GENERAL

BIOGRAPHICAL DICTIONARY.

BY JOHN GORTON,

AUTHOR OF THE "GENERAL TOPOGRAPHICAL DICTIONARY," &c. &c.

A NEW EDITION.

IN THREE VOLUMES.

VOL. III.

LONDON :
WHITTAKER AND CO., AVE-MARIA LANE.

1838.

London :
Printed by W. Clowes and Sons,
Stamford-street.

GENERAL BIOGRAPHICAL DICTIONARY.

QUADRATUS, an early Christian writer, flourished under the reigns of Trajan and Adrian, and according to Eusebius and Jerome he was a disciple of the apostles, and bishop of Athens. He succeeded Publius, who was martyred in the persecution under Adrian; and on the visit of that emperor to Athens, Quadratus presented to him, in the year 126, "An Apology for the Christian Religion," of which we have only a small fragment preserved in Eusebius's history, but which, he says, was written with much ability, and produced the desired effect, occasioning a temporary cessation of the persecution. The existing fragment is curious for the testimony it gives to the reality of the miracles of Christ and his apostles, asserting, that in his time several of the persons were living in whose favour these prodigies were wrought. There is no certain information of the death of Quadratus, but he is supposed to have been banished from Athens, and to have been greatly tormented.—*Eusebii Hist. Eccl. Cave. Lardner. Sazii Oronot. Fabricii Bibl. Græc.*

QUADRIO (FRANCIS XAVIER) an Italian critic and historian, who was born in the Valteline in 1695, and died in 1756. He entered into the society of the jesuits, and distinguished himself by the cultivation of literature. He was the author of "Dissertations on the Valteline," 3 vols.; a "History of Poetry," 7 vols. 4to.; and a "Treatise on Italian Poetry," published under the name of Joseph Maria Andrucci.—*Dict. Hist.*

QUAGLIATI (PAOLO) a celebrated Roman contrapuntist, who flourished about the commencement of the seventeenth century, and, according to his pupil Della Valle, the first who produced dramatic action or representation in music ever witnessed in Rome. This he did in a cart, or ambulatory stage, during the carnival of 1606. This circumstance coincides curiously with the first production of tragedy among the Greeks, the theatre of which is said to have been a cart.—*Biog. Diss. of Mus.*

QUARLES (FRANCIS) an English poet of some fame in his own day, was born in 1592, near Rumford, in Essex, being the son of James Quarles, clerk of the green cloth under queen Elizabeth. He was educated at Cambridge, and entered at Lincoln's-inn. He obtained the place of cup-bearer to the queen of Bohemia, daughter of James I., which was probably a mere sinecure. He was afterwards under-secretary to archbishop Usher, in Ireland, from which country he was driven, with the loss of his property by the rebellion of

1641, and was appointed chronologer to the city of London. At the commencement of the civil wars, he wrote a work entitled the "Loyal Convert," which gave great offence to the Parliament, so that when he afterwards joined the king at Oxford, occasion was taken to sequester his property, and plunder him of his books and MSS. He was so much affected by his losses, that his grief is supposed to have hastened his death, which took place in 1644, at the age of fifty-two. Of the numerous works of Quarles, in prose and verse, the most celebrated is his "Emblems," a set of designs exhibited in prints, and illustrated by a copy of verses to each. Few works have been more popular in their own time, or more neglected in the sequel. A great part of them are borrowed from "The Emblems of Hermannus Hugo;" but the verses are his own, and certainly, as well shown by Mr. Jackson of Exeter, they merit not the contempt which they have experienced; in the midst of much false taste and conceit frequent bursts of fancy and strokes of pathos being afforded. His other works, consisting of various miscellaneous productions in poetry and prose, many of which are on scriptural subjects, with one or two romances, and a comedy, are now seldom mentioned, but are well described in the Bibliotheca Anglo-Poetica.—*Biog. Brit. Houldley's Beauties. Reddita.*

QUATROMANNI (SEKTORIO) an Italian writer, was born at Cosenza in 1551, and died in 1606. He rendered himself odious to the literati of his time by his vindictive and satirical disposition. His life was passed in the cultivation of poetry and literature. His works, consisting of Italian and Latin poems, and letters, were published at Naples in 1714: some of them are worthy of attention. Sannazarius was his model, but the copyist was very inferior.—*Tiraboschi. Nouv. Dict. Hist.*

QUELLINUS (ERASMUS) an eminent painter, was born at Antwerp in 1607. He was the disciple of Rubens, and became distinguished both in history and landscape. His ideas are learned and elevated, his colouring rich, and his execution bold and vigorous. His principal painting is in the grand dining-hall at Antwerp, and represents Mary Magdalene washing the feet of Christ. He died in 1678.—His son, JOHN ERASMUS, the younger, was born at Antwerp in 1630. He visited Italy for improvement, and left several of his productions in the capitals of that country. He was employed in painting historical pieces for churches and convents, and was considered one of the best Flemish painters. His most

celebrated piece is Christ healing the sick, in the abbey church of St Michael at Antwerp. He died in 1715.—*D'Argenville. Pilkington.*

QUENSTEDT (JOHN ANDREW) a German Lutheran divine, was born at Quedlinburgh in 1617. He was professor of divinity in the university of Wittemberg for many years with great reputation. He died in 1688. He wrote a "System of Divinity," in 4 vols.; "De Sacra Scriptura Divinitate;" "Exercitatio de Puritate Fontium Hebraei Veteris et Graeci Novi Testamenti;" "De Sacra Scriptura ejusque Attributis et Scopo praeceptum;" "Exercitationes Theologicae;" "Dialogus de Patriis illustrium Doctrina et Scriptis Virorum ab Initio Mundi ad An. 1600;" "Sepultura Veterum;" and several other works exhibiting proofs of learning, but deficient in taste and correctness.—*Le Long's Bibl. Sacra. Moreri.*

QUERENGHI (ANTONIO) an Italian writer was born at Padua in 1546. He acquired a vast knowledge of the languages, civil laws, and philosophy; and at an early age distinguished himself in the belles lettres. He went to Rome, and entered into the service of several cardinals, and was made secretary of the sacred college. Clement VIII made him a canon of Padua, but Paul V recalled him to Rome, and made him his private chamberlain and referendary of both signatures. He received several invitations from different princes, but declined them all; and remaining at Rome, died there in 1633. His Latin poems were printed at Rome in 1629, and his Italian poetry in 1616.—*Baillet. Tiruboschi. Moreri.*

QUERLON (ANNE GABRIEL MEUSNIER de) a celebrated journalist, was born at Nantes in 1702. He was for two-and-twenty years conductor of a periodical paper in Brittany, called *Les Petites Affiches*, and was also employed in the *Gazette de France*, and the *Journal Etranger*; and he was one of the co-operators of the *Journal Encyclopédique*. He distinguished himself by his sound judgment, and his style was nervous and precise, but sometimes cold and obscure. His works are, "Les Impostures Innocentes;" "Le Testament de l'Abbé des Fontaines;" "Le Code Lyrique, ou Reglement pour l'Opera de Paris;" "Collection Historique;" "A Continuation of the Abbé Prévot's History of Voyages;" "An elegant Translation of the Abbé Marsy's Latin Poem on Painting." He also published editions of Lucretius, Phædrus, and Anacreon, with notes.—*Nouv. Dict. Hist.*

QUERNO (CAMILLO) an Italian poet, was born in the kingdom of Naples, at the latter end of the fifteenth century. He acquired great fame by his facility in extempore versification; and in 1514 visited Rome, where he was crowned arch-poet by some friendly bonvivans in a frolic, and was ever afterwards so denominated. He pleased Leo X by his buffoonery, and was obliged to make a distich off hand upon any subject which might be given him. Once, when the fit was on him, he made this verse: "Archipoeta facit versus pro mille poetas;" and as he hesitated to proceed,

the pope wittily added, "Et pro mille aliis archipoeta bibit." Querno hastening to repair his fault, cried, "Porridge quod facit ab mila carmina, docta Falernum;" to which the pope instantly replied, "Hoc vinum enervat, debilitatque pedes;" alluding either to the gout, to which Querno was subject, or to the feet of his verses. After the taking of Rome, he returned to Naples, where he died in a hospital. Querno was the Italian Mac Flecknoe of his day, and as such is often alluded to by Pope and other satirists.—*Roscoe's Life of Leo X. Sarii Onom.*

QUESNAY (FRANCIS) a French physician of some eminence, but chiefly noted as a writer on political economy. He was born in 1694, near Montfort l'Amaury, in the isle of France, and died at Paris in 1774. His father was a farmer, and he acquired the rudiments of his profession under a country surgeon; after which, going to the metropolis, he became secretary to a society established for the improvement of surgery. At length he took the degree of MD, and obtained the situation of physician to madame de Pompadour, the mistress of Louis XV, and through her interest he became physician to the king also. Amid the intrigues of a licentious court, he observed a simplicity of manners and apparent disinterestedness which formed a strong contrast with the characters of those around him. Towards the latter part of his life he became a leader of the political sect of the economists, to the influence of whose principles some have unjustly attributed the occurrence of the French Revolution. Quesnay, however, by no means anticipated such a result of his doctrines; and he was much attached to the royal family, and especially to the king, with whom he was a favourite, and who, in allusion to his turn for speculation, called him his thinker, "penseur." He was the author of "A Philosophical Essay on the Animal Economy," 3 vols. 12mo; and various surgical and medical works, besides several articles in the *Encyclopédie*, and tracts on politics, including a treatise on "Physiocracy, or the Government most advantageous to the Human Race," 1768, 8vo.—*Hutchinson's Biog. Med. Biog. Univ.*

QUESNE (ABRAHAM du) a distinguished French officer, was born of a noble family in Normandy in 1610, and was brought up to the marine service by his father, who gave him the command of a vessel at the age of seventeen. In 1644 he went into Sweden, and was there made vice-admiral of the fleet, and he distinguished himself in the battle in which the Danes were defeated. In 1647 having been recalled to France, he commanded a squadron sent on the Neapolitan expedition; and the French navy being very low, he fitted out some ships at his own expense, with which he assisted in the reduction of Bourdeaux. He defeated the Dutch in three engagements, in the last of which the celebrated De Ruyter was killed; and he struck such terror into the states of Tunis and Tripoli, that he compelled them to seek a peace with France by submit-

QUE

mon. His being a Protestant prevented him from obtaining the recompence due to his important services. He however received a royal gift of a fine estate, which was erected into a marquisate; and on the repeal of the edict of Nantes, he was the only person exempted from its penalties. He died in 1688.—His son, **HENRY**, was the author of "Reflections on the Eucharist," a work much esteemed by the French Protestants. He died in 1723.—*Perrault les Hommes Illustres. Moreri. Mod. Univ. Hist.*

QUESNEL (PASQUIER) a French Catholic divine, who belonged to the congregation of the Oratory, distinguished on account of the dissensions in the church, to which his writings gave rise. He was born at Paris in 1634. Having entered among the fathers of the Oratory, he devoted himself to literary studies and the duties of his profession. He gave offence to the court of Rome by an edition of the works of pope Leo the Great, which he published in 1675; but the production which excited the greatest animosity against him was his New Testament, with moral reflections, in eight volumes, 8vo; from which one hundred and one propositions were extracted, which were condemned by the bull Unigenitus, as favouring the erroneous doctrines of the Jansenists. Father Quesnel retired to Brussels, and afterwards to Amsterdam, where he died in 1719. His "New Testament, with Moral Reflections upon every Verse," was translated into English by Mr Russell, and published in 1729, 4 vols. 8vo. Dr Adam Clarke recommends this work on account of the profoundly pious spirit which it exhibits, though he objects to the rigid predestinarianism by which the author was influenced.—*Moreri. Dict. Hist.*

QUESNOY (FRANCIS du) also called Flammant, or the Fleming, was born at Brussels in 1594. He distinguished himself as a sculptor at a very early age, and was patronized by the archduke Albert and the constable Colonna. He particularly excelled in making models and bas-reliefs of Cupids and children; but being reproached by the Italians for the unimportance of his works, he undertook St Susanna in marble, for the chapel of Loretto, which, with a St Andrew in St Peters, established his reputation. He was, however, in a state of great indigence, owing to the slowness of his execution, when Louis XIII appointed him as his sculptor, and as the head of an intended school for that art, at a liberal salary; and he was preparing for his journey to France when he sank into a melancholy derangement, from which he never recovered, but died at Leghorn in 1646. His works are highly valued, particularly his infantile groups, which are finished with peculiar grace and delicacy.—*D'Argenville Vies des Sculpteurs.*

QUEVEDO VILLEGAS (FRANCISCO de) Spanish satirist, born at Madrid in 1570. He was a knight of the order of St Jago; and saving attacked in his writings count Olivarez, the favourite minister of Philip IV, he was thrown into prison: but on the disgrace of

QUI

that statesman, in 1643, he was released. His death took place in 1647. Quevedo published a Spanish translation of Epictetus, together with an apology for that writer: "The Spanish Parnassus;" "Visions of Hell;" which last work, by the peculiarity of its humour, has made the author best known in foreign countries; and various other works, satirical and religious, both in verse and prose. Several of his productions have been translated into English, of which the Visions, by sir Roger L'Estrange, have been repeatedly printed.—*Moreri. Biog. Univ.*

QUICK (JOHN) an eminent nonconformist divine, was born at Plymouth in 1636, and was educated at Exeter college, Oxford. After officiating at various places, he was made minister of Brixton, whence he was ejected in 1662; but he had some valuable preferments offered him, if he would conform, which he refused to do. He continued to preach for some time after his ejection, but being frequently prosecuted, he accepted an invitation to be pastor of the English church at Zealand, where, however, meeting with some dissensions, he returned to England in 1681, and preached privately during the remainder of the reign of Charles II. On the toleration of king James, he formed a congregation in Bartholomew Close. He died in 1706. His principal work is his "Synodicon in Gallia Reformata, or the Acts, Decisions, Decrees, and Laws, of the famous National Councils of the Reformed Churches in France." It is composed of interesting and authentic materials, and is well worth attention. He also left three folio volumes of MS. lives of eminent Protestant divines, sermons, tracts, &c.—*Calamy. Wilson's History of Dissenting Churches. Williams's and Freke's Funeral Sermons.*

QUIEN (MICHAEL le) a learned French Dominican, was born at Boulogne in 1661. He was the zealous adversary of father Pezron, and published a book against his *Antiquité des Temps rétablie*, entitled "*Antiquité des Temps détruite*." He also wrote against Couzray, upon the validity of the ordinations of English bishops. His principal work, and one which did him honour, was an edition of the works of Joannes Damascenus, in Greek and Latin, which prove him to have been one of the most learned men of his time. He published a work called "*Panoplia contra Schisma Græcorum*," in which he refutes the accusations that have been brought against the Romish church. He was prevented by his death, which took place in 1733, from the completion of a very large work, of which he had already published one volume, entitled "*Oriens Christianus in Africa*," or an account of all the prelates of Africa and the East.—*Moreri. Nouv. Dict. Hist.*

QUIEN DE LA NEUFVILLE (JAMES le) an historian, was born at Paris in 1647. He entered the army, which he soon quitted, and repaired to the bar; but disappointment also meeting him here, he turned to literature, and applied himself to history. In 1700 he

published a History of Portugal, down to the death of Emanuel I, in which M. de la Clede, who continued it, says, that he omitted several important facts, and related others partially. In 1713 he accompanied the abbé de Mornay, when he was appointed ambassador to Portugal; and the king of Portugal settled upon him a pension of 1500 livres, and created him a knight of the order of Christ. The success of his Portuguese history induced him to attempt its conclusion; but his too close study brought on a disorder, of which he died in 1728. Le Quien also wrote a treatise on "L'Usages des Postes chez les Anciens et les Modernes," Paris, 1734, 12mo.—*Niceron. Moreri. Sazii Onomast. Dict. Hist.*

QUILLET (CLAUDE) a modern Latin poet, was born at Chinon in Touraine, in 1602; and was brought up to the medical profession. When M. de Laubardemont, counsellor of state and a creature of cardinal Richelieu's, was sent to take cognizance of the famous pretended possession of the ruins of Loudun, with instructions to find them real, Quillet exerted himself so strenuously in detecting the impostures, that a warrant was issued against him, and he retired into Italy. He became secretary to the marshal d'Étrées, the French ambassador at Rome, with whom he returned to France, after the death of cardinal Richelieu. In 1653 he published the first edition of his poem, entitled "Callipedia sive de Pulchræ Proli habenda: Ratione," in which were some satirical lines against Mazarin. The cardinal sent for Quillet, and remonstrating with him for treating his friends with severity, promised him the next vacant abbey. Quillet obliterated the offensive lines, and dedicated the next edition to the cardinal. The sprightliness of its style, and variety of its episodes, procured this poem some popularity; but the diction is frequently impure and incorrect. He composed a version of Juvenal, in French verse, and a Latin poem called "Ilenriades," or the actions of Henry IV. He died in 1661.—*Bayle. Baillet. Moreri.*

QUIN (JAMES) an eminent actor, was born in London in 1693. Being the son of an Irish barrister, he was educated in Dublin. His father had unfortunately married a supposed widow, whose husband, after a long absence, returned and claimed her; on which account Quin, who was the offspring of the connexion, was deemed illegitimate, and upon his father's death, in 1710, was left without a fortune. The interruption of his prospects prevented him from being adequately educated for a profession, and he had recourse to the Dublin stage in 1713, and in a year after secured an engagement at Drury-lane theatre in the metropolis. Here he remained some time without much distinction, and in 1717 quitted Drury-lane for the theatre in Lincoln's-inn-fields, where he remained seventeen years, and gradually acquired considerable celebrity in grave, dignified, and sententious tragedy, such as in Cato, Zanga, and Coriolanus, and in characters of strong sarcastic comic humour, as Falstaff, Volpone, and sir John Brute. In

1732 he removed with the same company to Covent-garden; but in 1735 was induced to join that of Fleetwood at Drury-lane, on such terms, according to Cibber, as no actor had previously received; and he retained the pre-eminence until the appearance of Garrick in 1741. The success of the new performer much annoyed him, and in his usual pithy way he observed, that "Garrick, like Whitfield, was a new religion, but all would come to church again;" a remark which extorted a well-known epigram from his rival. In 1747 he was engaged at Covent-garden with Garrick; but the new actor obtained so disproportionate a share of attention, that it may be said to have gradually induced him to retire. After the death of the poet Thomson, to whom he had acted with great generosity, he appeared in his play of Coriolanus, and spoke a prologue written on the occasion by lord Lyttelton, with a sensibility that did him honour. His last performance was Falstaff, in 1733, for the benefit of his friend Ryan, in which character he is supposed never to have been exceeded. He survived his retreat several years, which he spent chiefly at Bath, where his fund of anecdote, and pointed sense, made him much sought after. Quin, who was convivial, and too fond of the bottle, was often coarse and quarrelsome on these occasions, which led to two or three hostile encounters, one of which proved fatal to his antagonist. He was otherwise manly, sensible, and generous; and his deliverance of Thomson from an arrest, by a spontaneous present of 100*l.*, although then unknown to him, has often been told to his honour. He died at Bath in 1706, aged seventy-three. Garrick, once his rival, and afterwards his friend, wrote the epitaph for his monument in Bath cathedral.—*Biog. Dram.*

QUINAULT (PHILIP) a French dramatist, of eminence as a writer of comic operas. He was born at Paris in 1636, and was educated for the bar; but such was his peculiar inclination for poetry, that he is said to have written comedies at the age of fifteen. He became auditor of accounts, and obtained a seat in the French Academy; and his great merit as a lyric dramatist, rendered him an extraordinary favourite with the public, and excited the envy and satirical abuse of Boileau. He was the author of a variety of light and lively poems; and in the latter part of his life he repented of having written them, and endeavoured to make atonement for his error, by a serious poem, "On the Destruction of Heresy." He died in 1688. Collections of his operas, entitled "Le Théâtre de Quinault," have been repeatedly published; and "Les Œuvres choisies de Quinault," were printed by Didot, 2 vols. 12mo.—*Perrault Homm. Illust. Biog. Univ.*

QUINCY (JOHN) an English physician and medical writer of the last century. He practised his profession, and delivered lectures on the materia medica and pharmacy in London, and died there in 1723. Among his works are, "Medicina Statica, or the Aphorisms of Sauctorius," 8vo; "The Dispensatory of the

Royal College of Physicians, translated with Notes and Remarks;" "Lectures on Pharmacy;" 4to; and "Lexicon Physico-Medicum, or a New Physical Dictionary," 8vo. These have all become obsolete, except the last, which has served as the foundation of Dr Hooper's Medical Dictionary, 1794, 8vo.—*Biog. Brit.*

QUINQUARBOREUS, or in French, CINQ-ARBRES (JOHN) a learned Hebrew scholar, was born at Aurillac in Auvergne, and became professor of Hebrew and Syriac in the college of France in 1554, and dean of the royal professors. He died in 1587. His Hebrew Grammar has been often reprinted, with the title "Lingux Hebraice Institutiones absolutissimæ." He also translated into Latin, with notes, the "Targum of Jonathan, Son of Uziel on Jeremiah," and several of the works of Avicenna into Latin; and in 1551 he published the Gospel of St Matthew in Hebrew, with the version and notes of Sebastian Munster.—*Moreri. Biog. Univ.*

QUINTILIAN (MARCUS FABIUS QUINTILIANUS) a celebrated critic and teacher of eloquence, was born in the year 42. He is supposed to have been of Spanish origin, but he was educated from his childhood at Rome, where he studied rhetoric under Domitius Afer. He is thought to have accompanied Galba into Spain, and to have opened a school at Calagurra. On the return of that leader to Rome, on the death of Nero, he went back with him, and taught rhetoric at the expense of the state, being allowed a salary out of the public treasury. He pursued this occupation for twenty years, joining with it the occasional pleading of causes in the forum. In the reign of Domitian, the education of two of the emperor's grand-nephews was entrusted to him, and he is said to have been honoured with the consular ornaments. Juvenal represents him to have been rich; but Pliny the Younger speaks of him as a man of very moderate fortune. He endured great affliction from the premature loss of his wife and two sons, whom he laments in terms which show some want of fortitude. He was, however, a man of excellent morals, and all his writings are favourable to virtue. The only stain in his literary character arises from his gross adulation of the emperor Domitian, a disgrace which he shared with several other men of eminence of his time. It is pretty clearly ascertained that he reached the age of fourscore, but the exact time of his decease is uncertain. The work of Quintilian which has reached modern times, is deemed one of the most valuable remains of antiquity. It was composed for the use of one of his sons, whom he lost, a youth described by him as a prodigy of early excellence. Few works more abound in good sense, or discover a greater degree of just and accurate taste; and almost all the principles of good criticism are to be found in it. There is perhaps no great depth of thought in his principles of rhetoric, but his observations are marked with sound sense, and he affords much useful information on

Biog. Dict.—Vol. III.

the current literature of the age. He also wrote a treatise on the causes of corruption in eloquence, which is lost; and his name is fixed to certain "Declamations," nineteen in number, which are however deemed unworthy of him. The first entire copy of the "Institutiones Oratoriae," was discovered by Poggio in the monastery of St Gall. The most useful editions of his works are those of Burmann, 1720, 2 vols. 4to; of Capperoneius, folio, 1725; of Gesner, 1758, 4to, beautifully reprinted at Oxford in 1805, 2 vols. 8vo.—*Life by Burmann. Suzii Onom. Blair's Lectures.*

QUINTINIE (JOHN de la) a celebrated French horticulturist. He was born near Poitiers in 1626, and studied at a seminary of the jesuits in that city. Having finished a course of philosophy and jurisprudence, he went to Paris, and was admitted an advocate. Possessing natural eloquence and considerable knowledge, he had already attained some reputation, when he accepted the office of tutor to the son of M. Tambonneau, president of the chamber of accounts, with whom he travelled into Italy. Having made himself acquainted with the georgical works of Columella, Varro, and Virgil, he employed himself in making observations on planting in the native country of those authors; and on his return to France, he instituted experiments for the farther improvement of that branch of rural economy. He acquired great eminence for his horticultural skill, in consequence of which he obtained the management of the royal garden at Versailles, with the office of director-general of fruit and kitchen gardens to his most Christian majesty. His fame extended to England, whither he made two voyages, and refused advantageous proposals, which were presented to induce him to remain in this country. He wrote a treatise on gardening, of which there is an English translation.—*Perrault. Biog. Univ.*

QUINTUS CALABER, or rather QUINTUS SMYRNEUS, was a Greek poet, who wrote a Supplement to Homer's Iliad, i fourteen books, in which a relation is given of the Trojan war, from the death of Hector to the destruction of Troy. He is supposed to have lived in the fifth century, and to have been a native of Smyrna; but his poem being discovered by Cardinal Bessarion, in the church of St. Nicholas near Otranto in Calabria, he was thence called Calaber. It was published at Venice, by Aldus, supposed in 1521; and the other editions are those of Freigius 1569; of Rhodomannus, 1604; of De Pauw, 1734; and of Bandurius, 1765.—*Vossii Poet. Græc.*

QUIRINI (ANGELO MARIA) a Venetian cardinal, was born in 1680. He went early into a convent of Benedictines, where he laid in a vast store of knowledge. He set out on his travels in 1700, and visited Germany, Holland, Flanders, England, and France, forming acquaintance with every distinguished literary character. Being created a cardinal, he waited on Benedict XIII, to thank him for

QUI

that distinction. "It is not for you," said the pope, "to thank me for raising you to this elevation; it is rather my part to thank you for having, by your merit, reduced me to the necessity of making you a cardinal." He was also appointed librarian to the Vatican, and prefect of the congregation of the Index. He died in 1755, regretted by all ranks and sects; for though a zealous champion of the papacy, he wrote with a candour and moderation, which gained the applause of the Protestants themselves. His principal works are, "An Account of his Travels;" "A Collection of his Letters;" "Cardinal Pole's Letters;" "A Work on the Lives of certain Bishops of Brasse, eminent for Sanctity;" "Specimen variae Literaturæ quæ in Urbe Brixia ejusque ditione paulo post Incunabula Typographiæ florebat, &c.;" "Primordia Corcyæ;" "An edition of the Works of St Ephrem, in Greek, Syriac, and Latin," &c.—*Nouv. Dict. Hist. Moreri.*

QUI

QUISTORP (JOHN) a German Lutheran divine and professor, was born at Rostock in 1584. In 1614 he was made professor of divinity in his native place, and in 1645 was appointed pastor of St Mary's, and superintendent of all the churches in the district of that city. He attended the celebrated Grotius in his last illness, and from him we have the particulars of his latest moments, in which he rendered every tender service to that great man. Quistorp died in 1648. He wrote "Annotationes in omnes Libros Biblicos;" "Commentarius in Epistolas Sancti Pauli;" "Manductio ad Studium Theologicum;" "Articuli Formulæ Concordiæ illustrati;" "Sermons;" "Dissertations," &c.—He had a son of the same name, who was rector of the university of Rostock, and died in 1669. He wrote several controversial papers against the papists.—*Moreri. Nouv. Dict. Hist.*

RAB

RABANUS MAURUS MAGNENTIUS, a learned German prelate, was born in the year 785, at Fulda, in which abbey he received his first instructions, and he afterwards became the disciple of the famous Alcuin, at Tours. In 822 he was made abbot of Fulda, and eight years afterwards he was instrumental in bringing about a reconciliation between Louis le Débonnaire and his children. In 839 the monks of his abbey expelled him, alleging as a reason, that in consequence of his devoting so much time to his studies the affairs of the monastery were neglected. They afterwards wished him to resume the government, but he declined, and remained in retirement until 847, when he was made archbishop of Mentz. One of his first acts was to summon a council, in which he procured the condemnation of Godeschalc, for maintaining the doctrine of St. Augustine respecting predestination and grace. Rabanus died in 856. He was a man of great learning, which he displayed in several Treatises and Commentaries, which were all published in 1627, at Cologne, in 3 vols. folio.—*Cave. Dupin. Mosheim. Moreri.*

RABAUT DE ST. ETIENNE (JOHN PAUL) a French Protestant clergyman and advocate who was a native of Nismes, for which city he was chosen a deputy to the Constituent Assembly, at the commencement of the Revolution. He had previously obtained some reputation by his writings; and possessing eloquence and address, he appeared with advantage as a public speaker. He distinguished himself at first as one of the warmest advocates for innovation; but on being elected a member of the National Convention, his ardour in some degree subsided. He had the courage to declaim against the right

RAB

of the convention to sit in judgment on Louis XVI; and on the debate in that subject, he said, "I am weary of my share of the present tyranny, and I sigh for the period when a national tribunal will oblige us to lay aside the forms and manners of despots." These sentiments, and his connexions with the Girondists, proved his destruction. Being impeached, he was arrested June 2, 1793; but he made his escape, and took refuge in the neighbourhood of Versailles. He was declared an outlaw on the 28th of July; when he returned to Paris, and found an asylum in the house of his brother. Being discovered by accident, he was seized and guillotined December 5, 1793. He published several historical and political works, among which are "Lettres à Bailly sur l'Histoire primitive de la Grèce," Paris. 1787, 8vo; and "Précis de l'Histoire de la Revolution de France," 1791, 8vo.—**JAMES ANTHONY RABAUT POMER**, younger brother of the preceding, was also a Protestant minister, and a member of the National Convention. He was imprisoned in December, 1793, but recovering his liberty after the overthrow of the Terrorists, he regained his seat in the Convention, and afterwards became a member of the Council of Ancients, and also held other offices. He relinquished politics in 1803, and was appointed pastor of a Protestant church at Paris. His death took place in 1820. He published in 1810, "Napoléon Libérateur Discours Religieux," 8vo; and in 1814, "Sermon d'Action de Graces sur le Retour de Louis XVIII." He is said to have made observations on the cow-pock, and its preservative effect against the small-pox, in 1786.—Another brother of the same family, **RABAUT DUFRES**, was a merchant at Nismes, who tak-

ing an active part in public affairs, was proscribed under the tyranny of Robespierre. He concealed himself till the storm was over, and afterwards held several employments. He died in 1808. Rabaut Dupuis published "Historical Details and Collections relating to the various Projects set on foot since the Reformation for Re-union among the Christian Communities," 1806, 8vo.—*Dict. des H. M. du 18me S. Biog. Univ.*

RABELAIS (FRANCIS) a celebrated French wit, was the son of an apothecary at Chinon, in the province of Touraine, where he was born about 1483. He was bred up in a convent of Franciscan friars, in Poitou, and received into their order. His strong inclination and taste for literature rendered him not only very learned in the languages, but skilful in all the science of the time. His conduct, however, was not so creditable as his abilities, and an adventure of his, which caused scandal in the monastery, was punished by imprisonment in the cloister. At length he obtained his liberation by the interest of some persons of rank, with permission to quit his order, and join that of St Benedict. Not able to reconcile himself to any restraint, he threw aside his religious habit altogether in 1530, and went to study medicine at Montpellier. After spending some time in that school, he removed to Lyons, where he printed a collection of Latin translations of Hippocrates and Galen, as well as some of the books of his famous history of Pantagruel. In 1535 he was taken under the protection of cardinal John du Bellay, who received him into his house as physician, librarian, and steward. The cardinal being nominated ambassador to Rome the next year, was accompanied by Rabelais, who so much amused the papal court with his wit and buffoonery, that he obtained a plenary absolution for the crime of apostasy. In 1537 he took the degree of doctor of physic, at Montpellier; and in 1538 was presented by cardinal Du Bellay with a prebendary. He afterwards became curé, or parochial priest, of Meudon, which office he held from 1545 until his death. His *Pantagruel*, which was finished about the time he became pastor of Meudon, excited much enmity against him on the part of the monks, who caused the condemnation of his work by the Sorbonne and the parliament; but in other respects it rendered him popular as the greatest wit of his time, a reputation which he fully maintained by his companionable qualities, and the inexhaustible store of ludicrous ideas which he displayed in conversation. He died in 1553, at the age of seventy. The "History of Gargantua and Pantagruel," of Rabelais, is an extravagant and whimsical satire in the form of a romance, attacking all sorts of monkish, and other follies, which it would not have been safe to seriously expose. Wit and learning are scattered in great profusion, but in a very wild and irregular manner, and with a strong mixture of coarseness and obscenity. His satire, when intelligible, is often just and ingenious; but the obscurity of his language, and the eccentricity of his concep-

tions, have always baffled commentators in their attempts at explanation; and he is now read more for the pure whimsicality of his joke and allusion, than with a view to the objects of his satire. Many editions have been given of Rabelais, the most complete of which is that printed at Holland, with cuts, and notes by Duchat, in 5 vols. 12mo, 1716; and that of De la Monnoye, 1741, 3 vols. 4to, with plates by Picart. Motteux published an English translation in London, 1708, with a preface and notes, in which he endeavoured to show that Rabelais intended a sort of burlesque history of his own times. This was followed by another by Ozell, in 4 vols. The letters of Rabelais have been published in 8vo, with notes by St Marthe. Every careful reader of the one and the other, must perceive that the *Tristram Shandy* of Sterne originated in a zealous perusal of the principal work of Rabelais.—*Moreri. Chauffepie. Nouv. Dict. Hist.*

RABENER (GOTTLIEB WILLIAM) a German writer, born at Wachau, near Leipsic, in 1714. He was educated for the legal profession, and obtained the office of comptroller of the taxes in the district of Leipsic. He made himself known as a satirist and a letter-writer; and he is reckoned among the classic authors of Germany, but his reputation is rather on the decline. He died at Dresden, in 1771. His satires have been often printed, and have been translated into French; and his Letters have appeared in an English dress. There is a collective edition of the works of Rabener, published at Leipsic, 1777, 6 vols. 8vo.—*Dict. Hist.*

RABUTIN (ROGER) Count de Bussy, a French wit and satirist, born of an ancient family, in the province of Burgundy, in 1618. He entered into the army at the age of twelve, and served under his father; and he might have probably attained high military rank, if he had not offended persons in power by the carelessness of his conduct, and by the composition of scandalous lampoons. His "Histoire Amoureuse des Gaules," a work of this description, occasioned his being imprisoned in the Bastille in 1665; and on his release he was banished from the court, whether he was not permitted to return till 1681. His death took place in 1693. Among his principal works are "Lettres, avec les Reponses," republished at Amsterdam, 1782, 6 vols. 12mo; and "Memoires," 2 vols. 12mo.—**FRANCIS RABUTIN**, count de Bussy, of the same family with the preceding, was the author of "Military Memoirs," which are much esteemed. He lived in the middle of the sixteenth century.—*Niceron. Dict. Hist. Biog. Univ.*

RACAN (HONORAT DE BUIEL, marquis of) a French poet, was born in Touraine, in 1589. He was one of the first members of the French Academy, and wrote pastorals and odes, which were esteemed. He also published a "Life of Malherbe," his friend and poetical instructor. Boileau says, that he excels in saying little things in the manner of the ancients. In his youth he was one of the pages of Henry IV; he then entered the

army, but finally he married, and devoted himself to literature. He died in 1670, and a new edition of his works was published at Paris in 1724, 2 vols. 12mo.—*Moreri. Nouv. Dict. Hist.*

RACINE (BONAVENTURE) a French Catholic divine, who became principal of the college of Harcourt, which he was obliged to leave on account of his disputes with the jesuits. He afterwards obtained a canonry in the cathedral of Auxerre, where he died in 1755. He is known as author of "Abrégé de l'Histoire Ecclésiastique," Cologne, 1754, 13 vols. 12mo; republished in 1762, 13 vols. 4to.—*Dict. Hist. Biog. Univ.*

RACINE (JOHN) a very eminent French dramatic poet, was born at La Ferté Milon in 1639. His father, who had a small place under the government, dying when he was very young, Racine, who had likewise lost his mother, was brought up by a grandfather at the convent of Port Royal, whence he removed to the college of Harcourt, where he passed through a course of philosophy. He first made himself known to the public by an ode on the marriage of Louis XIV, for which, through the patronage of Colbert, he was rewarded with a small pension. This success determined him to follow poetry, and rejecting an invitation to take orders, he fixed his residence in Paris. In 1664 he brought upon the stage his first tragedy, entitled "La Thébaïde," which, in 1666 and 1668 was followed by his "Alexandra," and his "Andromaque," the latter of which established his character as a tragic dramatist. His comedy of "Les Plaideurs" succeeded, which, although objected to in the first instance, obtained the liberal praise of Molière. From 1670 to 1677, appeared in succession his tragedies of "Britannicus," "Berenice," "Bajazet," "Mithridate," "Iphigene," and "Phedre;" the last of which produced a similar attempt on the part of Pradon, that gave extreme uneasiness to Racine, and inspired him with the notion of turning Carthusian. His director, however, gave him the better advice of marrying, which he followed, and at the same time reconciled himself to his old friends of the Port Royal, by ceasing to write for the stage. Always an assiduous courtier, he paid particular attention to the king, to whom he was gentleman in ordinary, and in whose apartments he slept during the monarch's indispositions, in order to entertain him with reading and recitations, in which he excelled. He was nominated joint historiographer-royal with Boileau, but no result of this appointment ever appeared. Although he had renounced the profane drama, he was prevailed upon by madame Maintenon to write "Esther," and "Athalie," to be acted by the ladies of St Cyr. The same lady also induced him to draw up a memoir upon the miseries of the people in the latter years of the reign of Louis XIV; and he executed the task with so free a pen in regard to the faults of administration, that the offended monarch forbade him his presence. Racine had not sufficient philosophy to endure this

disgrace with fortitude, and sinking into a state of melancholy, a fever ensued, which terminated his existence in 1699, in his fifty-ninth year. The dramatic characteristics of Racine are tenderness, elegance, good taste, refined sentiment, and perfection in the art of versification. In reference to the higher essentials of the drama, he wants verisimilitude, and rather describes feeling than expresses it. The introduction of love into all his dramas necessarily adds to these defects, which do not appear in "Athalie," and in the more elevated portion of his best pieces. Besides his dramatic works, Racine was the author of "Cantiques, for the use of St Cyr;" "L'Histoire de Port Royal;" "Idylle sur la Paix;" some "Epigrams," of merit;" "Lettres;" and a few "Opuscules," published in his son's memoirs of his life. He was a member of the French Academy from 1673. This celebrated poet was of an agreeable figure, with an open countenance, and was polite and soft in manners, while in reality splenetic and fastidious. He was also witty and eloquent, although grave and devotional in his later years. The editions of Racine are too numerous to particularize; the most distinguished are the later ones from the press of Didot.—*Moreri. D'Alembert. Hist. Acad. Nouv. Dict. Hist.*

RACINE (LOUIS) son of the preceding, and also a poet, was born at Paris in 1692. Of a pious tendency, he was led to adopt the ecclesiastical habit, and he was in a state of retirement with the fathers of the Oratory when he published his poem "On Grace," in 1720. He was, however, induced to quit the clerical profession and marry; and he lived happily with his family until the death of an only son revived the sombre melancholy which was inherent in his disposition. He died in 1763, at the age of seventy-one. His principal poems are these: "On Religion and Grace," which convey the thoughts of Pascal and Bossuet with fine lines and striking passages. He is also author of "Epistles;" and a translation of Paradise Lost. His prose works are, "Mémoires sur la Vie de Jean Racine;" "Remarques sur les Tragedies de J. Racine;" and several dissertations in the Memoirs of the Academy of Inscriptions. His "Œuvres Diverses" are published in 6 vols. 12mo.—*Nouv. Dict. Hist.*

RADCLIFFE (ANN) an eminent female novelist, was born in London, July 9, 1764. Her maiden name was Ward, and at the age of twenty-three she was married to William Radcliffe, esq., a graduate of Oxford, and a student-at-law in one of the inns of court; which profession, however, he never followed, but became proprietor and editor of a newspaper, called the "English Chronicle." Soon after her marriage Miss Radcliffe began to essay her powers in works of imagination. Her first performance was a romance, entitled "The Castles of Athlen and Dunblaine," and the next "The Sicilian Romance;" but the first of her works which attracted much attention was "The Romance of the Forest," which

was followed by "The Mysteries of Udolpho," a tale at once powerfully conceived and tastefully executed, which placed her at the head of a department of fiction which was then rising into considerable esteem. Her last work of this kind, "The Italian," produced the sum of 1500*l.*; and although of less varied interest than that displayed by its predecessors exhibited great power, especially in the delineation of the principal character. Besides these publications she published a quarto volume of "Travels through Holland and along the Rhine," in 1793. As a writer of romance Mrs Radcliffe possessed, in a high degree, the art of dallying with the expectation, and exciting a high degree of interest in her narrative. Her descriptive powers were of a superior order, especially in the delineation of scenes of terror, and in those aspects of nature which excite sentiment, and suggest a variety of tender or melancholy associations. She suffered much in the latter part of her life from a spasmodic asthma, of which she died in London, January 9, 1823.—*Ann. Biog.*

RADCLIFFE (JOHN) a celebrated medical practitioner, born in 1650, at Wakenfield in Yorkshire, where his father possessed a moderate estate. After a classical education at his native place, he was, at the age of fifteen, sent to University college, Oxford. In 1669 he took his first degree in arts; and afterwards removing to Lincoln college, was elected to a fellowship. He proceeded M.A. in 1672, and having applied himself to the study of medicine, he obtained the degree of M.B. in 1675, and immediately began to practise as a physician. Two years after he resigned his fellowship, not being permitted to retain it without taking holy orders; and having become M.D. in 1682, he removed to London in 1684, and settled in Bow-street, Covent-garden. He soon acquired great reputation, to which his conversational powers contributed, perhaps, more than his professional skill; for having a ready wit and a strong tincture of pleasantry, he was a very diverting companion. In 1686 he was appointed physician to the princess Anne of Denmark; and after the Revolution he was often consulted by king William III, whose favour he lost in consequence of the freedom of speech in which he indulged himself. In 1699 the king, on his return from Holland, finding himself very unwell, sent for Dr Radcliffe, and showing him his ancles, swollen and cedematous, while his body was much emaciated, said, "What do you think of these?" "Why, truly," replied the physician, "I would not have your majesty's two legs for your three kingdoms." He was no more consulted by that prince; and when Anne succeeded to the crown, lord Godolphin in vain endeavoured to get him reinstated in his post of chief physician, as he had given her offence by telling her that her ailments were nothing but the vapours. But though deprived of office, he was consulted in all cases of emergency, and received a large sum of secret service money for his prescriptions. In 1713

he was chosen MP. for the borough of Buckingham; and he acted with the tory party, but without taking any very decided part in contemporary political intrigues. In the last illness of queen Anne, Dr Radcliffe was sent for; but either through indolence or extreme caution, he excused himself, on the alleged score of his own indisposition. Her majesty died on the following day, and a motion for censuring the doctor was made in the house of Commons. This circumstance, added to threatening letters which he received, deeply affected his mind, and, perhaps, hastened his death, which took place three months after that of the queen, November 1, 1714. Dr Radcliffe never published any thing, and he appears to have been personally but little conversant with literature; yet he testified his regard for it by the noble bequest of 40,000*l.* to the university of Oxford, for the foundation of a public library of medical and philosophical science, which was consequently erected, and was opened with much ceremony April 13, 1749. Dr Garth, in allusion to the literary or rather non-literary character of the doctor, satirically remarked, that "for Radcliffe to found a library was as if an eunuch should establish a seraglio."—*Hutchinson's Biog. Med. Pointer's Antiq. of Oxford.*

RAEBURN (sir HENRY) an artist of eminence, first portrait-painter to the king in Scotland, an appointment which he only received a few days before his death. He was president of the academy at Edinburgh, and member of that in London. As a portrait painter he was considered second only to sir Thomas Lawrence; and was not only an artist himself, but a liberal patron of art in others. He received the honour of knighthood from his present majesty, during his visit to Edinburgh, and died July 6, 1823, at Bernard's Stockbridge, in the vicinity of that capital.—*Ann. Biog.*

RAFFLES (sir THOMAS STAMFORD) an able and philanthropic public officer of our own time. He was the son of Benjamin Raffles, a captain in the West India trade, and was born at sea in the ship Anne, of London, off Port Morant in Jamaica, July 6, 1781. On his arrival in England, his father placed him for education with Dr Anderson, of Hammer-smith, under whose tuition he remained till he was appointed to a clerkship in the India house. In 1805 the interest of Mr Ramsay, secretary to the board, procured him the situation of assistant-secretary to the newly-formed government of Pulo Penang, in the straits of Malacca, now Prince of Wales's Island, whither he accompanied governor Dundas in the course of the same year. He applied himself to the study of the Malay language with such success, that he was soon after appointed Malay translator to the government. In 1807 he was made secretary to the council and registrar of the ruler's court; but the following year was compelled, by serious indisposition, to retire to Malacca. In 1810 his reputation, for talents and character procured him the appointment of agent of the governor-general with

the Malay States; and the following year, on the reduction of Batavia and Java, he was nominated lieutenant-governor of the latter island. In this capacity he continued till the spring of 1816, having, in the interval, not only brought the hostilities commenced against the native chiefs to a successful termination, but completed a statistical survey and map of Java, and introduced material reforms into its code of laws, and the method of administering justice. In 1816, having lost his wife, he returned to England, bringing with him a Javanese prince and a most extensive collection of specimens of the productions, costume, &c. of the Eastern archipelago. The year following appeared his "History of Java," in two thick quartos, with plates. While in this country Mr Raffles entered a second time into a matrimonial engagement, and sailed from Falmouth in the winter of 1817, having been nominated to the residency of Bencoolen in Sumatra, with the honour of knighthood and the lieutenant-governorship of Fort Marlborough. On reaching the seat of his government in March 1818, he set himself forthwith to remedy many disgraceful abuses, and did much towards carrying into effect the abolition of slavery throughout the settlement. He also distinguished himself by his political arrangements with the Dutch commissioners in the interest of the sultan of Palembang, and by the occupation of the island of Singapore, with a view to the taking it under British protection, an event equally advantageous for the inhabitants and for the commercial objects of this country. On his last visit to the island in 1823, he laid the foundation of a literary institution, consisting of a college for the encouragement of Anglo-Chinese literature, with a library, museum, branch schools, &c. and a grant of five hundred acres of uncleared ground for its support; but in the following year the impaired state of his constitution induced him to return to Europe. With this view he embarked his family on board the *Fame*, on the 2d February 1824; but a fire breaking out in the ship on the evening of the same day, both the vessel and cargo, including property of his own to the amount of nearly 30,000*l.* with many valuable papers, were destroyed at sea; the crew and passengers saving their lives with difficulty in the boats, and relanding in a state of utter destitution, about fifteen miles from Bencoolen, after passing a whole night on the ocean, in a state of the utmost privation and anxiety, as well as comparative nakedness. Of this calamity an interesting document remains, in a letter written by sir Thomas to a friend in England, dated the day after the accident, and since printed. In April the family embarked again on board the *Mariner*, which landed them in London, in the August of the same year. Sir Thomas, however, survived his return to England not quite two years, dying of an apoplectic attack in July 1826. In addition to the work already alluded to, he left behind him a memoir of Singapore, in manuscript; besides editing "Fin-

layson's Mission to Siam, with Memoirs of the Author," 8vo, 1822; and Dr Leyden's "Malay Annals," with an introduction.—*Ann. Biog.*

RAGOTSKI (FRANCIS) second of the name, prince of Transylvania, was born at the castle of Borshi in Hungary, in 1676. On the death of his father, he was carefully watched by the house of Austria, and forced to break off all correspondence with his mother; but zealous for the independence of his country, he secretly entered into a negotiation with Louis XIV., which being betrayed, he was arrested, and found guilty of high treason; however, by the affection of his wife, the princess of Hesse Rhinfelds, who gained over his keeper, he made his escape from prison; and having received assurances of succour from France, he entered Hungary, and published a manifesto, urging the people to free themselves from the tyranny of the Austrians. He was joined by a great number, and stormed some fortresses, taking a severe revenge upon the imperialists, who had given no quarter to the Hungarian insurgents. The crown of Poland being then vacant, it was offered to Ragotski, who declined it; and pursuing his successes, reduced Tokay and took Agria, in consequence of which, in 1704, he was proclaimed prince of Transylvania and protector of Hungary; he also received a public embassy from Louis XIV. He soon, however, felt the difficulty of opposing the arms and policy of a powerful sovereign, especially as Louis could not render him much assistance. He also found a rival in his friend and associate, count Bercheni; and, in consequence of a severe check received by his troops, they began to desert. The crown of Poland was again offered to him by the czar, Peter, and was again refused. In 1711 a treaty was concluded between the Hungarian states and the emperor, to which he refused to accede, though the first article secured his life and property, with the title of prince of Transylvania. Deeply wounded at this defeat of his patriotic exertions, he renounced his estates, and withdrew into Turkey, where he died, at his castle of Rodosto, on the shore of the sea of Marmora, in 1735. He wrote "Memoirs of his Life," published in the "Revolutions de Hongrie," Hague, 1739. There is also a work, but of doubtful authenticity, entitled "Testament politique et moral du Prince Ragotski." *Moreri. Sacy, Hist. de Hongrie.*

RAIKES (ROBERT) a printer and philanthropist, was born at Gloucester in 1735. His father was proprietor of the "Gloucester Journal," and the son succeeded him in the printing business, and having realized a good property, he employed it with his pen and his influence in relieving such objects as stood in need of his benevolent assistance. He is, however, best known for his institution of Sunday schools, which he planned conjointly with the rev Mr Stock in 1781. Mr Raikes died at Gloucester in 1811.—*Gent. Mag. Nichols's Bowyer.*

RAIMONDI (MARC ANTONIO) a cele-

beated old engraver, was born at Bologna in 1487 or 1488. He studied under Francesco Francia. He went to Venice for improvement, and while there copied a set of wood-cuts by Albert Durer with so much exactness that they were sold for the originals; and Albert Durer complaining of the injury, it was ordered that Raimondi should never again add the cypher of Durer to any of his copies. From Venice he went to Rome, and was employed by Raphael to engrave several of his designs. Raimondi soon formed a school at Rome, which eclipsed those of Germany, and the Italian style of engraving became the standard of excellence. On the death of Raphael he was employed by Julio Romano, and he disgraced himself by engraving his abominable designs in illustration of Aretine's verses. For this conduct Clement VII sent him to prison, from which he was released with great difficulty; he, however, procured favour by his exquisite Martyrdom of St Lawrence, and the pope became his protector. In 1527, when Rome was taken by the Spaniards, he lost all his wealth, and retired to Bologna, where he died in 1540. He is distinguished for the purity and correctness of his outlines; the character and execution of the heads also prove his judgment and proficiency.—*Strutt. Roscoe's Leo X.*

RAINOLDS (JOHN) a learned divine, was born at Pinho, in Devonshire, in 1549, and became a scholar and fellow of Corpus Christi college, Oxford, where he read lectures on Aristotle. In 1585 he took the degree of DD, and the year following was appointed reader of the theological lecture founded by sir Francis Walsingham. In 1593 he was made dean of Lincoln, which preferment he resigned on being chosen president of his college. He was deemed the leader of the puritan party, and distinguished himself greatly at the Hampton-court conference in 1603, where he suggested the necessity of that new translation of the Bible which is now the standard one, and in which he himself actively engaged. He died in 1607. Several of his orations, and other works, have been printed.—His brother, **WILLIAM**, was educated at Winchester, and became a fellow of New college, Oxford, but afterwards turned Romanist, and proceeding to Rheims, obtained a professorship. He wrote some books against the Protestants, and died at Antwerp in 1594.—*Athen. Oxon.*

RALEGH or RALEIGH (sir **WALTER**) a distinguished warrior, statesman, and writer, in the reigns of Elizabeth and James I, was the second son of a gentleman of ancient family in Devonshire. He was born in 1552, at the parish of Budley in that county, and was sent to Oriel college, Oxford, where his proficiency in his academical studies inspired a high opinion of his capacity. His active disposition and martial ardour led him, at the age of seventeen, to form one in a body of a hundred gentlemen volunteers, which was raised to assist the French Protestants. He subsequently accompanied the forces sent

under general Norris to assist the Dutch, and afterwards accompanied his half-brother, sir Humphrey Gilbert, in a voyage to Newfoundland. On his return he distinguished himself against the Irish rebellion, headed by Desmond, and supported by Spain, and was joined in a commission for the government of Munster, and rewarded for his active and able services by a considerable estate in Ireland. His favour at the court of Elizabeth was much advanced by an act of gallantry, of a nature particularly adapted to flatter and excite the attention of that sovereign. Once attending the queen in a walk among a crowd of courtiers, she came to a spot in which the path was obstructed by mire, which being observed by Raleigh, he immediately took off his rich plush cloak, and spread it on the ground for a foot-cloth. He was subsequently much distinguished and employed, until, in 1584, his active and enterprising disposition was manifested in a scheme for the discovery and settlement of all those parts of North America that were not already appropriated to Christian states. By his interest he obtained a very extensive patent for this purpose, and by the help of a society of friends two ships were fitted out. These vessels having brought home cargoes that sold well, a second expedition of seven vessels followed, under the command of sir Richard Greenville, Raleigh's kinsman. The latter enterprise terminated in the settlement of Virginia, so called in honour of queen Elizabeth; and is said to have first introduced tobacco and potatoes to Europe. In the mean time his personal consequence increased at home, being chosen knight of the shire for the county of Devon, honoured with knighthood, and made warden of the Stannaries. He was also rewarded by several lucrative grants, including a large share of the forfeited Irish estates, and he secured so high a degree of favour, that the earl of Leicester became jealous, and brought forward the earl of Essex as a competitor. He was one of the council to whom the consideration of the best means of opposing the Spanish armada was entrusted; and was among the number of gallant volunteers who joined the English fleet with ships of their own, and assisted in its defeat. In 1589 he accompanied the expelled king of Portugal in his attempt to reinstate himself, for which service he received several additional marks of favour and emolument, for although fond of glory, he was almost equally so of gain. He rendered himself obnoxious by taking bribes for the exertion of his influence; and his never-ending solicitations at length extorted a reproof from Elizabeth herself, which he parried with his usual address. On his return from Portugal he visited Ireland, and contracted an intimate friendship with the poet Spenser, then residing upon a property conferred upon him in that country. Spenser celebrated sir Walter under the title of "The Shepherd of the Ocean;" and to his great work, the "Faery Queen," prefixed a letter to him, explanatory of its plan and design, and the latter in return introduced the poet to Elizabeth. In 1592 he commanded

an expedition with a view of attacking Panama, but was recalled by the queen, and soon after incurred her deep displeasure by an illicit amour with one of her maids of honour, the daughter of sir Nicholas Throckmorton; and although he made the best reparation in his power, by marrying that lady, he was imprisoned for some months, and banished the queen's presence. In order to recover favour, he then planned an expedition to Guiana, in which he embarked in person in February 1595, and reached the great river Orinoco, but was obliged by sickness and contrary winds to return, after having done little more than taken a formal possession of the country in the name of Elizabeth. In 1596 he had so far regained favour, that he had a naval command under the earl of Essex in the attack on Cadiz, with which aspiring nobleman a difference ensued, that laid the foundation of a lasting enmity between them. Sir Walter was subsequently fully restored to the good graces of Elizabeth, who nominated him to the government of Jersey. He witnessed the ruin of his antagonist, the earl of Essex, whose execution he indecently urged, and personally viewed from a window in the armoury. The rapid decease of the queen, which this very catastrophe hastened, put a period to his prosperity. James I, whom, in conjunction with some other courtiers, he sought to limit in his power of introducing the Scots into England, naturally resented that attempt, and otherwise disliked him as the enemy of his friend the earl of Essex. Although he received him with external civility at court, he was deprived of his post of captain of the guards, and evidently discountenanced. This treatment naturally preyed upon a man of his high spirit, and a mysterious conspiracy having been formed for the purpose of placing upon the throne the lady Arabella Stuart, sir Walter was accused of participating in it, by lord Cobham, a man of unsteady character, to whose idle proposals he had given ear without approving them. For this offence, by the base subservience of the jury to the wishes of the court, he was brought in guilty of high-treason, even to the surprise of the attorney-general Coke himself, who declared that he had only charged him with misprision of treason. Three were executed for this plot, and Raleigh reprieved and committed to the Tower, where his wife, at her earnest solicitation, was allowed to reside with him, and where his youngest son was born. Though his estates in general were preserved to him, the rapacity of the king's minion, the infamous Car, seized on his fine manor of Sherborne, upon a flaw found in his prior conveyance of it to his son. It was not until after twelve years' confinement that he obtained his liberation, during which interval he composed the greater part of his works, and especially his "History of the World." He was only released at last by the advance of a large sum of money to the now favourite, Villiers; and to retrieve his broken fortunes, he planned another expedition to America. He obtained a patent under the

great seal for making a settlement in Guiana; but in order to retain a power over him, the king did not grant him a pardon for the sentence passed upon him for his alleged treason. How far Raleigh knowingly deceived the court by his representations of rich discoveries and gold mines, it is impossible now to ascertain; but although certain that he was not authorised to commit hostilities against Spanish settlements, the asserted title of England to Guiana left him a wide latitude of interpretation. Be this as it may, having reached the Orinoco, he despatched a portion of his force to attack the new Spanish settlement of St Thomas, which was captured with the loss of his eldest son. The expected plunder, however, proved of little value, and sir Walter, after having in vain attempted to induce his captains to attack other Spanish settlements, returned home with a heavy heart, and arrived at Plymouth in July 1618. In the mean time, the complaints and influence of the Spanish ambassador had produced such an effect upon James, who was seeking the hand of the infanta for his son Charles, that Raleigh was arrested on his journey to London, and carried back to Plymouth. He there laid a plan of escaping to France, which failing, he was brought to the metropolis, and committed to the Tower. James had reason to be offended with the conduct of Raleigh against a power in amity with himself, and might have tried him for this new offence; but with his usual mean and inconsistent pusillanimity, he determined to execute him on his former sentence. Being brought before the court of King's Bench, his plea of an implied pardon by his subsequent command, was overruled; and the doom of death being pronounced against him, it was carried into execution the following day, October 29, 1618, in Old Palace-yard. His behaviour at the scaffold was calm, intrepid, and worthy his vigorous character; and after addressing the people at some length in his own justification, he received the stroke of death with the most perfect composure. Thus fell sir Walter Raleigh, in the sixty-sixth year of his age, by a sentence which has justly been regarded as one of the most odious acts of the weak and inglorious reign of James I. As a politician and public character, this eminent person is open to much severe animadversion; and it would be an abuse of terms to denominate him a pure patriot: but, in extent of capacity, and vigour of mind, he had few equals, even in an age of great men. His long imprisonment has placed him high among the writers, as well as among the great captains and leaders of his country. His writings are on a variety of topics, poetical, military, maritime, geographical, political, and historical. His poetry is now nearly obsolete, and most of his miscellaneous pieces have ceased to interest; but his "History of the World" is still read, and is regarded as one of the best specimens of the English of his day, being at once the style of the statesman and the scholar. The compass of the work did not admit that fulness of narrative which amounts to

history in its most perfect form; but he is often an acute and eloquent reasoner on historical events. The best edition is that of Oldys, 1736, 2 vols. folio. Of his numerous miscellaneous works, an edition by Dr Birch was published in 1748, in 2 vols. 8vo.—**CAROLUS RALSON**, the younger son of sir Walter, born in the Tower in 1604, was restored in blood, but with extreme meanness: the resignation of all claim to his estate of Sherborne was made the price of this royal favour. In 1659 he was made governor of Jersey; and dying in 1666, he was buried in the same grave with his father. Charles II would have knighted him, but he declined the honour. He was the author of some sonnets, and other minor compositions.—*Life by Cayley. Biog. Brit. Hume.*

RALEIGH, DD. (WALTER) an English divine, was born at Downton, in Wiltshire, in 1586, and was the nephew of sir Walter, being the son of his elder brother. He was educated at Winchester, and thence removed to Oxford. On receiving orders he obtained the living of Chedzoy in Somersetshire, and in 1630 became chaplain to the king. In 1641 he was made dean of Wells, but lost all his preferments and property during the subsequent civil contests, his own deanery being converted into a prison. He lost his life by the brutality of his gaoler, who stabbed him while endeavouring to conceal a letter which he had been writing to his wife. Of this wound he died, October 10, 1646. He left behind him in MS. discourses and sermons on several subjects, published in 1679 by Dr Patrick, bishop of Ely, under the title of “*Reliquiæ Raleghianæ*,” 4to.—*Athen. Oxon. Preface to Reliquiæ.*

RALPH (JAMES) a multifarious writer of the last century. He was a native of Philadelphia, in North America, and came to England as a literary adventurer in 1725, in company with the afterwards celebrated Benjamin Franklin. In 1728 Ralph published a poem, entitled “*Night*,” to which Pope thus alludes in the Dunciad:—

———“*Ralph to Cynthia howls,
Making night hideous—answer him, ye owls!*”
He afterwards attempted the drama, but without success; and having produced a tragedy, a comedy, an opera, and a farce, he took up the employment of a party writer. In 1742 he published an Answer to the Memoirs of Sarah, Duchess of Marlborough; and in 1744 appeared his “*History of England, during the Reigns of Charles II, James II, William III, &c.*” 2 vols. folio, which, as a work of research, is by no means destitute of merit. He was at length connected with the politicians and literary men who were attached to the service of Frederic, prince of Wales; in consequence of which Ralph is said to have become possessed of a manuscript written by the prince, or under his direction, to which so much importance was attributed, that a gratuity or a pension was bestowed on the holder, as a compensation for surrendering it. He certainly obtained pension after the accession of his late majesty; but he did not long enjoy it, as his

death took place in 1762. Besides the works mentioned, he published a treatise on the “*Use and Abuse of Parliaments*,” 2 vols. 8vo; “*The Case of Authors by Profession*,” 8vo; and a number of political pamphlets.—*Davies's Life of Garrick. Chalmers's Biog. Dict.*

RAMAZZINI (BERNARDIN) an Italian physician, born of a good family, at Carpi near Modena, in 1633. He studied at Parma, where he took the degree of MD. in 1659; after which he went to Rome for farther improvement, and then settled as a physician in the duchy of Castro. He subsequently removed to his native place, and thence to Modena, where, in 1682, he was made professor of medicine in the university then recently founded by duke Francis II. In 1700 he accepted of a professorship at Padua, and notwithstanding he was afflicted with blindness, he afterwards became rector of the university. He died November 5, 1714. He wrote on many medical and philosophical subjects; and his treatise on the Diseases of Mechanics has been translated into English.—*Hutchinson's Biog. Med.*

RAMEAU (JEAN PHILIPPE) sometimes styled by his countrymen “*The Newton of Harmony*,” an able French theorist, universally admitted to rank far above all his predecessors or contemporaries in the philosophical view he took of the science of music. He was a native of Dijon, born September 25, 1683; and having, at a very early age, acquired some skill and great taste in music, joined a strolling company of performers, whom he accompanied into Germany and elsewhere, and by whose assistance a musical entertainment of his composition was represented at Avignon, in the eighteenth year of its author. Anxious at length to obtain some more settled situation, Rameau became a candidate for that of organist to a church in Paris, but failing, was on the point of relinquishing the profession, when he fortunately obtained a similar appointment in Clermont cathedral. Here he applied himself with great perseverance and success to the study of the principles of his profession, and in 1722 printed the first fruits of his investigation in an able treatise, entitled “*Traité de l'Harmonie*.” Four years after appeared his second work, “*Nouveau Système de Musique Théorique*,” which was afterwards followed by his “*Generation Harmonique*,” and a tract upon the art of accompaniment; but it was not till the year 1750 that he published his celebrated “*Dissertation sur le Principe de l'Harmonie*,” which not only acquired for him the respect of all succeeding harmonists, and of Handel especially, but stamped his character with the world as a man of science and general talent. In this work he reduces harmony to one single principle, the fundamental bass, on which he proves all the rest to depend. The reputation which this work procured him was the means of his receiving an invitation from the court to superintend the opera at Paris, which he brought to a state of comparative perfection, by the pains which he bestowed on the selection of

RAM

performers and the production of original music. He possessed a great facility in adapting words to music, and piqued himself so much upon this talent, that he is said to have declared he would set a Dutch gazette, if it was required of him. His remaining theoretical works are, "Remarks on the Demonstration of the Principles of Harmony;" "Reply to a Letter of M. Euler," both printed in 1752; "On the Instinctive Love of Music in Man," 1754; "On the Mistakes of the Encyclopædia with respect to Music," 1755; and a "Practical Code of Music," 1760. He was also the author of six operas, "Hippolyte et Aricie," "Castor et Pollux," "Dardanus," "Samson," "Pygmalion," and "Zoroaster," besides a great variety of ballets and other minor pieces. Louis XV acknowledged his merits by the grant of a patent of nobility and the order of St Michael. Rameau did not, however, long enjoy his new honours, dying at Paris in the autumn of 1764.—*Burney's Hist. of Music. Biog. Diet. of Mus.*

RAMLER (CHARLES WILLIAM) a German poet, born at Colberg in Pomerania, in 1725. He was educated at an orphan school at Stettin, and afterwards at the university of Halle, where he became intimate with Gleim and Uz, two contemporary poets. The former, in 1746, procured him the situation of a private tutor at Berlin. He soon made himself known by his writings, and was appointed professor of logic and belles lettres to the royal corps of cadets in that city. In 1787 he was admitted into the Academy of Sciences, and, in conjunction with Engel, he had the direction of the national theatre. He resigned his professorship in 1790, and his theatrical office in 1796, soon after which he was attacked with a pulmonary disease, which caused his death April 11, 1798. His works consist of Songs, Odes, Fables, and Tales, original and translated; besides which he published an Abridgment of Mythology, and a translation of the abbé Batteux's Course of Polite Literature.—*Biog. Univ.*

RAMSAY (ALLAN) called the Scottish Theocritus, was born in 1685, in a little village on the high mountains that divide Clydesdale and Annandale, in the south of Scotland. He was the son of a peasant, and probably received such instruction as his parish school afforded, and the poverty of his parents admitted. He made his appearance at Edinburgh at the beginning of the last century, in the humble character of an apprentice to a barber or peruke-maker. By degrees he obtained notice for his social disposition and his talent for the composition of verses in the Scottish idiom; and changing his occupation for that of a bookseller, he became intimate with many of the literary, as well as many of the gay and fashionable characters of his time. Having published, in 1721, a volume of his own poetical compositions, which was favourably received, he undertook to make a collection of ancient Scottish poems, which appeared under the title of "The Evergreen." And he was afterwards encouraged to present to

RAM

the world a collection of Scottish Songs. From what source he procured the latter is uncertain; but as in the Evergreen he made rash attempts to improve on the originals of his ancient poems, he probably used still greater freedom with the songs and ballads. To several tunes, which either wanted words, or had words which were improper or imperfect, words were adapted highly worthy of the delightful melodies they accompanied. In the execution of this part of his undertaking, Ramsay associated with himself several men of wit and talent among his contemporaries, who attempted to write poetry in his manner; but these individuals in general do not seem to have been ambitious of poetical fame, and the respective shares of the editor of the Scottish Songs and his coadjutors, in the original compositions which they include, cannot now be distinctly ascertained. Ramsay's principal productions are, "The Gentle Shepherd," and two additional cantos of "Christie Kirk of the Grene," a tale, the first part of which is attributed to James I of Scotland. The latter, though objectionable in point of delicacy, has been regarded as the happiest of the author's effusions. His chief excellence, indeed, lay in the description of rural characters, incidents, and scenery; for he did not possess any very high powers, either of imagination or of understanding. He was well acquainted with the peasantry of Scotland, their lives and opinions. The subject was in a great measure new; his talents were equal to the subject; and he has shown that it may be happily adapted to pastoral poetry. In his Gentle Shepherd, a rural drama, the characters are delineations from nature; the descriptive parts are in the genuine style of beautiful simplicity; the passions and affections of rural life are finely delineated, and the heart is agreeably interested in the happiness that is represented as the reward of innocence and virtue. Throughout the whole there is an air of reality which cannot but strike the most careless reader; and, in fact, no poem perhaps ever acquired so high a reputation, in which truth received so little embellishment from the imagination. In his pastoral scenes, and in his rural tales, Ramsay appears to less advantage, but still with considerable attraction. His tales exhibit both the faults and the beauties of those of Prior and La Fontaine. When he attempts descriptions of high life, and aims at pure English composition, he fails entirely, becoming feeble and uninteresting; neither are his familiar epistles and elegies in the Scottish dialect entitled to much approbation. This poet died January 5, 1758.—*Dr Currie's Life of Burns. Aikin's Gen. Biog.*
—**RAMSAY** (ALLAN) son of the foregoing, born at Edinburgh in 1709, was instructed in portrait-painting, in which art he attained considerable eminence. He prosecuted his studies at Rome, and on his return to Scotland, he settled at his native place, where he became the founder of a literary society. He subsequently removed to London, and was appointed to the office of portrait-painter to the

king. He published a tract on "The Present State of the Arts in England;" and also a volume of Essays. His death took place in 1784, just after his return from a visit to Italy.—*Pilkington's Dict. by Fuseli.*

RAMSAY (ANDREW MICHAEL) an ingenious writer, born of an ancient family, at Ayr, in Scotland, in 1686. He studied at Edinburgh, and afterwards going to St Andrew's, he became tutor to the son of lord Wemyss. Having doubts of the truth of the Protestant doctrines, he consulted several eminent divines of the Scottish and English churches, without receiving any satisfaction, in consequence of which he at length became an absolute sceptic. He then went to Holland, where he met with the famous mystic Poiret, whose conversation excited afresh his attention to religious inquiries, and afterwards visiting the amiable Fenelon, archbishop of Cambray, he was by that prelate converted to the Catholic faith in 1709. Through his recommendation Ramsay was appointed governor to the duke de Chateau Thierry, and to the prince de Turenne, and was made a knight of the order of St Lazarus, whence he is frequently termed the chevalier Ramsay. He was subsequently employed in the education of the children of the pretender, called James III, who had taken refuge at Rome. This office he lost, through the intrigues of other persons belonging to the little court of the exiled prince; and in 1730 he went to England, where he was admitted a fellow of the Royal society, and had the degree of doctor conferred on him by the university of Oxford. Returning to France, he became intendant to the prince de Turenne, afterwards duke de Bouillon; and he died at St Germain-en-Laye, May 6, 1743. His principal works are a "Philosophical Essay on Civil Government;" "The Life of Fenelon;" "The History of Marshal Turenne;" "The Travels of Cyrus," an imitation of Fenelon's Telemachus, which is the best known and most admired of all his productions; and "Philosophical Principles of Natural and Revealed Religion," published posthumously.—*Aikin's G. Biog. Biog. Univ.*

RAMSAY (DAVID) an American physician and historical writer, who was a native of Charlestown, in South Carolina. He engaged in the practice of medicine at the place of his birth; and he was a member of the congress of the United States from 1782 till 1785. Having gone to visit the patients in a lunatic asylum, in 1815, he was unfortunately killed by one of the insane objects of his professional attentions. Dr Ramsay was the author of "A History of the American Revolution, so far as respects the State of S. Carolina," 1791, 2 vols. 8vo; "The Life of George Washington," 1807, 8vo; both which works were translated into French: "A Discourse delivered on the Anniversary of American Independence," 1800; and "A View of the Improvements made in Medicine during the Eighteenth Century," 1802, 8vo.—*Biog. Univ.*

RAMSAY (TAKES) the name of a Scottish

divine, a native of Aberdeenshire, born 1733, and bred a surgeon, in which capacity he served some years on board a king's ship, but becoming disabled through an accident, entered the church, and obtained a benefice in the island of St Kitts. This he afterwards resigned, and returning to this country, was preferred to the rectory of Teston, near Maidstone, which he held with the living of Nettlestead. Besides a volume of sermons, adapted for the use of the navy, he was the author of a treatise "On Signals;" "On the Duties of a Naval Officer;" "On the Treatment, Civil and Religious, of the Negro Slaves," &c. His death took place in 1789.—*Naval Chronicle.*

RAMSDEN (JAMES) an eminent mechanist and optician, was born at Halifax in Yorkshire, in 1738. He came to London, and applied himself to engraving, and in the course of his employment having to engrave several mathematical instruments, he finally constructed them himself. He married a daughter of Mr Dolland, the celebrated optician, and opened a shop in the Haymarket, whence he removed to Piccadilly, where he remained until his death, which took place in 1800. He early obtained a premium from the board of longitude, for the invention of a curious machine for the division of mathematical instruments; he also improved the construction of the theodolite, the pyrometer for measuring the dilatation of bodies by heat, the barometer for measuring the height of mountains, &c.; also the refracting micrometer and transit instrument and quadrant. He made great improvements in Hadley's quadrant and sextant, and he procured a patent for an amended equatorial. Mr Ramsden, who was chosen a fellow of the Royal Society in 1786, was distinguished during the whole of his life by an enthusiastic attention to his own profession, which formed his amusement as well as his occupation; and such was his reputation, that his instruments were bespoken from every part of Europe; and ultimately, although he employed sixty men, to obtain the fulfilment of an order was deemed a high favour. His death, in fact, originated in his too sedulous application upon a slender frame of body and delicate constitution.—*Hutton's Math. Dict.*

RAMUS (PERNA) a philosopher of the sixteenth century, who was a native of the county of Vermandois, in France. He went to Paris about 1523, when he was but eight years old, and became a laquay in the college of Navarre. Such was his strong inclination for learning, that he not only devoted to study all the time he could spare in the day, but also employed a part of the night in the same manner. After attending a course of philosophy in the schools for three years and a half, he was admitted to the degree of MA, on which occasion he maintained a thesis, in which he contested the infallibility of Aristotle. His opinions excited violent opposition, which had the usual effect of rendering him more zealous in supporting and publishing them. The partisans of the Aristotelian philosophy displayed the weakness of their cause, by having re-

course to the civil power, in order to silence their adversary. Charges against Ramus were prosecuted before the parliament of Paris, and afterwards before the king's council; the result of which was that his publications were censured, prohibited, and ordered to be burnt before the royal college of Cambridge, and he was commanded to abstain from teaching his doctrines, in 1543. He became the subject of much public obloquy, and was even ridiculed on the stage. Having obtained the patronage of the cardinal de Lorraine, the prohibition of lecturing was withdrawn in 1547; and in 1551 he was appointed royal professor of rhetoric and philosophy at Paris. In this situation he might perhaps have enjoyed tranquillity, if he had not entered into a violent controversy with the doctors of the Sorbonne, relative to the pronunciation of the letter Q in Latin words, which was at last settled by a decree of parliament in favour of Ramus. His spirit of free inquiry ultimately led him to relinquish the faith in which he had been educated, and become a Protestant. This change exposed him to persecution, and he was obliged to flee from Paris; but in 1563, peace being concluded between Charles IX and the Huguenots, he was restored to his professorial chair, and he employed himself in the cultivation of mathematical science, till 1567, when he again consulted his safety by flight, and putting himself under the protection of the army of the prince of Condé, he was present at the battle of St Denis; and soon after he was re-established in his situation. The approaching renewal of hostilities induced him to demand the king's permission to visit the German universities; and having obtained it, he went to Germany in 1568, and was everywhere received with the respect due to his talents. He returned to Paris after the third pacification between Charles IX and his Protestant subjects; and in the infamous massacre which took place on St Bartholomew's day, 1572, Ramus was one of the victims. His works, relating to grammar, logic, mathematics, &c. are numerous, as appears by the list in the first of the following authorities.—*Tessier Eluges des H. S. Martin's Biog. Philos. Aikin's Gen. Biog.*

RAMUSIO (GIOVANNI BATTISTA) a Venetian diplomatist of the sixteenth century, born about the year 1486. He was appointed to the post of secretary to the council of Ten, and served the republic in various embassies to the courts of Rome, Paris, the Swiss Cantons, &c. As a writer, he is advantageously known by a valuable collection of voyages, in three folio volumes. He also published a treatise on the overflowing of the Nile. His death took place in 1557, at Padua.—*Moreri. Nouv. Dict. Hist.*

RANCE (ARMAND JOHN LE BO. THILLIER de) the reformer of La Trappe, was born of a noble family at Paris, in 1626. At the age of ten he was nominated a canon of Notre Dame at Paris, and soon after the king gave him the sinecure priory of Boulogne, near Chambor. At twelve or thirteen, with the assistance of

his tutor, he published a new edition of "The Poems of Anacreon, in Greek, with learned Annotations." In 1651 he was ordained priest, and three years after he received the degree of DD. He was a great favourite at court, and became almoner to the duke of Orleans, and one of the deputies of the second order in the assembly of the clergy in 1655. The causes to which is attributed his retirement from the world are various; one writer says, that it was the consequence of a visit paid to a favourite lady, whom he found dead of the small-pox, and frightfully disfigured. He retired to his abbey of La Trappe, where he instituted the severe discipline for which that monastery is so celebrated. In this retreat he lived, observing all its austere regulations, until his death, which took place in 1700. His works are "Reflexions Morales sur les Quatre Evangiles," 4 vols. 12mo; "Conférences sur les Evangiles," 4 vols. 12mo; "Conduite Chrétienne;" "Accounts of the Lives and Deaths of some Monks of La Trappe;" "The Constitutions and Rules of the Abbey of La Trappe;" "Spiritual Letters;" "De la Sainteté des Devoirs de l'Etat Monastique;" "Eclaircissements sur ce Livre;" "Explication sur la Règle de S. Benoît," 12mo.—*Moreri. Dict. Hist. Senard's Anecdotes. Gent. Mag.*

RANDOLPH (THOMAS) an English divine, was born in 1523. He was a native of the county of Kent, and received his education at Christchurch, Oxford, in which university he rose to be head of Broadgate-hall, 1548. From this situation he was deposed by queen Mary, on account of his adherence to the reformed church, and found it advisable to imitate the example set him by many of his brethren, and retire to the continent. In the succeeding reign he returned to England, and was employed by the court in several diplomatic missions to Paris, Edinburgh, Moscow, &c. in which latter capital he fought a duel with the French envoy, to revenge a slight offered his royal mistress Elizabeth in conversation. His services on these occasions were eventually rewarded by the honour of knighthood, and the post of chamberlain to the exchequer. Besides his correspondence, which has been printed, he was the author of a curious account of his Russian embassy, to be found in Hakluyt. His death took place in 1590.—*Biog. Brit.*

RANDOLPH (THOMAS) a poet and dramatist, was a native of Newnham, Northants, and born in 1605. His father, who acted in the capacity of steward to a nobleman, placed him on the foundation at Westminster, whence he removed to Trinity college, Cambridge, and was eventually elected a fellow of that society. The possession of a lively genius and poetic talents, much above mediocrity, introduced him into the society of most of the wits of the age, by many of whom, especially by the celebrated Ben Jonson, he was much caressed. Unfortunately a strong natural disposition towards the pleasures of a town life, by this means received encouragement rather than that

R A N

wholesome check which the delicacy of his constitution required, and he sunk under the effects of dissipation before he had attained his thirtieth year. He was the author of "The Muses' Looking-glass," and of five other comedies, all possessed of considerable merit, which were collected and published after his decease by his brother Robert, rector of Donnington, together with his miscellaneous poems. They have since gone through several editions.—*Biog. Brit. Biog. Dram. Ellis's Specimens.*

RANDOLPH (THOMAS) an eminent divine, was the son of a barrister of some eminence, recorder of the city of Canterbury, where he was born about the commencement of the last century; and having received the rudiments of a classical education at the king's school, went off upon the foundation to Corpus Christi college, Oxford, of which society he eventually became president in 1748. Besides the valuable benefices of Petham, Waltham, and Saltwood, all in the immediate neighbourhood of his native city, his distinguished talents as a theologian raised him to the lady Margaret divinity chair, and the archdeaconry of Oxford, to which latter dignity he was elevated in 1768. As a controversialist he acquired considerable reputation by his "Vindication of the Doctrine of the Trinity," &c. His other works consist of "A View of the Ministry of our Saviour Jesus Christ," 8vo, 2 vols.; "The Christian's Faith a rational Assent;" "Citations from the Old Testament contained in the New;" and a volume of sermons preached at St Mary's, Oxford. He died in 1783, leaving behind him two sons; of these, JOHN RANDOLPH was afterwards bishop of London. This learned prelate was born in the year 1749, and obtained, at the usual age, a studentship at Christchurch, Oxford, where he graduated, and having become highly distinguished in the university by his industry and talents, was elected to the regius professorship of divinity in 1783. In 1799 he was raised to the episcopal bench as bishop of Oxford, over which see he presided about seven years, and was then translated to the more lucrative diocese of Bangor. Two years afterwards he was farther promoted to the bishopric of London, but enjoyed this accession of dignity not quite four years, being carried off by a fit of apoplexy in the summer of 1813. Several monuments of his classical, as well as the theological attainments, exist in his "Prælectio de Linguae Græcæ Studio," &c; his "Sylloge Confessionum;" "Concio ad Clerum," &c. Though austere, and even rough in his manners, bishop Randolph was equally distinguished by the soundness of his abilities, the real benevolence of his disposition, and the uncompromising firmness which he displayed in the regulation of his diocese, and the execution of his clerical duties.—*Life of Himself by Dr T. Randolph. Gent. Mag.*

RANNEQUIN or RENNEQUIN, the usual appellation of an engineer, who rendered himself famous by the construction of the

R A P

machine of Marli for the supply of Versailles with the water of the river Seine. His proper name was Swalm Renkin, and he was the son of a carpenter of Liege, where he was born in 1644. He was brought up to his father's occupation, and, like our countryman Brindley, he appears to have acquired his mechanical skill by means of native genius and self-instruction. The machine which he constructed consisted of a vast series of pumps and canals, by means of which the water was raised 476 feet above the mean height of the river. It was commenced in 1675, under the ministry of Colbert, and completed under that of Louvois in 1682. Some improvements were made in the works in the latter part of the last century; and the machine has been since entirely destroyed. Rannequin died July 29, 1704.—*Biog. Univ.*

RAPHAEL (RAFFAELLO SANZIO da Urbino) the most eminent of modern painters, was born at Urbino in 1483, being the son of a painter of no great estimation. He was the pupil of Pietro Perugino for three years, at the end of which time, in 1499, he went with Pinuccio to Sienna, to assist him in painting the history of Pius II, for the library of the cathedral. He next went to Florence, to pursue his studies in that great school; and in 1506 he was invited to Rome by pope Julius II, who employed him in painting in fresco the chambers of the Vatican; and it was here that he painted his famous picture of the School of Athens. On the accession of Leo X, he prosecuted his labours with increased spirit, and executed his Attila, and the Deliverance of St Peter. He was also employed by the rich banker, Agostino Chigi, for whose family chapel he painted some of his most beautiful pieces; but a passion which he conceived for a beautiful young woman, the daughter of a baker, who thence took the name of La Bella Fornarina, causing him to withdraw to her house, Chigi invited her to his palace, that the painter might undergo no interruption. Raphael was also distinguished as an architect; and on the death of Bramante, Leo confided to him the completion of the galleries or loggie of the Vatican, in which he displayed great and elegant invention. He was also superintendent of the building of St Peter's, in conjunction with Fra Giocondo, and was employed by the pontiff to make designs for some tapestry to be executed in Flanders, whence those famous cartoons, obtained by Charles I, still in royal possession. The result of a rivalry with Sebastian del Piombo was the celebrated Transfiguration, in which he fully demonstrated his superiority. He also commenced an apartment in the Vatican, called the hall of Constantine, but was prevented from finishing it by his untimely death, which took place on his thirty-seventh birthday, 1520. Leo testified great emotion at the news of his decease, and caused his body to lie in state, in a hall in which was placed his picture of the Transfiguration. He was buried in the church of the Rotondo at Rome, and cardinal Bembo wrote his epitaph. Raphael was handsome,

and of a mild and amiable character; but his immoderate attachment to the fair sex induced him to decline matrimony, though cardinal Bibiena offered him one of his nieces. The superiority which he possessed above any other painter, consists of his mastery in every branch of the art, united with his own peculiar excellencies. According to Fuseli, the drama, or in other words the representation of characters in conflict with passions, was his sphere, in respect to which his invention in the choice of the moment, his composition in the arrangement of the actors, and his expression in the delineation of their emotions, he has always been deemed unrivalled. To all this he added a style of design dictated by the subject itself, a colouring suited to it, and as much chiaro-scuro as was compatible with his ruling regard to perspicuity and force. His greatest works remaining are the frescoes in the Vatican. His oil pictures are every where most highly prized, and more than 740 pieces have been engraved from the designs of Raphael.—*D'Argenville. Roscoe's Leo X. Pilkington by Fuseli.*

RAPHELENGIUS (FRANCIS) a Flemish professor of the sixteenth century, one of the most distinguished Orientalists of his day. He was a native of Lanoy, born 1539, and received his education in the university of Paris. Raphaelengius afterwards came to this country, and supported himself for some time by giving lectures on the Greek language at Cambridge. Returning to Flanders, he settled at Antwerp, where he married, and superintended the press of his father-in-law, the well-known Christopher Plantin. While in this situation, he assisted in the production of the Antwerp Bible, 1571; and published two lexicons of the Arabic and Chaldee languages, a Hebrew grammar, and some learned "Remarks on the Chaldee Paraphrase." His death took place in 1597, at Leyden, where, for the last twelve years of his life, he had filled the chair as professor of Eastern languages. He left behind him a son of the same name, who was also a good classical scholar, and is known as the author of an elegiac poem to the memory of illustrious scholars, and some able notes on Seneca.—*Moreri. Tiraboschi.*

RAPIN (RENE) a French jesuit and man of letters, born at Tours in 1621. He entered into the order of Jesus in 1639, taught during nine years the belles lettres, and published between 1657 and 1687 a great number of works in prose and verse, both in the Latin and French languages. His contemporaries have praised him for the urbanity of his manners and his agreeable disposition, which did not, however, prevent him from engaging in warm controversies with Maimbourg and father Vasseleur, nor from the display of an immoderate degree of zeal against the Jansenists. Among his principal works are his Latin poem on gardens; "*Hortorum, libri iv.*" translated into English by Evelyn, and by Gardiner; "*Odes.*" "*Reflections on Eloquence.*" "*Reflections on the Poetics of Aristotle.*" and "*Comparisons between the great Writers of Antiquity.*"

He died at Paris, October 27, 1687. An English translation of the critical works of Rapin was published by Basil Kennet, 2 vols. 8vo.—*Dict. Hist. Bing. Univ.*

RAPIN DE THOYRAS (PAUL) a respectable historian, born at Castres in Languedoc, in 1661. He was the younger son of James Rapin, sieur de Thoyras, descended from a noble family of Savoy, which came into France in the reign of Francis I, for the sake of professing the reformed religion. He received his education at Puylaurens and Saumur, and then studied the law under his father, who was an advocate, until the revocation of the edict of Nantz drove him to England, and subsequently to Holland, where he entered into a company of French cadets at Utrecht, commanded by his cousin. In 1689 he followed the prince of Orange into England, and obtained an ensigncy in Lord Kingston's regiment, which he accompanied to Ireland, and so much distinguished himself at the battle of the Boyne, that he was rewarded with a company. He left Ireland in 1693, upon being appointed tutor to the son of the earl of Portland, and resigning his commission, received a pension from the crown of 100*l.* per annum. He accompanied his pupil to France and Holland, and then returned to the Hague, where he married. Having lost his pension by the death of king William, in 1707 he settled at Wesel, in the duchy of Cleves, and devoted himself to the composition of his well-known "*History of England.*" He died at Wesel in 1725. His great work, "*L'Histoire d'Angleterre.*" was printed at the Hague in 10 vols. 4to, 1725-1726. He lived himself to publish the eighth volume, which ends with the death of Charles I. His two remaining volumes, left in MS. did not appear until 1726. This laborious work has been twice translated into English; and Tindal, who corrected some of its errors and added valuable notes, continued it up to 1760. It is written in a prolix and unanimated manner, but deserves the praise of much solid information, and of a far higher degree of impartiality than had been exhibited by any of the historians who preceded him. He uniformly shows himself the steady friend of civil and religious liberty; and upon the whole his History may be regarded as meriting the popularity which it acquired before the publication of Hume's, and which it still partly retains. Besides this long work, he published, in 1717, a "*Dissertation sur les Whigs et Torys.*" and undertook an abridgment of Rymer's "*Fœdera.*" which was published in Le Clerc's "*Bibliothèque Choisie.*" —*Biog. Brit. Life prefixed to History.*

RAPIN (NICHOLAS) a French poet, was born at Fontenai-le-Comte in Poitou, in 1535. He was vice-seneschal of his native province, and went afterwards to Paris, and obtained a post under government. He died in 1679. His Latin epigrams are much admired, as also the principal of his French poems, entitled "*Les Plaisirs du Gentilhomme Champêtre.*" He made a vain attempt to compose French blank verse, and was one of

the writers concerned in the celebrated "Satire Menippée." All his works were printed at Paris in 1610, 4to.—*Niceron. Moreri.*

RAPP (JOHN) a French general officer, who was born of an obscure family at Colmar, in Alsace, in 1772. He engaged in military service in 1788, and attracted notice during the first revolutionary wars, by his bravery and intelligence. Having become a lieutenant in the tenth regiment of chasseurs, he was made aid-de-camp to general Desaix, with whom he served in the campaigns of 1796 and 1797, and afterwards in Egypt. After the battle of Marengo he was appointed aid-de-camp to the first consul Buonaparte. In 1802 he was employed in the subjugation of Switzerland; and returning to Paris the following year, he accompanied Buonaparte in his journey to Belgium. At the battle of Austerlitz he defeated the Russian imperial guard, and took prisoner prince Reppin, for which service he was made general of a division in December 1805. He was appointed governor of Dantzic in 1807; and after the campaign of 1812 he also commanded the garrison of that city, which he defended with consummate skill and valour, but he was at length obliged to capitulate. He submitted to the royal authority in 1814, but joined Napoleon on his return from Elba. Having afterwards been received into favour by Louis XVIII, he was made a member of the chamber of Peers. His death took place in 1821. Posthumous "Mémoires du General Rapp," appeared at Paris in 1823, 8vo.—*Biog. Univ.*

RASCHE (JOHN CHRISTOPHER) an eminent writer on numismatics, born in Saxony in 1733. Few particulars of his life have been recorded, except that he was created a master in philosophy, and nominated adjunct to the ecclesiastical tribunal of the bailliage of Maasfeld, and pastor of Lower Maasfeld, near Meiningen. He was also member of the literary societies of Altorf, Halle, Jena, Cassel, &c. After having exercised his ministerial office more than forty years he died, April 21, 1805. His works are extremely numerous, including "Lexicon Abruptum quæ in Numismatibus Romanorum occurrunt," Nuremberg, 1777, 8vo; "Numismata rarissima Romanorum à Julio Cesare ad Heraclium usque;" 1777, 8vo; "The Science of Ancient Medals, according to the Principles of Joubert and La Bastie," 1778, 1779, 3 vols. 8vo; and "Lexicon Universæ Rei Nummarie Veterum, et præciquæ Græcorum ac Romanorum, cum Observationibus," Leipsic, 1785—1794, 12 vols. 8vo; a supplement to which valuable work appeared in 1802—1805, 2 vols.—*Biog. Univ.*

RASPE (RONALD ERIC) a German antiquary, born at Hanover in 1737. He studied at Gottingen and Leipsic; and was successively employed in the libraries of Gottingen and Hanover. In 1767 the landgrave of Hesse appointed him professor of archaeology at Cassel, and afterwards inspector of his cabinet of antiques and medals, and a counsellor. At length he left the service of the landgrave, under circumstances of disgrace, being accused

of having purloined part of the valuable curiosities under his care. He fled, and took refuge in England, where he supported himself by his literary exertions. He published an "Account of German Volcanoes," 1776, and a translation of baron Born's Treatise on the process of Amalgamation. This ingenious, but unprincipled man, after experiencing many vicissitudes, died in Ireland, in 1794.—*Biog. Univ.*

RASTAL or RASTALL. There were three of this name, father and sons. JOHN RASTAL, the elder, is known as an eminent printer and historian, who flourished in London, of which city he was a native, during the early part of the sixteenth century. He appears to have received a classical education at Oxford, and although bred a member of the Romish church, to have eventually abjured its tenets in favour of the Lutheran communion. His conversion is said to have been the result of a polemical controversy carried on between him and the celebrated John Fryth, whom lord chancellor More sent to the stake as a recusant, and is the more remarkable, inasmuch as Rastal had previously married the chancellor's sister. His share of the disputations is yet extant, in two treatises, entitled "An Apology against John Fryth," and "Dialogues concerning Purgatory." He was also the compiler of some law books, which go under the name of "Rastal's Entries," and have been erroneously ascribed to one of his sons. It is, however, as an historian that he is principally distinguished, his "Anglorum Regum Chronicon," having gone through two editions. His other works consist of a curious "Dramatic Description of the World;" "Rules for a good Life;" "Canones Astrologici," &c. His death took place in 1536.—WILLIAM, the elder son, went to the bar, and rose to be a judge of the Common Pleas; but declining to follow his father's example, in embracing Protestantism, the ultimate ascendancy of that church under Elizabeth, induced him to retire to the continent, where he passed the latter period of his life. He was the author of a life of his uncle, sir Thomas More, and compiled a Chronological Table of Events from the Conquest downwards; a Chaturary; "English Law Terms," &c. The time of his decease, which took place at Louvaine, was about the year 1565.—Of JOHN RASTAL, his younger brother, little is known, but that he was for many years an active magistrate in the commission of the peace.—*Biog. Brit.*

RATTE (ETIENNE HYACINTHE DE) an astronomer, born in 1722, of a noble family, at Montpellier. He displayed, when young, a decided taste for mathematics, which he studied with such success as to astonish his learned contemporaries. At the age of nineteen he was admitted into the academy of Montpellier, of which the next year he became perpetual secretary; and he zealously attended to the duties of his office till the suppression of academies, at the commencement of the Revolution. On the re-establishment of that of Montpellier, in 1796, he resumed his place

of secretary, and was subsequently president. He was also chosen a corresponding member of the Institute, and nominated a member of the legion of honour. His death took place April 15, 1805. De Ratte made important observations on the transit of Venus in 1761, which served as the basis of his laborious calculations on the parallax of the sun. He furnished many articles on natural philosophy to the *Dictionnaire Encyclopedique*, and various contributions to the memoirs of the academy to which he belonged. His astronomical observations were posthumously published by his nephew, M. de Flauguergues.—*Biog. Univ.*

RAU (JOHN JAMES) a distinguished German physician and anatomist, born in 1668, at Baden in Suabia. He was at the age of fourteen apprenticed to a surgeon at Strasburg, and afterwards entered into the Dutch naval service in a professional character. He then engaged in a course of academical studies at Leyden; and having passed some time at Paris in anatomical and surgical investigations, he returned to Leyden, and took the degree of MD. in 1694. He fixed his residence at Amsterdam, where he gave anatomical lectures and demonstrations, for which he was allowed the use of the public amphitheatre in 1696. He succeeded Bidloo at Leyden, in 1713, in the professorship of anatomy; and in 1718 he was made rector of the university. His death took place September 18, 1719. Rau published "Epistolæ duæ de Septo Scroti ad Ruyschium," 1689, 4to; and "Oratio de Methodo discendi Anatomen," 1713, 4to; but though he wrote so little for the press, he obtained high reputation as a practical anatomist.—*Biog. Univ.*

RAU (SEBASTIAN FULCO JOHN) a Dutch theologian and Orientalist, born at Utrecht in 1765. He was educated at the university of his native place; and such was his proficiency, that at eighteen years of age he published "Specimen Arabicum, continens Descriptionem et Excerpta libri Ahmedis Teufachii de Gemmis et Lapidibus." Having completed his studies, he became a French preacher; and in 1787 he was appointed minister of the Walloon church of Harderwyck, and the following year of that of Leyden. To his pastoral office was added the chair of theology at Leyden; and in 1790 he succeeded Everard Scheidius as professor of the Oriental languages and antiquities. He was deprived of his office in 1795, in consequence of changes in the constitution of the university; but he was restored in 1799. His death took place December 1, 1807. His works consist of six academical discourses, distinguished for learned research and ingenuity; and three volumes of Sermons, which appeared posthumously.—*Biog. Univ. Biog. Nouv. des Contemp.*

RAUCOURT (SOPHIA) a French actress of eminence, whose proper name was Saucote. She was born at Nanci in 1756, and was the daughter of a theatrical performer. She first appeared on the stage at Paris, in 1772, in the character of Dido. She soon acquired great professional reputation, which

she enjoyed till 1776, when she suddenly fled from France to avoid her creditors. She returned to the Parisian stage in 1779, and continued to be one of its principal ornaments, till her imprisonment during the reign of terror in 1793. She was discharged after six months' confinement; but she experienced other persecutions till she obtained the protection of Buonaparte. Her death happened January 15, 1815. A disgraceful scene occurred at her funeral. The clergy of the parish of St Roch having refused to admit the corpse into the church, the populace assembled in great force, and after exhibiting some violence, escorted the body to the cemetery of Père la Chaise, where the interment took place.—*Biog. Univ.*

RAUWOLF (LEONARD) a distinguished Oriental traveller and botanist, who was a native of Augsburg in Germany. After having studied under the celebrated physician and naturalist Rondelet, at Montpellier, he set off in 1573 on a journey through Diarbeck, Syria, Palestine, Egypt, &c.; and after his return he became a physician in the Austrian army. He died in 1606. The observations made by Rauwolf in his tour through the East were published in Ray's "Collection of curious Travels and Voyages into Eastern Countries," Lond. n, 1693, 2 vols. 8vo; and the Herbarium of Rauwolf was used by Gronovius, in drawing up his "Flora Orientalis."—*Biog. Univ.*

RAVENET (SIMON FRANCIS) a French engraver, came to England in 1750, and settled in London. He lived in the latter part of his life in Kentish Town, where he died in 1774. His principal prints are, "The Prodigal Son," from Sal. Rosa; "Lucretia deploping her Misfortune;" and "The Manifestation of the Innocence of the Princess Gunhilda," from A. Casali; "The Death of Seneca," from Luca Giordano, &c.—*Strutt's Dict.*

RAVENS-CROFT (THOMAS) an English musician, died in 1640. In 1614 he published "A Briefe Discourse of the true but neglected Use of characterizing the Degrees by their Perfection, Imperfection, and Diminution, in measureable Musick, against the Common Practice and Custom of the Times," 4to; which exploded doctrines he continued to practise ineffectually. He also edited a collection of Psalm Tunes, among which were several of his own, many of which are still in use. Finally, he was the author of a collection of songs, entitled "Melcimate Musical Phanacies, fitting the Court, City, and Country Humours, in three, four, and five Voices," 1611.—*Hawkins' and Burney's Hist. of Music.*

RAVIUS. The Latin designation of Christian Rau, a learned German professor, born in 1613 at Berlin. He received his education in the university of Rostock, where he distinguished himself by his early proficiency in Oriental as well as classical literature. Coming to England, he was recommended to the notice of Usher, archbishop of Armagh, and under the auspices of that munificent encourager of learning, took a voyage in the Levant, for the purpose of procuring manuscripts.

While in the East he much increased his familiarity with the vernacular languages, especially the Persian and Turkish. On his return to Europe, he took up his temporary abode at Utrecht, where he read lectures in Arabic, and employed himself in the composition of several useful treatises connected with his favourite course of study, especially in constructing Grammars of the Hebrew, Samaritan, and Chaldaic dialects, the Syriac, Arabic, &c. His other works are, "Disputatio Chronologica de Plenitudine Temporis Christi;" "Chronologia infallibilis de Annis Christi;" "Chronologia Biblica;" "De Dudaim Rubenis Dissertatio philologica;" "Orbis Hieraticus Levitarum;" "Obtestatio ad Europam pro discendis Rebus et Linguis Orientalibus;" a Plan for acquiring the Orthography and Etymology of the Hebrew Tongue; and a Translation of the Writings of Apollonius of Perga, from the Arabic into Latin. Ravius maintained an extensive correspondence with the learned and their patrons, especially with Christina of Sweden, who held his talents in great respect. After reading his lectures at Upsal, Kiel, &c. he at length died at the latter place, or, as others say, at Frankfort-sur-Maine, in 1677.—JOHANNES RAVIUS, his son, published an edition of Cornelius Nepos with notes, and filled the situation of librarian to the elector of Brandenburg.—*Athen. Oxon. Moveri.*

RAWLEY (WILLIAM) an English divine, known as the editor of some of the works of Bacon, lord Verulam. He studied at Bennet college, Cambridge, where he obtained a fellowship, and took the degree of DD. Becoming chaplain and secretary to Bacon, the interest of his patron procured him the living of Landbeach in Cambridgeshire. He collected from the papers of the great philosopher to whose service he had been attached, several tracts, which he published under the title of "Resuscitatio;" and to his care we are also indebted for "Bacon's Remains," published by archbishop Tenison. Dr Rawley died in 1667.—*Chalmers's Biog. Dict.*

RAWLINSON (CHRISTOPHER) a critic and Saxon scholar, born in Lancashire in 1677. He received his education at Queen's college, Oxford, where he applied himself particularly to the study of the Saxon language. He died in 1733, leaving a monument of his erudition in his publication of king Alfred's Saxon version of Boethius's Treatise on the Consolations of Philosophy.—*Chalmers's Biog. Dict.*

RAWLINSON (THOMAS) a distinguished bibliomaniac, or book-collector, in the early part of the last century. He was the son of sir T. Rawlinson, knight, who was lord-mayor of London, and he was educated for the legal profession; but his claims to notice depend solely on his passion for the accumulation of books, which he indulged to a greater extent than almost any other private individual. While he resided in chambers at Gray's-inn, his library occupied four rooms, and he slept in a closet or passage. He subsequently removed his collection to a large house in Al-

dersgate-street, where he made great addition to it; but it was at length dispersed by sale by auction in 1722. The Catalogues of Rawlinson's library, consisting of a number of parts, separately published, are rarely to be met with complete. Mr Rawlinson's death took place in 1725, at the age of forty-four. He is satirized, in the Tatler, under the appellation of Tom Folio; and he appears to have exhibited many singularities of character besides his inordinate fondness for books.—RAWLINSON (RICHARD) younger brother of the preceding, an eminent antiquary and topographer. He was educated at St John's college, Oxford, where he graduated as LL.D. in 1719. He founded in the university an Anglo-Saxon lectureship; and he formed a large collection of books, printed and manuscript, engravings, drawings, &c. which were sold after his death. Dr Rawlinson published an improved translation of Lenglet du Fresnoy's "Method of studying History," 2 vols. 8vo, and "The English Topographer, or an Historical Account of all the Pieces that have been written relative to the Natural History or Topographical Description of England," 8vo; and he edited Aubrey's "Perambulation of Surrey." He died in 1755.—*Dibdin's Bibliom. Nichols's Lit. Anec.*

RAY (JOHN) a celebrated English naturalist and philosopher, born at Black Notley, in Essex, November 29, 1688. His father exercised the humble occupation of a blacksmith, notwithstanding which, the son received a regular education, having studied at a grammar school at Braintree, and afterwards at Catherine hall, Cambridge. Thence he removed to Trinity college, where he obtained a fellowship during the period that the university was subject to the influence of the puritans, after the death of Charles I. This did not prevent Mr Ray from procuring episcopal ordination, when the restoration of Charles II had made way for the re-establishment of the church of England. But though he thus far became a conformist, he conscientiously objected to signing the declaration against the solemn league and covenant, and chose rather to resign his fellowship. He thenceforth devoted himself to the cultivation of science and literature, and published many works, chiefly relating to theology and natural history. In 1663 he accompanied Francis Willughby, a gentleman of congenial taste, in a journey through France, Germany, Italy, and Spain; and after his return home in 1667, he was chosen a fellow of the Royal Society, to whose Transactions he was a frequent contributor. In 1670 he published a "Catalogue of English Plants," which was followed by a "Collection of English Proverbs;" and in 1673 he produced an account of his continental tour. On the death of Mr Willughby, in 1672, Mr Ray became tutor to his sons; and he soon after married and settled at his native place. He now continued his labours in the cause of science with unremitting ardour, and particularly distinguished himself by his improvements in the classical arrangement of plants.

and animals, in his "Methodus Plantarum Nova," 8vo; "Historia Plantarum," 3 vols. folio; "Synopsis Methodica Stirpium," 8vo; "Synopsis Methodica Animalium Quadrupedum;" and a "Sylloge Stirpium Europæarum extra Britanniam crescentium;" besides which he published his friend Mr Willughby's Ornithology, and History of Fishes. He was also the author of a very popular work on physico-theology, entitled "The Wisdom of God manifested in the Works of Creation," 8vo; and of "Miscellaneous Discourses concerning the Dissolution and Changes of the World," 8vo. His death took place January 17, 1705. "The Philosophical Letters of Ray, and those of his Correspondents, to which are added those of Willughby," were published in 1718, by Dr W. Derham.—*Brit. Biog. Aikin's Gen. Biog. Pulteney's Sketches of the Prog. of Botany in England.*

RAYMOND (ROBERT, baron) an eminent English lawyer, who flourished in great reputation about the time of the Hanover succession. His father, sir Thomas Raymond, himself a judge in the King's Bench, educated him for his own profession, in which he rose rapidly to the highest honours. Being appointed solicitor-general about the close of queen Anne's reign, he became first attorney-general, and eventually lord-chief-justice, and a commissioner of the great seal, with an English peerage, under her two successors. In the discharge of his high calling he distinguished himself as a sound constitutional lawyer and an upright judge, following the example of his father in compiling "Reports," which have gone through two editions, the first in two volumes folio, and subsequently in octavo. He was also the author of a folio volume of "Rubrics." Lord Raymond survived his elevation to the upper house little more than a year, dying in 1732.—*Bridgman's Legal Bibliog.*

RAYNAL (WILLIAM FRANCIS) a French writer of celebrity, was born at St Genies, in the Rouergue, in 1718. He entered at an early age among the jesuits, whom however he quitted in 1748, and fixed his abode in Paris, where he became an historical, political, and a miscellaneous writer, and distinguished himself by a bold and decisive turn of sentiment, and an animated style. For a time he forsook literary for convivial pursuits, which might possibly lead him to the composition of the work for which he is indebted for his principal share of fame, entitled "Histoire Philosophique et Politique des Etablissements et du Commerce des Européens dans les deux Indes," first printed in 1770. This work was for a while extremely popular for its freedom of opinion and brilliancy of style, but upon a closer examination it was found replete with dubious and incorrect statements, and disfigured with much empty declamation and unsound opinion. Sensible of these faults, the abbé travelled through England and Holland, to obtain correct mercantile information, and on his return published an improved edition at Geneva, in ten volumes octavo. It still

however retained so much freedom of opinion, and such bold remarks on authority of every description, that the parliament of Paris ordered it to be burnt, and the author to be arrested. He retired to Spain, and made the tour of Germany, but subsequently ventured to return to France, and lived unmolested in the southern provinces. In 1788 the national assembly cancelled the decree passed against him, and in 1791 he addressed a letter to the constituent assembly in defence of the rights of property, and to strengthen the bands of civil authority, which he now fully perceived the necessity of supporting. He however personally escaped the tyranny of Robespierre, possibly on account of his great age, but was stripped of his property, and died in indigence at Passy, in 1794, aged eighty-five. He also wrote, "Histoire du Stadhouderat," 1748; and "Histoire du Parlement d'Angleterre," a weak and prejudiced performance; with other treatises, historical and political. He is likewise said to have left in MS. a history of the revocation of the edict of Nantes. Few authors who were so celebrated, have sooner sunk into neglect.—*Nouv. Dict. Hist. Monthly Rev.*

RAYNAUD (THEOPHILUS) a celebrated jesuit, was born at Sospello, in the county of Nice, in 1583. His singular opinions and bad temper involved him in several quarrels with his society, with which nevertheless he continued to reside until his death, which took place at Lyons in 1663. His works amount to twenty volumes folio, and display great learning; but all his subjects are treated in a singular manner, which rendered them unpopular. The two best are, "Erotenia de bonis et malis Libris;" and "Symbola Antoniana," Rome, 1648, 8vo, relating to St Anthony's fire.—*Dupin. Nicéron. Gen. Dict.*

RE (PHILIP) a distinguished Italian agriculturist, born of a noble family, at Reggio, in 1763. He studied in the college of his native city, and acquired a taste for agriculture from the perusal of Virgil's Georgics. In 1793 an agricultural professorship was founded in his favour at Reggio; and he was subsequently appointed rector of the university there; and at length a member of the regency of Modena on the suppression of which he returned to private life, accompanied by the respect and esteem of his fellow-citizens. In 1803 he was called to the chair of agriculture at Bologna, and on the reorganisation of the university of Modena in 1814, he became professor of agriculture and botany, to which was added the superintendence of the royal gardens. His death took place March 26, 1817. Among the numerous valuable works which he published, are, "Elementa di Agricoltura," the first Italian treatise in which the principles of chemistry are applied to the improvement of agricultural science; "Dizionario ragionato de' libri d'Agricoltura, Veterinaria, e di altri rami d'Economia campestre," 4 vols. 16mo; and "Annali d'Agricoltura," 1807—1814, a periodical journal.—*Biog. Univ. Biog. Nouv. des Contemp.*

REC

REAUMUR (RENE ANTOINE FERCHAULT de) one of the most ingenious philosophic naturalists which France ever produced. He was born in 1683 at Rochelle, and was the son of a counsellor of the presidial court of that city. He studied under the jesuits at Poitiers, and afterwards went through a course of law at Bourges; but a predominant taste led him to the observation of nature, and as he possessed an ample fortune, he gave way to his inclination. Having made himself acquainted with the mathematical sciences, he went to Paris in 1703, and by means of his relative, the president Henault, he was speedily introduced to the literati of the metropolis, and in 1708 he was chosen a member of the Academy of Sciences, to which he had presented some memoirs on geometry. For nearly fifty years he continued to be one of the most active and useful members of this celebrated association; his labours alternately embracing the arts of industry, natural philosophy, and natural history; and from his first entrance into the academy, scarcely a year elapsed in which he did not publish memoirs or separate works, both interesting and important. He was appointed to assist in the descriptive accounts of arts and trades published by the academy; and in executing his part of the undertaking, he did not confine himself to the mere history of the different processes, but pointed out the way to various improvements, by the application of the principles of physics and natural history. He made important observations on the formation of pearls; and he discovered in Languedoc, mines of the Turquoise, which substance he demonstrated to be the fossilized teeth of an animal, since called the mastodon; but among his most useful researches must be reckoned those of which he gave an account in his "*Traité sur l'Art de convertir le Fer en Acier, et d'adoucir le Fer fondu*," 1722. As a natural philosopher the name of Reaumur is principally celebrated for the invention of an improved thermometer, which he made known in 1731. The fabrication of porcelain also occupied much of his attention, and led him to the discovery of a kind of enamel, called the porcelain of Reaumur, in 1733. But his experiments and investigations concerning artificial incubation as practised in Egypt, attracted more popular notice than most of his undertakings. Of all his literary productions the most considerable is that entitled "*Mémoires pour servir à l'Histoire des Insectes*," 1734—42, 6 vols. 4to, which placed him in the first rank of modern naturalists. He had no public employment except that of intendant of the order of St Louis, which he held only for the benefit of a relation, who was unable to retain it; and his time was entirely devoted to his favourite scientific pursuits. He died October 18, 1757, in consequence of injury arising from an accidental fall. He left to the Academy of Sciences his manuscripts and his cabinet of natural history.—*Biog. Univ.*

RECORDE (ROBERT) a learned physician and mathematician of the sixteenth century,

REC

was elected fellow of All Souls college, Oxford, in 1531. He devoted himself to the study of physic, and going to Cambridge, was admitted doctor of that faculty in 1545. Returning to Oxford, he publicly taught mathematics with much reputation. He next removed to London, where he is said to have been physician to Edward VI and Mary, but becoming embarrassed in his circumstances, he was confined for debt in the King's Bench prison, where he died in 1558. He wrote several mathematical works, the principal of which are, "*The Pathway to Knowledge*, containing the first Principles of Geometrie, &c.," "*The Ground of Arts*, corrected and augmented by Dr John Dee, and afterwards by John Millis, 1590, 1618, Robert Norton, Robert Hartwell, and finally by R. C.;" "*The Castle of Knowledge*, containing the Explication of the Sphere, both Celestiall and Materiall, &c.;" "*The Whetstone of Witte*, which is the second Part of Arithmetic, containing the Extraction of Rootes, the Cossike Practice, with the Rules of Equation, and the Works of Surde Nombers," 1557; an analysis of this work is given in Dr Hutton's Dictionary—art. Algebra; "*The Urinal of Physic*, &c." According to Sherburne he also published, "*Cosmographia Isagoge*;" "*De Arte faciendi Horologium*;" "*De Usu Globorum*;" and "*De Statu Temporum*."—*Tanner. Bale. Pitts. Athen. Oxon. Hutton's Dict. Fuller's Worthies.*

RECUPERO (ALEXANDER) a learned antiquary and medalist, born about 1740, at Catanea in Sicily. He was of a noble family, and being obliged to quit his native country, he took the name of Alexis Motta, under which appellation he travelled through the principal cities of Italy, and employed himself in forming a rich collection of the consular medals of the ancient Romans. The examination and classification of these relics of antiquity occupied him during more than thirty years, in the course of which he obtained an almost unrivalled acquaintance with the family history of the illustrious Romans, as appears from the following works. "*Institutio Stemmatica, sive de Vera Stemmatur præsertim Romanorum Natura atque Differentia*;" "*Annales familiarum Romanorum*;" and "*Annales Gentium Historico-Numismaticæ, sive de Origine Gentium seu Familiarum Romanorum Dissertatio*." He also wrote on the Roman weights, and manner of numbering. He was a member of the antiquarian academies of Veletri and Cortona. His death took place at Rome, in October 1803.—**RECUPERO** (dom JOSEPH) brother of the preceding, a learned mineralogist, embraced the ecclesiastical profession, and obtained a canonry in the cathedral of Catanea. He particularly distinguished himself by his researches concerning the volcanic mountain of Etna; and some details which he communicated to the English traveller Brydson, relative to the probable age of the mountain, as deduced from the appearances of the different layers of lava ejected from it, gave rise to much misrepresentation,

REE

and occasioned the Canonico Recupero, as he was called, to be considered as a freethinker. He published an oryctographical chart of Monte Ghibello, or Etna; and left a work on the same subject in manuscript. His death took place in 1787.—*Biog. Univ.*

REDI (FRANCIS) an Italian physician and naturalist of great eminence in the seventeenth century. He was born at Arezzo in Tuscany, in 1626, and he studied first at Florence, and then at Pisa, where he was admitted doctor of medicine and philosophy. He obtained the office of first physician to Ferdinand II, duke of Tuscany; and he employed his leisure in cultivating not only the sciences, but also the belles lettres, having been a considerable contributor to the Italian dictionary of the academy of La Crusca; and assisted Menage in his "Origines de la Langue Italienne." He likewise enjoyed much reputation as a poet; and as a man of science he is chiefly known on account of his experiments on the poison of the viper, and on the generation of insects. Redi belonged to the academies of La Crusca at Florence, of the Gelati at Bologna, of the Arcadi at Rome, as well as other learned societies. He died in 1698. His works were published collectively at Milan, 1809, 9 vols. 8vo.—*Hutchinson's Biog. Med.*

REDING (ALOYS, baron von) landammann and general of the Swiss, was born in 1755. He entered into the Spanish army, and obtained the rank of colonel; but he relinquished that service in 1783, and retired into the canton of Schwitz, where he was nominated to the office of lands-hauptmann. On the invasion of Switzerland by the French in 1798, Reding commanded the troops raised for the defence of the country, and obtained some advantages over the enemy, especially on the memorable field of Morgarten; but his forces were unequal to the contest, and the Swiss were compelled to submission. He afterwards had a considerable share in the political commotions which took place; and at length, in November 1801, he was chosen the first landammann of Switzerland. By various operations he endeavoured to secure some degree of independence for his country, which gave so much offence to Buonaparte, that he had Reding arrested and confined in the fortress of Arbourg; but he was set at liberty in a few months. In 1803 he was elected landammann of the canton of Schwitz, in which quality he assisted June 5, 1809, at the diet of Fribourg. After the disasters which befel France in 1812 and 1813, he was at no pains to conceal his antipathy to Buonaparte, and he is supposed to have favoured the passage of the allied troops through the Swiss territories, over the Rhine. His death took place in February 1818.—*Biog. Univ. Biog. Nouv. des Contemp.*

REED (JOSEPH) the name of one of the minor dramatic poets of the last century, none of whose writings, though attended with some temporary success, have kept possession of the stage. He was born in 1723, at Stockton-upon-Tees. The most prominent of his works are

REE

"Dido," a tragedy; "Tom Jones," an opera; "The Register Office," and "The Imposers," farces; with a burlesque piece, entitled "Madrigal and Trulletta." Mr Reed died in 1787, at Stepney, where he had been engaged in trade as a ropemaker for many years.—*Biog. Dram.*

REED (ISAAC) an acute and ingenious critic, distinguished by his intimate acquaintance with early English literature, a native of London, born 1742. He was educated for the legal profession, and in the earlier part of his life practised as a conveyancer in one of the inferior inns of court, but eventually gave himself up entirely to the cultivation of the belles lettres and general literature. He was the author of a history of the English stage, prefixed to his edition of the "Biographia Dramatica;" "The Repository," a collection of humorous and miscellaneous pieces, 4 vols. 1783; besides superintending the publication of lady Mary Wortley Montagu's poetical effusions, and an improved edition of Dodsley's collection of old plays. The works, however, by which he is most advantageously known are his splendid editions of Shakespeare, in 10, and subsequently in 21 vols. 8vo, of which the latter is justly considered the most perfect extant, embodying in its pages all the most valuable notes and elucidations of preceding commentators, with much original information. As a book collector, also, he displayed considerable judgment and perseverance, and had amassed a library of classical and miscellaneous literature inferior to few private collections. This became dispersed at his decease, and occupied thirty-nine days in the disposal of it by public auction. In addition to the literary labours already enumerated, the periodical miscellany known by the name of the "European Magazine," of which he was partly the owner, was for many years carried on under his own conduct. His death took place in the commencement of the year 1807.—*Gent. and Europ. Magazines.*

REES, DD. (ABRAHAM) a dissenting clergyman, who held a distinguished rank in the literary and scientific world. He was the son of a Welch nonconformist minister, and was born at, or in the immediate neighbourhood of, Montgomery, in 1743. Being intended by his father for the ministry, he was placed first under Dr Jenkins of Carmarthen, and afterwards at the Hoxton academy founded by Mr Coward, where his progress in his studies was so rapid, that in his nineteenth year he was appointed mathematical tutor to the institution, and soon after resident tutor, in which capacity he continued upwards of twenty-two years. In 1768 he succeeded Mr Read as pastor to the presbyterian congregation of St Thomas's, Southwark (since removed to Stamford-street), and continued in that situation till 1783, when, on the death of Mr White, he accepted an invitation to become minister of a congregation in the Old Jewry, whose spiritual concerns he superintended till his death. On the establishment of the dissenting seminary at Hackney, in

REG

1786, Dr Rees, who had, together with Drs Savage and Kippis, seceded from that at Hoxton two years before, was elected to the situation of resident-tutor in the natural sciences, which he held till the dissolution of the academy, which took place on the death of Dr Kippis. But although Dr Rees, throughout his long life, distinguished himself as an able, an indefatigable, and practical, rather than controversial divine, it is in his literary capacity that he is principally and most advantageously known to society in general. In 1776 he was applied to by the proprietors of Ephraim Chambers's *Cyclopædia* as the person best qualified to superintend a new and enlarged edition of that valuable compilation, which, after nine years incessant labour, he completed in four folio volumes. The success of this work stimulated the proprietors to still farther exertions; a new undertaking, similar in its nature, but much more comprehensive in its plan, was projected and carried on by him, and he had at length the satisfaction to see the new "*Cyclopædia*," now generally known by his name, proceed from the publication of its first volume in 1802, to its completion in forty-five volumes, with undiminished reputation. His other works are, "*Economy Illustrated and Recommended*," 1800; "*Antidote to the Alarm of Invasion*," 1805; "*Practical Sermons*," 2 vols. 8vo, 1809—1812; "*The Principles of Protestant Dissenters stated and vindicated*;" besides a variety of occasional discourses. Dr Rees obtained his degree from the university of Edinburgh at the express recommendation of Robertson the historian. He was also a fellow of the Royal and Linnæan societies. His death took place June 9, 1825.—*Ann. Ring.*

REEVE (CLARA) an ingenious lady, was born at Ipswich in 1738, and died there in 1808. She possessed great learning and research, which she displayed in a translation of Barclay's Latin romance of *Argenis*, published under the title of "*The Phoenix, or the History of Polyarchus and Argenis*," 4 vols. 12mo, 1772; and "*The Progress of Romance*." Her other works are the well-known tale of "*The Old English Baron*;" "*The Two Mentors, a modern Story*;" "*The Exile*;" the "*School for Widows*;" "*A Plan of Education*;" and "*Memoirs of Sir Roger de Clarendon*," 4 vols.—*Gent. Mag.*

REGIS (PIERRE SYLVAIN) an eminent Cartesian philosopher of Agenois in France, born 1632. From the jesuits' college at Cahors, at which seminary he had received the earlier part of his education, he removed to Thoulouse in 1665, and five years afterwards to Paris, where he attracted considerable notice by the zeal with which he espoused the system then lately broached by Des Cartes, the principles of which he had originally studied under Jacques Rohault. The popularity which he acquired, and the numerous audiences which attended him, excited the jealousy of his opponents, who prevailed on the king, through the interference of the archbishop of Paris, to put a stop to his proceedings by a

REG

royal ordonnance. The press, however, was still open to him, and through this channel he continued, with great energy, to promulgate and defend his doctrines against the attacks of Du Hamel and the bishop of Soissons, the latter of whom especially had in his treatise, *Censura Philosophiæ Cartesianæ*, ably exposed the errors of a system to which in his youth he had been himself a convert. Besides a reply to bishop Huet, Regis published a more detailed account of his tenets in his "*System of Philosophy*," contained in three quarto volumes; and in a work entitled "*The Use of Reason and Faith*," writings which, though popular in their day, are now become as obsolete as the hypothesis they were written to advocate. His death took place in 1707.—*Nouv. Dict. Hist.*

REGIUS. The Latin designation of Urban le Roy, a learned German professor, poet, and controversialist of the sixteenth century. He was a native of Langenargen, and having previously studied at Fribourg, Basle, and other universities, completed his education under the celebrated Johannes Eckius, at Ingolstadt. The doctrines of the reformed church having, however, operated strongly upon his conviction, he sided with Luther against his old tutor in the polemical contests carried on in 1519 and 1521 at Leipsic and Worms between those zealous disputants. In pursuance of this change in his religious sentiments, he afterwards retired to Augsburg, where he became pastor to a Lutheran congregation, but in 1530 exchanged his cure for one of a similar description at Lunenburg whither he had been invited by the duke. As a scholar, Regius held a distinguished rank among his contemporaries, while his talents as a rhetorician and a poet procured him on one occasion the honour of a laurel crown from the hands of the emperor Maximilian. There is a complete edition of his writings extant, in three folio volumes. His death took place suddenly at Zell, in the year 1541.—*Moreri. Nouv. Dict. Hist.*

REGNARD (JOHN FRANCIS) a comic poet, born at Paris, February 8, 1655. Having received a good education, and being set free from restraint by the death of his father, he went to Italy in 1676, or 1677. He was fond of play, and being very fortunate, he was returning home with a considerable addition of property, when he was captured by an Algerine corsair, and being sold for a slave, he was carried to Constantinople. His skill in the art of cookery rendered him a favourite with his master; but at length he was ransomed, and returned home. He did not, however, remain there long, for in April 1681, he set off in company with others, on a journey to Lapland, and after going as far north as Torneo, he returned through Sweden, Poland, and Germany. Regnard then retired to an estate near Dourdan, eleven leagues from Paris, where he died, in September 1709. He wrote an account of his Northern Tour; a number of dramatic pieces, poems, and other works, which have been often published, w

6 vols. 8vo, and 4 vols. 12mo.—*Dict. Hist. Biog. Univ.*

REGNAULT (NORL) a French philosopher and mathematician of the last century, born at Arras, in 1683. He belonged to the order of jesuits, and is advantageously known as the author of several scientific and metaphysical works, the principal of which are his "Philosophical Conversations," 12mo, 3 vols. of which there is an English translation; "Mathematical Conversations," 3 vols.; "A System of Logic," in the form of a dialogue, 12mo; and "Ancient Origin of the New Philosophy," 3 vols. He was a man of exemplary moral character, as well as deep erudition, and died in 1762, in the French metropolis.—*Moreri. Nouv. Dict. Hist.*

REGNIER DES MARETS (F. S.) See DES MARETS.

REGNIER (MATHURIN) a French poet, was born at Chartres, in 1573. His satires form an epoch in French poetry, and procured him the patronage of cardinal Francis de Joyeuse, and Philip de Bethune, both of whom he accompanied to Rome; and they obtained for him several benefices, which, however, he did not suffer to be any check upon his licentious life. He died in 1613. Boileau greatly admired the Satires of Regnier. His poems have been frequently printed; the best editions are those of Rouen, 8vo, 1729, and of London, 4to, 1734.—*Moreri. Nouv. Dict. Hist.*

REID (THOMAS) a Scottish divine, and eminent metaphysician, was born April 26, 1710, at Strachen, in Kincardineshire, of which parish his father was minister for fifty years. His education commenced at the parish school of Kincardine, and was completed at Marischal college, Aberdeen. His residence at the university was prolonged beyond the usual time, in consequence of being appointed librarian, but, in 1736, he resigned that office, and visited England. In 1737 he was presented by King's college, Aberdeen, with the living of New Machar, in the same county, where the greater part of his life was spent in the most intense study. In 1752 he was elected professor of moral philosophy, at King's college, Aberdeen, and in 1763 accepted the same office at Glasgow. In 1764 he published his celebrated "Inquiry into the Human Mind on the Principle of Common Sense," which was succeeded after a long interval, in 1786, by his "Essays on the intellectual Powers of Man," and that again in 1788, by his "Essay on the Active Powers." These, with a masterly "Analysis of Aristotle's Logic," and an "Essay on Quantity," which appeared in the Philosophical Transactions in 1748, comprehend the whole of his publications; the interval between the first and the last of which amounted to forty years. After an active and useful life, Dr. Reid, who survived his wife, and a numerous family of children, with the exception of one daughter, died of repeated attacks of the palsy, on the 7th of October, 1796, in his eighty-sixth year, with a high character for benevolence and integrity,

as well as for talents. The principal object of the "Inquiry" of Dr. Reid was to refute the philosophy of Locke and Hartley, by denying the connexion which they supposed to exist between the several phenomena, powers, and operations of the human mind, and by seeking to account for the foundation of all human knowledge, on a system of instinctive principles. Although strongly supported, it has also been objected to on various grounds, the principal of which are, that he assumes no small part of the theory which it is his business to prove; that by multiplying instinctive principles, he has brought the science of mind into greater confusion than before; and that his views tend to damp the ardour of philosophical inquiry, by stating as ultimate facts, phenomena which may be resolved into principles more simple and general. These objections are ably stated and answered by professor Dugald Stewart, who regards the writings of Dr Reid, as forming the finest school for the acquirement of reflecting on the operation of our own minds, that has hitherto appeared.—*Life, by Professor Stewart. Forbes's Life of Beattie.*

REIGNY (LOUIS ABEL BEFFROI) commonly called Cousin Jacques, a French writer, was born at Laon, in 1757. He taught rhetoric and the belles lettres in several colleges, and in 1770 he came to Paris, where he was made a member of the Musée, and of the Lyceum of Arts. He died at Charenton, in 1810. He was a very eccentric and fertile writer, and composed several plays, which were very successful; these were, "Les Ailes de l'Amour;" "Le Club des Bons Gens;" "Histoire Universelle;" "Nicodeme dans la Lune;" "La Petite Nanette," &c. His other works were, "Petites Maisons du Parnasse;" "Marlborough Tarlata Hurlabertia;" "Les Lunes;" "Le Courier des Planètes;" "Les Nouvelles Lunes;" "La Constitution de la Lune;" "Precis Historique de la Prise de la Bastille," &c. &c. He also commenced a periodical work, entitled "Dictionnaire des Hommes et des Choses," which was suppressed, on account of its political opinions.—*Nouv. Dict. Hist.*

REIL (JOHN CHRISTIAN) professor of medicine, counsellor, knight of the red eagle of Prussia, &c. was born in East Friesland, in 1769. His father was a clergyman, and he was intended for the same profession; but he was permitted to follow his inclination, and became a physician. He studied at the college of Naerden, and afterwards at the universities of Göttingen and Halle, and proceeded MD. in 1782. He became chemical professor at Halle in 1787, and also medical superintendent of the poor of that city; the functions belonging to which offices he discharged in a manner highly creditable to his zeal and sagacity till 1810, when the king invited him to Berlin; and in 1813 he was nominated director of the military hospitals, established in consequence of the battle of Leipsic. He died of typhus fever, November 12th, the same year. Among the principal works of

REI

professor Reil, are, "Memorabilium Clinicorum Medico-practicorum;" "Archives of Physiology," a periodical journal in German, 1795, &c. continued after his death; "Exercitationum Anatomicarum fasciculus primus, de Structura Nervorum," 1796, folio; and a number of Memoirs published collectively at Vienna, 1811, 2 vols. and at Halle, 1817, 1 vol.—*Biog. Univ.*

REIMARUS (HERMAN SAMUEL) a learned philosopher and classical scholar, born at Hamburg, in 1694. He studied at Wittemberg, and afterwards travelled in Germany, and remained some time at Weimar, where he published some tracts under the title of "Primitia Wismariensis," 1723, 4to. Returning to Hamburg, he obtained the chair of philosophy in that city, of which he was one of the principal literary ornaments during more than forty years. He married one of the daughters of John Albert Fabricius, and he assisted in the philological labours of that erudite scholar. Reimar, who was a member of the imperial academy at Petersburg, and of many learned societies in Germany, died March 1, 1768. He published an admirable edition of Dion Cassius, 2 vols. folio; an Account of the Life and Writings of his father-in-law, Fabricius; "A Treatise on the Principal Truths of Natural Religion;" and "Observations Moral and Philosophical, on the Instinct of Animals, their Industry, and their Manners," of which there is a French translation, with Notes, Amsterdam, 1770, 2 vols. 12mo.—*Biog. Univ.*

REIMANN (JAMES FREDERICK) an industrious bibliographer, born at Groeningen, in the principality of Halberstadt, in 1668. He was educated at Jena, and was admitted a Protestant minister; but his inclination led him at first to prefer the office of a tutor. In 1692 he was appointed rector of the gymnasium of Osterwick, and after holding other situations, he relinquished them, and in 1704 was chosen first pastor of the province of Ermaleben. A great part of a library which he had collected was destroyed by a fire, in 1710, on which he commenced a new and more extensive collection of valuable books. In 1714 he became librarian to the chapter of Magdeburg; and in 1717 pastor of Hildesheim, and soon after superintendent of the churches, and inspector of the Lutheran schools of that district. His death happened February 1, 1743. Among his principal works are, "Historia Literaria de Fatis Studii Genealogici apud Hebræos, Græcos, Romanos, et Germanos," 1702, 8vo, of which a second edition, with a second part, or continuation, was published in 1710, at Leipzig; "Idea Systematis Antiquitatis Literariæ generalis et specialioris, desiderati adhuc in Republica Fructidorum literaria," Hildesheim, 1718, 8vo; "Historia universalis Atheismi et Atheorum falso et merito suspectorum apud Judæos, Ethnicos, Christianos, &c." 1725, 8vo; "Historia Literaria Babyloniorum et Sinenisium," Brunswick, 1741, 8vo; besides valuable catalogues of his own library.—*Idem.*

REI

REINECCIUS (REINER) a learned historian and genealogist, was a native of Steinheim, in the diocese of Paderborn, and was a disciple of Melancthon. He taught the belles lettres in the universities of Helmstadt and Frankfort, and died in 1595. He wrote "Historia Orientalis;" "Historia Julia," 3 vols. folio; "Methodus legendi Historiam;" "Chronicon Hierosolymitarum Familie Regum Judæorum;" "Syntagma de Familiis Monarchiarum trium priorum."—*Thuanii Hist. Saxii Onom. Moreri.*

REINESIUS (THOMAS) a German physician and classical scholar of eminence in the 17th century. He was born at Gotha, in Saxony, in 1587; and after having completed his education, he practised as a physician in different parts of Germany. According to his own testimony in his letters, he suffered many domestic and other misfortunes, and refused to accept of academical professorships from an apprehension of meeting with disagreeable associates. He was settled at length at Altenbourg, where he became a burgo-master; and afterwards removing to Leipsic, he was appointed counsellor to the elector of Saxony. He died in 1667. He wrote some professional tracts; but his principal works are, "Variarum Lectionum, libri iii;" and his Letters.—*Bayle. Hutchinson's Biog. Med.*

REINHARD (FRANCIS WOLMAR) a celebrated Protestant preacher, who was a native of the duchy of Sulzbach, in Germany. He was instructed by his father (who was a clergyman) till he was sixteen, when he was admitted into the gymnasium of Ratibon, where he remained five years, and in 1773 he was removed to the university of Wittemberg. The study of sacred eloquence especially attracted his attention; and his reputation procured him, in 1782, the chair of theology, to which, in 1784 was added the offices of preacher at the university church, and assessor of the consistory. In 1792 he was invited to Dresden to become first preacher to the court of Saxony, ecclesiastical counsellor, and member of the supreme consistory. After filling these stations with high renown for about twenty years, he died September 6, 1812. His principal works are, "A System of Christian Morality;" "An Essay on the Plan formed by the Founder of Christianity for the Happiness of the Human Race;" "Sermons;" "Letters of F. W. Reinhard on his Studies, and on his Career as a Preacher;" "Lectures on Dogmatic Theology."—*Biog. Nouv. des Contemp. Biog. Univ.*

REINHOLD (ERASMUS) a German mathematician and astronomer of the sixteenth century. He was educated at the university of Wittemberg, where he at length became professor of mathematics, and acquired great reputation by his lectures and his writings. He died in 1553, in the forty-second year of his age. His works comprise "Theoria Novæ Planetarum G. Purbachii, cum Scholiis," 1542, 8vo; the First Book of Ptolemy's Almagest, with a Latin version and scholia, 1549, 8vo; "Prutenicæ Tabulæ Cælestium

Motuum," 1551, 4to; besides which he prepared editions of several astronomical and mathematical treatises.—*Teissier. Moreri. Aikin's Gen. Biog.*

REISKE (JOHN JAMES) a most learned and laborious philologist, born at Zorbig, in Saxony, December 25, 1716. At the age of twelve he was sent to the orphan school at Halle, and in 1733 he went to the university of Leipsic, being intended for the clerical profession, and he spent five years in desultory studies, in the course of which he became extremely partial to Oriental literature. The first specimen he gave of his abilities was the publication of one of the Narratives of Hariri, with Arabic scholia, and a Latin version, 1737, 4to. He then went to Holland, that he might have an opportunity of examining the stores of Eastern literature preserved in the library of the university of Leyden. In spite of his poverty, which obliged him to become a corrector of the press, he in some measure effected his object; and having also made use of the advantages which Leyden afforded for the study of medicine, he obtained the degree of MD. on his return to Leipsic. His habits and manners, however, by no means qualified him for success as a physician; and he was therefore obliged to rely on his literary occupations for the means of supporting himself and his family. He was continually employed in writing, translating, and performing other tasks for the booksellers; and besides a multitude of less important undertakings, he produced valuable editions of the Moslem Annals of Abulfeda; of the Greek Anthology; of the Greek Orators; of the Works of Plutarch; and of the treatise of Constantine Porphyrogenitus on the Ceremonies of the Byzantine Court. His hard fate soured his temper, and by his incautious criticisms he made himself many enemies. In 1758 he was appointed rector of the College of St Nicholas, at Leipsic, which office he held till his death in August 1774.—His wife, ERNESTINE CHRISTINA MULLER, instructed by her husband in the learned languages, assisted him in his researches, and after his death completed some of his undertakings. She also published his autobiography, with a list of his very numerous works. This lady, who printed some productions of her own composition, died at Kemberg, in July 1798.—*Aikin's Gen. Biog. Biog. Univ.*

REIZ or REITZ (FREDERIC WOLFGANG) a German philologist, born in Franconia, in 1733. After having completed his studies at Leipsic, he became a private tutor, and then a corrector of the press in the printing-office of Breitkopf. He successively held the professorships of philosophy, Latin and Greek, and poetry, and was director of the library belonging to the university of Leipsic. He died February 2, 1790. Reiz is principally known as the editor of Herodotus; but he also published editions of other classics, and two Dissertations on Prosody.—*Biog. Univ.*

RELAND (ADRIAN) a very learned Orientalist, was the son of a Dutch minister, and was born near Alkmaar, in North Holland, in

1676. He was educated first at Amsterdam, and then at the university of Utrecht, where, at the early age of seventeen, he was admitted to the degree of doctor in philosophy. After staying there six years, he removed to Leyden, and soon after he was chosen tutor to the son of Bentinck, earl of Portland, the favourite of William III. That nobleman was desirous of taking Reland to England, but the declining health of his father induced him rather to give up his engagement. In 1699 he became professor of philosophy at Harderwyk, which place he soon after quitted for the chair of the Oriental languages and ecclesiastical antiquities at Utrecht. He remained there seventeen years, and died of the small-pox, February 5, 1718. Among his more important works are, "Dissertationes quinque de Numis Veterum Hebræorum, qui ab Inscriptarum literarum Forma Samaritani appellantur," 1709, 8vo; "De Religione Muhammedica libri duo," 1705, 8vo; "Antiquitates sacræ Veterum Hebræorum," 1712, 8vo; and "Palestina ex Monumentis veteribus illustrata," 1714, 2 vols. 4to. He also published Latin poems, orations, &c.—PETER RELAND, brother of the preceding, an advocate at Haerlem, who died in 1715, compiled a useful work, entitled "Fasti Consulares," printed after his death at Utrecht, 1715, 8vo.—*Moreri. Sazii Onom. Biog. Univ.*

RELHAN (RICHARD) a divine and naturalist, was educated at Cambridge, and became a fellow of King's college. In 1791 he attained the rectory of Hunninghy, in Lincolnshire. His works are, "Flora Cantabrigensis," in which he describes his discovery of a new species of lichen and of the athamanta libanotis; and "Tacitus de Moribus Germanorum et de Vita Agricola," 8vo. Mr Relhan was a fellow of the Royal and Linnean Societies. He died in 1823.—*Cent. Mag.*

REMBRANDT VAN RHYN (PAUL) a very celebrated painter, was born in 1606, at a mill on the Rhine, near Leyden. His father, observing in him an extraordinary talent for the arts of design, placed him for six months under Lastman, and as many with Pinas, from whom he is said to have imbibed that taste for strong contrasts of light and shade, for which his pictures are so much distinguished. Nature was, however, his principal study; and one of his designs attracting the notice of a connoisseur, his reputation soon increased; and in 1630 he settled at Amsterdam, and at once came into full employment, both as a portrait and as a general painter. He also opened a school, and had a number of pupils, who paid him very liberally; and, being greedy of gain, it was often his practice to touch up their designs and sell them for his own. He likewise made numerous etchings, consisting of what appeared a few random sketches, but so managed as to produce a surprising effect. His first style of painting had much of the delicate finishing of Mieris, but this he changed for a bold and forcible manner, with a vast body of colour, and masses of deep shade relieved by bright lights, the effect of which was, coarseness and confusion when viewed near, but at a

distance nothing could appear more mellow and harmonious. He was a perfect master of colouring and in the magic of chair' oscuro, but he possessed few ideas of grace and beauty and was very incorrect in the naked human form. He married the handsome daughter of a peasant, who used to sit to him as a model, as did likewise his servant maid. His manners were rude and coarse, and unfortunately he could relish no company but what resembled himself. Notwithstanding his great gain, want of economy made him a bankrupt, and he secretly quitted Amsterdam to repair to the king of Sweden, who employed him a considerable time. He finally, however, returned to Amsterdam, where, according to one account, he died in 1674, and to another, in 1688. Rembrandt is deemed a genius of the first class in whatever is not immediately related to form and taste. He painted history, portraits, and landscape; and his works in all branches are highly valued. Many of his portraits are admirable, combining minute exactness with extraordinary force and animation. His etchings amount to two hundred and eighty, and are extremely prized by all collectors. Many of his works have been engraved by other artists.—*D'Argenville Vies des Peint. Pilkington's Diet.*

REMIGIUS or REMI (Sr.) a celebrated French prelate, was archbishop of Rheims, and was the converter and baptiser of king Clovis. He died in 533. He wrote some "Letters," and a "Testament," in the Library of the Fathers.—*Cave. Fabricius.*

REMIGIUS, of Auxerre, a learned Benedictine of the ninth century, was educated in the abbey of St. Germain at that place. He taught at Rheims, and attained great celebrity; and at length he went to Paris, and opened the first public school in that city after the ravages of the Normans. He wrote "Commentarius in omnes Davidis Psalmos," Cologne, 1536; "Enarrationes in posteriores XI. Minoras Prophetas," Antwerp, 1545; with the "Commentaries of Eusebius upon the Acts of the Apostles and their Epistles, and those of Arethas upon the Book of Revelation;" and "Expositio Missæ," &c.—*Cave. Dupin.*

REMIGIUS, a Roman saint and Gallic prelate in the ninth century, was a native of Gaul, and was grand Almoner to the emperor Lotharius, who, about 853, promoted him to the archiepiscopal see of Lyons. He was a zealous defender of the opinions of Godescalc, or of St. Augustine, on the subjects of grace and predestination; and condemned the canons decreed against that monk, as he also did the propositions of John Scotus Erigena, relating to the same subject. He died in 875. He wrote some pieces, which may be found in the Bibl. Patr. in "Maguin's Collect. Script. de Prædestinat. et Gratia."—*Cave. Dupin. Moreri.*

RENAU D'ELISAGARY (BERNARD) an able French naval architect, was born at Bearn in 1652, of an ancient family of Navarre. At an early age he attained the patronage of M. du Terron, intendant of Rochefort, who

educated him with a view to the naval service. He was soon after made known to the minister of the marine, and he much distinguished himself by his plans for the better construction of vessels. In 1680 he conceived the idea of bomb-vessels, which were first employed by Du Quesne in the siege of Algiers; and he subsequently acted as engineer with Vauban, in fortifying the frontiers of Flanders and Germany, and also served in Spain. In the midst of these occupations, he found time to write his "Theorie de la Manœuvre des Vaisseaux," 1689, 8vo, which in respect to one of its main propositions, was refuted by Huygens. As a reward for his able and active services, Louis XIV made him captain of a ship, with the authority of an inspector of the navy at pleasure, with a pension of 12,000 livres. The grand-master of Malta requested his assistance to defend the island against the Turks, but the expected siege not taking place, he returned to France, and was honoured with the cross of St. Louis. He died September 30, 1699. M. Renau, who in stature was almost a dwarf, is deemed the best engineer produced by France after M. de Vauban.—*Nouv. Diet. Hist.*

RENADOT (EUSEBIUS) a French divine, celebrated for the cultivation of Oriental literature, who was the son of Dr. E. Renaudot, mentioned in the next article. He was born at Paris, July 20, 1646, and educated among the jesuits, and at the college of Harcourt. He entered into the ecclesiastical state, that he might have leisure for study; and his attention was particularly directed to the Eastern languages, and especially the Arabic and others which would serve to illustrate the history and antiquities of the Christian church. His merit and connexions procured him the patronage of the prince of Condé, the duke de Montausier, Colbert, Bossuet, and other persons of rank and talents. He was admitted into the French Academy in 1689; and two years after he succeeded Quinault, as a member of the Academy of Inscriptions. In 1700 he accompanied cardinal Noailles to Rome, at the election of Clement XI, when the abbé Renaudot, as he was commonly styled, received an appointment from the new pope to a priory in Bretagne, which was the only preferment he could be prevailed on to accept. On his return home through Florence he was well received by the grand duke; and he was chosen an associate of the Accademia della Crusca. He died at Paris, September 1, 1720, leaving to the abbey of St. Germain des Pres, a valuable collection of Oriental MSS., now in the royal library. He assisted, by his translations of Eastern documents, in the great work of Arnauld and Nicole, "Perpetuité de la Foi," of which he also published a "Défence," and a continuation in three supplemental volumes. Among his other literary labours are "Historia Patriarcharum Alexandrinorum Jacobitarum," 1713, 4to; "Anciennes Relations des Indes et de la Chine de deux Voyageurs Mahometans, dans le 9^e siècle," 1711, 8vo; "Liturgiarum Orientalium Collectio," 1716, 2 vols. 4to; besides several dis-

REN

assertations in the Memoirs of the Academy of Inscriptions, and contributions to the works of others.—*Sartii Onom. Aikin's Gen. Biog. Biog. Univ.*

RENAUDOT (THEOPHRASTUS) a French physician and political writer, born at Loudun, in 1584. He went to Paris when quite young, and studied surgery; and in 1606 he removed to Montpellier, and took the degree of MD. After having improved his stock of knowledge by travelling for several years, he settled at Loudun, and practised as a physician with great success. In 1612 he established himself at Paris, where he obtained the appointment of physician to the king, with a pension of eight hundred livres. He became known to cardinal Richelieu, whose interest procured him the post of commissary-general of the healthy and sick poor of the whole kingdom, for whose benefit he erected a kind of dispensary and register office; and also the more profitable privilege of establishing a "Gazette," being the earliest publication of the kind known in France, and which first appeared in 1631. His medical projects excited great opposition from the faculty of Paris and the whole profession, in consequence of which Renaudot was prosecuted in the court of Chatelet for the alleged irregularity of his practice, and sentence being given against him in December, 1643, he was prohibited from holding consultations or continuing his establishments. His appeal to the parliament against this decree was unavailing; for the decree was confirmed, with circumstances of additional severity. He continued, however, to practise privately, and he lived long enough to see the utility of antimonial medicines (the employment of which had been condemned by his antagonists) generally admitted. He likewise proceeded with the publication of his *Gazette*, which was his best resource, till his death, in 1653. He was the author of a *Life of Henry II, prince of Condé*, and other biographical works; and he continued the "*Mercurie Français*," from 1635 to 1643; but he wrote nothing on his own profession.—His two sons, ISAAC and EUSEBIUS, who were both physicians, continued the "*Gazette de France*," after the death of their father. The latter, who became first physician to the dauphiness, was the author of some medical tracts. He died in 1679.—*Moreri. Eloy Dict. Hist. de la Med. Biog. Univ.*

RENEAULME (PAUL), a French physician and botanist, born at Blois, about 1560. He was the author of a curious work, entitled "*P. Reneaulmi, MD. Specimen Historiæ Plantarum*," Paris, 1611, 8vo, with plates, in which he exhibits the outline of a botanical arrangement, founded, like that of Linnæus, on those organs which serve for the propagation of plants. He also published "*De Curationibus Observationum liber*," 1606, 8vo; from which it appears that he introduced into practice the use of hemlock and other active medicines, which involved him in disputes with the Parisian faculty. He was known and esteemed by cardinal Nuperron, the president

REN

De Thou, and others of his eminent contemporaries; and Plumier gave the name of Rennealmia to a genus of plants, in commemoration of him. His death took place about 1624.—*Biog. Univ.*

RENNELL, BD. FRs. (THOMAS) son of the rev Dr Rennell, dean of Winchester, master of the Temple, &c. and grandson by the mother's side to the celebrated sir William Blackstone, was born at Winchester in 1787. At an early age he was placed upon the foundation at Eton, where he distinguished himself by his rapid progress in classical literature, and carried off Dr Buchanan's prize for the best Greek Sapphic ode "On the Propagation of the Gospel in India." About the same period he joined with three of his contemporaries in the publication of a series of essays, under the name of the "Miniature," a work on the plan of the "Microcosm," which went through two editions, and which, considered as the exclusive production of boys, exhibits striking evidence of early genius. In 1806 he removed in due course to King's college, Cambridge, where he completed his education, and gave additional proof of his increasing literary attainments, by gaining, in 1808, sir William Browne's annual Greek medal for a Greek ode entitled "Veris Comites," as well as by his contributions to the "*Museum Criticum*," a work occasionally published by some eminent scholars of the university. Having taken orders at the usual age, he became assistant preacher to his father at the Temple church, and in 1811 published his "*Animadversions on the Unitarian Translation, or Improved Version of the New Testament*," under the modest designation of "A Student in Divinity," and about the same time undertook the editorship of the "*British Critic*." In 1816 the bishop of London conferred on him the vicarage of Kensington, and in the same year he was elected Christian advocate in the university of Cambridge. In this latter capacity he produced his "*Remarks on Scepticism*," especially as it is connected with the subjects of Organization and Life." This treatise was written in reply to opinions of sir T. C. Morgan, Mr Lawrence, &c. on those points; and Mr Rennell was, perhaps, the rather induced to enter into the inquiry, inasmuch as he had himself made no slight progress in the study of anatomy and medicine. It was first printed in 1819, and went rapidly through six editions. His other work, undertaken in the same character, was occasioned by the publication of the "*Apocryphal New Testament*," and is entitled "*Proofs of Inspiration, or the Grounds of Distinction between the New Testament and the Apocryphal Volume*." In 1823 he obtained from the bishop of Salisbury the mastership of St Nicholas' hospital, with a stall in Salisbury cathedral; and in the same year a pamphlet appeared from his pen, addressed to H. Brougham, esq. MP. on the subject of a speech made by that gentleman at Durham, taken in connexion with some articles in the Edinburgh Review on ecclesiastical subjects. In the autumn of 1823 Mr Rennell

REN

married a Miss Delafield of Kensington; but not many weeks after a violent attack of fever terminated in a gradual decline, which carried him off in the June of the following year, just as he had completed his last work, a new translation of "Munter's Narrative of the Conversion of Count Struensee." In private life he was highly esteemed, especially by his parishioners, at whose expense a monument has been erected to his memory in their parish church.—*Ann. Biog. Christian Remembrancer.*

RENNEVILLE (RENE AUGUSTUS CONSTANTINE de) a French writer, more distinguished on account of the accidents of his life than on the score of his talents, or his literary undertakings. He was born at Caen in Normandy, about 1650; and after serving for some time in the army, he obtained a civil office at Carentan, through the influence of M. de Chamillart. Having become a Calvinist, he left his native country, and settled in Holland in 1699. His patron, de Chamillart, invited him to return to France, with the promise of employment; and on his acceptance of the offer, in 1702, he was well received by that minister, who gave him a pension, and engaged to procure him a lucrative situation. He was soon after denounced to M. de Torcy, in letters from Holland, as a spy; and was also accused of having written verses injurious to France. He was, therefore, arrested, his papers were seized, and he was committed to the Bastille in May 1702. At first he was well treated, but being suspected of having favoured the escape of count Bucquoi, he was thrown into a dungeon, and afterwards more rigorously confined. He contrived, however, to procure books, and also employed himself in writing; according to his own account, making his ink with soot mixed with wine, and using pointed bones instead of pens. In June 1713 he was released, and ordered to quit France; on which he went to England, where he wrote a work, entitled "L'Inquisition Française, ou Histoire de la Bastille," Amsterdam, 1715, 12mo, which he republished with additions in 1724, 5 vols. 12mo. He likewise compiled a collection of voyages, and published some religious works. The time of his death is not known.—*Biog. Univ.*

RENNIE (JOHN) a celebrated engineer, was born near Linton in East Lothian, in 1760. His father was a respectable farmer, who gave him a good education, and placed him with an eminent millwright. After serving out his articles, he commenced business on his own account, but in 1783 was induced to remove to London, where he first distinguished himself by the construction of the Albion mill. His next work of magnitude was the formation and erection of the machinery of Whitbread's brewery. His reputation from this time rapidly increased, until he was finally regarded as standing at the head of the civil engineers of this country. Among his public works may be mentioned Ramsgate harbour, Waterloo and Southwark bridges, at least as to construction; the Breakwater at Plymouth, and the Bell Rock Lighthouse, erected on the same prin-

REN

ciples as that of the Eddystone, which last proof of his great skill has excited general admiration. Mr Rennie was admirably adapted, by steady resolution and inflexible perseverance, to contend with the great physical operations of nature which he was called on to control or guard against; and accordingly, no one has effected greater performances in that branch of his profession. He was, at the same time, in the highest degree punctual and steady in all his engagements; and although in some respects a self-taught man, he acquired the respect of the most distinguished men of science and learning in his day, and was elected a member of the Royal Society. His death took place at his house in Stamford-street, Blackfriars, October 4, 1821, in his sixty-first year, and he was buried with the respect due to his eminent talents in St Paul's cathedral.—*Ann. Biog.*

RENNIGER or RHANGER (MICHAEL) a learned divine and Latin poet, was born in Hampshire in 1529, and took his degrees at Magdalen college, Oxford. On the accession of Mary, being of the reformed religion, he left England, but afterwards returned, and became one of the chaplains of queen Elizabeth. He obtained the archdeaconry of Winchester and a prebend in St Paul's. He died in 1609. His works are, "Carminia in Mortem duorum Fratrum Suffolciensium Henrici et Caroli Brandon," London, 1552; "De Pii V et Gregorii XIII Furoribus contra Elizabetham Reginam Angliæ; "An Exhortation to true Love, Loyalty, and Fidelity to her Majesty;" "Syntagma Hortationum ad Jacobum Regem Angliæ, &c." and some MSS. in Bennet college library.—*Tanner. Bale. Ath. Ox. Strype's Life of Parker.*

RENTI (GASTON JOHN BAPTIST, baron de) a French nobleman, remarkable for his ascetic piety. He was born of an ancient family, at the castle of Beni, in the diocese of Baieux, in 1611. After studying at the college of Navarre, and under the jesuits at Caen, he returned to Paris, to complete his education at the school of the young nobility, where he acquired skill in all fashionable and manly exercises. He also learnt mathematics, and wrote on that science. His natural disposition for a secluded life made him desirous to enter into the religious order of the Carthusians; but being an only son, he was prevented by his parents from indulging his wishes, and induced to marry, and accept a commission in the army. He served with distinction in the wars of Lorraine, and obtained the approbation of his sovereign. At length he determined to retire from the world, and at the age of twenty-seven he gave up all his employments, and devoted the remainder of his life to works of charity, religious exercises, and mortification. He carried his austerities so far as to injure his health, and he died at Paris in 1649. He is said to have been the author of "Introducteur en la Cosmographie," published at Paris 1645, 2 vols. 8vo. His life, written by father de St Jure, a jesuit, has been often printed, and translated into Italian and Eng-

REQ

lish. An abridgment of it was published by the famous John Wesley.—*Biog. Univ.*

REPNIN (NICHOLAS WASILIEWITSCH, prince) a Russian field-marshal, the son of a prince of the same name, who served in the army of Peter I. He was born in 1734, and having adopted the profession of arms, he distinguished himself in the seven years' war, as a volunteer in the French army, when he passed his winters at Paris. He was afterwards appointed by Catherine II assistant to the Russian ambassador at the elevation of Stanislaus Poniatowski to the throne of Poland in 1764; and on the death of his principal immediately after, he became Russian minister at Warsaw. He remained there some years, governing the Poles in effect, and suppressing their various efforts for freedom. In 1774 he was sent ambassador to Constantinople; and in 1778 to Breslau, in the double capacity of general and negotiator, when he displayed his talents by contributing to the treaty of Teschen. In 1789 he succeeded count Romanzoff in the command of the army of the Ukraine, when he formed the blockade of Ismael, afterwards taken by Suwarrow; and in July 1791 he defeated the grand visir Yusuf. Having offended prince Potemkin, he was disgraced and banished to Moscow, whence, however, he was recalled to be made governor of Livonia. After the last partition of Poland, he received the government of Lithuania; and he subsequently submitted to serve under Suwarrow. Paul I, in 1796, promoted prince Repnin to the rank of a field-marshal, and 1798 sent him on a secret mission to Berlin. Not having succeeded in his endeavours to prevail on the Prussians to join in the meditated coalition against France, on his return to Petersburg, Repnin was ordered to retire to Moscow, where he died in May 1801.—*Biog. Univ. Biog. Nouv. des Contemp.*

REPTON (HUMPHREY) a private gentleman, distinguished by his skill in the art of ornamental gardening. He was a native of Bury St Edmund's in Suffolk, where he was born in 1752. Having acquired the friendship of the late Mr Windham, he accompanied that gentleman to Ireland in 1783, and obtained a lucrative situation in the castle of Dublin, which, however, he gave up when his friend quitted Ireland. On his return to London, he professionally applied himself to the improvement of gardens and pleasure grounds, in which pursuit he was extensively employed. He published several works on miscellaneous subjects, but his principal productions are on landscape gardening; and these have secured a very wide attention. He died in 1818, leaving several sons, one of whom is married to a daughter of the earl of Eldon.—*Ann. Biog.*

REQUENO (VINCENTE) a learned Spanish jesuit, was born in Grenada about 1730. Having a great taste for the fine arts, on the expulsion of his order he went to Italy, and in 1782 he sent to the society opened in Madrid for the fine arts, a memoir, which obtained the first prize. He acquired great fame by an

RET

elaborate work, printed at Seville in 1766, on the "Roman Antiquities in Spain." But he is best known by his "Saggi sul Ristabilimento dell' Antica Arte de' Greci e de' Romani Pittori;" the object of which was to restore the ancient art of Greek and Roman painting, and describing the manner of encaustic painting used by them, and the materials employed therein. His opinions were supported by many professors of eminence, but artists were very backward in adopting them. Requeno died at Venice in 1792.—*Dict. Hist. Supplement.*

RESENIUS (PETER) a learned and industrious writer, born at Copenhagen in 1625. His father, John Resenius, was professor of ethica at Copenhagen, and afterwards bishop of Zealand. The son, having studied philosophy and theology, became rector of a gymnasium, which office he quitted in 1647, and went to Leyden, where he remained four years, attending the lectures of Heinsius, Boxhorn, Vinnius, and other celebrated professors of that university. He then travelled in France, Spain, and Italy, and remained some time at Padua, where, in 1653, he received the diploma of LL.D. Returning to Copenhagen, he engaged in the study of Danish antiquities, and collected a great number of ancient relics, books, and MSS. relating to the north of Europe. In 1657 he was appointed professor of ethica, and in 1662 he obtained the second chair of jurisprudence in the university. He was besides invested with several honourable offices; and he died June 1, 1688. Having no family, he left his rich library to the university of Copenhagen; and of his collection he published a Catalogue in 1685, 4to, preceded by an interesting sketch of his life. His principal publications are, editions of the Islandic Edda; "Inscriptiones Havnenses;" "Lexicon Islandicum Gudmundi Andreæ;" "Jus Aulicum vetus Regum Norvigorum;" "Leges Cimbricæ Valdemari secundi Regis Danici;" and "Leges civiles et ecclesiasticæ Christiani secundi."—*Biog. Un.*—**JOHN PAUL RESENIUS**, a Danish divine, who became bishop of Roschild, translated the Bible into his native language. He died in 1638.—*Moreri.*

RESTAUT (PETER) a grammarian, was born at Beauvais in 1694. He was an advocate in the parliament of Paris, and became a protégé of the chancellor d'Aguesseau. He wrote an excellent work, entitled "Principes généraux et raisonnés de la Grammaire Française;" and "Traité de l'Orthographe, en forme de Dictionnaire," 8vo. He died in 1764.—*Dict. Hist.*

RETZ (JOHN FRANCIS PAUL DE GONDI cardinal de) a celebrated political character was born at Montmirel in 1614. He was the son of Philip Emanuel de Gondi, general of the gallies, descended from a Florentine family. His father obliged him, against his will, to embrace the ecclesiastical profession, and he was placed under the tuition of the famous Vincent de Paul. Several abbacies were conferred upon him at an early age, and in 1627 he was presented to a canonry of Notre Dame.

He passed through his course of study with distinction, and in 1643 was appointed coadjutor to the archbishop of Paris, his uncle. His deportment was by no means adapted to his profession; he fought duels, entered into every species of dissipation, and so early devoted himself to political intrigue, that, according to Voltaire, he was the soul of a conspiracy against the life of cardinal Richelieu at the age of twenty-three. The ministry of Mazarin was, however, the period of his great party consequence, and he was the source of all the factious cabals which led to the petty civil war of the Fronde. It was he who induced the Parisians to take up arms on the day of the Barricades, and for some time he was the Catiline of this sedition. At length the court was induced to buy him off by a cardinalate, to which he was nominated by the king in 1651. Like other deserters he immediately lost his popularity, and for the future acted only a secondary part. He could not, however, cease from caballing, and at last Mazarin, who both hated and feared him, imprisoned him in the castle of Vincennes, whence he was removed to Nantes, from which he contrived to escape into Spain, and thence proceeded to Rome. He subsequently travelled through Holland, Flanders, and England, and on the death of Mazarin, in 1661, made his peace with the court, by the renunciation of the archbishopric of Paris, to which he had succeeded by the death of his uncle. He had hitherto lived with great magnificence, which had plunged him deeply in debt, but he honourably determined to live upon a small income until he paid his debts, which, although enormously large, he effected. In 1675 he wished to give up his cardinal's hat, and retire from the world, but the pope would not receive it. The later years of his life procured him respect, and he died regretted at Paris, in 1679, at the age of sixty-six. The character of cardinal de Retz has been drawn by several eminent writers, all of whom agree in its principal features. Daring, turbulent, and intriguing, with designs rather romantic than elevated, and conducted with more adroitness than ability, he seemed exactly fitted to act the part which he sustained in what MarmonTEL calls the *tragi-comedy of the Fronde*. His "Memoirs" are well worthy perusal; they were written by himself in his retreat, with considerable impartiality; for he neither spares himself nor others, and his portraits of those who acted parts in the intrigues of the Fronde, are very curious. He was the author of several other writings relative to the affairs of the time and the party, which are now but little read.—*Sicéle de Louis XIV. Moreri.*

REUCHLIN (JOHN) a celebrated German philologist, born at Pfortsheim, in 1455. His early proficiency in learning recommended him to the margrave of Baden, who sent him with his own son to study at Paris. He returned to Germany with his patron, but a wish to apply himself to Greek literature induced him to go again to the French metropolis alone, where he supported himself by copying Greek

manuscripts. In 1474 he went to Basil, and took the degree of doctor in philosophy, and afterwards studied the law at Orleans, and in 1481 he obtained the diploma of licentiate in that faculty at Poitiers. Having accompanied Everard, count of Wurtemberg, to Rome as his private secretary, in 1482, he was received with the distinction due to his talents, and he was particularly noticed by Lorenzo de' Medici, at Florence. Returning to Germany with his patron, who became duke of Suabia, he established himself at Stuttgard. In 1484 he was nominated assessor of the supreme court; and the next year he proceeded doctor of law at Tubingen. In 1486 he was sent to the diet of Frankfurt; and in 1487 he was at the coronation of the emperor Frederic III. He was afterwards employed in some diplomatic affairs, and his services were recompensed with the title of count Palatine. He made use of the opportunity afforded by his residence at the imperial court, to study Hebrew under Loana, a Jew, who was physician to the emperor. After the death of duke Everard, he retired to Worms, where he remained under the protection of the bishop, till he was employed by the elector palatine in negotiations at Rome. After the renewal of the league of Suabia, in 1500, Reuchlin was appointed judge of a tribunal at Tubingen, in 1502, and he held the office eleven years. The latter part of his life was embittered by a dispute with the theologians of Cologne, who had obtained from the emperor a decree authorizing the destruction of all the books of the Jews, except the Bible, at the instance of Pfeffercorn, a convert from Judaism. Reuchlin wished to restrict this order to such books only as had been written against Christianity; and wrote an answer to a publication of Pfeffercorn on the subject, which subjected him to much illiberal abuse and persecution. His death took place at Stuttgard, in 1522. He composed the first Hebrew grammar and lexicon for the use of Christians; and he was the author of a treatise "*De Verbo mirifico*;" another, in three books, "*De Arte Cabbalistica*;" a Latin comedy, &c. This learned man, in compliance with the taste of his age, called himself *Capnio*, a Greek translation of his German family name, which signifies smoke.—*Stollis Introd. in Hist. Litt. Biog. Univ.*

REUSNER (NICHOLAS) a learned jurist, poet, and miscellaneous writer of the sixteenth century. He was a native of Silesia, and studied at Wittenberg and Leipsic. Going to Augsburg in 1565 to see the ceremonies of the diet, he produced some pieces of Latin poetry, which procured him the notice of the duke of Bavaria, who nominated him professor in the college of Liningen, of which he afterwards became rector. In 1583 he took the degree of doctor of laws at Basil; and he was invested with the dignity of assessor of the imperial chamber of Spire, and appointed professor in the academy of Strasburg. His reputation caused him to be invited to Jena in 1589, and he was twice rector of that uni-

REV

versity. The emperor Rodolph II bestowed on him publicly the laureate crown, and created him count palatine; and in 1595 he was deputy from the electorate of Saxony to the diet of Poland. He died at Jena, in 1602, aged fifty-seven. A list of the works of Reusner may be found in Nicéron's *Memoirs*. Among the most important are, "*Hodeporicorum, sive Itinerum totius fere Orbis, lib. vii.*" 1580, 8vo, a curious compilation; "*Icones seu Imagines Virorum Literis illustrium, additis eorum Elogiis diversorum Auctorum,*" 1587, 8vo; a second part, 1589, 8vo; "*Ænigmatologia, seu Sylloge Ænigmatum et Gryphorum convivialium,*" 1589, 8vo; and "*Opera Poetica,*" 1593, 8vo.—**REUSNER** (*ELIAS*) an antiquary and historian, brother of the preceding, was professor of philosophy at Jena, where he died in 1612. He was the author of "*Genealogicon Romanum de Familiis præcipuis Regum, Principum, Cæsarum, &c.*" 1590, folio; and other works relative to history and genealogy.—*Biog. Univ.*

REUVENS (*JOHN EVERARD*) one of the most celebrated lawyers Holland ever produced, was born at Haerlem in 1763, and studied at the university of Leyden. Having taken his degrees, he established himself at the Hague as an advocate; and after acquiring great reputation, he was appointed, in 1795, counsellor to the court of justice of the province of Holland. When the Revolution had changed the form of the government, he was placed at the head of the judicial department of the state, with the title of agent of justice; and on the occurrence of new political alterations in 1801, he was made president of the high court of justice. Under the regal government, in 1806, M. Reuvers was nominated counsellor of state extraordinary, then president of the first section, and at length vice-president of the council. On the union of Holland, to France in 1810, he became president of the court of appeal at the Hague; but was soon after invited to Paris, and made counsellor of the court of cassation. When his native country recovered its independence in 1814, he returned home, and was nominated president of the court of appeal at the Hague, and commander of the order of the Union. The criminal code of the kingdom of the Netherlands is almost entirely his work, and it has obtained the approbation of the most eminent lawyers. Being a member of the commission appointed to present projects for the other codes of law, he went to Brussels in July 1816, where he perished, the victim of a dark conspiracy, the authors of which have never been discovered. He was the author of an inaugural dissertation "*De Cautione Muciana.*"—*Biog. Nouv. des Contemp.*

REVAI (*NICHOLAS*) a learned Hungarian, born in 1751. He was educated in the Pious Schools, and became an ecclesiastic. Having cultivated literature with success, he made himself known as a poet, a philologist, and a grammarian. Among his prose works are, "*Hungarian Antiquities;*" and "*Elaboratio Grammatica Hungarica, ad genuinam patrii*

REW

Sermonis indolem fideliter exacta, affiniumque linguarum adminiculis locupletius illustrata," Pesth, 1805, 2 vols. 4to. He was professor of the Hungarian language and literature at Pesth; and he contributed much to excite a spirit of critical research among his countrymen. His death took place April 1, 1807.—*Biog. Univ. Biog. Nouv. des Contemp.*

REVELEY (*WILLEY*) an ingenious English architect and antiquary, who studied under sir William Chambers. He travelled in Greece and the Levant to observe the remains of ancient art, and brought home a valuable collection of drawings, the fruits of his talents and industry. As an artist, he distinguished himself by the erection of the church of All Saints at Southampton, and various other structures. He prepared for the press the last volume of Stuart's "*Antiquities of Athens;*" and he died in the prime of life, July 6, 1799.—*Europ. Mag.*

REWBELL (*JOHN BAPTIST*) one of the directors of the French republic, born at Colmar in Alsace, in 1746. He was an advocate in the sovereign council of his native province in 1789, and being devoted to the popular interest, he was chosen a deputy from the tiers-état to the states-general. On his arrival at Paris he displayed a violent spirit of innovation, and a decided enmity to the existing government. After the dissolution of the first assembly, Rewbell became attorney-general syndic of the department of the Upper Rhine, and he exercised that function during the whole continuance of the legislative assembly. Being nominated by his department a deputy to the Convention, in September 1792, he voted for the establishment of a republic, and warmly pressed the trial of Louis XVI, though he did not vote on that occasion, being absent on a mission to Mayence. He was afterwards employed as a commissary of the Convention in La Vendée; and he remained in similar situations during the reign of terror. In October, 1794, he was appointed a member of the committee of public safety; and in December following he was elected president of the Convention. Under the new constitution of the year 3 (1795), he became a member of the council of five hundred, and soon after he was raised by his colleagues to the highest magistracy of the state, being first nominated one of the five directors of the republic, of which he thus obtained the presidency. During the four years he was director, he is said to have given great offence by his pride and obstinacy; and, together with Barras and La Reveillière Lepeaux, he formed a majority which overruled the opinions of his two remaining colleagues. In March 1799, he was replaced by the abbé Sieyès, when he was nominated by his department a member of the council of ancients, in which he was the object of violent denunciations, from which, however, he defended himself. After Buonaparte overturned the government, Rewbell held no office. He died in obscurity in 1801.—*Biog. Univ.*

REWICKZY (*CHARLES ÉMÉRANCE DE REVISSINGS*, count) a celebrated bibliogra-

REY

pher, born in Hungary in 1737. After having finished his studies at Vienna, he visited the principal courts of Europe, and the classic regions of Asia. He acquired a knowledge of languages with singular facility; and he spoke and wrote French, German, Italian, English, Spanish, and most of the Northern and Oriental dialects. The empress Maria Theresa appointed him ambassador-extraordinary to Warsaw; and Joseph II afterwards sent him to Berlin. He was subsequently employed on a mission to the court of London, 1790; and also resided in England in a private capacity: but his death took place at Vienna in 1793. Count Rewiczky published an edition of the works of Petronius, and of the odes of the Persian poet Hafiz; but his principal production was a catalogue of his own library, which he published under the name of "*Periergus Deltophilus*."—*Biog. Univ.*

REY (JOHN) a philosopher of the seventeenth century, who was one of the precursors of the science of pneumatic chemistry, which has made such advances towards perfection in our times. He was a native of Bugue, in the province of Perigord, and after having received the degree of MD, he went to reside with his brother at Rochebeaurant, devoting his leisure to the study of chemistry and physical science. In 1630 he published the result of his researches, under the title of "*Essais sur la Recherche de la Cause pour laquelle l'Etain et le Plomb augmentent de Poids quand on les calcine*," 8vo. This interesting work shows that Rey had in some degree forestalled the grand discoveries of the moderns relative to the influence of oxygen gas in the calcination of metals, on which the antiphlogistic theory of chemistry is, in a great measure, founded. Rey, who corresponded with father Mersenne, and others of his scientific contemporaries, died in 1645. His treatise, just mentioned, was republished by Gobet at Paris, 1777, 8vo.—*Tilloch's Philos. Mag. Biog. Univ.*

REY (JEAN BAPTISTE) an eminent French musician, born in 1734, at Lauzerte, in the department of the Tarn and Garonne. He received the rudiments of a musical education in a monastic establishment at Thoulouse, whence, at the age of seventeen, he removed as a chorister, to the cathedral at Auch. In his fortieth year, his reputation as a composer having reached the ears of the court, a *lettredu-cachet* brought him from Nantes, where he was at that time settled, to Paris, and the appointment of chamber-musician to the king was conferred upon him, with a salary of 2000 francs. His promised advancement in the royal household was prevented by the Revolution; he still, however, continued to direct the opera orchestra for more than thirty-five years, and under Napoleon was appointed to superintend that of the chapel-royal. Besides a variety of operas of his own composition, some of which are still popular, he completed the "*Arvire et Eveline*" of his friend Sacchini, at the express request of that composer. He died in 1810, of grief, it is said, occasioned

REY

by the loss of a favourite daughter.—*Biog. Dict. of Mus.*

REYHER (SAMUEL) a German writer on mathematics and general literature, born at Schlusingen in 1635. He studied at the university of Leyden, after which he became tutor to the prince of Saxe Gotha. He next obtained the mathematical chair, and at length that of jurisprudence, in the university of Kiel. In 1674 he published a dissertation, "*De Mundo*," relating to the different systems of astronomy; and afterwards a universal history of jurisprudence; a German translation of Euclid's *Geometry*; "*Mathesis Biblica*;" and other works. He died at Kiel, in 1714.—*Moreri. Biog. Univ.*

REYNEAU (CHARLES RENE) known by the appellation of father Reyneau, an eminent French mathematician, who was the son of a surgeon at Brissac, in the province of Anjou. He was born in 1656, and having finished his studies, at the age of twenty he entered into the congregation of the Oratory. He studied the then prevailing system of Cartesian philosophy, in conjunction with which he acquired an intimate acquaintance with geometry; and he was sent by his superiors to teach mathematics and physics first at Pezenas, and afterwards at Toulon and Angers. In 1708 he published, for the use of his pupils, a treatise entitled "*Analyse Demontrée*," 2 vols. 4to; which was followed by "*Science du Calcul des Grandeurs*;" and in 1716 he was chosen an associate of the Academy of Sciences at Paris. He suffered a great deal from sickness in the decline of life, and, on account of his learning and his virtues, died much regretted, in 1728.—*Martin's Biog. Philos. Biog. Univ.*

REYNIER (JOHN LOUIS EBENEZER) a French general and man of science, born at Lausanne, in 1771. He had received a good education, and was preparing to enter into the corps of engineers, when the French Revolution facilitated his views. In 1792 he made a campaign in Belgium, attached to the staff of the army; and being raised to the rank of adjutant-general, he contributed to the success of the French, under Pichegru. Appointed general of a brigade during the conquest of Holland in 1794, he distinguished himself at the passage of the Waal. He then served under Moreau, as chief of the staff, in the army of the Rhine; and in the memorable retreat in 1796, as well as on several other occasions, he signalized his talents. In 1798 he went with Buonaparte to Egypt, where he was present at the battle of the Pyramids; and he joined in the Syrian expedition, laid siege to El Arisch, and commanded for a time at that of Acre. He overthrew the janizaries, and thus contributed greatly to the victory of Heliopolis; but having subsequently quarrelled with general Menou, he was not well received by Buonaparte on his return to France. In 1802 he published a work, entitled "*De l'Egypte après la Bataille d'Heliopolis, et Considerations generales sur l'Organisation physique et politique de ce Pays*," Paris, 1802, 8vo; which involved him in a dispute with ge-

REY

neral D'Estaing, with whom he fought a duel, when, having killed his antagonist, he was exiled from Paris. In 1805 he was recalled, and employed in Italy. Soon after, he entered into the service of Joseph Buonaparte, then king of Naples, and in July 1806 he was defeated by the English, under general Stewart, at the battle of Maida. In 1809 he served in Germany, and commanded the Saxons at the battle of Wagram; and in 1812 he was engaged in the Russian campaign, and appointed to cover the right of the grand army in Poland. In 1813 he was made prisoner at the battle of Leipsic; and, on being exchanged, he went to Paris, where he died of gout, February 27, 1814. Besides the work already mentioned, he was the author of "Conjectures sur les anciens habitants de l'Egypte," 1804, 8vo; and "Sur les Sphinx qui accompagnent les Pyramides d'Egypte," 1805.—*Biog. Univ. Biog. Nouv. des Contemp.*

REYNOLDS (EDWARD) bishop of Norwich in the seventeenth century, a prelate of considerable talent and polemical ability. He was a native of Southampton, born about the year 1569, and having received the rudiments of a classical education in the grammar-school there, removed to Merton college, Oxford, of which society he became fellow, and eventually warden. A strong Calvinist in his religious opinions, he entered the ministry, and obtained the living of Braynton, Northants, with the preacher'ship of Lincoln's-inn; and, on the breaking out of the civil commotions, distinguished himself by the zeal of his animadversions against the court party. This procured him to be elected one of the assembly of divines who met at Westminster; and he also assisted at the conference held in the Savoy, which was followed by his advancement to the deanery of Christchurch. From this preferment he was, however, ejected for deciding the test in 1651, and returned to the metropolis, where he resided for nearly eight years, till he was replaced in his former situation. In 1660, much to the scandal of the low church party with which he had hitherto acted, he accepted a seat upon the episcopal bench, and continued to preside over the diocese of Norwich till his death in 1676. There is a folio volume of his devotional and controversial writings extant, which breathe throughout the spirit of the reformer of Geneva.—*Biog. Brit. Wood.*

REYNOLDS (sir JOSHUA) an eminent English painter, was born at Plympton, in Devonshire, in 1723, being the tenth child of the reverend Samuel Reynolds, master of the grammar-school of that town. He early discovered a predilection for the art of drawing, which induced his father to place him, at the age of seventeen, with Hudson, then the most famous portrait painter in London, with whom he remained three years, and then, upon some trifling disagreement, returned into Devonshire. He passed some time without any determinate plan, and from 1746 to 1749 pursued his profession in Devonshire and London, and acquired numerous friends and patrons.

REY

Among the latter was captain, afterwards lord, Keppel, whom he accompanied on a cruise in the Mediterranean, and proceeded to Rome, in which capital and other parts of Italy, he spent three years. On his return to London he painted a full length portrait of captain Keppel, which was very much admired, and at once placed him at the head of the English portrait painters. Rejecting the stiff, unvaried, and unmeaning attitudes of former artists, he gave to his figures air and action adapted to their characters, and thereby displayed something of the dignity and invention of history. Although, from want of early practice, he never attained to perfect correctness in the naked figure, he has seldom been excelled in the ease and elegance of his faces, and the beauty and adaptation of his fancy draperies. His colouring may be said to be at once his excellence and his defect. Combining, in a high degree, the qualities of richness, brilliancy, and freshness, he was often led, by a restless love of experiment, to try modes which, probably from want of a due knowledge in chemistry and the mechanism of colours, frequently failed, and left his pictures after a while in a faded state. He rapidly acquired opulence, and being universally regarded as at the head of his profession, he kept a splendid table, which was frequented by the best company in the kingdom, in respect to talents, learning, and distinction. On the institution of the Royal Academy, in 1769, he was unanimously elected president, on which occasion the king conferred upon him the honour of knighthood. Although it was no prescribed part of his duty to read lectures, yet his zeal for the advancement of the fine arts induced him to deliver annual or biennial discourses before the academy on the principles and practice of painting. Of these he pronounced fifteen, from 1769 to 1790, which were published in two sets, and form a standard work. In 1781 and 1783 he made tours into Holland and Flanders, and wrote an account of his "Journey," which consists only of short notes of the pictures which he saw, with an elaborate character of Rubens. He was a distinguished member of the celebrated club which contained the names of Johnson, Garrick, Burke, and others of the first rank of literary eminence, and seems to have been universally beloved and respected by his associates. He is the favourite character in Goldsmith's poem of "Retaliation," and Johnson characterised him as one whom he should find the most difficulty how to abuse. In 1784 he succeeded Ramsay as portrait-painter to the king, and continued to follow his profession, of which he was enthusiastically fond, until he lost the sight of one of his eyes. He however retained his equable spirits until threatened, in 1791, with the loss of his other eye; which apprehension, added to his habitual deafness, exceedingly depressed him. He was not, however, a prey to lingering illness, being carried off by a disease in the liver in 1792, in his sixtieth year. He died unmarried, and was interred in

REZ

St Paul's cathedral, with an attendance of nobility and other persons of eminence which has seldom been equalled at the obsequies of a private person. He left a large property, the bulk of which went to a niece married to the earl of Inchiquin. Sir Joshua Reynolds, although there was scarcely a year in which his pencil did not produce some work of the historical kind, ranks chiefly in the class of portrait painters. His "Ugolino," and his "Death of Cardinal Beaufort," are, however, deemed, in grandeur of composition, and force of expression, among the first performances of the English school. But on the whole his powers of invention were inadequate to the higher flights of historic painting, although inexhaustible in portrait, to which he gave the most delightful variety. His character as a colourist has been already mentioned, and if not a thorough master in drawing, he gave much grace to the turn of his figures, and dignity to the airs of his heads. To conclude, although he did not reach that grand style which in his writings he almost exclusively holds up to admiration, his works are highly pleasing; and the engravings from his portraits and other works have contributed much to the perfection of that branch of art in England. As a writer he obtained great credit by his "Discourses," which are elegant and agreeable compositions, although sometimes vague and inconsistent. He also added notes to "Dufresnoy's Art of Painting," and gave three papers on painting to the "Idler." The whole of "The Literary Works of Sir Joshua Reynolds" were edited by Mr Malone in two volumes, quarto, 1797, with a life of the author.—*Life by Malone. Pilkington.*

REYRAC (FRANCIS PHILIP LAURENS DE) a French ecclesiastic, was born at Layville, in the Limousin, in 1734. He became prior of St Maclou, at Orleans, and an associate of the Academy of Inscriptions. He is principally known by his "Hymns to the Sun," 8vo. in the flowery prose of Fenelon. His other works are, "Idylls in Prose," 8vo; "Sacred Poems;" and "Manuale Clericorum," 12mo. The abbé Rey rac, who was much admired for the purity of his morals and the gentleness of his disposition, died in 1782.—*Nouv. Dict. Hist.*

REYS (ANTONIO DOS) a Portuguese divine, who distinguished himself by his attention to literature. He was born at Pernes, near Santarem, in 1690; and died at Lisbon, in 1738. He entered into the congregation of the fathers of the Oratory, and was historiographer to the order, and qualificador to the inquisition. He was a member of the Academy of History at Lisbon, and chronologist of the kingdom. He published a great number of his works, among which are Latin Poems; the Life of Don Ferdinand de Mezas; a collection of Portuguese poetry; and a collection of Latin poetry, by Portuguese authors.—*Biog. Univ.*

REZZONICO (ANTHONY JOSEPH, count) marshal of the camp, chamberlain to the infant erke of Parma, and governor of that citadel
Biog. Dict.—Vol. III.

RHE

was born at Como, in 1709, and died in 1785. He devoted much of his time to literary pursuits, and produced the following works, "Disquisitiones Pliniane, sive de utriusque Plinii atria, scriptis, codicibus, editionibus, atque interpretibus," 2 vols. fol. which is much esteemed; "De Suppositis Militaribus stipendiis Benedicti Odeschalci qui Pontifex Maximus, anno 1676 Innocentii prænominis fait renunciatus;" "Musarum Epinicia," &c. His son, the count Gastone della Torre Rezzonico, was born in Parma, in 1740, and distinguished himself by his literary attainments. At a very early age he was chosen a member of the Academia degli Arcadi, and was appointed president of an academy of fine arts at Parma; but falling into disgrace at court, he journeyed for some time through Europe, and on his return to Italy he settled at Rome. His poetical works were printed in 2 vols. at Parma, and are much admired for their nobleness of expression, lively imagery, and propriety of diction. He died in 1795.—*Dict. Hist. Sax. Onom.*

RHAZES or RAZI, an Arabian physician of the ninth century, who was a native of Korasan, and became superintendant of a public hospital at Bagdat, where he long resided with the highest reputation as a medical practitioner. He wrote a "Discourse of the Pestilence," by which term he designated the small-pox; and he is the earliest author extant who has treated of that disease, which made its first appearance in Egypt in the reign of the caliph Omar, the successor of Mahomet. Rhazes died in 932, at the age of eighty.—*Friend's Hist. of Phys. Moreri.*

RHEINEK (CHRISTOPHER) a German composer and musician of some note, born in 1748, at Memmingen. He perfected his musical education at Lyons, in which city he produced his first opera, "Le Nouveau Pygmalion," which met with great success, and procured him the notice of Turgot, who invited him to the metropolis, with the promise of a suitable provision. The disgrace of that minister, however, which took place before the arrival of his protégé in Paris, prevented the realization of the hopes held out, and the latter retired at length to his native place, where he commenced business as an innkeeper. Two other operas of his composition, "Le Fils Reconnaissant," and "Rinaldo," with Stadele's poetry, are much admired, as well as his oratorio, "Der Todgesang Jesu." He also published a collection of songs, in 4 vols. He died in 1796.—*Biog. Dict. of Mus.*

RHESE (JOHN DAVID) or John Rhese Davis, a physician, was born in 1534, in the isle of Anglesea, and died in 1609. He studied at Christchurch, Oxford, whence he went to Sienna, where he took his doctor's degree. His works are, "De Italicæ Lingue Pronunciatione," Pædua; "Rules for Obtaining the Latin Tongue," printed in Italian at Venice; "Cambro-Britannicæ, Cymræcæve Lingue Institutiones et Rudimenta, &c." folio.—*Wood.*

RHETICUS or JOACHIM (GEORGE) who derived the former appellation from the

R H O

ancient name of his native country, (Rhætia,) was an eminent mathematician of the sixteenth century. He was born at Feldkirchen, in the Valteline, in 1514; and he studied at the university of Wittemberg, where he obtained the chair of mathematics and astronomy. Having heard of the discoveries of Copernicus, he quitted his situation, and went to Thorne to visit that celebrated astronomer, and having adopted his doctrines, he published an account of them. He died of a catarrh, at Cassau in Hungary, in 1576. His works are, "Ephemerides;" "Orationes de Astronomia, Geometria, et Physica;" "Canon Doctrinæ Triangulorum;" "Narratio de Libris Revolutionum, &c. Nicolai Copernici." Besides which he left a great number of valuable manuscripts.—*Teissier Eloges des H. S.*

RHIGAS or RIGAS (——) a modern Greek patriot, born about 1753, at Velesini, a small town of Thessaly. He studied in the colleges of his native country, and was early distinguished for his ready apprehension and extensive acquirements. While yet young he repaired to Bucharest, and resided there till 1790, dividing his time between commercial pursuits and his studies. He became intimately acquainted with the ancient literature of Greece, and made himself familiar with the Latin, French, German, and Italian languages. He conceived the project of a grand secret society, in opposition to the domination of the Turks, and among the discontented chiefs who became associated with him was the pacha Passwan Oglou. He proceeded to Vienna, where he met with a number of rich Greek merchants, and some learned emigrants of the same nation. From that metropolis he extended his correspondence to various parts of Europe. He commenced a Greek journal for the instruction of his countrymen, and translated the Travels of Anacharsis the Younger, and other French works; and composed a treatise on military tactics, and an elementary treatise on natural philosophy; and he likewise drew up a grand chart of all Greece, in twelve divisions, wherein he noted not only the present, but also the ancient names of all places celebrated in Grecian history. At length he fell a sacrifice to treachery, being, together with eight of his friends, denounced by one of his associates to the Austrian government as a conspirator against the state. He was arrested at Trieste, and ordered to be delivered up to the Ottoman Porte; but he was, with his companions, drowned in the Danube, his conductors fearing to be intercepted by Passwan Oglou. This catastrophe took place in May 1798, when Rhigas was about five-and-forty years of age.—*Month. Mag.* vol. lviii. *Biog. Univ.*

RHODIGINUS (CÆLIUS) a learned Italian, whose real name was Ludovico Celio Richieri, was born at Rovigo in 1480, and studied at Ferrara and Padua. He was public professor at Rovigo for some years, and in 1503 he opened a school at Vicenza, where he remained until 1508, when he was invited to Ferrara by duke Alfonso I. In 1515 he was

R H U

named to the chair of Greek and Latin eloquence, by Francis I: six years after he returned to Padua, whence he was deputed to Venice to congratulate the new doge. He died in 1525 of grief, on account of the defeat and capture of Francis I at the battle of Pavia. He wrote a work, entitled "Antiquæ Lectiones," in 30 books, which displays great research and erudition, and excites wonder that it should be so little known. Julius Cæsar Scaliger called Rhodiginus "the Varro of the age."—*Vossii Hist. Lat. Tiraboschi.*

RHODIUS (JOHN) a learned physician and antiquary, was born in 1587, at Copenhagen. In 1614 he went to Padua, where he fixed his residence, but refused all appointments which were offered to him in order to devote himself entirely to study. His works are, "Notæ et Lexicon in Scribonium Largum de Compositione Medicamentorum," a very erudite work, and useful for the elucidation of the works of the early medical writers; "Analecta et Notæ in Lud. Septalii Animadversiones et Cautiones Medicas, 1652;" "Oratio de Ponderibus et Mensuris, et Vita Celsi;" "De Acia Dissertatio ad Corneli Celsi mentem," Patav. 1639; "Observationum Medicinalium Centuriæ tres;" "Mantissa Anatomica ad T. Bartholinum;" and "Observationes Posterioriores."—*Hallerii Bibl. Med. et Anatom. Eloy Dict.*

RHODOMAN (LAURENCE) a learned German, was born at Sassow, in Upper Saxony, in 1546, and studied at the college of Ilfeld, under Michael Neander. He was professor of Greek at Jena for some years, and of history at Wittemberg, where he died in 1606. He was deeply learned in the Greek language, in which he wrote some very good poetry, particularly a history of Martin Luther in Greek verse. His other works are, "Troica seu Historiæ Trojanæ Epitome," Gr. et Lat. versæ; "Historiæ Ecclesiæ ejusque Politicæ," Greek verse, with a Latin translation; "Historiæ Sacre, Gr. Lat. lib. ix." &c.—*Bayle. Baillet. Moreri.*

RHUNKEN, RUHNKEN, or RHUNKENIUS (DAVID) a celebrated critical scholar and philological writer, born at Stolpen in Pomerania, in 1723. He was intended for the ecclesiastical profession, but he consulted his inclination in devoting himself to the study of classical literature. Having passed some time at the university of Königsberg, he removed to Wittemberg, where he took the degree of LLD, and afterwards going to Leyden he attended the lectures of Hemsterhuis, who procured him the situation of a tutor, and through whose advice he published an edition of the Greek lexicon of Timæus. He subsequently went to Paris, where he availed himself of the stores of learning contained in the royal library. In 1757 he became assistant to Hemsterhuis at Leyden; and in 1761 he succeeded Oudendorp as professor of the Latin language and history. After having been long the great ornament of the university, to the reputation of which he contributed by his writings and lectures, he died much regretted

in 1798. He published a eulogium on his friend Hemsterhuis; an edition of Rutilius Lupus on Rhetoric; and an admirable edition of the history of Velleius Paterculus.—*Biog. Univ.*

RIBADENEIRA (PETER) a celebrated Spanish jesuit, was born at Toledo in 1527, and was one of the favourite disciples of St Ignatius. He studied at Paris, whence he went to Padua, and afterwards to Palermo, where he became a teacher of rhetoric. He died at Madrid in 1611. He is chiefly distinguished for his lives of various saints and jesuits, particularly that of St Ignatius de Loyola, written with candour and good sense. This work, and his "Lives of the Saints," were both translated into English, the latter in 2 vols. 8vo. In 1558 Ribadeneira visited England with the duke of Feria, and the result of his inquiries was a treatise "On the English Schism," containing many curious personal anecdotes of queen Mary.—*Alegambe, Douglas's Criterion. Freheri Theatrum. Dict. Hist.*

RIBERA (JOSEPH) called Lo Spagnoletto, an eminent painter, was born at Xativa in Valencia, about 1589, and was a pupil of Caravaggio. He went to Rome, and studied the works of Raphael, the Caracci, and others. He lived in a state of extreme poverty there, but one day, as he was painting some ornaments outside of a house, a cardinal passing by and observing his distressed appearance, gave him a home in his palace; but finding that he became indolent and voluptuous in his new situation, he had the strength of mind to withdraw himself from the house of his protector, and return to labour and indigence. He then visited Parma and Modena, and thence went to Naples, where the viceroys named him his own painter, and his fame extending to Rome, the pope created him a knight of the order of Christ, and the academy of St Luke elected him one of its members. In 1648, when don John of Austria visited Naples, Ribera imprudently boasted to him of the beauty of his daughters, which led to an intrigue with one of them, and the prince finally carried her off. The disgrace and the reproaches of his wife so affected Ribera, that one day, in 1649, he left his house, near Posillipo, to go to Naples, and was never more heard of. Other accounts, however, say that he died at Naples in 1656. He wrote a MS. tract upon the principles of painting, which was much esteemed. Spagnoletto revelled in scenes of horror and severity. His historical pictures are chiefly representations of martyrdoms, executions, and tortures, which he represented with a painful force. His anchorites and fathers of the church were all distinguished for their severity and dignity.—*D'Argenville. Pilkington. Cumberland's Painters in Spain.*

RICARDO (DAVID) a celebrated writer on finance and statistics. He was of a Jewish family, and was born in London, April 12, 1772. His father was a Dutch merchant and stockbroker; and the son being intended for

the same profession, was sent to Holland for education. At an early age he offended his friends, by uniting himself in marriage with Miss Wilkinson, a quakeress, whose relations were equally displeased at the temerity of the young couple, who were thus, with few resources but their own industry, left unsupported on all sides. Mr Ricardo, however, young as he was, had established among his father's connexions a character for probity, industry, and talent, which procured him immediate offers of assistance and support, of which he availed himself; and becoming a member of the Stock Exchange, he gradually accumulated immense property. In 1810 he first appeared before the public as a writer in the Morning Chronicle, on the subject of the depreciation of our national currency; and he afterwards embodied his ideas in a distinct work, and defended his opinions against the animadversions to which they were subjected; and he had the satisfaction to see his reasonings adopted and confirmed in the Report of the Bullion Committee of the house of Commons. He published "An Essay on Rent," in which he advocated the principles of Mr Malthus concerning population; and he also entered on an examination of the affairs of the Bank of England, the result of which was his proposal for an economical currency; and he addressed a letter on the subject to Mr Percival, but his plan was not adopted. His most important production is his treatise on "Political Economy and Taxation," which affords a luminous exposition of the origin and fluctuations of national wealth and expenditure, and which deserves to be ranked with the celebrated work of Dr Adam Smith. In 1819 Mr Ricardo obtained a seat in Parliament for the Irish borough of Portarlington, and displayed as a senator the same liberality, good sense, and clear argumentation which are to be found in his published works, so that he attracted the respect and esteem of all parties. He died of inflammation of the brain, arising from an abscess in the ear, at his seat of Gatcomb Park, near Minchin Hampton in Gloucestershire, September 11, 1823, and he was interred at Harnish, near Chippenham, in Wiltshire. Mr Ricardo, in relinquishing the religious sentiments of his ancestors, is said to have adopted the principles of Unitarianism, but he usually attended the service of the established church.—*Ann. Biog. Edinb. Ann. Reg.*

RICAUT (sir PAUL). See RYCAUT.

RICCI (MICHAEL ANGELO) an Italian cardinal, was born at Rome in 1619. He conceived a great inclination for the study of mathematics, which was cultivated by Torricelli, and had not his studies been interrupted, he promised to be one of the greatest geometricalians in Europe. In 1666 he published a little work, entitled "Exercitatio Geometrica, &c." in which he determined, in a purely geometrical manner, the tangents and the maxima and minima of curves, chiefly compared with conic sections of the first order. This treatise was eminently successful, and was reprinted by the Royal Society of London. In 1681 he

R I C

was created a cardinal by pope Innocent XI, a dignity which he enjoyed but a short time, dying in 1682. He wrote several Dissertations and Letters.—*Landi Hist. de Lit. de l'Italie*. Bayle. Moreri.

RICCI (SEBASTIAN) an eminent painter, was born in 1659 at Belluno, in the Venetian territory. He was for some time patronised by Rannuccio II, duke of Parma, who maintained him liberally at Rome, where he completed his studies. He was invited to the court of Vienna, to decorate the palace of Schönbrunn, whence he went, at the invitation of the duke of Tuscany, to Florence, and afterwards he visited England, where he remained ten years. He died at Venice in 1734. He was grand in his ideas, and an agreeable colourist, but he is deficient in correctness, the number of his works obliging him rather to consult his imagination than nature. His principal performances are in the churches of Venice.—*D'Argenville. Pilkington*.

RICCIOLI (GIOVANNI BATTISTA) a learned Ferrarese philosopher and mathematician, born in 1598. He became a member of the college of jesuits, and read lectures in philosophy and rhetoric in the universities of Bologna and Parma. It is, however, upon his proficiency in the science of astronomy that his reputation principally rests, on which subject he published some valuable works. These consist of his "Astronomia Reformata," folio; "Chronologia Reformata," folio; and the "New Almagest," folio, 2 vols.; besides twelve books on Geography, printed in 1672. His death took place in 1671.—*Tiraboschi*.

RICCOBONI (LOUIS) an Italian actor and writer on the history of the stage. He was a native of Modena, but resided at Paris, where he was long considered as one of the best performers at the Italian opera. At length, from religious motives, he relinquished his profession, and he died in 1753, aged seventy-eight. Riccoboni published several works, the most important of which is "Histoire du Théâtre Italien, depuis la Decadence de la Comedie Latine, avec une Catalogue des Tragedies et Comedies Italiennes depuis 1500 jusqu'à 1660," 2 vols. 8vo.—**ANTHOVY FRANCIS** Riccoboni, son of Louis, also a dramatic writer, died in 1772.—His wife, madame Riccoboni, was the writer of several popular novels or romances, the principal of which are, "Lettres de Miladi Catesby;" "Lettres de la Comtesse de Sancerre;" "Lettres de Sophie de Valiere;" "Ernestine;" "Lettres de Milord Rivers;" she also translated Fielding's novel of "Amelia." Her works were printed collectively in 10 vols. 12mo, Neufchatel, and 9 vols. 12mo, Paris. They display much knowledge of the heart, with vivacity and elegance, and several of them were translated into English. Madame Riccoboni was in habits of correspondence with Garrick. She died in 1792, in a state approaching to want.—*Nouv. Dict. Hist.*

RICH (CLAUDIUS JAMES) an Orientalist, was born at or near Bristol in 1786. His proficiency in the Eastern languages was so

R I C

great, that he was made a writer to the East India Company at the age of seventeen, and he finally became their resident at Bagdad. He displayed his literary talents in two memoirs on the Ruins of Babylon; and his valuable collection of Oriental MSS. was purchased by parliament for public use. Mr Rich died in 1821.—*Asiatic Register*.

RICH (JOHN) a celebrated pantomimic actor of the last century, was the son of Christopher Rich, the patentee of a theatre in Lincoln's-inn-fields, to the management of which he succeeded in 1714. When young he attracted general admiration by his performance of Harlequin; and under the sobriquet of Lun he received the frequent tribute of applause from contemporary critics and prologue-writers. In expressing the feelings of the mind by dumb show, his power was almost inimitable; and the speaking attitudes which he gave to the motley hero of the stage, superseded the necessity of vocal language to give interest to the scene. He rendered pantomime a most fascinating amusement, and through his abilities, was frequently enabled, with the assistance of an indifferent company, to secure a large share of the public attention, though opposed by the dramatic genius of Garrick at the rival theatre. In 1733 he removed his company to Covent Garden, where he was manager till his death, which happened in December 1761, during the run of a grand spectacle, which he exhibited in honour of the coronation of his late majesty. His education had been so grossly neglected, that he could neither write nor speak with grammatical propriety, which circumstance gave occasion for a coarse repartee of Foote. Among various peculiarities of expression, Rich had a habit of addressing persons to whom he was speaking, by the appellation of "Mister," and, on his applying it to Foote, the latter angrily asked him, why he could not call him by his proper name. "Don't be offended," said Rich, "for I sometimes forget my own name." "Indeed!" replied Foote, "I knew you could not write your own name; but I could not have supposed it possible you should forget it."—*Davies's Life of Garrick. Thesp. Dict.*

RICHARD I. king of England, surnamed Cœur de Lion, second son of Henry II by Eleanor of Guienne, was born in 1157. In 1173 he was induced by his mother to unite with his brothers, Henry and Geoffry, and other confederates, in a rebellion against his father, which, however, that active prince soon quelled. This conduct he repeated on more than one occasion, until, in 1189, he openly joined the king of France, and, in the war which ensued, pursued the unhappy Henry from place to place, who, being at the same time deserted by his youngest son, died worn out with chagrin and affliction at Chinon, cursing his unfaithful and ungrateful children with his latest breath.—(See HENRY II.)—On this event, Richard succeeded to the throne of England, and visiting his father's corpse the day after his decease, expressed great remorse at his own conduct. Having settled his affairs

in France, he sailed to England, and was crowned at Westminster. He prudently gave his confidence to his father's ministers, and discountenanced all who had abetted his own rebellion. He immediately released his mother, queen Eleanor, who had been long under confinement, and made the most ample grants to his brother John. He had taken the cross previously to his accession, and now bent all his views to the gratification of his martial ardour in the fields of the East. He raised money by the sale of the crown property and offices, and by every other means he could devise, including the remission of a large sum of the vassalage imposed by his father upon Scotland. He then sought an interview with Philip of France, who had also taken the cross, in which mutual conditions respecting their joint operations were agreed upon. A great number of English barons and others took the cross on this occasion, to which pious enterprise a horrible massacre of the Jews in several of the principal towns of the kingdom had formed a singular prelude. At midsummer 1190, Richard and Philip united 100,000 of their bravest subjects on the plains of Vezelai. Richard then proceeded to embark at Marseilles, and the two kings met at Messina, where they spent the winter. Here Richard was joined by Berengaria, daughter of Sanchez, king of Navarre, his intended wife, but without staying to celebrate his nuptials, he once more put to sea with his fleet, which was soon after dispersed by a storm. The king got into Crete, but those of his ships with his bride and his sister, the queen of Sicily on board, were driven into Cyprus, where Isaac, the king of that island, basely imprisoned the crew, and refused to deliver up the princesses. In revenge for this insult, Richard landed his army, and soon obliged the miserable Isaac, to surrender himself, his only daughter, and his sovereignty. In Cyprus he consummated his nuptials, and then embarked with his queen and the Cypriot princess for Palestine. At this period the siege of Acre was carrying on by the remnant of the army of the emperor Frederick and other Christian adventurers; and defended by a Saracen garrison, supported by the celebrated Saladin, at the head of a numerous army in the field. The arrival of the two kings infused new vigour into the besiegers, and the place was brought to a surrender in July 1191. This advantage was, however, rapidly succeeded by mutual jealousies, more especially excited by a contest for the crown of Jerusalem, between Lusignan, widower of the late queen Sybilla, and Conrad of Montferrat, the husband of her younger sister; the former being supported by Richard, and the latter by the king of France. At length, disgusted with a warfare in which he only acted a secondary character, the latter returned to Europe, leaving 10,000 men with Richard. Some active warfare ensued, until at length a general engagement took place, in which Richard, by the most heroic exertion of bravery and consummate military skill, gained a complete victory, which was followed by the

possession of Joppa, Ascalon, and various other places. Richard advanced within sight of Jerusalem, but the greater part of the auxiliaries refusing to concur in the siege of the capital, he retired to Ascalon, and perceiving his difficulties increase, concluded a truce with Saladin, on condition that Acre, Joppa, and the other sea-ports of Palestine should remain in the hands of the Christians, who were also to enjoy full liberty of performing pilgrimages to Jerusalem. Richard was the more readily induced to quit a field where he had at least acquired an extraordinary share of personal glory, by the knowledge he now acquired of the intrigues against him of Philip of France, and his new ally, his brother John. He accordingly prepared to return to England, but previously concurred in the election of Conrad, (almost immediately after assassinated), to the nominal sway of Jerusalem, and bestowed his conquered kingdom of Cyprus upon Lusignan. He embarked at Acre in October 1192, and sailed for the Adriatic; but his voyage was tedious and unprosperous, and he was finally wrecked near Aquileia. Thence taking the disguise of a pilgrim, he pursued his way through Germany, until being discovered by the profusion of his expenses near Vienna, he was arrested by the order of Leopold duke of Austria, who having received an affront from him in Palestine, seized this opportunity to gratify his avarice and revenge. The emperor, Henry VI, who had also a quarrel with Richard, for his alliance with Tancred, the usurper of the crown of Sicily, hearing of his captivity, demanded him from Leopold, who gave him up, on the stipulation of a portion of his ransom. While Richard was thus unworthily imprisoned, his brother John, with his usual baseness, had taken up arms in England, in concert with the king of France, who made himself master of a great portion of Normandy. The progress of the former was, however, quickly terminated by the vigour of the justiciary, while Philip, who was forced to raise the siege of Rouen by the earl of Leicester, and was, moreover, threatened by the pope with an interdict, consented to a truce. Richard, in the meantime, bore his misfortunes and indignities with undaunted courage, and when the emperor, in order to justify his unworthy treatment, charged him before the diet at Worms, with various imaginary offences, he refuted these accusations with so much spirit and eloquence, that the assembly loudly exclaimed against his detention. At length a treaty was concluded for his liberation, on the payment of a ransom of 150,000 marks, which being raised in England by great exertions, Richard obtained his liberty. Happily the negotiation was concluded, and the money paid before the emperor received great pecuniary offers from Philip and John, to protract his confinement, which that sordid prince would have accepted, and actually sought to arrest Richard again, but he had fortunately embarked at the mouth of the Scheldt, and safely reached England in March 1194, to the great joy of his subjects. When king Philip was acquainted with the

release of Richard, he wrote to John—"Take care of yourself, the great devil has broken loose;" and, as was reasonable, the fresh storm of the king's anger fell upon that deplorable prince, all of whose property was declared forfeited, unless he appeared in forty days. After being re-crowned in England, he landed in France, in May 1194, where he was met by his brother John, who threw himself at his feet, with tears, and under the mediation of his mother, intreated forgiveness. "I forgive him," said Richard, with the caustic levity which was natural to him, "and I hope I shall as easily forget his injuries as he will my pardon." In the ensuing war with Philip, Richard gained some advantages, but a truce soon suspended their hostilities. About this time, Leopold of Austria having received an accidental hurt which proved mortal, expressed great remorse for his base treatment of Richard, and gave up all claim to the remainder of his ransom. The emperor also offered to remit the remainder of his debt, provided he would join him in an offensive alliance against France, which was readily agreed to. Nothing, however, of any consequence followed, but the infliction of much mutual injury, until terminated by another truce. England, during this period of useless foreign contention, partly by disturbances, created by the needy rapacity of government, and partly through unpropitious seasons, productive of famine and pestilence, was in a state of great depression. A lasting accommodation with France was in agitation, preparatory to another crusade, when the life and reign of Richard were suddenly brought to a close. A considerable treasure having been found in the land of the viscount of Limoges, he sent part of it to Richard as his feudal sovereign. The latter, however, demanded the whole, which being refused, he invested the castle of Chalus, where the treasure was concealed, and having savagely refused terms of surrender to the garrison, in the openly expressed determination of hanging the whole of them, was wounded by a shot from the cross-bow of one Bertrand de Gourdon, while in the act of reconnoitring. The assault was, however, successfully made, and all the garrison hanged, as the king had threatened, with the exception of Gourdon, who was reserved for a more cruel death. Richard, apprised that his wound was mortal, commanded Gourdon to be brought into his presence, and asked him what had induced him to attempt his life. The man boldly replied, "You killed my father and my brother with your own hand, and designed to put me to an ignominious death." The prospect of death had inspired Richard with sentiments of moderation and justice, and he ordered Gourdon to be set at liberty, and allowed a sum of money; but the savage Marcadée, who commanded the Brabançons, which the king had hired for the expedition, caused the unhappy man to be flayed alive. Richard died of his wound on the 6th of April, 1199, in the forty-second year of his age and tenth of his reign, leaving no issue. The character of this king was strongly marked. He was certainly the

bravest among the brave, and reached the summit of that renown which is obtained by martial exploits and great personal daring. Nor was he destitute of some of the laudable qualities which usually attend the warrior; he was often frank and liberal, and when his feelings were properly addressed, not devoid of generosity. At the same time he was haughty, violent, unjust, rapacious, and sanguinary; and, to use the strong expression of Gibbon, united the ferocity of a gladiator to the cruelty of a tyrant. His talents were considerable, both in the cabinet and the field, and he was shrewd in observation, eloquent, and very happy at sarcasm, of which some pithy examples are afforded. He was also addicted to poetry, and some of his reputed compositions are preserved among those of the Troubadours. On the whole, a sort of romantic interest is attached to the character and exploits of this prince, which, in the cool eye of reason, they little merit, as the career of Richard produced calamities to his country which were but poorly atoned for, by the mere military reputation which alone attended it.—*Hume. Henry.*

RICHARD II, king of England, son of Edward the Black Prince, and grandson of Edward III, was born in 1366. He succeeded the latter in 1377, in his eleventh year, at which time the chief authority of the state was in the hands of his three uncles, John of Gaunt, duke of Lancaster, Edmund, earl of Cambridge, afterwards duke of York, and Thomas of Woodstock, subsequently duke of Gloucester. The earlier years of the king's minority passed in wars with France and Scotland, the expense of which led to exactions that produced the formidable insurrection headed by Wat Tyler. The details of this popular revolt belong to history, but its termination in the death of its chief leader in Smithfield, by the hand of Walworth, lord mayor of London, in the presence of the young king, afforded the latter an opportunity to exhibit a degree of address and presence of mind which, in a youth of fifteen, was very remarkable. Whilst the rioters stood astonished with the fall of their leader, the young king calmly rode up to them, and declaring that he would be their leader, drew them off, almost involuntarily, into the neighbouring fields. In the mean time an armed force was collected by the lord mayor and others, at the sight of which the rioters fell on their knees, and demanded pardon, which was granted them, on the condition of their immediate dispersion. Similar insurrections took place in various parts of the kingdom, all of which were, however, put down, and Richard, now master of an army of 40,000 men, collected by a general summons to all the retainers of the crown, found himself strong enough to punish the ringleaders with great severity, and to revoke all the charters and manumissions which he had granted, as extorted and illegal. The promise of conduct and capacity which he displayed on this emergency, was unhappily but ill answered in the sequel, and he very

early showed a predilection for weak and dissolute company, and the vicious indulgences so common to youthful royalty. In his sixteenth year he married Anne, daughter to the emperor Charles IV, and soon after was so injudicious as to take the great seal from Scroop, for refusing to sanction certain extravagant grants of lands to his courtiers. Wars with France and Scotland, and the ambitious intrigues of the duke of Lancaster, disquieted some succeeding years. In 1385 he marched with a great army into Scotland, where he committed destructive ravages, and burnt Edinburgh and Perth. In the mean time, a Scottish army made a similar inroad into England, mutual devastation being the only result of these useless expeditions. The principal favourites of Richard were, Michael de la Pole, earl of Suffolk and chancellor, and Robert de Vere, earl of Oxford, the latter of whom he created duke of Ireland, with entire sovereignty in that island for life. The duke of Lancaster being then absent, prosecuting his claim to the crown of Castile, the king's younger uncle, the duke of Gloucester, a prince of popular manners, and unprincipled ambition, became the leader of a formidable opposition, which procured an impeachment of the chancellor, and influenced the parliament so far that it proceeded to strip the king of all authority, and obliged him to sign a commission appointing a council of regency for a year. Being now in his twenty-first year, this measure was naturally very galling to Richard, who, in concert with the duke of Ireland, found means to assemble a council of his friends at Nottingham, where the judges unanimously declared against the legality of the extorted commission. Gloucester, at these proceedings, mustered an army in the vicinity of London, which being ineffectually opposed by a body of forces under the duke of Ireland, several of the king's friends were executed, and the judges who had given their opinion in his favour, were all found guilty of high treason, and sentenced to imprisonment for life in Ireland. As usual on such occasions, a reaction was soon produced by the tyranny of the ascendant party, so that in 1389 Richard was encouraged to enter the council, and in a resolute tone to declare that he was of full age to take the government into his own hands, and no opposition being ventured upon, he proceeded to turn out the duke of Gloucester and all his adherents. This act he rendered palatable to the nation by publishing a general amnesty, and remitting the grants of money made by the late parliament. Several years of internal tranquillity ensued, which was promoted by the return of the duke of Lancaster, who formed a counterbalance to the influence of the duke of Gloucester, and Richard prudently kept on the best terms with him. In 1394 the king visited Ireland, and held a parliament in Dublin, and on his return, having become a widower, made proposals of marriage to Isabella, daughter of Charles VI, king of France, who was only between seven and eight years of age. These

overtures were accepted, and a truce of twenty-five years agreed upon between the two nations. In the mean time, although guilty of no acts of very notorious misgovernment for a considerable interval, by his fondness for low company, by spending all his time in conviviality and amusement with jesters, and persons of mean station and light behaviour, the king forfeited all respect from his subjects, while his weak attachment to his favourites placed all things at their disposal, and made a mere cypher of himself. Encouraged by these follies, the duke of Gloucester once more began to exercise his sinister influence, and the most criminal designs being imputed to him, Richard caused him and his two chief supporters, the earls of Arundel and Warwick, to be arrested. The earl of Arundel was soon after tried and executed, and the earl of Warwick and the archbishop of Canterbury, brother to Arundel, were condemned to perpetual banishment. The duke of Gloucester had been sent over to Calais for safe custody, and when the warrant was issued to bring him over for trial, an answer was returned by the governor that he had died of an apoplexy. Suspicion of his murder immediately arose, and it afterwards appeared that he had been suffocated. As is often the case with weak administrations, it was thought safer to take off a potent adversary by a crime than by open course of law. A quarrel which soon after arose between the duke of Hereford, son of John of Gaunt, and the duke of Norfolk, in consequence of the former accusing the latter of slanderous expressions concerning the king, may be deemed the incidental cause of the revolution which terminated this unsettled reign. Mutual defiance being exchanged, a single combat was appointed, but when the lists were prepared before the royal court at Coventry, the king interposed, and by a sentence, the justice of which it is not easy to discover, banished both the dukes, Norfolk for life, and Hereford for ten, afterwards reduced to six years. It was however expressly declared, that each of them should be duly entitled to any inheritance which might fall to them during their absence. Instead however of fulfilling this stipulation, on the death of John of Gaunt in 1399, when the duke of Hereford became heir to his vast estates, the unprincipled and impolitic Richard, with the assistance of a parliamentary committee, seized all his property as forfeited to the crown. Whilst the kingdom was full of discontent at this tyranny, the king was so imprudent as to embark for Ireland, to revenge the death of his cousin, the earl of March, who had been killed in a skirmish with the natives. Invited by his numerous partisans, Henry of Bolingbroke, as the duke of Hereford was now invariably called, made use of this opportunity to land at Ravenshaw in Yorkshire, with a small body of forces, and being joined by the earls of Northumberland and Westmoreland, and other influential leaders, he proceeded southward at the head of 60,000 men, nominally to recover his duchy of

Lancaster. The duke of York, who had been left regent, unable to oppose Bolingbroke, joined him, and when Richard, upon this intelligence, landed at Milford haven, he found himself so much deserted, that he withdrew to North Wales with a design to escape to France. He was however decoyed to agree to a conference with Henry, and on the road was seized by an armed force, and conveyed to Flint castle, and thence led by his successful rival to London. As they entered the capital together on horseback, their different reception strongly marked the different feelings of the people towards them, Henry being hailed with the loudest acclamations, and the unfortunate Richard treated with neglect and even contumely. His deposition was now resolved upon, to be preceded by a forced resignation of the crown. Thirty-five articles of accusation were accordingly drawn up against him, of which several were exaggerated, false, and frivolous, but others contained real instances of tyranny and misgovernment. The proceedings that followed, a modern historian is of opinion, have never been sufficiently studied in the various discussions which have taken place in respect to the limits and responsibility of the kingly office in England. They were opposed only by the bishop of Carlisle, who made a dignified and eloquent speech against them, which had no other effect than to produce his own arrest, and king Richard was solemnly deposed September 30, 1399. Henry then stood forward and claimed the crown, which was immediately awarded to him, and he declared his intention to spare the life of the unfortunate prince whom he supplanted. Richard was then committed for safe custody to the castle of Pomfret, where the usual fate of dethroned princes awaited him. Of the manner of his death no certain account has been given, but a popular notion prevailed, that his keeper and guards killed him with halberds. It is more probable that starvation or poison was had recourse to, for his body, when exposed, exhibited no marks of violence. He died in the thirty-fourth year of his age, and twenty-third of his reign. The character of Richard II is sufficiently exhibited by the tenor of his unhappy reign; but in the midst of his weakness, folly, caprice, and political incapacity, there is reason to believe that he indulged a share of taste for letters and the arts; and his ordering some trees to be cut down at Shene, because they too forcibly reminded him of his deceased wife Anne, in whose company he used to walk under them, affords a favourable testimony of his susceptibility of the social affections.—*Hume.*
Henry. Raptin.

RICHARD III, king of England, born in 1450, was the youngest son of Richard duke of York. On the accession of his brother, Edward IV, he was created duke of Gloucester, and during the vicissitudes in the early part of Edward's reign, he served him with great courage and fidelity. He partook of the ferocity which has ever been a dark feature in the family character of the Plantagenets; and

is said to have personally aided in the slaughter of Edward prince of Wales, after the battle of Tewkesbury, and to have been the author, if not the perpetrator of the murder of Henry VI in the Tower. This bloody disposition was however united in him with deep policy and dissimulation, which only rendered him still more dangerous. He married in 1473, Anne, who had been betrothed to the murdered prince of Wales, joint heiress of the great earl of Warwick, whose other daughter was united to the duke of Clarence. Quarrels arose between the brothers on the division of the inheritance of their wives, and Richard, who otherwise found his elder brother an obstacle to his views of aggrandisement, combined in the accusations against that weak and versatile prince, which brought him to destruction. On the death of Edward in 1483, the duke of Gloucester was appointed protector of the kingdom, and he immediately caused his nephew, the young Edward V, to be declared king, and took an oath of fealty to him. The two ascendant factions, that of the queen's relatives, headed by her brother, earl Rivers, and that of the more ancient nobility, who were led by the duke of Buckingham and lord Hastings, courted the favour of the protector, who dissembled with each apart, while he was secretly pursuing the schemes of his own dark ambition. His first object was to get rid of those who were connected with the young king by blood, and after spending a convivial evening with Rivers, Grey, and sir Thomas Vaughan, he had them arrested the next morning, and conveyed to Pomfret, where they were soon after executed without trial. Alarmed at the arrest of her relatives, the queen dowager took refuge in the sanctuary at Westminster, with her younger son, the duke of York, and her daughter. As it was necessary for the protector's purposes to get both his nephews into his hands, he persuaded two prelates to urge the queen to deliver the duke of York into his hands, upon the most solemn assurances of safety. Lord Hastings, although opposed to the queen's relatives, being the steady friend of her children, was next arrested while sitting in council, and led to immediate execution. After this bold and bloody commencement, he proceeded in an attempt to establish the illegitimacy of Edward's children, on the pretence of a previous marriage with the lady Eleanor Talbot, daughter of the earl of Shrewsbury; and as if even this imputation, if proved, could not supersede the claims of the children of the duke of Clarence, he scrupled not to countenance an attack on the character of his own mother, who was affirmed to have given other fathers to Edward and Clarence, and to have been true to her husband only in the birth of Richard. All these pleas were dwelt upon in a sermon preached at St Paul's cross, by Dr Shaw, brother to the lord mayor of London. The duke of Buckingham afterwards, in a speech before the corporation and citizens of London, enlarged upon the title and virtues of the protector, and then ventured to ask them

whether they chose the duke of Gloucester for king. On their silence, he repeated the question, and a few prepared voices exclaiming, "God save king Richard," this was accepted as the public voice, and Buckingham, with the lord mayor, repaired to the protector with a tender of the crown. He first affected alarm and suspicion, and then pretended loyalty to his nephew, and unwillingness to take such a burthen upon himself; but finally acceded, and he was proclaimed king on the 27th of June, 1483, the mock election being secured by bodies of armed men, brought to the metropolis by himself and Buckingham. The deposed young king and his brother were never more heard of, and according to general belief, they were smothered in the Tower of London, by order of their uncle. Whether this was precisely the manner of their death, has been disputed; but the discovery of the bodies of two children of correspondent ages, buried beneath a staircase in the Tower, in the reign of Charles II. countenances the tradition resting on the authority of sir Thomas More, especially as they were removed to Westminster abbey on that presumption. The new reign commenced with rewards to those who had been instrumental to the change, and with endeavours to obtain popularity. Richard, with a splendid retinue, made a progress through several provincial towns, and was crowned a second time at York, on which occasion he created his only son prince of Wales. Happily, however, for the welfare of society, the moral feelings of an entire population are not wholly to be conquered. The supercession of a youth of unknown character, by a usurper of abilities, might be of little moment itself to the people of England, but a total insensibility to such a course of brutality, injustice, and tyranny, was uncongenial even with the barbarous civilization of those days, and hatred and abhorrence of Richard became the general sentiment of the nation. In looking out for a successor to the crown, after the death of the two princes in the Tower, overlooking the daughter of Edward IV. and the children of the duke of Clarence, then too young and powerless, all men's eyes were turned towards Henry, earl of Richmond, maternally descended from the legitimated, or Somerset branch of the house of Lancaster. Richard's first danger, however, arose from the discontent of his execrable accomplice Buckingham, who, not thinking himself adequately rewarded, entered into a conspiracy against him, with several other malcontents in the south and west of England. The standard of revolt was, in consequence, hoisted in several places on the same day, in October, 1483; but a very unusual flood having prevented Buckingham, who was in Wales, from crossing the Severn, he was suddenly deserted by his followers, and betrayed by an old retainer, with whom he had sought refuge, into the hands of authority. Whatever the baseness exhibited towards this very contemptible nobleman, in could not exceed his own; and it is rather satisfactory than otherwise to learn

that he was conducted to Salisbury, and executed without trial, like Rivers, Grey, and Vaughan, whose execution in the same lawless manner, he had so strenuously promoted. Richard's affairs, at this time looked promising, for about the same time the earl of Richmond, who had embarked in a fleet from St. Malo, encountered a violent storm, and was obliged to return to Brittany. Richard, with great policy, took advantage of this favourable interval to call a parliament, and pass several popular laws, and to bastardize the issue of Edward IV. He also negotiated at the court of Brittany for the delivery into his hands of the earl of Richmond; but the latter escaped the danger, by taking refuge in the immediate territories of the French monarch. The death of his son, the prince of Wales, was a severe stroke to Richard in the midst of his prosperity; and such was the odium attached to his character, that the death of his wife, which followed soon after, was, without the least evidence, attributed to poison. His character, however, justified any suspicion: and his almost immediate determination to marry his niece Elizabeth, the daughter of his brother Edward, and legitimate heiress of the crown, to prevent her union with Richmond, gave countenance to the presumption. It supplies a melancholy picture of human nature to learn that the consent of the queen dowager to this marriage of her daughter to the murderer of her sons, was either obtained or extorted. As this union, which could only take place by dispensation, would have been extremely detrimental to the earl's interest, the latter hastened his preparations, and in August 1485, landed with a small army at Milford-haven. Richard, not knowing in what quarter to expect him, was thrown into much perplexity, which was aggravated by his suspicion of the fidelity of his nobles, and especially the Stanleys, the chief of whom had become the second husband of Margaret the earl of Richmond's mother. When informed of the advance of his rival, he, however, took the field with great expedition, and met him with an army of 15,000 men at Bosworth in Leicestershire. Richmond had only 6,000 men, but relied on the secret assurances of aid from Stanley, who commanded a separate force of 7,000. The battle was fought on the 23d of August, 1485; and in the midst of it, Stanley, by falling on the flank of the royal army, secured the victory to Richmond. Richard, finding his situation desperate, rushed against his competitor, slew his standard-bearer, and was on the point of encountering Richmond himself, when he sunk under the number of his assailants. His troops were also totally defeated, with the loss of all their principal leaders. The body of Richard was found in the field stripped naked, in which condition it was carried across a horse to Leicester, and interred in the grey friars' churchyard. Thus fell this odious prince, in his thirty-fifth year, after possessing the crown, which he had acquired by so many crimes, for two years and two months. It is allowed on all hands, that

as possessed courage, capacity, eloquence, and most of the talents which would have adorned a lawful throne. It may be also admitted, that in conformity with the tendency of mankind to aggravate the vices of known delinquents, that many of his baleful qualities have probably been exaggerated. But it is not proper, in compliment to the curiosity and scepticism of individuals, to be reasoned out of the conviction which so many undeniable facts tend to establish, of his cruelty, dissimulation, treachery, and relentless ambition. It is, doubtless, worthy the philosophy of history to correct unjust imputation, even in regard to bad men; but it must steer clear of the paradox of resting their defence upon suppositions and presumptions, far more paradoxical than those they are employed to supersede; and in a few calm pages Gibbon has for ever set at rest, the "Historic Doubts" of Horace Walpole. On the character of Richard III, too, the genius of Shakespeare has stamped an eternal impression, which no merely curious or conjectural erudition can assail. John, and Richard III, in fact, are the royal villains of English history, the one from weakness and innate baseness of mind, the other from unprincipled ambition, and the fearful misapplication of great talents. Richard III has been represented as of small stature, deformed, and of a forbidding aspect; but there is some direct testimony to prove, that his personal, like his mental defects, have been magnified by the general detestation of his character.—*Hume. Rapin. Henry.*

RICHARD, abbot of St Victor, in the twelfth century. He was a native of Scotland, who went to pursue his studies in the university of Paris, after which he entered into the abbey of St Victor, of which he became the superior in 1164. He died in 1173. His works, which consist of critical remarks on some of the historical parts of the Old Testament, with commentaries on the Psalms, the Song of Solomon, the Apocalypse, and the Epistles of St Paul, have been frequently printed; but the best edition is that of Rouen, 1650, 2 vols. folio.—*Cave. Dupin.*

RICHARD, commonly called Armachanus, but sometimes Fitz-Ralph, his family name, is said by some to have been a native of Devonshire, and by others of Ireland. He studied at Oxford, and in 1333 became commissary-general of that university. He subsequently became dean of Lichfield, and in 1347 was advanced to the Irish see of Armagh. While at Oxford, he honourably distinguished himself by his opposition to the mendicant orders; whose affectation of poverty, and other superstitious practices and irregularities, he exposed in his lectures. After being raised to the see of Armagh, he also strenuously argued against the encroachments of the friars on the duties of the parish priests, and endeavoured to show, that although Jesus Christ was poor, he never affected mendicancy, or taught men to make choice of beggary as a thing agreeable to God. Doctrines so opposed to the principles

of the mendicant orders, were of course forcibly resisted by them, and he was obliged to repair to Avignon, to defend himself before pope Innocent VI, who decided in favour of the friars. This able and sensible prelate died at Avignon in 1360. His printed works are, "Sermones quatuor ad Crucem Londinensem," Paris, 1612; and "Defensio Curatorum adversus Fratres Mendicantes," Paris, 1496, being the substance of the defence of his principles at Avignon. He also translated the Bible, or at least the New Testament, into Irish, which translation was found in the wall of his cathedral in 1530.—*Collier's Dict. Bayle.*

RICHARD of CIRENCESTER, so named from his birth-place, was an English historian of the fourteenth century. No traces remain of his family history, and little more is known of him than that he became a Benedictine monk of the abbey of St Peter at Westminster in 1350, and that his name occurs in various documents of that monastery in the years 1387, 1397, and 1399. Towards the close of his life he visited Rome; but he returned to Westminster, and died there in 1401. He devoted his leisure to the study of our national history and antiquities; and he wrote "Historia ab Hengista ad an. 1348," in two parts, still remaining in manuscript; but his principal work is "The Description of Britain," first published in Latin at Copenhagen, in 1767, and more recently in Latin and English, with a commentary and maps by Mr Hatcher, 1809, 8vo. Richard of Cirencester also was the author of some theological tracts.—*Life pref. to Desc. of Brit.*

RICHARD or REICHARD (BARTHOLOMEW CHRISTIAN) a learned writer on philology and bibliography, in the early part of the eighteenth century. He was a native of Corbey in Westphalia, and became professor of history and philology in the university of Wittenberg, and afterwards in that of Jena. He died in 1721, at the age of forty-one. He was the author of "Dissertatio de Toga Quiritium," 1702, 4to; "De Censu Augusti Universe indicto," 1704; "De Roma ante Romulum condita," Jenæ, 1706, 4to; "Commentatio de Vita et Scriptis Professorum hodie in Academia Jenensi publice docentium," 1710, 8vo; and "Historia Bibliothecæ Cæsareæ Vindobonensis ad nostra tempora deducta," 1712, 8vo; besides which he published an edition of the epistles of Libanius.—*Sartii Onom. Stollis Introd. in Hist. Lit.*

RICHARD (CHARLES LOUIS) a theological writer, born at Blainville-sur-l'Eau in Lorraine, in 1711. He was descended from a noble but reduced family, and at the age of sixteen he took the habit of St Dominic, and having finished his studies at Paris, he was admitted a doctor of the Sorbonne. He consecrated his talents at first to preaching, but not meeting with the success he anticipated, he had recourse to his pen, and produced a number of works, some of which attracted considerable attention. When the Revolution took place, he opposed its progress, and was

obliged to seek an asylum in the Netherlands; and when that country was entered by the French troops in 1794, he was arrested at Mons. He was tried before a military commission, and condemned to death for having published a tract, entitled "Parallele des Juifs qui ont crucifié Jesus Christ, avec les Français qui ont tué leur Roi;" and pursuant to his sentence he was shot the 16th of August, 1794. He was the author of "Dictionnaire Universelle des Sciences Ecclesiastiques," 1760, &c. 6 vols. folio, in which he was assisted by father Giraud; and "Analyse des Conciles généraux et particuliers," 1772-77, 5 vols. 4to.—*Biog. Univ. Biog. Nouv. des Contemp.*

RICHARD (LOUIS CLAUDE MARIE) one of the most eminent botanists of the present age, born at Versailles September 4, 1754. He was the son of the keeper of the royal gardens at Auteuil, and he studied at the college of Vernon, and afterwards went through a course of rhetoric and philosophy at the Mazarin college at Paris. Whilst there, he partly supported himself by making drawings for architects, and at the same time assiduously applied himself to the study of botany, comparative anatomy, zoology, and mineralogy. While yet very young, he presented to the Academy of Sciences several memoirs, which attracted the notice of the celebrated Bernard de Jussieu, who gave him the use of his library and cabinet. In 1781 he sailed from France with the title of naturalist to the king, on a voyage of research to French Guyana and the Antilles. He returned home in 1789, bringing with him a herbal of one thousand plants, most of which were newly discovered, and a great number of cases filled with shells, insects, birds, and quadrupeds, besides a valuable collection of minerals and geological specimens. The political disturbances of that period caused his labours to be neglected; but on the restoration of order, when the school of medicine was established, he was appointed professor of botany; and on the formation of the Institute, he was chosen a member of the first class in the section of zoology and comparative anatomy. He was also a corresponding member of the Royal Society of London; and was made a member of the legion of honour. He died June 7, 1821. The researches of this botanist were chiefly directed to the anatomy of plants, and the discovery of their natural characters, on which subjects he published a multitude of valuable memoirs in periodical works, besides which he was the author of "Demonstrations Botaniques, ou Analyse du Fruit considéré en général," 1808, 8vo.—*Biog. Univ.*

RICHARDSON (JONATHAN) a painter and author, was born about 1665. He was apprenticed to a scrivener in London, but when released by the death of his master, he pursued his natural inclination for the arts of design, and entered as a pupil with Riley the portrait painter, whose niece he subsequently married. He never attained much excellence in his profession, but in the then state of the

art was deemed at its head, after the death of Kneller and Dahl. As a writer he is entitled to more consideration, and two discourses which he published in 1719, entitled "An Essay on the whole Art of Criticism in relation to Painting," and "An Argument in behalf of the Science of a Connoisseur," display considerable judgment and feeling. He had a son, who, with greater advantages in the way of education than himself, travelled into Italy, the result of which journey was a joint production, published in 1722, under the title of "An Account of some of the Statues, Bas-Reliefs, Drawings, and Pictures in Italy, with Remarks, by Messrs Richardson senior and junior." The father and son also published, in 1734, "Explanatory Notes and Remarks on Milton's Paradise Lost," 8vo, an unequal, but not unmeritorious performance. In 1776 Mr Richardson sen. published a volume of poems, which possess a very slight degree of poetical merit, although indicative of the pious and amiable character of the writer. He died of a paralytic stroke in 1745, aged eighty. His son, who practised painting occasionally, and who was also an extremely worthy man, died in 1771.—*Walpole's Anec. Newton's Milton.*

RICHARDSON (JOSEPH) a man of letters, was born at Hexham in Northumberland, and was entered of St John's college, Cambridge, in 1774. He became a student of the Middle Temple in 1779, and was called to the bar in 1784. His literary pursuits, however, prevented him from the exercise of his profession. He took a conspicuous part in the celebrated political satires, "The Rolliad" and the "Probationary Odes." He also wrote the popular comedy of "The Fugitive." He was brought into parliament by the duke of Northumberland, by whose means he was also enabled to become proprietor of a fourth part of Drury-lane theatre. He died in 1803.—*Gent. Mag.*

RICHARDSON (SAMUEL) a very distinguished English novelist, was born in 1689, in Derbyshire, to which county his father retired from the business of a joiner, in London. He was destined for the church, but owing to losses in trade, the expense of a learned education could not be supported, and the learning of a common school was all that he ever attained. He early discovered a talent for story-telling and letter-writing; and those who take pleasure in tracing the dawning indications of talent and propensities, which are the groundwork of future celebrity, will learn with pleasure that at the age of thirteen he was the confident of three young women in their love secrets, and was employed by them, unknown to each other, in the construction of their amatory correspondence. At the proper age he was bound apprentice to Mr John Wilde, of Stationers' hall, London, a printer of some eminence in his day; and after the expiration of a laborious apprenticeship, passed five or six years as foreman in a printing-office, until at length he found means to set up for himself in a court in Fleet-street. The habits of dili-

gence, accuracy, and honourable dealing, soon acquired him an extensive business, and beginning to thrive in the world he married the daughter of his former master. Among other things, he printed a publication called the *True Briton*, for the profligate duke of Whar-ton; the *Daily Gasetteer*; and, through the interest of the speaker Onslow, the first edition of the *Journals of the House of Commons*. His "*Pamela*," the first work which gave him distinction as a writer, was published in 1741, and arose out of a proposal to him by the booksellers to compose a volume of "*Familiar Letters*," which suggested the idea. Such was the readiness of his invention and his pen, the first two volumes were completed in two months, and so great was its popularity, that it ran through five editions in one year, and was even recommended from the pulpit. The novelty of his plan, with many passages of great beauty and interesting traits of character, may account for much of this reception; but even at that time critics existed, who entertained those opinions of its imperfections, and doubts of its salutary tendency, which have since become almost general. He was led by a spurious continuation by another writer to add two volumes to his "*Pamela*," which were deemed very inferior to the former; but in 1748, the appearance of the first two volumes of his "*Clarissa*," fully established his literary reputation. This is unquestionably the production upon which his fame is chiefly founded; and although it has lost much of its original popularity, owing to a change in the taste of novel readers, its pathos, its variety of character, and minute development of the movements of the human heart, will cause it ever to be regarded as a noble monument of its author's genius. The interest created by its progressive appearance was immense; and when made known to the continent by translation, it raised the reputation of Richardson to a level with the most applauded writers of the age. "*The History of sir Charles Grandison*," his concluding performance, appeared in 1753. The interest taken in this work was not equal to that produced by the former, although possibly exhibiting more compass, invention, and entertainment; but the character of the hero, like all assumed perfection, is in some degree repulsive, and the lengthy mode of the author began to engender satiety. The character of Clementina is allowed to be a masterly example of delicate delineation. This work was also translated into foreign languages, and received with great applause. With respect to all the productions of Richardson, it is agreed that the matter receives little assistance from the style, which is inelegant, gossiping and verbose, and that he seldom knows when to leave off. Writing as he did so much and so rapidly, this was to be expected, not to mention his paucity of original education, the chief source of refinement of style. While advancing in the career of literary fame, he was by no means inattentive to the improvement of his fortune. In 1754 he rose to be

master of the Stationers' company; and in 1760 purchased a moiety of the patent of law printer to the king. As he grew rich, he indulged himself with a country residence at Parson's-green, Middlesex, where he lived surrounded with a circle of affectionate admirers, particularly females, to whom it was his delight to read his work in the progress of composition. In mixed company he was rather silent and reserved, and never got over the bashfulness incident to a man of feeling of early origin, which reserve was rather strengthened than otherwise by a great love of independence. Nothing, however, could exceed his piety, moral worth, and general benevolence. This estimable person was carried off by an apoplexy, in 1761, at the age of seventy-two, and was buried in the church of St Bride in Fleet-street. He was twice married, and out of a large family reared four daughters, who survived him. The writings of Richardson, exclusive of his three novels, are "*Familiar Letters*," an "*Edition of Æsop's Fables, with Reflections*;" his "*Case*," on the piracy of his Grandison by the Dublin booksellers; "*The Duties of Wives to Husbands*," printed on a large single sheet; and several fugitive pieces in various periodical publications, one of which is No. XCVII of the *Rambler*, describing the progress of a virtuous courtship. His correspondence, selected from his original MSS. was published in 1804, in 6 vols. 8vo, with an excellent life and criticism by Mrs Barbauld. It will not add to his reputation, unhappily exhibiting an uncommon share of the vanity that was his principal foible, and which appears to have been the only unfavourable result of that exclusive predilection for female society and approbation, which had been one of his earliest and unceasing characteristics.—*Life by Mrs Barbauld. Nichols's Lit. Anec.*

RICHARDSON, F.A.S. (WILLIAM) a learned divine and ecclesiastical antiquary, born at Wilsamstead in Bedfordshire, in 1698. He received his education at Westminster school and Emmanuel college, Cambridge; and having been episcopally ordained, he became curate and lecturer of the parish of St Olave, Southwark. Having returned to the university, and taken the degree of LL.D. he obtained the mastership of the college in which he had been educated. On the death of archbishop Potter, in 1747, he had a dispute with Dr Chapman, relative to the precentorship of Lincoln, of which the latter had taken to himself the presentation, as executor to the primate, to whom the right of nomination had appertained, but his claim was defeated. Dr Richardson's principal literary undertaking was a new and much improved edition of bishop Godwin's treatise, "*De Presulibus Anglorum*," folio, 1743. He also published some Sermons. His death took place in 1775.—*Nichols's Lit. Anec.*

RICHARDSON, DD. (WILLIAM) an Irish clergyman, distinguished as an agriculturist. He was born in 1740, and entering into the established church, he became rector of Clon-

RIC

suckle, in the county of Antrim. All his leisure was devoted to the culture of the *Agrostis stolonifera*, or florin grass, on which he made a great number of experiments, tending to show its superiority over most other kinds of herbage for feeding cattle. He published "A Letter to the Right Hon. Isaac Corry, on the Properties of Florin Grass," 1809, 12mo; "An Essay on Florin Grass," 1810, 8vo; "A new Essay on Florin Grass," 1813; besides a Memoir on the Giant's Causeway, and other papers in the *Philosophical Transactions*.—Dr Richardson died in 1820.—*London Mag. Biog. Nouv. des Contemp.*

RICHARDSON (WILLIAM) an ingenious Scottish writer, who was educated at the university of Glasgow, where he took the degree of M.A. Having finished his studies, he obtained the office of tutor to a young nobleman, with whom he went to Russia. Returning to Scotland, he was chosen professor of humanity or classical literature (*litteræ humaniores*), at Glasgow, and he held that station for more than forty years. He published "An Analysis and Illustration of some of Shakespeare's most remarkable Characters," 1774, 8vo; "Poems, chiefly rural," 1774, 8vo; "Essays on Shakespeare's Dramatic Characters of Richard III, Lear, and Timon of Athens," 1783, 8vo; "Anecdotes of the Russian Empire, in a series of Letters," 1784, 8vo; "The Cæcique of Ontario, an Indian Tale," 1786, 4to; "Essays on Shakespeare's dramatic Character of Sir John Falstaff, and on his Imitation of Female Characters, with some general Observations on the Study of Shakespeare," 1788, 8vo; and "The Maid of Lochlin, a Tale," 12mo. He also published papers in the *Transactions of the Royal Society of Edinburgh*, to which he belonged. He died at an advanced age, in 1814.—*Revue. Gent. Mag.*

RICHE (CLAUDE ANTOINE GASPARD) a distinguished French physician and naturalist, born in 1762. After studying at a college of the Benedictines, he went to Montpellier, where he took the degree of MD, in 1787. He then visited the mountains of Languedoc, to improve his acquaintance with botany and geology; and in 1788 he went to Paris, and became the first secretary to the newly-founded Philomathic Society. On the fitting out an expedition under M. d'Entrecasteaux, for the double purpose of inquiry into the fate of La Perouse, and the prosecution of researches relative to geography and natural history, Riche obtained an appointment, and sailed on board the *Esperance*, one of the two frigates destined for the voyage, in September 1791. After visiting New Holland, and many of the islands of the South Sea, and making numerous collections of specimens and observations, M. Riche and his colleagues, Ventenat, La Billardiére, Deschamps, &c. arrived with the vessels at Java, in October 1793. The French republican government being then at war with the Dutch, the journals, charts, &c. of the squadron were seized; and after fruitless attempts to recover them, and a voyage to

RIC

the Isle of France, M. Riche returned to Europe. He landed at Bourdeaux, in an ill state of health, and died soon after, September 5, 1797. The papers of this naturalist were subsequently given up by the Dutch government, and they were used in preparing an account of the Voyage of D'Entrecasteaux. He was the author of an ingenious treatise, "Sur la Chimie des Végétaux," and he read before the Philomathic Society, a number of memoirs, some of which have been published.—*Biog. Nouv. des Contemp. Biog. Univ.*

RICHELET (CESAR PIERRE) a French lexicographer of the seventeenth century, the value of whose writings is much deteriorated by the acrimony and ribaldry with which they are intermingled, a circumstance the more to be regretted, inasmuch as the less exceptionable parts evince much talent, and are replete with useful information. He was a native of Cheminon, born there in 1631, and in 1680 printed at Geneva the first edition of the Dictionary that bears his name, in one quarto volume. A second edition, in two vols. folio, appeared at Lyons in 1721, and a third, with many additions and improvements, in the same city in 1755. He was also the author of a Rhyming Dictionary, and a translation of Vega's "History of the Conquest of Florida." He died in 1698.—*Nouv. Dict. Hist.*

RICHELIEU (ARMAND JOHN DU PLESSIS, cardinal, duke de) a celebrated French statesman, born of a noble family, September 5, 1585, in the city of Paris. He was the son of Francis du Plessis Richelieu, grand provost of France, and captain of the guards to Henry IV, who died when the subject of this article was but five years old. He was originally intended for the military profession; but his elder brother having resigned the bishopric of Luçon to become a Carthusian, Armand engaged in a course of study to fit himself for the benefice; and having finished his education at the college of the Sorbonne, he went to Rome, and was consecrated bishop of Luçon in 1607. He at first occupied himself with his pastoral duties, and edified his flock and the court by his preaching, devoting himself entirely to religious affairs till the assembly of the States General in 1614, in which he was a deputy from the clergy of Poitou. He therein supported the interest of the queen mother, Mary de' Medici, who appointed him her grand almoner, and through whose interest he became secretary of state. On the destruction of the queen's favourite, the marshal d'Ancre, Richelieu accompanied her majesty in her exile to Blois, whence, by his intrigues with the duke de Luynes, he procured her return and reconciliation with her son. Luynes, in reward of his services, procured him a cardinal's hat, and after the death of that minister in 1622, he arrived at unbounded power, through his influence over his weak master, Louis XIII. In 1624 he was placed in the arduous office of prime minister, and his government assumed a tone of vigour and decision which the exigencies of that period required. France was agitated by contending factions, both religious

and political ; and it was the policy of the cardinal to suppress them, by preventing their permanent union, and giving a preponderant influence to the royal authority, which had been so often set at defiance by the religious fanatics of various classes, and by the powerful and turbulent nobility. It is true, that in effecting these objects, he pursued a course of despotic severity which has entailed on his administration the stigma of tyranny ; yet his vigour was in many instances justified by the criminality of its subjects ; and it must be acknowledged that the French monarchy dates from his ascendancy its strength and independence. He turned his arms against the Calvinist insurgents, and having secured the alliance of England and Holland, he expelled them from the Isle of Rhé. His schemes were often traversed by the restless ambition of the weak and unprincipled duke of Orleans, the king's brother, who entered into a conspiracy to assassinate Richelieu, and to effect great political alterations. But the discovery of the plot served only to strengthen the power of the minister, and increase his influence over the royal councils. He proceeded to attack the Calvinists in their strong hold of Rochelle, which city, after a year's siege, opened her gates to the conqueror, October 28, 1628 ; and proud of his success, he advanced to the subjugation of the Protestants in other parts of the kingdom. In 1629 he was nominated lieutenant-general of the army employed in Italy, and minister with powers so extensive, as to place every department of the state under his control. Mary de' Medici having become his enemy, and indisposed the king against him, he contrived to recover his ascendancy, and after taking severe vengeance on her partisans, he procured the exile of the queen mother to Cologne, where she continued till her death. Gaston, duke of Orleans, having renewed his intrigues against the cardinal, and engaged the duke of Montmorenci in an insurrection, its failure was followed by the execution of the latter, and the disgraceful humiliation of Orleans. In 1635 war was declared against Spain, when the invasion of Picardy, and the sudden alarm which took place in the metropolis, induced the minister to think of resigning his post. In this emergency he owed his safety to his confidant, father Joseph, who advised him to make his appearance in the streets of Paris unguarded, and with an air of tranquillity and confidence ; which had the desired effect of changing the inward curses of the populace into benedictions, and the storm was dissipated. The war was carried on more prosperously, and the great power of Richelieu was experienced both at home and abroad. The perpetual plots of the duke of Orleans, though they often endangered the life of the cardinal, had no other ultimate effect than to confirm his power, cover the prince with disgrace, and occasion the destruction of his associates. The jesuit Caussin, who was the king's confessor, having imprudently attempted to render the minister's policy odious to his master, was exiled from

court ; and the confessor of the duchess of Savoy, the king's sister, underwent a similar disgrace. The cardinal even braved the papal court ; and the French clergy were forced to yield to his will the same submission which was displayed by the other orders of the state. One of the last events of his life was the discovery and punishment of the conspiracy of Cinque-Mars, in which, as usual, the duke of Orleans was a party ; and which proved fatal to the son of the celebrated president De Thou, who was executed for concealing his knowledge of the plot. Cardinal Richelieu died December 4, 1642, exhibiting in his last moments a degree of calmness and resignation which would have been characteristic of a well spent life. On receiving the sacrament, he declared that in all his actions he had solely had in view nothing but the welfare of religion and the state ; justifying to himself probably the severities he had exercised on the plea of political necessity, for on being asked if he forgave his enemies, he replied, " I have no enemies but those of the state." Besides some theological works, he was the author of "*Mémoires sur les Evénements du Règne de Louis XIII.*" published by Mezeray ; "*Testament politique du Cardinal de Richelieu*," the authenticity of which was attacked by Voltaire, and defended by M. Foncemagne, who published an edition of this piece in 1764 ; and "*Journal de M. le Cardinal de Richelieu, qu'il a fait durant le grand Orage de la Cour, en 1630 et 1631.*" 1649, 8vo. He aspired to fame as a poet, but his dramatic attempts and his critical enmity to Corneille, are alike discreditably to his literary reputation. As a benefactor of science and literature he deserves to be noticed, for having rebuilt the Sorbonne college, founded the royal printing-house at Paris, and the botanic garden ; and especially for the establishment of the French Academy, which last repaid him with copious offerings of incense during his life and long after his decease.—His elder brother, ALPHONSE LOUIS DU PLESSIS DE RICHELIEU, noticed in the beginning of this article, was commonly known by the title of the cardinal of Lyons. He became archbishop of Aix, and afterwards of Lyons, and grand almoner to the king. He seems to have possessed none of the ambition of his brother, and is said to have often regretted the loss of the tranquillity of the cloister. He died in 1653. Some of his letters have been published.—*Père Griffet Hist. de Louis XIII. Voltaire Hist. Gen. Moreri. Aikin's Gen. Biog. Univ.*

RICHELIEU (LOUIS FRANCIS ARMAND DUPLESSIS de) marshal of France, a member of the French Academy and of the Academy of Sciences, was descended from the same family with the subject of the preceding article, and was born at Paris in 1696. He was introduced at court in 1710, and though so young he attracted great notice. Becoming a favourite with the duchess of Burgundy, his father thought proper to procure an order for confining him in the Bastille ; and, on his liberation, he made a campaign in Flanders,

as *aide-de-camp* to marshal Vilars. After the death of Louis XIV, Richelieu was admitted into the court of the regent, duke of Orleans, and he largely participated in its profligate luxury. He was sent to the Bastille in 1716, for fighting a duel with the count de Gacé, and again in 1719, as an accomplice with the Spanish ambassador, the prince of Cellamare, in a conspiracy against the regent. He subsequently again engaged in military service, and gained much reputation at the battles of Dettingen, Fontenoi, Raucoux, and Lafeldt. In 1756, war having taken place between the French and English, marshal Richelieu was employed in an expedition against Minorca; and after conquering that island, he was sent to Germany, where he forced the duke of Cumberland to submit to the capitulation of Closterseven. In 1781 he obtained the rank of dean of the French marshals; and he concluded his long career, as a man of wit and gallantry in every sense of the word, at the advanced age of ninety-two, in August 1788. The "*Mémoires du Marechal de Richelieu*," appeared in 4 vols. 8vo, in 1720, and "*Vie privée du M. Richelieu*," in 1790-92, 3 vols. 8vo; but neither of these works is considered as perfectly authentic.—*Dict. Hist. Biog. Univ.*

RICHELIEU (ARMAND EMANUEL DU PLESSIS, duc de) minister of state under Louis XVIII, was the grandson of the preceding. He was born at Paris in 1767, and after studying in the college of Pleasy, he travelled in Italy, whence he returned at the commencement of the Revolution in 1789. He soon after obtained permission from the king to go to Vienna, where he was well received by the emperor Joseph II; but he soon quitted that capital with the young prince de Ligne, and entered into the service of Catherine II, then at war with the Turks. He distinguished himself at the taking of Ismail by Suwarrow, and was rewarded with the rank of major-general. In 1794 he was with Louis XVIII in England, whence he returned to Russia; but not being well treated by the emperor Paul, he quitted that country, and after the peace of 1801 he revisited France, where Buonaparte in vain attempted to attach him to his service. He went again to St Petersburg, and at the commencement of 1803 he was nominated civil and military governor of Odessa, a Russian colony on the Black Sea, which flourished greatly under his superintendence. On the restoration of Louis XVIII, the duke de Richelieu took his seat in the chamber of peers, and resumed his functions as first gentleman of the bedchamber. In March 1815 he accompanied the king to Ghent, and returning with him to Paris, after the battle of Waterloo, he was appointed president of the council of ministers, and placed at the head of the foreign department. He presided at the installation of the four academies in April 1818, and in September following he was made president of the French Academy. In the same month he appeared at the congress of Aix-la-Chapelle. He subsequently resigned

his office as minister of state; but in 1820 he again became president of the council. He fruitlessly opposed the establishment of the censorship of the press, and finding he had lost his influence, he again retired from office, and died soon after, in May 1822.—*Biog. Nouv. des Contemp. Biog. Univ.*

RICHER (CLAUDE) a learned French ecclesiastic and mathematician of the eighteenth century. He was a native of Auxerre, and was educated at Paris, where, in 1701, he published "*Universaal Gnomonics, or the Science of Dialling*." Having taken the order of priesthood, he for a long series of years devoted his time to the religious duties of his profession, and the education of youth. In 1730 he resumed his mathematical studies, in consequence of his acquaintance with M. Fantet de Lagny, of the Academy of Sciences; and in 1733 he published his "*General Analysis, containing new Methods of resolving all kinds of Problems*," 4to. He intended to have continued this work, but his attention was diverted from it by a new pursuit, which occupied the remainder of his life. This was the investigation of the relics of Egyptian History, on which obscure subject he produced two immense folio volumes, but a specimen only of his researches was printed. He died about 1755.—*Aikin's Gen. Biog.*

RICHER (EDMUND) a learned French divine, was born at Chaource, in the diocese of Langres, in 1560, and became grand master of the college of Le Moine, and afterwards syndic of the faculty of divinity at Paris, in which situation he strenuously opposed the pope's infallibility in a tract "*On the Civil and Ecclesiastical Power*," 8vo. This work caused a great commotion, and was censured by a council of bishops, from which Richer entered an appeal to the parliament, but he was finally proscribed and condemned at Rome. He was deposed from his office, and retired into solitude, whence he was dragged and sent to the prisons of St Victor. In 1620 he published a declaration, protesting that he was ready to explain his work in an orthodox sense, and to submit it to the judgment of the holy see, and of the Catholic church. He then published a second; and in 1629 he printed a new edition of his book, with the proofs of the propositions advanced in it, and the two declarations, to which, at the command of cardinal Richelieu, he added a third. He died in 1631. Richer also wrote a "*History of General Councils*," 4 vols. 4to; and a "*History of his Syndicate*," &c.—*Dupin. Niceron. Mosheim.*

RICHER (FRANCIS) a French lawyer and man of letters, who was a native of Avanches. After having completed his studies, he was admitted an advocate about 1740; and having established himself at Paris, he resided there till his death in 1790, at the age of seventy-two. Besides improved editions of the works of Montesquieu and other writers, he published "*Traité de la Mort Civile*," 1755, 4to; "*De l'Autorité du Clergé, et du Pouvoir du Magistrat Politique sur l'Ép-*

RIC

exercice des fonctions du Ministère Ecclesiastique," 1767, 2 vols. 12mo; and "Causes Célèbres et Intéressantes," 1772—88, 22 vols. 12mo, a work which has superseded that of Gayot de Pitaval, under the same title.—**RICHER** (ADRIAN) brother of the preceding, was the author of many useful compilations. He died at Paris, in 1798. Among his works are "Vies des Hommes Illustres," 1756, 2 vols. 12mo; "Essai sur les Grands Evénements par les Petites Causes, tiré de l'Histoire," 1758, 12mo; "Nouvelle Essai sur les Grands Evénements, &c.," 1759, 12mo; and "Vies des plus Célèbres Marins," 1784—89, 13 vols. 12mo.—*Biog. Univ. des Contemp.*

RICHER (JOHN) a French astronomer and mathematician in the seventeenth century, who was admitted a member of the academy of Sciences at Paris in 1666. In 1672 he was sent to Cayenne, in South America, by Louis XIV, for the purpose of making observations which might contribute to the improvement of astronomy. He was the first who observed the contraction of the pendulum in the equatorial regions, whence Newton and Huygens derived evidence of the oblate spheroidal figure of the earth. After three years Richer returned to France, and gave the result of his labours in "Astronomical and Physical Observations made at the Island of Cayenne," which are inserted in the seventh volume of the Memoirs of the academy of Sciences. He died in 1696.—*Dict. Hist. Aikin's Gen. Biog.*

RICHER DE BELLEVAL (PIERRE) an eminent French physician and botanist, born at Chalons in Champagne, in 1538. He may be regarded as the first professor of botany in France, who taught that science as distinct from medicine. He studied at Montpellier, and took his degrees at Avignon, and having rendered great services to the public during the prevalence of a contagious disease at Pезenas, he was patronized by the duke de Montmorenci, through whose recommendation Henry IV appointed him to a professorship of botany and anatomy, which he founded in the university of Montpellier towards the end of the sixteenth century. He published "Onomatologia, seu Nomenclatura Stirpium quæ in Horto Regio Monspellii recens constructo colluntur," 1598, 12mo; and at the time of his death, in 1623, he was preparing for the press an extensive botanical work, the MSS. and engraved plates for which were dispersed and destroyed through the careless folly of his descendants. Villars, in his Flore du Dauphine, has consecrated to the memory of this botanist a genus of plants called Richeria; and similar honours have been paid to him by Scopoli and Bruguiere.—*Aikin's Gen. Biog. Biog. Univ.*

RICHER SERISY (—) a French journalist, born at Caen, about 1764. He went to Paris when young, and was employed in the office of an attorney of the parliament. He had acquired considerable popularity as a public writer when the Revolution took place, and he exerted his influence in opposing inno-

RIC

vation, notwithstanding he was on terms of friendship with Camille Desmoulins and other popular demagogues. He published "Actes des Apôtres," a periodical work; and after the fall of Robespierre, by whom he had been imprisoned, he set up a journal, entitled "L'Accusateur Public," which gave him a distinguished place among the political writers of the day. Under the Directory he was sentenced to deportation to Cayenne, but he escaped; and at length taking refuge in England, he died in London in 1803.—*Biog. Univ.*

RICHEY (MICHAEL) a native of Ham-burgh, who studied at the gymnasium of that city, and afterwards at the university of Wittenberg. He then travelled in various parts of Germany, and in 1704 he became rector of the gymnasium of Stade, whence he removed to Ham-burgh; and in 1717 he was appointed professor of history and the Greek language. He retained his office till his death, in 1761. He wrote poems, published by Weichmann, in his collection of the poetry of Lower Saxony; and a piece which he composed on the return of Charles XII of Sweden from Turkey, was rewarded by the countess Lewenhaupt with a laurel crown, a silver pen, an embossed cup, and a present of wine. Richey also was the author of "Gallorum quorundam de Germanorum ingenia judicia iniquitatis convicta;" and other works: and he engaged, in concert with Weichmann and others, in publishing a periodical paper, entitled "The Patriot," in imitation of the English Spectator.—His son, JOHN RICHEY, wrote some law tracts, and died at Vienna, where he held the office of syndic of the city of Ham-burgh, at the court of Austria. He wrote an apology for the city of Ham-burgh, against Voltaire's History of Charles XII.—*Biog. Univ.*

RICHMAN (GEORGE WILLIAM) a member of the Imperial Academy of Sciences at Petersburg, was born at Parnau in 1711, and is chiefly remarkable for the manner of his death. He was devoted to the study of electricity, especially that of thunder-clouds, and he composed a treatise on the discoveries he had made in this science. On the 26th of July, 1753, the day of his death, observing that it thundered at a great distance, whilst the sky was clear and the day bright, in hope of being able to continue his observations he hurried home, with Sokolefan, engraver, to his electrical apparatus; but, whilst anxiously examining it, with his head inclined towards it, he received so violent a shock as to deprive him instantly of life. The electric fluid entered at the head, and made its way out at the foot.—*Philos. Transactions.*

RICHTER (OTTO FREDERIC von) an Eastern traveller, was born at Dorpat in Livonia, in 1792. After acquiring a knowledge of classical learning and archaeology, he went to Moscow at the age of sixteen to study the modern Greek language, and afterwards to Heidelberg, where he applied himself to the Arabic and Persian under professor Wilken. He then travelled in Switzerland and Italy, and continued his studies under the celebrated

Orientalist Hammer, at Vienna. Having thus laid in a stock of information, he went, with Lindemann, the secretary to the Swedish embassy, to Egypt, where they were well received by Mohamed Ali; and having travelled up the Nile as far as Ibrim in Nubia, they returned to Alexandria with a rich collection of drawings, descriptions, &c. Being at Cairo in August 1815, they narrowly escaped destruction during a mutiny of the troops. They then proceeded to Jaffa by sea, and thence they travelled to Acre, where the friends separated, and Richter alone travelled through Palestine, Syria, Asia Minor and the Isles, and then went to Constantinople to deposit his collections in safety. Having done so, he re-embarked for Asia, and arriving at Smyrna he was there seized with a fever, which proved fatal, August 13, 1816. His papers being sent home, M. Ewers, who had been his tutor, published from them "O. F. Von Richter's Wallfahrten im Morgenlande," Berlin, 1822, 8vo, with a folio atlas.—*Biog. Univ.*

RIDDELL (ROBERT) of Glenriddell, a Scottish gentleman of an ancient family, who distinguished himself by his researches concerning the antiquities of his native country. He was a member of the Philosophical Society of Manchester, and a fellow of the Antiquarian Societies of Edinburgh and London. He published in the *Archæologia* a "Dissertation on the Ancient Modes of Fortification in Scotland;" another "On the Vitrified Fortifications in Scotland;" besides other papers. Mr Riddell, who was an early and active patron of the poet Burns, died April 21. 1794.—*Gent. Mag.*

RIDER (JOHN) bishop of Killaloe in Ireland, a native of Carrington, in the county palatine of Chester. He was born about the year 1562, and received his education at Jesus college, Oxford, where he graduated. On taking holy orders he became successively rector of Winwick, Lancashire, and dean of St Patrick's in the sister island, which latter preferment he vacated in 1612, on being raised to the episcopal bench. Besides a useful Latin dictionary which still goes under his name, and is well known in most of our principal seminaries, he was the author of a tract vindicating the claims of the reformed religion, on the ground of its genuineness and antiquity; and also of a political pamphlet on "The News out of Ireland, the Spanish Invasion, &c." 4to. His death took place in 1632.—WILLIAM RIDER, an English clergyman of the last century, distinguished himself both as a biblical critic and a general scholar. He was for some years a junior master in St Paul's school, on dean Colet's foundation, and held the lectureship of the adjoining parish, St Vedast, Foster-lane. He published some valuable notes on the Old Testament; and a "History of England;" and died in 1785.—*Biog. Brit.*

RIDLEY (NICHOLAS) bishop of London in the reigns of Edward VI and his successor Mary. He was a native of Wilmonswick, in the county of Northumberland, born about the commencement of the sixteenth century; and

having received the rudiments of a classical education at the foundation-school of Newcastle-upon-Tyne, removed thence to Pembroke-hall, Cambridge, of which society he became a fellow in 1524, and eventually president. Declining an advantageous offer made him on account of his reputation as a classical and theological scholar by the members of University college, Oxford, he travelled over a considerable part of the European continent, during a three-years' absence from his native country, in the course of which period he became personally acquainted with several of the early reformers, whose doctrines he afterwards so warmly and perseveringly espoused. Returning to Cambridge, he filled the responsible office of proctor to the university, and as such protested against the claims of the papal see to the supreme ecclesiastical jurisdiction in these realms. He was also chosen public orator, and through the patronage of his friend archbishop Cranmer, became one of the king's chaplains, with the vicarage of Hearn, in East Kent. This preferment was followed by a stall at Westminster, till, in the second year of Edward VI, he was elevated to the see of Rochester. Three years after, on the disgrace and deprivation of Bonner, Ridley was made bishop of London, and distinguished himself in this office as much by his moderation, learning, and munificence, as by his tempered zeal in favour of the Protestant church, and especially by his liberality and kindness towards the family of his predecessor. During the whole of this short reign, bishop Ridley exerted the credit he possessed at court in a way which has been productive of the happiest effects to posterity, both in a religious and a moral point of view. To his suggestions and active superintendence may be mainly attributed the foundation of those noble monuments of national munificence, the hospital of Christ, of St Bartholomew, and of St Thomas, in Southwark; the former as eminent for its utility in promoting the study of classical and general literature, as the two latter are in constituting a school of medicine, and in the benevolent application of their supernumerary funds. On the death of his royal patron, a dread of the consequences to be apprehended from the succession of a Roman Catholic sovereign, induced him to listen with too great facility to those who, actuated by more questionable motives, made a daring but ill-concerted attempt to secure the Protestant ascendancy, by placing the lady Jane Grey upon the throne. The defeat of this ill-advised scheme, his known connexion with it, and above all, the active part he had taken in the establishment of the new discipline, and the construction of the Liturgy, together with his intimate connexion with Cranmer, marked Ridley out as one of the most prominent victims to the temporary restoration of papal authority. The form of a trial was indeed granted him, and a deputation of popish bishops was appointed to hold a formal disputation on the controverted points with him at Oxford. In order to be present at this con-

RID

ference, he was released from an eight months' imprisonment in the Tower; but the result, as might have been anticipated from the comparative strength and credit of the contending parties, was unfavourable to him, and he was condemned as a recusant and obstinate heretic to the stake. This sentence he underwent with the greatest fortitude, in company with his friend and fellow-sufferer Hugh Latimer, bishop of Worcester, on the 15th of October, 1555, in the centre of what is now called Broad-street, Oxford, nearly fronting the gate of Balliol college. A few of his discourses, and a treatise against the Romish doctrine of transubstantiation, are yet extant, as well as his life, written by the rev. Dr Gloster Ridley, prebendary of Salisbury, and a descendant of the same family.—*Biog. Brit. Fox's Acts and Mon.*

RIDLEY, LLD. (GLOSTER) an English divine, who derived his Christian name from the circumstance of his having been born at sea, in 1702, on board the Gloster Indiaman. He was educated at Winchester school and New college, Oxford, where he obtained a fellowship, and in 1729 took the degree of BCL. In his younger years he had a great partiality for the stage, and, in conjunction with some friends, he wrote a tragedy in four acts, which was never published. He also distinguished himself as a poet, and two of his productions, "Jovi Eleuthero, or an Offering to Liberty;" and "Psyche," were printed in Dodsley's Collection. A sequel to the latter, entitled "Melanpus," was afterwards published by subscription. He for many years held the college benefice of Weston Longueville, in Norfolk, and the donative of Poplar in Middlesex; and afterwards the donative of Romford in Essex. In 1740 and 1742 he preached a course of sermons at lady Moyer's lecture, afterwards published. In 1743 appeared his "Review of Phillips's Life of Cardinal Pole;" and in 1768 he was presented to a golden prebend at Salisbury by archbishop Secker, in reward of his labours in the controversy occasioned by archdeacon Blackburne's "Confessional." He died in 1744. Besides the works referred to, he wrote "The Life of Bishop Nicholas Ridley," of whose family he was a descendant.—*Aikin's Gen. Biog.*

RIDLEY (JAMES) son of the preceding. The date of his birth is unknown, but he was educated at Winchester and New college, Oxford, and after taking orders succeeded his father in the living of Rumford in Essex. In 1761, while attending to his duty, as chaplain to a marching regiment, at the siege of Belisla, he laid the foundation of a disease from which he never recovered, and which some years after, when happily married and preferred in the church, carried him off in the prime of life, to the great grief of his family. This event took place in 1765. Mr Ridley was author of "The Schemer," a very humorous periodical paper; and of "The History of James Lovegrove, Esq." But his literary fame principally rests on his "Tales of the Genii," in which the wildness of the East-

RIE

ern tale is happily tempered by some very noble moral lessons, and which in many parts exhibit imaginative genius of so high an order, that the premature death of the author may be deemed a great loss to polite literature.—*Nichols's Lit. Anec.*

RIDLEY (sir THOMAS) an eminent civilian in the reign of James I. He was a native of the isle of Ely, and became provost of Eton college. He also obtained the offices of master in chancery, chancellor to the bishop of Winchester, and vicar-general to the archbishop of Canterbury. His death occurred in 1629. He was the author of an esteemed work, entitled "A View of the Civil and Ecclesiastical Law;" for writing which James I bestowed on him the honour of knighthood.—*Wood's Athen. Oxon.*

RIDLEY (HUMPHREY) a physician and anatomist, who lived in the beginning of the eighteenth century, was a fellow of the college of physicians, and a practitioner in the metropolis. In 1695 he published "The Anatomy of the Brain, containing its Mechanism and Physiology," 8vo; and in 1703 "Observationes quædam Medico-practice et Physiologicæ." The former work exhibits a more accurate description than had previously appeared of the circular sinus of the dura mater, or external coat of the brain. The time of his death is uncertain.—*Aikin's G. Biog.*

RIDOLFI (CARLO) an Italian painter, poet, and historian of the arts. He was born at Vicenza in 1602, and studied rhetoric, philosophy, architecture, and the art of design, as well as painting, in which he was instructed by Antonio Bassilio, a Greek. He executed some pictures at Rome, for which pope Innocent X bestowed on him the order of knighthood of the Golden Cross; and he published a work, entitled "Le Maraviglie dell' Arte, ovvero delle Vite dei Pittori Veneti e dello Stato, ove sono raccolte l' Opere insigni, i Costumi, i Ritratti loro," 1648, 4to, for which the republic of Venice gave him a chain of gold and a medal of St Mark. He also wrote the life of the painter, Jacopo Robusti, called Tintoretto. He died in 1670.—*Orlandi. Biog. Univ.*

RIEDELSE (FREDERICA CHARLOTTE LOUISA, baroness) the daughter of the Prussian minister Masson, was born at Brandenburg in 1746. At the age of sixteen she was married to lieutenant-colonel Riedesel, who commanded the troops of Brunswick employed in the English service in America in 1777. Madame Riedesel, who accompanied her husband, wrote an interesting account of her adventures, published by her son-in-law, the count de Reuss, under the title of "Voyage de Mission en Amérique, ou Lettres de Madame de Riedesel," Berlin, 1799, reprinted in 1801. She returned to Europe in 1783; and having lost her husband (who had been made a general) in 1800, she fixed her residence at Berlin, where she died March 29, 1808.—*Biog. Nouv. des Contemp. Biog. Univ.*

RIEDELSE (JOSEPH HERMAN) a German nobleman, who was the son of a Prussian

RIE

general, and was born in 1740. He became chamberlain to Frederic II, who sent him ambassador plenipotentiary to Vienna, and in that quality he appeared at the congress of Teschen. But baron Riedesel is better known as an author than as a diplomatist. A taste for the fine arts induced him to go to Italy, where he became acquainted with Winkelmann; and he afterwards travelled in Sicily, Greece, and the Levant. The fruit of his observations appeared in his "Journey in Sicily and Magna Græcia," 1771, 8vo; and "The Remarks of a modern Traveller in the Levant," 1773, 8vo, republished together at Paris in 1802. Riedesel died near Vienna in 1785.—*Biog. Univ.*

RIEDINGER (JOHN ELIAS) a painter of animals, born at Ulm in Suabia, in 1695. He received the first lessons in his art from his father, and was afterwards the pupil of Chr. Resch. He settled at Augsburg, where he employed himself in making designs and engravings for the booksellers. He excelled in his figures of all kinds of animals, both wild and tame; and whether his works exhibit single figures or groups, his accurate attention to anatomy and just expression of character, give him a manifest superiority over all other masters. Many of his paintings are historical, displaying the different kinds of animals connected with the chase. He died at Augsburg in 1767, leaving two sons, MARTIN ELIAS and JOHN JAMES, both eminent engravers.—*Biog. Univ.*

RIEGO (RAPHAEL del) a modern Spanish patriot officer, born of a noble family, in the province of Asturias. After having been liberally educated, he entered into the army, and served during the invasion of Spain by Buonaparte. He was taken prisoner, and on his liberation, the constitutional general Abisbal gave him a staff appointment; and when that chief betrayed the cause of independence, Riego retired from the service in disgust, and for a time led a private life. In the beginning of 1820, at the head of a battalion, he proclaimed the Spanish constitution, and traversing a large extent of country, he shut himself up in a fortress with the small number of troops who had the patriotism and courage to follow his example. Several days elapsed without Riego's call being answered by his countrymen; and at the same time he was threatened by a powerful army. Aware of the danger of delay, he sallied forth from the iale of Leon with a few hundred brave men, made his way through the forces that opposed his passage, visited several large towns, intimidated the authorities, fought obstinately, lost the greater part of his troops, and retired to the mountains with the determination to defend himself to the last extremity rather than submit to the mercy of his enemies. But the spirit of freedom which he had excited was not extinguished; the provinces ranged themselves under the banners of independence, and Riego received the homage of national gratitude which his services deserved. His popularity excited the jealousy of those in power, and he was calumniated as a promoter of

RIE

anarchy and disorder, his army was dissolved, and he was proscribed. But he preserved the confidence of the people, and he was appointed a deputy to the Cortes of 1822, of which assembly he became the president; and in this arduous station he displayed prudence and firmness with a conciliatory disposition that did him honour. When king Ferdinand refused to maintain the constitution which he had sworn to observe, Riego again appeared in arms to assert the liberty of his country, but it was destined to fall before foreign foes. He was taken prisoner after the surrender of Cadix to the French, under the duke d'Angoulême, and being conveyed to Madrid, was executed as a traitor, October 7, 1823. His widow, who sought refuge in England, died at Chelsea, June 19, 1824.—*Lit. Mus. Gent. Mag. Biog. Nouv. des Contemp.*

RIEM (JOHN) a German agriculturist, born at Frankenthal on the Rhine in 1739. He studied pharmacy, of which he continued to be a practitioner till 1774. Having obtained a prize from the Academy of Sciences of Mannheim, in 1768, for a dissertation on the management of bees, he employed himself in establishing a society of apiology at Kaiserslautern, the plan of which being subsequently enlarged so as to form a physico-economical society, it was transferred to Heidelberg, and lectures were regularly delivered by professors appointed for the purpose, and a collection of memoirs was published. Riem was director of this institution; but he at length relinquished his connexion with it, and went to Prussia, where he was nominated commissary of economy, and sent in 1776 into Silesia, as an inspector of the bee-hives in that country. In 1783 he received a prize from the economical society of St Petersburg, for a treatise on feeding cattle; and in 1785 he was appointed secretary to the economical society of Dresden. He was afterwards made a counsellor of mission, and he died at Dresden in 1807. The management of bees was the principal object of his researches, but he published several useful works on other branches of rural economy.—*Biog. Univ.*

RIENZI (NICHOLAS GABRINI de) a native of Rome, who in the fourteenth century became celebrated by his attempts to restore the Roman republic. Although the son only of one of the lowest order of tavern keepers, he received a literary education, and early distinguished himself by the quickness of his parts, and the elevation of his sentiments. The glory of ancient Rome, compared with existing abject states, appears to have excited a real enthusiasm in his breast, and he was gradually regarded by the common people as an extraordinary person, who might be destined to rescue them from the oppressive tyranny of the aristocracy, who, on the removal of papacy to Avignon, were in the highest degree insolent and oppressive. He obtained the post of public scribe or notary, and in 1346 was joined in a deputation to pope Clement VI at Avignon, to exhort him to bring back the papal court to its original seat. He acted on this

occasion with so much energy and eloquence, that the pope, struck with his abilities, created him an apostolic notary, which office, on his return, he executed with a probity which gained him additional reputation. While thus engaged, however, he let no opportunity escape to excite the discontent of the people, by haranguing against the nobility and the defects of the public administration. Having by this means prepared men's minds for a change, and engaged persons of all orders in his designs, in the month of April 1347, in the absence of the governor of Rome, Stephen Colonna, he summoned a secret assembly upon mount Aventine, before which he made an energetic speech, and induced them all to subscribe to an oath for the establishment of a plan of government, which he entitled the Good Estate. He had even the address to gain over the pope's vicar; and in a second assembly in the capitol, produced fifteen articles as the bases of the Good Estate, which were unanimously approved, and the people conferred upon him the title of Tribune, with the power of life and death, and all the other attributes of sovereignty. The governor, Colonna, upon his return, threatened him with punishment, but he was himself constrained to quit the city, and with him Rienzi banished several of the noble families of Rome, after capitally punishing such as were convicted of oppression and injustice. In the first exercise of his authority he conducted himself with a strict regard to justice, and the public good; and even the pope was induced to sanction his power, which, although termed a usurpation, seems to have been as lawfully conferred as the consent of the governed could make it. The reputation of the new tribune extended throughout Italy, and his friendship was even solicited by the king of Hungary and the emperor Louis. Among others, the celebrated Petrarch was highly interested in his proceedings, and there are extant several eloquent and pathetic letters, in which that poet exhorts him to persevere in his glorious undertakings. In the mean time, the intoxication which generally seizes upon those who rise suddenly from obscurity into supreme power, began to betray him into extravagancies. He caused himself to be created a knight, with a singular mixture of religious and military ceremonies; and he cited the two rival emperors, Charles and Louis, to appear before him to justify their pretensions. He also dismissed the pope's legate, and reducing the nobles into complete humiliation, commenced a reign of terror. He was for some time successful in this career: but at length, finding that he had lost the affection and confidence of the people, he secretly withdrew, in 1348, from Rome, and sought refuge in Naples, until 1350, when he took advantage of the jubilee to return secretly to Rome; but soon being discovered, he withdrew to the king of the Romans at Prague. Thence, either voluntarily or through constraint, he came into the hands of pope Clement at Avignon, who confined him three years, and appointed a commission to try him,

but dying, his successor, Innocent VIII, released Rienzi, and sent him to Rome to oppose another popular demagogue, named Boroncelli. The Romans received him with great demonstrations of joy, and he recovered his former authority; but after a turbulent administration of a few months, the nobles found means to excite another sedition against him, in which he was massacred in October 1354. His last brief career had been marked with great cruelty, which induced the populace to treat his remains with extreme indignity. Rienzi, who seems to have possessed that union of fanaticism and artifice, which usually attends enthusiasts of his character, was more energetic in speech and council, than in action, and always failed in courage and presence of mind in great emergencies. His original intentions seem to have been good, and his views enlarged; but neither his temper, nor his understanding, was adequate to the magnitude of his enterprises.—*Trabacchi Moreri.*

RIGAUD (HYACINTH) an eminent portrait painter, was born at Perpignan in 1663. His father and grandfather were both painters, and Hyacinth received instructions from Ranc, a painter after the manner of Vandyck. He visited Paris in 1681, and obtained the first prize from the Academy of Painting. He was ennobled by Louis XV, and in 1727 he was created a knight of the order of St Michael, with a pension. He was successively professor, rector, and director of the academy. He died in 1743, highly esteemed, as well for his private as his professional character. His likenesses are very striking and characteristic; nature was his chief study, and so far did he carry his accuracy of imitation, that he even represented the materials of his draperies, which are blamed for an artificial disposition. He met with distinguished patronage, and is said to have painted five monarchs, and all the princes of the blood-royal of France.—*D'Argenville. Pilkington.*

RIGBY, MD. (EDWARD) a physician of Norwich, fellow of the Linnæan, Horticultural, and Philadelphian-Agricultural Societies. In 1815, his lady, having produced him three sons and a daughter at a birth, the city of Norwich, of which he was an alderman, voted him a piece of plate, with an inscription, commemorative of the circumstance. Besides several professional tracts, he published an account of Mr Coke's agricultural system, under the title of "*Holkham and its Agriculture*," which went through three editions, and has been translated into French. He also printed a translation of Mr Chateaubriau's *Travels*, and died in 1821, aged seventy-four.—*Ann. Biog.*

RIGHTWISE or RITURYSE (JOHN) in Latin *Justus* an eminent grammarian, was born at Sawl in Norfolk, and was admitted of King's college, Cambridge, in 1508. He succeeded William Lily as head master of St Paul's school, and died in 1532. He made many improvements in the edition of Lily's *Latin Grammar*, published at Antwerp in

RIN

1533. He also composed a tragedy of "Dido," from Virgil, performed by himself and his pupils before cardinal Wolsey. — *Knight's Life of Colet. Warton's Hist. of Poetry.*

RIGOLEY DE JUVIGNY (JOHN ANTHONY) a French writer, who was educated in the university of Paris, and became an honorary counsellor of the parliament of Metz. He was one of the literary antagonists of Voltaire, whose merit as a dramatist he rated below that of Crébillon, or of Piron; and he published a collection of the works of the latter, whom he styled the greatest poet of the age. Rigoley is more advantageously known as the editor of the "Bibliothèques Françaises," of La Croix du Maine and Du Verdier, 1772, 6 vols. 4to, to which he prefixed "Discours sur les Progrès des Lettres en France," afterwards printed separately in 8vo. He died at Paris, February 21, 1788, at an advanced age. — *Biog. Univ.*

RILEY (JOHN) an English artist of considerable merit, was born in London in 1646. He was instructed in the art of painting by Fuller and Zoust, and after the death of sir Peter Lely he advanced in the esteem of the public, and was appointed painter to the king. Lord Orford deems Riley one of the best native painters of England, and asserts that there are draperies and heads painted by him which would have done honour to Lely or Kneller. He was of an humble, modest, and amiable character, and so distrustful of his own merit, that the same noble writer regards his modesty as the chief impediment to his reputation. He died of the gout in 1691, at the age of forty-five. — *Walpole's Anec.*

RINALDI (ODERICO) a learned Italian ecclesiastical historian of the seventeenth century, was a native of Treviso, and brought up in the congregation of the Oratory at Rome. After the death of Baronius, he continued "The Ecclesiastical Annals," from the year 1198 to 1564, with no inferiority to the former volumes. This addition consists of ten volumes folio, published at Rome from 1646 to 1677. Rinaldi was also the author of a copious and able abridgment in Italian of the labours both of Baronius and himself. — *Landi Hist. Litt. d'Italie.*

RINMANN (SWEN) a Swedish mineralogist, born at Upsal in 1720. Having obtained an office in the college of the mines of Sweden, he visited the principal mining establishments in Europe. In 1749 he was nominated inspector of the metal works in the province of Roslagen; and he afterwards was director of the silver mines of Hallefors. He was also admitted into the college of Mines, and decorated with the order of Gustavus Vasa. He made many improvements in the processes which he superintended, as well as some chemical discoveries. Besides a great number of dissertations in the memoirs of the Swedish academy, he published a treatise on the manufacture of steel and iron; an "Essay of the History of Iron;" and a dictionary of the art of mining. He died December 20, 1792. — *Biog. Univ.*

RIO

RINUCCINI (OTTAVIO) an Italian poet of Florence, who visited Paris in the suite of Mary de' Medici, queen to Henry IV. He claims a place in this collection as the reputed inventor of the musical drama, or opera. He was the author of three lyric pieces, "Daphne," "Eurydice," and "Ariadne;" the first of which was written in honour of the nuptials of Mary de' Medici, and performed with great splendor at Florence. He died in 1621, and a collection, or rather selection of his works was published at Florence in 1622, by his son, and another, entitled "Drammi Musicali," in 1802, at Leghorn. — *Burney's Hist. of Mus. Life of Tassoni.*

RIOLAN (JOHN) an eminent physician, born at Amiens in 1539. After studying the ancient languages and philosophy, he became a tutor in various colleges. In 1574, while teaching at the college of Boncourt, he applied himself to the study of medicine, and having taken his doctor's degree, he was appointed professor of anatomy and medicine in the university of Paris. His death took place in 1605. Among his works are commentaries on the writings of Fernel; "Particularis Methodi Medendi, lib. ii.;" "Expositio in Hippocratis Aphorismos;" "Artis Medicinalis Theoricæ et Practicæ Systema;" and "Discours sur les Hermaproditæ." — **RIOLAN** (JOHN) son of the preceding, was born at Paris in 1580. He became, while very young, professor of anatomy and pharmacy to the faculty of medicine at Paris; and in 1601 he published some interesting researches on surgery. Having been appointed first physician to Mary de' Medici, mother of Louis XIII, he took advantage of his influence at court to solicit the king to establish a botanic garden at Paris; and the garden of medicinal plants, now existing, was the result of this application. He accompanied the queen-mother in her banishment, and was with her when she died at Cologne in 1642. He returned to Paris, and resumed his professional practice, which he continued with great reputation till near the time of his death in 1657. His principal works are, "Schola Anatomica novis et rarior Observationibus illustrata;" "Osteologia;" "Anthropographia;" and "Enchiridion Anatomicum et Pathologicum;" besides which he wrote against the discoveries of Bartholine and Pecquet, relative to the absorbents; and against Harvey, on the circulation of the blood. He was also engaged in other controversies, one of which was on the existence of races of giants, which he endeavoured to disprove. — *Eloy Dict. Hist. de la Med. Bug. Univ.*

RIOUFFE (HONORE) a French writer, born in 1764. After finishing his studies at Paris, he was designed for the bar, but he devoted himself entirely to the cultivation of literature. At the Revolution he became connected with the Girondists, and on their proscription by the Jacobins, he attempted to escape to Bourdeaux; but he was taken prisoner, and confined in the Conciergerie at Paris, where he remained about fourteen

RIP

months, till the overthrow of his enemies, when he was set at liberty. He then published "*Memoires d'un Detenu pour servir à l'Histoire de la Tyrannie de Robespierre*," an interesting work, which became very popular. In 1800 Riouffe was made a member of the tribunate; in 1804 he was nominated prefect of the department of the Côte d'Or; and he obtained from Buonaparte the title of baron, on the creation of the new nobility. Having been removed to the prefecture of La Meurthe in 1808, he was there when the military hospitals of Nanci were filled with the victims of Napoleon's Russian expedition; and typhus fever prevailing among the soldiers, Riouffe thought it his duty to inspect and assist them, when he caught the disease, and died in November 1813. Besides his memoirs, he wrote a poem on the death of the prince of Brunswick, who was drowned in 1785, in attempting to rescue some peasants during an inundation of the Oder; and other pieces in prose.—*Biog. Nouv. des Contemp. Biog. Univ.*

RIPLEY (GEORGE) a poetical writer on alchemy in the latter part of the fifteenth century. He was canon of Bridlington in Yorkshire, travelled much, and pursued his mystical studies in France and Italy. His "*Compound of Alchemie*," dedicated to Edward IV, possesses little merit in point of versification; but as an exposition of the science of which it treats, it is sufficiently intelligible, though unfortunately the information it affords is worthless, notwithstanding the assertion of its commentator Ashmole, who states that Ripley gave from the treasures procured by his art, 100,000*l.* to assist the knights of Rhodes against the Turks. He became a Carmelite, and died in 1490. His poem may be found in "*Ashmole's Theatrum Chemicum Britannicum*."—*Warton's Hist. of Poetry. Journal of R. Institut.* vol. ix.

RIPPERDA (JOHN WILLIAM, baron of) was born in 1680, of a noble family in Groningen, and was educated under the jesuits of Cologne, but on marrying a Protestant lady, he conformed to her religion. He rose to the rank of colonel in the Dutch service, and in 1715 he was sent on a mission to Philip V of Spain, when he returned to the Catholic religion, and settled at Madrid, and the king finally made him duke of Ripperda, and his prime minister, but from his inefficiency incurring the displeasure of the king, he was dismissed, and confined in the castle of Segovia, whence he escaped, and came into England, where he remained until 1730, when he went to the Hague, and resumed the Protestant religion. But his restless and ambitious disposition would not allow him to remain tranquil, and in 1731 he went to Morocco, where he was favourably received by Muley Abdalla, and declaring himself a convert to the Mahometan religion, and taking the name of Osman, he obtained the chief command of the Moorish army at the siege of Ceuta. On the defeat of the Moors he fell under the displeasure of the emperor, and for a time he lived in retirement. He then formed a new project

RIS

for the consolidation of different religions, particularly the Jewish and Mahometan, and it is said that he even made some converts. He finally retired to Tetuan, but his projecting spirit animated him to the last, and he advanced considerable sums to Theodore, baron Newhoff, to assist his attempts on the crown of Corsica. His death took place in 1737.—*Moore's Life of Ripperda. Univers. Hist. Moreti.*

RIQUET (PETER PAUL de) a French engineer, born at Beziers in 1604. He was remotely descended from the same Florentine family with the marquis de Mirabeau; and the branch to which he belonged was established in Languedoc, in the sixteenth century. He conceived the idea of forming the canal of Languedoc, which opens a communication between the Mediterranean and the bay of Biscay; and having communicated his plan to Colbert, an edict for the construction of the canal was issued in October 1666. The work was soon commenced, and carried on during the remainder of the life of Riquet, who died October 1, 1680.—He had associated in his labours his son JOHN MATHIAS DE RIQUET DE BONREPOS, master of requests, and president of the parliament of Thoulouse, who, with the assistance of his brother, PETER PAUL DE RIQUET DE CARAMAN, and others, completed the work. The navigation of the canal was established in 1681, but it was not till 1724 that it proved profitable to the family of the projector. Besides his great work, he conducted improvements in the port of Cette, where he built two jetties, and was carrying on his operations at the time of his decease.—*Biog. Univ.*

RISBECK, or **RIESBECK** (GASPAR) a German traveller, born at Hoechst, near Frankfort, in 1750. He studied the law, but the works of Klopstock and of Goethe suited his taste better than those of professional authors, and having dissipated the fortune he had derived from his father, who was a merchant, he established himself at Salzburg, and commenced writer for the press. There he published a continuation of the "*Letters on the Monks*," attributed to M. de la Roche, which attracted a good deal of temporary notice. He then went to Zurich in Switzerland, and became co-operator in the political journal printed there; and he also published Coxe's Swiss Travels; and "*Letters of a French traveller in Germany to his brother at Paris*, translated by K. R." Zurich, 1783, 2 vols. 8vo. This German work, which was very successful, was a complete mystification, being an original production of Risbeck. He retired to the little town of Arau, where he died in 1786; and a "*History of Germany*," which was the last work he composed, appeared posthumously in 1787, and in 1788-89 was published a continuation of the history, from the pen of professor Milbiller, of Passau.—*Biog. Univ.*

RISDON (TRISTRAM) an English topographer and provincial historian, born at Winscot, near Great Torrington, in Devon-

shire, in 1580. He received his education at Broadgate-hall, now Pembroke college, Oxford; and on leaving the university he took up his residence on his estate in his native county, and devoted much of his time to the illustration of Devonian antiquities and topography. He died in 1640, leaving in manuscript, a "Description or Survey of the County of Devon," first published in 1723, 8vo, and reprinted in 1811, 8vo.—*Gough's Brit. Topog.*

RISHTON (EDWARD) a learned Catholic divine and historian, who was a native of Lancashire. He studied for a short time at Brazenose college, Oxford, and then removed to Douay, where he proceeded MA. Thence he went to Rome, and after passing four years in the study of divinity at the English college, he was ordained a missionary priest in 1580. Returning to England to exercise his function, he was arrested as a recusant, and detained in prison three years. The legal sentence of death which he had incurred being commuted for banishment, he went to France, where he was seized with the plague, and died at St Menchoud in 1585 or 1586. He published Sanders's "History of the English Schism," with a continuation; and he also wrote "Synopsis Rerum Ecclesiasticarum ad Annum 1577.—*Fuller's Worthies. Dodd's Church Hist.*

RITCHIE (JOSEPH) an English traveller, born at Odey in Yorkshire. He obtained a situation in the office of the English consul at Paris; and having become acquainted with the plans of the African association in London, he offered his services to explore the interior of Africa. In conjunction with captain G. F. Lyon, R.N. he went to Tripoli, and in March 1819 the party set out for Mourzouk, the capital of Fezzan, under the escort of Mukni, the bey of that country, who was returning home. They resided at Mourzouk for some months in circumstances of distress, arising from the want of funds, and heightened by the treacherous conduct of the bey, who seems to have speculated on the chance of becoming possessed of the property of the travellers on their dying in his dominions. Mr Ritchie actually fell a sacrifice to hardship and vexation of mind, dying in November, 1819. Captain Lyon then returned to England, and in 1821 published "A Narrative of Travels in Northern Africa, in 1818, 19, and 20, accompanied by Geographical Notices of Soudan, and of the Course of the Niger," 4to.—*Lit. Gaz. Nov. 218, 219. Biog. Univ.*

RITSON (ISAAC) a poet and miscellaneous writer, born near Penrith in Cumberland, in 1761. He became a teacher in a school at the age of sixteen; but he afterwards went to Edinburgh, and received a medical education, supporting himself by writing inaugural theses for indolent or illiterate students. Removing to London, he became an author by profession, and for a time he was a contributor of criticisms on medical works to the Monthly Review. He died at Islington in 1789. The only piece published with his name is a translation

of Homer's Hymn to Venus, 1788, 4to; but he is said to have written the prefatory introduction to Clarke's "Survey of the Lakes."—*Hutchinson's Hist. of Cumberland. D'Israeli's Calam. of Auth.*

RITSON (JOSEPH) an English lawyer and antiquary, who was a native of Stockton, in the county of Durham. He settled in London as a conveyancer, and held the purchased office of deputy high-bailiff of the duchy of Lancaster. As an antiquary he exhibited much industry and intelligence, especially with regard to our early national poetry; but his acrimony and ill-will in his critical remarks on Thomas Warton, Dr Percy, and other men of learning; and his morbid singularities of temper, and avowed contempt of religion, admit of no excuse but a degree of insanity under which he seems to have long laboured, and which issued in violent derangement. He died in a mad-house at Hoxton, in September, 1803. His principal publications are, "A Collection of English Songs," 3 vols.; "The English Anthology," 3 vols.; "Metrical Romances," 3 vols.; "Bibliographia Poetica, a Catalogue of English Poets;" and "Robin Hood, a Collection of Ballads." He also wrote a tract on abstinence from animal food, for which he was an advocate.—*Gent. Mag. Ann. Reg.*

RITTANGELIUS, the Latin designation of John Stephen Rithangel, a native of Bamberg in Germany, who filled the chair of professor of the Eastern languages in the university of Königsberg, about the middle of the seventeenth century. Of his personal history, and even of the religion in which he was originally brought up, but little is known, although his treatise "De Veritate Religionis Christianæ," evinces him to have at length become a convert to the doctrines of the reformed church. That he once professed Judaism is also certain, but whether, as some assert, he in the first instance apostatized from the Catholic faith remains doubtful. Besides the book already mentioned, he was the author of another, entitled "Libra Veritatis," and of some learned remarks on the Apocryphal work "Jezirah." His death took place in 1652.—*Bayle. Moreri.*

RITTENHOUSE (DAVID) a celebrated American philosopher, of a Dutch family, but born at Germantown, in Pennsylvania, in 1732. He was destined for the occupations of agriculture, and received but an indifferent education, notwithstanding which he showed so strong a disposition for mechanical pursuits, that his parents apprenticed him to a watchmaker, and by his own exertions he acquired a knowledge of mathematics and astronomy. His intelligence introduced him to the notice of the Philosophical Society of Philadelphia; and in 1769 he was sent to Norriton, in the county of Montgomery, to observe the transit of Venus. He was afterwards chosen a member of that society, for which he constructed an observatory. In 1770 he established himself at Philadelphia as a watchmaker and mathematical instrument-maker,

and he soon rose to great eminence as an artist and a natural philosopher. He was appointed to the office of treasurer of the state of Pennsylvania, and director of the mint, after the American revolution. The university of Philadelphia conferred on him the degree of LL.D.; and he succeeded Dr Franklin as president of the American Philosophical Society, to whose Transactions he was a considerable contributor. He died July 10, 1796. Rittenhouse was employed in making geometrical surveys, in order to determine the relative limits of some of the American states; and his exertions in the cause of science appear to have greatly promoted the diffusion of a taste for mathematical and physical knowledge among his countrymen, who, with excusable patriotism, regard him as the Newton of the new world.—*Hutton's Math. Dict.* *Aikin's G. Biog.* *Biog. Univ.*

RITTER (ALBERT) a German naturalist of the last century, who deserves to be noticed for his researches concerning oryctology. He published "Lucubratiuncula de Alabastris Hohensteinsibus, nonnullisque aliis ejusdem Loci Rebus naturalibus," Helmstad. 1731, 4to; "Lucubratiuncula II de Alabastris Schwartzburgicis," 1732, 4to; "Epistola historico-physica Oryctographia Goslarensis," 1733, 4to; "Commentatio Epistolaris I. de Fossilibus et Naturæ mirabilibus Osterodanis," Sondershausen, 1734, 4to; "Commentatio Epist. II. de Zoolitho," 1736, 4to; "Relatio historica curiosa de iterato Itinere in Hercyniæ Montem famosissimum Bructerum," 1740, 4to; besides other curious works relating to the fossils and minerals of his native country.—*Gronovii Bibl. Regn. Anim. et Lapid.*

RITTER (JOHN DANIEL) a learned writer, born at Breslau, in 1709. He became professor of history and philosophy at Leipsic, and afterwards at Wittemberg; and he distinguished himself by the publication of a number of works relating to civil law, history, and archaeology. Among these are, "Dissertatio de Cognitoribus," Lips. 1735, 4to; "Observationes Historiæ," Witteb. 1742, 4to; "Historia Præfecturæ Pratorizæ ab Origine Dignitatis ad Const. M. recensens," 1745, 4to; "De falsis Barbaricæ Philosophiæ Fontibus," 1745, 4to; besides a new edition of the Theodosian code, and a translation from the English of Guthrie's History of the World. He died in 1775.—*Saxii Onom. Lit.*

RITTER (JEREMIAH BENJAMIN) an eminent chemist and physician, who was a native of Silesia. He studied at Königsberg, and when he graduated sustained a thesis, "De Usu Matheseos in Chymia." In 1795 he was placed as secretary and verifactor in the administration of the mines of Silesia; and some years after he was called to Berlin, where he was arcanist to the porcelain manufactory, and director of the Pharmaceutical Society. He died April 4, 1807, aged forty-five. His principal works are a treatise "On the new Objects of Chemistry," 1791-1802, 2 parts, 8vo; "Elements of Stœchiometry, or the Art of measuring Chemical Elements," 1792-94, 3 vols.

8vo; and he also assisted in some scientific journals.—*Biog. Univ.*

RITTER (JOHN WILLIAM) one of the most celebrated philosophers of modern Germany, born at Samitz in Silesia, December 16, 1776. He studied medicine at Jena, and employed himself in physical experiments, particularly relative to galvanism. Being distressed by the narrowness of his circumstances, he fortunately obtained the patronage of the duke of Saxe Gotha, who assisted him with the means for procuring the expensive apparatus necessary for his researches. In 1798 he started the idea that the phenomena of animal life are connected with galvanic action, and he inserted several memoirs on the subject in the Physical Journal of Gehlen. He was of an ardent disposition, not always under the direction of sound judgment, as appeared from his advocating the reveries of animal magnetism, and other quackeries of his time. In 1805 he was chosen a member of the academy of Munich, which was the only scientific distinction he enjoyed. He died at Munich, January 23, 1810. Besides numerous papers in journals of science, he was the author of "Contributions towards a more particular Knowledge of Galvanism," Jena, 1801, 2 vols. 8vo; "Physico-Medical Memoirs," Leipsic, 1806, 3 vols.; and "Fragments taken from the inheritance of a Young Physician," Heidelberg, 1810, 2 vols. 8vo.—*Biog. Nouv. des Contemp.* *Biog. Univ.*

RITTERSHUYS (CONRAD) a learned writer on jurisprudence and philology, born at Brunswick in 1560. After having studied at Helmstadt, Altorff, and Ingoldstadt, and taking the degree of doctor of law at Basil, in 1591, he was nominated to the professorship of law at Altorff, where he remained till his death, in 1613. He wrote notes and comments on the works of Petronius, Phaedrus, Oppian, and Salvia; published the History of the Emperor Frederic I, by Guntherus, in Latin; and was the author of several dissertations, and of a work entitled "Jus Justinianum sive Novellarum Expositio Methodica," published posthumously by his son, NICHOLAS RITTERSHUYS, who was professor of feudal law at Altorff, and died in 1670. The latter was the author of a Dissertation on the Periplus of Hanno; and of a large work on the Genealogy of Illustrious Families.—*Saxii Onom. Lit.* *Aikin's G. Biog.*

RIVAROL (ANTOINE de) a native of Baguols, in the province of Languedoc, born April 17, 1757. He possessed a lively wit, well cultivated by a good education, and held a very respectable rank among the savans of the French metropolis, in which he became a resident. Voltaire, D'Alembert, Buffon, &c. were among his confidential associates; but his principles becoming suspected in the early stage of the Revolution, he found it necessary to emigrate, and seek an asylum in Germany. Hamburg was his first retreat, which he at length quitted for the capital of the Prussian dominions, where he was much patronized by some branches of the royal family, especially

by the prince royal. His works consist of a "Treatise on the Universality of the French Language;" "Letters on Religion and Morality;" "An Account of the Political Life of M. de la Fayette;" "Prospectus of a new French Dictionary;" "On the Faculties of Man, Moral and Intellectual;" "Letters to the French Nobility;" a satirical work, entitled "A little Almanac of Great Men;" some original poems on miscellaneous subjects, and a translation of the "Inferno" of Dante. Of these the first-mentioned treatise was written as a prize essay for the academy at Berlin in 1784, and was the successful composition. A Biographical Sketch of this ingenious writer appeared in two 12mo vols. in 1802, the year succeeding that of his decease.—*Biog. Univ.*

RIVAULT (DAVID) a French mathematician of the age of Louis XIII., to which monarch he was military tutor, and afterwards a counsellor of state. He is known as the author of a treatise, entitled "Les Etats," and of another "On the Principles of Gunnery," and he died at Tours in the forty-fifth year of his age. An edition of the Remains of Archimedes, with a Latin version annexed, was printed at Paris in folio, under his superintendence.—*Nouv. Dict. Hist.*

RIVAZ (PETER JOSEPH de) a skilful mechanician and chronologer, born in the Lower Valais, in 1711. He made an extraordinary progress in mathematical learning when young, and he also studied history and antiquities. In 1740 he submitted to the examination of Daniel Bernoulli a watch, which had the singular property of winding up spontaneously. Eight years after he went to Paris, and presented to the Academy of Sciences watches constructed according to his principle, with an escapement of his own invention. He also contrived an improved pendulum, for which he obtained an exclusive privilege, a circumstance which involved him in disputes with his Parisian rivals, in the art of horology. In 1752 he drained the mines of Pontpean in Brittany; and in 1760 he went to Switzerland, and made improvements in the salt-works of Bex. He passed the latter part of his life at Montiers, and died in 1772. His mechanical discoveries are recorded in the collections of the Academy of Sciences, and in the journals of his time. He left many historical works in manuscript, but it does not appear that any of them have been published.—*Biog. Univ.*

RIVE (JOHN JOSEPH) a celebrated French bibliographer, born at Aptin Provence, in 1730. His father, who was a goldsmith, gave him an education suited to the ecclesiastical profession, of which he became a member. After having been professor of philosophy in the seminary of St Charles at Avignon, he was appointed curé of Molleges, in the diocese of Arles. He quitted this situation, and in 1767 he went to Paris, where he obtained the office of librarian to the duke de la Valliere. On the death of that nobleman, in 1780, Rive wished to have been employed to draw up a catalogue of his library; but the task was confided to MM. G. Deburé and Val-

praet, who, in consequence, incurred the violent displeasure and abuse of the disappointed bibliographer. Returning to his native province at the commencement of the Revolution, he made himself conspicuous as a partizan of the new political doctrines then in vogue, though his zeal appears to have depended a good deal on feelings of personal resentment against individuals belonging to the privileged orders. He died of apoplexy in 1792. The list of his works, printed and manuscript, given by some writers, is almost interminable, including apparently among the latter, the titles of many which Rive probably had only projected. Of his published productions the most important is "La Chasse aux Bibliographes et Antiquaires mal avisés," à Londres (Aix) chez Aphobe (Sans Peur), 1788 and 1789, 2 vols. 8vo. It consists principally of criticisms on Lelong, Mercier de St Leger, Deburé, Vanpraet, and other bibliographers.—*Biog. Nouv. des Contemp. Biog. Univ.*

RIVERIUS, or RIVIERE (LAZARUS) an eminent physician, born at Montpellier in 1589. He studied medicine in the university of his native place, and in 1611 he was admitted MD. He obtained the medical chair at Montpellier in 1622, and occupied it during thirty-three years, refusing flattering invitations which he had received from Bologna and Toulouse. He died in 1655. Riverius first established the use of chemical remedies in the Montpellier school; and he published several works, principally relating to the practice of medicine, which have been repeatedly printed, together and separately.—*Hulleri Bibl. Med. Eloy Dict. H. de la Med. Biog. Univ.*

RIVET (ANDREW) a learned ecclesiastic, who filled the divinity chair at Leyden with great reputation, in the earlier part of the seventeenth century. He was a Poitevin by birth, having first seen the light at St Marent in 1572, and having taken holy orders, was preferred to a benefice at Thouars, which he held till 1620. In this year he quitted France, and after visiting this country, settled finally on the professorship to which he had been elected in the Dutch university alluded to. Three volumes of his devotional and controversial writings have been published; and the English university of Oxford ranks his name among those of her public benefactors, having received from him a variety of valuable books, in return for which she complimented him with the honorary degree of DD. His death took place in 1647.—*Biog. Univ.*

RIVET DE LA GRANGE (ANTOINE) a learned and ingenious French author, who flourished during the earlier part of the last century. He was born in 1683 at Consolens in Poitou, and became early in life a monk of the order of St Benedict. The work by which he is principally known, and in the compilation of which he spent upwards of thirty years, is a valuable history of the Progress of Literature in France, first published in nine quarto volumes, but since continued by Clemences,

whose additions swell it to thirteen. He was also the author of biographical sketches of some of the members of the society of Port Royal. His death took place in 1749.—*Biog. Univ.*

RIVIERE (— MÉRCIER de la) a celebrated political economist, who was born in France about 1720. He obtained the post of counsellor of the parliament of Paris in 1747, and was soon after made intendant of Martinique. On his return from that colony, he became one of the disciples of Quesnay, and he made himself known by the publication of a work, entitled "L'Ordre naturel et essentiel des Sociétés politiques," which his party-admirers represented as superior to Montesquieu's Spirit of Laws. Prince Galitzin, the Russian minister at Paris, recommended Riviere to the empress Catherine as a political philosopher, who might with advantage assist in preparing the new legal code she wished to bestow on her subjects. He went to Russia, but not arriving so soon as he was expected, he was treated with neglect, and he soon returned home without exercising his talents as a legislator. The singularity of his schemes and his high pretensions exposed him to the ridicule of Voltaire, Grimm, and the abbé Galiani, who amused themselves at the expense of the would-be Solon. He witnessed the misfortunes of the Revolution, which he had predicted in pointing out the most proper methods of preventing them. He escaped unnoticed during the reign of terror, and died in obscurity in 1794. His principal works, besides that already mentioned, are, "De l'Instruction publique, ou Considérations morales et politiques sur la Nécessité, la Nature, et la Source de cette Instruction," 1775, 8vo; "Lettre sur les Economistes," 8vo, also inserted in the *Encyclopedie Methodique*.—*Biog. Nouv. des Contemp. Biog. Univ.*

RIVINUS (ANDREAS) or ANDREW BACHMAN (of which German appellation the former name is a Latin translation), was a learned Saxon physician of the seventeenth century. He studied medicine and philosophy at Jena, and then travelled for improvement in England, France, and the Netherlands. Returning to Saxony, he became rector of the college of Nordhausen; and he afterwards took the degree of doctor of physic at Leipsic, and was appointed professor of poetry in that university. In 1655 he changed his professorship for that of medicine, and he died April 4, in the following year. He edited the poetical works of Gregory Nazianzen, Tertullian, Lactantius, and other ancient Christian writers; and he published a number of medical and philosophical theses, and philological dissertations; and executed many other literary undertakings.—*Niceron. Saxii Onom. Lit. Biog. Univ.*

RIVINUS (AUGUSTUS QUIRINUS) an eminent botanist and physician, who was the third son of the preceding, and was born at Leipsic in 1632. Having lost his father when young, he owed his education to the munificence of the elector of Saxony. He studied at Helmstadt, and took the degree of doctor in 1676.

In 1691 he was nominated professor of physiology and botany at Leipsic, he became dean of the faculty in 1709, and he died of pleurisy December 30, 1723. Rivinus is chiefly distinguished as a botanist. He proposed a new method of arrangement of plants in his "Introductio generalis in Rem Herbariam," first published in 1690. His scheme is founded on the structure of flowers, and he distributes all plants into eighteen classes, distinguished by the number and form of their petals. He also published splendid botanical plates to illustrate his system, which was adopted by Gouan in France, and by sir John Hill in England; and after being variously modified by other botanists, was at length superseded by that of Linnaeus. The medical writings of Rivinus are not destitute of merit, and he made some anatomical discoveries.—*Halleri Bib. Med. et Bot. Biog. Univ.*

RIZZIO, RIZZI, or, as his name is sometimes written, RICCI (DAVID) the son of a professor of the same name, who taught music and dancing at Turin, in which capital the subject of this article was born, in the earlier part of the sixteenth century. His abilities as a musician procured him some notice at the court of Savoy, while his talents as a linguist eventually raised him to the fatal honour of being selected by the ambassador from the grand duke to Mary, queen of Scots, as a component part of his suite. In 1564 he first made his appearance at Holy Rood House, where he soon became so great a favourite with the queen, that he was taken from the service of his own sovereign and appointed her secretary for foreign languages. The distinction with which he was treated by his unhappy mistress, soon excited both the envy of the nobles, and the jealousy of Darnley himself; the hatred of the former being, perhaps, increased as much by the religion, as by the arrogant deportment of the new favourite, while the suspicions of the latter were excited by his address and accomplishments. A conspiracy, with the king at its head, was soon formed, for the destruction of the presuming foreigner, and before he had enjoyed two years of court favour, the lord Ruthven, and others of his party, were introduced by Darnley himself into the queen's apartment, where they despatched the unfortunate object of their revenge by no less than fifty-six stabs, in the very presence, and clinging to the robes of his scarcely less defenceless mistress, AD. 1566. Popular tradition assigns to Rizzio the amelioration, not to say the invention, of the Scottish style of music; and it appears unquestionable that his skill in the performance of the national melodies on his favourite instrument, the lute, tended not a little to their general improvement and popularity with the higher classes; still it is evident that the style of Scottish music was determined long before the time of Mary, and many of the airs which have been ascribed to Rizzio, such as "Cowden Knowes;" "Gala Water;" and others of the same class, are easily traced to more distant periods.—*Burney. Robertson.*

ROB

ROBERT I, king of Scotland, of the family of Bruce, memorable as the restorer of the independence of his country, was grandson of that Robert Bruce who was the unsuccessful competitor with John Baliol for the crown of Scotland. He was born in 1275, and appears to have served in his youth in the army of Edward I. The death of his father, who left him heir to his estate and pretensions, together with that of John Baliol, inspired him with high designs for himself and his country, then in complete subjection to the English. In 1305 he quitted the English court, to which, it is said, his purposes had been betrayed by Comyn or Cumming, earl of Badenoch, whom, in an interview at Dumfries, in February 1306, he stabbed with his own hand. He immediately followed up this daring action by seizing the castle of Dumfries, confining the English judges assembled there, and openly asserting his claim to the crown. He was soon at the head of a body of troops, with which he penetrated as far as Perth, the English flying every where before him; and in the following March he was solemnly crowned at Scone. The king of England, highly enraged, ordered all his Northern forces to join the followers of Comyn, in order to take vengeance; in consequence of which the earl of Pembroke marched to Perth, where he surprised and beat the troops of Bruce, who escaped with difficulty, being obliged to seek refuge in an unfrequented isle of the Hebrides. His family and friends partook of his adverse fortune; three of his brothers were executed as traitors, and his queen, his daughter, and two sisters, made captives, and committed to prison. Neither friends nor foes were acquainted with the fate of Bruce, when he suddenly made his appearance with a small band of followers, but on the approach of an English force he retired. In a second incursion, with augmented force, he defeated the earl of Pembroke in his turn, and was soon after delivered by the death of that warrior from his most formidable foe, Edward I. The weak son of the latter, Edward II, although he obeyed the dying injunction of his father, to march into Scotland, pursued the war with so little vigour, that Robert gradually reduced the whole of Scotland, with the exception of a few fortresses, to an acknowledgment of his authority. Several weak attempts were subsequently made by the English king, which ended in a truce; and Robert actively employed this interval of hostilities in consolidating his power, and regulating his civil government. In the mean time, Edward, after the death of his favourite, Gaveston, having reconciled himself to his rebellious barons, entered Scotland at the head of the largest army that had ever been employed against it, and marched to Stirling, to relieve the castle, then besieged by Robert. The Scotch army, which was much inferior in number to the English, but composed of veteran troops, awaited the approach of the enemy on the banks of the Bannock, which rivulet gave name to the famous battle of Bannockburn.

ROB

Through the able disposition and conduct of Robert, the Scots on this occasion obtained over the English the most decisive victory of which their annals can boast. Edward himself narrowly escaped, and the number of noble prisoners was so great as to enable Robert to recover in exchange, his wife, daughter, sisters, and several other prisoners of high rank. He then thought himself strong enough to assail the English government in return, and sent over his brother with a body of troops to the north of Ireland. In 1316 he himself followed, but was obliged by famine to return; and soon after his brother was defeated, and fell in battle. The papal influence was resorted to in order to effect a peace between the hostile nations, but as the legates employed would not give Robert his regal title, he rejected their proposals with scorn. At length a second truce for two years was agreed upon, on the expiration of which, Edward undertook a new expedition into Scotland, and in 1322 advanced as far as Edinburgh, but was soon obliged to retreat, with Robert in his rear, who surprised part of the army, and even took the king's baggage. Both parties becoming desirous of repose, a third truce for thirteen years was agreed upon, which left Robert in full possession of Scotland, although without acknowledging him as lawful king. On the deposition and death of Edward II in 1327, the king of Scotland, who seems not to have considered himself bound to the new government of England, renewed hostilities, by marching an army into Northumberland, which was however soon obliged to retire, on the approach of an English force under the youthful Edward III. The same year a peace was concluded, in which the king of England renounced all claim to superiority over the kings or kingdom of Scotland, and David, the son of Robert, was affianced to Joan, the sister of Edward. Thus, the great object of Robert's patriotic exertions, the independence of his country, was finally established. Worn out with the cares and fatigues of his active life, this able and warlike prince expired in 1329, at his castle of Cardross, in the fifty-fourth year of his age, leaving a name eternally memorable in the annals of Scotland, which he rescued by his courage and wisdom from a foreign yoke, and restored to its rank among nations.—*Hume. Henry. Robertson.*

ROBERT (HUBERT) a French painter, was born at Paris in 1732. He resided in Italy for several years, and during that time he painted the gardens and cascades at Rome in a most masterly manner, managing his aerial perspective with a skill nearly approaching to illusion. On his return to France he was admitted into the academy. During the horrors of the Revolution he was seized and thrown into prison, where he amused himself by his profession. On his release he regained his patronage and reputation, which he preserved until his death, April 14, 1808.—*Galerie des Peintres Célèbres.*

ROBERT (FRANCIS) a modern geographer, who was a native of Chalons in France.

He became professor of philosophy and mathematics at the college of Chalons, and in 1780 he obtained the title of royal geographer. In 1789 he joined the advocates for revolution, and condemned tithes and other rights of the privileged classes. He was nominated mayor of the commune of Besnois in 1793, and after the Revolution of the 31st of May, that year he was appointed administrator of the department of Côte d'Or. In 1797 he was chosen a member of the Council of Five Hundred, in which he displayed a decided alteration in his political opinions. Having escaped the proscription, which overtook many of his coadjutors, he retired into the country. In his old age he became a traveller, and died at Heiligenstadt in Saxony, in 1819, aged eighty-six. He was the author of *Travels in Switzerland*; a *Description of France*; some useful elementary works on geography; and a *Memoir on a method of Guiding Air-balloons*.—*Biog. Univ.*

ROBERTS (PETER) a Welsh divine, and writer on British history and controversial theology. He was a native of North Wales, and received his education at Trinity college, Dublin, where he proceeded to the degree of MA. Having taken orders in the church of England, he obtained the living of Halkin, in the county of Flint. He published, "Letters to M. Volney, in Answer to his Book on the Revolution of Empires," 8vo; "A Harmony of the Epistles," 4to; "A Sketch of the Early History of the Ancient Britons," 8vo; and "A Review of the Policy and peculiar Doctrines of the Modern Church of Rome," 1809, 8vo, in which he displays abundant zeal against the Catholics. But his most considerable work is "The Chronicle of the Kings of Britain," 1810, 4to, a translation from the ancient Welsh Chronicles, with copious notes and illustrations. His death took place in 1819.—*Gent. Mag.*

ROBERTSON (JOSEPH) an English divine, was born at Knipe in Westmoreland, in 1726, and was educated at the grammar school of Appleby, whence he was removed to Queen's college, Oxford. In 1738 he obtained the living of Herriard in Hampshire; in 1770 that of Sutton in Essex; and in 1779 the vicarage of Horncastle in Lincolnshire, where he died in 1802. Mr Robertson, who was for many years a writer in the *Critical Review*, is best known by his tract, entitled "The Parian Chronicle, or the Chronicle of the Arundelian Marbles; with a Dissertation concerning its Authenticity," in which he strives to render its authority questionable. He also wrote *Essays on Punctuation*, on *Female Education*, and on the nature of English Verse, with some small productions of a kindred nature, including an "Introduction to the Study of Polite Literature."—*Nichols's Lit. Anec.*

ROBERTSON, DD. (WILLIAM) an eminent divine, was born at Dublin in 1705. His father, who was a linen manufacturer, being a native of Scotland, sent him to the university of Glasgow, from which he was expelled for the strong part he took in asserting the right of the students to choose their rector.

By the interest of the duke of Argyll and his brother, the earl of Ilay, a commission was on this occasion appointed to visit the university of Glasgow, the result of which was the full establishment of the right claimed by Mr Robertson, whose expulsion was removed, and the election to which he objected declared void. On taking orders he enjoyed the patronage of Dr John Hoadly, bishop of Ferns and Leighlin, and obtained the rectories of Ravilly in the county of Carlow, and of Keltavell in the county of Wicklow. He was subsequently presented to other preferments, but altogether of a very small amount. He distinguished himself by a successful suit for the tithes of herbage for black cattle; but Irish parliamentary interference soon put an end to that demand. The ill-will produced by these proceedings induced him to write a tract, entitled "A Scheme for utterly abolishing the present heavy and vexatious Tax of Tithe," which publication advocated the substitution of an equivalent land-tax, and excited much attention at the time. In 1754 he was presented to another benefice by the bishop of Ferns, but previously to accepting it, he had imbibed doubts on the subject of the Athanasian creed, and declined induction, on the score that he could not conscientiously qualify for the preferment. In 1764 he deemed it more honest to resign all his livings in submission to the same scruples of conscience, and by way of explanation, in 1766, published a small volume, entitled "An Attempt to explain the Words, Reason, Substance, Person, Creeds, Orthodoxy, Catholic Church, Subscription, &c." This book he presented to the university of Glasgow, which in return complimented him with the degree of DD. In 1768 he was made master of the free grammar school of Wolverhampton, and in 1772 was a distinguished member of the Committee of Clergymen, employed to form and present the famous petition to Parliament, to be relieved from the obligation of subscribing to the thirty-nine articles. He died at Wolverhampton, much respected, in 1783, in the seventy-ninth year of his age.—*Life in Gent. Mag.* for 1783.

ROBERTSON, DD. (WILLIAM) a celebrated modern historian, was born at Borthwick, where his father was minister, in 1721. He received his early education at the school of Dalkeith; but in 1733 accompanied his father, on his removal to Edinburgh, as minister of the Grey Friars in that city, and soon after entered on his academical studies. After the completion of his course in the theological class of Edinburgh, he obtained a license to preach in 1741, and in 1743 was presented by the earl of Hopeton to the living of Gladmuir in East Lothian. In 1751 he married a lady of the name of Nisbet, his cousin-german, and began to be distinguished by his eloquence and good taste as a preacher. About the same time he became known as a powerful speaker in the General Assembly of the church of Scotland, in which he obtained an ascendancy by his eloquence and great talents for public business, which, exerted as they were on the

side of authority, gave him for a long time the lead in the ecclesiastical politics of Scotland. In 1754 he became a member of the celebrated "Select Society" of Edinburgh, and signalled himself by supporting Mr Home, the clerical author of the tragedy of Douglas, against the censures of the Scottish rigorists. In the mean time, he had occupied himself in his "History of Scotland, during the Reigns of Queen Mary and King James VI," which work appeared early in 1759, in two vols. 4to, and was received with immediate and general applause. In this praise no one more heartily concurred than the celebrated David Hume, between whom and Dr Robertson, notwithstanding religious and political differences, a faithful and intimate friendship was maintained throughout life. The distinction and patronage acquired by this work, which reached a fourteenth edition before his death, soon appeared in the author's nomination to the chaplainship of Stirling Castle in 1759, in being appointed one of the king's chaplains in 1761, and becoming principal of the university of Edinburgh in 1762. Two years after he was made historiographer royal of Scotland, with a salary of 200*l.* per annum, and was altogether the best benefited clergyman of the Scottish church. His emoluments, however, fell far short of what mere private patronage, or political and family interest, will frequently bestow on the most undistinguished clergy of the south. But his influence was not to be measured by his income, and it was equally to his honour that it derived little support from those who managed the political affairs of Scotland, but was in a great degree personal and independent. As head of a flourishing seat of education, he was minutely attentive to all its duties; and undeluded by a prejudiced and narrow-minded opposition to amendment under the name of innovation, he co-operated with the greatest liberality in all the improvements which have raised Edinburgh to its present celebrity. In the midst of those numerous pursuits and official avocations, he found time to employ himself in his celebrated "History of the Reign of the Emperor Charles V," which work appeared in 1769, in 3 vols. 4to. Though high expectations were formed, it was received with even more than correspondent applause. The introductory volume, containing a view of the progress of society in Europe, from the subversion of the Roman empire to the beginning of the sixteenth century, met with particular approbation. This work being more calculated for foreign perusal than the History of Scotland, rendered the historian as popular abroad as at home, and among other testimonies of respect, he received a valuable diamond snuff-box from the empress of Russia. Thus encouraged, he proceeded to the composition of his "History of America," which appeared in 1777, in 2 vols. 4to. On the whole, this third attempt was worthy his high reputation, although later writers are of opinion, that he ought to have consulted some authorities which he neglected, and it has been thought, that, either led by natural candour, or impelled by

gratitude for the liberality of the Spanish court, in the way of communication, he has too studiously extenuated the cruelty of the early conquerors of the new world. The latest work of this able writer appeared in 1791, under the title of "An Historical Disquisition concerning the Knowledge which the Ancients had of India, and the Progress of Trade with that Country prior to the Discovery of the Cape of Good Hope," 4to. It exhibits his characteristic industry and skill in composition; but owing to the critical nature of the subject, and the superior lights in Indian history and antiquities, since attained by writers with greater local advantages, it has never attained the popularity of his other performances. The health of Dr Robertson began visibly to decline in 1791, and he retired to a country-house in the neighbourhood of Edinburgh, where he expired in the bosom of an affectionate family in June 1793, in his seventy-second year. As a historian, Dr Robertson is admired for skilful and luminous arrangement, distinct mode of narrative, and highly graphical description. His style is pure, dignified, and singularly perspicuous; and although there may be less glow in his expression of moral and political feelings, than some eminent writers in a free country have manifested, it is atoned for by the calm sagacity attendant upon a cool temper, when enlightened by knowledge and directed by principle. Dr Robertson, besides being a member of the Royal Society of Edinburgh from its foundation, belonged to those of Madrid, Padua, and Petersburg.—*Account of Life and Writings by Professor Dugald Stewart.*

ROBERVAL (GILES PERSONNE de) an eminent French mathematician, was born in 1602 at Roberval, a parish in the diocese of Beauvais, and he was first professor at the college of Maitre Gervais, and afterwards at the college-royal. In 1666 he was chosen a member of the Royal Academy of Sciences, to which he communicated some curious experiments on the Torricellian vacuum. He also invented two new kinds of balances, one of which was for the weighing of air. The Robervallian lines also were his, for the transformation of figures. He was involved in a dispute with Des Cartes, which, from his attempts to depreciate him, and disputing with him the credit of his analytical inventions, did not terminate to his credit. Roberval died in 1675. His works are treatises, "On Mathematics," "On the Mundane System," and one in Latin, which he attributes to Aristarchus of Samos; and the following pieces in the Memoirs of the Academy of Sciences, "Treatise on Indivisibles;" "On the Trochoid or Cycloid;" "A Letter to Father Mersenne;" "Observations on the Composition of Motion and on the Tangents of Curve Lines;" "The Recognition of Equations;" "Experiments concerning the Pressure of the Air;" and "The Geometrical Resolution of Plane and Cubic Equations."—*Hutton's Math. Dict. Moreri. Nouv. Dict. Hist.*

ROBESPIERRE (MAXIMILIAN ISIDORE)

was born at Arras, in French Flanders in 1759, and was the eldest son of an advocate of the superior council of Artois. His father dying when he was young, he was indebted for his education to the bishop of Arras, who gave him an exhibition at the college of Louis le Grand, at Paris. He completed his youthful studies in a manner creditable to his talents and application; and at this period he is said to have derived an attachment to republicanism, and which may have influenced his future conduct, from the lessons of one of his tutors, M. Hérivaux, who was an enthusiastic admirer of the heroes of ancient Greece and Rome. In 1775, when Louis XVI, after his accession to the crown, made his entry into Paris, Robespierre was deputed by his fellow-students to present their homage to the new sovereign. Having adopted the law as a profession, he became an advocate of the council of Artois; and the first cause in which he distinguished himself was as the defender of M. Visery, who was prosecuted for erecting a conductor to preserve his house from lightning. Previously to the Revolution he was advantageously known, both on account of his professional abilities, and the liberal and enlightened spirit which he exhibited in his conduct and writings. In 1789 he was elected a deputy, from the Tiers Etat of the province of Artois to the States General. In that assembly he advocated the liberty of the press, and other popular topics of discussion; but his eloquence did not attract much attention, and he attached himself in the first instance so closely to Mirabeau, that he acquired the epithet of "Le Singe de Mirabeau." At this time, however, he frequented the Jacobin assemblies and clubs of the lower orders, over whom he gained an ascendancy, of which he afterwards availed himself to make his way to despotic power. In January 1791 he spoke repeatedly on criminal legislation; and he subsequently displayed so much moderation in discussions relative to the emigrants and the priests, as led to suspicions that he was actuated by some secret motives. In a speech on the 30th of May, he recommended the abolition of capital punishments. He is said to have been much alarmed at the flight of the king from Paris, and equally rejoiced at his forced return from Varennes; and from that period he seems to have used all his influence in overturning the monarchy. His projects now gradually became developed, and at the tumultuary meeting in the Champ de Mars, on the 17th of July, an altar, with the inscription "A celui qui a bien mérité de la Patrie," and below it the name of "Robespierre," testified his high favour with the people. The closing of the Constituent Assembly, on the 30th of September, afforded him another triumph, when the mob presented him with a garland of oak-leaves, and taking the horses from his carriage, drew him through the streets, exclaiming, "Behold the friend of the people, the great defender of liberty!" It does not appear that he actively interfered in the riot of the 10th of August 1792, or in the

massacres which took place in the prisons of Paris, in the beginning of September; but he was connected with Marat and Danton, of whose crimes, and those of their associates, he had sufficient address to reap the fruits, and, like other tyrants, he at length made his instruments his victims. After the trial and execution of the king, in promoting which, the Brissotins, or Girondists, co-operated with Robespierre and the Jacobins, the former were speedily sacrificed to the ascendancy of the latter. The Hebertists, who had joined in this work of destruction, were the next victims to the jealousy of the dictator, who had no sooner sent them to the scaffold, with the assistance of Danton and his friends, than he adopted measures for the ruin of that popular demagogue, whom he dreaded as his most dangerous rival. His next measure was to throw the imputation of atheism and irreligion on those whom he had destroyed, and to establish a species of religious worship. Barrère, by his direction, promulgated his new system of worship; and on the 8th of June, 1794, Robespierre, in person, celebrated what he termed "the Feast of the Supreme Being." His power seemed now to be completely established, and the reign of terror was at its height; but his cruel tyranny and mysterious denunciations had alarmed many of those who had been most intimately connected with him, and a conspiracy was formed for his destruction. At this critical juncture, far from acting with the decision which previously marked his conduct, he waited for the attack of his enemies, and most unaccountably secluded himself from the public for more than a month, during which period he is said to have been employed in preparing an elaborate defence of his conduct, to be delivered in the National Convention, where he made his appearance for that purpose on the 26th of July (the 8th of Thermidor, in the revolutionary calendar) 1794. He was indirectly attacked by Bourdon de l'Oise; after which Vadier, Cambon, Billaud Varennes, and several other members spoke against him. He now perceived the extent of his danger, and the ensuing night was passed in consultation with St Just and others of his most intimate partizans; but their deliberations led to no decisive results. The next day, when they appeared in the Convention, Tallien and Billaud openly accused Robespierre of despotism; a tumult ensued, and amidst cries of "à bas le tyran," he in vain endeavoured to obtain a hearing. At length a decree of arrest was carried against him; and his brother, and his friends St Just, Couthon, and Le Bas, were included in it. Robespierre was sent to the Luxembourg prison, but in the night he was set free by the keeper, and was conducted to the hall of the commune of Paris, where Henriot, commander of the national guard, Fleuriot, the mayor of Paris, and others of his creatures, had assembled forces for his defence. This was the critical moment; but neither Henriot, nor Robespierre himself, had spirit sufficient to head the mob and lead it

against the Convention. While they deliberated, their opponents proceeded to action. Barras and others having been appointed commissioners to direct the armed force of the metropolis, they, without difficulty, secured the persons of the fallen tyrant and his associates, who were all guillotined the next day, July 28, 1794. Robespierre endeavoured in vain to escape a public execution, by shooting himself with a pistol at the moment of his seizure; but he only fractured his lower jaw, and thus subjected himself to protracted suffering, which excited neither sympathy nor compassion. Of all the wretches defiled by the crimes which accompanied the Revolution, Robespierre has excited the highest abhorrence, and entailed on his name the greatest degree of infamy. He was not, however, the author of all the enormities with which he has been charged. Among his colleagues of the committee, and especially those who were sent into the departments, many exercised cruelties which far exceeded their instructions. Those who contributed most to his overthrow, and were loudest in their accusations against him, had profited by his crimes, in which they were deeply involved; and, like the scapegoat of the Jews, he was charged with the sins of the whole nation, or rather of the jacobin government. In the Memorial from St Helena, Buonaparte is stated to have said, that Robespierre displayed in his conduct more extensive and enlightened views than have been generally ascribed to him; and that he intended to re-establish order after he had overturned the contending factions: but not being powerful enough to arrest the progress of the Revolution, he suffered himself to be carried away by the torrent, as was the case with all before Napoleon himself, who engaged in a similar attempt. As a proof of this, the ex-emperor asserted, that when with the army at Nice, he had seen in the hands of the brother of Maximilian Robespierre, letters, in which that demagogue expressed an intention to put an end to the reign of terror. On the whole, it may be reasonable to conclude that something like principle and genuine enthusiasm guided this hateful and unhappy man in the first instance, but, wholly unable to govern the elements of wild disorder afloat around him, the characteristic cruelty of perplexed cowardice at length became his only instrument, either of action or self-defence. However stimulated, his career exhibits one of the most signal instances of theoretical and practical cruelty upon record. Among the published works of Robespierre are, "Plaidoyer pour le Sieur Visserly," in favour of the right of setting up electrical conductors against lightning, 1783, 8vo; "Discours couronné par la Soc. Roy. de Metz, sur les Peines infamantes," 1785, 8vo; "Eloge de Gresset," in which the author displays an attachment to monarchical government and religious institutions; "Eloge de Pres. Dupaty," and a political journal, called "Le Défenseur de la Constitution."—*Dict. de H. M. du 18^{me} S. Biog. Nouv. des Contemp. Biog.*

Univ. Sir Walter Scott's Life of Napoleon Buonaparte.

ROBILANT (ESPRIT BENOIT NICOLIS de) lieutenant-general of infantry, and commander-in-chief of the royal corps of military engineers of the king of Sardinia, was born at Turin in 1724. His father, the count de Robilant, was acquainted with military affairs and civil architecture, and was the author of a treatise on the art of war. The son studied under Bertola, the Vauban of Piedmont, and entering into the corps of artillery, he served as a lieutenant in the war carried on by Charles Emanuel III, against the Spaniards, between 1742 and 1748. Peace taking place, the king sent him to Germany to survey the mines of Saxony, Hanover, Bohemia, &c.; and he returned home in 1752 with a valuable collection of plans and memoirs. He was then appointed inspector-general of mines in all the Sardinian states, and he established at Turin a school of mineralogy, subterranean geometry, and docimastics; and he founded a chemical laboratory in the arsenal. In 1769 he travelled in the Alps and Appennines; and he was subsequently employed in mineralogical researches by pope Clement XIV. He succeeded count Pinto, in 1787, as first engineer; and he was promoted by his Sardinian majesty to several other offices. He died May 1, 1801. He was the author of "Experiments on Platina," and other important essays in the memoirs of the academy of Turin; besides which he wrote, "On the different Processes employed at the Mint for the Improvement of Metallurgic Operations;" and "On the Utility and Importance of Travels in One's own Country."—*Biog. Univ.*

ROBIN (JEAN) a French botanist, born in 1550. He had a garden at Paris, in which many curious plants were cultivated, of which he published a list. On the institution of the Jardin des Plantes, it was confided to his care by a decree of the Parisian faculty of medicine in 1597.—VESPASIAN ROBIN, who was either the son or the nephew of the preceding, was associated with him in the direction of this garden in 1621, as appears by a catalogue, entitled "Enchiridion Isagogicum ad facilem Notitiam Stirpium, tam Indigenarum quam Exoticarum, quæ coluntur in Horto DD. Joan. et Vesp. Robin, Botanicorum Regiorum," Paris, 12mo. V. Robin appears to have been alive in 1640, as Dr Morison, who visited France at that period, was one of his pupils. The beautiful tree called Robinia, or pseudo-acacia, derives its name from these botanists.—*Biog. Univ.*

ROBINS (BENJAMIN) an eminent mathematician, who was the son of a tailor at Bath, where he was born in 1707. He received but a limited education, which he improved by his own industry, and qualified himself to become a teacher of mathematics, which employment he exercised first at Bath, and then in London. In 1742 he published a small treatise, entitled "New Principles of Gunnery," containing the result of experiments which he had made relative to the force of gunpowder and

the resistance of the atmosphere. On the return of commodore Anson from his famous voyage round the world, Mr Robins was employed to prepare the narrative of the enterprise, which he drew up in the name of the rev. Richard Walter, chaplain of the Centurion, and produced one of the most popular works of the kind in our language. In 1750 he obtained the office of engineer-general to the East India company, and he went out in that capacity: but he did not long enjoy the appointment, dying at Fort St David's, July 29, 1751. His mathematical tracts, with an account of his life, were published in 2 vols. 8vo, 1761.—*Martin's Biog. Philos.*

ROBINSON (MARY) a female whose great personal attractions, combined with some literary as well as histrionic talent, procured her in the latter part of the last century a degree of public attention, much increased by the notoriety of a temporary connexion established between her and the then heir-apparent to the throne. Her father, an American by birth, of the name of Darby, commanded a trading vessel belonging to the port of Bristol, in which city the subject of this article was born in 1758. At an early age she was placed under the care of the Misses More, one of whom, Hannah, has since acquired so much celebrity, and with them she continued till, in her fifteenth year, she became the wife of an extravagant and profligate attorney, named Robinson, whose vices having at length immured him within the walls of a prison, his young wife was compelled to adopt some method of procuring for herself that support which her husband ought to have afforded her. The stage appeared the only probable means of success, and to this she had recourse. Garrick saw and fostered her rising talent. Her personal beauty was a powerful co-operative, and after appearing with great success in Imogen, Juliet, Ophelia, and other of Shakspeare's heroines, her greatest triumph was exhibited in her representation of Perdita in the Winter's Tale, in which character she is supposed to have achieved the conquest already alluded to, and whence she derived the appellation by which she was afterwards generally distinguished in the world of fashion. This illicit amour, the conducting of which will ever reflect disgrace on the courtly panders, who ought to have checked, yet unblushingly encouraged it, was even more brief than usual. A general officer, whose services in the American war have been favourably mentioned, and who was at least as remarkable for the elegance of his person and manners as for his military abilities, was her next protector, or rather favourite, for she lavished on him all her disposable property, and caught a violent rheumatism by suddenly following him to the sea-side to release him from a temporary embarrassment. She subsequently retired to the continent, and on her return in 1788 commenced her literary career, in which she had considerable success. "Vaucenza," "Hubert de Sevrac," "The Widow," "Angelina," "Walsingham," "The

Natural Daughter," "Modern Manners," together with some other novels; a tragedy, entitled the "Sicilian Lovers;" "Nobody," a farce; and two volumes of miscellaneous poetry; some "Lyrical Tales;" and an autobiographical sketch of her own life, remain to attest her possession of at least considerable feeling and talent, and so far to add to her misfortunes. In 1800 her health began to decline rapidly, principally owing to her inability to take exercise, having never recovered the use of her limbs; and she died at her house at Englefield green, December 28 in the same year, in the forty-second year of her age.—*Memoirs by Herself. Gent. Mag.*

ROBINSON (RICHARD) first baron Rokeby, and archbishop of Armagh in Ireland. He was the lineal descendant of the elder branch of an ancient family of that name in Yorkshire, in which county he was born in 1709. From Westminster school he removed on the foundation to Christchurch, Oxford; and having taken holy orders, became domestic chaplain to archbishop Blackburne, through whose patronage he obtained the vicarage of Aldborough, with a stall in York Minster. In 1751 he accompanied the duke of Dorset, the new lord-lieutenant of Ireland, to Dublin, in the capacity of chaplain, and before the expiration of the year was preferred by him to the see of Killala. Over this diocese he presided eight years, when he was translated to that of Ferns. In 1761 he was again removed to Kildare, which he resigned in 1765, on being advanced to the Irish primacy. In this elevated situation he distinguished himself by his munificence, especially in erecting an archiepiscopal palace, with a public library, observatory, &c. annexed, which he not only founded but endowed, and in building four new churches in his diocese. His elder brother dying in 1785, he succeeded to the family baronetcy, which then merged in the Irish barony, to which he had been previously elevated in 1777, by the title of baron Rokeby, with remainder to his nephew, the eccentric Matthew Robinson, of Monkshorton in Kent, who, on the death of the primate at Clifton, in 1794, succeeded to the title. Matthew, the second baron, was brother to the celebrated Mrs Montagu, and retained till his death his predilection in favour of a venerable beard of snowy whiteness, which descended to his chest, and rendered him one of the most conspicuous characters of the county in which he lived. At his decease he was succeeded in his titles by the present baron, a nephew.—*Ency. Brit.*

ROBINSON (ROBERT) an eminent dissenting divine. He was the son of a native of Scotland, and was born at Swaffham in Norfolk, in October 1735. He was educated at a respectable grammar-school at Scarning, in his native county; but owing to the loss of his father, and the humble circumstances of his mother, at the age of fourteen he was apprenticed to a hair-dresser in London, who gave up his indentures when he was about twenty. Having zealously attached himself to George Whitefield, he became a

preacher among the Calvinistic methodists, and occupied that office at Mildenhall in Suffolk, and afterwards at the Tabernacle at Norwich, and other places. He subsequently relinquished his connexion with the methodists, and, although with the forfeiture of the countenance of a rich relation, established an independent congregation at Norwich, over which he presided. In 1759 he married, and was soon after chosen pastor to a small anabaptist congregation at Cambridge, which increased very much under his care, and he retained this situation during the remainder of his life. In 1773 he removed his residence to the village of Chesterton, near Cambridge, where he engaged in trade as a farmer, corn-dealer, and coal-merchant. His learning and abilities, displayed in his sermons and his published works, procured him much respect from the members of the university and other persons belonging to the established church; and he is said to have received offers of promotion if he would become a conformist, which he declined. He was first known as an author in 1774, by a publication under the title of "The Arcana, or the Principles of the late Petitioners to Parliament, for Relief in Matters of Subscription, in eight Letters to a Friend," 8vo. These letters discovering considerable controversial ability, much advanced his character among the dissenters. In the same year he published a spirited translation of the sermons of the celebrated French preacher Saurin, to which he prefixed an introduction, containing very interesting memoirs of the reformation in France, the life of M. Saurin, together with some observations on Christian liberty, and the moral influence of the Gospel, which acquired him much attraction, even from the dignitaries of the establishment. In 1776 he entered into controversy respecting the divinity of Christ, and published "A Plea for the Divinity of our Lord Jesus Christ, &c." which was received with great approbation, and again obtained him the countenance of several members of the episcopacy. He would not however be led into farther discussion on this subject, and declined every solicitation to answer Mr. Lindsay's published "Examination" of his argument. In 1777 he produced a small tract on the observance of Good Friday; in which, with considerable learning, and still more point and humour, he attacked the observance of similar commemorations. This tract, from its piquancy, has been repeatedly republished. In 1778 he published "A Plan of Lectures on the Principles of Nonconformity," 8vo; a work which contains outlines of the whole controversy between the church of England and the dissenters. Towards the close of the same year, he translated the celebrated Claude's "Essay on the Composition of a Sermon," 2 vols. 8vo, which he was subsequently induced to illustrate on a larger scale, for the benefit of dissenting students. In 1780 he paid a visit to Edinburgh, and declined the proffered diploma of doctor of divinity. On his return to Cambridge he published

lished a well-written tract, entitled "The general Doctrine of Toleration;" and soon after preached and published an able sermon, entitled "Slavery inconsistent with Christianity;" and was the author of an excellent petition from the gentry, freeholders, and others of the county of Cambridge, against the slave-trade. In 1781 he began to collect materials for his "History of Baptism;" and in 1782 appeared his "Political Catechism," in 8vo, intended to convey just ideas of civil government and of the British constitution. In 1784 he published "Sixteen Discourses," which had been delivered extempore to plain and illiterate audiences in the vicinity of Cambridge. These being very liberal on doctrinal points, excited much apprehension among his orthodox friends; and his tendency to Unitarian principles soon became known, although he still continued his ministerial labours at Cambridge. During the latter years of his life the intense application he bestowed on his history of baptism undermined his health, and it was hoped by his family that a journey to Birmingham, and an interview with Dr Priestley, might benefit him. He accordingly arrived in that town, and ventured to preach twice on the same Sunday. The following Tuesday he spent a cheerful evening with some friends, but died, as is supposed, soon after he retired to rest, on the 8th of June, 1790, in the fifty-fifth year of his age. This able reasoner and eminent controversialist died before he completed the work to which his labour had for several years been confined. One part of it however was published in 1790, under the title of "The History of Baptism," 4to. This was to be followed by a "History of the Baptists;" and what he had prepared with that view, with the exception of some trifling omissions, was published in 1792, under the title of "Ecclesiastical Researches." The ability displayed in both these works is generally admitted, but of course with exceptions and qualification, according to the various creeds of those who pronounce judgment. A detail of the subjects of some of his most admired sermons, with the titles of several minor works, will be found in the first of our authorities.—*Dyer's Life of Robinson. Rees's Cyclop.*

ROBINSON (THOMAS) an eminent divine, was born at Wakefield, in Yorkshire, in 1749. After receiving the rudiments of a classical education at the foundation school there, he removed to Trinity college, Cambridge, and obtained a fellowship of that society in 1772. He was the author of several devotional works, the principal of which are his "Christian System unfolded," 8vo, 3 vols.; and "Scripture Characters," 8vo, 4 vols. He also published some sermons, &c. and died in 1813 at Leicester, in which town he held the living of St Mary's for thirty-five years.—*Chalmers's Biog. Dict.*

ROBINSON (JOHN) an eminent Scottish mathematician and natural philosopher, born at Bognhall, in Stirlingshire, in 1739. He studied at Glasgow, where he applied himself particularly to algebra and geometry. After

being disappointed of the office of assistant to Dr Dick, the professor of natural philosophy, he went to sea as tutor to the eldest son of admiral Knowles, who was a lieutenant in the navy, and Mr Robison was at his own request rated as a midshipman. He afterwards sailed to Quebec; and while in the river St Lawrence, he observed the connexion between the aurora borealis and the direction of the magnetic needle. In 1762 he went to Jamaica, to ascertain the accuracy of Harrison's time-keeper. On his return he resumed his studies at Glasgow, and his pupil having died, he undertook to direct the studies of admiral Knowles's younger son. In 1767 he succeeded Dr Black as professor of chemistry, and in 1770 he went with his patron, sir C. Knowles, to St Petersburg, where he was appointed inspector-general of the corps of marine cadets. He held that post four years, and then accepted an invitation to become professor of natural philosophy at Edinburgh. On the institution of the Royal Society in that city in 1783, he was chosen secretary, and he furnished many contributions to the Transactions of that association. He also wrote many articles on natural philosophy for the *Encyclopædia Britannica*. In 1798 he published a work, entitled "Proofs of a Conspiracy against the Religion and Governments of Europe," 8vo, in which he denounced the continental freemasons as revolutionary conspirators. The book attracted much temporary notice, but is now fallen into deserved oblivion. He published the "Chemical Lectures" of Dr Black, with valuable notes, in two volumes, quarto; and "Elements of Mechanical Philosophy," 8vo. His death took place in 1805.—*Philos. Mag. Biog. Univ.*

ROBORTELLO (FRANCESCO) a philological writer, born at Udina, in Italy, in 1516. He studied at Bologna, and about 1538 he became professor of the belles lettres at Lucca, whence he removed to Pisa in 1543. The senate of Venice, in 1549, invited him to succeed the celebrated Baptist Egnatius, whose great age prevented him from continuing his lectures. In 1553 he became professor of Greek and Latin literature at Padua, whence he went to Bologna in 1557, but returning to Padua in 1560, he died there March 18, 1567. Robortello seems to have been of a very contentious temper, as in most of the situations he held he was involved in disputes with his learned contemporaries, and his writings are replete with invective against them. He edited the poetics of Aristotle, the tragedies of Æschylus, the treatise of Longinus on the Sublime, and other works of ancient writers; and composed many original essays and treatises, of which a catalogue is given by Teissier.—*Tiraboschi. Biog. Univ. Teissier. Eloges des Hommes Savans.*

ROCABERTI (JOHN THOMAS de) a Spanish prelate, was born of a noble family at Peselada, on the frontiers of Catalonia, in 1624. In 1666 he was made provincial of Arragon; in 1670, general of the order of St Dominic, archbishop of Valencia, and finally,

in 1695, inquisitor-general of Spain. He was twice appointed by the king viceroy of Valencia. He was very zealous in his devotion to the church of Rome, in defence of the claims of which, he wrote a treatise "De Romani Pontificis Auctoritate," 3 vols. folio, 1693. He also procured all the treatises written in defence of the pope's authority, and caused them to be printed in a uniform collection, entitled "Bibliotheca maxima Pontificia," &c. 21 vols. folio. He also wrote some devotional pieces. His death took place in 1699.—*Moreri. Nouv. Dict. Hist.*

ROCCA (ANGELUS) a learned Italian, was born at Rocca Contrata, in the marche of Ancona, in 1545. He took the habit among the hermits of St Augustine, at Camerino, and studied at Rome, Venice, Perugia, and Padua, where he took the degree of DD. In 1579 he was invited to Rome by Firizani, the vicar-general of the Augustines, to be his secretary; and Sixtus V placed him in the Vatican, and made him superintendent of the editions of the Bible, the Councils, and the Fathers, which appeared during his pontificate: in 1595 Clement VIII made him apostolical scrierian and titular bishop of Tagasté, in Numidia. He died in 1620. He collected an excellent library, called after him the Angelical library, which he left to the Augustinian monastery at Rome, on condition that it should be open to the public. Rocca displayed his learning and industry in several works on divinity, morals, and history, the principal of which are "Bibliotheca Theologica et Scripturalis;" "Notæ in Novum Testamentum;" "De Patientia;" "De Cometis;" "Observationes in VI Libros Elegantiarum Laur. Vallæ;" "Observationes de Lingua Latina," collected in two volumes folio, 1719. A curious collection was made from his MSS. entitled "Thesaurus Pontificiarum Antiquitatum, necnon Rituum ac Cæremoniarum," 2 vols. folio.—*Landi. Moreri. Nouv. Dict. Hist.*

ROCHAMBEAU (JEAN BAPTISTE DONATIEN DE VIMEUR, comte de) marshal of France, was born at Vendome, July 1, 1725. He entered into the army at the age of sixteen, and served in Germany under marshal Broglie. In 1746 he became aide-de-camp to Louis Philip, duke of Orleans; and afterwards obtaining the command of the regiment of La Marche, he distinguished himself at the battle of Lafeldt, where he was wounded. He obtained fresh laurels at Creveldt, Minden, Corbach, and Clostercamp. Having been made lieutenant-general, he was in 1780 sent with an army to the assistance of the United States of America, and they rewarded his services by a present of two cannons taken from lord Cornwallis. After the revolution, Rochambeau was raised to the rank of a marshal by Louis XVI, and he was appointed to the command of the army of the North. He was soon superseded by more active officers, and being calumniated by the popular journalists, he addressed to the legislative assembly a vindication of his conduct. A decree of approbation was consequently passed in May, 1792,

and he retired to his estate near Vendôme, with a determination to interfere no more with public affairs. He was subsequently arrested, and narrowly escaped suffering death under the tyranny of Robespierre. In 1803 he was presented to Buonaparte, who, in the year following, gave him a pension, and the cross of grand officer of the legion of honour. His death took place in 1807. He wrote, in the latter part of his life, "Memoirs," published in 1809. 8vo.—ROCHAMBEAU (DONATIEN JOSEPH MARIE DE VIMEUR, viscount de) son of the former, entered into the army, and served against the English in the West Indies in 1793 and 1794. He was afterwards employed in Italy, and in 1802 he went to St Domingo with general Leclerc, whom he succeeded. He disgraced himself by his cruelties to the Negroes; and being taken prisoner by the English, he did not return to France till 1811. He was killed at the battle of Leipsic in 1813. —*Biog. Nouv. des Contemp. Biog. Univ.*

ROCHE (SOPHIA de la) a German romance writer, was the daughter of Dr Guttermann, who was related to the celebrated Wieland, and was born in Suabia, in 1730. She displayed an early disposition for literature; and her father being resident at Augsburg, as dean of the faculty of medicine, Bianconi, physician to the prince-bishop of Augsburg, was so struck with the mental charms of the young lady, that he demanded her in marriage. The union, however, did not take place, in consequence of the lover requiring that the children which might arise from it should be educated in the Catholic religion. She was therefore forced to break off the connexion, in obedience to the commands of her father; and while suffering from the disappointment, she became an inmate with her relative Wieland, then minister of Biberach. He also offered her his hand, but considerations of interest prevented their marriage, and she at length became the wife of a counsellor of Mayence, whose name was Frank, better known by the Gallicized name of La Roche, given him by the minister, count Stadion, under whom he held an office. He made himself known as a man of letters, by a satirical work, entitled "Letters on Monachism, written by a Catholic Parish Priest to a Friend," 1771. He afterwards retired with his wife to Offenbach, where he died in 1789. Madame La Roche long survived her husband, dying at the same place, February 18, 1807. She wrote several works of imagination, in the style of Richardson, the first and best of which, "The History of Lady Sophia Sternheim," was translated into English, by J. Collyer, and published in two volumes, octavo, 1776.—*Biog. Univ.*

ROCHEFORT (WILLIAM de) a French writer, was born in 1730 at Lyons, and had a small employment in the finances at Cette in Languedoc. His inclinations leading him to literature, he went to Paris, and composed three tragedies upon the Greek model, which did not please the public taste, though a comedy which he wrote had more success. His other works are, "A Refutation of the Système de

la Nature;" "A Critical History of the Opinions of the Ancients concerning Happiness;" "A complete Translation of the Plays of Sophocles," much esteemed for its elegance and fidelity, and for the excellent notes attached to it. He also translated Homer's Iliad and Odyssey, the notes to which were most admired. He was a member of the Academy of Inscriptions and Belles Lettres, to which he presented several learned memoirs. He died in 1788, much esteemed for his amiable private character.—*Nouv. Dict. Hist.*

ROCHEFOUCAULT (FRANCIS, duke of) prince of Marsillac, a distinguished wit and nobleman of the reign of Louis XIV, was born in 1613. He distinguished himself as the most brilliant nobleman about the court, and by his share in the good graces of the celebrated duchess of Longueville, was involved in the civil war of the Fronde. He signalized his courage at the battle of St Antoine in Paris, and received a shot which for some time deprived him of sight. At a more advanced period his house was the resort of the best company at Paris, including Boileau, Racine, and the mesdames Sevigné and La Fayette. By the former of these ladies he is spoken of as holding the first rank in "courage, merit, tenderness, and good sense." The letters of madame de Maintenon also speak of him with high but inconsistent praise. Huet describes him as possessing a nervous temperament, which would not allow him to accept a seat in the French academy, owing to his want of courage to make a public speech. The duke de Rochefoucault died with philosophic tranquillity at Paris in 1680, in his sixty-eighth year. This nobleman wrote "Mémoires de la Règne d'Anne d'Autriche," 2 vols. 12mo, 1713, an energetic and faithful representation of that fretful period; but he is chiefly famous for a work, entitled "Réflexions et Maximes," which have been abundantly both praised and criticised. Founded on the principle that self-love is the foundation of all our actions, it is deemed by some writers to be rather a satire upon, than an exposition of, human nature, and unfavourable to virtue, by giving it a principle in common with vice. Possibly a somewhat deeper insight into the sources of human conduct, would show not only that self-love is the mainspring of all action, but that all which is admirable in performance is best promoted and explained by it. As regards the "Maxims" of Rochefoucault, they receive a portion of their peculiar point from the very courtly scene of contemplation, and from the delicacy and finesse with which the veil is penetrated that is spread over the surface of refined society. It is well known that Swift was a decided admirer of Rochefoucault, and his celebrated poem on his own death commences with an avowal of the fact. The misanthropy of that great man renders his suffrage any thing but popular; but possibly, as in the doctrine of the invariable predominance of the stronger motive, that of self-love simply bespeaks a more strict attention to early cultivation and

ROC

discipline, to render it not only compatible with virtue, but strictly and philosophically connected with the highest, the noblest, and, in common language, the most disinterested fulfilment of all our duties.—*Nouv. Dict. Hist. Voltaire, Siècle de Louis XIV.*

ROCHEJAQUELEIN (**HENRY** de la) a French royalist officer, who distinguished himself in the war of La Vendée. He was born in 1773, and was the son of the marquis de la Rochejaquelein, a nobleman of Poitou, who was colonel of a regiment of cavalry. Having been educated at the military school of Sorèze, he entered into the constitutional guard of Louis XVI. His father having become an emigrant, he quitted Paris after the insurrection of the 10th of August, 1792, and retired to Poitou. He resided with his relative, the marquis de Lescure, near Parthenay, in March 1793, when the inhabitants of the surrounding country took arms in favour of the royal cause, and La Rochejaquelein putting himself at their head, joined Bonchamps and d'Elbée. They attacked and defeated the republicans under general Quétineau, at Aubiers. The marquis de Lescure then took the field with the royalists, who were at first very successful; but on the 18th of October they were defeated at Chollet, and their generals, Lescure, Bonchamps, and d'Elbée, were mortally wounded. La Rochejaquelein was chosen commander-in-chief of the Vendean troops, and he was obliged, against his own judgment, to retreat beyond the Loire. He continued, under great disadvantages, for some time to oppose the republicans with various success; but he was at length killed in defending the village of Nouaille, near Chollet, March 4, 1794. In the "Memoires" of the marchioness de la Rochejaquelein, the widow of his younger brother, published at Paris in 1815, this young soldier is represented as resembling a knight of chivalry, or a hero of romance; and after making all the requisite allowances for the partial friendship of his historian, he really appears to have possessed extraordinary military talents.—*Biog. Nouv. des Contemp. Biog. Univ.*

ROCHON (**ALEXIS MARIE** de) a French astronomer and distinguished navigator, born in the castle of Brest, where his father held a military office, in 1741. He was destined for the clerical profession, and was promoted to the priory of St Martin, near Mantes; but an irresistible passion for the sciences prevented him from entering into holy orders. In 1765 he was appointed librarian of the royal marine academy of Brest, and admitted a corresponding member of the Parisian Academy of Sciences, to which he had addressed several memoirs on optics. In 1767 he obtained the title of astronomer of the marine, and in that quality he embarked on board a vessel which conveyed to Morocco the French ambassador, general Breugnot. He made some curious astronomical observations at Cadix and Morocco, and determined the longitudes of various places. In 1768 he was sent by the government on a scientific voyage to the East

ROD

Indies, and elsewhere, of which an account appeared in his "*Voyages à Madagascar, et aux Indes Orientales*," Paris, 1791, 8vo. In 1787 he was nominated astronomical optician of the marine in the room of father Boscovich; and he was sent to London, in 1790, by the minister for foreign affairs, to make inquiries previously to the introduction of a new system of weights and measures in France. On the foundation of the Institute, in 1795, Rochon was one of the first members, and he was employed in a great variety of researches connected with the improvement of the arts and sciences till his death, which happened April 5, 1817. His scientific works, which are very numerous, are specified in the annexed authorities. The most important of his discoveries is his micrometer of rock crystal, which he invented in 1777; and an account of it may be found in a memoir which he read before the Institute, April 1, 1811.—*Biog. Nouv. des Contemp. Biog. Univ.*

RODNEY (**GEORGE BRYDONS**, baron) a gallant and successful naval commander, descended of a good family in Somersetshire, born 1717. His father, Henry Rodney, was a captain in the royal navy, and educated his son for the same profession. He first obtained a ship in 1742, and seven years after was sent out to Newfoundland as governor, which situation he filled upwards of three years. In 1759, having been promoted to the rank of admiral, he took the command of the expedition destined for the bombardment of Havre de Grace, a service which he executed with much success, destroying a great quantity of warlike stores collected there by the French government. Two years after he sailed with a fleet under his command to the West Indies, where he distinguished himself in the reduction of Martinique, and on his return was rewarded with the red ribbon and a baronetcy. A contested election for the borough of Northampton, in 1768, having very much impaired his finances, he found it necessary to retire to the continent, in order to escape the importunities of his creditors. While in this state of self-banishment, the French government, aware of his necessities, and fully appreciating his talents as a naval tactician, made some overtures to him, which, had he accepted them, would have recruited his fortune at the expense of his reputation. These the honest sailor rejected, not only without hesitation, but in such terms as marked his sense of the insult offered him by the proposal; and the fact having transpired through the French ambassador in London, the earl of Sandwich, then at the head of the Admiralty, sent him an invitation to take the command of a squadron destined for the Mediterranean. In 1780, having previously intercepted a valuable Spanish convoy, he fell in with admiral Langara's fleet off cape St Vincent, and after an obstinate engagement, completely defeated it, bringing home five ships of the line as the fruits of his victory. In 1781 he again sailed for the West Indies, and reduced the Dutch island of St Eustathius: but his greatest tri-

R O D

umph was achieved on the 12th of April the following year, when he obtained a decisive victory over the French fleet under De Grasse, capturing five, and sinking one of his largest vessels. A barony, and a pension of two thousand pounds, were the rewards bestowed upon him by his country for services of such importance; and on his decease, in the spring of 1792, a monument was voted to his memory at the national expense, which has since been erected in the north transept of St Paul's cathedral. Lord Rodney is described by some writers on naval affairs as the first who put in practice the system of tactics afterwards adopted with such success by Nelson and other commanders, the principal feature of which consists in breaking through the centre of the enemy's line.—*British Peerage. Naval Chronicle.*

RODOLPH I, emperor of Germany, founder of the imperial house of Austria, was born in 1218, being the eldest son of Albert IV, count of Hapsburgh, and landgrave of Alsace. He was brought up in the court and camp of the emperor Frederick II; and on the death of his father he succeeded to territories of a very moderate extent, which, in the spirit of the times, he sought to augment by military enterprises. In 1245 he married a daughter of the count of Hohenburgh, by which he acquired an accession of territory; and some years after served under Ottocar, king of Bohemia, against the Pagan Prussians. Several years of active warfare ensued, in which he much distinguished himself by his prudence, valour, and the spirit of justice with which he protected the inhabitants of the towns from their baronial oppressors. In 1273, as he was encamped before the walls of Basil, he received the unexpected intelligence that he was elected king of the Romans, and emperor, in preference to Alphonso king of Castile, and Ottocar king of Bohemia. Rodolph, then in his fifty-fifth year, willingly accepted the proffered elevation; and being crowned at Aix-la-Chapelle, immediately strengthened himself by marrying two of his daughters to the count palatine of Bavaria, and the duke of Saxony. He also took measures to ingratiate himself with pope Gregory X, who induced the king of Castile to withdraw his pretensions. The king of Bohemia, however, at that time one of the most powerful princes in Europe, persisted in his opposition, and a war ensued, in which he was defeated, and compelled to sue for peace, and agree to pay homage. Stung by this disgrace, the Bohemian king broke the treaty in 1277, and the following year Ottocar was again defeated and slain. By the treaty with his successor which followed, Rodolph was to hold Moravia for five years, and retain the Austrian provinces which had been previously yielded by Ottocar, and the securing of which to his family was henceforward his primary object. After some abortive attempts to restore the influence of the empire in Tuscany, he contented himself with drawing large sums from Lucca and other cities, for the confirmation and extension of

R O E

their privileges. No foreign foe remaining, he assiduously employed himself to restore peace and order to Germany, and wisely put down the private fortresses, which served as a retreat to banditti, and to ferocious nobles, who were little better than their leaders. For these and other eminent services in the same spirit, he obtained the title of "a living law," and was regarded as a second founder of the German empire. He subsequently engaged in war with the counts of Savoy and of Burgundy, and delivered the young king of Bohemia from the captivity to which he had been subjected by the regent Otho, and married him to one of his daughters. The final object of the emperor was to secure the imperial succession to his son Albert; but the electors, jealous of the rapid rise of the family, could not be made to concur, and Rodolph felt the disappointment severely. He had however laid a permanent foundation for the lasting prosperity of his race, and after a reign of nineteen years, expired in July 1291, in the seventy-third year of his age. There is scarcely an excellency either of body or mind which the biographers of the house of Austria have not attributed to its founder; and he appears to have merited no small portion of their panegyric. Few princes have surpassed him in energy of character and in civil and military talents. He was personally brave, almost to rashness, indefatigable, simple and unaffected in his manners, affable, and magnanimous. In the beginning of his career he seems to have shared in the usual licence of the period in pursuit of aggrandisement; but as an emperor he has been regarded for the most part as equitable and just as he was brave and intelligent.—*Mod. Univ. Hist.*

RODON (DAVID de) or DAVID DERODON, a French divine and philosopher of the seventeenth century. He was a native of Dauphiny, and appears to have been brought up in the Catholic faith, which he afterwards renounced, and became a zealous Protestant. He filled the philosophical chair successively at Die, at Orange, and at Nismes, where he published a tract, entitled "The Tomb of the Mass," in 1632; which so exasperated the Catholics, that they procured his banishment from France, and he died about two years after at Geneva. He was the author of a course of philosophy, of which he published a popular abridgment, entitled "Philosophia Contracta," and other works, besides that above noticed.—*Aikin's G. Biog. Biog. Univ.*

ROE (sir THOMAS) a distinguished traveller and negotiator, was born at Low Layton, in Essex, about the year 1580. He was admitted into Magdalen college, Oxford, in 1593, but quitted it without taking a degree, and after spending some time at one of the inns of court, was made an esquire of the body to queen Elizabeth. In 1604 he was knighted by king James, and soon after appointed to command an expedition sent by prince Henry to make discoveries in America. On his return, by the desire of the East India Company he was sent an ambassador to the

Great Mogul in 1614; at whose court he resided until 1618, and made many curious observations upon the court and people, specimens of which may be found in Purchas's Pilgrim, and in Churchill's Collection of Voyages. On quitting India he visited the court of Shah Abbas, in Persia, with whom he negotiated a treaty for a free trade with that country. On his return home, in 1620, he was elected a Burgess for Cirencester, and the following year was nominated ambassador to the Ottoman Porte, which post he held under five successive sultans, and rendered numerous and important services to the commercial interests of his country. During his embassy, sir Thomas drew up "A true and faithful Relation of what lately happened in Constantinople, concerning the Death of Sultan Osman, and the setting up of his uncle Mustapha," 1622, London, 4to. He also kept minutes of his negotiations, which remained in manuscript until 1740, and then were published, under the title of "The Negotiations of Sir Thomas Roe, in his Embassy to the Ottoman Porte." During his residence in the East he also made a valuable collection of Greek and Oriental MSS. which he presented to the Bodleian library, and was constituted the bearer of the fine Alexandrian MS. of the Greek Bible sent by Cyril, patriarch of Alexandria, as a present to Charles I. In 1629 he was sent ambassador to mediate a peace between the kings of Poland and Sweden; and gained so much credit with Gustavus Adolphus, that he was mainly instrumental to the design formed by that spirited prince in 1630, to head an expedition into Germany, to restore the freedom of the empire. He was subsequently employed in other missions to the German princes, and was present at the congress of Hamburg, and on its removals to Ratisbon and Vienna. In 1640 he was elected representative for the university of Oxford; and in 1641 was sent to the diet at Ratisbon to negotiate for the restoration of the ex-king of Bohemia. On his return the king created him a privy counsellor and chancellor of the order of the garter. He died in 1644, his close of life being much embittered by the national disturbances of the period; and he left behind him the character of an able and upright minister, a true patriot, and an accomplished gentleman. Besides the writings before mentioned, he left in MS. "A compendious Relation of the Proceedings of the Diet held at Ratisbon in 1640 and 1641;" and a "Journal of several Proceedings of the Knights of the Garter."—*Biog. Brit. Athen. Oxon.*

ROEBUCK (JOHN) an eminent physician and natural philosopher, born at Sheffield in Yorkshire, in 1718. He studied at Edinburgh and Leyden, where he was admitted M.D. in 1743. He then engaged in practice at Birmingham, and devoted much of his time to chemical researches, which led to some improvements in various operations. In 1749 he established a manufactory of sulphuric acid, at Preston Pans, in Scotland, in which undertaking he was joined by Mr Garbet The

scheme proved very advantageous, and Dr Roebuck, relinquishing his medical business, devoted himself to the cultivation of the useful arts. In conjunction with his partner, the iron-foundry of Carron was established, and carried on with great success. But the profits of these speculations were sunk in an attempt to work mines of coal and salt at Borrowstonness, on the estate of the duke of Hamilton. This disastrous project swallowed up all the property which Dr Roebuck had acquired by his other establishments; and the last twenty years of his life were passed in a state of indigence, only relieved by a small annuity, granted him by his creditors. He died July 17, 1794. He was a fellow of the Royal Society, to which he communicated some philosophical papers; and he was also the author of two political pamphlets.—*Biog. Nouv. des Contemp. Biog. Univ.*

ROEDERER (JOHN GEORGE) an eminent physician, born at Strasburg, in 1726. He passed through a course of medical studies in the university of his native city, and took the degree of doctor in 1750. He afterwards travelled for improvement in France, England, and Holland; and on his return home, he devoted his attention especially to the obstetrical branch of his profession. In 1754 he became professor of midwifery at Gottingen, and he soon acquired great reputation as a public lecturer. Ill health obliged him to resign his situation, and returning to Strasburg, he died in 1763. Besides his "Elementa Artis Obstetricæ, in Usum Prælectionum Academicarum," 8vo, and other works on the same subject, he was the author of a number of dissertations, which were collected and published under the title of "Opuscula Medica, sparsim prius edita, nunc demum collecta, aucta et recusa," Gotting. 1764, 4to.—*Biog. Univ.*

ROEMER (OLAUS) a Danish astronomer and mathematician, born in 1644. He became a student of the university of Copenhagen in 1662, and making a rapid progress in mathematical knowledge, under Bartholin, he was employed by that professor to arrange the manuscripts of Tycho Brahe. When Picard, from the French Academy of Sciences, visited Sweden, he persuaded Roemer to accompany him back to France in 1672. He was extremely well received, and was engaged to teach mathematics to the dauphin, and admitted into the Academy of Sciences. He remained at Paris ten years, and acquired high reputation by his scientific discoveries, the most important of which was that of the velocity of light, from the observation of the eclipses of Jupiter's satellites. In 1681 Roemer was recalled to Denmark, having been nominated professor of mathematics in the university of Copenhagen, and he was also made royal astronomer. He was likewise employed in the improvement of the coinage, the regulation of weights and measures, and other public undertakings. In 1687 the king sent him to travel in Germany, England, France, and Holland, to collect information relative to arts and manufactures. On his

return he was made a counsellor of the chancellery, and in 1693 assessor of the supreme court of justice. He was appointed by Frederick IV counsellor of state, and first magistrate of Copenhagen. He nevertheless continued his astronomical pursuits, and particularly made observations to determine the parallax of the fixed stars. He was about to publish the result of his researches, when he died of the stone, September 19, 1710. The greater part of his MSS. was destroyed when the observatory of Copenhagen was burnt, October 20, 1728. Some of his communications were published in the *Memoirs of the Parisian Academy of Sciences*; and Horrebow, his disciple and successor, gave an account of his discoveries in a work entitled "Basis Astronomiz," 1735, 4to.—*Hutton's Math. Dict. Biog. Univ.*

ROESEL (AUGUSTIN JOHN) a German painter and naturalist, who was ennobled under the appellation of Von Rosenhof. He was born in 1705, and was instructed in his art by a relation, who was a painter of animals and frescos. Having also learnt the art of engraving, he settled at Nuremberg in 1725. He continued there as long as he lived, with the exception of two years passed at Copenhagen, where he went to execute some paintings for the court. He particularly applied himself to the delineation of insects, and other animals of the lower orders, and published two curious works, one on the natural history of insects, 4 vols. 4to. 1746—61; and the other relating to frogs, in folio. His death took place March 27, 1759.—*Biog. Univ.*

ROGER, or rather RICHARD OF HEXHAM, a monkish historian, was brought up in the priory of Hexham, where he embraced the monastic life, and was elected prior some time before 1138, as he saw the Scottish army march into Yorkshire under David, previously to the battle of the Standard, which was fought in that year. He wrote the history of the campaign, in which, in a very declamatory style, he describes the ravages committed by the Scottish army.—*Tanner. Wharton's Anglia Sacra.*

ROGER OF HOVEDEN. See HOVEDEN.

ROGERS, Mus. Doc. (BENJAMIN) an eminent English composer of the seventeenth century, educated under Dr Giles as a chorister in St George's chapel, Windsor, where he afterwards held the situation of a lay-clerk. Rogers was for some time organist of Christchurch, Dublin, but lost his situation on account of his politics, on the breaking out of the rebellion in 1641. From this period he supported himself by teaching music at Windsor, till the interest of Dr Ingels, chaplain to commissioner Whitelock, procured him a recommendation to the university of Cambridge, where he took his degree as bachelor in music in 1658. Four years after he was re-appointed to his former situation, in the chapel royal of St George at Windsor, with an increase of salary, and was also chosen organist to the neighbouring college of Eton; but he gave up both these appointments in 1669, on ob-

taining one of the same description at Magdalen college, Oxford, on which occasion he took his doctor's degree. From this last station he was expelled by James II in 1685, and owed his support subsequently to a small pension allowed him by the college. His compositions, consisting principally of church music, though few in number, are remarkable for the sweetness of their melody and the correctness of their harmony. Most of them, especially a fine service in the key of D, are to be found in the majority of our cathedrals and collegiate choirs. The precise time of his decease is uncertain, but he is known to have reached a great age in indigence and obscurity.—*Biog. Dict. of Music.*

ROGERS (DANIEL) an English diplomatist of the sixteenth century, a native of Ash-ton, Warwickshire, born 1540. In early life he went into Germany, and was there brought up in the principles of the reformed religion. On the re-establishment of Protestantism in his native country under Elizabeth he returned to England, and was employed by that princess in several negotiations with foreign powers. His writings consist of an "Epistle to George Buchanan;" an "Elegy addressed to William Cecil Lord Burleigh;" a collection of "Odes, Epigrams, and Panegyrics in praise of Bishop Sewell;" and some other poems, all composed in the Latin language. He was a graduate of the university of Oxford, and died in 1590.—*Biog. Brit.*

ROGERS (JOHN) an eminent English divine, who flourished about the middle of the sixteenth century, and was a graduate of the university of Cambridge. Going to Antwerp in the capacity of chaplain to the English factory established in that city, he there associated himself with Tindal and others, at that time engaged in translating the Scriptures into English. He returned to England in the early part of Edward VI's reign, and obtained a stall in St Paul's cathedral, in which situation he eminently distinguished himself by his eloquence and ability. This circumstance rendered him highly obnoxious to the Romish party, who in the following reign marked him out as one of the first objects of their resentment. He was seized and tried for heresy, and refusing to recant his opinions, was condemned to the stake, a punishment which he underwent with great fortitude on the 4th of February 1555, being the protomartyr of the Lutheran church, in the persecutions under Mary.—*Fox's Acts and Mon. Strype.*

ROGERS (JOHN) also a celebrated divine, was born in 1679 in Enslam in Oxfordshire, a parish of which his father was the incumbent; and after receiving the rudiments of a classical education at home, was entered of New college, Oxford, but on taking his bachelor's degree in arts, quitted that society for Corpus Christi, where he obtained a fellowship. Having taken holy orders, he was preferred to the living of Buckland, Berks, but did not reside upon it, settling in the metropolis in 1712, and being elected lecturer to the parishes of Christchurch, Newgate-street, and

St Clement Danes. He was afterwards instituted successively to the rectory of Wrington, Somersetshire, with a stall in Wells cathedral, and the vicarage of St Giles, Cripplegate; to which last benefice he was inducted in 1728, having previously been presented with the honorary degree of doctor in divinity by the university of Oxford, in compliment to his exertions in the memorable Bangorian controversy. Dr Rogers survived this last promotion but a few months, dying in the spring of 1729. His works consist of "A Discourse on the Visible and Invisible Church of Christ," 1719; "Sermons on the Necessity of a Divine Revelation;" "The Civil Establishment of Religion Vindicated," in answer to Collins, all printed in his life-time; after his decease appeared four more volumes of Sermons, and 'A Persuasive to Conformity.' He was nearly connected by marriage with the Coleraine family, and for a short time previously to his death held the appointment of domestic chaplain to the prince of Wales.—*Biog. Brit.*

ROGERS (WOODS) an English naval officer and circumnavigator. He belonged to the royal navy in 1708, when he was invited by the merchants of Bristol to take the command of an expedition to the South Sea. He set sail with two vessels, the Duke and the Duchess, taking out the celebrated Dampier as a pilot. Passing to the south of the Island of Terra del Fuego in January 1709, they entered on the Pacific Ocean, and on the 1st of February arrived at the Isle of Juan Fernandez, where they found Alexander Selkirk, the supposed prototype of Robinson Crusoe. They afterwards captured some Spanish vessels, and having visited the coast of California, they crossed the Pacific, and returned to England in October 1711. Captain Rogers was appointed governor of the Isle of Providence, one of the Bahamas, in 1717; and was employed with a squadron to extirpate the pirates who infested the West Indies. He died in 1732. Though he made no new discoveries, yet his "Voyage round the World," published in 1712, contains some interesting information.—*Biog. Univ.*

ROHAN (HENRY, duke of) was born at the castle of Blein in Brittany, in 1579. At the age of sixteen he distinguished himself at the siege of Amiens, under the eyes of Henry IV, who had a great affection for him. After the death of Henry he was at the head of the Calvinistic party in France, and remained so until the reduction of Rochelle by cardinal de Richelieu, soon after which he was obliged to make terms and quit the kingdom. In the first instance he retired to Venice, which republic nominated him its general-in-chief against the Imperialists; but he was recalled home, and sent ambassador to the Swiss and Grisons, and at the head of the troops of the latter, in 1633, he drove the Spaniards and Germans out of the Valteline. He afterwards defeated the Spaniards on the banks of the lake Como; but the Grisons becoming suspicious of the intentions of the French troops to remain in their country, took up arms, and

obliged the duke to make a separate treaty with them in 1637. Fearful of the resentment of Richelieu, on this account he retired to Geneva, and thence went to join his friend, the duke of Saxe Weimar, with whom he fought against the Imperialists, and received hurts of which he died some weeks after in Switzerland, at the age of fifty-nine. The duke of Rohan was esteemed one of the greatest captains of his times, and possessed all the magnanimity and amenity requisite to render the head of a party popular. He was the author of several works, military and political. These are, "Les Intérêts des Princes;" "Le parfait Capitaine," an abridgment of the Commentaries of Cæsar; "Un Traité de la Corruption de la Milice Ancienne;" "Un Traité du Gouvernement des Treize Cantons;" "Recueil de quelques Discours politiques sur les Affaires de l'Etat;" "Mémoires et Lettres de Henri duc de Rohan, sur la Guerre de la Valteline."—His wife, MARGARET DE BATHUNE, the worthy daughter of the duke of Sully, warmly espoused the interests of her husband; and his brother, BENJAMIN DE ROHAN, lord of Soubise, also took a distinguished part in the Huguenot contest, and finally sought refuge in England, where he died in 1640.—*Moreri. Nouv. Dict. Hist.*

ROHAULT (JAMES) a French mathematician and natural philosopher of some eminence in the seventeenth century. He was the son of a merchant of Amiens, where he was born in 1620. Having gone through his preliminary studies at home, he went to Paris, where he acquired a knowledge of the Cartesian philosophy, and formed an intimacy with Clersellier, editor of the works of Descartes, who gave him his daughter in marriage. Rohault composed a treatise on "Physics or Natural Philosophy," on Cartesian principles, which was long a popular text book among the French professors. An English translation of this work, by Dr John Clarke, was published with notes, correcting the principles of the author according to the Newtonian system. Rohault also published "Elements of the Mathematics," and "Dialogues concerning Philosophy." He died in 1675, and a posthumous publication from his MSS. appeared in 1690, relating to geometry, trigonometry, mechanics, &c.—*Moreri. Aikin's Gen. Biog. Biog. Univ.*

ROLAND DE LA PLATIERE (JEAN MARIE) a French revolutionary statesman, born at Villefranche, near Lyons, in 1732. He obtained a situation under a relation, who was inspector of manufactories at Rouen, and having distinguished himself by his industry and ability, he at length became inspector-general at Amiens, where, in 1770, he married Jeanne Philpon, to whose splendid talents he was indebted for his future distinction. They travelled together in Italy and Switzerland, and in 1784 visited England. Having been removed from Amiens to a similar situation at Lyons, he was there when the Revolution commenced, and it was hailed with enthusiasm by him and Madame Roland as the

ROL

beginning of a golden age. Going to Paris on official business in 1791, he became connected with Brissot and other popular leaders; and in March 1792, through their influence, he was appointed minister of the interior. He was in the course of a few months dismissed with all his colleagues, except Dumouriez, for urging the king to sanction decrees which he disapproved. On the abolition of the monarchy he was restored to his place, which he held till he was involved in the proscription of the Girondists, when he made his escape from Paris, and took refuge at Rouen. On hearing of the condemnation and death of his wife, he left his retreat November 15, 1793; and taking the road to Paris, he sat down on a bank some miles from Rouen, and deliberately put an end to his life with a sword, which he carried in a walking cane. Roland is generally admitted to have been a man of strict integrity and considerable abilities, but he was materially assisted by his wife in the composition of his Letter to the King on his dismissal, and other political writings. Among his own works are the Dictionary of Arts and Manufactures, making part of the *Encyclopédie Méthodique*; and "Lettres écrites de Suisse, d'Italie, de Sicile, et de Malte, en 1776-78," 6 vols. 12mo.—*Dict. des H. M. du 18me S. Biog. Univ.*

ROLAND (MANON JEANNE PHILIPON) wife of the preceding, was born at Paris in 1734, and was the daughter of an engraver and jeweller. From her earliest years she was inspired by a passion for study, and the Lives of Plutarch especially attracted her attention. She had already become learned and accomplished, when at the age of sixteen she lost her mother, by whom she had been tenderly treated. To add to her misfortune, her father contracted habits of dissipation, and in a few years squandered great part of his own and his daughter's property. With what she was able to save she retired into a convent, where she resided till her marriage with M. Roland, who was twenty years her senior. With him she travelled in England, &c. and afterwards settled at Lyons. In 1787 she went to Italy, and passing through Geneva, she was not a little scandalized to observe that the citizens had not erected a statue of their celebrated countryman, J. J. Rousseau, of whom she was a warm admirer. She accompanied her husband to Paris, where she not only shared largely in his political labours, but also contributed much to his elevation to the ministry. Under these circumstances, she necessarily shared in the perils attending such distinction as he enjoyed. On the 7th of December, 1792, she appeared at the bar of the Convention, to defend her conduct against the denunciations of her enemies; when her exculpation was satisfactorily received, and she was admitted to the honours of the session. She a second time presented herself before the National Convention, when her husband was accused, but she could not then obtain a hearing, and was herself arrested and shut up in the prison of the abbey.

ROL

She was, however, liberated from this confinement, but soon after again arrested, and prosecuted before the revolutionary tribunal; and being condemned to death as a conspirator against the unity and indivisibility of the republic, she was guillotined November 1, 1793. Her writings consist of *Essays, Travels in England and Switzerland*, and an historical apology for her conduct, which she composed in prison, and which was published under the title of "*Appel à l'Impartiale Postérité*," 8vo. This work, composed under such appalling circumstances, exhibits much energy and vivacity; and with an occasional exhibition of personal vanity and carelessness of style, presents many well-drawn portraits of the leading characters of the period. Her works have been collected in 3 vols. 8vo.—*Aikin's G. Biog.*

ROLANDINO, an early Italian historian, was born in 1200, at Padua, and studied at Bologna. His father, who was a notary, had been in the habit of keeping a chronicle of memorable events as they occurred, which he put into his son's hands, charging him to continue it, which he did to twelve books, in Latin, which in 1262 were read before the university of Padua and solemnly approved. Though not free from the barbarisms of the time, his narrative is clear and well arranged, and this history is considered the most faithful record of that time. Vossius speaks highly of Rolandino as possessing much perspicuity, order, and judgment. His history was reprinted by Muratori, in the seventh volume of his Italian historians.—*Vossii Hist. Lat. Tiraboschi. Mereri.*

ROLEWINCK (WERNER) a chronicler of the fifteenth century, who was born at Laer in the bishopric of Munster in Westphalia, whence he is sometimes called Werner de Laer. In 1447 he entered into a Carthusian monastery at Cologne, and after having acquired great reputation by his writings, he died in 1502, aged seventy-seven. He wrote a great number of theological works, besides a treatise on universal history, entitled "*Fasciculus Temporum*," Colon. 1474. folio, frequently reprinted.—*Trithemius. Biog. Univ.*

ROLFINCK (GUERNER) a physician, who was a native of Hamburg, and became professor at Jena, where he died in 1673. He travelled in various parts of Europe, and was well acquainted with the Oriental languages. Being invited to Jena, he occupied the first chemical professorship founded in Germany; and he procured the establishment of an anatomical theatre and a botanic garden, and delivered lectures on botany, in 1631. He was the author of "*De Vegetabilibus Plantis, Suffructibus et Arboribus in genere, lib. ii.*" 1670, 4to; and he also wrote on chemistry and anatomy, and in the latter science he is said to have made some discoveries.—*Biog. Univ.*

ROLIE (HENRY) an eminent lawyer and judge, was the second son of Robert Rolle, esq. of Heanton, Devonshire, where he was born in 1589. He received his academical education at Exeter college, Oxford, and was

subsequently admitted a student of the Inner Temple. When called to the bar, he became a lawyer of leading reputation in the court of king's bench, and was chosen a member for Callington in Cornwall. On the accession of Charles I, in 1640, he was made sergeant-at-law; and on the breaking out of hostilities, he took the covenant. In 1645 he was made one of the judges, and in 1648 was promoted to be lord chief-justice of the king's bench, in which office his integrity was acknowledged even by the opposing party. He resigned this office some time before his death, which took place in 1656. He wrote "Reports of sir Henry Rolle," and other learned works, in 2 vols. folio, French; and "An Abridgment of Cases and Resolutions of the Law," also in French, which was published by sir Matthew Hale, and is highly esteemed.—*Bridgman's Legal Bibliog.*

ROLLE (MICHAEL) an eminent French mathematician, was born in 1652, at Ambert in Auvergne. He came to Paris, where he pursued the occupation of a writing-master, but being noticed by the minister Colbert, was enabled to give himself up entirely to the study of algebra and the mathematics. His conduct in life gained him much esteem; in 1685 he was chosen member of the ancient Academy of Sciences, and in 1699 second geometrical pensionary, which office he enjoyed until his death in 1719. The principal works of Rolle consist of "A Treatise on Algebra," 4to, 1690; "A Demonstration of a Method for the Resolution of Equations of all Degrees;" and "A Method of Resolving Indeterminate Quantities in Algebra," all of which are much esteemed. He was also author of a great many curious pieces, inserted in the memoirs of the Academy of Sciences.—*Hutton's Math. Dict.*

ROLLI (PAUL ANTONIO) a learned Italian, was born at Rome in 1687, and was a pupil of the celebrated Gravina. He came to England, and was introduced by lord Bolingbroke to the female branches of the royal family as their master in the Tuscan language. In 1729 he was elected a fellow of the Royal Society. He returned to Italy in 1747, where he died in 1767. Rolli was considered one of the best Italian poets of his day, his principal works, consisting of odes, elegies, songs, &c. were published in London in 1735, 8vo. A collection of his epigrams was printed at Florence. He translated into Italian Milton's *Paradise Lost*, and *Anacreon*. He also edited the *Satires of Ariosto*, the burlesque works of *Berni*, *Varchi*, &c. 2 vols. 8vo; the *Decameron*, and the *Lucretius of Marchetti*.—*Encyc. Brit. Dict. Hist. Burney's Hist. of Mus.*

ROLLIN (CHARLES) an eloquent writer and professor, was born at Paris in 1661. His father was a cutler, and intended him for the same business; but having obtained the notice of a learned Benedictine, who procured him an exhibition in the college of Du Plessis, he was suffered to pursue the natural bent of his inclination for learning. He went through a course of academical study with great ap-

plause, and having also taken a course of theology at the Sorbonne, received the tonsure. He became assistant professor to his master, professor Hersant, in 1683; and in 1687 succeeded him. In 1687 he obtained the chair of eloquence in the Royal College, of which he became rector in 1694, and held that post for two years, during which time he reformed the academical course in many striking particulars, and revived the study of the Greek language. In 1698 he was chosen coadjutor of the college of Beauvais, which was also much benefited by his attention. In 1720 he was again chosen rector of the university of Paris; but in consequence of his connexion with the Jansenists, was displaced by a lettre de cachet, on which he proceeded to occupy himself in the composition of the various works which have rendered his name so celebrated. The first of his productions, "De la Manière d'Etudier et d'Enseigner les Belles Lettres," appeared in 1726; and, encouraged by its great success, he composed his popular "Histoire Ancienne," which he published in 13 vols. 8vo, between 1730 and 1738. While the last volumes of this work were printing, he commenced his "Roman History," which he lived long enough to carry down to the war against the Cimbri. The remainder, to the battle of Actium, the extent of the original plan, was completed by Crevier, the whole amounting to 16 vols. 12mo. This respectable and eloquent writer died September 14, 1741, at the age of eighty. All the works of Rollin are commendable for eloquence and purity of sentiment, although often too diffuse and prolix in the way of reflection. As a writer of history, he is also eloquent and ingenious, but gives too much credit to the exaggerations and puerilities of the ancient historians, and exhibits a great want of philosophy and critical sagacity. His own piety, indeed, was tinged by superstition and credulity, being a firm believer in the miracles of the Jansenist, abbé Paris, at whose tomb he was accustomed to pray. Until lately, the "Ancient History" of Rollin has been used in the education of a great part of the youth of Europe.—*Biog. Univ.*

ROLLOCH (ROBERT) a learned Scotch divine, was born near Sirling in 1555. He was educated at St Andrew's, where he became reader in philosophy, and in 1582 he was appointed the first principal of the new university of Edinburgh, and professor of divinity. In 1596 he was nominated one of the commissioners for the visitation of colleges; and in 1597 moderator of the general assembly. He died in 1598, in his forty-third year. He was the author of several theological works, which are much esteemed by the church to which he belonged, consisting of "Sermons on the Epistles;" "Commentaries on the Scriptures;" "Tractatus de Providentia;" "Tractatus de Excommunicatione," &c.—*Mackenzie's Scot. Writers.*

ROLT (RICHARD) the compiler of several useful publications for the booksellers, by which he is principally known. He was a native of Shrewsbury, born 1724 and held an

inferior office in the customs, of which he was afterwards deprived on joining the rebel army under the young Pretender. It was to his pen that he subsequently owed his support, until his death, which took place in 1770. Among his writings are, "A Dictionary of Trade and Commerce," folio; "A History of England," 4 vols.; "Northall's Travels in Italy;" "A History of the War which terminated in 1748," 4 vols.; "Lives of the Reformers," folio; and "Biographical Memoirs of John Earl of Craufurd," 8vo.—*Europ. Mag.* 1803.

ROMAINE (WILLIAM) a popular Calvinistic divine of the last century, descended of a French family settled at Hartlepool, in the palatinate of Durham, where he was born in 1714. He became successively a member of Hertford college and Christchurch, Oxford, where he graduated and took holy orders. His strong attachment to the peculiar opinions of the reformer of Geneva, made his discourses as unpopular at the university as they were afterwards the contrary in the metropolis, to which he removed in 1749, on obtaining the lectureships of St Dunstan's in the West and St Botolph's, Bishopsgate. The year following he became one of the morning preachers at St George's, Hanover-square, and obtained from the mercers' company the appointment of professor of astronomy on sir Thomas Gresham's foundation. This latter situation, however, he soon resigned, and in 1764 was elected by the parishioners, in whom the patronage of St Anne's Blackfriars is vested, to the rectory of that parish; which he enjoyed till his decease, attracting numerous congregations by his eloquent and enthusiastic manner of preaching, and occasionally engaging in itinerant labours of the same description, which placed him in the foremost rank of Calvinistic methodists. His zeal, indeed, was sometimes indulged at the expense of his candour; and in some particulars he has been accused of very unwarrantable alterations introduced into his edition of Calasio's Concordance (published 1749, in four folio volumes), for the purpose of serving the Hutchinsonian interpretation of particular passages in the Bible. His other works consist of eight volumes of sermons, and other religious tracts, one of which, on the Divine Legation of the Jewish Lawgiver, drew a very warm reply from bishop Warburton, whose opinions he had very unceremoniously attacked in it. He obtained such popularity by his opposition to the bill for the naturalization of the Jews, that his publications on that subject were printed by the corporation of London. Mr Romaine died at the rectory-house of St Anne's Blackfriars, July 26, 1795.—*Life by Cadogan.*

ROMANO (JULIO). See JULIO ROMANO.

ROMANZOFF (PETER ALEXANDROWITZ, count) a Russian general and field-marshal, born about 1730. He was descended from an illustrious family, and having entered into the army when very young, his courage and abilities soon procured him promotion. He commanded at the taking of Colberg in 1761; and in the following year the death of Peter III

prevented the invasion of Holstein, which he was about to undertake at the head of 40,000 men. Catherine II made peace with the Danes; and in 1769 she employed Romanzoff against the Turks. He succeeded prince A. Galatzin, as commander-in-chief, in 1770, and obtained many advantages over the enemy in that and the following years previously to the treaty into which he forced the grand vizir to enter in his camp at Kainardgi, in July 1774. The empress magnificently rewarded her successful general, who soon after set out for his government of the Ukraine. He was recalled to attend the grand duke Paul to Berlin, on his marriage with the princess of Wurtemberg, when he was treated with great distinction by the king of Prussia, Frederick II. Romanzoff served against the Turks in the war which commenced in 1787; but being disgusted with the conduct of prince Potemkin, who had the chief command, he retired to his estate in the Ukraine in the beginning of the year 1789, and there he passed the latter part of his life. He died in December 1796. Posthumous honours were paid to him by Paul I, and his successor Alexander, who erected a statue of the marshal, with the inscription, "To the Victories of Romanzoff."—*Biog. Univ.*

ROME DE LISLE (JOHN BAPTIST LOUIS) a distinguished writer on mineralogy, born at Grai, in the department of Upper Saone, in 1736. After having studied at Paris, he went to the East Indies, as secretary to a company of artillery and engineers; and being taken prisoner by the English at Pondicherry, he visited China, and returned to France in 1764. Assisted by the counsels of M. Sage, he devoted himself to the cultivation of natural history, and especially of mineralogy; and he became domesticated with M. Ennery, a rich amateur at Paris, who possessed a valuable cabinet of medals. After the death of that gentleman he subsisted on a small pension from the king, which he obtained in 1785, and which was augmented by Louis XVI a short time before the decease of Romé de Lisle, which occurred March 7, 1790. His principal works are, "Cristallographie, ou Description des Formes propres à tous les Corps de Règne Minérale dans l'Etat de Combinaison Saline, Pierreuse, ou Métallique," 1783, 4 vols. 8vo; "Des Caractères extérieurs des Minéraux," 1785, a supplement to the foregoing treatise; and "Métrologie, ou Tables pour servir à l'Intelligence des Poids et Mesures des Anciens, et principalement à déterminer la Valeur des Monnaies Grecques et Romaines," 1789, 4to.—*Biog. Univ.*

ROMILLY (JOHN) an eminent horologist, born at Geneva in 1714. To a practical knowledge of his art, he joined an intimate acquaintance with its theory, which he developed in a number of articles in the French Encyclopédie. In 1755 he presented to the Academy of Sciences at Paris a watch, which required winding up but once in eight days, and he afterwards constructed one which kept going a year. In conjunction with his son-in-law, Corancez, he set up, in 1777, the

"*Journal de Paris*," in which he published meteorological observations and scientific essays. He died suddenly, February 16, 1796.—ROMILLY (JOHN EDWARD) only son of the preceding, was born in 1739, and adopting the ecclesiastical profession, he was ordained in 1763, and three years after was chosen pastor of a French church in London. A delicate state of health induced him to return to Geneva, where he was appointed minister of the small parish of Sacconai, and he died there, after ten years' illness, in October 1799. He wrote the articles *Vertu* and *Tolerance* in the "*Dictionnaire Encyclopédique*;" and furnished contributions to the "*Mémoires de la Littérature*" of Palissot. He acquired distinction as a preacher, and two volumes of his "*Sermons*" appeared after his death.—*Biog. Univ.*

ROMILLY (sir SAMUEL) an eminent lawyer, was the son of a jeweller, of French extraction, who carried on business in Frith-street, Soho; where he was born March 1, 1757. He received a private education, and in the first instance was placed in the office of a solicitor, which he quitted to study for the bar, to which he was called in 1783. For some years his practice was chiefly confined to draughts in equity, but he gradually rose to distinction in the court of chancery, in which he ultimately took the lead, being equally distinguished by his profound legal information, and logical and forcible flow of eloquence as a pleader. His general politics agreeing with those of the whigs, during the short administration of Mr Fox and lord Grenville, he was appointed solicitor-general, and knighted. When his party went out of office he also retired, but remained in parliament, where he became highly distinguished by his talent in debate, and by the argumentative skill and eloquence with which he pleaded the necessity of a revision of the criminal code, with a view to the limitation of capital punishment, and a more appropriate regulation of the scale of penalties. On this subject he also composed a very able pamphlet, and to his exertion in this direction may be traced the final determination of the executive to the reforms and condensation of the various acts in regard to crime, which have since taken place under the superintendence of Mr Peel. Sir Samuel Romilly also published an energetic remonstrance against the creation of the office of vice-chancellor; and was in the height of popularity and reputation, when a nervous disorder, produced by grief at the death of his lady, to whom he was devotedly attached, deprived him of reason, and in a fit of temporary frenzy he terminated his useful and philanthropic existence, November 2, 1818, to the great regret of the intelligent and humane of every party.—*Ann. Biog.*

ROMNEY (GEORGE) a painter, was born at Dalton in Lancashire, in 1734. After some attempts by his father to settle him in trade, he consented to let him become a painter, and placed him with an artist named Steele. In 1762 he came to London, where he met with

great encouragement; and in 1765 he gained a prize from the Society for the Encouragement of Arts and Sciences, for an historical picture of the "Death of King Edmund." 1773 he went to Italy, where he staid years; and on his return to England he enjoyed the most uninterrupted success in profession, in one year painting portrait the value of 3,635*l*. He also gave some specimens of his talents in history, in the illustrations of Boydell's *Shakspeare*. Rom died in 1802. In the composition of figures and the arrangement of the drapery Romney displayed his study of the antique. His style of colouring is broad and simple, and in his flesh he was very successful; he is not always happy in blending his shades particularly in his back-grounds.—*Life Hayley. Pilkington by Fuseli.*

RONDELET (WILLIAM) an eminent French physician and naturalist, born at Montpellier in 1507. He studied at his native place, and then at Paris, after which he came a schoolmaster at Pertuis, in Provence. At length he obtained the chair of medicine and ultimately the chancellorship of the university of Montpellier. He contributed, by his influence, to the establishment of an anatomical theatre in the seminary over which he presided; and he otherwise endeavoured to promote the improvement of anatomy; but he is principally known as a writer on ichthyology. In the prosecution of his research into the natural history of fishes, he travelled in France and Flanders; and he died in 1566 on his return from a journey to Toulouse. He was the author of "*Libri de Piscibus marinis quibus veræ Piscium Effigies exprimentur* Lugdun. 1554, folio; and "*Universæ Aquatiliæ Historiæ, cum veris ipsorum Imaginibus*," 1554-55, 2 vols. folio. Both the works have wood-cuts; and the latter was republished in French, in 1558. Rondelet also wrote on medicine.—*Niceron. Teissier, Elog. des H. S. Biog. Univ.*

RONSARD (PIERRE) an early French poet, who contributed considerably to the improvement of the language and literature of his native country. He was born of a noble family of Vendôme, in 1524. In his youth he was page to the duke of Orleans, and having finished his education, he went to Scotland, and resided some time at the court of James V. On his return from his travels, he was employed in a diplomatic capacity in Germany. He afterwards applied himself for several years to the cultivation of his talents for poetry, under the direction of the celebrated Dorat. Becoming a candidate for the poetical prize at the Floral games, at Toulouse, he triumphed over his competitors; when, instead of a silver eglantine, which was the usual object of contest, the parliament bestowed on Ronsard a silver statue of Minerva, which he presented to Henry II. He was greatly esteemed by that prince, and also by his successors Francis II and Charles IX, the latter of whom he attended to Bayonne, when he went there to receive his sister, the queen of Spain. He

distinguished himself in the wars against the Huguenot insurgents; and as the reward of his courage or his talents, he obtained the abbey of Bellocane. He was also prior of the monastery of St Cosme, near Tours, where he died December 27, 1585. His writings consist of sonnets, madrigals, eclogues, lyric pieces, elegies, and satires; besides an epic poem, entitled "La Franciade," which is said to be the worst of his productions, and his hymns and odes are reckoned the best.—*Tessier, Eloges des H. S. Bug. Univ.*

ROOKE (sir GEORGE) a gallant and successful English admiral, descended of an ancient family of the same name, in the county of Kent, where he was born in 1650. Although originally intended by his friends for one of the liberal professions, his strong predilection for a seafaring life induced them to yield to his entreaties, and to permit him to enter the royal navy at an early age, in which he rose by rapid but regular gradation to the highest situations. His conduct in a variety of naval expeditions under king William and queen Anne placed his name in the foremost rank of the defenders of his country; especially the gallantry which he displayed in the destruction of the French and Spanish fleets in Vigo bay, 1702, and the capture of that highly important fortress, Gibraltar, in 1704, a place then deemed impregnable, and which has since, in the hands of the English, defied all efforts made to reduce it. In the intervals afforded him from active service abroad, sir George occupied a seat during several successive parliaments for the borough of Portsmouth, as well as another at the council-board of the lord high admiral, prince George of Denmark. The independent spirit, however, of the honest sailor, rendered him less successful in his civil than in his martial career; and his votes on several occasions, particularly one in favour of the appointment of Mr Harley to the speakership of the house of Commons in 1701, obscured all his merits in the eyes of the court party, and he was repeatedly attacked with much acrimony, the value of his services depreciated, and his good fortune ascribed to accident. Party spirit prevailed, and the gallant officer at length retired in disgust from the service to his family seat in Kent, where he died January 24, 1709; declaring, in allusion to the contracted fortune which he left behind him, that "though small, it was honestly acquired, and had never cost a sailor a tear nor the nation a farthing." A handsome monument is erected to his memory in Canterbury cathedral, the place of his interment.—*Campbell's Lives of the Admirals.*

ROOKE (LAURENCE) an eminent geometer and astronomer of the seventeenth century, born at Deptford in Kent, 1623. From Eton college he removed on a foundation fellowship to King's college, Cambridge, where he graduated, and was afterwards admitted *audem* at Wadham college, in the sister university, in 1650. Two years after he was elected to the astronomical professorship in Gresham college, which he exchanged in 1655

for that of geometry on the same foundation. Mr Rooke was one of the original members of the Royal Society, and published several philosophical treatises "On the Eclipses of the Moon, and of the Satellites of Jupiter;" "Directions for Sailors going to India;" "On Comets," &c. among the Transactions of the Society. His death took place in 1662.—*Ward's Gresham Professors.*

ROOKER (MICHAEL) an ingenious engraver, son to an artist in the same line, and born in 1743. He studied under his father and the celebrated Paul Sandby, who highly esteemed his talents, and from his success in the execution of architectural subjects more especially, used to designate him the Michael Angelo of engraving. Some fine specimens of his art are to be seen in the plates to some of the earlier Oxford almanacs, delineating many of the principal buildings in that university. Mr Rooker died in 1801.—*Strutt.*

ROQUE (ANTHONY de la) chevalier de St Louis, a native of Marseilles, known as a man of letters in the early part of the last century. He entered into the army, and served in the gendarmerie; but having lost a leg at the battle of Malplaquet, he turned his attention to literature, and becoming conductor of the "Mercure de France," he carried it on in conjunction with his brother, the subject of the following article. Anthony de la Roque also wrote "Histoire des Spectacles anciens et modernes;" and "Mémoires pour servir à l'Histoire des Personnes qui se sont distinguées dans les Arts et dans les Métiers." He died at Paris in 1744.—*Camusat, Hist. des Journaux. Biog. Univ.*

ROQUE (JOHN de la) brother and coadjutor of the preceding, was born at Marseilles, and died at Paris in 1745, aged eighty-four. He was acquainted with the Oriental languages, and made several voyages to the Levant, of which he gave an account in his "Voyage de l'Arabie Heureuse," 12mo; "Voyage de la Palestine," 12mo; and "Voyage de Syrie et du Mont Liban," 12mo; which works afford much interesting information.—*Eadem.*

ROQUE (GILES ANDREW de la) a French writer on heraldry, born of a noble family in Normandy, in 1597. He at first adopted the ecclesiastical profession, and took orders as a sub-deacon; but repenting of his engagement, he obtained from Rome a dispensation to enter into wedlock. Having taken a wife, he became again discontented with his situation, and procured a separation by allowing her a pension. He then devoted himself to study, paying particular attention to genealogy; and his acquaintance with the family history of the Norman nobility and gentry was most minute and extensive. On losing his wife, he resumed his clerical station; but, somewhat inconsistently, he continued to take the title of chevalier, *sieur de la Lontière*. He died at Paris, in 1686. Among his principal works are "Histoire généalogique de la Maison d'Harcourt, avec les Preuves," Paris, 1662, 4 vols. folio; "Traité singulier du Blason,"

12mo; "Traité du Ban et Arièreban, de son Origine et de ses Convocations," 1676, 12mo; and "Traité de la Noblesse, et de ses différentes Espèces," 1678, 4to.—*Huet, Orig. de Caen. Biog. Univ.*

ROSA (SALVATOR) a celebrated painter, distinguished likewise as a musician and a poet. He was the son of an architect and surveyor, and was born at the village of Renella, in the kingdom of Naples, in 1615. He was intended for the church; but leaving of his own accord the seminary in which he had been placed for education, at the age of sixteen, he devoted himself to the study of music, and with such success that he became a skilful composer. His eldest sister having married Francesco Francanzani, a painter of considerable talent, Salvator, from frequenting his work-room, acquired a predilection for the art, in which he afterwards excelled. He at first amused himself with copying whatever pleased his fancy in the paintings of his brother-in-law; and his latent genius being thus awakened, his sketches were so much admired that he was easily persuaded to adopt painting as a profession. But his taste was formed more from the study of nature among the wilds of the Appenines than from the lessons of other artists; and he delighted in delineating scenes of gloomy grandeur and terrible magnificence, to which the boldness of his conceptions, and the fidelity of his representations, communicate a peculiar degree of interest. He worked for some time at Naples in obscurity, till one of his pictures being observed by the famous painter Lanfranco, he generously recommended Salvator to notice, and was the means of his procuring effectual patronage and support. He removed to Rome, where he established his reputation, and raised himself to celebrity and independence. He afterwards went to Florence, where he was patronized and employed by the grand duke and other members of the family of Medici. At length returning to Rome, he painted many pictures for the churches in that city, where he died in 1673. His satires and other poetical productions have been often printed under the title of "Rime di Salvatore Rosa, Pittore e Poeta Napolitana."—*Orlandi, Lady Morgan's Life and Times of Rosa.*

ROSALBA. See CARRIERA.

ROSCELLINUS, founder of the scholastic sect of the nominalists, was a native of Brittany, where he flourished towards the end of the eleventh and the commencement of the twelfth century. He distinguished himself by his proficiency in logic and metaphysics, and being presented with a canonry in the diocese of Soissons, he delivered lectures at the request of the chapter, in which, contrary to the principles of Aristotle, he taught that universals subsist, not prior to individual bodies, nor after them, but within them, and that they are mere names or words by which kinds of individuals are expressed. Hence he and his followers obtained the name of nominalists, and their opponents that of realists. By applying this doctrine to the trinity he brought

on himself a suspicion of heresy and of tritheism, and was obliged to retract. Fatigued at length with controversy and persecution, he retired into Aquitaine, where he distinguished himself by his piety and charity. The time of his death is unknown.—*Brucker Mosheim.*

ROSCIUS (QUINTUS) a famous Roman actor, was a native of Narbonnensian Gaul, and was contemporary at Rome with the tragedian Æsopus. Cicero states that he carried his art to perfection, and that he was no less esteemed for his moral conduct and liberality than for his professional talents. His person is said to have been agreeable, but he had a slight obliquity of vision, which however did not prevent him from playing without a mask. He was raised to the senatorial rank, and died at Rome, B.C. 61. He wrote a "Parallel between the theatrical and oratorical Action," which is lost.—*Ciceronis Opera. Pliny, Moreri.*

ROSE (GEORGE) a well-known statesman and political writer, was born at Brechin in Angushire, in 1744. He entered the navy, and became a purser, but through the interest of the earl of Marchmont he was afterwards made keeper of the records in the exchequer. He next superintended the publication of the Domesday Book, and completed the Journals of the Lords. On the return of Mr Pitt to power, Mr Rose was made president of the board of trade, and treasurer of the navy, which situations he lost on the death of that minister, but afterwards he regained them, and held them until his death, which took place at Cuffnells, his seat in Hampshire, in 1818. He published "Observations on the Poor Laws;" "A Pamphlet on Friendly Societies;" "Considerations on the Debt Due by the Civil List;" "Observations on the Historical Work of the late Right Hon. Charles James Fox, &c.;" "A Letter to Lord Melville relative to the Creation of a Naval Arsenal at Northfleet;" "A Report on the Records;" "A Brief Examination into the Increase of the Revenues, Commerce, and Navigation of Great Britain;" "Observations respecting the Public Expenditure, and the Influence of the Crown;" speeches on various occasions, &c.—*Ann. Biog.*

ROSEN DE ROSENSTEIN (NICHOLAS) a Swedish physician, born in West Gothland in 1706. He studied at Lund, and afterwards at Upsal, and then travelled with the young count Posse. In Germany he attended the lectures of Hoffman, and in Holland those of Muschenbroek and Boerhaave; and at the university of Harderwyk he took the degree of M.D. and published an academical thesis. Returning in 1731 to Upsal, where he had been appointed adjunct-professor of medicine, he entered on the duties of his station, in which he attained great eminence. He was at length made physician to the king, assessor of the college of medicine, professor and archiater; and he was ennobled and honoured with the knighthood of the polar star. He contributed greatly to the introduction of innocu-

lation for the small-pox into Sweden, for which he received from the government a gratuity of 100,000 rix-dollars. Rosen died at Upsal in 1773. He published several professional works, the best-known of which is his "Treatise on the Diseases of Children," which has been translated into several languages.—*Biog. Univ.*

ROSENMULLER (JOHN GEORGE) a learned German divine and theological writer, born at Ummerstadt, in the county of Hildburghausen, in 1736. Having finished his studies, he entered on the pastoral office, and in 1773 he became professor of divinity in the university of Erlangen. After remaining in that situation ten years, he removed to Gießen; and in 1785 he obtained the theological chair at Leipsic. His death took place in 1815. The principal works of professor Rosenmüller are, "Emendationes et Supplementa ad Nov. Test." Nuremb. 1789—91, 2 vols. 8vo; "Historia Interpretationes sacr. Libror. in Eccles. Christ." Lips. 1795—1814, 5 vols. 8vo; "Scholia in Novum Testamentum," Nuremb. 1801—8, 5 vols. 8vo, and Sermons or Homilies, 1814, 8vo.—*Month. Mag.*

ROSS (ALEXANDER) a professed author of the seventeenth century, whose numerous works display more industry than talent. He seems, however, to have enjoyed considerable popular reputation as a sort of encyclopædical writer, for to him Butler alludes in the often-quoted couplet, in his *Hudibras* :—

"There was an ancient sage philosopher,
And he had read Alexander Ross over."

Ross was a native of Scotland, and having been episcopally ordained, he became master of a free-school at Southampton, where he died in 1654, aged sixty-three. Among his productions are, "Virgilius Evangelizans," a cento from the *Æneis*, on the Gospel history; "The Muse's Interpreter, a Key to Mythology;" a continuation of sir W. Raleigh's "History of the World;" and "A View of all Religions," which went through many editions.—*Chalmers's Biog. Dict.*

ROSS (DAVID) a theatrical performer, who was contemporary with Garrick. He was born in 1768, and was educated at Westminster school. Going on the stage when young, in opposition to the will of his father, he was disinherited; notwithstanding which the general respectability of his character secured him the countenance of other friends. He made his first appearance at Drury-lane, in 1751, and was well received. His talents were not of the highest order, but having the advantages of a good figure and a classical education, he succeeded in acquiring reputation both as a tragic and a comic actor. His personification of George Barnwell, at Christmas in 1752, is said to have made such an extraordinary impression on one of the spectators, a merchant's clerk, who had been guilty of speculation to supply the demands of a mistress, as not only to produce a reformation in the youth, but also an annual present from him of ten guineas, to his theatrical monitor. Mr Ross left Drury-lane in 1778; and he subsisted in

the latter part of his life on an ill-paid annuity arising from a mortgage on the Edinburgh theatre, of which he had been manager. He died in London, September, 14, 1790.—*Theop. Dict.*

ROSS (JOHN) a learned prelate, was born in Herefordshire, and became fellow of St John's college, Cambridge, where he took his doctor's degree in 1756. He was vicar of Frome in Somersetshire, and in 1778 he was made bishop of Exeter. He wrote a defence of the epistles said to have been written by Cicero to Brutus, and published an edition of the "Epistolæ Familiares," 2 vols. 8vo; also some sermons on different occasions. Dr Ross died at Exeter in 1792.—*Gent. Mag.*

ROSSI (GIAN VITTORIO) LATIN, JANUS NICIUS ERYTHRÆUS a learned Italian, was born at Rome in 1577, and was educated under the Jesuits of the Roman college. He afterwards entered the academy degli Umoristi, of which he was a zealous promoter. He became secretary to cardinal Andrea Petretti, on whose death he retired to a villa on mount Sant' Onofrio, where he died in 1647. He was much esteemed by the learned men of his time, but is now best known by his classical name of Erythræus. He wrote four volumes of epistles to various persons; "Pinacotheca Imaginum illustrium Virorum," or biographical accounts of several of his learned contemporaries; a satire on the corrupt manners of the Romans, entitled "Eudemia, lib. x.;" 8vo; dialogues, &c. &c.—*Tiraboschi.*

ROSTGAARD (FRÉDÉRIK) a learned Dane, born in Zealand, in 1671. From his early years he applied himself to the study of old manuscripts; and after residing some time at the university of Copenhagen, he visited Giessen, Leyden, and Oxford; and from 1695 to 1698 he took up his abode at Paris, where he copied many MSS. in the Royal Library. After a journey to Italy, he returned home in 1699, and was raised to various employments, such as archivist, counsellor of justice, &c. In 1735 he obtained the title of counsellor of conference, having previously had a pension from the king. He died in 1745. He collected a multitude of valuable books and manuscripts, and in 1726 he published, under the title of "Bibliotheca Rostgardiana," a catalogue of his library, which he afterwards sold. He resumed the task of collection, and at his death left his books and MSS. to the university of Copenhagen. His original publications are few and unimportant; but he drew from obscurity and committed to the press many valuable works, among which may be mentioned, "Lex Regia," Copenh. 1709, folio. He left in manuscript a Danish Latin Dictionary; and a "Thesaurus genealogicus Familiarum nobilium Regni Daniæ."—*Biog. Univ.*

ROSWEIDE (HÉRIBERT) a learned jesuit, was born at Utrecht in 1569. He was professor of philosophy and divinity, first at Douay, and afterwards at Antwerp. He died in 1629. He wrote various philosophical and ecclesiastical works, the principal of which are

the following, "An Account of the Hermits of Egypt and Palestine;" "The History of the Belgic Church;" "An Ecclesiastical History from the time of Christ to Pope Urban VIII," 2 vols, folio; "Fasti Sanctorum quorum Vitæ in Belgicis Bibliothecis Manuscriptæ asseruntur," which he intended as a specimen of a larger work, and which was the prelude to the immense collection of "Acta Sanctorum," by Bollandus and others.—*Burman Traject. Erudit. Alegambe. Foppens Bibl. Belg.*

ROTGANS (LUKE) one of the most distinguished of the Dutch poets, was born at Amsterdam in 1645. Having been initiated in classical literature, he entered into the army as an ensign in 1672; but after two years' service, not meeting with promotion, he retired to his country house, between Amsterdam and Utrecht, where he renewed his studies. Subsequent to the peace of Nimeguen, he took a journey to Paris; and on his return home he married Anne Adriana Sallengre, who died in 1689, leaving two daughters. Rotgans spent the rest of his life in retirement in the country, employing himself in poetical composition. He died in 1710. Rotgans was the author of an epic poem, in eight books, the hero of which was William III; besides several pieces of minor importance.—*Biog. Univ.*

ROTHSCHOLZ (FREDERICK) a learned German bookseller, born in Lower Silesia, in 1687. He was from his youth destined for commerce, though his taste prompted him to prefer literature. After attending some courses of lectures at Leipsic and Halle, he engaged in business, and at length settled at Nuremberg. He carried on an extensive correspondence with men of learning, and published a vast number of works, of which he was the author or editor. Among the most important are, "Icones Eruditorum Academiae Altdorfiæ," 1721, folio; "Icones Virorum omnium ordinum Eruditione meritorum," 1725, 1731, folio; "Memoirs for a History of Learned Men," 1725—26, 3 vols. 8vo; and "Bibliotheca Chemica Rothscholziæ," 1727—1733, in five parts. He died in 1736.—*Biog. Univ.*

ROTROU (JOHN de) a French dramatic writer, was born at Dreux, in 1609. He made great improvements in the composition of dramatic pieces, both tragic and comic, whence he is called by Voltaire "the founder of the theatre;" and Peter Corneille used to call him his father. He died in 1650, at Dreux, where he held the office of lieutenant-particular. His chefs-d'œuvre are "Choræus," "Antigone," and "Wenceslaus."—*Moretti. Nouv. Dict. Hist.*

ROUBAUD (PETER JOSEPH ANDREW) a miscellaneous writer, born at Avignon, in 1730. He was from his youth destined for the church, into which he entered more for convenience than from inclination. Going to Paris, his talents and agreeable disposition procured him friends, but unwilling to be dependent on others for his support, he had recourse to his pen. He became connected with the sect of the Economists, of whose plans he was an ardent admirer and panegy-

rist. His first work was an essay on synonyms, which was well received. He then engaged with Camus, in the "Journal du Commerce," from 1759 to 1762, Brussels, 24 vols. 12mo; next with Dupont de Nemours, Quesnay, Mirabeau, and others, in "Journal de l'Agriculture, du Commerce, et des Finances," 1764—1774; and afterwards with Ameilhon, in another journal. He was also the author of "Histoire de l'Asie, de l'Afrique, et de l'Amérique," Paris, 1770—75, 15 vols. 12mo; and "Nouveaux Synonymes Français," 1785, 4 vols. 8vo, of which a new and enlarged edition appeared in 1796. He died at Paris in November 1792. His last work was a defence of the right of the pope to the territory of Avignon, for which he received a present from the papal nuncio.—*Biog. Univ.*

ROUBILLIAC (LOUIS FRANCIS) an eminent sculptor, who was a native of Lyons in France. He settled in England in the reign of George I; and in the absolute dearth of native talent which prevailed at that period, he long stood at the head of his profession. He executed a statue of Handel for Vauxhall-gardens, and another of sir Isaac Newton erected at Trinity college, Cambridge; but he was chiefly employed on sepulchral monuments, among which may be particularized that for John duke of Argyll in Westminster abbey. His statues of George I, and of the duke of Somerset, in the senate-house at Cambridge; and his monuments for the duke and duchess of Montagu, at Boughton in Northamptonshire, also deserve to be noticed with approbation. Lord Chesterfield said of him, "Roubiliac was our only statuary, and that other artists were mere stone-cutters." He had some talent for poetry, and wrote satires in his native language. His death took place January 11, 1762, at his residence in St Martin's-lane, London.—*Walpole's Anec.*

ROUCHER (JOHN ANTHONY) a French poet and man of letters, born at Montpellier in 1745. He studied among the jesuits, who endeavoured to attach him to their society, but in vain. At the age of twenty he went to Paris to continue his studies at the Sorbonne, with a view to the church; but he renounced his hopes of ecclesiastical promotion, to devote himself entirely to literature. He published many poetical compositions in the "Almanach des Muses," from 1772 to 1787; and a poem, entitled "La France et l'Autriche au Temple de l'Hymen," on occasion of the marriage of Louis XVI and Marie Antoinette, procured him the patronage of Turgot, and the office of receiver of gabelles, at Montfort l'Amauri. When the Revolution took place, he opposed the excesses of the more violent politicians; and during the reign of terror he was obliged to conceal himself. He was discovered and arrested; being set free, he was arrested again in October 1793, and after more than seven months' confinement he suffered under the guillotine. His principal production is a poem, entitled "Les Mois," 1779, 2 vols. 4to; and he translated Adam Smith's Wealth of Nations.—*Biog. Univ.*

ROU

ROUELLE (WILLIAM FRANCIS) a celebrated French chemist, born near Caen in 1703. He studied in the university of that city, but he owed the principal part of his scientific acquirements to his own exertions. He went to Paris when young, and entered into the service of a German apothecary, named Spitzley, who had succeeded Lemery. He remained in this situation seven years, during which he devoted his time to researches in chemistry, pharmacy, botany, and natural history. At length he engaged in the profession of pharmacy on his own account, and at the same time gave lectures on chemistry. His reputation soon became extended, and in 1742 he obtained the professorship of chemistry at the royal garden of plants; and two years after he was admitted an adjunct member of the Academy of Sciences. He presented to that learned body a memoir on Neutral Salts, followed in 1745 by another on the Crystallization of Marine Salt. He also wrote on acid salts, on the inflammation of nitric acid and oil of turpentine, &c. He held the office of inspector-general of pharmacy at the Hôtel Dieu; and having resigned his place of demonstrating professor at the Jardin du Roi, in 1768, on account of bad health, he died August 3. 1770.—*Biog. Univ.*

ROUELLE (HILARY MARINUS) usually designated Rouelle the Younger, to distinguish him from his brother, the subject of the last article, was born in 1718. He applied himself to the study of chemistry, and became one of the most industrious and accurate experimental philosophers of his time. He assisted his brother in his lectures, and succeeded him as professor at the royal garden. He distinguished himself by his researches concerning tartaric acid, phosphoric acid, Libavius's spirit, and by his analysis of animal and vegetable substances, published in various periodical works, by means of which he contributed materially to the advancement of science. His death took place at Paris, April 7, 1779.—*Id.*

ROUILLE (PETER JULIAN) a learned Jesuit, who was a native of Tours in France. He studied in a college of that city, and entering into the order of St Ignatius, he was employed in teaching, in various seminaries, classical literature, philosophy, and mathematics. He afterwards assisted father Catrou in his voluminous Roman History, and Brumoy in the History of the Revolutions of Spain; and at length he was appointed principal conductor of the "Journal de Trevoux," which he carried on from December 1733 to February 1737. His death took place in 1740, at the age of fifty-nine. He was the author of "Discours sur l'Excellence et l'Utilité des Mathématiques," 1716.—*Id.*

ROUSSEAU (JOHN BAPTIST) an eminent French lyric poet, born at Paris, April 6, 1670. Though he was the son of a shoemaker he received a good education, and at an early period he displayed a strong taste for poetry. In 1688 he obtained a situation in the service of the French ambassador at Copenhagen; and he subsequently accompanied

ROU

marshal Tallard to England as his secretary. He wrote several pieces for the theatre, on the success of one of which, having, according to the Parisian custom, appeared on the stage to receive the congratulations of the audience, he had the abominable meanness and ingratitude to disown his father, when the old man, rejoicing at his son's triumph, came forward to speak to him before the friends who surrounded him. In 1701 he obtained admission into the Academy of Inscriptions and Belles Lettres; and his lyric compositions procured him high reputation among the French literati; but his turn for satire, and quarrelsome temper, at length involved him in disgrace. Some abusive and indecent verses having been circulated at Paris, which Rousseau was accused of having written, but which he disclaimed, he after a time professed to have discovered the author in the person of his enemy Saurin. To relieve himself from the load of obloquy under which he laboured, he commenced a prosecution of that academician, for composing the defamatory couplets in question, and having failed in substantiating the allegation, he was exiled from France in 1712. He went to Switzerland, and afterwards resided at Vienna, under the patronage of prince Eugene. The latter part of his life was spent in the Netherlands, where he obtained a pension from the duke of Arrenberg, which he resigned on having forfeited the favour of that nobleman. His death took place at Brussels, in 1741. The odes of Rousseau are reckoned superior to those of any other French poet; but he is chiefly distinguished in literary history under the discreditable character of a personal satirist. An edition of his works was published under his own inspection, by Tonson, London, 1723, 2 vols. 4to; and since his death they have been often printed, in various forms.—*Dict. Hist. Biog. Univ.*

ROUSSEAU (JEAN JACQUES) the most eloquent writer and singular character of his age, was born at Geneva in 1712. His father was a watchmaker, and like most of the citizens of Geneva, tinctured with a taste for literature. This taste he communicated to his son, with whom he read romances until he was eight years of age, and then introduced him to Plutarch with such observations as might be expected from a zealous republican. A taste for romantic adventure, and a high admiration of free and patriotic principles, were therefore amalgamated in his mind from his earliest infancy; and in his celebrated "Confessions," he has mentioned many other incidents, which, in his opinion, exerted a lasting influence on his character. His school education was very imperfect, and never enabled him to read Latin with facility; and his picture of himself in childhood, represents him as of a warm and sensual temperament, and replete with mental and corporeal susceptibility. He was first placed with an attorney, who soon discharged him for negligence; and he was then sent to an engraver, from whom

F

he eloped in his sixteenth year, and strolled away to the territory of Savoy. Here he was hospitably entertained by a Savoyard priest, who, with the idea of converting him from the creed of Geneva, sent him to Annecy, to a Madame de Warens, a new convert to the Catholic church, who had left her husband at Lausanne, and employed herself in the pious work of proselytism. A beautiful woman of twenty-eight was well calculated to operate convictions upon a boy of sixteen of the susceptible temperament of Rousseau, whose conversion was completed at Turin, and twenty florins given him in exchange with his new religion. When this money was spent, he entered into the service of a countess de Vercelli, on whose death he was received into that of a nobleman, whose son, a man of letters, took great pains to instruct him. He soon forfeited this protection by misconduct, and after passing some time in a wandering manner, returned to madame de Warens, who contrived to unite devotional feelings with amorous propensities, of which her protégé in his turn became the object. Through the interest of this coarse and sensual woman, he obtained a place as secretary to a commission, appointed by the king of Sardinia for surveying lands. Music, however, which he had already taught, became his passion; and giving up his post, he took up the profession of a music-master at Chambery, where he passed eight years more, very intimately connected with madame de Warens, delicacy or constancy being attended to on neither side. At length a coldness taking place, he was recommended by her to be a tutor in a family at Lyons, which situation he soon forfeited, and went to Paris, where he resided in great obscurity until 1743, when he was appointed secretary to the French ambassador at Venice. As usual he soon quarrelled with his superior, and returned to Paris, where he supported himself by copying music, and also became clerk to a farmer general. In 1749 he was engaged to compose the musical articles in the *Encyclopédie*, and the following year distinguished himself for the first time, under his own name, in the world of letters. The academy of Dijon had proposed for a prize-question, "Whether the re-establishment of the arts and sciences has contributed to purify morals?" Rousseau, who at first intended to espouse the affirmative, was, as it is said, induced by the persuasion of Diderot, to adopt the negative, as more likely to attract notice. Whether this assertion be true or not, he displayed so much ingenuity and eloquence in his discourse on the occasion, that it was crowned by the academy; and read with all the interest inspired by a splendid paradox, and it seems at least to have made a convert of the philosopher himself. In 1752 he wrote a comedy, entitled "Narcisse," and also composed his musical entertainment of "Le Devin du Village," both words and music, which was much admired for its attractive simplicity. In the midst of the applause thus excited the paradoxical author took occasion in his "Lettre

sur la Musique Française," to prove that, from the defects of their language, the French could have no such thing as vocal music. This letter was written with great taste and knowledge of the subject; but the severity with which he treated the national idol, the French opera, drew upon him a torrent of resentment, and in 1754 he returned to Geneva, and giving up the Roman Catholic religion, was restored to his citizenship. This favour he returned by an eloquent dedication to the republic, of his "Discours sur le Cause de l'Inégalité parmi les Hommes," a rhetorical rather than an argumentative prize-dissertation, upon another question, proposed by the academy of Dijon. In 1758 he published his letter to M. D'Alembert, on the design of establishing a theatre at Geneva, which piece contained much forcible and just observation, so far as applied to Geneva. It produced a great sensation, and was replied to by Marmontel and D'Alembert. The dislike of Voltaire for Rousseau is said to have originated in this production. In 1762 he published his famous novel, entitled "Lettres des deux Amants," but more commonly known by the title of "Julie, ou la Nouvelle Héloïse." In warmth of painting and eloquence of sentiment, it has probably no superior; but with occasional deep knowledge of the human heart, it abounds with much inconsistency and improbability. The affectation and bad faith of the preface are very disgusting. He therein observes that a young girl cannot read a single page of it without being undone, and grieves that he did not live in an age when it ought to be thrown into the fire; but "romances are necessary for a corrupt people." His next performance was, "Du Contrat Social," a closely reasoned dissertation on the fundamental principles of civil polity, in which he excludes from the rank of free governments all but pure democracies. The impression made by this work has brought upon Rousseau the imputation of having hastened the French revolution. It was prohibited in France, and even in the republics of Switzerland; and from its appearance may be dated that warfare between the author and the supporters of existing authority, civil and religious, which exposed nearly all the rest of his life to persecution and annoyance. The "Emile, ou de l'Education," of this extraordinary genius was published in 1762, and in a certain sense it may be regarded as his principal work. His fundamental idea on education is, to suffer the young mind to develop itself, attending rather to the prevention of evil, than to direct inculcation, until a foundation is laid for the operation of reason, unbiassed by habit or prejudice. That many of his observations may be applied to great advantage in the business of education, will be admitted by every candid and well-informed reader; but they are alloyed by so much that is absurd, sophisticated, and impracticable, that as a system his views are altogether visionary. The freedom with which all received opinions are treated in this remarkable production, procured him a host of enemies, and the cele-

brated profession of faith, which he puts into the mouth of a Savoyard vicar, was attended with the singular result of exciting the ire of both devotees and philosophers. It was anathematized by the archbishop of Paris, and ordered to be burnt both by the parliament of Paris and the authorities of Geneva. Obligated to flee from France and Switzerland, the author took shelter in the principality of Neuchâtel, where he enjoyed the protection of marshal Keith. He there published his "Letter to the Archbishop of Paris," in answer to his "Mandement;" and "Lettres de la Montagne," a remonstrance against the proceedings of the republic of Geneva, the citizenship of which he renounced. The excitement produced by these works obliged their author to seek another asylum at Strasburgh, where he was kindly received by marshal de Contades. Thence he ventured to proceed to Paris, where he appeared in an American habit, and was introduced to Mr Hume, under whose advice and counsel he sought an asylum in England in 1766. At this period the persecutions which he had undergone, had so agitated his susceptible mind with notions of his own importance, and the consequence attached to his proceedings, that a sort of perversion of temper and intellect was produced, which bordered upon insanity. Such an excuse can alone account for his baseness and ingratitude to Mr Hume, who not only procured a hospitable asylum for him and his gouvernante, but, on condition of secrecy, a pension from the crown. It happened that in the preceding winter Mr Horace Walpole had written a letter in the person of the king of Prussia, in ridicule of Rousseau. This letter, which had been widely circulated, at length appeared from the English press, and the morbid mind of the Genevese philosopher, without reason or common sense, attributed its appearance to Mr Hume, whose friendship he solemnly renounced, and behaved with so much extravagance, that his departure from England very quickly followed, and in 1767 he returned to France, and abode chiefly in the provinces. In this year he published his "Dictionnaire de Musique," a performance of taste and science. In 1769 he married his gouvernante, or mistress, a coarse, illiterate woman, who had produced him five children, all of whom, with most unfeeling dereliction of nature and duty, he consigned to the orphan hospital. During the summer of 1770 he again appeared publicly in Paris; for while always praising solitude, he could never bear to be long out of the general gaze. In 1775 his "Pygmalion" was acted with success at the Comédie Française, and he appears to have passed some of the following years with comparative tranquillity, having consented to renounce all further discussion on the topics which had involved him in so many hostilities. Still, however, suspicious of the machinations of a supposed confederacy, he accepted, in March 1777, the invitation of the marquis de Girardin, to reside with his wife in a small house near the latter's beautiful seat of Ermenonville. In

this retreat he died the following July, of an apoplectic attack, at the age of sixty-six, and was buried by the marquis in the isle of Poplars, in his pleasure grounds, where a monument was erected to his memory, with the inscription "Ici repose l'Homme de la Nature et de la Vérité;" the correctness of which, like that of much other monumental praise, is by no means conspicuous. After the death of Rousseau, appeared his celebrated "Confessions," in six books, in which he has given a minute account of his life until his thirtieth year. This singular piece of autobiography forms in itself a very striking exemplification of the character of the author. With the exception, possibly, of Cardan, no writer ever related circumstances so humiliating and degrading of himself; but while ostensibly executed as a self-imposed task of contrition, it was evidently a tribute to vanity and self-importance. Although abounding with excellent analyses of sentiment and action, it is dangerous, for the manner in which the virtues and vices are constantly confounded, not to mention the disgusting nature of a species of mental exposure, as nauseous as a similar display of bodily infirmities would be, if made with equal minuteness, and as little necessity. A sense of shame has many beautiful uses, and a cynical contempt for it has a very equivocal pretension to the name of philosophy. Another posthumous work, entitled "Les Rêveries du Promeneur solitaire," which gives a view of his thoughts and sentiments at a later period, is also a very characteristic production, and with several other smaller pieces in vindication of himself, may be studied with a view to a due understanding of this moral and literary phenomenon, who after all was possibly moved by two or three very simple springs of action, from first to last, the principal of which was utter and entire self-engrossment. To the list of his writings already enumerated, many more might be added, which equally mark his peculiar warmth and energy of style, and vigour of thinking. Rousseau exercised great influence over the theoretical opinions of the age, at the period of the French Revolution, when his "Social Contract" was a favourite political authority. His reputation has since greatly declined; but while the French language exists, he must always be regarded as one of the greatest authors to be found in it. His works have been published in seventeen volumes quarto, and in numerous editions of a small size, the last and finest of which is that of Didot, 1796—1801, in 25 vols. royal 8mo.—*Rousseau, Confess. Nouv. Dict. Hist. Senebier, Hist. Lit. de Genève.*

ROUSSEAU (SAMUEL) a humble and meritorious, but unfortunate retainer of literature, who was a native of London. He became an apprentice to Mr John Nichols, the printer, in whose office he continued after the expiration of his indentures. While thus situated, he applied himself to the acquisition of Latin, Greek, and the Oriental languages; and his skill in the latter appears in his publication of "Flowers of Persian Literature,"

containing Extracts from the most celebrated Authors in Prose and Verse, with English Translations," 1801, 4to. He also produced a Dictionary of Words used in the East Indies; a Persian and English Vocabulary; and a Persian Grammar. At length he engaged in business on his own account in the neighbourhood of Clerkenwell, where he printed in 1813 an ingenious tract, entitled "Punctuation, or an Attempt to facilitate the Art of Pointing, on the Principles of Grammar and Reason," 12mo. He was unsuccessful as a tradesman, and died in distress, in the year 1820.—*Gent. Mag. Edit.*

ROUSSEL (PETER) an ingenious French physician, who was a native of Ax, in the diocese of Pamiers, and received his education in the university of Montpellier. Having taken the degree of MD. he settled as a physician at Paris, whence he removed to Chateaudun, where he died in 1802. He was the author of an ingenious work, entitled "Système physique et moral de l'Homme et de la Femme," which passed through several editions; and he likewise published "Eloge de M. Borden," and other pieces.—*Dict. Hist. Biog. Univ.*

ROUSSEL (WILLIAM) a learned Benedictine of the congregation of St Maur, born at Conches, in the diocese of Evreux, in Normandy, in 1658. He entered into the order of St Benedict, at the abbey of Notre Dame, at Lire, in 1680; and he soon distinguished himself among his brethren, by his learning and ability. Though qualified to shine as an orator, he preferred the cultivation of literature; and retiring into a monastery at Rheims, he occupied himself in making a French translation of the "Moral and Devotional Letters" of St Jerome, which he published in 1703. This work was followed by the "Critical Letters on the Sacred Scriptures," of the same father, 1707. Roussel afterwards engaged in the arduous task of preparing a history of French literature, on the plan of the Bibliothèque Ecclésiastique of Du Pin; but he did not live to complete it, and the work was afterwards executed by Rivet de la Grange. The death of Roussel took place at the monastery of Argenteuil, October 5, 1717.—*Le Cerf Biblioth. Biog. Univ.*

ROUSSET DE MISSY (JEAN) a native of Laon, in the province of Picardy, born 1686. Of his early life little is known till he appears at Amsterdam in the capacity of historiographer to the prince of Orange, who also admitted him to his confidence. This, however, he at length forfeited, and found it advisable to retire to Brussels. He is known as the author of a "History of the Campaigns of Prince Eugene, the Duke of Marlborough, and the Prince of Orange," in three folio volumes; an "Historical Account of the Grand Revolution in the United Provinces," 4to; "On the Interest of the Powers of Europe," 4to, 2 vols; "An Historical Collection of Public Acts and Treaties," in twenty-one volumes; "A Description of Sardinia;" and a supplement to the "Corps Diplomatique" of Dumont, in five

volumes folio. His death took place in 1762.—*Nouv. Dict. Hist.*

ROUX (AUGUSTIN) a French physician, who was a native of Bordeaux, and died at Paris in 1776. He published several useful works, among which are "Recherches sur le Moyen de refroidir les Liqueurs," 12mo; "Mémoires de Chimie, extraits de ceux d'Upsal," 2 vols. 12mo; "Traité de la Culture et de la Plantation des Arbres à ouvrir," 12mo; and "Encyclopédie Portative," 2 vols. 12mo.—*Biog. Univ.*

ROWE (ELIZABETH) a lady distinguished for her piety and literary and poetical talents, was the daughter of Mr Walter Singer, a dissenting minister of Ilchester, where she was born September 11, 1674. Her father, who possessed a competent estate, encouraged her early display of talent by adequate instruction, and she became accomplished in music and painting at a very tender age, and even attempted versification in her twelfth year. Being very devoutly educated, she accustomed herself to the composition of pious exercises; and by the advice of bishop Ken, who knew and admired her, composed a paraphrase on the 38th chapter of Job. In 1696, being then in her twenty-second year, she published a volume of "Poems on several Occasions, by Philomela." The charms of her person and conversation procured her many admirers, among whom, it is said, was the poet Prior. She did not, however, marry until the age of twenty-six, when she chose Mr Thomas Rowe, the son of a dissenting minister, a gentleman of considerable literary attainments, who was some years her junior, and whom, to her great grief, she lost a few years after marriage, by a consumption, at the early age of twenty-eight. On this event she retired to Frome, where she resided for the remainder of her life, with the exception of occasional visits to the countess of Hertford, and a few other friends of rank and talent, to whom her merit, elegance of manners, and literary accomplishments, rendered her society valuable. It was at Frome that Mrs Rowe produced the greatest part of her works, the most popular of which was her "Friendship in Death, or Twenty Letters from the Dead to the Living," a work of a lively and florid imagination, strongly imbued with devotional feeling and tenderness of heart. This production, which was published in 1728, was followed in 1729 and 1731, by "Letters, moral and entertaining, in Prose and Verse." In 1736 she published "A History of Joseph," a poem, which she had composed in early life. In both poetry and prose she wrote without labour, and with no great attention to correctness; but she is often striking and luxuriant, although not unfrequently too florid for a just taste to approve. In 1737 Dr Isaac Watts revised and published her "Devout Exercises of the Heart;" and in 1739 her "Miscellaneous Works, in Prose and Verse," appeared in 2 vols. 8vo, with an account of her life and writings prefixed. This collection, which has been repeatedly reprinted, contained several

ROW

poems and original translations by her deceased husband. Mrs Rowe died of an apoplectic attack in her sixty-third year, highly esteemed for the amiable and impressive character, which she had borne through life.—*Biog. Brit. Life prefixed to Works.*

ROWE (NICHOLAS) an eminent English dramatist and poet, was born in 1673, at the house of his maternal grandfather at Little Berkford, Bedfordshire. He was the son of John Rowe, esq. serjeant-at-law, a gentleman of an ancient family in Devonshire. After a preliminary education at a private school, he was sent to that of Westminster as king's scholar, where he pursued his classical studies under the celebrated Dr Busby. At the age of sixteen he was entered a student at the Middle Temple, and proceeded so far as to be called to the bar; but on the death of his father he partially gave up the law, and gradually turned his chief attention to poetry and polite literature. At the age of twenty-four he produced his first tragedy of "The Ambitious Step-mother," the success of which induced him to altogether abandon the bar. His "Tamerlane" followed, which was intended as a compliment to king William, who was figured under the conquering Tartar; while Louis XIV, with almost equal want of verisimilitude, ranked as the Turkish Bajazet. It was, however, a successful piece; and indeed, with little nature, contains many elevated and manly sentiments. His next dramatic performance was the "Fair Penitent," remodelled from the Fatal Dowry of Massinger, with some abatement of moral effect and correctness of character, but rendered otherwise interesting by poetry, situation, and sentiment. In 1706 he wrote "The Biter," a comedy; which being altogether a failure, he was prudent enough to keep to his own line, and from that time to 1715 his "Ulysses," "Royal Convert," "Jane Shore," and "Lady Jane Grey," appeared in succession, of which "Jane Shore" still, and probably long will, keep the stage. Being a decided whig, when the duke of Queensbury was made secretary of state, he appointed Mr Rowe his under-secretary. This post he lost by the death of his patron; and on the accession of George I he was made poet-laureat in place of Tate, and also obtained the several posts of one of the land-surveyors of the port of London, clerk of the closet to the prince of Wales, and secretary of presentations under the lord chancellor Parker. The emoluments of these offices, aided by his paternal fortune, enabled him to live respectably. He was twice married to women of good family, and had a son by his first wife and a daughter by his second. He died (of what disorder is not recorded), in December 1718, in his forty-fifth year, and was buried among the poets in Westminster abbey, where his widow has erected a superb monument to his memory. The personal character of Rowe seems to have been very respectable, and, according to Pope, he possessed the most agreeable talents for society. As a tragic poet he may possibly be deemed the most

ROW

successful writer on the French model, in which eloquence and sentiment supply the place of nice discrimination of character, and a skilful development of the passions. His dramatic fables are, however, generally interesting, and the situations striking; which, being aided by a singularly sweet and poetical diction in the dialogue, his pieces forcibly arrest attention, although they but slightly affect the heart. As an original poet, Rowe appears to most advantage in a few tender and pathetic ballads; but as a translator he assumes a higher character. His version of "Lucan's Pharsalia," not published until after his death, although somewhat too diffuse, Dr Johnson esteems a masterpiece. He also gave translations of the first book of Quillet's Callipedia, and of the Golden Verses of Pythagoras. The poetical works of Rowe were published collectively, in 3 vols. 12mo, 1719.—*Biog. Brit. Johnson's Lives of the Poets.*

ROWLANDS (HENRY) a Cambrian antiquary, distinguished for his researches concerning the existing memorials of the ancient Cimbric population of Britain. He was a native of the Isle of Anglesey, and having received a classical education, he became a member of the clerical order, and obtained the living of Llanfadden in Anglesey. Much of his time was devoted to the investigation of the remains of stone circles, cromlechs, and other structures of former ages, which abound in the principality of Wales, and especially in the island in which Mr Rowlands resided. The result of his inquiries was a treatise, entitled "Mona Antiqua Restaurata, an Archaeological Discourse on the Antiquities of the Isle of Anglesey," which was first published at Dublin in 1723, the year after the death of the author, and reprinted in London 1766, 4to. Together with much learned speculation and fanciful theory, this volume contains important information relative to the language, arts, and manners of the Cambro-British inhabitants of this island.—*Orig.*

ROWLEY (WILLIAM) a dramatic writer in the reign of James I, who was one of the company of players under the protection of the prince of Wales. He is said to have excelled chiefly as a comic actor; but of his personal history little or nothing is known. His productions, including those in which he assisted other dramatists, are numerous. Among his own works are, "A New Wonder, a Woman never Vext," com. 1632, 4to; "All's Lost by Lust," trag. 1633, 4to; "Match at Midnight," com. 1633, 4to; "A Shoemaker's a Gentleman," com. 1638, 4to; "The Witch of Edmonton," tragi-com. 1658, 4to; "The Birth of Merlin," tragi-com. 1662, 4to; besides which he wrote five plays, which were never printed; and he was engaged in the composition of nine more dramatic pieces with Massinger, Middleton, Webster, Thomas Heywood, and others.—*Biog. Dram.*

ROWLEY (WILLIAM) an eminent physician, of Irish descent, but born in London, in 1743. After completing his studies, he served

ROY

as a surgeon in the army, and was at the siege of Bellisle and at the taking of Havannah, where his conduct was so highly approved that he was employed, through the patronage of admiral Keppel, to make professional visits to Cuba, and all the leeward islands, for which he was handsomely rewarded. Returning home he settled in London, and acquired extensive practice as a physician. Though he had received the diploma of MD. from St Andrew's, and had been admitted a bachelor of medicine at Alban-hall, Oxford, some objections occurred which prevented his taking the next degree in the latter university. He obtained considerable reputation as a practitioner, and was respected for his benevolence and humanity; but he unfavourably distinguished himself by opposing vaccine inoculation on its first introduction. His death took place March 17, 1806. He published several tracts on diseases of the eyes, ulcers of the legs, and other subjects; besides a treatise on the practice of physic, and "*Schola Medicinæ universalis nova*, containing the History of Medicine, Anatomy, Physiology, and Special Pathology," 1797, 2 vols. 4to.—*Lempriere. Reuss.*

ROXBURGH (WILLIAM) an eminent English physician and naturalist, who was originally a surgeon in the service of the East-India company. He exercised his profession for several years at Madras, and having distinguished himself by his investigation of the vegetable productions of India, he was at length removed to Calcutta, as superintendent of the noble botanic garden founded by the company. He contributed much to the improvement of that establishment; and he was, in consequence of his spirited exertions for the promotion of science, nominated principal botanist to the company in the East Indies. Returning to Europe, he died at Edinburgh, in the beginning of the year 1815. He was intimately connected with sir William Jones, Warren Hastings, and lord Teignmouth; and he enriched various periodical works with valuable communications. He was the author of an account of the "*Plants of the Coast of Comandely*," with plates and descriptions, London, 1795—98, 3 vols. folio; a "*Botanical Description of a New Species of Swietenia, or Mahogany*," 1797, 4to; and an "*Essay on the Natural Order of the Scitamineæ*," Calcutta, 4to; besides various papers in Dalrymple's Oriental Repository, the Asiatic Researches, and the Philosophical Transactions.—*Cent. Mag. Biog. Univ.*

ROY (JULIAN DAVID le) an architect and antiquary, who was the son of a celebrated horologist, of the same name, and was born at Paris in 1728. He studied architecture as a profession, and having travelled into Greece for improvement, he published the result of his observations in his "*Ruines des plus beaux Monumens de la Grèce*," 1758, folio, of which a second edition appeared in 1769. This work procured him admission into the Academy of Inscriptions, and he subsequently became a member of the Institute. He died

ROY

at Paris, in January, 1803. Among his other works are "*Histoire de la Disposition et des Formes différentes des Temples des Chrétiens*," 1764, 8vo; and "*Observations sur les Edifices des anciens Peuples*," 1767, 8vo; besides some pieces on naval architecture.—**JULIAN LE ROY**, his father, who was a native of Tours, settled at Paris as a watchmaker, and arrived at the highest eminence in his profession. He died in 1759.—**PETER LE ROY**, son of the preceding, who died in 1785, was skilful in the same art. His marine time-keepers were remarkable for the simplicity of their construction, as well as for their accuracy. He published "*Mémoires pour les Horlogers de Paris*," 1750, 4to; "*Etrennes Chronométriques*," 1758; "*Précis des Recherches pour la Détermination des Longitudes par la Mesure artificielle du Temps*," 1773, 4to, &c.—*Dict. Hist. Biog. Univ.*

ROY (PETER CHARLES) a satirical and dramatic poet of eminence, born at Paris in 1683. He was the son of an attorney of the Chatelet, and he purchased the office of counsellor in the same court; but he devoted himself entirely to literature, neglecting his profession. Having gained poetical prizes at the French Academy, and at the Floral Games, he turned his attention to lyric composition for the theatre. In 1712 he produced the opera of "*Callirhoe*," which was followed by that of "*Semiramis*," the ballets of the "*Elements*;" the "*Senses*;" and the comedy of the "*Captives*," imitated from Plautus; besides many more pieces of less importance. His satires against the members of the French Academy, whom he abused individually as well as collectively, prevented his obtaining a seat in that assembly, though he made repeated attempts to gain admission. He died October 23, 1764. A collection of his poetical and miscellaneous works was published in 1727, 2 vols. 8vo.—*Dict. Hist. Biog. Univ.*

ROYE (GUY le) a French prelate of the fourteenth century, principally known as the author of a work, entitled "*Doctrinale Sapientie*," of which there is a translation by William Caxton, printed by him as early as 1489. The scarceness of this treatise is now its principal merit. The author was elevated to the archbishopric of Rheims, and at length fell in a popular commotion in Italy AD. 1409.—*Nouv. Dict. Hist.*

ROYEN (ADRIAN van) a physician and botanist, born, probably in Holland, in 1705. He succeeded Boerhaave in the botanical chair of the university of Leyden, and in the direction of its academical garden, which was highly enriched under his care. In 1728 he printed an inaugural dissertation, "*De Anatomia et Oeconomia Plantarum*," and farther contributed to recommend botanical science by his "*Carmen de Amoris et Connubii Plantarum*," 1732. When Linnæus was in Holland, Van Royen prevailed upon him to pass a few months with him, for the purpose of assisting in the compilation of "*Floræ Leidensis Prodrômus*," which appeared in 1740, being one of the first works which adopted

the nomenclature, although not the classification, of Linnæus. The attempt was well received, and the catalogue deemed among the richest of the kind. Van Royen died in 1779.—*Halleri Bibl. Bot.*

ROYOU (THOMAS MARIE) a French journalist, who distinguished himself as one of the most courageous defenders of received doctrines in politics and literature among the writers of the eighteenth century. He was born at Quimper about 1741, and becoming an ecclesiastic, he went to Paris, where, for twenty years, he was professor of philosophy at the college of Louis le Grand. After the death of his brother-in-law, Freron, he was one of the conductors of the "Année Littéraire;" and in 1778 he engaged with Geoffroy in editing a periodical work, called the "Journal de Monsieur." Royou opposed the principles of the Revolution, which he combated in a journal commenced June 1, 1790, entitled "Ami du Roi." The boldness with which he attacked the anarchists, exposed him to their displeasure, and after having been repeatedly denounced, his journal was suppressed in May 1792. He was at that time labouring under illness, and having obtained an asylum in the house of a friend, he died about two months afterwards. Besides his periodical productions, he published "Le Monde de Verre réduit en Poudre, ou Analyse et Refutation des Époques de la Nature, par Buffon," 1780, 12mo; and other tracts.—*Biog. Univ.*

ROZIER (JOHN) an eminent writer on agriculture, rural economy, and natural history. He was born at Lyons in France, in 1734; and he received a clerical education among the jesuits at Villefranche and Lyons. In 1757, on the death of his father, who had been engaged in commerce, he obtained the management of a considerable estate in Dauphiny, which became the property of his elder brother, and he immediately applied himself to experimental farming, putting in practice the precepts he found in the works of various agriculturists, ancient and modern, which he had attentively studied. A veterinary school having been established at Lyons, in 1761, Rozier soon after was appointed to the direction of that institution; when, in conjunction with his countryman and friend Latourrette, he composed "Les Demonstrations Élémentaires de Botanique," 1766, 2 vols. 8vo, one of the best works of the kind then extant. A dispute with Bourgelat, through whose influence he had obtained his situation, was the cause of his removal. He then went to Paris, and was employed in editing the "Journal de Physique et d'Histoire Naturelle," of which he at length became the proprietor, when he continued it in a new form, under the title of "Observations sur la Physique, sur l'Histoire Naturelle, et sur les Arts." He was invited by Stanislaus Augustus, king of Poland, to assist in the establishment of an institution for the improvement of botany at Grodno; and as he declined removing from his native country, the king testified his es-

teem by procuring for Rozier, through his interest at the court of France, the rich priory of Nanteuil-le-Haudouin. Thus placed in easy circumstances, he consigned the management of his Journal to his nephew, the abbé Mongez, and devoted himself to the composition of a work, entitled "Cours d'Agriculture," in the form of a dictionary, extending to ten volumes quarto, which occupied the remainder of his life. He purchased an estate near Beziers, where he made experiments in rural economics; but after remaining there about six years, he sold the property and retired to Lyons in 1788, and he was admitted a member of the Academy of Sciences in that city. His death took place September 29, 1793, when he was killed by a bomb, which destroyed his house during the siege of the city of Lyons. Besides his principal works, already noticed, he published tracts on making wine, on oil-presses, &c.—*Biog. Nouv. des Contemp. Biog. Univ.*

RUBENS (PETER PAUL) the most eminent painter of the Flemish school, was the son of a doctor of laws, and a sheriff of Antwerp, who during the troubles of the Low Countries retired to Cologne, where his celebrated son was born in 1577. The family subsequently returned to Antwerp, where the subject of this article received a literary education, and early displayed a talent for design, which induced his mother, then a widow, to place him with the painter Van Oort, whom he left for the school of Otto Venius. His rising talent having made him known to the archduke Albert, governor of the Netherlands, that prince employed him on several pictures, and recommended him to the duke of Mantua, at whose court he remained six years, studying the works of Julio Romano, and other great artists, and paying a particular attention to the colouring of the Venetian school. In the interval he also visited Madrid, on a commission for the duke, where he saw some of the finest works of Titian and other masters. On leaving Mantua he visited Rome and other cities of Italy, copying some of the best pictures, and perfecting himself in every branch of his profession. After a residence of seven years in Italy he returned to Antwerp, being recalled by the illness of his mother, who died before his arrival. This event induced him to retire to the abbey of St Michael, where he gave himself up for a time to solitary study. His reputation now stood so high, that he was called to the court of the archduke, and pensioned; soon after which, he married his first wife, and lived in a style of great magnificence, which excited much envy among inferior artists, who sought to lower his reputation by attributing the best parts of his pictures to his numerous pupils. These calumnies he treated with great disregard, and aware of the source of much of the ill-will, relieved the necessities of some of his principal decriers. He continued to execute many great works with surprising facility, until, in 1620, he was employed by Mary de' Medici to adorn the gallery of the Luxem-

bourg, for which he painted a well-known series of magnificent pictures, allegorically exhibiting the principal events in the life of that princess. Such was the opinion of his general talents, that he was chosen, at the recommendation of the archduchess Isabella, to be the private negotiator of a peace between Spain and England, for which purpose he visited Madrid in 1628, where he was treated with great distinction. He painted for Philip IV, and his minister Olivarez, twelve or fourteen of his most celebrated pictures, in the short space of nine months; and in 1629 he returned to Flanders with a secret commission, and proceeded to England. Although not received openly as a minister, Charles I, who was both a patron and judge of the fine arts, was much gratified by his visit; and during his stay in England, where he succeeded in his negotiation, he was engaged to paint the ceiling of the banqueting-house at Whitehall. He also executed several other pictures for the English nobility, some of which are to be found at Blenheim, Wilton, Easton, &c. He remained in England about a year, during which time he received the honour of knighthood, and then returned to Flanders, where he married the beautiful Helen Forman, his second wife, and was nominated secretary to the council for the Low Countries. He maintained a highly disguised station through the rest of his life, which was one of continued prosperity, until his death at Antwerp in 1640, in the sixty-third year of his age. Rubens, beyond all comparison, was the most rapid of the great masters; and so many pictures bear his name, it is impossible not to credit a part of the assertion in his own days, that the greater portion of many of them was performed by his pupils. His merits as an artist have been so copiously dwelt upon by various writers, and in our own country have produced so much observation from sir Joshua Reynolds, lord Orford, and Mr Fuseli, that the limits of this work will allow of little beyond a reference to them and our other authorities. According to all these judges, his great characteristics are freedom, animation, and striking brilliancy and disposition of colouring, the favourite tone of which is that of a gay magnificence, from which, whatever the subject, he never deviated. Besides the excellency of his general powers, he saw all the objects of nature with a painter's eye, and instantly caught the predominating feature by which the object is known and distinguished, and as soon as seen, he executed it with a facility that was astonishing. According to sir Joshua Reynolds, he was the greatest master of the mechanical part of his art that ever existed. His chief defects consist in inelegance and incorrectness of form, a want of grace in his female figures, and in the representation of youth in general, and an almost total absence of sublime or poetical conception of character. The works of Rubens are found in churches, palaces, and galleries throughout Europe; for his universal aptitude rendering no branch of the art uncultivated by him, the amateurs of history, landscape,

portrait, and even common life, have all a motive for possessing some of his works. The spoils of the French victories placed many of them in the gallery of the Louvre; but on the visit of the allies to Paris, several were reclaimed, and occupy their former situations. His celebrated Rape of the Sabines is placed in the newly-formed national gallery of Great Britain. The number of engravings from the designs of Rubens exceed three hundred. This great painter, who was no mean scholar, wrote some treatises on his art in very good Latin.—RUBENS (ALBERT) a man of letters, son of the preceding, was born at Antwerp in 1614, and succeeded his father as secretary to the council. He devoted his time to literary pursuits, and was the author of several learned works, the principal of which are entitled “Regum et Imperatorum Romanorum Numismata,” 1654, folio; “De Re Vestiaria Veterum;” “Disseratio de Gemma Tiberiana et Augustea; de Urbibus Necoris; de Natali Die Caesaris Augusti;” which last two works were published by Grævius in the *Thesaurus Antiq. Roman.* The same critic also edited his “Disseratio de Vita Mallii Theodori,” 1694, 12mo.—*Pilkington. D'Argenville. Sir Joshua Reynolds's Works. Walpole's Anec. Fuseli's Lectures. Nouv. Dict. Hist.*

RUBINI (PIETER) a physician, born at Parma in 1760. Having completed his studies at the university of his native city, and taken his doctor's degree, he became pensionary physician at the small village of Compiano. He was afterwards enabled to travel for improvement, at the expense of the government; and having visited Pavia, Montpellier, Paris, Edinburgh, &c. he was, on his return, made professor of clinical medicine at Parma. In 1804 he contributed greatly to the foundation of a medical and surgical society, on the plan of that of Edinburgh, of which he was a member; and in 1816 the archduchess Maria Louisa appointed him her consulting physician and archiater. He died May 15, 1819. Rubini claims notice principally as the promulgator of a new system of medicine, which appears to have been a modification of that of Dr John Brown, and which he developed in his lectures, and in his treatises on periodical (intermittent) fevers, and on the yellow fever, published in 1805. He produced many other professional works, noticed in the annexed authorities.—*Biog. Nouv. des Contemp. Biog. Univ.*

RUCELLAI (BERNARD) an Italian statesman and historian, born at Florence in 1449. At the age of seventeen he married the sister of Lorenzo de' Medici; and this connexion made way for his promotion to the office of gonfalonier of justice in 1480; and four years after he was sent ambassador to Genoa. He subsequently went in the same capacity to Naples and to France, and several employments were confided to him during the revolutionary commotions which disturbed Florence towards the close of the fifteenth century. After the death of Lorenzo de' Medici, he protected the members of the new Platonism

RUD

Academy, for whose use he erected a palace with gardens, embellished with noble monuments of ancient and modern art. He died at Florence in 1514. His principal work is his book "*De Urbe Roma*," reprinted in "*Rerum Italicarum Scriptores Florentini*." He also wrote a history of the Pisan war and the invasion of Italy by Charles VIII of France, entitled "*De Bello Italico*," London, 1724, 4to; and other works.—**RUCCELLAI** (JOHN) the fourth son of Bernardo, was born at Florence in 1475. He became a distinguished scholar, having studied under Marsilio Ficino, Politian, and other celebrated literati of the Platonic Academy. He was sent ambassador to Venice in 1505; and in 1512 he took an active part in the measures which issued in the restoration of the Medici family. On the elevation of Leo X to the papal throne, Rucellai repaired to Rome, and took orders in the church. He accompanied the pope when he went to Bologna to conclude the concordat with Francis I, and he was afterwards sent as nuncio to the French court. Clement VII made him apostolic protonotary, and governor of the castle of St Angelo; but the great object of his ambition was a cardinal's hat, which he never obtained. His death occurred in 1525. As an author, he is known by his poem "*Le Api*," the Bees, a didactic piece, in blank verse, which is much esteemed. He also wrote "*Rosmonda*," and "*Orestes*," tragedies, which are imitations of the "*He-cuba*" and "*Iphigenia in Tauris*" of Euripides.—*Roscoe's Lives of Lorenzo de' Medici and Leo X. Biog. Univ.*

RUCHAT (ABRAHAM) a Protestant Swiss clergyman and historical writer, born in the canton of Berne, about 1680. Having studied classical literature, theology, and the Oriental languages, he endeavoured to obtain the professorship of Greek and Hebrew at the academy of Lausanne; but he was disappointed. After having for some years held the small benefice of Anbonne, devoting his leisure to the cultivation of letters, he became professor of belles lettres at Lausanne in 1721. About twelve years after he quitted that post for the chair of theology, which he occupied till his death in 1750. Besides a great number of dissertations in the "*Bibliothèque Italique*," and the "*Journal Helvétique*," Ruchat published "*Les Délices de la Suisse*," Leyden, 1714, 4 vols. 12mo, reprinted at Amsterdam, and elsewhere; "*Histoire de la Réformation de la Suisse*," Geneva, 1727, 6 vols. 12mo; and other works. Among his MSS. preserved in the public library at Berne, is a "*General History of Switzerland, from the Origin of the Helvetic Nation to the Year 1516*," 5 vols. 4to.—*Bing. Univ.*

RUDBECK (OLAVS). There were two eminent physicians and natural philosophers of this name, father and son, descended of a noble Swedish family, and more immediately from Rudbeck, bishop of Vesterås. The elder, born 1630, became a member of the university of Upsal, in which he afterwards filled the chair of professor of medicine many years

RUD

with great reputation and ability. His principal work is entitled "*Exercitatio Anatomica*," 4to, in which he defends his claim to the discovery of the lymphatic vessels in the liver, &c. against the rival pretensions of Thomas Bartholine. He was also the author of a catalogue of plants in the botanical garden at Upsal, and of two other treatises on similar subjects, "*Campi Elysi*," and "*Deliciae Vallis Jacobæ*;" but his most curious production is a whimsical yet learned work on the locality of Paradise, which he places in Sweden, and assigns that country as the common parent of the German, English, Danish, and even Greek and Latin nations. Notwithstanding the numerous and absurd paradoxes which he broaches in this treatise, it is written with much ability, and exhibits the deep erudition of the author, though certainly at the expense of his judgment; it is entitled "*Atlantica, sive Manheim vera Japheti Posteriorum Sedes ac Patria*," and occupies four folio volumes. His death took place in 1702.—His son, born in 1660, emulated the reputation of his father, whom he succeeded in his anatomical and botanical professorships, having graduated in medicine at Utrecht. He was one of the original members of the Academy of Sciences at Stockholm, in the formation of which he assisted the learned Benzelius. A variety of papers, on philosophical subjects, from his pen, are to be found in the transactions of the society; and he is also known as the author of a work on the natural history of the Bible. He died at Upsal in 1740.—*Rees's Cyclop.*

RUDBORNE (THOMAS) bishop of St David's in the fifteenth century, a native of Hertfordshire, or as some say, of the county of Wilts. He was a member, and afterwards warden of Merton college, Oxford, the great gateway and tower of which edifice were built under his auspices, and it is said after his own design. In the earlier part of his life he had been one of the clerical advisers who instigated Henry the Fifth in enforcing his pretensions to the French crown, and had even accompanied that monarch in quality of chaplain on the celebrated expedition which terminated in the victory of Agincourt. In the following reign he was elevated to the mitre, which he wore something less than ten years, dying about the year 1442. He must not be confounded with a monkish author of the same name, who wrote a "*History of Winchester*." *Baile. Pitts. Tannar.*

RUDDIMAN (THOMAS) a distinguished grammarian and critic, born in the parish of Boyndie, in Banffshire, in Scotland, in 1674. He was sent in 1690 to King's college, Aberdeen, where he obtained a bursary. He took the degree of MA. in 1694, and the next year he was chosen master of the school of Lawrencerkirk. He removed to Edinburgh in 1700, and in 1702 he was appointed librarian to the faculty of advocates. In 1715 he set up a printing-office, in conjunction with his brother; and from their press issued many accurate and valuable editions of the works of ancient writers, among which were a Greek Testament,

and the Roman History of Livy. He became one of the founders of the earliest literary society in Scotland in 1718. Towards the close of his life his eye-sight became impaired, and in 1752 he resigned his post of librarian to the celebrated David Hume. He died January 19, 1757. Of his original productions the most distinguished is his "Rudiments of the Latin Tongue," long used as an elementary book in schools. He also wrote "Grammaticæ Latinæ Institutiones;" and "Grammatical Exercises;" and he edited the works of George Buchanan, in Latin, 1725, 2 vols. folio; the "Diplomata et Numismata Scotiæ;" of James Anderson, to which he prefixed a learned preface; besides other works. He also established a newspaper, "The Caledonian Mercury."—*Rees's Cyclop. Biog. Univ.*

RUE (CHARLES de la). There were two learned ecclesiastics of this name in the seventeenth century. The elder, born in 1643, was a native of the French metropolis, and distinguished himself early in life by his ability both as a preacher and a poet. In the latter capacity especially, he acquired the approbation of the celebrated Corneille, no mean critic, who was so pleased with a Latin poem of de la Rue's composition, having for its subject the victories of Louis the Fourteenth, that he translated it into the French heroic metre, and presented it in person to the king. The scholarship and elegant Latinity displayed in the original, still farther recommended him to the monarch, and he was appointed one of the number of learned men, to whom the publication of the edition of the classics for the use of the dauphin was committed. The works of Virgil fell to his share, his commentary on which, and the life of the poet prefixed, are justly admired. He was also the author of several tragedies both in the Latin and French languages, popular in their day, as well as of some encomia and other panegyric writings. His death took place in the college of jesuits, of which order he was a member, in 1725.—The second, born in 1685, was a Benedictine monk, celebrated for his piety and theological learning. He commenced an edition of the works of Origen, of which two volumes, folio, were published in his lifetime, and gained him great and deserved reputation. His death took place in 1739, before the completion of the third; it was, however, afterwards continued, and a fourth added by his nephew, Vincent.—*Moreri.*

RUFFHEAD (OWEN) the son of a baker in Piccadilly, whose father having purchased a lottery-ticket in his son's name during his infancy, employed the 500*l.* which it produced in educating him for the law. He was born about the year 1723, and became a member of the society of the Middle Temple, by which he was in due time called to the bar. His practice, however, seems to have been principally confined to his chambers, and the only result of his professional labours now extant is an edition of the "Statutes at Large," in 4to, which he superintended with diligence and accuracy. It is

as a political writer and partizan that he is principally known, especially by "The Contest," a periodical work which excited considerable attention in its day, and his defence of the ministry against the celebrated John Wilkes, which he published under the title of "The Case of the late Election for the County of Middlesex considered." For this pamphlet he was promised a place in the Treasury, but died before he obtained it, in the year 1769. A "Life of Alexander Pope," which he undertook at the suggestion of bishop Warburton, was considered, even in his lifetime, as a failure; but whether, owing to the deficiency in the requisites of a critic and biographer, or, as he himself averred, to the scantiness of his materials, is a question which still remains undecided.—*Northouck's Biog. Dict.*

RUFFI (ANTHONY de) the historian of Marseilles, was born there in 1607, and bred to the law. Being appointed counsellor to the seneschalsch of his native place, he practised there with great integrity, but employed much of his time in collecting materials for his "History of Marseilles," which he published in 1642. He was also author of a "Life of the Chevalier de la Coste;" and of the "Counts of Provence from 934 to 1480." He died in 1689.—His son, LOUIS ANTHONY, who followed similar pursuits, added a second volume to his father's "History of Marseilles;" and was also author of "Dissertations Historiques et Critiques sur l'Origine des Comtes de Provence, &c." and of a similar work on the bishops of Marseilles. He died in 1724.—*Moreri.*

RUFFINUS or RUFINUS, a celebrated priest of Aquileia, called by some Torianus, was born about the middle of the fourth century, at Concordia, a small city in Italy. He retired to a monastery in Aquileia, which was visited by St Jerome, to whom he became so much attached, that when the latter retired into the East, he soon after determined to follow him. He accordingly embarked for Egypt, where he visited the hermits who inhabited the deserts, and became the friend and confidant of St Melania the Elder. Being persecuted by the Arians under Valens, he was banished into one of the most desolate parts of Palestine, but was ransomed by Melania. He built a monastery on mount Olivet, and made many converts; but at length, in translating what he deemed the most interesting parts of Origen, a rupture took place between him and his former friend St Jerome. He subsequently visited Rome, and soon after published a Latin version of his "Apology for Origen," which wholly alienated his former friend, and a most rancorous controversy on the part of the latter ensued. Rufinus was cited to Rome by pope Anastasius, and being accused of heresy, published some very orthodox apologies for his translations from Origen, whose opinions he alleged that he did not wish to support in anything that was reprehensible. Not satisfied with this declaration, the pope condemned him as a heretic, a censure that seems to have produced little

effect on Rufinus, as he continued his controversy with St Jerome, and being driven from Aquileia by an irruption of the Visigoths, he retired into Sicily, where he died about the year 410. He translated "Josephus," from Greek into Latin; as likewise the "Ecclesiastical History of Eusebius," to which he added two books. He also supplied versions of the writings of Origen, Gregory Nazianzen, and St Basil; and left a tract in defence of Origen, two apologies against St Jerome, and various other pieces, which were printed collectively at Paris in 1580, folio. Jortin thinks that he might have been quite as good a saint, although not so good a scholar, as Jerome.—*Care. Dupin.*

RUFUS THE EPHESIAN, a physician and naturalist in the reign of the emperor Trajan, or as others say, of Nero, who was esteemed by Galen to have been one of the ablest of the physicians who had preceded him. He appears to have cultivated anatomy by dissecting brutes, with great success. He traced the origin of the nerves in the brain, and even observed the capsule of the crystalline lens in the eye. He wrote treatises on the diseases of the urinary organs, on purgative medicines, and according to Galen, a *materia medica* in verse. What remains of his works are to be found in the "*Artis Medicæ Principis*" of Stephens, and printed separately at London, Gr. and Lat. 4to, by William Clinch, 1726.—*Keel's Cyclop.*

RUGENDAS (GEORGE PHILIP) a famous battle-painter, who was the son of a clock-maker at Augsburg, and was born in 1666. He studied under Isaac Fischer, and afterwards copied the works of Bourguignon and Lemble, and the engravings of Tempesta. Having injured his right hand, he learned to paint with his left with great facility, though he afterwards recovered the use of his right hand. He visited for improvement Vienna, Venice, and Rome, and then settled at Augsburg. He practised engraving as well as painting, and arrived at great excellence in the representation of military engagements. Such was his zeal for the advancement of his art, that during the siege of Augsburg he freely exposed himself amidst the fire and carnage, that he might obtain opportunities for sketching the scenes around him, and transfer them to his canvas. He died May 10, 1742, leaving a great number of the productions of his pencil, as well as of his brain, many of which are highly esteemed.—*Biog. Univ.*

RUGGLE (GEORGE) author of a celebrated dramatic satire, was born at Lavenham in Suffolk, where his father was a clothier, in November 1575. He was educated at the free grammar school of his native place, whence he was removed to St John's college, Cambridge, in 1589, and thence to Trinity college, where he obtained a scholarship in 1593, and the degree of A.M. in 1597. From Trinity college he removed to Clare-hall, and was elected a fellow of that society, to which he afterwards became a benefactor. In consequence of a legal dispute carried on between

the university and the mayor and corporation of Cambridge, Ruggle, who was one of the taxers of the university, completed his comedy called "*Ignoramus*," which is a satire on the lawyers, and not destitute of humour. In 1614 it was performed before James I, who was highly delighted with it; and the lawyers, who felt the force of the ridicule, were proportionably angry. Mr Ruggle resigned his fellowship in 1626, and died the following year. A very correct edition of "*Ignoramus*" was published in 1787, 8vo. Two other plays are ascribed to the same author; "*Club Law*," and "*Reveries on Verity*," which have never been printed — *Preface to Ignoramus.*

RUHNEKEN. See **RHUNKEN.**

RUHS (FREDERICK) a German historian, born in Swedish Pomerania in 1780. He studied at Gottingen, where Schlegel persuaded him to devote himself to the investigation of the history of Scandinavia, for which he was peculiarly qualified by his acquaintance with the Swedish language. In 1801 he published an "*Essay towards the History of the Religion, the Constitution, and the Civilization of Ancient Scandinavia*." Being made professor at Griefswald, in his native province, he began the "*History of Sweden*," Halle, 1801—1810, 4 vols. 8vo, which is the most important of his works, and is highly esteemed. Being deprived of his office, through the political revolutions which took place in Pomerania, Ruhs obtained the professorship of history at Berlin. Having taken a voyage to Italy, on account of his health, he died of a consumptive complaint at Leghorn, February 1, 1820.—*Biog. Nouv. des Contemp. Biog. Univ.*

RUINART (THIERRY) a French theologian, was born at Rheims June 10, 1657, and became a Benedictine monk in 1674. He studied the Scriptures, the fathers, and ecclesiastical writers with so much zeal, that Mabillon chose him for a companion in his literary labours. In 1689 appeared his "*Acta Primorum Martyrum*," 4to, being an account of the martyrs of the first four centuries, a new edition of which work, with alterations and additions, was published in 1713. He was also the author of several other learned works, the principal of which are, "*Hist. Persecutionis Vandalicæ*," "*Iter Literarium in Alsatiâ et Lotharingiam*," &c. He also gave an excellent edition of the works of Gregory of Tours; and when Mabillon died, in 1707, was appointed to continue the work in which they had been jointly engaged. This learned and industrious Benedictine died in 1707.—*Niceron*, vol. ii.

RULHIÈRE (CLAUDE CARLOMAN de) a French poet and historian, born in 1735, at Bondi, near Paris. Having studied at the college of Louis le Grand, he entered into the corps of gendarmes, and in 1758 and 1759 he was at Bordeaux, in quality of aide-de-camp to marshal Richelieu, then governor of Guienne. He afterwards went with the minister plenipotentiary, baron Breteuil, to St Petersburg, where he witnessed the dethronement of Peter III, and the elevation of Ca-

therine II to the throne of Russia in 1762. Returning to France in 1765, he drew up an account of the interesting events which he had witnessed, published in 1797, under the title of "Histoire, ou Anecdotes sur la Revolution de Russie, en 1762," 8vo. In 1768 he was employed to write the history of the troubles in Poland, for the use of the dauphin, for which he was allowed a pension of 6000 francs. His "Histoire de l'Anarchie de Pologne, et du Démembrement de cette République," which he did not live to publish, appeared in 1807, 4 vols. 8vo. Rulhiere was admitted a member of the French Academy in 1787, and he died in January, 1791. His poems, consisting of epistles in verse, and other light pieces, were published collectively in 1801 and 1808. He wrote historical remarks on the revocation of the edict of Nantes, and other works, besides those already mentioned.—*Biog. Nouv. des Contemp. Biog. Univ.*

RUMFORD. See THOMPSON.

RUMPH (GEORGE EVERARD) a doctor of physic in the university of Harau, in which city he was born in 1637. He went to Amboyna as consul and senior merchant, which occupation did not prevent him from making a collection of the plants of the country, which he composed in twelve books, and dedicated to the East India company. These were published after his death by Burman, under the title of "Herbarium Amboinense." He also left behind him "Imagines Piscium Testaceorum," Leyden, 1711; and a "Political History of Amboyna," which has never been published. This ingenious man became blind in his forty-third year, but could distinguish herbs by the taste and touch. The date of his death is not recorded.—*Rees's Cyclop.*

RUNCIMAN (ALEXANDER) a Scottish painter, was born at Edinburgh in 1736. His father, who was an architect, taught him some of the principles of his art, and he was afterwards placed with a portrait-painter of the name of Norries, under whom he made a rapid improvement. About 1766 he accompanied his younger brother, John, to Rome, where the latter, who had excited far higher expectations as an artist, died of a consumption. On his return to Scotland in 1771, Alexander, who was warmly patronized by sir James Clerk, of Pennecuik, was employed by that gentleman to paint a series of subjects from Ossian, for his hall at Pennecuik. In the course of a few years he was made master of a public institution for promoting designs. He died in October, 1785. His best pictures are, an altar-piece in the episcopal chapel, Edinburgh; his "Lear;" his "Andromeda;" and his "Agrippina landing with the Ashes of Germanicus."—*Stark's Biog. Scot.*

RUNDLE (THOMAS) an English divine, was born at Milburn Abbot, in Devonshire, in 1686, and educated at Exeter college, Oxford, where he took the degree of bachelor of laws in 1710. According to Whiston, he soon after became a convert to Arianism, which seems not to have been the case, as he was ordained by bishop Talbot, and under the patronage of

the same family would have reached the English bench of bishops, but for the opposition of Gibson, bishop of London, in consequence of the suspicions entertained of his orthodoxy. The controversy produced by this resistance, by making his name conspicuous, alone renders this notice necessary. Dr Rundle finally became bishop of Derry in Ireland. He died in 1743. He printed a few sermons; and his letters, with memoirs prefixed, were published in 1790.—*Memoirs as above.*

RUNIUS (JOHN) one of the most celebrated of the Swedish poets, was born in West Gothland in 1679. He received the rudiments of his education at Skara, where he gave early proofs of his genius, and particularly distinguished himself by his proficiency in the Greek language. In 1700 he went to Upsal, and after completing his studies, was taken by count Stromberg to be his secretary. He died after a life of indigence and perplexity, of a consumption, in 1713, at the age of thirty-four. Runius is accounted by the Swedes one of the best of their poets. His poems were published after his death, under the title of "Dudain," Stockholm, 1714, in two parts; the first containing sacred poems, and the second epithalamia, epitaphs, odes, &c. on different subjects, interspersed with several ingenious pieces in Greek, Latin, French, and German.—*Gesell's Biographiska Lexicon.*

RUNNINGTON (CHARLES) serjeant-at-law, was born in Hertfordshire in 1751. His education was private, and in 1768 he was placed with a special pleader, who employed him in a digest of the law of England. He was called to the bar in 1778, and in 1787 to the degree of serjeant-at-law. In 1815 he was appointed commissioner for the relief of insolvent debtors, which office he resigned in 1819. He died at Brighton, January 18, 1821. Serjeant Runnington published "Hale's History of the Common Law," 2 vols.; "Gilbert's Law of Ejectments," 8vo; "Ruffhead's Statutes at Large," 4 vols. 4to; "History of the legal Remedy by Ejectment, and the resulting Action for Mesne Process," 8vo.—*Gent. Mag.*

RUPERT, or ROBERT OF BAVARIA (prince) the third son of Frederick V, elector palatine and titular king of Bohemia, by the princess Elizabeth of England, daughter of James I. He was born in 1619, and like most German princes, he received a military education. Becoming an exile in his early years, through the misfortunes of his father, he came to England at the commencement of the civil war, and offered his services to his uncle Charles I. He was accepted, and had the command of a corps of cavalry, at the head of which he distinguished himself at the battle of Edgehill, in October 1642; and at Chalgrove Field in July 1643. Soon after he took Bristol, and obliged the enemy to raise the sieges of Newark and of York. He displayed his courage at Marston Moor and at Naseby, but his impetuosity and imprudence contributed to the disastrous result of those engagements. He afterwards shut himself up

R U S

in the city of Bristol, and having surrendered that place, after a short siege, to general Fairfax, his conduct so much displeased the king, that he dismissed the prince from his service. He then went abroad, but returning after the death of Charles I, he was made commander of that part of the fleet which adhered to Charles II in 1648. Prince Rupert for some time carried on a predatory warfare against the English; and after narrowly escaping from the pursuit of admiral Blake on the coast of Portugal, he at length sailed to France with his prizes and ships, and having sold them, joined Charles II at the court of Versailles. His time was chiefly devoted to scientific studies, till the Restoration, when he returned to England. In April 1662 he was admitted a member of the privy council, and in December following, a fellow of the newly founded Royal Society. In 1666 he was appointed, in conjunction with Monk, duke of Albemarle, to the command of a fleet fitted out against the Dutch; and in the next war with Holland in 1673, he was made admiral of the fleet. In 1679 he was nominated a member of the new privy-council; but from that period he interfered but little in public affairs. He led a retired life, and spent much of his time at Windsor castle, of which he was governor. Many useful inventions resulted from his studies, among which are the invention of the compound called "Prince's Metal;" and also the discovery of the method of engraving in mezzo-tinto. He was an active member of the Board of Trade; and to his influence is ascribed the establishment of the Hudson's Bay Company, of which he was the first governor. This public-spirited and patriotic prince died at his house in Spring Gardens, London, November 29, 1682. He was never married, but he left one natural son, Dudley Rupert, or Dudley Bard, whose mother was the daughter of Henry Bard, viscount Bellemont. He was educated at Eton, and was killed at the siege of Buda, in Hungary, in 1686.—*Rees's Cyclop. Biog. Brit.*

RUPPIUS (HENRY BERNARD) a medical student, a native of Giessen, who was enthusiastically attached to botanical investigations. Haller characterizes him as "of a short robust stature, with the eyes of a lynx, unwearying limbs, a penetrating genius, and a most tenacious memory." He travelled through various parts of Germany, subjecting himself to many privations for the sake of indulging in his favourite pursuits. He seems to have died at an early age. The "Flora Jenensis," compiled from his papers, was published in 1718, by J. H. Schutte, and reprinted with additions in 1726 and 1745.—*Rees's Cyclop.*

RUSH (BENJAMIN) an eminent American physician and medical writer, was born near Bristol, in the state of Pennsylvania, Jan. 5, 1745. His parents, who were quakers, were descended from a family who had accompanied the celebrated William Penn. He studied at the college of Princeton, and was placed under the care of Dr Redman, of Philadelphia, in order to acquire a knowledge of the

R U S

medical profession. After spending some time with that experienced physician, he repaired to Edinburgh, where he took his doctor's degree in 1768. On his return to Philadelphia, an attempt being made to form a medical school, he became professor of chemistry therein. On the breaking out of hostilities between Great Britain and the colonies, Dr Rush sided with the great majority of his countrymen, and in 1776 was chosen a member of the congress for the state of Pennsylvania, and was appointed physician-general to the military hospital, which office, in consequence of some misunderstanding, he soon resigned. When the medical colleges of Philadelphia became united under the name of the university of Pennsylvania, he was appointed professor of the institutes of medicine and clinical practice, and about this time gave to the public his "Lectures upon the Cause of Animal Life." In 1793, a year memorable in the medical annals of the United States, on account of the devastation produced by the yellow fever, Dr Rush extremely distinguished himself; and the history of that epidemic, which he published the following year, cannot be too highly valued, both for an accurate description of the disease, and for the many important facts which the author has recorded in relation to it. This eminent and indefatigable man died of a typhus fever, in the month of April, 1813. The tracts of Dr Rush are exceedingly numerous, and highly and deservedly esteemed by his countrymen. The principal of these are contained in an octavo volume, entitled "Essays, Literary, Moral, and Philosophical;" while his medical papers are collected in four volumes, octavo, under the title of "Medical Enquiries," a third edition of which he published in 1807. The reputation of Dr Rush will permanently depend on his history of the several epidemics of the United States, which is a book of authority in every quarter, and principally contributed to make him a member of many of the most distinguished literary associations of Europe.—*American Ann. and Philos. Register.*

RUSHTON. See **RISHTON.**

RUSHWORTH (JOHN) an industrious and useful collector of historical matter, was born in 1607 in the county of Northumberland. His parents were natives of Yorkshire, and related to the Fairfaxes. He was for some time a student at Oxford, which he quitted for Lincoln's-inn, where he remained until he was called to the bar. He was however more attached to politics than to law, and made it his business to attend parliament, the star-chamber, and other courts, when important business was transacting, in order to take notes of what he saw and heard. Being attached to the parliamentary and presbyterian parties, in 1640 he was admitted assistant to Mr Elsynge, clerk of the house of Commons; and for his activity in conveying addresses and messages to the king, at York, recommended to a place in the Excise. In 1643 he took the covenant, and when his relation, sir Thomas Fairfax became general of the parliamentary

forces, he was appointed his secretary. When Fairfax resigned his commission, Mr Rushworth took up his residence at Lincoln's-inn, and was one of the commissioners appointed in 1652 to reform abuses at common law. About the same time he was much engaged in his "Historical Collections," the first part of which was submitted to Oliver Cromwell, and published in 1659. He was chosen member for Berwick-upon-Tweed in 1658, and was appointed one of the clerks of the new council of state. In 1660 he was re-elected for Berwick in the healing parliament; and at the Restoration he endeavoured to ingratiate himself with Charles II, by presenting to him several books of the privy council of the former reign; but he only received the king's thanks, without any farther notice. In 1667 he was made secretary to sir Orlando Bridges, keeper of the great seal, but after the decease of that lawyer, having taken no care of his private affairs, he fell into great distress. He still, however, assiduously employed himself in his collections, until arrested for debt, and committed to the King's Bench prison, where he remained for six years, and died with impaired memory and understanding in 1690, at the age of eighty-three. His "Historical Collection of private Passages in State, weighty Matters in Law, and remarkable Proceedings in Parliament," was published at different times, in folio, until it amounted to eight volumes, including the trial of the earl of Strafford, published in 1680; the first seven volumes of these were reprinted uniformly in 1721. Of this laborious and highly useful compilation different opinions have been formed by the partizans friendly to, or opposed to the cause of Charles I. Rushworth professes great impartiality, but Dr Nalson, a writer employed by Charles II to publish a collection of public transactions, made a formal attack upon his credit, and a long list of his mistakes have been recorded by the authors of the Parliamentary History, which are attributed rather to transcribers than to himself. It is reasonable, however, to believe, that like most of the writers of the day, he was occasionally biassed by his opinions, a fact which will still leave his work the credit of much industry and utility.—*Biog. Brit.*

RUSSEL (ALEXANDER) an eminent physician and naturalist, who was a native of Edinburgh. He received his education at the university in that city, and having taken the degree of MD. he removed to London, whence he soon after embarked for the Levant, and settled at Aleppo, as physician to the English factory. In this situation he assiduously applied himself to the study of the language and manners of the people, and of the natural productions of the country. The result of his inquiries was the publication of his "Natural History of Aleppo, and the Parts adjacent," 1756, 4to, which, together with other important information, contained some interesting observations on the plague. Dr Russel returned to England in 1759, and taking up his residence in the metropolis, he was chosen

one of the physicians to St Thomas's hospital, which office he held till his death in 1770. He was a fellow of the Royal Society, and the contributor of some valuable papers to the Philosophical Transactions.—*Hutchinson's Biog. Med.*—RUSSELL (PATRICK) younger brother of the preceding, was likewise a physician, and a cultivator of the science of natural history. He exercised his profession for a time at Aleppo, and afterwards held a medical situation in the East Indies, whence he returned to his native country, and died in London, July 2, 1805, at the age of seventy. He published an "Account of the Tabasheer," a siliceous concretion found in the joints of canes, in the Philosophical Transactions for 1790; a "Treatise on the Plague," 1791, 4to; an enlarged edition of Dr A. Russel's History of Aleppo; and "Descriptions and Figures of Two Hundred Fishes collected on the Coast of Coromandel," 1803, 2 vols. folio.—*Gent. Mag.*

RUSSEL (WILLIAM) fifth earl, and first duke, of Bedford, was the eldest son of Francis, the fourth earl. He was born in 1614, and received his education at Magdalen college, Oxford. He was a member of the long parliament which met at Westminster in 1640, but soon after succeeded his father in his title and honours. In 1642, having declared against the measures of the court, he commanded the reserve of horse at the battle of Edge-hill; but in 1643 he joined the royal standard, and fought with great bravery at the battle of Newbury, together with the earls of Holland and Clare. Although treated with civility by the king, the retainers of the court acted in such a manner as to induce the three earls to retire to the earl of Essex at St Albans; soon after which the earl of Bedford was taken into custody by order of parliament, and his estate sequestered, which sequestration was, however, on his submission in 1644, removed, and he led a private life until the Restoration, when he assisted at the coronation, and was elected a knight of the garter. The head of a family which favoured the Revolution, he also attended the coronation of William and Mary, who made him lord-lieutenant of the counties of Bedford, Cambridge, and Middlesex; and in 1694 exalted him to the rank of marquis of Tavistock and duke of Bedford. In the enumeration of his merits in the patent, it was expressed, that not the least of them consisted in being the father of the executed lord Russel, the ornament of his age, whose loss it was intended to solace by the accession of dignity. This influential nobleman died in 1700, in his eighty-seventh year.—*Collins's Peerage.*

RUSSEL (lord WILLIAM) third son of the preceding, and a distinguished and admired supporter of liberty, was born about 1641. He was brought up in the principles of constitutional freedom espoused by his father, and he appears to have yielded to the vortex of dissipation introduced by the Restoration, until his marriage with Rachel, second daughter and co-heiress of the earl of Southampton, (then widow of lord Vaughan), which

union wholly reclaimed him. He represented the county of Bedford in four parliaments, and being highly esteemed for patriotism and independence was regarded as one of the heads of the whig party. When Charles II was exasperated at the court of France for withdrawing the pension which his meanness and profligacy induced him to accept, he appeared really desirous of joining the continental confederacy against Louis XIV, and a French war being generally popular in England, the parliament voted a large supply of men and money. The whigs, aware of the king's character, dreaded giving him an army which might as probably be employed against liberty at home as against France, raised an opposition to the measure. This party movement being acceptable to the French king, an intrigue commenced between the leading whigs and Barillon, the French ambassador, the consequence of which was the receipt on the part of some of them of pecuniary assistance, in order to thwart the intended war. From that minister's private despatches, sir John Dalrymple, in his *Memoirs of Great Britain*, has published a list of the members whom he had really bribed; but as the lords Russel and Holland are specified as directly refusing to receive money on this account, the circumstances will hereafter claim notice more regularly in the article ALGERNON SIDNEY. That he was aware of this intrigue can scarcely be doubted, and however pure the object, such proceedings can never be politically justifiable. In 1679, when Charles II found it necessary to ingratiate himself with the whigs, lord Russel was appointed one of the members of the privy council. He soon, however, found that his party was not in the king's confidence, and the recall of the duke of York, without their concurrence, induced him to resign. Although his temper was in other respects mild and moderate, his fear for the Protestant religion, and of a Catholic succession, induced him to take very decisive steps in the promotion of the exclusion of the duke of York. In June 1680 he went publicly to Westminster-hall, and at the court of King's Bench, presented the duke as a recusant; and on the November following, carried up the exclusion bill to the house of Lords, at the head of two hundred members of parliament. The lead which he took in this matter of course highly displeased the court, and was equally operative in a contrary sense upon the public. The king therefore dissolved the parliament, and resolved henceforward to govern without one; and in the spirit of this determination, arbitrary principles were openly avowed by the partizans of the court. Alarmed at the state of things, many of the whig leaders indulged in proportionately strong expedients, in the way of counteraction, and a plan of insurrection was formed for a simultaneous rising both in England and Scotland. Among these leaders, including the dukes of Monmouth and Argyll, the lords Russel, Essex, and Howard, Algernon Sidney and Hampden, different views prevailed; but it is admitted that lord Russel

looked only to the exclusion of the duke of York. While these plans were ripening, a subaltern plot was laid by some inferior conspirators, for assassinating the king on his return from Newmarket, at a lone farm called the Ryehouse, which gave a name to the conspiracy. Although this plan stood quite apart from the great scheme of the insurrection, the detection of the one led to that of the other, and lord Russel was in consequence committed to the Tower. After some of the Ryehouse conspirators had been executed, advantage was taken of the national feeling, to bring him to trial, in July, 1683; and pains being taken to pack a jury of partizans, he was, after very little deliberation, brought in guilty of high treason. "It was proved," says Hume, after describing the evidence produced on the trial, "that the insurrection had been deliberated on by the prisoner; the surprisal of the guards deliberated, but not fully resolved upon; and that an assassination of the king had not been once mentioned or imagined by him." The same author goes on to say, that the English law of treason requiring direct testimony of an overt act, there arose some difficulty, but the crown lawyers, "partly desirous of paying court to the sovereign, and partly convinced of the ill consequence which might attend such narrow limitations, introduced a greater latitude, both in the proof and the definition of the crime." Stripped of the apologetical tone which this historian always employs to palliate illegality under the Stuarts, the law was, on this occasion, stretched to the prisoner's destruction. It is certain at least, that his condemnation was deemed illegal by judge Atkins and many other authorities, not to dwell on the act which on this ground reversed his attainer. Once condemned, such a victim was too agreeable to the court, and to the cold, vindictive feelings of the duke of York, to meet with mercy; and the offer of a large sum of money from his father, whose only son he had now become, to the duchess of Portsmouth, and the pathetic solicitations of his excellent wife, all proved in vain, and he obtained remission only of the more ignominious parts of his sentence. He was too firm to be induced by the divines who attended him to subscribe to the doctrine of non-resistance, then the favourite court tenet of the day; and it is to be regretted that he was induced to write a petitionary letter to the duke of York, promising to forbear all future opposition, and to live abroad, should his life be spared. It is presumed that this letter was written in compliance with the solicitations of his friends, for he nobly refused the generous offer of lord Cavendish to favour his escape by exchanging clothes; and with equal generosity declined the proposal of the duke of Monmouth (then in concealment) to deliver himself up if he thought the step would be serviceable to him. Conjugal affection was the feeling that clung closest to his heart; and when he had taken the last farewell of his wife, he exclaimed, that the bitterness of death was past. He was beheaded in Lincoln's-inn Fields, on the

21st of July, 1683, in the forty-second year of his age. To the character of this regretted nobleman for probity, sincerity, and private worth, even the enemies to his public principles have borne ample testimony. Of his talents Burnet observes, that he was of a slow but sound understanding; and few impartial persons will agree with Hume, that he was a man blinded by party zeal, as the course of proceeding which characterized the years which immediately followed his death, completely justified the apprehensions which had actuated him. With respect to the more problematical points of his public conduct, his best apology is formed by the difficulty in which every honest lover of liberty is necessarily placed, when the extreme case of submission to arbitrary machination is opposed by the difficulty of a perfectly unobjectionable resistance to them. Possibly the honestest man in such cases is in the greatest danger, and posterity upon the whole has not failed to do justice to this estimable, patriotic, and ill-fated nobleman.—*RUSSEL* (LADY RACHEL) the excellent wife of the preceding. Her parentage has been already mentioned; and the affectionate zeal with which she assisted her husband, and the magnanimity with which she bore his loss, obtained the respect and admiration of all the world. Upon his trial she accompanied him into court; and when he was refused counsel, and allowed only an amanuensis, she stood forth as that assistant, and excited the respect and sympathy of all who beheld her. After his death she wrote a touching letter to the king, in which she asserted that the paper delivered by him to the sheriff, declaratory of his innocence, was his own composition, and not, as charged by the court (which was much offended at it), dictated by any other person. She spent the remainder of her life in the exercise of pious and social duties. A collection of letters between her and her correspondents was published in 1773, 4to, which gave farther evidence of her calm magnanimity. There appears no triumph in the expression with which she records the flight of James II; and she passes over in silence the merited fate of the infamous Jeffries, who had behaved with his usual coarseness as a crown lawyer on her husband's trial. This exemplary woman died in 1723, aged eighty-seven.—*Biog. Brit. Hume. Lady R. Russel's Correspondence.*

RUSSEL (FRANCIS) the fifth duke of Bedford, was the eldest son of Francis, marquis of Tavistock, who died March 22, 1767, in consequence of a fall from his horse while hunting. He was born July 22, 1765, and was educated at Westminster school and the university of Oxford. On entering into public life he became intimately connected with C. J. Fox and the whig party; and in 1791 he displayed his talents in the house of Lords, in opposing hostilities against France and the designs of the ministry to form a corps of emigrants in the pay of this country. In 1796 he retired from parliament, with the rest of the whigs; and he seldom made his appearance

again in the house of Lords, till after the change of ministry in 1801. He was a sincere advocate for the conclusion of peace with the French; but he did not live to witness its final settlement, dying of strangulated hernia, February 26, 1802. The duke of Bedford was distinguished rather for solid than brilliant qualities; and his integrity, patriotism, and regard for civil liberty, constitute his most decisive claims to the favourable recollection of posterity. Of the large fortune which he possessed, a considerable portion was directed to the improvement of agriculture and rural economy. By the institution of a public festival, and the distribution of prizes at the season of sheep-shearing, at his seat at Woburn Abbey, and by his influence and example he contributed greatly to the establishment of a taste for georgical pursuits among the nobility and gentry of this country, and their dependants.—*Biog. Univ.*

RUSSEL (EDWARD) earl of Orford, was the grandson of Francis Russel, the fourth earl of Bedford, and was born in 1651. He became gentleman of the bed-chamber to James, duke of York; but on the execution of his cousin, lord William Russel, he retired from court; and when James II succeeded to the crown, he opposed the measures of his government, and used all his influence in promoting the Revolution. Under William III he was a privy-counsellor; and in 1690 he was appointed admiral of the blue, advanced to the command of the navy, and made first lord of the Admiralty. On the 19th of May, 1692, he obtained a signal victory over the French fleet under Tourville, off cape La Hogue; and in 1695 he prevented the invasion of Britain by the French, under the expelled monarch James II. His services were rewarded with promotion to the peerage, by the titles of baron of Shingey, viscount Barfleur, and earl of Orford. In 1701 he was impeached by the house of Commons, and was tried on the charges of corruption and malversation with regard to the supply of the fleet, but he was acquitted. He died without issue, November 26, 1727.—*Collins's Peerage.*

RUSSEL (RICHARD) a physician, who was the son of a London bookseller, and received his education in the university of Padua, where he graduated as MD. He settled as a medical practitioner at Reading, in Berkshire, where he attracted some notice by a dispute with Dr Addington, the father of lord Sidmouth, who had refused to meet him in consultation, on the alleged ground of his having obtained his diploma at a foreign university. The quarrel, however, seems to have rather originated in difference of politics, Dr Addington being a zealous whig, and Dr Russel a tory or a jacobite. He removed to London, and at length to Brighton, and died in 1768. He was the author of a treatise "On the Use of Sea Water in Diseases of the Glands," 8vo.—His brother, JOHN RUSSEL, who was an artist, published "Letters from a young Painter abroad [in Italy] to his Friends in England," 1750, 2 vols. 8vo; and "Elements of

RUT

Painting with Crayons," 1772, 4to.—*Biog. Univ. Reuss.*

RUSSEL (WILLIAM) an historical writer of some eminence in the last century. He was born in the county of Mid Lothian in Scotland, in 1746; and after having been educated at a school at Inverkeithing, he became an apprentice to a bookseller and printer. On the termination of his indentures, he published a "Collection of modern Poems;" and removing to London, he engaged in business as a printer, but afterwards employed his time in writing for the press. He was the author of the "History of America, from its Discovery by Columbus to the Conclusion of the late War," 1778, 2 vols. 4to; and the "History of Modern Europe, with an Account of the Decline and Fall of the Roman Empire, in a Series of Letters," 1779, 4 vols. 8vo, a very popular work, since augmented and republished by Dr Charles Coote. Mr Russel obtained the diploma of LL.D. from a Scottish university, and engaged in other literary undertakings, particularly the "History of Ancient Europe," as an introduction to his former work, the completion of which being interrupted by his death in 1793, owing to a paralytic stroke, the work was finished by Dr Coote, and was printed in three volumes, octavo.—*Chalmers's Biog. Dict. Reuss.*

RUTHERFORD (DANIEL) a physician and natural philosopher of eminence, born at Edinburgh, November 3, 1749. He studied at the university there, and on taking the degree of MD. in 1772, he read a thesis "De Aëre Fixo," in which he first indicated the existence of a new gaseous body, since called azote or nitrogen. He was admitted a fellow of the College of Physicians at Edinburgh, May 6, 1777. In a paper on nitric acid, read before the Philosophical Society in 1778, he described, under the name of vital air, what is now termed oxygen gas, which he represented as the necessary constituent of all acids. In 1786 he succeeded Dr John Hope as professor of botany and keeper of the botanic garden; and he retained those offices till his death, which happened November 15, 1819. Though not distinguished as an author, Dr Rutherford has acquired a permanent title to fame on account of his discovery of nitrogen, which forms a component part of atmospheric air, animal substances, &c.—*Edinburgh Philos. Journ.* vol. iii.

RUTHERFORTH (THOMAS) an English divine, was born at Papworth Everard in the county of Cambridge, of which parish his father was rector, in 1712. He was entered of St John's college, Cambridge, where he obtained a fellowship in 1740. Two years after, he was chosen a fellow of the Royal Society; and in 1745, on being appointed professor of divinity, he took his doctor's degree, and was appointed chaplain to the prince of Wales. His church preferments were successively the rectories of Barrow in Suffolk, of Stanfield in Essex, and of Barley in Hertfordshire, with the archdeaconry of Essex. Dr Rutherford, who died in 1771, was the author of "A

Biog. Dict.—VOL. I. F

RUT

System of Natural Philosophy," 2 vols. 4to "An Essay on the Nature and Obligations of Virtue," 8vo; "A Letter in Defence of Bishop Sherlock on Prophecy," 8vo; "A Discourse on Miracles;" "Institutes of Natural Law," 2 vols. 8vo; "Two Letters to Dr Kennicott;" "A Vindication of the Right of Protestant Churches to require Subscription from the Clergy," 8vo; "A Letter to Archdeacon Blackburne;" "Sermons and Charges."—*Nichols's Lit. Anec.*

RUTGERS (JOHN) an able critic and negotiator, was born of an ancient family, at Dort in Holland, in 1589. He was educated for a time under Gerard Vossius, and completed his education at the university of Leyden, whence he proceeded to France, and took the degree of licentiate of law at Orleans. He returned to Dort, and soon after accepted the invitation of the Swedish ambassador to accompany him to Sweden, where he was made a counsellor of state by Gustavus Adolphus. He was subsequently employed by that monarch on various embassies, and ennobled. He finally resided at the Hague, as minister from that sovereign to the republic, where he died in 1625 at the early age of thirty-six. His works are, "Notæ in Horatium," added to an edition of that poet by Robert Stephens; "Varie Lectiones," published at Leyden in 1618, and justly esteemed a very learned work; notes on Martial, Apuleius, and Quintus Curtius, &c. with several Latin poems, published by Nicholas Heinsius in 1666, in conjunction with his own.—*Moreri.*

RUTILIUS NUMATIANUS, a Latin poet of the fifth century, who, about the year 414, was prefect of Rome. In order to succour his country, then overrun by the Visigoths, he took a journey into Gaul, of which he wrote a description in elegiac verse. It consisted of two books, of which the latter is lost, and what remains gives a favourable opinion of the writer, who was a pagan, although he has undergone censure from Christian writers, for his reflections on the works of Capraria, and as the commemorator of the Jewish Sabbath. The "Itinerarium" of Rutilius, which was discovered in 1694, in a monastery at Bobbio, has been several times printed, and is, besides, contained in Burman's "Poetæ Minores," and Mattaire's "Corpus Poetarum."—*Vossii. Hist. Lat. Moreri.*

RUTTY (JOHN) a physician, was born in Ireland, of quaker parents, in 1698. He was educated first in Dublin and next in London, whence he proceeded to Holland, when having taken his doctor's degree, he returned to Dublin, where he practised with great credit to his death in 1775. He was the author of several works, which display considerable ability, and much eccentricity of character. The principal of these are, "History of the Quakers;" "An Essay on Women's preaching;" "A Synopsis of Mineral Waters;" "A Chronological History of the Weather and Seasons, and of the Diseases of Dublin;" "An Essay towards a Natural History of the Vicinity of Dublin," 2 vols; "Obser

G

ventions on the London and Edinburgh Dispensatories;" "Materia Medica Antiqua et Nova;" "Spiritual Diary and Soliloquies," 2 vols. 8vo, which last production forms a curious picture of mental singularity.—*Chalmers's Biog. Dict.*

RUYSCH. There were two celebrated Dutch physicians of this name, father and son. **FREDERICK**, the elder and more eminent, born in 1638 at the Hague, was the son of a commissary in the service of the States General, and rose by his abilities and perseverance to be one of the most distinguished anatomists of modern times. Having studied medicine and surgery at Leyden and Franeker, in which latter university he graduated, he returned to his native city, and there practised with great success, till the publication of his treatise on the lymphatic vessels, in 1665, procured him an invitation to fill the anatomical chair at Amsterdam. Here he continued to pursue his course of dissection, minutely scrutinizing every part of the human frame, and occasionally publishing the result of his discoveries, some of which, however, appear to have been even then already known, a fact with which his studies, rather of a practical than a theoretical nature, do not seem to have made him sufficiently acquainted. While engaged in this pursuit, he gradually amassed an immense collection of anatomical specimens and preparations, the whole of which were purchased from him at the price of 30,000 florins, by the eccentric czar, Peter of Russia, then on his travels, who often amused himself by attending the professor's demonstrations, and at length bought his museum, for the purpose of encouraging the study of surgery in his new capital. Ruysch was afterwards appointed professor of physic in the same university, and was elected a member of the Royal Society of London, and of the Academy of Sciences at Paris. He continued to enjoy his faculties, with the exception of sight, to a very advanced age, when he died in the spring of 1731, having survived by four years his son Henry, who was himself an excellent anatomist, and author of the "Theatrum Universale Animalium," folio, 2 vols. 1718, a standard work of great value. The works of Frederick Ruysch were collected into five quarto volumes, and printed at Amsterdam four years after his decease. They are entitled "Opera Omnia Anatomico-Medico-Chirurgica F. Ruysch.—*Halleri Bibl. Anat. Eloges de Fontenelle.*

RUYSDAAL. The name of two Flemish artists, brothers, and natives of Haerlem, both, though in different branches of the art, distinguished in the annals of painting. **SOLOMON**, the elder, was born in 1616, and is principally famous for the beauty and accuracy of his representation of marbles, &c.; his landscapes, though good, are far inferior to those of his brother Jacob. The latter was born in 1636, and ranks among the best painters of the Dutch school, especially in the delineation of wood and water, which he gives with great spirit and correctness. He died in his native city in 1681, having survived his brother

about eleven years.—*D'Argenville. Vies de Peint.*

RUYTER (**MICHAEL FITZ ADRIAN**) a celebrated Dutch admiral, born at Flushing in 1607. He entered young into the naval service of his country, and rose from the situation of cabin-boy to that of captain in 1635. He was sent in 1641 to the assistance of the Portuguese, who had thrown off the yoke of Spain; on which occasion he was appointed rear-admiral, and two years after he was employed against the Barbary corsairs. In the war between the Dutch and English, which commenced in 1652, Ruyter repeatedly distinguished himself, especially in the terrible battle fought in February 1653, near the mouth of the Channel, when Blake commanded the English, and Tromp and Ruyter the Dutch. He afterwards served against the Portuguese, the Swedes, and the Algerines, previously to the naval warfare between England and Holland, in the reign of Charles II. He commanded in the great battle fought in the Downs, in June 1666, against prince Rupert and the duke of Albemarle; and, in the following year, he insulted the English by his memorable expedition up the Thames, when he destroyed Upnor castle, and burnt some ships at Chatham. He was admiral of the Dutch fleet at the battle of Solebay in 1672; and he signalized his skill and courage on several other occasions. He died in the port of Syracuse, April 29, 1676, in consequence of a wound received in an engagement with the French, a few days before, off Messina.—*Moreri. Rees's Cyclop. Biog. Univ.*

RYAN (**LACY**) an actor and dramatic author of the last century. He was born in Westminster, about 1694, and was the son of a tailor, who intending him for the profession of the law, sent him to St Paul's school, and afterwards placed him in an attorney's office. This situation he left to go on the stage at the age of sixteen; and two years after he acquired some reputation in the character of Marcus, in Addison's Cato. An accidental wound in his mouth impeded his utterance, and rendered his voice disagreeable; but previously to that misfortune, he displayed so much ability, that Garrick is said to have derived his excellence in the part of Richard the Third from his observation of Ryan's manner of playing it. He was the author of a little piece, in one act, called "The Cobler's Opera." His death took place August 15, 1760.—*Biog. Dram. Thesp. Dict.*

RYCAUT or **RICAUT** (**SIR PAUL**) an English traveller and historical writer of eminence, who was the youngest son of sir Peter Rycaut, knight, a merchant of London. He was educated at Trinity college, Cambridge; and in 1661 he went to Constantinople, as secretary to the earl of Winchelsea, ambassador extraordinary from Charles II to the grand seignor. He visited various parts of Asia and Africa while he held this situation, and travelled twice between London and Constantinople, going the second time over land through Hungary, when he remained for a while in the

RYE

Turkish camp of the visier Kupriogli. He was afterwards made English consul at Smyrna; and having exercised that office about eleven years, he was recalled at his own request. He then appears to have led a private life at home, till the reign of James II, under whom he became secretary for the provinces of Leinster and Connaught to the earl of Clarendon, lord-lieutenant of Ireland; and was also one of the Irish privy council, and a judge of the high court of admiralty, all which offices he held till the Revolution. He, notwithstanding, was appointed English resident at the Hanse Towns, Hamburg, Lubeck, and Bremen, where he continued ten years, and returning to England, died soon after, November 16, 1700. Sir Paul Rycout was the author of a paper in the Philosophical Transactions, relative to the appearance of swarms of Norway rats, or sable mice, in Poland; and he published several historical and political tracts; but his principal productions are, "The Present State of the Ottoman Empire," 1670, folio, and a continuation of Knolles's "History of the Turks," from 1623 to 1700, forming, together with that work, 3 vols. folio. He translated from the Latin, Platina's "Lives of the Popes;" and from the Spanish, Garcilasso de la Vega's "History of Peru."—*Le Neve's Monumenta Anglicana. Biog. Brit.*

RYCKIUS or DE RYCKE (THEODORE) a Dutch advocate of the seventeenth century, born about the year 1640. He became professor of history in the university of Leyden; and besides superintending the publication of excellent editions of Tacitus, in 2 vols. 12mo, and of Stephen of Byzantium, folio, was the author of two original treatises, on the first colonization of Italy, and on the giants of antiquity. His death took place at Leyden in 1690.—*Saxii Onom.*

RYDER (sir DUDLEY) an eminent English lawyer, born in 1691. He was descended from an ancient Yorkshire family, and having received a liberal education, he entered on the study of his profession. In 1733 he was appointed solicitor-general; and in 1736 advanced to the office of attorney-general. After holding that post eighteen years, he was made lord-chief-justice of the King's Bench; and he was about to be elevated to the peerage, by the title of lord Ryder, baron of Harrowby, in Leicestershire, when he died, while the patent was preparing, May 25, 1756.—His son, NATHANIEL RYDER, was created baron Harrowby in 1776, and died in 1803. He was succeeded by his eldest son, since created earl of Harrowby and viscount Sandon.—*Biog. Peer. Rees's Cyclop.*

RYER. The name of two ingenious French writers, who both flourished about the middle of the seventeenth century. PIERRE DU RYER, born at Paris in 1605, held, in the early part of his life, a small post at the court of Louis XIII, which the poverty of his circumstances compelled him to dispose of. He eventually became secretary to the duke of Vendome, and historiographer to the king, being at the same time a member of the Aca-

RYM

demey. He was the author of nineteen original compositions for the stage, and the translator and adapter of several others, most of which were eminently successful in their day. His death took place in 1658.—ANDREW DU RYER, sieur de Malesais, born at Marcigny, held a place about the king's person, having been for some time previously resident in a mercantile situation in Turkey. Of the language of this country he afterwards published a compendious Grammar, together with a French version of the Koran. He also translated the "Gulistan" of the Persian poet Sadi. His death took place in 1640.—*Bayle. Nouv. Dict. Hist.*

RYLAND (WILLIAM WYNNE) an eminent engraver, was born in London, in the year 1732. His genius for the fine arts manifested itself early in life, and he was placed under Ravenet. At the expiration of his engagement, he was patronized by sir Watkin Williams Wynne, his godfather, and went to Paris, where he studied for five years under Boucher, from whose design he engraved his best work of Jupiter and Leda. He gave other proofs of ability, which gained him the gold medal, and, in consequence, liberty to pursue his studies in the academy at Rome, which he did very successfully. From Boucher he however acquired a false and meretricious taste, from which he never fully recovered; and this error was heightened by the fashion of stippling, which he introduced with modifications of his own into England, where his engravings in this way, for the most part printed in red, for a time entirely caught the taste of the public. His principal pieces were after Angelica Kauffman. The end of this able artist was very melancholy, being executed for a forgery on the East India Company, to which rash act he was induced by temporary embarrassment. This event took place in August 1783.—*Strutt. Life of Ryland.*

RYMER (THOMAS) a critic and antiquary, was probably a native of Yorkshire, as he received his early education at Northallerton grammar-school. He afterwards studied at Cambridge, and on quitting the university entered at Gray's-inn. In 1678 he published "Edgar, a Tragedy," and wrote a work entitled "A View of the Tragedies of the last Age," in which he severely criticised our earliest dramatists, not excepting Shakspeare. It is, however, as an historical antiquary that he is chiefly celebrated. Succeeding Shadwell, in 1692, as royal historiographer, he meritoriously employed the opportunities afforded him by his office, to make a collection of public treaties and compacts, which he began to publish in 1704, under the title of "Foedera, Conventiones, et cujuscunque generis Acta Publica, inter Reges Angliæ et alios Principes, ab an. 1101," of which he completed 15 vols. folio, five more being added by Robert Sanderson. Although confused and ill-digested, it is a publication of great value and fundamental to an accurate knowledge of English history. Rymer died in 1713. Some specimens of his poetry may be found in the

first volume of Nichols's Select Collection of Miscellaneous Poems. Besides the "Fœdera," he left an unpublished collection relating to English history, in 58 volumes, now in the British Museum.—*Aikin's Biog. Dict. Sarii Onom.* See SANDERSON (R.) No. 2.

RYSBRACH (JOHN MICHAEL) a statutory of great eminence, the son of a painter of Antwerp, in which city he was born in 1694. He came to England early in life, and derived considerable reputation and profit from the exercise of his art, of which Westminster abbey, and other of our cathedral churches, contain many admirable specimens, among which may be mentioned the monuments of sir Isaac Newton and the duke of Marlborough; while others, and especially busts, enrich our best private collections, the heads of English worthies at Stowe, and in the Hermitage at Richmond, being of the number. His death took place in 1770. Some other members of his family distinguished themselves in the sister art of painting.—*Walpole's Anec.*

RYVES. There were two learned and distinguished characters of this name in the reign of the first Charles, natives of Dorsetshire, and descended of the same family. Of these **DR BRUNO RYVES** received his education at the university of Oxford, being first a fellow of New college, and afterwards chaplain of Magdalen. His attachment to the royal cause drew on him the persecution which so many of his brethren shared with him in common; and during the commotions, he was exposed to considerable inconvenience and deprivation, especially with regard to the profits of his ecclesiastical preferment, the livings of Stanwell, and St Martin by the Vintry, London. For much of this he was indebted to his publication of a periodical work, entitled "*Mercurius Rusticus*," commenced by him in the autumn of 1642, and levelled strongly against the parliament. He was also the author of an "Account of the Lords and Persons of Quality Slain or Executed during the Civil Wars;" a pamphlet entitled "*Querela Cantabrigiensis*;" and a few sermons; and assisted in the compilation of Walton's Polyglott Bible. On the return of Charles the Second, his exertions were rewarded with the living of Acton in Middlesex, and the deanery of Windsor. His death took place in 1677.—**SIR THOMAS RYVES**, his contemporary, was a civilian of considerable talent and learning, to which he appears to have joined all the loyalty of his relative. He received the rudiments of a classical education on the foundation at Westminster, which he

completed at New College, Oxford, where he graduated in civil law, and afterwards did good service to the king, both with his pen and sword, for which he received the honour of knighthood. In 1618 he was made a master in chancery, and subsequently went to Dublin as judge of the prerogative court. He was a man of considerable classical and antiquarian research, as is evinced by his "*Historia Navalis Antiqua*;" "*Historia Navalis Media*;" "*A Defence of the English Sway in Ireland*;" "*A Defence of the Emperor Justinian*;" "*The Vicar's Plea*;" and other learned works. He died in 1651, and lies buried in the church of St Clement Danes, London.—*Athen. Oxon. Fuller's Worthies.*

RZEWSKY (WENCESLAUS) a Polish nobleman of an ancient family, born in 1705. He was educated at the college of Belts, and afterwards travelled through the principal countries of Europe. Returning to Poland, he was placed at the head of the chancellery; and his leisure was devoted to the study of public law and history. After the death of king Augustus II, in 1733, he declared in favour of Stanislaus Lecinski, and on the failure of his attempts to secure the crown, Rzewusky went into voluntary exile. He subsequently accepted of the office of grand-marshal of the diet, under Augustus III, who recompensed his services by the palatinate of Podolia, and soon after appointed him marshal of the tribunal of Lublin. He distinguished himself against the Tartars, on their invasion of Poland in 1739, when he was created general of the crown. His endeavours to preserve the independence of his country, on the election of Stanislaus Poniatowski, under the influence of Russia, gave offence to the empress, and he was arrested and conveyed to Smolensk, and afterwards to Kaluga. In his confinement he employed himself in translating into Polish verse, the Psalms of David, and the Odes of Horace. Six years elapsed before he was permitted to return home, when he retired to a small estate at Siedliska, and, rejecting all offers of court favour, he remained there till his death in November 1779. Count Rzewusky possessed an extensive acquaintance with natural philosophy, botany, and medicine; and he cultivated with equal success literature, music, and architecture. Besides discourses, letters, and dissertations in Latin, he composed, in his native language, "*A New Art of Poetry*;" two tragedies, two comedies, &c.—*Bug. Univ.*

S A or DE SAA (EMANUEL) a learned Portuguese jesuit, was born at Conde, in the province of Douro, in 1530, and he entered the society in 1545; and after the usual course of studies at Coimbra, he proceeded to Rome, where he was employed by Pius V on

a new edition of the Bible. He died in 1596. His chief works are, "*Scholia in Quatuor Evangelia*," 1596, 4to; "*Notationes in totum Sacram Scripturam*," 1598, 4to, both which works are much praised by Dupin. He was also author of another small work, en-

titled "Aphorismi Confessorum," Venice, 1595, a set of rules for confessors in cases of conscience, which, like many other works of the same kind, has been thought occasionally loose and dangerous both as to morals and policy. It underwent many corrections before the pope would allow it to be licensed, in the year preceding the death of the author.—*Dupin. Moreri.*

SAAD EDDIN MOHAMMED BEN HASSAN, the most celebrated among the Turkish historians, also known by the appellation of Khodja Effendi. He became preceptor to the sultan Amurat III; and was subsequently appointed mufti, which office he held till his death, about the year 1600. He was the author of a work entitled "The Crown of Histories," containing an account of all the Turkish emperors to his own times. This Chronicle was translated into Italian by Vincent Brattuti, and into Latin by Kollar. A. L. Schloezer, in his *Critico-Historical Amusements*, Gottingen, 1797, 8vo, has given full details of the Chronicle of Saad Eddin, which has been continued from 1510, where the author concluded it, to 1751, by five other historiographers appointed for that purpose by the sultans.—*Biog. Univ.*

SAADI. See **SADI**.

SAADIAS-GAON, a learned rabbi, and the chief of the academy of the Jews, was born at Pothim in Egypt, in 892. In 927 he was invited by David-ben-Chair, prince of the captivity, to preside over the academy of Sora near Babylon, which office, with some interruption, he held until his death in the year 942. His principal works are, "Sepher Haemimah," a treatise concerning the Jewish articles of faith; "A Commentary on the book Jezirah;" "An Arabic version of the entire Old Testament," of which the Pentateuch is inserted in Jay's and Walton's Polyglots, accompanied by the Latin version of Sionita; "Commentaries" on the Song of Songs, and on Daniel, in Hebrew; and on the book of Job, in Arabic.—*Moreri. Simon Hist. Crit.*

SAAS (JOMN) a learned French writer on bibliography, born in 1703. He studied at Rouen in Normandy, and having adopted the ecclesiastical profession, he became secretary to the archbishop of Rouen, and afterwards librarian to the metropolitan chapter, a situation which afforded him an opportunity for indulging his taste for literary research. In 1751 he obtained a canonry, as a recompense for his zeal in defence of the privileges of his church, which had been invaded by the Benedictine monks of the abbey of St Ouen at Rouen. He intended to publish a supplement to Moreri's Historical Dictionary, but ill health obliged him to lay aside the undertaking; and after having languished some years, he died of apoplexy, April 20, 1774. He was the author of "Notice des MSS. de la Bibliothèque de l'Eglise Metropolitaine de Rouen," 1746, 12mo; "Abrégé de Cosmographie;" "Remarks on the Dictionaries of Chaupefié, Ladvoat, and Moreri;" "Let-

ters on the Encyclopédie;" and various other works.—*Biog. Univ.*

SAAVEDRA FAXARDO (DIZGO de) a Spanish author, descended of a noble family, settled at Algezares, in the kingdom of Murcia, where he was born in 1584. His talents as a diplomatist, which first displayed themselves during his secretaryship to the embassy at Rome, occasioned his being afterwards entrusted with the entire management of the Spanish interests in that capital. He was afterwards employed in several other missions, especially in conducting a negotiation with the Swiss cantons, and received as a reward for his services the collar of St Jago, a lay canonry belonging to the order, and a seat at the supreme council-board for the Indies. Among his writings are, "The Idea of a Politic Christian Prince," since translated into Latin; "The Literary Republic," which has also been translated both into the French and English languages; and "The Gothic Crown, &c." His death took place in 1648.—*Antom. Bibl. Hisp.*

SAAVEDRA. See **CERVANTES**.

SABATAI SEVI, a Jewish impostor of the seventeenth century, who aspired to the character of the Messiah. He entered on his pretended mission in Turkey, and deluded great multitudes of his countrymen, who eagerly flocked to him as their expected leader to the promised land. The government becoming alarmed at his progress, he was seized and sent prisoner to Constantinople. Being brought before the grand seignor, he was interrogated as to his claims to the Messiahship of the Jews, when he persisted in asserting his right to the character, and declared that he was endowed with the power of working miracles. The sultan told him he should have an immediate opportunity of displaying his supernatural powers, if he possessed any; and ordered him to be fastened to a post, opposite to which a dozen janizaries were drawn up ready to fire at him. Sabatai, finding matters so serious, was glad to save his life at the expense of his religion, and turned Mahometan. This pretender, who made his appearance about the year 1666, was the last of a long train of false Messiahs, who, from the time of Judas of Galilee and Barcochab, had deluded the credulous posterity of Jacob.—*Bp. Kidder's Demonstration of the Messiah.*

SABATIER (ANROINX) called Sabatier de Castres, from the place of his birth, which occurred in 1742. Having finished his studies he assumed the clerical tonsure, and the title of abbé; but he devoted himself to the profession of literature. At first he was protected by Helvetius, and connected with the philosophical party of the French literati, whose society he left, and manifested his enmity to them as a public opponent. His work, entitled "Les Trois Siècles de la Littérature Française, ou Tableau de l'Esprit de nos Ecrivains, depuis François I, jusqu'en 1772," procured him a great many enemies, and brought him into notice. In 1775 the count de Vergennes invited him to Versailles, procured him a con-

aidable income, and gave him an apartment in the palace. He assumed the character of an ardent defender of religion and morality, while his own conduct was very discreditable, and becoming generally despised, he emigrated at the Revolution. After a few years, having exhausted his means of subsistence, and had recourse to some very unfair methods of raising money from the booksellers, he endeavoured to get permission from the imperial government to return to France. In vain he lavished on Buonaparte the titles of Saviour of France, hero, and demi-god; his flatteries had no effect, and it was not till after the restoration of the king that he again appeared in his native country. Instead of recovering, as he had expected, his pensions and arrears, he could obtain only 3,500 francs a-year; and he therefore resumed his trade as a libeller, freely censuring the court and the clergy. Age augmented his necessities, and being seized with sickness, he was taken to the house of the Charitable Sisters at Paris, where he died June 15, 1817. His works are very numerous, including "Les Siècles Païens, ou Dictionnaire Mythologique, Heroïque, Politique, Littéraire, et Géographique de l'Antiquité Païenne," 1784, 9 vols. 12mo; and "Les Caprices de la Fortune, par M. l'Abbé Sabatier de Castres, précédés d'une Notice sur la Vie de ce Critique célèbre," 1805, 3 vols. 12mo.—*Biog. Univ.*

SABATIER (FRANÇOIS) born in 1755 at Condom, was a tutor in the college of Chalons, and is known as the author of several tracts on historical and miscellaneous subjects, the principal of which are his dissertations "On the Manners, Habits, and Customs of the Ancients," 3 vols.; "The Children's Manual;" "On the Rise and Progress of the Temporal Power of the Popes;" a treatise "On various Subjects connected with the History of France;" and a compendious classical dictionary, in 36 octavo volumes. An unfortunate speculation in a paper manufactory reduced him to indigence a short time before his death, which took place in 1807.—*Id.*

SABATIER or SABATHIER (PIERRE) a French writer of the last century, was a native of Poitiers, and entering the church, assumed the habit of the order of St Benedict at St Maur. His "Bibliorum Sacrorum Latinæ Versiones Antiquæ," which appeared in 1743, in three folio volumes, is a work of great labour, which occupied twenty years in the compilation, and contains a complete collection of all the old Latin versions of the Scriptures. Sabatier did not live to witness its publication, dying at Rheims in the spring of 1742, after which De la Rue continued and produced it.—*Nouv. Dict. Hist.*

SABATIER (RAPHAEL BIENVENU) an eminent French surgeon, was born in the metropolis in 1732, and became an associate both of the Institute and the Academy of Sciences. He was the author of a variety of able treatises connected with his profession, especially of a valuable work on the anatomy of the hu-

man frame, in three volumes, octavo. Among his writings are, "On the various Methods of Extracting the Cataract," 4to; "Thèses Anatomico-Chirurgiques," 4to; "De la Médecine Opératoire;" and "De la Médecine Experimentative;" each in 3 vols. 8vo. His death took place at Paris in 1811.—*Id.*

SABBATINI (ANDREW) known by the name of Andrea del Salerno, was born about 1480, and is deemed the first artist claiming notice in the Neapolitan school. He studied under Raphael, whose manner he imitated with success. Of his numerous works at Naples, the altar-pieces at St Marie delle Grazie are deemed the most valuable. He painted likewise at Salerno, Gæta, and other places, for churches and private collections, where his madonnas often rival those of Raphael.—LORENZO SABBATINI, also Lorenzo di Bologna, another admired painter, of the sixteenth century, executed many good pictures, which are often mistaken for those of Andrew.—*Pilkington by Fuseli.*

SABBATINI (P. LUD. ANT.) commonly known by the designation of Sabbatini of Padua, an able writer on the science of music, of which he was a distinguished professor, having studied counter-point under Padre Martini and Vallotti. His principal work is entitled "La vera Idea delle Musicali Numereche Signature," printed at Venice in 1799. Among his other writings on this subject are "Elementi teoratici e pratici di Musica," Rome, 1790; a "Treatise on Fugue," 2 vols. Venice, 1801; and a great variety of church music; especially a grand mass composed for the funeral of Jomelli. His death took place in 1809, in his native city, where he held the situation of chapel master to the church of St Anthony.—*Biog. Dict. of Mus.*

SABELLICUS (MARCUS ANTONIUS COCCIOS) an Italian historian and critic, was born in 1436, in Roma Campagna. In 1475 he became professor of eloquence at Udino, and afterwards at Venice, where he obtained a pension for writing the history of the republic, entitled "Rerum Venetiarum ab Urbe conditâ," folio, which was published in 1487, and forms a very beautiful specimen of early printing. He also published a "Description of Venice;" "A Dialogue on the Venetian Magistrates;" and "Rhapsodum Historiarum Enneades," comprising a general history from the creation of the world. His other works, consisting of discourses, moral, philosophical, and historical, with several Latin poems, are printed in 4 vols. folio, Basil, 1560. He died in 1506.—*Tiraboschi.*

SABELLIUS, an heresiarch of the third century, a native of Ptolemais, in Libya, and the disciple of Noetus of Smyrna. He became the founder of a sect which acquired many proselytes both in Palestine and in Rome. Its peculiar doctrines were, the absolute identity of the persons of the Trinity, consequently that the Father and the Holy Ghost suffered death upon the cross, as well as the Son, the two latter being in fact mere qualities. These opinions were first promul-

ized about the year 260, and continued to make considerable progress till St Denys wrote ably against them, and they were at length formally condemned at a general council held at Constantinople in 381.—*Mosheim. Dupin.*

SABINUS (**GEORGE**) whose German name was Schalten, a modern Latin poet, was born in the electorate of Brandenburg in 1508. At the age of fifteen he was sent to Wittenberg, where he was privately instructed by Melancthon. In his twenty-second year he published a poem, entitled "*Res Gestæ Cæsarum Germanorum*," which procured him great reputation. He afterwards travelled into Italy, and on his return married the daughter of Melancthon. He subsequently became professor of belles lettres at Frankfort on the Oder, and rector of the new university at Königsburg, which was opened in 1544. His learning and reputation having made him known to Charles V, he was ennobled by that sovereign, who also employed him in several embassies. He died in 1560. His poems were published at Leipsic, in 1558 and 1597. He also published other works, which are enumerated by Nicéron.—*Nicéron*, vol. xxvi.

SACCHETTI (**FRANCIS**) an Italian novelist, born at Florence, of an ancient family, about 1335. Raised by his merit and connexions to the first civil offices in his native city, he acquired by his conduct the reputation of being an honest and enlightened magistrate. In 1385 he was nominated podestat of Bibbiena, and there he is supposed to have written his tales, which are esteemed next to those of Boccaccio, though far from equalling the Decameron, which however they rival in licentiousness. Sacchetti travelled, and became acquainted with Boccaccio, whose death he lamented in an elegy. His own death is supposed to have happened about 1410.—*Biog. Univ.*

SACCHI (**ANDREA**) an eminent painter, born at Rome in 1594. He was a pupil of Francis Albano, whose beauty of design and colouring, and whose facility of execution he successfully imitated. He was employed in ornamenting the Vatican; and twelve of the principal Roman churches exhibited specimens of his works. Pope Urban VIII. patronized Sacchi, who derived celebrity, not only from his own productions, but also from those of his numerous disciples. He closed his long career of professional excellence at the age of seventy. Many of his paintings are described by the abbé Titi, in his account of the works of art in the churches and palaces of Rome.—*Orlandi Abeced. Pittor.*

SACCHINI (**ANTONIO MARIA GASPARO**) a celebrated Italian composer, was born in 1735, at Naples, and studied under Durante, at the conservatory of St Onofrio, in that capital, where he acquired great skill in the practical as well as theoretical part of his profession, particularly in the management of the violin. On leaving this excellent seminary he soon raised himself into notice, and in 1762 obtained an engagement as composer to the

principal theatre in Rome. This situation he filled about seven years, when he proceeded to Venice, and there succeeded Galuppi in the superintendence of the conservatory of L' Ospedaleto. In this school, which is dedicated entirely to the instruction of females, he had among his pupils the afterwards highly celebrated Gabrielli, Pasquali, and Canti. In 1772 he came to England, where he remained nine years; but a cabal being formed against him, at the head of which was his quondam friend Rauzzini, he suffered, though very undeservedly, both in reputation and fortune, the former being especially affected for a time by a report encouraged, if not circulated, by his enemies, that Rauzzini was the real author of many of the pieces to which Sacchini had set his name. In 1784 he quitted this country finally for Paris, where he soon rose to the height of his fame, and received a pension from the queen, but did not long enjoy this return of prosperity, dying in 1786. Of his dramatic pieces, which are upwards of eighty, the principal are his operas, "*Tamerlane*," "*The Cid*;" and "*Evelina*."—*Burney's Hist. of Mus. Biog. Dict. of Mus.*

SACHEVERELL, DD. (**HENRY**) a divine of the establishment, exalted into temporary importance by the conflicting spirit of party, was the son of a clergyman at Marlborough. The date of his birth is not recorded, but he was chamber-fellow at Magdalen-college, Oxford, with Addison, who addressed to him his "*Account of English Poets*." He distinguished himself while at the university, by some able Latin poetry, and became fellow of his college, and ultimately obtained the degree of DD. in 1708. In 1705 he was appointed preacher of St Saviour's, Southwark, and while in this station, preached his two famous sermons, one at Derby, on August 14, 1709, and the other at St Paul's, on the 9th of November following. The object of these, in reality weak and incendiary compositions, was to rouse apprehensions for the safety of the church, and to excite a rancorous hostility against the dissenters. Being foolishly impeached in the house of Commons, he was brought to trial on the 27th of February, 1709-10, and after a hearing of six days, sentenced to be suspended from preaching for three years. This prosecution however excited such a spirit in the high church party, that it ultimately overthrew the ministry, and to complete the satire, established the fortune of Dr Sacheverell, who, during his suspension, made a sort of triumphal progress through the kingdom, and was collated to a living near Shrewsbury. The same month that his suspension terminated, he was appointed to the valuable rectory of St Andrew, Holborn, by queen Anne; and such was his reputation, that the copy-right of the first sermon which he afterwards was allowed to preach, sold for 100l. He had also sufficient interest with the new ministry to provide handsomely for a brother; and, to crown his good fortune, had a considerable estate left him by a relation. Little was heard of him after this party ebull-

tion subsided, except by his numerous squabbles with his parishioners. The abilities of this turbulent divine, even according to writers on his own side, were contemptible, and, if we may credit Dr Swift, he was despised and hated by the very ministry whom his accidental notoriety so much contributed to support. He died in 1724.—*Chalmers's Biog. Dic.*

SACHS (JOHN) one of the most celebrated of the early German poets, termed Mastersingers. (See FOLCZ, J.) John, in German Hans Sachs, was the son of a tailor of Nuremberg, where he was born November 5, 1494. He was sent to a Latin school at the age of seven, and in his fifteenth year apprenticed to a shoemaker. Two years after, he became the pupil of Nunnenbeck, a weaver, who belonged to the corporation of the Mastersingers; and having been instructed in the art of poetry, he set off on his travels in search of opportunities for improvement in the gentle crafts of making verses and making shoes. Such was his industry and success, that on his return to Nuremberg in 1516, he was admitted a master-shoemaker; and he obtained high reputation as a poet. He studied indefatigably the works of the ancient German bards, and those of the great Italian writers, especially Petrarch and Boccaccio; but, above all, he devoted himself to the study of the Bible, and the works of Luther, whose doctrines he embraced, and whose cause he materially assisted by his compositions. His death occurred January 19, 1578. A collective edition of his works appeared at Nuremberg, 1576—79, 5 vols. folio; and they were republished at Kempten, 1616, 5 vols. 4to. Selections from the poems of Hans Sachs have been published by J. G. Busching, at Nuremberg, 1816; and by F. Furchau, at Leipsic, 1818. Goethe, in one of his legendary tales, has professedly imitated this prince of the Mastersingers. Many of his pieces are dramatic, and he is regarded as the inventor of both tragedy and comedy among the Germans.—*Retrospect. Rev. Biog. Univ.*

SACKVILLE (THOMAS) lord Buckhurst and earl of Dorset, an accomplished statesman and poet, was the son of sir Richard Sackville, of Buckhurst, in the parish of Witham, in Sussex, where he was born in 1527. He was first of the university of Oxford, and as it is supposed of Hart-hall, now Magdalen-hall; but taking no degree there, he removed to Cambridge, at which university he graduated MA. and afterwards became a student of the Inner Temple. At both universities he was distinguished for his performances in Latin and English poetry, and he carried the same taste and talents to the Temple, where he wrote his tragedy of "Gorboduc." He was a representative in parliament for Westmoreland, in the fourth and fifth years of queen Mary, and about the same time laid the plan of a poem intended to comprehend a view of all the illustrious but unfortunate characters in English history, which he entitled the "Mirror of Magistrates." On this work he finished a poetical preface,

and one legend on the life of Henry Stafford, duke of Buckingham. In 1561 his tragedy of Gorboduc was performed in the Inner Temple, and subsequently before queen Elizabeth at Whitehall. He was member in the two first parliaments of the latter sovereign, for Sussex, and for Bucks. after which he travelled, and was, for some cause or other, in prison at Rome, in 1566, where he received an account of the death of his father, and his succession to a large inheritance. He soon obtained his liberation, and in the following year was knighted, and raised to the peerage by the title of baron Buckhurst. He was employed by Elizabeth as the head of an embassy to compliment Charles IX on his accession to the throne of France, but fell into disgrace, and was imprisoned, owing to the influence of the favourite, Leicester, in consequence of his honest report in his disfavour, when sent on an embassy of inquiry into his conduct in Holland. On the death of Leicester, he was released, made a knight of the garter, and by royal influence chosen chancellor of the university of Oxford. In 1598 he was joined with Burleigh in negotiations for peace with Spain, and signed the treaty which followed with the States General. On the death of that sagacious minister, he also succeeded him as lord high treasurer. In this situation he was instrumental in discovering the dangerous projects of the earl of Essex, at whose trial he presided as high steward, in which office he conducted himself with great prudence and humanity. On the accession of James I, his post of treasurer was confirmed to him, and in 1604 he was created earl of Dorset. He died suddenly, at the council-table, in April, 1608, at the age of eighty. This nobleman ranks among the most prudent and able, if not among the most eminent of the ministers of Elizabeth, and was a good speaker, and a still better writer. As a poet, he may be deemed the first who approached to perfection in the English heroic stanza, and for having given the first example of regular tragedy in blank verse. His tragedy of "Gorboduc," or, as entitled when printed in 1671, "The Tragedie of Ferrex and Porrex," is a sanguinary story from early British history, composed with little pathos or attention to dramatic rules; but with considerable force of poetical conception, and moral sentiment. The language is also pure and perspicuous, and free from the turgidity which soon after prevailed. This tragedy has been several times printed, but as a drama has never been very popular. Several of the letters of the earl of Dorset are in the Cabala, and there is also a Latin letter by him to Dr Bartholomew Clarke, prefixed to that writer's translation from the Italian of the "Courtier" of Castiglione, printed in 1571.—*Collins's Peerage. Warton's Hist. of Eng. Poetry.*

SACKVILLE (CHARLES) sixth earl of Dorset and Middlesex, descended in a direct line from the preceding, was born January 24, 1637. He received his education under a private tutor, and after making the tour of

Italy, was chosen member for East Grinstead in the first parliament which assembled after the Restoration. He made a great figure as a speaker, but declined all public employment, being wholly engrossed with gallantry and pleasure. He however served as a volunteer in the first Dutch war in 1665, and the night before the engagement composed his celebrated song of "To all you ladies now at land," which is esteemed one of the happiest of his productions. He succeeded to the estate of his uncle, James Cranfield, earl of Middlesex, in 1674, and in 1675 to his title by creation. In 1677, on the death of his father, he also succeeded him in his estate and the title of Dorset. He utterly disliked and discountenanced the violent measures of James II, and early engaged for the prince of Orange, who made him lord chamberlain of the household. In 1698, on the decline of his health, he retired from public affairs, and died January 19, 1705-6, leaving a son and daughter, the first of whom was created duke of Dorset in 1720. Lord Dorset wrote several small poems, which are included in Chalmers's collection, but they are not numerous enough to make a volume of themselves. He was still more celebrated as a patron of poets, and of men of wit, who in their turn have been very copious in their panegyric; and Prior, Dryden, Congreve, and Addison, all bear testimony to his merit. He was a very able critic; and Butler owed it to him that the court relished his Hudibras. His own brief productions are those of a man of wit, gay, vigorous, and airy.—*Piag. Brit. Collins's Peerage.*

SACKVILLE (GEORGE) viscount Sackville, an English military officer and statesman, who was the third son of the first duke of Dorset, and was born in 1716. He was educated at Westminster school and Trinity college, Dublin, whither he removed while his father was lord lieutenant of Ireland. Entering into the army, he served with reputation at the battles of Fontenoy and Dettingen; and in 1758 he had attained the rank of lieutenant-general. The following year he commanded the British cavalry at the battle of Minden, under prince Ferdinand of Brunswick, whose orders to advance with his troops during the engagement he disobeyed, either from cowardice or misapprehension. His behaviour was generally attributed at home to the former cause, and a violent outcry was raised against him, in the midst of which he was tried by a court-martial, convicted of dereliction of duty, and sentenced to be dismissed from the service, with peculiar marks of the royal displeasure. Under the administration of lord Bute, he was restored to favour. In 1775 he was appointed colonial secretary of state, and he held that office during the progress of the disastrous war with America. On relinquishing his post in 1782, he was created a viscount; and he survived his elevation to the peerage about three years, dying in 1785. To this nobleman has been ascribed the composition of the "Letters of Junius." He was suspected of being their author by sir William

Draper; his talents appear to have been equal to the production of such a work, and his political principles led him to the same side of the question as was espoused by Junius. It is said, indeed, that on one occasion his lordship privately observed to a friend of his, "I should be proud to be capable of writing as Junius has done; but there are many passages in his letters I should be very sorry to have written." This declaration, however, is not quite inconsistent with the circumstance of his having been the author; but the fact that lord G. Sackville is roundly accused of want of courage by Junius is certainly adverse to the imputation of authorship. For a considerable part of his life this nobleman was called lord G. Germaine, having taken that name on succeeding to an estate left him by lady Elizabeth Germaine, the friend and correspondent of Swift and Pope, who died in 1769.—*Woodfall's Edit. of the Letters of Junius, Pref. Europ. Mag.*

SADE (JAMES FRANCIS PAUL ALPHONSE DE) the third son of the marquis de Sade, was born in 1705. Having adopted the clerical profession, he became vicar-general of the archbishop of Toulouse, and afterwards of the archbishop of Narbonne. The states of Languedoc having employed him on a mission to the court, he resided several years at Paris; and in 1744 he was nominated abbot of Ebreuil, in Auvergne. About 1752 he retired to Saumane, a league from Vaucluse, where he devoted himself entirely to study, and wrote his "*Mémoires sur la Vie de Petrarque*," 1764, 3 vols. 4to, on which his literary reputation depends. He died December 31, 1778. Besides the preceding, he was the author of "*Remarques sur les premiers Poètes Français et les Troubadours*."—*Bing. Univ.*

SADE (DONATIAN ALPHONSE FRANCIS, count de) nephew of the preceding, was born at Paris in 1740. He was educated in the college of Louis le Grand, and afterwards entering into the army, he served during the seven years' war in Germany. He returned, in 1766, to Paris, and married the daughter of a president of the court of Aids. His conduct became most disgracefully dissipated, and after having escaped by flight from justice, and wandered for some time in Italy, he returned to France, and was taken and confined in the castle of Vincennes. He was afterwards transferred to the Bastille, where he remained at the Revolution. Being then set free, he continued his infamous career, till at length his friends procured his confinement in the madhouse at Charenton, where he died December 2, 1814. This abandoned nobleman wrote a number of licentious novels, &c, which display a sad perversion of extraordinary talents.—*Id.*

SADEEL (ANTOINE) a learned French Huguenot of the sixteenth century, chaplain to Henri Quatre, whom he accompanied during his wars with the League. He was descended of a noble family, born about the year 1534. Having early in life dedicated himself

to the ministry, he was thrown into prison on account of his tenets, and was only liberated at length through the personal interference of the royal patron, to whose service he afterwards attached himself. On the reconciliation of Henri to the church of Rome, Sadeel retired from Paris to Geneva, where he obtained the Hebrew professorship, and continued to officiate as a Protestant pastor till his death in 1591. His theological writings were collected at his decease, and appeared in the course of the following year.—*Freheri Theatrum*.

SADELER (JOHN) the first of a family of distinguished engravers, was born at Brussels in 1556. He applied early in life to drawing and engraving, and having executed some masterly works, found a liberal patron in the elector of Bavaria. He went afterwards to Rome and Venice, at which latter capital he died in 1600, leaving a son named John, by whom there are also some good prints.—*RAPHAEL SADELER*, brother and pupil to John, was born in 1555. He accompanied his brother to Rome and Venice, and they worked in conjunction several collections of religious subjects, amounting to more than five hundred prints, in two volumes, folio.—*GILES SADELER*, the nephew and pupil of the two last, excelled them in correctness and taste, and engraved "Vestigi dell' Antichita di Roma," which appeared in 1660, folio.—*Strutt*.

SADI, or SAADI, a celebrated Persian poet, who was native of Shiraz. He studied at Bagdad, at a college founded by Nizam al Moluk, and adopting a religious life under the direction of the famous sophi Abd al Kadir Ghilani, he accompanied him in a pilgrimage to Mecca. He is said to have repeated that act of religion forty times, and to have always taken the journey on foot. The author of the History of the Persian Poets states that Sadi passed thirty years of his life in study, thirty years in travelling, and thirty years more in retirement and devotion. He fulfilled the common duty of the Moslems in combating the infidels, and carried arms in India and in Asia Minor. He was at length made a prisoner by the crusaders in Syria, and employed in digging the trenches at the siege of Tripoli. A rich merchant of Aleppo ransomed him, and gave him his daughter for a wife; but, according to the testimony of the poet, her behaviour was such as to make him regret the slavery from which he had been rescued. Towards the close of his life, which is said to have extended beyond a century, he built a hermitage near the walls of Shiraz, where he passed his time in exercises of piety. He died in 1296, and his tomb, on the spot where he had lived, was long visited with devotion by the admirers of his piety and his genius. His works consist of "Gulistan," or the Garden of Roses, of which there is a French translation by Andrew Duryer; and English translations by Francis Gladwin, London, 1808, 2 vols. 8vo, and by James Dumoulin, Calcutta, 1807, 4to, both printed with the original text; "Bostan," or the Garden of Fruits; "Pend-nameh," published, with an English version, in Mr F.

Gladwin's Persian Moonshine," 1801, 4to, &c.—*Biog. Univ.*

SADLER (JOHN) an English law-writer in the seventeenth century, who was a native of Shropshire. He was educated at Emanuel college, Cambridge, where he obtained a fellowship, and distinguished himself by his knowledge of Oriental literature. He then entered as a student at Lincoln's-inn, and in 1644 he became a master in chancery, as also one of the two masters of requests. In 1649 he was chosen town-clerk of the city of London; and the same year he published his "Rights of the Kingdom, or Customs of our Ancestors." He was in great favour with Oliver Cromwell, who offered him the chief-justiceship of Munster, in Ireland, which he declined. In 1658 he was chosen MP. for Yarmouth; but soon after the Restoration he lost all his employments, and having suffered from the destruction of property in the fire in London, in 1666, he retired to his estate at Warmwell in Dorsetshire, where he died in April, 1674, aged fifty-nine. Besides the work already noticed, he wrote a political romance, entitled "Olbia, or the new Island lately discovered," 4to.—*Chalmers's Biog. Dict. Encyc. Brit.*

SADLER (WILLIAM WINDHAM) an ingenious natural philosopher, who fell a victim to the practice of aërostation. On the 30th of September, 1824, he ascended in a balloon from the neighbourhood of Blackburn in Lancashire; and in the descent the car was driven against a chimney, and Mr Sadler was thrown out, at the height of about forty yards from the ground, when his skull was fractured, and he was otherwise injured so as to occasion his death. He thus perished in the twenty-eighth year of his age, after having made thirty aërial voyages, in one of which he crossed the Irish channel, ascending at Dublin and alighting on the Welsh coast. He possessed considerable talents as a chemist and an engineer, in which capacities he was employed by the first gas company established at Liverpool. He resided at that sea-port, where he had fitted up accommodations for the use of warm, medicated, and vapour baths; and before he had time to reap the profits of this useful institution, his life was terminated by the terrible accident already noticed.—*Biog. Nouv. des Contemp. Ann. Reg.*

SADLER or SADLIER (sir RALPH) an English diplomatist, born at Hackney in Middlesex, in 1507. Early in life he obtained the patronage of Cromwell, earl of Essex; and Henry VIII employed him in various political affairs, gave him a seat at the council-board, and made him secretary of state. He was present at the battle of Musselburgh in Scotland, in 1547, when he was dubbed a knight banneret, in reward of his services; having been previously engaged in the negotiations which were carried on between the English and Scottish governments. In the reign of queen Elizabeth he was again sent ambassador to Scotland; and he resided for some time at the court of queen Mary, who, when she took

S A D

refuge in England, was committed to the custody of sir Ralph Sadler. His death took place in 1587. A collection of the "Letters and Negotiations of Sir R. Sadler," was published at Edinburgh, in 1720, 8vo; and in 1809 Mr Arthur Clifford published a more complete collection of his diplomatic papers, &c. in 2 vols. 4to.—*Fuller's Worthies. Memoir by Sir Walter Scott, prefixed to the Letters.*

SADOC, a famous Jewish doctor in the third century BC. He was the disciple of Antigonus Sochæus, president of the Sanhedrim, who, disgusted with the great stress laid on the mere ceremonial law, and the doctrine of works of supererogation, strenuously maintained that men ought to serve God on a pure principle of piety, without hope of reward or fear of punishment. Sadoc, with Baithosus, another of the disciples of Sochæus, refining upon this doctrine, were led to deny the resurrection, and hence the rise of the Jewish sect of Sadducees, so named after Sadoc. Besides the denial of a resurrection, his followers disclaimed the existence of angels or spirits, as well as the doctrine of an irresistible fatality. Their denial of a future state of rewards and punishments seems to have flowed as a consequence from their belief in the homogeneous nature of man, which implies the absence of any distinct principle like the soul.—*Josephus. Enfield's Hist. of Phil.*

SADOLET (JAMES) a learned Italian cardinal, born at Modena in 1477. He was the son of an eminent lawyer, professor of jurisprudence at Ferrara, under whom he was partly educated. Having acquired a knowledge of classical literature, rhetoric, and philosophy, he went to Rome, and became secretary to cardinal Oliver Caraffa, who procured him a canonry in the church of St Lawrence. His talents and learning raised him to eminence, and Leo X, on ascending the papal throne, nominated Sadolet one of his secretaries. In 1517 he was made bishop of Carpentras, which dignity he very unwillingly accepted. Pope Adrian VI, who had but little taste for the belles lettres, neglected this accomplished scholar, who retired to his diocese, whence he was recalled, and restored to his office by the succeeding pontiff, Clement VII. His advice to the pope, not to enter into the league against the emperor Charles V, being neglected, he obtained leave to retire to his see; and having quitted Rome only twenty days before the sack of that city by the troops of the constable de Bourbon, his palace was plundered, and his valuable library, which had been put on board a vessel to be conveyed to France, was lost. At Carpentras he employed himself in ecclesiastical duties, and in various exertions for the benefit of those under his pastoral care. Paul III recalled him to Rome in 1536, created him a member of the congregation of reform, and gave him a cardinal's hat. In 1542 he was sent legate to France for the purpose of negotiating a pacification between Francis I and Charles V. Returning to Rome, he died October 18, 1547. The works of Sadolet, besides theological treatises,

S A G

consist of poems, discourses, letters, and miscellaneous tracts, all in Latin, and distinguished for purity and classical elegance of style. His works were printed at Verona, 4 vols. 4to.—*Tiraboschi. Aikin's Gen. Biog. Univ.*

SAEMUND SIGFUSSON, a celebrated Icelandic priest, legislator, historian, and poet, who flourished in the eleventh and twelfth centuries. He appears to have been born about the year 1045, and to have established a seminary at Odda, which enjoyed considerable reputation. The collection of Scandinavian poetry, known under the name of "The Edda," of which an edition appeared at Copenhagen in 1787, was compiled by him; as was also a code of laws for the government of the Icelandic church, and a "History of Norway." His death took place in 1133.—*Analytical Rev. vol. ii.*

SAGE (BALTAZAR GEORGE) an eminent natural philosopher, the founder of the science of mineralogy in France. He was born at Paris in 1740, and after a domestic education, he completed his studies at the Mazarin college. Chemistry and mineralogy became the favourite objects of his researches; and at the age of twenty he opened a gratuitous course of lectures on those topics. Louis XVI bestowed on him a small pension; and he succeeded Rouelle as a member of the Academy of Sciences. To his influence and recommendation was owing the establishment of the Royal School of Mines in 1783; and it was placed under the direction of M. Sage, who justified the confidence of his sovereign by his laborious and successful exertions for the promotion of scientific improvements. The Revolution interrupted his useful labours; but under Napoleon he was enabled to resume and extend them. M. Sage, who was a knight of the order of St Michael, administrator of the mint, and a member of the Institute, died at Paris, September 9, 1824. He made some important discoveries, and published a Catalogue of a Cabinet of Minerals, as well as many Dissertations in the Memoirs of the Academy of Sciences. His disciple, Dr Demeste, also developed some ingenious speculations, which he had advanced relative to the theory of chemistry, in a work entitled "Lettres à Docteur Bernard sur la Chimie et la Physique en général," Paris, 1779, 2 vols. 12mo. Among the later works of M. Sage are, "Théorie de l'Origine des Montagnes," 1809, 8vo; "Observations sur l'Emploi du Zinc," 8vo; "Expériences sur les Mortiers," 8vo; "Institutions de Physique," 1811, 3 vols. 8vo; "Supplément," 1812, 8vo; "Opuscules de Physique," 1813, 8vo; and "Tableau comparé de la Conduite qu'ont tenue envers moi les Ministres de l'ancien Régime avec celle des Ministres du nouveau Régime," 1814, 8vo.—*Biog. Nouv. des Contemp. Edit.*

SAGE (JOHN) bishop of Edinburgh, an able and enlightened Scottish prelate, distinguished as an eloquent defender of episcopacy in that kingdom. He was a native of Fifeshire, born 1652, and received a liberal educa-

tion in the university of St Andrew's. From Glasgow, where he had for several years officiated, he removed, on the establishment of presbyterianism, to Edinburgh, of which capital he was made the diocesan in 1705, but survived his elevation little more than five years. His principal theological writings are, a tract entitled "The Principles of the Cyprianic Age," in which he warmly advocates the episcopal form of church government, as well as in a vindication which he subsequently published of the original treatise; and "The Charter of Presbytery." He was also the author of an Introduction to Drummond's History of Scotland during the Reigns of the first five Jameses, and a biographical memoir of Douglas, bishop of Dunkeld.—*Encyc. Brit.*

SAGITTARIUS (GASPARD) a learned German historian and divine, who flourished during the latter part of the seventeenth century. He was a native of Lunenburg, born 1643, and became historiographer to the duke of Saxony, with the historical professorship in the university of Halle. As a theologian he distinguished himself by several able treatises in favour of the reformed church, and by his "Dissertation on Oracles;" while as an antiquary and historian he is advantageously known by his "Antiquities of Thuringia;" "The Ancient History of Norway;" "The History of Lubec;" "The History of Hardewyck;" "The Genealogy of the Dukes of Brunswick;" "The Succession of the Princes of Orange;" a "Life of St Norbert;" and a treatise "On the most Beneficial Method of Reading History." His death took place at Halle in 1694.—*Nicéron. Moreri.*

ST ANDRÉ (NATHANIEL) a native of Switzerland, who came to England in a menial situation early in life, and through the kindness of friends was educated for the profession of surgery. Having entered on business in the metropolis, he made his way to eminence rather by industry and assurance, than by his professional abilities. He became a favourite with king George I, and was appointed surgeon to the royal household; and he held that office in 1726, when the ridiculous case occurred of the rabbit-woman of Godalming, of whom St André was either the accomplice or the dupe, most probably the latter. The impostor in question, Mary Tofts, pretended to have given birth to a number of rabbits. She was attended by John Howard, a surgeon of Guilford, who introduced his patient to the notice of St André; and under the sanction of these two professional men, the case was laid before the public, and was productive of general consternation. A number of pamphlets, ballads, and caricatures were published on the subject; and the affair ended in the exposure of this gross delusion, and the disgrace of those who had contributed to support it, especially of St André. Through this transaction he lost the king's favour, and was no longer received at court, though his practice still continued to be very extensive. In 1730 he added largely to his income by his marriage with lady Betty Molyneux, a richly-jointed widow, whom,

however, he long survived; and at his death, in March 1776, he left but a small portion of wealth behind him. Besides tracts on the case of M. Tofts, he wrote a pamphlet against Dr Mead.—*Nichols's Anecd. of Hogarth. Hutchinson's Biog. Med.*

ST ANDRÉ (JEAN BON). See JEAN BON ST ANDRÉ.

ST ANGE (ANGE FRANÇOIS FARIAU de) a French poet, born at Blois, October 13, 1747. He studied among the jesuits, and afterwards at the college of St Barbe at Paris. When the king of Denmark was in that metropolis in 1768, St Ange attracted some notice by a congratulatory ode, which he presented to that prince. Turgot, the financier, became his patron, and procured him a pension; and the poet manifested his gratitude, by dedicating to the manes of his benefactor a translation of Ovid's Metamorphoses. The Revolution deprived him of his income, and reduced him to want; but after the 9th of Thermidor 1794, he obtained a civil employment, which he exchanged at length for the professorship of grammar, and afterwards of belles lettres, in one of the central schools. His health was injured by his attention to the duties of his station, which he resigned, and was allowed to retain his salary. In September 1810 he was admitted a member of the Institute; but he enjoyed that honour but a short time, dying December 8th, the same year. Besides his principal work, the translation of the "Metamorphoses," he also produced versions of the "Fasti;" "The Art of Love;" "The Remedy of Love;" and of some of the Elegies and the Heroic Epistles of Ovid; and he published "The School for Fathers," a comedy; a volume of "Fugitive Poetry," and other works.—*Biog. Univ.*

ST BEUVE (JACQUES de) a celebrated theological casuist, born at Paris in 1613. Having studied at the Sorbonne, he was admitted doctor in 1638; and in 1643 he became royal professor of theology in that college, having previously attained great eminence as a preacher. He entered into the disputes relative to the doctrines of grace and predestination, which agitated the French church in the middle of the seventeenth century; and on his refusal to subscribe to the censure of Dr Arnauld, he was dismissed from his professorship in 1658. He afterwards signed the required formulary, and was appointed theologian to the clergy of France, with a pension. He then opened a sort of cabinet of consultations at Paris; and as a casuist he obtained great eminence, and was applied to from all quarters of the kingdom, on the part of bishops, chapters, religious communities, magistrates, persons of rank, and even princes. He died of apoplexy, December 15, 1677. Of his numerous consultations nothing appeared during his life; but his brother published a collection of his decisions at Paris, 1689-1704, 3 vols. 4to; and there are many subsequent editions. He was the author of two tracts "De Confirmatione. et de Extrema Unctione," Geneva, 1669, &c.

Many of his works remain in manuscript, in the library of the Sorbonne, which display profound critical judgment and extensive learning.—*Biog. Univ. Moreri. Aikin.*

ST CROIX (GUILLAUME EMANUEL JOSEPH GUILHEM DE CLERMONT LODEVE, baron de) was born at Mormoiron, near Carpentras, in the south of France, in 1746. He studied at a college of the jesuits at Grenoble; and afterwards entering into the army, he went with his uncle, the chevalier de St Croix, to the West Indies, where the latter had been appointed commander of the French troops in the Windward islands. He returned home in 1762, with the rank of captain of grenadiers, and for several years he devoted the leisure of a military life to literary studies. The first fruit of his researches was "Examen critique des Historiens d'Alexandre," for which he obtained a prize from the Academy of Inscriptions, in 1772; and in 1775 and 1777 two more of his essays were similarly rewarded. He was elected an associate of the Academy; and at a subsequent period he became a member of the Institute, in the class of history and ancient literature. During the Revolution he suffered greatly in his property; and in 1792 he was imprisoned, but he made his escape, and survived the restoration of order, dying March 11, 1809. Besides a great number of academical memoirs, he published "L'Eaour-Vedam, ou ancien Commentaire du Vedam," with Notes, Observations, &c. Yverdun, 1778, 2 vols. 12mo; "Histoire des Progrès de la Puissance Navale d'Angleterre," 1782, 2 vols. 12mo; and "Mémoires pour servir à l'Histoire de la Religion secrète des anciens Peuples, ou Recherches Historiques sur les Mystères du Paganisme," 1784, 8vo, of which an enlarged edition appeared in 1817, 2 vols. 8vo. The baron de St Croix is chiefly known as the author of the "Critical Examination of the Historians of Alexander the Great," of which he published an enlarged edition in 1804, 4to. There is an English translation of this work by sir R. Clayton.—*Biog. Univ.*

ST EVREMOND (CHARLES DE MARQUETEL DE ST DENIS, seigneur de) a French man of letters, of great temporary celebrity, was born of a noble family of Constance in Normandy, in 1613. He studied the law at Paris, but quitted it in order to enter the army, and served under the prince of Condé at Friburg and Nordlingen; but lost his commission in consequence of having exercised his talent for satire, at the expense of the prince. He was favoured by the friendship of the minister, Fouquet; but his propensity to sarcasm involved him with cardinal Mazarin, and cost him three months' imprisonment in the Bastille. In the war of the Fronde he embraced the side of the court, and obtained promotion and a pension; but in consequence of a letter addressed to M. Crequi, censuring the peace of the Pyrenees, he became once more embroiled with the ministry, and to escape the Bastille, repaired to England. He was well received at the gay court of Charles II,

and all solicitations for his recal proving fruitless, he passed the rest of his life in this country, in an easy Epicurean style of existence, which was much promoted by the natural vivacity of his temperament and fondness for the company of young people. He was humane and generous, and although by no means a rigid moralist, he was regarded as a man of honour. He died in 1703, at the age of eighty, and was interred in Westminster abbey, where a monument is erected to his memory. His works, which consist of essays, letters, poems, and dramatic pieces, have been printed in 4 vols. and 7 vols. 12mo. 1705. They were much read, when first published, in consequence of having been handed about in MS. among persons of fashion, during the life of the author. St Evremond is a lively but insipid writer, although not destitute of sense and penetration. There is an English translation of his works by Des Maizeaux.—*Moreri. Nouv. Dict. Hist.*

ST FARGEAU (LOUIS MICHEL LEPELLETIER de) a French statesman, descended from ancestors distinguished in the magistracy, who was born at Paris in 1760. He became successively advocate-general and president à mortier of the parliament of Paris; and being a deputy to the states-general, he voted with the majority of his order; and when Louis XVI enjoined the nobility to unite with the Tiers Etat, St Fargeau refused to obey him, he and the count de Mirepoix alone remaining in the chamber of the nobility. Afterwards, becoming connected with the duke of Orleans, he changed his principles, and employed his influence in forwarding the Revolution; yet in his behaviour and language he displayed more moderation than most of his associates. Being appointed to present to the Assembly a report on the penal code from the Committee of Criminal Jurisprudence, he proposed that capital punishment should be commuted for twenty-four years' confinement in irons. He sat in the Convention as a deputy from the department of the Yonne, and voted for the death of Louis XVI, which proceeding occasioned his own destruction. On the 20th of January, 1793, the day before the king was executed, Lepelletier de St Fargeau was assassinated at a tavern in the Palais Royal, by a man named Paris, who had belonged to the royal guard; and whose avowed motive was the determination to avenge the fate of his sovereign, by the sacrifice of some member of the Convention who had voted for his death. The corpse was pompously interred in the Pantheon, now the church of St Genevieve; and the nation adopted the daughter of their murdered representative. Robespierre read from the tribune of the Convention a discourse which he had left on national education.—*Dict. des H. M. du 18me. S. Dict. Hist.*

ST FOIX (GERMAIN FRANÇOIS POUILLAIN de) a French dramatist and miscellaneous writer, who was descended of a noble family at Rennes in Brittany. He was born in 1698, and having studied among the jesuits, he adopted the profession of arms, and entered

into the corps of mousquetaires, whence he was discharged on obtaining a lieutenant's commission in a regiment of cavalry. He cultivated literature at his leisure; and while a youth he produced two or three light dramatic pieces. He went to Italy with marshal Broglie, and distinguished himself by his courage at the battle of Guastalla (1734); but not being able to obtain promotion, he left the army, and purchased the office of master of waters and forests. In 1740 he settled at Paris, where he acquired notoriety by the numerous duels which he fought, and the multitude of plays which he wrote. Among the best of these are, "*Le Sylphe*," 1743; "*Les Graces*," 1744; and "*L'Oracle*," which last is the only one that has kept possession of the stage. St Foix also was the author of "*Lettres Turques*;" "*Histoire de l'Ordre du Saint Esprit*;" and "*Lettre au Sujet de l'Homme au Masque de Fer*;" but his principal work, is entitled "*Essais Historiques sur Paris*," first published in five parts, duodecimo, Paris, 1754, of which there is an English translation. He died at Paris, August 25, 1776.—His nephew, AUGUSTUS DE ST FOIX, published "*Nouveaux Essais sur Paris*," 1805, 2 vols. 8vo; and there is an earlier work extant with the same title.—*Dict. Hist. Biog. Univ.*

ST GERMAIN (CLAUDE LOUIS, count de) minister at war under Louis XVI, was born of a noble but indigent family, in 1707, near Lons-le-Saulnier in Franche Comté. He entered young among the jesuits, but left their society for the army, and served with distinction in Hungary, in the war of 1737, against the Turks. When hostilities took place between the French and Austrians, he left the imperial service for that of the elector of Bavaria. He afterwards returned to France, and served in Flanders in 1746, 1747, and 1748, in which last year he was made a lieutenant-general. He displayed his talents to advantage in the war with the king of Prussia, at the battle of Roebach in 1757, when he saved the remains of the French army, and protected the retreat. He also distinguished himself on other occasions; but having quarrelled with the duke de Broglie, he left the French service, and went to Denmark, where he was placed at the head of the army, made a field-marshal and knight of the order of the elephant. The death of count Struensee, and the changes in the Danish government, which took place in 1772, induced St Germain to retire to an estate near Lauterbach, in Alsace, where he devoted his time to the cultivation of his garden and the study of botany. The failure of a banker at Hamburg, to whom he had entrusted his property, would have reduced him to poverty, but for the kindness of his friends. At length, on the death of marshal du Muy, he was invited to become war-minister to Louis XVI; and in October 1775 he made his appearance at court. After executing several advantageous plans of reform in the department over which he presided, he found so much obstruction to his proceedings after

the retreat of his colleagues, Turgot and Malesherbes, that he thought proper to resign his office in September 1777. His death took place January 15, 1778. There is extant a volume of memoirs under his name, printed at Amsterdam, 1779, 8vo.—*Biog. Univ.*

ST GERMAIN (count de) an adventurer, whose real name and family have never been satisfactorily ascertained. Marshal Belle-Isle, becoming acquainted with him in Germany, took him to France, where he succeeded in obtaining the confidence of madame de Pompadour, who presented him to the king, Louis XV. He professed to be acquainted with the secret of immortality; and was accustomed to talk familiarly of his intercourse with the emperor Charles V, Francis I, and their contemporaries. He appeared also to possess immense wealth, often making an ostentatious display of valuable jewels. After having long interested and amused the Parisians, he retired to Hamburg, and subsequently resided with the prince of Hesse Cassel. He died in obscurity at Sleswick, in 1784. He is said to have been the son of a Portuguese Jew; and it is most probable that he was employed as a spy by different ministers, which occupation was the source of that wealth whence he derived much of his importance in the public estimation.—*Œuvres inédites de Grouley*, tom. iii. *Biog. Univ.*

SAINT GERMAN or SEINTGERMAN (CHRISTOPHER) an English barrister and writer on jurisprudence, who was the son of sir Henry St German, and was a native of Shilton, in Warwickshire. He was educated at Oxford, whence he removed to the Inner Temple; and being called to the bar, he became eminent for his knowledge of the laws of his country. He died in London in 1540. St German was the author of a very valuable work, entitled "*The Doctor and Student, or Dialogues between a Doctor of Divinity and a Student in the Laws of England*," concerning the Grounds of those Laws, first published in Latin in 1523, and subsequently in an English translation, of which there have been many editions. One of the latest is that of 1787, 8vo, with questions and cases concerning the equity of the law, corrected and improved by William Machall. Several other tracts are ascribed to this writer, who engaged in a controversy with sir Thomas More, relative to ecclesiastical jurisdiction.—*Berkenhout's Biog. Lit. Bridgman's Leg. Bibl.*

ST HUBERTI (ANTOINETTE CECILE CLAVEL, commonly called madame) a celebrated French opera-singer and actress, born at Toul, about 1756. After having travelled in Germany, Poland, and Prussia, she returned to France, with the chevalier de Croisy, to whom she is said to have been married. After acting three years at Strasburgh, she made her debut at the opera at Paris in 1777. At first she attracted little notice; but on the retreat of Sophia Arnould and de la Beauménil, she became distinguished as the first operating actress on the French stage. After having long enjoyed high reputation for her talents, she

quitted France in April 1790, to join the count D'Entraigues, at Lausanne, where they were married in December that year, though the union was not acknowledged till some years after. She was assassinated, together with her husband, in 1812.—(See art. DELAUNEV.)—The motive of this outrage, which was perpetrated by the count's footman, is said to have been the apprehension the man was under of the discovery of his having been corrupted by agents of Buonaparte, to whom he had betrayed his master's correspondence with the English ministry.—*Biog. Unit.*

ST JOHN (HENRY) viscount Bolingbroke, a nobleman of great celebrity, both in the political and literary world, was the son of sir Henry St John, of the ancient family of that name. He was born at Battersea, in Surrey, in 1672, and his early education seems to have been principally directed by his grandfather and grandmother. The latter being a rigid presbyterian, he seems to have imbibed a disgust at the comparative austerity of this sect, which never afterwards forsook him. At a proper age he was sent to Eton, and thence transferred to Christchurch college, Oxford, and at both places gave indications of extraordinary talent. He appeared in the world with all the advantages of a fine person and fascinating address, and for some years ran a career of pleasure and gaiety, not however unmixed with study, and an attention to letters. With a view to reclaim him from a course of extravagance and licentiousness, his parents united him, in his twenty-second year, to the daughter and co-heiress of sir Henry Winchcombe, and he soon afterward entered parliament for Wotton Bassett, a borough belonging to his family. He joined the Tories, and in particular attached himself to Harley (afterwards earl of Oxford). His abilities appeared so conspicuous, that in 1704 he was made secretary at war, which office he retained until 1707, when Harley resigned the seals. Upon the restoration of the latter minister to power in 1710, Mr St John was appointed secretary of state, and had the principal share in negotiating and defending the treaty of Utrecht. His services were rewarded in 1712 with the title of baron St John and viscount Bolingbroke, with which honour, expecting a higher rank, he expressed himself strongly dissatisfied. Conscious of possessing superior abilities, he became weary of acting under Harley, and the greatest animosity grew up between them. On the accession of George I, the seals were taken from him, and his papers secured; on which, conceiving these measures were preparatory to an impeachment, he withdrew to France, and after a while accepted the seals of secretary of state from the pretender. As he had no hereditary prejudices in favour of the Stuarts, and had even promoted the accession of the house of Hanover, he seems to have been solely guided in his conduct by resentment. A bill of attainder against him soon followed; and he otherwise found occasion to repent his new engagement, as nothing could be worse planned

than the attempt of 1715 in favour of the exiled family, and his good sense and education led him to be equally ashamed of the personal qualities of both his nominal sovereign and his new associates. The return of the pretender from Scotland was followed by the discharge of Bolingbroke from his post of secretary, and that by articles of impeachment, so that he had the singular fortune to hold the same office on both sides, and to lose it with marks of displeasure from each. While in France he wrote his "Reflexions on Exile;" and also vindicated himself from the charges brought against him by the pretender's adherents. He likewise drew up a "Letter to Sir William Wyndham," in which he defended his whole conduct with respect to the Tory party, and gave so striking a picture of the bigotry of the pretender, and the absurdity of those around him, as must have done much to estrange the more reflective Tories from his cause. Having become a widower, he took for his second wife the marchioness de Villette, niece to madame Maintenon, a lady of great sense and merit. In 1723 he obtained a full pardon, and returned to England, and two years afterwards an act of parliament restored to him his family inheritance. He then purchased an estate at Dawley, near Uxbridge, and lived in retirement; but being offended with the minister Walpole, to whom he attributed his inability to procure a restoration to his seat in the house of Lords, he commenced an active opposition as a writer. In various papers in the Craftsman, as well as in separate pamphlets, he attacked the ministry with great boldness and vigour for a period of ten years, until disagreeing with Pulteney and others in 1735, he again withdrew to France, and gave himself up to literature. His "Letters on the Study of History," and "Letter on the true Use of Retirement," with other productions of a philosophical and speculative kind, were the fruits of this resolution. His father, who had been created viscount St John during the exile of his son, dying in 1742, the latter once more returned to England, and passed the remainder of his life in dignified retirement, at the family mansion at Battersea. The last work published during his life was, "Letters on the Spirit of Patriotism, and Idea of a Patriot King," 1749, the preface to which expresses great indignation at the conduct of Pope, then deceased, who had privately caused it to be printed unknown to the author. He died at Battersea, in 1751, at the age of seventy-nine. By his will he left all his MSS. to David Mallet, who, in 1753 and 1754, published "The Works of the late Right Hon. Henry St John, Viscount Bolingbroke," 5 vols. 4to. Of these, besides the pieces already mentioned, a considerable part was occupied by letters, or "Essays written to A. Pope, Esq. on Religion and Philosophy," in which the writer declares himself the avowed opponent of revelation. These essays and letters produced a considerable sensation at the moment of publication, but in the sequel secured less attention than

was expected either by the opposers or partisans of similar opinions. Of the character of lord Bolingbroke as a politician, sufficient is elucidated by the events of his life. He was evidently an ambitious man, who could ill brook a superior, and was little scrupulous, either in the pursuit of power, or the gratification of resentment. As a conspicuous figure in the literary annals of his time he demands more consideration, it being agreed that for elegance, perspicuity, and strength, few of our prose writers have equalled him. In the correspondence of Pope and Swift he is happily distinguished among a constellation of wits, by his polished freedom and tone of good company, and in the estimation of lord Chesterfield his eloquence was of the highest order. His political writings being on temporary matters, have lost their interest; but his letters on Patriotism and History, which are of more general import, are deemed more superficial and declamatory than solid or profound. As a philosophical moralist his sentiments are displayed with great brilliancy by Pope, in his "Essay on Man," the plan of which celebrated poem was avowedly supplied by him. On the whole this eminent nobleman may be regarded as a man of high attainments and lofty powers, not always directed with correspondent utility, and otherwise rendered subservient to party and personal feelings, in a manner which demands and has ensured but little respect from posterity.—*Biog. Brit. Swift's Works. Leland's Deist. Writers.*

ST JOHN (JOHN) a writer on statistics, who was the youngest son of John, lord St John, of Battersea, and nephew of the celebrated lord Bolingbroke. He had a seat in the house of Commons during three successive parliaments; and for several years he held the office of surveyor-general of the crown lands. His death took place November 8, 1793, in the forty-eighth year of his age. He was the author of a valuable work, entitled "Observations on the Land Revenue of the Crown, containing the Origin and Sources of the Land Revenue of England," 1787, 4to, republished in octavo in 1790 and 1792.—HENRY ST JOHN, brother of the preceding, became a lieutenant-general in the army. He wrote a tragedy, entitled "Mary, Queen of Scots," acted at Drury-lane theatre in 1788, and afterwards published; and "The Isle of St Marguerite," a musical drama.—*Watt's Bib. Brit. Biog. Drum.*

ST JUST (ANTHONY) a political agent and writer of considerable talents, who was associated in the crimes and punishment of Robespierre. He was born in 1768, and was educated for the legal profession. At the commencement of the Revolution, he eagerly entered into the measures of the enemies of monarchical government; and being chosen a deputy to the Convention from the department of the Aisne, he voted for the death of Louis XVI. He assisted materially in the destruction of the Girondists, and he was subsequently sent, as a commissioner of the National Convention, to the army in Alsace,

opposed to the Austrians, when, in conjunction with Lebas, he carried to a great extent the system of terror both among the troops and the inhabitants of the country; and his severity, execrable as it was, seems to have infused an energy into the army, which contributed much to its future victories. St Just, on his return to Paris, towards the close of 1793, obtained great influence with the ruling party, and he formed an intimate connexion with Robespierre, who was principally guided by his counsels. After assisting in the overthrow of Danton and his friends, he became involved in the ruin of Robespierre, who rejected his advice in the last struggle for power. He was guillotined July 28, 1794. St Just was the author of "Organt," a poem in twenty cantos, 1789, 2 vols. 8vo, said to be a feeble imitation of the Pucelle of Voltaire; "Mets Passee-temps, ou le Nouvel Organt de 1792," another licentious poem; and "Fragmens sur les Institutions Republicaines," a posthumous work, 1800, 12mo; besides reports to the National Convention, from the Committees of General Surety and of Public Safety.—This demagogue has been sometimes confounded with Louis LEON St Just, who called himself the marquis de Fontvieille, and was the author of a work, entitled "Esprit de la Revolution, et de la Constitution de France."—*Dict. des H. M. du 18me S. Biog. Nouv. des Contemp. Biog. Univ.*

ST LAMBERT (CHARLES FRANCES DE) an eminent man of letters, was born at Nancy, December 16, 1717. He was educated by the jesuits at Pont-a-Mousson, but subsequently entered the army, which he quitted at the treaty of Aix-la-Chapelle, and joined the gay circle assembled by Stanislaus, the ex-king of Poland, at Luneville. He soon after became a devoted adherent of Voltaire's, and a favoured admirer of madame de Chatelet. He did not commence his literary career until he had exceeded the age of forty, when he produced a theatrical piece, entitled "Les Fêtes de l'Amour et de l'Hymen," 1760. His poem, entitled "Les Quatres Parties du Jour," appeared in 1764, and the same year he published his "Essai sur le Luxe," 8vo. His celebrated poem of "Les Saisons" followed in 1769. His other works are, "Fables Orientales;" "Consolations de la Vieillesse;" and a philosophical work in prose, which appeared in 1798, in 3 vols. 8vo, under the title of "Catéchisme Universelle." It was intended to exhibit a system of morals grounded on human nature, the principal object of the author being to confute the doctrine of a moral sense as advocated by Shaftesbury, Hutcheson, and their successors. He also wrote some articles in the Encyclopédie, and many fugitive pieces in the literary journals. This able writer was one of the few men of eminence who escaped the annoyance and dangers of the Revolution; his death taking place Feb. 9, 1805, in his eighty-eighth year.—*Nouv. Dict. Hist.*

ST MARC (CHARLES HUGUES LEFEBVRE DE) a learned and industrious writer, born at

Paris in 1696. He studied at the college du Plessis, and afterwards became a sub-lieutenant in the regiment of Aunis, which he quitted to take orders in the church. Disappointed in his expectations of preferment, he engaged in the education of youth; and becoming connected with the abbé Goujet, he was encouraged to devote himself to literary pursuits. In 1735 he composed a lyric drama, entitled "*Le Pouvoir de l'Amour*," which was represented with some success. But he relinquished the drama for more serious studies, and his next production was a supplement to the necrology of the Port Royal Society. He afterwards published editions of the works of Boileau, Pavillon, Chaulieu, Malherbe, &c.; but he is principally known as the author of "*Abrégé Chronologique de l'Histoire d'Italie, depuis la Chute de l'Empire d'Occident*," Paris, 1761—70, 6 vols. 8vo, a work on the plan of president Henault's History of France. St Marc died November 20, 1769, and the sixth volume of his History of Italy was published by Lefevre de Beauvray, with a biographical memoir of the author.—*Biog. Univ.*

ST MARC (JEAN PAUL ANDRÉ DES RAINES, marquis de) a French lyric poet, born of a noble family in the province of Guienne, in 1728. He was admitted into the French guards in 1744, but being obliged through an accident to quit the service in 1762, he employed himself in the cultivation of the lighter kinds of literature. In 1770 was represented his pastoral drama, "*La Fête de Flore*," which was followed by "*Adèle de Ponthieu*," founded on a story of chivalry. St Marc wrote the verses which were recited at the Theatre Français, when the bust of Voltaire was crowned on the stage in 1778. He died at Bordeaux, October 11, 1818. His works have been often printed collectively, in 2 vols. 8vo.—*Id.*

ST MARTHE, the name of a family in France, which produced several men of letters, among whom is to be ranked CHARLES ST MARTHE, who became physician to Francis I. He was remarkable for his eloquence, and composed the eulogium of his master in elegant Latin. He was also author of several poems. He died in 1556.—SCÆVOLA, nephew of the preceding, was born in 1536, and was distinguished as a poet, orator, and historian. In 1579 he was made governor of Poitou, which province he reduced to subjection to Henry IV. He died universally regretted in 1623. He was author of "*La Louange de la Ville de Poitiers*," 1573; "*Opera Poetica*," 1575; "*Gallorum Doctrina illustrium Elogia*," and "*Pædrotrophia, seu de Puerorum Educatione*," 1584, a Latin poem, of considerable merit, which has passed through many editions. It was neatly printed in London, in 12mo, 1708, together with the "*Callipædia*" of Quillet.—His son ABEL became librarian to the king, and wrote "*Opuscula Varia*," 1645.—His second and third sons, SCÆVOLA and LOUIS, were also men of literature, and composed in conjunction "*Gallia Christiana, seu Series*

Biog. Dict.—VOL. III.

omnium Episc. &c. Franciæ," of which there is an edition in thirteen volumes, folio, 1715 to 1786.—*Moreri. Nouv. Dict. Hist.*

ST MARTIN (LOUIS CLAUDE de) a visionary of the last century, who styled himself "*Le Philosophe inconnu*." He was born of a noble family, at Amboise, in 1743. Having received a collegiate education to qualify him for the magistracy, he preferred entering into the army, for the sake of applying himself to study in the intervals of military duty. While a subaltern in garrison at Bordeaux, he became a follower of Martinez Pasqualis, founder of the sect of Martinists, whose school, after the death of their leader in 1779, was transferred to Lyons, where St Martin published his work "*Des Erreurs et de la Vérité, ou les Hommes rappelés au Principe universel de la Science*," 8vo. This was followed by a number of other publications, including translations of many of the productions of Jacob Boehmen, of whom he was a great admirer. He quitted the army, that he might be at liberty to prosecute his favourite studies, and travelled, like Pythagoras, in search of knowledge. In 1787 he visited England, and the following year he went to Italy, with the Russian prince Alexis Galitzin, whom he made a convert to his opinions. On his return to France he received the cross of St Louis, in reward of his military services; but the Revolution shortly after deprived him of this as well as his other aristocratic privileges. In other respects he was but little affected by the political changes which he witnessed, continuing his philosophical speculations till the close of his life. He died of apoplexy, October 13, 1803.—*Biog. Nouv. des Contemp. Bing. Univ.*

ST PALAYE (JEAN BAPTISTE DE LA CURNE de) a French writer, was born at Auxerre in 1697. His father was gentleman to the duke of Orleans. The delicacy of his health in his childhood interrupted his education, and he was fifteen years old before he began to learn Latin and Greek; but he made a rapid progress in his studies, and soon excelled his masters. In 1724 he was admitted into the Academy of Inscriptions, and the following year he was employed by his court to conduct the correspondence with Stanislaus, king of Poland, then at Weissenbourg. That prince wished to have attached him to his service as a diplomatist; but the love of literature induced him to forego the brilliant prospect which this overture presented. He resolved to devote his talents to the study of the history of France; and after perusing the chronicles of the third race of French kings, he communicated his observations to the academy in a number of interesting memoirs. He afterwards attached himself more particularly to the illustration of the institutions of chivalry. Having visited many of the public libraries in France, in search of information, he took two journeys to Italy, whence he returned with a great number of MSS. He had intended publishing a "*History of the Troubadours*;" but he put the materials he had collected into the hands of the abbé Millot, who prepared them for the

press. In 1758 he was chosen a member of the French Academy; and he belonged to that of La Crusca, and other learned societies in France and Italy. He died March 1, 1781. Among the works which he had projected were, a "Dictionary of French Antiquities," and a "Glossary of the ancient French Language," neither of which was completed; but he published "*Mémoires sur l'ancienne Chevalerie considérée comme un Etablissement politique et militaire*," Paris, 1759-81, 3 vols. 12mo; and he left a voluminous collection of MSS.—*Biog. Univ.*

ST PAVIN (DENYS DE SANGUIN de) a French poet, born at Paris in 1610. From his father, who was provost of the merchants of the metropolis, he inherited a moderate fortune, which enabled him to devote his time to the cultivation of literature. He obtained some distinction as a satirist and epigram writer, and directed his wit against Boileau, whose severe retaliation contributed not a little to lower the fame of his adversary, and reduce him to comparative obscurity. His death took place in 1670. A collection of his poems was published in 1759, 12mo.—*Dict. Hist. Biog. Univ.*

ST PIERRE (CHARLES IRENEE CASTEL de) a French moral and political writer, was born at St Pierre in Normandy, in 1658. He was brought up to the church, and studied at the college of Caen, but he is best known as a politician. In 1695, having written some observations on philosophical grammar, he was admitted a member of the Academy. He accompanied cardinal de Polignac to the congress of Utrecht, where he proposed the establishment of a kind of European diet, in order to secure a perpetual peace. This, as was the case with most of his schemes, was good in theory, but attended by great practical difficulties, which prevented its being carried into effect, though it was received with good humour. St Pierre censured the government of Louis XIV; and on the death of that monarch he published his sentiments in a pamphlet, entitled "*La Polysynodie*," which caused his expulsion from the Academy, Fontenelle alone giving a vote in his favour. Another of his works was "*A Memorial on the Establishment of a proportional Taille*," which is said to have ameliorated the state of taxation in France. St Pierre died in 1743, and an edition of his works was published in Holland, 1744, 18 vols. 12mo.—*Eloge by D'Alembert. Dict. Hist.*

ST PIERRE (JACQUES HENRI BERNARDIN de) a French writer of some genius and notoriety, was born at Havre de Grace, 19th January, 1737. His father, who claimed descent from a noble family, ranked among his ancestors the celebrated mayor of Calais, Eustache de St Pierre, who exhibited so much patriotism when that town was captured by Edward III. The subject of this article received a liberal education, which he finished at the college of Rouen, where he obtained the first mathematical prize in 1757. Of an enthusiastic and adventurous disposition, a great part of his early life was spent in ram-

bling from one country to another, until at length he entered into the corps of military engineers, which he was soon obliged to quit; and he then proceeded with very little either of money or recommendation to Russia, where he obtained a commission as lieutenant. At the expiration of eighteen months, he was led by his restless enthusiasm to quit the Russians for the Poles, in whose service he was taken prisoner; but being soon released, after passing some time in Germany he returned to Paris. His next removal was to the Isle of France, in quality of engineer, where he remained upwards of two years, much dissatisfied with his situation; and in 1774 returned to his native country, and published a relation of his voyage. In 1784 he gave to the world his eloquent, but not very philosophical work, entitled "*Studies of Nature*," which obtained him considerable reputation, and ultimately acquired him the office of intendant of the botanical garden at Paris, with a liberal salary. In 1789 came out his beautiful tale of "*Paul and Virginia*," which was soon followed, in 1791, by his "*Indian Cottage*," on which productions his lasting reputation will probably chiefly depend. He lost his post of intendant in the Revolution, and having previously married, was reduced to considerable distress. He however retained a small patrimony, and survived the storms of that period. His death took place in 1814, when he left behind him a work entitled "*Harmonies de la Nature*," which, with all the rest of his works, have been translated into English. A memoir of the life of this amiable and eccentric writer has been published by way of introduction to his correspondence; but it is composed in so bad a taste, and admits personal adventure so very kindred to romance, that however it may merit confidence, it but very poorly inspires it.—*Notes. Dict. Hist.*

ST PREST or ST PRET (JEAN YVES de) counsellor of the grand council, and director of the dépôt of archives of foreign affairs in France, in the beginning of the eighteenth century. He was the author of a work published anonymously at Amsterdam about 1726, under the title of "*Histoire des Traités faits entre les Diverses Puissances de l'Europe, depuis le Règne d'Henri IV, jusqu'à la Paix de Nimègue en 1679*," 2 vols. folio; and he wrote several other political treatises, which were never printed. His literary labours were intended for the benefit of the students of a political academy founded by the French minister De Torcy, in 1710, over which St Prest presided from that period till his death, in the beginning of 1720.—*Biog. Univ.*

ST PRIEST (FRANCIS EMANUEL GUIGNARD, count de) a French statesman, born at Grenoble, March 12, 1735. After receiving an excellent education, he entered into the army, and he was also admitted among the knights of Malta. He served with reputation in Germany, and attained the rank of *maréchal-de-camp*; and after being employed on a diplomatic mission to Portugal, he was, in 1768, sent ambassador to Constantinople. He was

subsequently French minister at the Hague, where he remained at the commencement of the Revolution. In July 1789 he succeeded baron de Breteuil as minister of the royal household, including the management of domestic affairs of state; and after encountering repeated denunciations, he was obliged to resign this office in December 1790, soon after which he quitted France. In 1795 he was one of the four ministers whom Louis XVIII had assembled at Verona, and he accompanied that prince to Blankenbourg and to Mitau; but he afterwards left him, and resided some years in Sweden. His sons having entered into the service of Russia, he sought an asylum in that country, and afterwards at Geneva. Returning to France at the restoration of the Bourbons, he was raised to the peerage in August 1815. He retired to an estate near Lyons, where he died February 26, 1821. He was the author of "*Examen des Assemblées Provinciales*," forming part of the observations presented to the assembly of the Notables, Paris, 1787, 8vo; and he left in manuscript "*Mémoires*," containing an account of the whole of his military and political career.—*Biog. Univ.*

ST REAL (CÉSAR VICHARD de) an able writer of the seventeenth century, was the son of a counsellor to the senate of Chamberri in Savoy, where he was born, but in what year is not ascertained. He came young to France, and was some time a disciple of M. Varillas, and in 1673 accompanied the duchess of Mazarin to England. He died at Chamberri in 1692. The abbé de St Real was much attached to the study of history, and wrote a piece to advance a philosophical consideration of it, which is entitled, "*De l'Usage de l'Histoire*," Paris, 1672, 12mo. He also published, in 1674, "*Conjurations des Espagnols contre la République de Venise en 1618*," 12mo; and a similar work on the imputed conspiracy of Don Carlos, prince of Spain. Voltaire compares the style of the first of these productions to that of Sallust; but it is to be regretted that in both of them the author infuses a portion of romance, for which there was little foundation. They, however, on this very account afforded scope for the tragic muse of Otway, whose dramas of "*Don Carlos*" and "*Venice Preserved*," are founded principally on the narratives of the abbé St Real. He wrote several other pieces upon the Roman history and subjects of philosophy, politics, and morals; all of which are comprised in the Paris edition of his works of 1745, in 3 vols. 4to, and 6 vols. 12mo.—*Nicéron*, vol. ii. and x.

ST SIMON (LOUIS DE ROUVROI, duke of) a French writer of memoirs, was the son of a nobleman of the same title, and born in 1675. He was introduced to the court of Louis XIV in his fifteenth year, and maintained fair moral reputation both as a courtier and a soldier. In 1721 he was appointed ambassador-extraordinary to the court of Spain, for the purpose of soliciting the infanta in marriage for Louis XV. He was much in the confidence of the regent duke of Orleans, and after acting

a respectable part in life, he retired to his estate, where he maintained the character of a strict devotee, and died at an advanced age about the year 1767. This nobleman was the author of "*Memoirs of the Court of Louis XIV, and of the Regency*," which he composed in his retreat, and which has been published since his death. They consist of a great variety of anecdotes relative to persons and incidents, interspersed with portraits drawn with a strong but dark pencil. They exhibit many of the author's natural prejudices in favour of nobility, and are often obscure, incorrect, and involved; but, nevertheless, make a valuable addition to the secret history and biography of the times. This work was published in a mutilated state in the first instance in 1788; but a complete edition was printed at Strasburgh in 13 vols. 8vo, 1791.—*Nouv. Dict. Hist. Anquetil Hist. de Louis XIV.*

SALA (NICOLÒ) a Neapolitan musician, born about the commencement of the last century. He was master of the conservatory of La Pietà at Naples, and is advantageously known as the author of an immense and laborious work, to the compilation of which he dedicated the whole of a life prolonged far beyond the period usually allotted to man. This book was printed at length at the expense of the king, under the title of "*Regole del Contrapunto pratico*," when the author died, inconsolable at seeing the whole impression sacrificed by the fury of the populace, who set fire to the royal printing-house in the Revolution of 1799. Eight years after, however, the treatise, which is a truly valuable one, was reproduced by M. Choron, in his "*Principes de Composition des Ecoles d'Italie*."—*Biog. Dict. of Mus.*

SALAHEDDIN YUSEPH BEN AYUR, usually called Saladin, a celebrated sultan of Egypt and Syria, was born in the year 1137, in the castle of Tecuib, of which his father, a native of Curdistan, was governor. In 1168 he was chosen to succeed his uncle Siracoub in the command of the armies of the Fatimite caliph Adhed, or rather of the sultan Noureddin, his immediate superior. He terminated the dynasty of the Fatimite caliphs of Egypt, at the command of the latter, and subsequently endeavoured to supersede the minor son of Noureddin himself, but did not succeed until after his death, when he was recognized sultan of Syria and Egypt by the caliph of Bagdat. The great object both of his religion and his politics was now to expel the Christians from Palestine, and to recover the city of Jerusalem. An atrocious massacre of Mahometan pilgrims by the French lord, Du Chatillon, added still more to his ardour; and his vow of revenge against the perpetrator he was enabled to make good by his famous victory on the plain of Tiberias in 1187, where he captured Guy de Lusignan, with the chieftain Chatillon (whom he cut down after the battle with his own scimitar), and many more. The fruits of this victory were the towns of Acre, Seid, and Barout; after which he laid

siege to Jerusalem, which yielded in a capitulation to the articles of which Saladin faithfully adhered. He then proceeded against Tyre, but failed, in consequence of the destruction of his fleet by the Franks. The intelligence of the loss of Jerusalem reaching Europe, produced the crusade under the emperor Frederick Barbarossa, whose death inspired the Mussulman with hopes which were soon damped by the arrival, with a mighty host, of Richard Cœur-de-Lion of England, and of Philip Augustus of France. A recovery of Acre, by the two kings, took place in 1191, upon which event Philip returned to France, and Richard, after twice defeating the sultan, took Caesarea and Jaffa, and spread alarm as far as Jerusalem. At length a truce was concluded between Richard and Saladin, by the terms of which the coast from Jaffa to Tyre was ceded to the Christians, while the rest of Palestine remained to the sultan. The departure of Richard freed Saladin from his most formidable foe; but his own death, which took place at Damascus in 1193, in the fifty-sixth year of his age, suddenly terminated the career of this active and able prince, and plunged his subjects of Syria and Egypt into deep mourning. Though chargeable in the outset of life with unjustifiable means of acquiring power, Saladin employed it, when obtained, very usefully for his subjects, whose burthens he lightened, whilst he benefited them by a great number of useful works and establishments. Whilst magnificent in his erections, and in public undertakings, he was altogether frugal in his personal expenses. In religion he was zealous for his creed, almost to fanaticism, but was faithful to his engagements, and administered justice with diligence and impartiality. A lasting proof of the terror which his name inspired, was given by the Saladin tenth, imposed by the authority of pope Innocent X on both clergy and laity, for the support of the holy war. Saladin left a family of seventeen sons and one daughter, and was the founder of the dynasty of the Ayyubites.—*Mod. Univ. Hist.* Gibbon.

SALDEN (WILLIAM) an ingenious philological writer, who was a native of Utrecht, where he died in 1694. He was the author of "Otia Theologica," 4to; "Concionator Sacer," 12mo; "Chr. Liberii (Gul. Salden) Bibliophila, sive de Scribendis, Legendis, et aestimandis Libris, Exercitatio parænetica; interjecta sunt quedam de Plagio Litterario, Thrasionismo Theologorum, &c." Ultraj. 1681, 12mo; and a treatise "De Libris, variorum eorum Usu et Abusu," Amst. 1688, 12mo.—*Watt. Stollii Introd. in Hist. Lit.*

SALE (GEORGE) a learned English Oriental scholar, and various writer, of the eighteenth century. Unfortunately nothing of his particular history is known, notwithstanding his services to literature; but it is ascertained that he was a married man, and had a son educated at New college, Oxford, of which he became a fellow. Our author was one of the founders, and of the first committee, of a Society for the Encouragement of Learning, founded in 1736.

His services were, however, but of short duration, as he died the same year. Mr Sale was one of the compilers of the great "General Dictionary;" as also a principal writer in the "Universal History," of which he supplied the cosmogony, and a small part of the history which follows it. The most important of his performances, however, is a translation of the Koran into English from the original Arabic, with explanatory notes from the most approved commentators. To this version is prefixed a preliminary discourse on the state of the Arabs, Jews, and Christians at the time of Mahommed's appearance; on the doctrine and positive precepts of the Koran; and on various other points connected with Islamism, of a nature to merit a separate publication.—*Gent. Mag.* for 1736 and 1781. *Boswell's Life of Johnson.*

SALICETI (CHRISTOPHER) was born at Bastia in Corsica, in 1757, and was educated at a college of the Barnabites at his native place, whence he removed to study the law at Pisa. Returning home, he became an advocate of the superior council of Corsica; and in 1789 he was deputy from the tiers état of his native country to the states-general of France; and in 1792 a member of the National Convention, in which he voted for the death of Louis XVI. Having opposed the projects of Paoli, he left Corsica precipitately; and subsequently he was employed as commissary to the French army in Italy. In 1797 he had a seat in the Council of Five Hundred; and on the assumption of power by Buonaparte he was proscribed. His talents restored him to favour; and under the consulate he was sent ambassador to Genoa, when he aided in the union of that republic to France. When Joseph Buonaparte was raised to the throne of Naples, Saliceti was appointed his minister of police, to which was united the office of minister at war. Under king Joachim (Murat) he was dismissed, but was afterwards recalled on the invasion of Italy by the English. He died suddenly, not without suspicion of poison, in December 1809.—*Dict. des H. M. du 18me S. Biog. Univ.*

SALINAS (FRANCISCUS) professor of music in the university of Salamanca. This extraordinary man was the son of the treasurer of Burgos, in which city he was born in 1513. Though blind from his birth, he acquired no inconsiderable share of knowledge of the Greek and Latin languages, as well as of philosophy and the arts, especially of music. Sarmenius, archbishop of Compostella, struck with the genius he displayed, rescued him from the poverty in which he found him, and on being elected a cardinal took him with him to Rome, where he continued to prosecute his studies with great success. He was eventually invited to Salamanca, where he filled the situation already alluded to with great credit, and obtained from pope Paul the Fourth the abbey of St Pancratius della Rocca Salegna in the Neapolitan dominions. His principal work is a treatise, "De Musica," in seven books, in which he exposes very happily some

of the errors of the ancients with respect to harmony, and enters into a copious examination of the metres used by the Greek, Roman, and Spanish poets. His death took place in 1590.—*Biog. Dict. of Mus.*

SALISBURY (JOHN of) an Augustine canon of the twelfth century, supposed to have been born at Old Sarum about the year 1116. After having studied in the universities of Paris and Oxford, he assumed the cowl in the monastery of St Augustine at Canterbury, where he acquired the friendship of the primate Thomas à Becket. On the murder of this prelate, in 1171, by Fitzurse and his associates, of which deed he is said to have been a witness, he retired to France, and there obtained the bishopric of Chartres from the pope. As an author he is known by his "*Polyraticon, seu de Nugis Curialium et Vestigiis Philosophorum*;" as well as by some other tracts, both curious and valuable, on subjects connected with antiquity and critical research, being well versed in all the learning of the age, and the order to which he belonged. His death took place in 1182.—*Leland. Tanner.*

SALISBURY (WILLIAM) a Welsh lawyer of the age of Elizabeth, a native of the county of Denbigh, and a graduate of Oxford. He is principally known as the first translator of the liturgy of the church of England into the Welsh language, of which tongue he also published a Dictionary, in 1 vol. 4to, 1547; and a complete version of the Scriptures. His death took place in 1570.—*Athen. Oxon.*

SALKELD (WILLIAM) an eminent writer on the statute law, who practised as an advocate in the beginning of the last century, and attained to the rank of king's serjeant. His "*Reports of Cases Adjudged in all the Courts from 1 Will. and Mary to 10 Anne*," are highly esteemed by professional men; and since their first publication, in 1717, they have passed through several editions, the sixth of which, with large additions and references to modern determinations, by William David Evans, esq. appeared in 1795, 3 vols. royal 8vo.—*Bridgman's Leg. Bibl.*

SALLENGRE (ALBERT HENRY de) an ingenious and laborious Dutch author, descended of a good family in Holland, and son to the receiver-general of Walloon Flanders. He was born in 1694 at the Hague, and after receiving an excellent education at Leyden was admitted an advocate at the Dutch bar. Here his abilities, aided by family connexion, made his rise a rapid one, and in 1716 he received the appointment of counsellor to the princess of Nassau, which was soon followed by that of commissary of finance, and auditor of the bank of Holland. The hours of relaxation from public business he diligently employed in the cultivation of literary pursuits, and besides a periodical work which he edited, under the name of the "*Literary Journal*," was the author of a "*Commentary on Ovid's Epistles*," "*The History of Peter Montmaur*," 8vo, 2 vols.; "*A Treasury of Roman Antiquities*," folio, 3 vols.; and "*L'Eloge de l'Yvresse*." He was carried off by the

small-pox in the thirtieth year of his age, while busily employed in compiling a "*History of the United Provinces, from the Year 1609 to the Peace of Munster*." Of this work one volume only, in 4to, appeared five years after his decease, printed at the Hague.—*Niceron. Moreri.*

SALLO (DENIS de) a man of letters, distinguished as the original conductor of the oldest critical journal established in Europe. He was descended from an ancient family of the province of Poitou, and was the son of a counsellor of the parliament of Paris, in which metropolis he was born in 1626. He went through his youthful studies with great credit, and having afterwards applied himself to jurisprudence, he was admitted a counsellor of the parliament in 1652. He soon attained eminence in his profession, and he gave a proof of his talents in a work entitled "*Traité de l'Origine des Cardinaux du S. Siège, et particulièrement des François, avec deux Traités curieux des Legats à Latere, &c.*" 1665, 12mo. He was frequently consulted by the minister Colbert, for whose use he drew up a number of important memoirs relative to naval affairs, and other subjects. In 1665 he commenced the publication of the "*Journal des Savans*," which appeared in weekly numbers, the editor concealing himself under the title of the sieur d'Hedouville. He is said to have been assisted by several men of learning, among whom were Chapelain, and the abbé Gallois. Thirteen numbers only had been published when the work was suppressed, through the interest of persons who had taken offence at the severity of critical animadversion displayed by these self-constituted arbiters of literary reputation. After a short interval, the abbé Gallois obtained permission to resume the journal, which has been continued, though not without interruption, to the present time. M. de Sallo died in 1669.—*Camusat Hist. des Journaux. Biog. Univ.*

SALLUST (CAIUS CRISPUS SALLUSTIUS) an eminent Roman historian, was born at Amiternum, in the country of the Sabines, BC. 85. He was educated at Rome, where he became almost equally distinguished for abilities and licentiousness of manners. His extravagance and debauchery even caused him to be expunged by the censors from the list of senators, but he was restored by Julius Cæsar, who promoted him to the dignities of questor and prætor, and nominated him to the government of Numidia. In this office he so enriched himself by pillage and rapine, which it is supposed he shared with Cæsar, that on his return to Rome he was enabled not only to purchase a large estate, but a magnificent mansion on the Quirinal hill, with the extensive gardens which still bear his name. He is supposed to have died BC. 35, at the age of fifty. The vices of Sallust were curiously contrasted by the rigid morality which pervades his writings, and in other respects the author is as valuable as the man was the contrary. His principal work was a history of the Roman republic, from the death of Sylla to Cætiline's

conspiracy, of which some fragments alone exist; but happily two entire historical pieces of his composition remain, "On the Jugurthine War," and "On the Catilinarian Conspiracy," in which it is agreed that the concise energy of the Latin language is displayed with considerable skill and mastery. The matter also exhibits great vigour of sentiment and force of narrative; and his high literary reputation at Rome is established by the testimony of Martial, Tacitus, and Quintilian, although his neglect of Cicero, and partiality to Cæsar, justly detract from his historical fidelity. The most valuable modern editions of Sallust are those of Gronovius, Leyden, 1690; of Wasse, Cambridge, 1710; and of Homer, Leyden, 1769. There are four English translations, one by Gordon, another by Dr Rose, a third by Dr Murphy, and a fourth by Dr Steuart, in two volumes, quarto, to which are prefixed, essays on his life and writings.—*Life by Steuart. Vossii Hist. Lat.*

SALMASIUS (CLAUDIUS). See SAU-MAISE (CLAUDE).

SALMON. There were several ingenious English authors of this name. **THOMAS SALMON**, who held the living of Mespall, Bedfordshire, in the latter part of the seventeenth century, is advantageously known in the musical world as the author of some clever treatises on the science. The principal of these is entitled "An Essay to the Advancement of Music by casting away the Perplexity of different Clefs," printed in London in 1672.—His eldest son, **THOMAS**, entered the navy, in which he spent some years, but afterwards quitted the service, and opened a house of public entertainment at Cambridge. Proving unsuccessful in business, he came to London, and there commenced author by profession, in which capacity he compiled several works for the booksellers. Of these the principal are, "An Examination of Burnet's History of his own Times;" "The Chronological Historian," 8vo, 2 vols.; "A Geographical Grammar," afterwards improved by Guthrie; a "History of England," 12 vols.; "Modern History," folio, 3 vols. reprinted in thirty-two volumes, octavo; "Essay on Marriage," 8vo; "General Description of England," 2 vols.; "Foreigner's Companion through Oxford and Cambridge;" "Universal Gazetteer." His death took place in April, 1743.—His brother **NATHANIEL**, the most celebrated of the three, was born at his father's parsonage, and received his education at Bene't college, Cambridge, where he graduated, and entering the church, obtained some preferment in Suffolk. On the accession of queen Anne to the throne, he refused to take the oath of allegiance, although he had made no scruple of doing so to her predecessor; this caused his ejection from his benefice, and all hopes of advancement in his profession being now closed against him, he assumed the habit of a layman, and practised physic first at St Ives and afterwards at Bishop's Stortford, where he died in 1742. As an antiquarian he is esteemed for the accuracy of his deductions, the patience

and perseverance of his inquiry, and his active and industrious research. His writings consist of "A History of Hertfordshire," in folio; "Antiquities of Surrey," 8vo; "Antiquities of Essex," folio; "Roman Antiquities in the Midland Counties," 8vo; "Roman Stations in Great Britain;" "Lives of the English Bishops, from the Time of the Restoration to the Revolution in 1688."—*Gough's Topog. Gent. Mag.* vol. lxvi.

SALMON (WILLIAM) an empirical physician and medical writer of considerable note in the latter part of the seventeenth century. He was engaged for a long course of years in the practice of physic in London, but probably with no great success, as the multitude of works which he published must have required industrious application, and left but little time for other employment. Among his productions are, "The complete Physician, or Druggist's Shop opened," an octavo volume, containing more than twelve hundred pages; a "Universal Herbal," folio; and various other professional works, besides a treatise on drawing, engraving, &c. entitled "Polygraphice," of which the tenth edition appeared in 1701. His death took place about the end of the seventeenth century.—*Hutchinson's Biog. Med.*

SALOMON (JOHANN PETER) a native of Bonn, in the electorate of Cologne, born 1745. He was educated by his parents with a view to make the law his profession, but an invincible passion which he displayed for the science of music, at length induced them to relinquish the idea, and to suffer him to follow the bent of his genius. After acquiring considerable reputation as a musician both in Germany and France, he came to England in 1781, and besides proving himself incontestably the greatest violinist of the age, had the merit of first introducing into this country, at a great pecuniary risk, the celebrated Haydn, whose symphonies, written for Salomon's concerts, are considered the standard of perfection for this species of composition. Among his pupils, Pinto proved the extent of his master's skill, and his ability in communicating it; but unfortunately this extraordinary young man, whose musical progress reflected so much honour on his master, possessed qualities which are not unusually the concomitants of genius, and perished just as he was ripening into unrivalled excellence. Salomon, whose respectable literary attainments, and polished manners, had always secured him an entrance into the very first circles, died in London, in 1815, after a long illness, occasioned by a severe fall from his horse, and lies buried in Westminster abbey.—*Biog. Dict. of Mus. Burney's Hist. of Mus.*

SALVIAN, a native of Cologne, one of the early fathers of the Christian church. He led a religious life at Marseilles during the greater part of the fifth century, and died in that city about the year 484. Salvian was the author of several works on devotional subjects, of which there are yet extant a treatise on "The Providence of God," in eight books; another in four books, written "Against Avarice, es-

pecially in Priests and clerical Persons;" and nine pastoral letters. His remains were collected and printed together in two volumes octavo, by Baluzius, at Paris, in 1663.—*Cave. Dupin.*

SALVIATI, the name by which two Italian painters, of considerable merit, are usually known. **FRANCESCO ROSSI**, the elder of these, was a native of Florence, born in 1510. He studied under Del Sarto and Baccio Bandinelli, and was much patronized by cardinal Salviati, whose family name he in consequence assumed. He was an excellent artist, both in fresco and oils, and in his style of designing came very near Raphael himself, though he fell short in sublimity and grandeur of composition. His naked figures and draperies are also much admired. Unfortunately an irritable and peevish disposition not only made him unjust to the claims of rival talent, but at length alienated the regard of many of his most attached friends. In 1554 he visited Paris, but made no long stay in that capital, and at length died in Italy in 1563. Most of his best pieces are to be found in Florence, Rome, and Venice.—The second, whose family name was **JOSEPH PORTA**, was a Venetian by birth, and became a pupil of the former, whose name he took. His colouring and designs were highly esteemed by the citizens of Venice, where he died in 1585.—*Pilkington. Rees's Cyclop.*

SAMBUCUS (JOHN) a learned physician, born at Tirnau in Hungary, in 1531. He held the offices of counsellor and historiographer to the emperors Maximilian II and Rodolph II, and he wrote a continuation of the Hungarian history of Bonfinius, dialogues, orations, and other works; but he distinguished himself principally as an editor and commentator on the writings of the ancients. De Thou praises him for his liberality; and says that he expended immense sums in procuring and publishing the works of ancient authors, among which were the Dionysiaca of Nonnus, the Epistles of Aristænetus, Eunapius, Hesychius, &c. He died at Vienna in 1584.—*Teissier Eloges des H. S.*

SAMMES (AYLETT) an antiquary and lawyer, who studied at Christ's college, Cambridge, where he proceeded MA, and he was afterwards admitted to the same degree at Oxford in 1677. He died in 1679. His literary reputation depends on a work entitled "*Britannia Antiqua Illustrata*, or the Antiquities of Ancient Britain derived from the Phœnicians," 1676, folio, the real author of which, according to Wood, was Robert Aylett, LL.D. a master in chancery, who wrote a poem entitled "Susanna, or the Arraignment of the Two Elders," and other poetical pieces. Sammes, who was the nephew of Dr Aylett, is supposed to have obtained the materials for his Britannia from the papers of his deceased relative.—*Wood's Athen. Oxon.*

SANADON (NOEL STEPHEN) a learned French jesuit, born at Rouen in Normandy, 1676. He dedicated himself to the study of oratory, on which he gave lectures at Caen, in

his native province, and afterwards held the professorship of the same science in the university of Paris. To this situation was eventually added those of keeper of the royal library and preceptor to the young prince of Conti. Besides some elegant poems and orations, written in the Latin language, he published a new translation of Horace, with valuable notes. This work first appeared at Paris, in two quarto volumes, and was afterwards reprinted at Amsterdam, in 1735, in eight volumes, 12mo, with considerable additions, including the commentary of Dacier. Sanadon died at Paris, September 21, 1732.—*Nouv. Dict. Hist.*

SANCHES (ANTONIO NUNES RIBEIRO) an eminent Portuguese physician, born at Ponta Macor, in 1697. He was the son of an opulent merchant, in opposition to whose wishes he adopted the profession of medicine; and he was indebted to the liberality of his maternal uncle, Dr Nunes Ribeiro, of Lisbon, for the means of prosecuting his studies at Coimbra and at Salamanca. At the latter university he took the degree of MD. in 1724, and the following year became stipendiary physician at Benavente. He soon after removed to London, but the climate of this country affecting his health he went to Leyden, where he remained till 1731, when, through the recommendation of Boerhaave, he obtained an advantageous appointment in Russia. He served as physician to the army at the siege of Azoph; and in 1740 he was nominated one of the imperial physicians. He attended the empress Anne in her last illness; and he was favoured by the regent in the reign of Iwan III, but on the deposition of that prince, and the advancement of Elizabeth the daughter of Peter the Great, he lost his appointments. Being apprehensive for his personal safety, he obtained leave to retire from Russia, and in 1747 he took up his residence at Paris, where he passed the remainder of his life. While at St Petersburg he carried on a correspondence with the jesuits settled in China, through whom he procured the seeds of the official rhubarb, and introduced the culture of that plant into Europe. He contributed in various ways to the advancement of science, and left several works on medical subjects. His death took place October 14, 1783.—*London Med. Journ. Hutchinson's Biog. Med.*

SANCHEZ. There are several learned Spanish writers of this name, of which it will be necessary only to mention four. **FRANCIS SANCHEZ**, or Sanctius Brocensis, was born in 1523, at Estremadura, and became professor of rhetoric at Salamanca, where he died in 1600. He published editions of several of the classic authors, and some dissertations on classical subjects; but his principal work is a grammatical treatise, entitled "*Minerva, seu de Causis Lingue Latinæ*," printed first at Salamanca in 1587, 8vo, and many times since, with improvements.—**PETER ANTHONY SANCHEZ**, an eminent Spanish divine, was born at Vigo in 1740, and became canon of the cathedral of St James, and professor of rhetoric in

his native place, where he was much admired both for his talents and benevolence. His works are, "Summa Theologiæ Sacræ," 4 vols.; "Annales Sacri," 2 vols.; "A Treatise on Toleration," 3 vols.; "History of the Church of Africa;" "Essay on the Eloquence of the Pulpit;" "Sermons," 5 vols.; and "On the Means of encouraging Industry."—RODRIIGO SANCHEZ, a Spanish prelate, was born in the diocese of Segovia in 1404. He studied law at Salamanca, obtained successively the bishoprics of Zamora, Calahorra, and Valencia, and was much employed in embassies. He died at Rome in 1470. His works are, "Historia Hispaniæ;" "Speculum Vitæ Humane," folio; "Epistola de Expugnatione Nigropontis."—THOMAS ANTHONY SANCHEZ, a learned Spaniard, and librarian to the king, was born in 1730, and distinguished himself by his researches into the literary history of his country, and published a new and improved edition of the "Bibl. Hispan. of Antonio." His most celebrated work, however, is his collection of Castilian poetry anterior to the fifteenth century, to which is prefixed a letter on the origin of Spanish poetry, Madrid, 1779—1782, 5 vols. 8vo. He was also the author of an "Apology for Cervantes." He died in 1798.—*Antonio Bibl. Hispan. Novv. Dict. Hist.*

SANCHO (IGNATIUS) the name given to a singular negro, whose abilities presented a strong contrast to the presumed incapacity of those of his nation and colour. He was born in 1729, at sea, on board a slave-ship, in its passage to the Spanish Main, and on his arrival at Carthage, received from the owner the name of Ignatius at the font. Accompanying his master to this country, he was given by the latter to three maiden sisters residing at Greenwich, who employed him in menial offices, and bestowed on him his second name of Sancho, in allusion, it is said, to the celebrated squire of Cervantes. While residing in this family, he appears to have been treated with great and unnecessary harshness; but being at length fortunate enough to attract the notice of the duke of Montagu, that benevolent nobleman not only rescued him from his unpleasant situation, but took him into his own service, and continued his steady friend. On the deaths of the duke and duchess, by the latter of whom he was bequeathed a pension of thirty pounds for his life, Sancho was again thrown upon the world, the little property left him proving, as is too often the case in similar circumstances, an unfortunate present, and leading him into irregular habits, by the indulgence of which it was soon dissipated. As a resource he determined to try the stage, and actually appeared in Othello and Oronooko. The experiment did not succeed, as he appears to have had few requisites for the characters, except his colour. A marriage, however, which he soon after contracted with a young creole, possessed of a small property, and the continued kindness of the family of his late patron, once more restored him to comfort and respectability. He com-

menced business as a grocer, and succeeded in making some provision for a large family, before his decease, which took place about the Christmas of 1780. This extraordinary man was the author of some well-written letters published after his death, and was much noticed by many of the literary characters of the day, especially by Garrick and Sterne. A few pieces of miscellaneous poetry, and a tract on music, are also ascribed to him.—*Life by Jekyl.*

SANCHONIATHON, an ancient Phœnician writer, who is generally supposed to have been a native of Berytus, though Athenæus and Suidas affirm that he was a Tyrian. The age in which he lived is uncertain, but it is probable that he flourished about the time of the Trojan war. He composed, in the Phœnician language, a history of his native country, which was translated into Greek by Philo Byblius, in the reign of the emperor Adrian, and of this version some fragments have been preserved by Porphyry and Eusebius. Suidas mentions other works of Sanchoniathon, which are entirely lost.—*Biog. Univ.*

SANCROFT (WILLIAM) a learned and distinguished English prelate of the seventeenth century. He was born at Fressingfield in Suffolk, in 1616, and after studying at a grammar-school at St Edmundsbury, he was admitted into Emanuel college, Cambridge, in 1633. In 1642 he obtained a fellowship, from which he was ejected in 1649 for refusing to take the covenant. He then visited France and Italy; and returning home on the Restoration, he was chosen one of the university preachers, and in 1661 he assisted in revising the Liturgy. In 1664 he was made dean of York, and towards the close of that year he was removed to the deanery of St Paul's, London. In this station he distinguished himself by his munificent contributions towards the repair, and afterwards of the rebuilding of the cathedral. In 1669 he was presented by the king to the archdeaconry of Canterbury, which preferment he resigned after he had held it two years. He was chosen prolocutor of the lower house of convocation, which station he held in 1677, when he was unexpectedly raised to the metropolitan see of Canterbury. His conduct as primate displays a conscientious regard for the laws of his country, and the rights of the church over which he presided. In 1687 he was, with six other prelates, committed to the Tower for presenting to king James II a remonstrance against the declaration of indulgence ordered to be read in churches; and being tried in the court of King's Bench, the archbishop and his colleagues were acquitted. On the secession of the king, he concurred with the lords, spiritual and temporal, assembled at Guildhall, December 11, 1688, in signing an address to the prince of Orange, demanding a free parliament, the security of laws, liberty, and property, and recommending indulgence to Protestant dissenters. He subsequently refused to take the oath of allegiance to William III and his consort, in consequence of which he was removed from his high station in the

church, in February 1689; and a few months after he retired to Fresingfield, where he died in November 1693. Sancroft was a man of great industry and learning, of which he left evidence in a large collection of manuscripts. His printed works consist of a Latin dialogue, entitled "Fur Prædestinatus, sive Dialogismus inter quendam Ordinis Prædicantium Calvinistam et Furem ad Laqueum damnatum habitus," 1651, 12mo, reprinted a few years since; "Modern Politics, taken from Machiavel, Borgia, and other Modern Authors, by an Eye-Witness," 1652, 12mo; "Sermons," "Letters," &c. An interesting account of the life of archbishop Sancroft was published by the rev. G. D'Oyley, 1818, 2 vols. 8vo.—*Biog. Brit.*

SANCTORIUS or **SANTORIO**, an eminent physician, was born in 1561, at Capo d'Istria. He studied and graduated at Padua, and after practising for some years at Venice, was invited in 1611 to the first theoretical chair in the university of the former city, where he commenced a series of observations on insensible perspiration, which made his name famous throughout Europe. He continued to lecture in this capacity for thirteen years to numerous audiences, when he was induced by fatigue to resign, and to fix his residence in Venice. The senate, however, continued his salary undiminished until his death in 1636, at the age of seventy-five. The name of Sanctorius is rendered memorable by his work, entitled "Ara de Statica Medicina," first printed at Venice in 1614, and many times reprinted and translated into the modern languages. It consists of seven sections of aphorisms relative to insensible perspiration, which excretion this author was the first to reduce to certain laws, and place in a striking light by experiment. In this work he established many important facts, but like most writers on a particular topic, has overcharged their practical importance. He was the author of several useful inventions: besides his statical chair for the measure of perspiration, he invented another for ascertaining the force of the pulse, and several useful instruments of surgery. He was also the first physician who endeavoured to measure the heat of the skin by a thermometer. His writings were published collectively at Venice, in 4 vols. 4to, 1660.—*Halleri Bibl. Annot. et Med. Tiraboschi.*

SANDBY (PAUL) an ingenious artist, was born at Nottingham in 1732. At the age of fourteen he became a student in the drawing-room at the Tower, and in 1748 was sent into the Highlands of Scotland to take views for the duke of Cumberland. Of these he made small etchings, which were afterwards published; after which he was much employed in Wales, under the patronage of sir Watkin Williams Wynne, in taking scenes which he transferred to copper-plates, and executed prints in imitation of drawings in Indian ink, which art of aquatinta he carried to great perfection. On the institution of the Royal Academy he was elected an academician, and

in 1768 the marquis of Granby appointed him chief drawing-master at Woolwich. He died at his house at Paddington, November 7, 1809.—*Europ. Mag.*

SANDEMAN (ROBERT) in whom the sect called Sandemanians originated, was born at Perth in Scotland in 1723. He studied at Edinburgh, and afterwards engaged in the linen trade. On marrying the daughter of the rev. John Glass, he became an elder in his congregation, and soon after published a series of letters addressed to Mr Hervey, on his Theron and Aspasio, in which he endeavoured to show, in opposition to that divine, that a justifying faith meant nothing more than a simple assent to the divine mission of Christ. This position caused much controversy, and those who adopted it were called Sandemanians, and formed themselves into church order, in strict fellowship with the church of Scotland, but holding communion with no other. The chief opinions and practices in which this sect differs from others, are their weekly administration of the Lord's Supper, washing each other's feet, &c. In 1764 Mr Sandeman accepted an invitation to New England, where he died in 1771. His sect still subsists in Great Britain. He was author of some other theological tracts, besides his "Letters on Theron and Aspasio."—*Encyc. Brit.*

SANDERS (NICHOLAS) an ecclesiastical historian, born about 1527, at Charlewood in Surrey. He was professor of canon law at Oxford in the reign of queen Mary, who appointed him her secretary for Latin correspondence. On the accession of Elizabeth he retired to Rome, was ordained a priest, and created DD. Cardinal Hosius took him to the council of Trent as his secretary; and he was afterwards employed by that prelate in various affairs in Poland, Prussia, and Lithuania. He subsequently became professor of divinity at Louvain, where he published, in 1751, his work "De Visibili Monarchia Ecclesiæ," in defence of the supremacy of the holy see. In 1579 he was sent as papal nuncio to Ireland, and he died there in the following year. Camden states, that Sanders having promoted the rebellion of the earl of Desmond against the English government, was forced to wander as a fugitive among the mountains after the defeat of the insurgents, and that he perished with hunger; but Wood attributes his death to dysentery, and says that he expired in the arms of the bishop of Killaloe. Besides the work already mentioned, he was the author of a history "Of the Origin and Progress of the English Schism," as he styles the Reformation, which has been severely animadverted on by Bayle and bishop Burnet. He also wrote against Jewel and Nowel, in defence of transubstantiation, and on various other subjects.—*Moreri. Aikin's Gen. Biog.*

SANDERS (ROBERT) a native of Scotland, born in 1727, who was apprenticed to a painter, which employment he relinquished for that of a writer for the press. Having travelled over a great part of the country, he

produced a work, entitled "The Complete English Traveller," which passed through several editions. At one time he was employed as an amanuensis by lord Lyttelton, whom he assisted in preparing for the press his "History of Henry II." He was the compiler of Notes on the Bible, published under the name of Dr Henry Southwell; and he was engaged on a treatise on general chronology, when he died of an asthma in March 1783. Among the productions of his pen are, "The Newgate Calendar;" "The Adventures of Gaffer Greybeard," a satirical novel; and a "History of Rome, in a series of Letters."—*Gen. Biog. Dict.*

SANDERSON (ROBERT) a learned English divine and theological casuist, born at Rotherham in Yorkshire, in 1587. He studied at Lincoln college, Oxford, where he obtained a fellowship in 1606, and the following year he proceeded MA. In 1618 he was presented to the rectory of Wibberton, near Boston, in Lincolnshire, which he resigned the ensuing year for that of Boothby Pagnel, in the same county. He was afterwards made a prebend of the collegiate church of Southwell; and in 1631, through the recommendation of Laud, then bishop of London, he was appointed a chaplain to the king. In 1636 he was created DD.; and in 1642 chosen regius professor of divinity at Oxford, and made canon of Christchurch. His attachment to the royal cause, during the civil war, occasioned the loss of part of his preferment, and exposed him to much persecution. He was, however, allowed to retain his living, and he resided among his parishioners till the Restoration, soon after which he was elevated to the bishopric of Lincoln. He was one of the commissioners at the Savoy conference in 1661, and he contributed much to the alterations then made in the liturgy. He died January 29, 1662-3, and was privately buried at Buckden. His principal works are, "Nine Cases of Conscience resolved," 1678, 8vo; "Logica Artis Compendium;" "De Juramenti Promissorii Obligatione Prælectiones Septem;" "De Obligatione Conscientiæ Præl. Sept.;" "A Discourse concerning the Church in these Particulars; 1. concerning the Visibility of the True Church; 2. concerning the Church of Rome," 4to; and "Sermons," folio.—*Biog. Brit. Walton's Lives, edited by Zouch.*

SANDERSON, FAS. (ROBERT) usher of the Court of Chancery and clerk of the Rolls chapel, an intelligent and laborious antiquary and historian. He assisted Rymer in the compilation of that great national work, the "Fœdera;" and his name is included in a royal warrant issued May 3, 1707, empowering Rymer and Sanderson to search public offices, and transcribe materials for the work in which they were engaged. After the death of Rymer, the seventeenth and three following volumes of the "Fœdera," were published by his coadjutor, who also assisted in a second edition of the work, 1727-35. He died December 23, 1741. An improved and augmented edition of the Fœdera is now in pro-

gress of publication, edited by Dr Adam Clarke and Mr Frederick Holbrooke.—*Lempriere's U. B. Edit.*

SANDERUS (ANTHONY) a Dutch ecclesiastic, born 1586. He was a native of Antwerp, and having graduated at the college of Douai, entered the ministry, and obtained a canonry at Ypres. Sanderus was the author of several valuable works connected with the topography of his native country. Of these the principal are, his "Flandria Illustrata," folio, 2 vols.; and "Chronographia Sacra Brabantie," folio, 2 vols. with numerous engravings. His other writings are, "Hagiologium Flandriæ;" and two quarto volumes, the one containing an account of the principal Flemish authors, the other biographical notices of citizens of Ghent distinguished for their progress in literature. His death took place in 1664.—*Nov. Dict. Hist.*

SANDFORD (FRANCIS) a celebrated genealogist and herald of the seventeenth century, an Irishman by birth, who filled the office of a pursuivant-at-arms in the Herald's college during the reigns of Charles the Second and James the Second. He published an account of the ceremonies observed at the coronation of the latter monarch, in one volume folio, as well as several other tracts connected with his profession. Of these the principal are, a "Genealogical History of the Kings of England and Monarchs of Great Britain," folio, to which a supplement has since been added by Stebbing; "A Genealogical History of the Royal House of Portugal," folio; and an account of the "Order of the Ceremonies observed at the Funeral of George Monk, Duke of Albemarle." In 1688 Mr Sandford resigned his situation, but survived it little more than four years, when he died in his sixty-fourth year.—*Biog. Brit.*

SANDINI (ANTONIO) a native of the Venetian states, born in the year 1692. He obtained the professorship of ecclesiastical history in the university of Padua, and is known as the author of "The Lives of the Popes;" "A Dissertation on the Lives of the Popes, extracted from the History of the Church;" "The History of the Holy Family;" and "The Lives of the Apostles." His death took place at Padua about the middle of the last century.—*Nov. Dict. Hist.*

SANDIUS (CHRISTOPHER) a German polemic of the seventeenth century, born in 1644 at Königsberg. He wrote against the Trinity, and was a warm defender of the opinions of Socinus. His principal works consist of a "Treatise on the Nature and Origin of the Soul;" "Bibliotheca Anti-Trinitariorum," 12mo; "Nucleus Historiæ Ecclesiasticæ," 2 vols. 8vo; some remarks on the writings of Gerard Vossius, and a volume of epigrams. Sandius retired into Holland, and settled at Amsterdam, where he died in 1680.—*Saxii Onom.*

SANDRART (JOACHIM) a German artist and author of celebrity, who flourished in the seventeenth century. He was a native of Frankfort-sur-Maine, where he was born in

1606, and became especially eminent as a portrait and historical painter. Having studied the principles of his art under De Bry, Merian, and Giles Sadeler, all engravers of considerable merit, he accompanied Gerard Honthorst to London, where he was much noticed by Villiers duke of Buckingham. The assassination of his patron in 1627 induced him to return to the continent, where, after visiting the principal cities of Spain and Italy, he settled at his native place. Marrying some time after, he took up his abode at Nuremberg, where he founded a school of painting, and acquired both reputation and wealth. As an author, Sandrart is advantageously known by his "Lives of the Painters," a work which he compiled with great care principally from the writings of Ridolfi, Vasari, and Van Mander. His other works, all on professional subjects, consist of "Romanorum Fontinalia;" "Academia Tedesca della Architettura, Scultura, e Pittura," folio, 2 vols.; "Admiranda Sculpturæ Veteris," folio; "Iconologia Deorum," folio; and "Romæ Antiquæ et Novæ Theatrum," folio. His death took place at Nuremberg in 1683; or, as others say, in 1688.—*Sartii Onom.*

SANDYS (EDWIN) an eminent English prelate, was born of an ancient family of the same name near Hawkshead, Lancashire in 1519. He received his education at St John's college, Cambridge, where he embraced the doctrines of the Reformation. In 1547 he was elected master of Catherine-hall, and in 1553 served the office of vice-chancellor. Having been induced by the duke of Northumberland to preach a sermon in favour of lady Jane Grey, on the defeat of that ill-judged attempt, he was committed to the Tower, whence he was removed to the Marshalsea; but finally released at the intercession of sir Thomas Holcroft, knight marshal. He was, however, no sooner at liberty, than Gardiner, bishop of Winchester, being informed of his zeal for the reformed doctrines, sought to arrest him again, but he safely reached the continent, where he remained until the accession of Elizabeth, when he returned, and in Dec. 1559 was consecrated bishop of Worcester. In 1570 he succeeded bishop Grindal, in the see of London, and in 1576 followed the same prelate in that of York. In 1582 a plot was laid by sir Robert Stapleton, to ruin him by a charge of adultery; but the conspiracy was discovered, and the parties concerned in it punished. The abilities of this prelate were of a high order, but his disposition to amass wealth for his numerous family, and continual conflicts and altercations with both Protestants and Papists, his own clergy and neighbours included, injured his general character. A volume of his sermons was printed after his death, and reprinted in 1812, with a biographical memoir by Dr Whitaker. Archbishop Sandys, who died in 1588, in his sixty-ninth year, was one of the translators of the Bible of 1563.—*Life by Whitaker. Bing. Brit.*

SANDYS (sir EDWIN) second son of the preceding, was born in Worcestershire about

1561, and educated at Corpus Christi college, Oxford. In 1579 he obtained a fellowship, and in 1581 was collated to a prebend in the church of York, though not in orders. On graduating MA. he went abroad, and while in Paris, wrote a work, entitled "Europæ Speculum," which being printed surreptitiously, he published an amended edition in 1629, with large additions, under the title of "Europæ Speculum; or a View and Survey of Religion in the Western Parts of the World." In 1602 he resigned his prebend, and the following year was knighted by James I, and was employed by him in much important public business, although subsequently imprisoned for opposition to the court. He was afterwards treasurer of the Western plantations. He died in 1629. He founded a metaphysical lecture at Oxford.—*Fuller's Worthies.*

SANDYS (GZONOX) second son of the archbishop of that name, born in the archiepiscopal palace at Bishop's Thorpe, in 1577. In 1589 he was placed at St Mary-hall, Oxford, but does not appear to have taken any degree. In 1610 he commenced his travels through the Levant and other parts of the Turkish empire, returning home through Italy, and staying some time at Rome, where he applied himself diligently to the study of the classical remains yet visible in that capital. This journey occupied him upwards of two years. On his return to England he amused himself by digesting his notes, and publishing, in 1615, an account of the countries through which he had passed. This work was followed by several poetical productions, the first of which, a translation of Ovid's *Metamorphoses*, originally printed in London in 1627, with the first book of the *Æneid* annexed, is highly spoken of by Dryden, who styles the author "the best versifier of the last age;" and with regard to his version of Virgil, declares, that had Mr Sandys gone before him in the whole translation, he himself would never have attempted it. His other works are a "Paraphrase on the Psalms and upon the Hymns dispersed through the Old and New Testaments," London, 1636, reprinted in folio, 1638. This book was a great favourite with Charles I, who kept it constantly with him while confined at Carisbrooke castle; "A Paraphrase on the Divine Poems," with a thorough base for an organ by the two Lawes, 4 vols. 4to, 1637; and translation of the "Christus Patiens" of Hugo Grotius, 1640. His death took place in 1643, at the house of his nephew, Mr Wiat, of Boxley abbey, near Maidstone, in Kent, in the church of which parish he lies buried without any monument; but the following complimentary entry is inserted in the register: "Georgius Sandys, Poetarum Anglorum sui Sæculi Princeps, sepultus fuit Martii 7, Stilo Anglico, Anno Dom. 1643.—*Life by Cibber.*

SANGALLO (ANTONIO) an eminent architect of the sixteenth century. He was born in the environs of Florence, and was intended for the business of a carpenter; but happily visiting Rome, where he had two uncles who

were architects, he was instructed by them in their art, his knowledge of which he perfected under Bramante, whom he succeeded as architect of the church of St Peter. He was much employed under the popes Leo X, Clement VII, and Paul III, both in fortifying places, and in the construction of public buildings, the grandeur and solidity of which have been much admired. He died in 1546.—*Nouv. Dict. Hist.* See GIAMBERTI.

SANMICHELI (MICHAEL) a distinguished Italian architect, born at Verona, in 1484. He adopted the profession of his father, and at the age of sixteen went to Rome for improvement. He was intimate with Michael Angelo, Bramante, Sansovino, and Sangallo, in whose fame he participated. His first erections were the cathedrals of Orvieto and Montefiascone. Being called to Rome before he had finished these works, he entered into the service of pope Clement VII, and was employed at Parma and Placentia as an engineer. The Venetians subsequently engaged his services in the fortification of the city of Verona, where he also built a bridge over the Adige, and the palaces of Bevilacqua, Torre, Pompei, and Canossa. He died at Verona, in 1559.—*Maffei Verona Illustrata. Milisia Memorie degli Architetti antichi e moderni. Biog. Univ.*

SANNAZARIUS (ACTIUS SINCERUS) or Giacompo Sanasario, a celebrated Italian poet, born at Naples, July 28, 1438. He was patronized by Frederick king of Naples, and when that prince was dethroned, he attended him in his retreat to France, and remained there till his majesty died. Sanazarius then returning to Italy dedicated his time to the cultivation of elegant literature. His wit and gaiety rendered him the object of general admiration, and he passed several years in the society of his friends. At length his country seat at Mergogliano being destroyed by the imperial army, under the prince of Orange, he was so affected with the disaster, that it occasioned his death in April 1530. The works of Sannazarius are "Arcadia," a pastoral romance; "Sonnetti e Canzoni; both in Italian; and poems "De Partu Virginis, lib. iii." "Eclogæ v.," "Salices;" and "Lamentatio de Morte Christi."—*Tiraboschi. Aikin's G. Biog. Univ.*

SANSON (NICHOLAS) a celebrated French geographer, mathematician, and engineer, born at Abbeville, in Picardy, on December 12, 1599. Though destined by his friends for a commercial life, in which he actually engaged, yet, even while a youth, the peculiar bent of his genius displayed itself in the construction of a map of ancient Gaul, remarkable for its excellence and accuracy. The reputation which this work procured him, and some severe losses in trade, induced him to forsake commerce altogether, and to devote himself to the study of geography, in which he soon rose to the greatest eminence. Settling in the metropolis, he obtained the patronage both of Richelieu and Mazarin, and was made geographer and engineer to the king. His maps

ancient and modern, all of which are on a large scale, exceed three hundred in number, and are highly valuable. They were collected and published by his two sons, themselves good geographers, in an Atlas, which appeared at Paris, in two volumes, folio, 1693, twenty-six years after the decease of their father. The elder Sanson is also known as the author of a "History of Abbeville;" descriptions of France, Spain, Italy, the Roman empire, &c. and other tracts, accompanying, and illustrative of his maps.—*Nouv. Dict. Hist.*

SANSOVINO, or TATTI (GIACOPO) a celebrated sculptor and architect, born at Florence about 1479. He studied under the Florentine sculptor Contucci, of Mont-Sansovino, from whom he derived the name by which he is commonly known; and he was afterwards taken to Rome by the architect Julio di Sangallo, where he was employed in designing and in modelling antiques. Ill health induced him to return to Florence, and being recovered, he executed several works, among which was a triumphal arch, erected for the entrance of pope Leo X into Florence in 1515. He again visited Rome, where he built the church of St John the Baptist, and engaged in various other undertakings. On the death of the pope he went to Venice; but returning when Clement VII was raised to the pontifical throne, he renewed his labours, which were interrupted by the sacking of Rome in 1527. Having received an invitation to visit France, he proceeded to Venice in his way thither, and the favourable reception he experienced induced him to remain in that city. He was appointed first architect of the church of St Mark, and he exercised his talents in the erection of churches, palaces, the mint, and the public library. Many works of sculpture were also executed by Sansovino at Venice, where he resided till his death in November, 1570. Both as an architect and a sculptor this artist ranks with the most celebrated of his contemporaries.—*Vasari. Milisia Memorie degli Architetti antichi e moderni. Biog. Univ.*

SANSOVINO (FRANCESCO) son of the preceding, was born at Rome in 1521. He was sent to study the law at Padua; but he preferred polite literature, and procured admission into the newly founded academy of the *Inflammati*. This conduct offended his father, who persuaded him to resume his legal studies at Bologna, where he was admitted doctor of laws. He did not, however, engage in professional practice, and ultimately attached himself to the study of poetry and history. On the accession of pope Julius III, who was his godfather, he hastened to Rome in the hope of obtaining his patronage; but being disappointed, he returned to Venice, and dedicated his time to literary occupations. He died in 1586. His principal works are, "Del Governo de' Regni e delle Repubbliche antiche e moderne," 1561, 4to; "Ritratto delle più nobile e famose Città d'Italia," 1575, 4to; "Dell' Origine e Fatti delle Famiglie illustri d'Italia," 1582, 4to.—*Niceron, xxii. Biog. Univ.*

SANTEUL or **SANTOLIUS** (**JOHN** de) erroneously styled John Baptist Santeuil, the most celebrated modern Latin poet France has produced, was born at Paris, May 12, 1630. He studied under the jesuits, and at a proper age entered among the canons regular of the abbey of St Victor, and devoted himself to the cultivation of literature, never having proceeded beyond the rank of a sub-deacon in the church. He soon acquired fame by the productions of his pen; and among his works were inscriptions for public edifices at Paris, for which he received a pension from the city. His personal character was singular in the extreme, exhibiting all the violence, impatience, and caprice of an eccentric wit and humourist. His moral conduct was liable to great reprehension; yet he had occasional fits of devotion, in which he endeavoured to atone for his irregularities by writing Latin odes and canticles for the church. Those which he composed for that of Paris, were so much applauded, that many other churches wished to employ him in a similar task. He spent much of his time in society, and was patronised by the two princes of Condé, the duke of Bourbon, and other persons of distinction. He was also noticed by Louis XIV. who granted him a pension, on condition of devoting his talents entirely to sacred poetry. His death took place at Dijon, whither he had accompanied the duke of Bourbon, in August, 1697. A complete edition of his works was published in 1729, 3 vols. 12mo.—His elder brother, **CLAUDE SANTEUL**, who belonged to the seminary of St Magloire, at Paris, was also a writer of Latin poetry. He died in 1684.—*Biog. Univ.*

SAPPHO, a celebrated Lesbian poetess, who flourished about the forty-fourth Olympiad, in the fifth century before the Christian æra. She was the wife of Ceroclaus, by whom she had a daughter, but appears to have been more remarkable for her wit and talents than for her personal charms. It appears to have been after she became a widow that she rendered herself so distinguished by her poetry and amorous propensities. Her verses were chiefly of the lyric kind, and love was their general subject, which she treated with so much warmth of nature, and beauty of poetical expression, as to acquire the title of the tenth muse. Her morals, however, have been as much depreciated as her genius has been exalted; and besides her desperate attachment to Phaon, which Ovid has immortalized, she has been accused of improper attachments to several of her own sex. There are various accounts of her death, but that most generally received states, that unable to bear the neglect of Phaon, she repaired to the famous precipice of Leucate, popularly called the Lover's Leap, and threw herself into the sea, which terminated at once both her life and her love. Of the works of Sappho there remain only a "Hymn to Venus," two epigrams, an ode, and some trifling fragments. Of the ode an elegant version is given by Catullus; and both that and the hymn are known to the English

reader by the versions of Ambrose Philips. Sappho is regarded as the inventor of the stanza called after her name, as also of the measure denominated myxo-Lydian.—*Vossii Poet. Græc. Bayle.*

SARAZIN (**JAMES**) an eminent French sculptor, born at Noyon in 1590. After studying at Paris, he went to Rome, where he contracted a friendship with Domenichino, the painter, who assisted him with his advice. He resided at Rome eighteen years, and then returned home through Florence and Lyons, at both which places he left some of his productions. He was employed by cardinal Richelieu, and he made a group in silver and gold, representing the presentation of the dauphin to the Virgin Mary, intended as an offering from the queen, Anne of Austria, to the chapel of Loretto. He also executed several works which afforded greater scope for his talents, and particularly a much-admired group of two children and a goat, at Marli. His best production was the mausoleum of Henry de Bourbon, prince of Condé, who died in 1646. His works display grace and elegance, but his figures are said to want dignity and correctness, and his draperies are heavy. He died at Paris in 1660.—*Biog. Univ.*

SARBIEWSKI (**MATTHIAS CASIMIR**) commonly known by the name of Casimir, was born in 1595, of a noble family in Poland. He entered into the society of Jesus in 1612, and being sent to Rome, devoted himself to the study of classical antiquities and poetry. On his return to Poland he was successively professor of classic philosophy and theology at Wilna, and when he took his doctor's degree, Ladislaus IV assisted at the ceremony, and placed his own ring on his finger. The same king afterwards nominated him his preacher, and made him the companion of his journeys. He was cut off in the prime of life, dying at Warsaw, in 1640, at the age of forty-five, at which time he had begun an epic poem on the history of Poland, entitled "The Leschiad." His finished Latin poems, which consist of odes, epodes, dithyrambs, epigrams, and miscellaneous pieces, have acquired him a high reputation, and the emphatic praise of Grotius, Heinsius, and Borrichius. Several of his odes relate to national events, and are touched with great fire and spirit. He has been criticised for impurity of diction and occasional extravagance; but, upon the whole, few modern Latin poets have exhibited equal force and fertility. His works have been several times printed, and an elegant edition was given by Barbou in 1759, 12mo.—*Baillet. Classical Journal*, No. xxv. *Bowring's Polish Poets*

SARNELLI (**POMPEIO**) a learned Italian prelate, born at Polignano in 1649, and studied principally at Naples. In 1675, after he had been admitted to priest's orders, pope Clement X made him honorary protonotary; and in 1679 he was appointed grand vicar to cardinal Orsino, and obtained other preferment, being ultimately nominated bishop of Biseglia. He died in 1724. He was author of more than

thirty works, enumerated by Nicéron and Moreri, of which the principal are "Lettere Ecclesiastiche," 9 vols. 4to; "Il Clero secolare nel suo Splendore, ovvero della Vita commune clericale," 1688, 4to; "Bestiarum Schola ad Homines Erudiendos ab ipsa Rerum Natura provide instituta," &c.; "Memorie Chronologique de' Vescovi et Arcivescovi di Benevento;" the lives of Baptista Porta, Boldoni, and others.—*Nicéron. Moreri.*

SARRASIN, (JOHN FRANCIS) an eminent French poet, born in Normandy about 1604. He studied at the university of Caen, and afterwards going to Paris, obtained an introduction to the first society, and married a rich wife, whose age and ill-temper so disgusted him, that he procured a separation. He then entered into the service of the prince of Conti, as his secretary, but falling into disgrace with that nobleman, whom he had persuaded to marry the niece of cardinal Mazarin, he was dismissed, and died soon after in 1655. His poetical works were published at Paris, in 1663, 12mo; and two more volumes appeared in 1675.—*Huet, Orig. de Caen. Biog. Univ.*

SARTI (JOSEPH) an able and graceful composer, was born at Faenza, in 1730. In 1756 he went to Copenhagen, and held the situation of Maestro di Capella to the young king of Denmark, for whose theatre he published an opera, which was but moderately successful. He then went to Venice, where he was appointed master of the conservatorio of la Pietà, and composed his opera of "Giulio Sabino," which obtained so much reputation that he was invited to St Petersburg, where the empress Catharine appointed him director of the conservatory of music at Catharineslaß, with a munificent salary, to which she afterwards added a title of nobility and an estate. He resided in Russia eighteen years, and retired in 1801, with a pension, with a view of seeking a warmer climate, but died the following year at Berlin. Sarti composed nearly a score of operas, with some pieces of church music, which are very highly esteemed, especially a "Miserere," from which there is an exquisitely beautiful trio, to be found in the second volume of the sacred music of Latrobe.—*Biog. Dict. of Mus.*

SAUMAISE (CLAUDE) one of the most learned and indefatigable classical scholars of the seventeenth century. He was born at Semur in France, April 15, 1588. He commenced his studies under his father, and afterwards pursued them at Paris and Heidelberg. In 1610 he entered as an advocate of the parliament of Dijon, but he never appeared at the bar, being wholly engrossed by the study of ancient literature. He succeeded Joseph Scaliger as professor of history at Leyden, where he remained, in spite of the tempting offers made by cardinals Richelieu and Mazarin to induce him to return to France. He however received marks of favour from the king, who appointed him a counsellor of state. In 1649 he wrote a defence of Charles I of England, at the request of his son; and this work involved him in a literary contest with

the celebrated Milton, from whom it produced his forcible but virulent "Defensio pro Populo Anglicano," which was so much more popular than the work of Saumaise, that the latter was greatly mortified; nor could he justly complain on the score of rancour and scurrility, the indecorum in this respect being mutual. He twice visited the court of Christina, queen of Sweden; and the second time he was recalled by the curators of the university of Leyden, who, in their address to Christina, informed her that "as the world could not subsist without the presence of the sun, neither could their university without that of Saumaise." On his journey homeward he was admitted to the table of the king of Denmark, and conducted, loaded with presents, to the frontiers of the kingdom. But the fatigue he had encountered debilitated his constitution, and occasioned his death, which took place at Spa, September 6, 1653. The Swedish queen composed a funeral oration for him, and undertook the education of his third son. Among his works are treatises, "De Usuris;" "De Modo Usurarium;" "De Fœnore Trapezitico;" "Diatriba de Mutuo non esse Alienationem;" "De Re Militari Romanorum;" and "De Hellenistica." But he is chiefly celebrated for his commentaries on the Scriptures Historiæ Augustæ; Solinus; Florus; Epictetus, &c. Though violent as a controversial writer, Saumaise was mild and unassuming in private life. His mind was a vast magazine of various knowledge, the result of a retentive memory and great industry, but little improved by taste or judgment.—*Biog. Univ. Aikin's Gen. Biog.*

SAUNDERS (sir EDMUND) an English judge and legal reporter of eminence in the reign of Charles II. He was originally an errand-boy at the inns of court, who being employed to copy precedents, gradually acquired so much knowledge as to qualify him for an attorney. He was subsequently called to the bar, and in 1682 he was made chief-justice of the court of King's Bench. His death took place suddenly in the course of the same year. His "Reports of several Pleadings and Cases in B. R. temp. Car. II." were first published in French, 1686, 2 vols. folio; and the third edition, with notes and references by serjeant Williams, appeared in 1799, 2 vols. large 8vo. These Reports are considered as peculiarly valuable, on account of the correct state of the pleadings in the several cases.—*North's Life of lord Guilford. Bridgman's Leg. Bib.*

SAUNDERSON (NICHOLAS) a celebrated blind mathematician, born at Thurlston in Yorkshire, in 1682. When a year old he entirely lost his eye-sight through the small-pox. Notwithstanding this privation, he acquired at a grammar-school a knowledge of Latin and Greek, which he afterwards so much improved as to be able to understand the works of Euclid, Archimedes, and other ancient geometers when read to him in the original languages. Having pursued his studies for some time with the assistance of friends who admired his talents, he was, in 1707,

sent to Cambridge. He took up his residence at Christ's college, without being admitted a member of that society, notwithstanding which he was allowed a room and the use of the library; and he soon commenced giving lectures. Numbers flocked to hear him, partly from curiosity, to observe how a blind man would explain the phenomena of light and colours, as the subject on which he lectured was optics. He became acquainted with sir Isaac Newton, with whom he carried on an interesting correspondence; and on the ejection of Mr Whiston from the mathematical professorship, Saunderson was chosen to the vacant chair. He applied himself closely to the duties of his station, and continued to reside at Christ's college till 1723, when he took a house, and married the daughter of a clergyman, by whom he had a son and a daughter. In 1728, when George II visited the university, he was created doctor of laws, by the royal mandate. Though naturally of a strong constitution, he suffered at length from too close application to study; and after some years' illness, he died from mortification of the foot, April 19, 1739. As an author he is principally known on account of an elaborate treatise on algebra, published after his death at Cambridge, 1740, 2 vols. 4to. He left other works in an imperfect state, among which were comments on Newton's Principia, which were published at the end of his posthumous treatise on Fluxions, 1756, 8vo.—*Life prefixed to his Algebra. Rees's Cyclop. Martin's Biog. Philos.*

SAURIN (ELIAS) an eminent Piedmontese Protestant minister, born in the year 1639, at Vimeaux, on the borders of Dauphiny. He was educated by his father, the minister of his native place, and successively attended the Protestant seminaries of Die, Nismes, and Geneva. He was admitted to the ministry in 1661, and would have been made professor of divinity at Die, had he not been driven from his country by persecution. He took refuge in Holland, and became pastor of the Walloon church at Delft, and retained that situation in 1671, when he accepted the same office at Utrecht. He was one of the learned and moderate ministers who were accused of heresy by the furious Jurieu, whose bigotry and fanaticism he very ably exposed. He had also a contest with Bayle, on the subject of his "Philosophical Commentary." He died in 1703. He was author of an "Examination of the Divinity of M. Jurieu," 2 vols. 8vo; "Reflections on the Rights of Conscience;" "A Treatise on the Love of God;" "A Treatise on the Love of our Neighbour," &c.—*Moreri.*

SAURIN (JAMES) a learned French Protestant divine and very celebrated preacher, was the son of an eminent Protestant lawyer at Nismes, where he was born in 1677. Upon the revocation of the edict of Nantz in 1685, his father retired with his family to Geneva, where the subject of this article made a considerable progress in learning, but quitted his studies and went into the army. He made a

campaign as a cadet in the regiment of lord Galloway in 1694; but when the duke of Savoy, under whom he served, made a peace in 1696, he renounced the military profession, and returned to Geneva with a view to engage in the ministry. When he had finished his studies, in the year 1700 he visited Holland and England, in the latter of which countries he continued nearly five years, and preached with great acceptance among his fellow-refugees in London. In 1703 he married a lady by whom he had a son, who survived him; and two years afterwards he returned to Holland, and in the first instance obtained a chaplaincy to some of the nobility at the Hague. He subsequently became one of the pastors to a congregation of French refugees, who were permitted to assemble in a chapel belonging to the palace of the prince of Orange, in the same place. Here he officiated for the remainder of his life, and was constantly attended by a crowded and brilliant audience, attracted by his powerful and persuasive talents as a preacher. When the princess of Wales, afterwards queen Caroline, passed through the Hague, she received him with the greatest condescension; and afterwards, with a view to the benefit of Frederick, prince of Wales, commissioned him to write a "Treatise on the Education of Princes." For this work, which has never been printed, he received a handsome present; and afterwards, by the same influence, a pension was conferred upon him by George II, to whom he dedicated a volume of his sermons. His celebrity excited the envy of some of his brethren, and his moderation the bigotry of others; and their ill-will involved him in disputes which much embittered the latter end of his life. He died in 1730, at the age of fifty-three. This eminent preacher and exemplary man possessed great talents, and a fine address; his voice was strong, clear, and harmonious, and his style pious, unaffected, and eloquent. He had the happy art of adapting his arguments with great skill to the understanding of the audiences before whom he spoke, and was persuasive and pathetic, or plain, clear, and argumentative, as best suited his subjects or his hearers. His principles were those of moderate Calvinism. He was the author of twelve volumes of Sermons, 8vo, selections from which were translated into English, and published between 1775 and 1784, in 5 vols. by Mr Robert Robinson, a sixth being added, in 1796, by Dr Henry Hunter. His other works are, "The State of Christianity in France," 8vo, which work treats of many points of controversy between the French Catholics and Protestants; "A Compendium of Christian Divinity and Morality, in the Catechetical Form," 8vo; "Discourses, Historical, Critical, and Moral, on the most Remarkable Events of the Old and New Testaments." Of this, his most considerable work, he had nearly completed 3 vols. folio, when he died; to which Roques added a fourth on the Old Testament, and M. Beausobre two more on the New Testament, making the whole amount to

6 vols. folio. It was a dissertation in the second volume, "On the Expediency of sometimes Disguising the Truth," that gave a pre-eminence for the controversy, which eventually so much annoyed him. He conceived that in the character of historian he was entitled to state the arguments of those who maintained the affirmative of the position, as well as of those who denied it; and, without formally deciding the point, he was thought to favour the sentiments of the former. On this account he was assailed with furious clamours, but met with zealous defenders, as well as rancorous opponents; and after giving a satisfactory explanation of his sentiments, the synods decided the dispute in his favour. In other respects, this elaborate work is replete with learning; and throughout the author shows himself a complete friend to toleration.—*Robinson's Memoirs prefixed to Sermons. Chauffage. Moreri.*

SAURIN (JOSEPH) a French mathematician, was born in 1659, at Courtuson, in the principality of Orange. He was educated by his father, a Protestant minister at Grenoble, and at a very early age was admitted to the ministry, at Eure in Dauphiny. Here he gave offence to the Catholics by the freedom of his language; and in 1683 he was obliged to retire to Geneva, whence he removed to Berne, and was appointed pastor of the church of Berchen, in the bailiwick of Yverdun. Being peaceably settled in his living, he married a lady of noble birth; but was soon after obliged to withdraw to Holland, in consequence of having preached against some of the doctrines of the formulary, subscription to which was then required in Switzerland from all French refugee ministers. He now determined to quit the Protestant communion, and having made his intention known to the celebrated Bossuet, bishop of Meaux, he made his abjuration before that prelate in 1690. How far conviction, resentment, or the desire of advancement, operated towards his conversion has been much disputed, but he immediately received a pension from Louis XIV; and devoting himself to mathematical studies with great ardour and success, was, in 1707, admitted a member of the Academy of Sciences. Some years afterwards he was involved in a dispute with the poet Rousseau, on the subject of some virulent satirical songs, which dispute caused him much trouble, and a short imprisonment; but in 1712 an arrêt of parliament decided in his favour, and banished his antagonist from the kingdom. He died of a lethargic fever in 1737. He was a lively, impetuous, and independent character; and thereby created to himself many enemies, who assailed him while living, and blackened his reputation after death. His mathematical and philosophical papers, which are esteemed very able, will be found in the *Memoirs of the Academy of Sciences*, from 1709 to 1727.—*Moreri. Hutton's Math. Dict.*

SAURIN (BERNARD JOSEPH) a dramatic writer, the son of the subject of the preceding article, was brought up to the law, which he

forsook for the drama. His tragedy of "Spartacus," acted at Paris in 1760, raised him to reputation, which was farther advanced by his "Mœurs du Temps," a lively comedy in prose. Various other dramas followed, as well as several pieces of poetry and a number of "Couplets Bacchiques," which are gay and ingenious. He was intimate with Montesquieu, Voltaire, and Helvetius; the latter of whom gave him a pension of a thousand crowns, and presented him a sum equivalent to the capital of that annuity on his marriage. He was a member of the French Academy, and died in 1781. The "Théâtre de Saurin" was printed in 1783, in 2 vols. 8vo.—*Nouv. Dict. Hist.*

SAUSSURE (HORACE BENEDICT de) a distinguished natural philosopher, born at Geneva, February 17, 1740. From his father, who was a member of the Council of Two Hundred and the author of works on agriculture, he imbibed a taste for the study of nature. Such were his early attainments, that he became professor of philosophy at Geneva at the age of twenty-two. He travelled in search of knowledge in France, England, and other parts of Europe. In 1760 he began exploring the Glaciers of the Alps, among which he long continued to make annual excursions. In 1779 he had crossed the Alps fourteen times, in eight different tracks; and that year he published the first volume of his "Voyages dans les Alpes," which was followed by three more in 1786—1796. In July 1788 he succeeded in reaching the summit of Mont Blanc, the most elevated peak of the Alpine chain; and in the following year he explored Mont Rose, in the Pennine Alps. When Geneva was united to the French Republic, he was chosen a deputy to the National Assembly; but the consequent troubles which ensued, both public and domestic, contributed to disturb the tranquillity of his life, and hastened his decease, which happened January 22, 1799. Saussure was the author of many essays and papers, relating to natural philosophy and natural history; and he displayed his ingenuity by the construction of a thermometer for measuring the temperature of water at various depths, of a hygrometer, to determine the quantity of aqueous vapour in the air, of a eudiometer, to ascertain the purity of the atmosphere, of an electrometer, an anemometer, and other philosophical instruments. He carried on an extensive correspondence with men of science in various countries, and contributed greatly to the diffusion of natural knowledge.—*Rees's Cyclop. Biog. Univ.*

SAUVEUR (JOSEPH) a native of La Fleche, born 1653. He was dumb from his birth, till he had passed his seventh year, when he at length attained the faculty of speech, and became eventually one of the ablest mathematicians of his day. He was professor of the science in the college of Paris, as well as a member of the Academy of Sciences, among whose transactions are to be found several valuable treatises by him, especially on the subject of music. He was also the inventor of a musical chronometer. Among

other eccentricities, he refused to see the woman he had selected for his wife, till after the contract was mutually signed. By this lady he had a son, who laboured under a similar impediment with regard to speech as his father, and for a similar period. His death took place in 1716.—*Nouv. Dict. Hist.*

SAUVAGES (FRANCIS BOISSIER de) the inventor of modern nosology. He was born at Alais, in Lower Languedoc, in 1706, and was the son of Boissier, lord of Sauvages, a captain in the army. After a preliminary education at Alais, he entered at Montpellier upon a course of medical study, and was admitted to the degree of doctor in 1726. In 1730 he visited Paris, where he formed the plan of an arrangement of diseases according to the botanical method of classes, genus, and species. He published a sketch of his design in 1732, under the title of "*Nouvelles Classes des Maladies, dans un Ordre semblable à celui des Botanistes.*" On his return to Montpellier he obtained the survivorship of the medical chair, which he soon after occupied. His reputation was rapidly extended by his writings and lectures, and in 1740 he was nominated demonstrator of botany in the royal gardens at Montpellier, and in 1751 he published his "*Methodus Foliorum,*" 8vo. A number of dissertations, and other works, attested his diligence, among which the principal was "*Nosologia Methodica,*" 5 vols. 8vo, 1763, and since his death in 2 vols. 4to, 1768, being the completion of his system. The classification of diseases, according to their obvious symptoms, is regarded as a great improvement in nosology, although it offers a temptation to multiply diseases by forming new species from trifling circumstances. It is, however, a valuable performance, and, as might be imagined, was much admired by Linnaeus, who formed a nosology of his own on the same plan. After a life spent in an assiduous attention to his duties as a physician and professor, he died in 1767, in the sixty-first year of his age. He was much beloved by his numerous pupils, and his reputation procured him an accumulation of literary honours both at home and abroad. He was married, and left two sons and four daughters.—*Eloy Dict. Hist. de Med.*

SAVAGE, DD. (JOHN) an English clergyman of the last century, educated at Westminster school, whence he removed to Emanuel college, Cambridge, and there graduated in divinity. He was a man of considerable talent, but of rather eccentric manners, which more especially displayed themselves in the exhibition of a singular attachment to the seminary in which he had been brought up. Lord Salisbury, to whom he had acted in the capacity of travelling tutor, gave him the living of Clothall in Hertfordshire, which, together with the lectureship of St George's, Hanover-square, he enjoyed till his death, March 24, 1747. He is known as the author of "*The Turkish History,*" 8vo, 2 vols.; "*Letters of the Antients,*" 8vo, and two occasional sermons. After his decease, the scholars on the

Westminster foundation, whom his frequent visits had much attached, raised a tablet to his memory, in the eastern part of the abbey cloisters.—*Gent. Mag.*

SAVAGE (RICHARD) an English poet of the last century, celebrated for his genius, irregularities, and misfortunes. He was born January 10, 1698, being the natural son of Anne, countess of Macclesfield, who, anxious to procure a divorce from her husband, with whom she had long lived on the worst of terms, publicly and shamelessly declared that the child with which she was then pregnant was the offspring of an adulterous intercourse carried on between herself and earl Rivers. No sooner did the boy, whose misfortunes may thus be considered to have commenced even before his birth, see the light, than a violent and most unnatural hatred seems to have taken complete possession of his mother. He was not only at once disowned, but placed by her with an old woman in the lowest state of indigence, with directions that he should be brought up in utter ignorance of his birth, and in the meanest condition. The interference of his maternal grandmother, the lady Mason, a little alleviated his lot; and through her kindness the boy was placed at a grammar-school in the neighbourhood of St Alban's, during which period earl Rivers, who seems unquestionably to have considered him as his son, died, revoking a bequest he had made him of 6000*l.* on being positively assured by the countess herself that the child had been some time dead. The same cruelty soon after influenced this wretched woman to endeavour to have him kidnapped, and sent as a slave to the plantations, a fate he very narrowly escaped. Young Savage was now apprenticed to a shoemaker, when the woman, whom he had been taught to consider his mother, dying suddenly some of lady Mason's letters, which he found among her papers, discovered to him the secret of his birth. From this moment his attempts to see, and, if possible, obtain the notice of his real parent were incessant; and he is known to have perambulated for hours at a time before her residence, merely with the hope of obtaining a glimpse of her person; but all his assiduity and applications were unavailing, while necessity compelled him to become an author for the means of bodily subsistence. His first work was a pamphlet on the Bangorian controversy, which then engaged the public attention; a crude effort, of which he was afterwards ashamed. This he followed up with two comedies, "*Woman's a Riddle,*" and "*Love in a Veil,*" which, however, procured him little advantage beyond the acquaintance of sir Richard Steele and Mr Wilkes; the former of whom used to declare, that "the inhumanity of his mother had given him a right to find a father in every good man;" while the interposition of the latter was so far effectual, as to procure him on one occasion fifty pounds from his mother, with the promise of a farther sum, which was never performed. In 1723 his tragedy, on the subject of sir Thomas Overbury, was brought out,

under the auspices of Aaron Hill. This gentleman wrote the prologue and epilogue, in which he alludes very happily to the circumstances of the author, who himself performed the principal character, but with little success; the profits of the piece, however, appear to have amounted to about 200*l*. Nor did Mr Hill's kindness stop here, as he not only contributed to a volume of "Miscellanies," which Savage edited soon after, but by his exertions procured him a subscription of seventy guineas, towards the publication. The poet was now rising fast in reputation, when, in 1727, in a broil in a house of ill-fame, he killed a Mr Sinclair; and being tried for murder, a verdict of guilty was pronounced against him and Gregory, one of his companions; while Marchant, another of them, was found guilty of manslaughter only, as having had no sword on at the time. Savage had now no hope of life but from the royal mercy, which his mother exerted herself personally and strenuously with the queen to intercept; the joint influence, however, of lady Hertford, lord Tyrconnel, and Mrs. Oldfield, counteracted her unnatural attempts, and the king's pardon was pleaded by her unfortunate son, on the 9th of March, 1728. A pleasing instance of the forgiving temper of poor Savage, is found in his afterwards changing his last guinea to relieve a common woman, whose evidence had weighed heaviest against him; the only ebullition of his resentment on the occasion being a severe satire upon the judge (Page) who tried him. The threat of a lampoon upon his mother, whose late conduct had quenched the last spark of filial affection in his bosom, now procured him some attention from her relation, lord Tyrconnel, who, on his agreeing to abandon his design, received him into his house, and allowed him two hundred a year. This was the golden age of Savage's life, and during its continuance, in 1729, he published his "Wanderer, a Moral Poem," always considered by himself as his *chef-d'œuvre*, though its sale produced him only ten guineas, the copyright being disposed of by him in all probability during some irregular freak, to discharge a tavern reckoning. The sunshine of his prosperity was soon overcast by a quarrel with his patron; and once more turned adrift upon the world, he revenged himself by the publication of "The Bastard," a poem of such severity and incontestable merit, as to have the effect of shutting his mother out of all respectable society. A Birth-day ode, addressed to the queen, soon after procured him a pension of 50*l*. from her majesty, to which he was eventually mainly indebted for his support. A satire against the clergy, entitled the "Progress of a Divine," next caused a prosecution to be instituted against him; but the information was dismissed by sir Philip Yorke, on the ground of the general morality of the work. From this period he appears to have gradually and irretrievably sunk into the lowest misery. The death of the queen, and the consequent loss of his pension, completed his ruin; and although a few friends raised a

subscription with the view of enabling him to reside in Wales, the same incurable propensity to dissipation induced him, not only to squander the money advanced to him, but to incur a debt of eight pounds at Bristol, for which he was arrested, thrown into the county jail, and eventually removed to Newgate, where he died miserably on the 1st of August, 1743, exhibiting, in the memorable words of his great biographer, Johnson, a lamentable proof that "nothing can supply the want of prudence; and that negligence and irregularity, long continued, will make knowledge useless, wit ridiculous, and genius contemptible.—*Life by Johnson.*"

SAVARY. There were several ingenious French writers of this name. Of these JAMES, the elder, was a native of Doué, in the province of Anjou, born 1622. Till the age of thirty-six, he was actively engaged in commercial pursuits, when he began to turn his attention from the practice to the theory of trade, in which latter study he appears to have been little more successful at first than in personally carrying his ideas into execution, inasmuch as the poverty of his circumstances induced him, in 1667, to solicit and obtain one of the pensions granted by the court to such subjects of France as had twelve living children. The qualifications of Savary for this mark of the royal bounty were unquestionable, he having no fewer than seventeen by one wife, eleven of whom survived him. In 1670 he was appointed one of the commissioners for the reformation and encouragement of trade; in which capacity he was mainly instrumental in drawing up the orders and instructions issued in that year. Five years afterwards he was induced to give the result of his observation and experience to the public, in a quarto volume, entitled "Le Parfait Negociant," a valuable treatise, which was translated into most of the European languages, and went through eight editions in the original. He subsequently published a second work on similar subjects, "Avis et Conseils sur les plus importantes Matières du Commerce," also in one vol. 4to. His death took place in 1690.—Of the children already alluded to, JAMES obtained the post of inspector-general of manufactures at Paris, and appears to have inherited much of his father's peculiar talents and turn of mind. He commenced a very laborious but useful work, entitled "A Universal Dictionary of Commerce," in the compilation of which he was much assisted by his brother, PHILEMON LEWIS, a canon of St Maur. The latter finished this work, which the death of James, in 1716, had threatened to put a stop to; and the first edition appeared at Paris in 1723, in 2 vols. folio. Philemon afterwards added a supplement, which was printed in 1748, nineteen years after the author's decease, in a new edition of the original book, occupying altogether three folio volumes. This last and most complete impression appeared at Copenhagen.—*Nour. Dict. Hist.*

SAVARY (NICHOLAS) an observant and acute traveller of the last century, was a na-

S A V

tive of Vitre in Brittany, and educated at Rennes. From the year 1776 to 1780, he employed his time in visiting Egypt and the Levant. Of these travels he published an interesting account, in an epistolary form, on his return to France in 1780. The antiquities, manners, customs, and languages of the countries he visited on this occasion, were especially the objects of his observation; and of his proficiency in the latter respect a very fair specimen is exhibited in his version of the Koran, and abridgment of the same work, entitled "*La Morale de Mahomet*." His letters have been translated into most modern languages. He died in 1788.—*Biog. Univ.*

SAVILLE. The name of an ancient English family, long settled in Yorkshire, which has produced several eminent men, variously distinguished. Of these, HENRY SAVILE, afterwards knighted by James the First in 1604, was one of the most profound and elegant scholars of the age in which he lived. He was born at Bradley, near Halifax, November 30, 1549, and after graduating at Brasenose college, Oxford, removed on a fellowship to Merton college, in the same university. In his twenty-ninth year he made a tour on the continent, for the purpose of perfecting himself in elegant literature, and on his return was appointed tutor in Greek and mathematics to queen Elizabeth, who held his abilities in great estimation. Seven years after, the wardenship of his college becoming vacant, he was elected to fill that situation, which he held for about six-and-thirty years, the provostship of Eton being added to it in 1596. On the accession of James to the throne of the united kingdoms, several dignified offices were offered to his acceptance by the new king, who affected to patronize all men of eminent classical attainments. The moderation of Mr Savile was, however, as conspicuous on this occasion as his erudition; and although he accepted the order of knighthood, he steadily declined all other proposals, either of honour or emolument. In fact, the loss of an only son soon made him utterly indifferent to promotion of any kind, and from that moment he appears to have dedicated both his time and fortune solely to the advancement and encouragement of literature. In 1619 he founded two professorships in geometry and astronomy in the university of which he was a member, besides conferring several other valuable benefactions both in property and books, many of the latter forming still a part of the Bodleian library. He was the author of several learned works, of which the principal are his "*Commentaries on Roman Warfare*;" "*Rerum Anglicarum post Bedam Scriptores*," folio, to which is added a chronological account of events from Cæsar to the Conquest; "*Prælectiones tredecim in Elementa Euclidis Oxoniæ habitæ*;" "*Oratio coram Elizabetha Regina habitæ*;" a translation of four books of Tacitus, and that writer's life of Agricola, with a commentary, in one folio volume. He also edited Bradwardin "*De Causâ Dei*;" but the work by which he is principally known is his celebrated edition

S A V

of the writings of St Chrysostom, in eight folio volumes, which, including the sums paid by him for the collation of different manuscripts both in England and on the continent, was not produced at a less expense than 8,000*l*. Sir Henry Savile was the intimate friend and correspondent of J. Scaliger, Meibomius, Isaac Causabon, and most of the learned men of his day. His death took place at Eton college, February 19, 1622, and his remains lie buried in the chapel belonging to that establishment.—He had two brothers, JOHN SAVILE, afterwards knighted, who died in 1606, one of the barons of the exchequer, and a lawyer of considerable talent, whose reports in the courts of the exchequer and common pleas are yet referred to as books of authority: and THOMAS, an erudite and elegant scholar, who held a fellowship at Merton college, and afterwards at Eton. Thomas was a great friend of Camden the antiquary, and died in 1593, at London.—*Biog. Brit.*

SAVILLE (GEORGE) marquis of Halifax, descended of the same family as the preceding, an illustrious statesman and elegant writer, was born in 1630. On the death of Cromwell he distinguished himself by his exertions in favour of the absent king, which, on the restoration of that monarch to the throne, were rewarded by a coronet. In 1672 he was joined in commission with the duke of Buckingham and lord Arlington to conduct the negotiation with France for a general peace. With this view he accompanied his colleagues to Holland, but the object of their mission failing, returned to this country, and resumed his seat at the council-board. From this situation, however, he was removed in 1675, through the influence of the duke of York, afterwards James the Second, in consequence of his violent opposition to that prince's measures in favour of the Roman Catholic religion. But although he appears to have been a determined enemy to that church, his loyalty to the Stuart family operated no less forcibly on him when the bill for excluding the duke from the succession was in agitation, his strongly manifested repugnance to which measure brought him greatly into disgrace with the party with which he had hitherto acted; so much so, that they carried a vote through the Commons that a petition should be presented to the king, praying him again to dismiss the obnoxious peer from the post to which he had been but recently restored. The dissolution of the parliament, so hostile to him, soon followed, and he was raised a step higher in the peerage. In 1682 he experienced a still farther elevation, being created marquis of Halifax, keeper of the privy seal, and president of the council, which dignities he retained in the early part of the succeeding reign, till his opposition to the proposed repeal of the test acts excited the new king's displeasure, and caused his abrupt dismissal. From this moment lord Halifax continued in opposition, till the flight of James, when he was chosen speaker of the house of Lords, in what is known as the convention parliament, and in that capacity contributed mainly to the

SAV

elevation of William to the throne. His predilection for the new government, however, did not long continue; and the year following, that of the Revolution, he resigned in disgust the privy seal, which had once more been committed to his keeping, and during the whole remainder of his life spoke and voted against the court. A mortification in the bowels carried him off in 1695. Lord Halifax was a man of great and unquestioned talents; as an orator, though powerful and convincing, his eloquence wanted that refinement which is found in his writings, his style being occasionally low, and his humour coarse. Bishop Burnet denies the then generally received opinion of his having been a freethinker, and affirms that he died a sincere Christian from conviction. He was the author of a treatise, entitled "Advice to a Daughter," as well as of a variety of political tracts, the principal of which are, "Maxims of State;" "The Character of a Trimmer;" "Character of King Charles II.;" "Anatomy of an Equivalent;" "Letter to a Dissenter," &c. Many of these were collected after his decease, and printed together in one octavo volume; an enlarged edition appeared some years after. He was succeeded in his titles and estates by his only son, WILLIAM, who survived his father little more than four years, and by whose death, without issue, the marquise became extinct.—*Biog. Brit. Collins's Peerage.*

SAVONAROLA (JEROME) a famous Italian monk and religious enthusiast, born at Ferrara in 1452. He took the habit of St Dominic at Bologna, at the age of fourteen. In 1488 he went to Florence, and was appointed prior of the convent of St Mark. Savonarola, inspired by an enthusiastic love of liberty, and possessing great talents as an orator, declaimed warmly against the domination of the Medici family over the state. Lorenzo de' Medici respected the virtues of the monk, who had assumed the character of a prophet, and was regarded by some as an enthusiast, and by others as an impostor, notwithstanding which he was protected during the life of Lorenzo, whom he attended in his last illness. After his death the credit of Savonarola increased with the populace; and he took a leading part in the affairs of the republic subsequent to the expulsion of Pietro de' Medici. He promoted the schemes of those citizens who aimed at changing the government to a democracy, professing to be favoured with a divine revelation, purporting that Christ would be king of the Florentines, and that the legislative power should be extended to all the citizens. He continued to maintain his reputation till the violence of his denunciations against the court of Rome called down on him the sentence of excommunication. Being afterwards imprisoned, and tried for sedition and blasphemy, he defended himself with spirit; but being tortured into confession of his guilt, he was, pursuant to his sentence, strangled and burnt, May 23, 1498. He wrote a work entitled "Triumphus Crucis," Florence, 1492, folio; and his writings have been printed collectively at Leyden, in 6 vols. 8vo.—*Biog. Univ.*

SAX

SAXE (MAURICE, count de) a celebrated military officer, was the natural son of Augustus, king of Poland, by the countess of Koenigsmark. He was born at Dresden in 1696, and even in childhood he displayed some presages of his warlike genius. At the age of twelve he joined the allied army under the duke of Marlborough and the prince Eugene; and he was present at the sieges of Lisle and Tournay, and at the battle of Malplaquet. His father then gave him a regiment of cavalry, with which he served in Sweden, and was at the taking of Stralsund. His mother procured his marriage with a German lady of rank, when he was but fifteen; but the inconstancy of his temper occasioned a divorce after a few years. He was with prince Eugene in Hungary, in the war with the Turks; but after the treaties of Utrecht and Passarowitz, he withdrew to France, and he was permanently attached to the service of that country by a brevet of mareschal-de-camp, given him in 1720, by the regent duke of Orleans. He applied himself to study at Paris, and made himself intimately acquainted with professional tactics. In 1726 he was a candidate for the duchy of Courland; and he formed various other schemes of ambition at different periods. On the death of his father he declined the command of the Saxon army, offered him by his brother, Augustus III, and joined the French on the Rhine, under the duke of Berwick. He distinguished himself at Dettingen and Philipsburg; and in 1744 he was rewarded with the staff of a marshal of France. He was employed in the war that followed the death of the emperor Charles VI; and in 1745 he gained the famous battle of Fontenoy, which was followed by the capture of Brussels and many other places in Flanders. In 1747 he was victorious at Lafeldt, and in the following year he took Maestricht, soon after which the peace of Aix-la-Chapelle was concluded. Marshal Saxe survived that event a little more than two years, dying November 30, 1750. He wrote a treatise, entitled "Mes Reveries," on the art of war, 2 vols. 4to. General Grimoard, in 1794, published "Lettres et Memoires choisis parmi les Papiers originaux du M. de Saxe, depuis 1753. jusqu'en 1750," 5 vols. 8vo.—*Biog. Univ.*

SAXIUS or SACHSIUS, the Latin name of Christopher Gottlob Sachs, a learned German, born in 1714, at Eppendorf in Saxony. He graduated in the university of Leipsic, which he quitted in 1752, on being appointed to the professor's chair in antiquities, history, and rhetoric at Utrecht. He is known as the author of an elaborate reply to father Hardouin's objections against the authenticity of the *Æneid*, which he published in 1737, under the title of "*Vindiciæ secundum libertatem pro Maronis Æneide, cui manum Johannes Hardouinus nuper assertor injecerat*," and of a catalogue of authors, entitled "*Onomasticon Litterarium*," 8 vols. besides some papers in the "*Acta Eruditorum*." He reached the advanced age of eighty-eight, dying at Utrecht in 1806.—*Biog. Univ.*

SAXO GRAMMATICUS a learned antiquarian and historian, who flourished during the greater part of the twelfth, and the commencement of the thirteenth century. Of his origin nothing authentic is known, but he is supposed to have been a native of Denmark, of which kingdom and its dependencies he compiled an elaborate history, under the auspices of Absalom, bishop of Roschild. This work, which is said to have occupied him twenty years in its composition, has gone through several editions, especially those of Paris, 1514, Basle, 1534, and Sora in Denmark, 1644, folio; of these the latter is by far the most perfect. Saxo was a priest in the cathedral of Roschild, and is said to have been deputed on a mission to Paris in 1161, for the purpose of inducing some of the monks of that capital to visit his native country, and assist in reforming the discipline of the religious orders there. He lies buried in the church of which he was a member, where a monument was erected to his memory about three hundred years after his death, which took place in 1208.—*Nouv. Dict. Hist.*

SCALA (BARTHOLOMEW) a learned Florentine of the fifteenth century, eminent as a lawyer, historian, and diplomatist. He was of humble origin, being the son of a miller, and was born about the year 1424. The steady patronage of Cosmo de' Medici, who duly appreciated, and made use of his talents, raised him to some of the most important offices in the state, in the execution of which he was repeatedly employed in conducting negotiations with various foreign courts. He was equally fortunate in acquiring and retaining the favour of Pietro de' Medici, who succeeded Cosmo, and who continued him in his dignities of chancellor and grand standard bearer to the Florentine republic. Pope Innocent XII also, who held him in high esteem, for services rendered to the holy see, conferred on him a collar of knighthood and the dignity of a senator of Rome. He was the author of a valuable history of Florence, in twenty books, four only of which have been printed; "A Life of Vitaliani Borromeo," 4to, Rome, 1677; with some miscellaneous letters, poems, and orations. His death took place in 1497.—*Tiraboschi.*

SCALIGER. The name of two most profound scholars and celebrated critics, father and son, who flourished in the sixteenth century. **JULIUS CÆSAR**, commonly called the Elder Scaliger, was descended of the princely house Della Scala, lords of Verona, and was born April 23, 1484, at Ripa, a town in the Veronese. His immediate ancestor, Benedict Scaliger, was a general officer in the army of Matthias Corvinus, king of Hungary, whose interests at the German courts placed this, his favourite son, about the person of the emperor Maximilian, in quality of page of the bed-chamber, when only twelve years of age. In the household of this monarch he remained till his twenty-ninth year, when having in the interim attended his imperial master on several of his expeditions, the loss of his father and

brother at one stroke in the sanguinary battle of Ravenna, fought in 1512, disgusted him with the service, and induced him to entertain serious intentions of shutting himself up in a cloister. From the adoption of the habit of St Francis he was, however, at length effectually dissuaded by his friends, and his next ten years were passed as before, amidst the bustle and dangers of a military life. At the age of forty he quitted it again, and for ever, devoting his time to the study of medicine as a profession, and of the learned languages as a matter of taste. In 1526 he commenced practice as a physician at Agen, in Guienne, where within three years he married a young lady of noble birth, whose age bore to his own the proportion of sixteen to forty-five. In the course of a cohabitation of nearly thirty years, his wife bore him fifteen children, of whom seven survived him; and one eclipsed, as a scholar and a critic, even the fame of his father, whose biography he gave to the world after his decease. This event took place in 1558, of a suppression of urine. The private character of the elder Scaliger appears to have been composed of jarring materials; as a scholar it is impossible that his claims to consideration should be rated below the highest rank. Of this his commentaries "On Theophrastus," "On Aristotle," "On Hippocrates," and even the contests which he carried on against Cardanus and Scioppius, though disfigured by the coarseness of his expressions, and the virulence of his attacks, afford abundant proofs; as well as his still more valuable treatise, "De Causis Linguæ Latine," his seven books on poetry, and his own poems and miscellaneous epistles. But the vanity and asperity of his disposition, notwithstanding all his son says of his amiability of temper and general benevolence, is also but too evidently manifested in the strain of invective used by him towards Erasmus and others on the subject of Cicero's Latinity.—*Life by his Son. Moreri.*

SCALIGER (JOSEPH JUSTUS) son of the subject of the preceding article, was born at Agen in 1540. He commenced his education in the college of Bourdeaux, which he continued under his father, and after his decease completed at Paris, under the celebrated Turnebus. He possessed an uncommon facility of acquiring even the most difficult languages, and is said to have made himself master of no less than thirteen, Greek and Hebrew among the number, in which two he had no other instructor or assistant than his own genius and assiduity. The fame of his great learning, and scientific as well as classical attainments, procured him, in 1593, an invitation to fill the professor's chair in the belles lettres at Leyden, which he accepted, and retained till his death in 1609. He was, with great justice, considered by far the most learned man of the age, but seems to have inherited much of his father's haughtiness, self-sufficiency, and illiberality towards his opponents, with his acknowledged talents and ability. Of his writings, which are replete with the most extensive

erudition, and perfect familiarity with all the works of the best Greek and Roman authors, the most conspicuous are, his treatise "*De Emendatione Temporum*," conveying, by his invention of the Julian period, the principles of a regular and systematic chronology, of which he has, not undeservedly, been styled the father. His other works are, "*Thesaurus Temporum*," folio, 2 vols.; a Latin translation of the Arabian proverbs in Erpenius' collection, "*De Tribus Sectis Judæorum*," 4to, 2 vols.; "*Canones Isagogici*;" a great variety of epistles, poems, &c.; besides valuable commentaries on the works of Seneca, Varro, Pompeius Festus, Ausonius, and other classical authors; the *Chronicon* of Eusebius, &c. In their religious opinions, the elder Scaliger was a Roman Catholic, the younger a Huguenot.—*Now. Dict. Hist. Moreri*.

SCAMOZZI (VINCENTIO) a celebrated Italian architect of the sixteenth century, the contemporary and rival of Palladio, who was, like himself, a native of Vicenza in Lombardy. Scamozzi was born in 1550, and after learning the rudiments of the art under his father, who was of the same profession, travelled for improvement through France and over a large proportion of the north of Europe. On his return to Italy, he followed the example of his great compatriot in taking up his abode at Venice, then the principal seat of the arts, where there are yet in existence several noble monuments of his genius. The citadel of Parma is also one of his greatest works. As an author Scamozzi is known by several tracts on professional subjects, of which the principal are "*A Treatise on the Antiquities of Rome*," folio; and "*L'Idée dell' Architettura Universale*," in ten books, left incomplete by his death. Of this valuable work only six books appeared, in two folio volumes. His death took place in 1616.—*Tiraboschi*.

SCANDERBEG, prince of Albania, whose proper name was George Castriot, son of John, prince of that country, was born in 1404. Being given by his father as a hostage to sultan Amurath II, he was educated in the Mahometan religion, and at the age of eighteen was placed at the head of a body of troops, with the title of Sanjiac. After the death of his father, in 1432, he formed the design of possessing himself of his principality; and having accompanied the Turkish army to Hungary, he entered into a secret agreement with the famous Hunniades to desert to the Christians, during the first battle which should occur. This design he put into execution; and having defeated the Turks, and taken Amurath's secretary prisoner, he compelled him to sign an order for the governor of Croia, the capital of Albania, to deliver that place and the citadel to its bearer. This stratagem succeeding, he ascended the throne of his fathers, and renounced the Mahometan religion. A long warfare followed; but although frequently obliged to retire to the fastnesses of mountains, he always renewed his assaults upon the first favourable occasion, and destroyed a vast number of his enemies. A similar course of war-

fare was continued for eleven years, under Mahomet II, until that powerful sultan proposed terms of peace to him, which were accepted. At the request of the pope, Scanderbeg then repaired to Italy, to the succour of Ferdinand II, king of Naples, besieged at Bari; and having caused the siege to be raised, he contributed greatly to Ferdinand's subsequent victory over the count of Anjou. The Venetians having entered into a war with Mahomet II, induced Scanderbeg to renounce his treaty with that sultan, and to make an inroad into his dominions. He again obtained repeated victories over the Turkish generals, and saved his own capital, although invested by an army commanded by Mahomet himself. He was at length carried off by sickness at Lissa, in the Venetian territories, in 1467, in his sixty-third year. His death was considered by the sultan as relieving him from the most formidable of his enemies; and it was soon followed by the submission of all Albania to the Turkish dominion. Scanderbeg was one of the greatest warriors of his time, and his personal strength and address were such, as to make his prowess in the field resemble that of a knight of romance; whilst his enterprise and military skill constituted him one of the most able and successful of generals. His jesuit historian, Poncet, has painted him as a genuine Christian hero; but there was little but his cause to sanction this character, as he often exhibited both cruelty and perfidy. His private life was, however, praiseworthy, and he preached continence and sobriety to his soldiery. When the Turks took Lissa, they dug up his bones, of which they formed amulets, to transfer his courage to themselves; an absurd, but sincere testimony of involuntary admiration.—*Mod. Univ. Hist.*

SCAPULA (JOHANN) the author of a valuable lexicon of the Greek language, published originally in quarto, in 1583, which has since gone through a variety of editions, particularly an excellent one from the Elzevir press. This work, useful as it is, is scarcely more a monument of the compiler's learning and diligence than of his treachery, Henry Stephens, while completing his laborious and voluminous "*Thesaurus*," having employed Scapula to correct the press, the latter took advantage of the opportunities afforded by his occupation, secretly to abridge the work, and printed the essence of its contents in the dictionary which now bears his name. The cheapness and comparative portability of his book, ruined the sale of that of his employer, who failed in consequence, and has left a proof of the indignant feelings which this breach of confidence occasioned, in his "*Latinitas Lipsius*." Of the birth or decease of Scapula little is known.—*Morhoff*.

SCARBOROUGH (sir CHARLES) a skillful physician and good mathematical scholar, born in 1616, and educated at Caius college, Cambridge, in which society he obtained a fellowship, and while there is said to have been blessed with so retentive a memory, that he had all the problems of Euclid and Archimedes by heart. During the civil wars, his

attachment to the royal party caused the deprivation of his fellowship, on which, after a temporary retreat to the sister university, he finally took up his abode in the metropolis, where he soon obtained great practice in his profession. After the Restoration he became physician to the court, and continued so during that and the two following reigns, having received the honour of knighthood from the hand of Charles II. He assisted Harvey in the compilation of his work "De Generatione Animalium," and succeeded him as anatomical and surgical lecturer at Surgeon's-hall. Besides a translation of Euclid, he published an original treatise on trigonometry, an elegy on the death of the poet Cowley, an abridgment of Lily's grammar, "Syllabus Musculorum," &c. His death took place in 1696.—*Biog. Brit.*

SCARLATTI. There were three celebrated Italian composers of this name, the first, and by far the most famous of whom was ALESSANDRO, justly considered as the great regenerator of the Neapolitan school of music. He was born at Naples in 1650, and although the name of his master is unknown, made, at an early age, a very surprising progress in his favourite science. The reputation of Carissimi, the head of the Roman school, having reached Naples, Scarlatti, at that time confessedly the greatest harpist of his day, went to Rome, and by means of his instrument, introduced himself to the acquaintance of that accomplished master, which ripened into a sincere friendship, and tended much to their mutual improvement. From the metropolis of the arts he visited Bologna, Florence, Venice, and eventually Vienna, where he made the first essay of his talents for composition both in sacred and theatrical music, and in both kinds was equally successful. On his return to Naples, he directed the whole of his attention to the improvement of the national taste in music; and to his exertions is owing the reformation produced in the overture, which, from a mere obligato symphony, became in his hands a species of musical prologue or programme of the action of the opera. He was also the most original, as well as the most voluminous composer of cantatas; and there are few of the musicians of the early part of the last century, who have not benefited more largely by his talents than they have had the candour to avow. Alessandro Scarlatti was the instructor of the celebrated Durante, and is said to have produced nearly a hundred operas (of which his "Principessa Fidele" is quoted as the best), besides oratorios, and near two hundred masses, composing faster than any ordinary copyist could write. He died in 1723, and is still spoken of by his countrymen as the "glory of the art."—His son, DOMENICO SCARLATTI, born in 1683, was the successor rather than the disciple of his father. He was educated under Francisco Gaspari, and after visiting the various schools of Italy, especially that of Venice, then in the zenith of its reputation, acquired in this last mentioned city the friendship of Handel, whom he

accompanied to Rome, and continued to enjoy his society and instructions till the offer of the mastership of the chapel to the king of Portugal induced him to repair to Lisbon. In this capital he remained till 1726, producing in the interim several operas, as well as some sacred music, after which he visited Rome and Naples, but settled finally at Madrid on the appointment of chapel master to the queen of Spain, whom he also instructed in the management of the harp. Here he produced his "Merope," the most celebrated of all his dramatic compositions, and passed the remainder of his life. At what time it terminated is uncertain.—GIUSEPPE SCARLATTI, a grandson of Alessandro, was also born at Naples in 1718, but passed the greater portion of his time at Vienna, in which city and at Venice he produced thirteen operas. He died at Vienna in 1776.—*Burney's Hist. of Mus. Biog. Dict. of Mus.*

SCARRON (PAUL) nicknamed Cul de Jatte, from his singular deformity, a comic writer of great wit and humour, born at Paris in 1610. His father, a French advocate, designed him for the church, and a canonry at Mans was actually procured for him; but he was compelled to relinquish all idea of taking holy orders, by a severe attack of palsy, brought on by dissipation, which, in his twenty-seventh year, deprived him of the use of his limbs. His mental faculties were, however, still unimpaired, and he not only induced cardinal Richelieu to become reconciled to his father, who had offended that haughty minister, but procured himself a pension of five hundred crowns from the court; and what is still more extraordinary, the hand of the beautiful and witty mademoiselle d'Aubigné, after his death known as the widow Scarron, and eventually rendered still more famous as madame de Manteau. His principal writings are his "Comic Romance," and his "Virgile Travesti," works of unquestionable talent, but abounding in that licentious style of thought and expression, which is said to have been but too faithful a transcript of his early life. After his marriage, his own wit and that of his wife drew around him all the choicest society of France, till his death, which took place in 1660.—*Moreri. Biog. Univ.*

SCHAAF (CHARLES) an eminent Orientalist, who was born in the territory of Cologne in Germany, in 1646, and died at Leyden in 1729. He studied at Augsburg, was professor of the Eastern languages at Duisbourg, and afterwards at Leyden; and he distinguished himself by the publication of the New Testament, in Syriac, with a Latin version, and a Syriac Lexicon and Concordance, printed in 1717, 2 vols. 4to. He was also the author of "Opus Aramæum completens Grammaticam Chaldaico-Syriacum, et Lexicon," L. Bat. 1686, 8vo; and "Epitome Grammaticæ Hebrææ," 8vo.—*Niceron, xxxix. Biog. Univ.*

SCHADOW (ZENO RIDOLFO) a sculptor, born at Rome, in 1786. His father in 1788 removed to Berlin, where he was appointed

sculptor to the king, and afterwards director of the Academy of the Fine Arts. Ridolfi and his younger brother, who is one of the most distinguished painters in Germany, received from their father their first instruction in the art of design; and the former continued to study at home till the age of eighteen, when he was sent with a pension from the king to continue his studies at Rome. There he was noticed by Canova and Thorwaldsen, under whom he made great improvement. His first important work was a statue of Paris deliberating on the judgment he was to pronounce between the rival goddesses. He afterwards executed many admired sculptures and bas-reliefs; and among the latter, a monument for the marquis of Lansdown. He was engaged on a colossal group of Achilles defending the body of Penthesilea, in marble, when he was cut off by death, January 31, 1822.—*Biog. Univ.*

SCHAEFFER (JACOB CHRISTIAN) born at Querfurt in Germany, in 1718, was one of the most distinguished philosophers of his time. He was the son of a clergyman, but losing his father when he was young, it was with difficulty that he supported himself while studying at the university of Halle, where he completed his education. Professor Baumgarten then procured for him the office of tutor to the son of a merchant at Ratisbon, where he was chosen minister of one of the churches in 1741. He published several theological dissertations and other religious works, in consequence of which he obtained the diploma of DD. from the university of Wittenberg. He died at Ratisbon, January 5, 1790. Among his numerous publications, chiefly relating to natural history, are "Fungorum qui in Bavaria nascuntur Icones," 1762—70, 4 vols. 4to; "Icones Insectorum circa Ratisbonam indigenorum," 1766, 5 vols. 4to; "Elementa Entomologica," 1766, 4to; "Botanica expedition," 1762, 8vo. Persoon published a volume of commentaries on the work of Schaeffer relating to the Bavarian Fungi, in 1800; and in 1804 Panzer published "Iconum Insectorum Schaefferi circa Ratisbonam indigenarum Enumeratio systematica," 4to.—*Biog. Univ.*

SCHAFEI (ABU ABDALLA MOHAMMED BEN EDRIS AL) a celebrated Mahometan doctor, born at Gaza in Palestine, AD. 767. He visited Bagdad and Mecca, and afterwards going to Egypt, to visit a famous iman, he died there in 819. He was the first of the moslem theologians who wrote on jurisprudence; and he was the author of a treatise entitled "Ossoul," or the fundamentals of Islamism, comprising the entire code of the Mahometans, civil and sacred. He composed likewise two other works on legal topics; and his doctrine is generally received among the orthodox moslems. Sultan Saladin founded at Cairo a college for the exclusive inculcation of the principles of Al Schafei.—*Rees's Cyclop.*

SCHALKEN (GODFREY) a painter of eminent talents and eccentric manners, was born at Dort in 1643, and studied under Gerard Dow, from whom he caught a great delicacy

in finishing. He chiefly excelled in painting candle-lights, on which occasion he used to place the object and candle in a dark room. He also drew portraits, and with that view came to England, where he painted William III. As the piece was to be by candle-light, he gave the king the candle to hold, until the tallow ran down upon his fingers. Many similar anecdotes are related of his rudeness and inattention to the forms of polished society. He died at the Hague in 1706.—*Walpole's Anec.*

SCHEELE (CHARLES WILLIAM) a celebrated chemist, who contributed greatly to the improvement of the science which he cultivated. He was born at Stralsund in Sweden, December 19, 1742, and he was apprenticed to an apothecary at Gothenburgh. He became his own instructor in chemistry, and read the works of Lemery, Neumann, Kunckel, and Stahl; at the same time making experiments which added greatly to the knowledge he had acquired. After occupying different situations as an assistant in pharmacy, he went to Upsal in 1773, where his abilities introduced him to the notice of professor Bergmann; and being employed to perform some chemical experiments before prince Henry of Prussia and the duke of Sudermania, when they visited the laboratory of the academy of Upsal, his merit became known, and he was admitted an associate of the Academy. He subsequently became director of a pharmaceutical establishment at Kiöping; where, notwithstanding some advantageous proposals which he received to induce him to settle in England, he continued to the close of his life. The services which he rendered to the cause of science were numerous and important. He discovered the fluoric acid and the acids of tungsten and molybden; and his experiments on barytes, chlorine, various animal and vegetable acids, on the composition of water, and several other subjects, are in the highest degree curious and important. He carried on a correspondence with men of science; and he was a member of the electoral scientific society at Erfurt, and of the physical society of Berlin. He died May 24, 1786. A volume of Chemical Essays, by Scheele, translated into English, was published in 1786, 8vo; and a "Collection of the Researches of C. W. Scheele on Physics and Chemistry," edited by S. F. Hermbstaedt, appeared at Berlin, 1793, 2 vols. 8vo.—*Aikin's Gen. Biog. Univ.*

SCHEFFER (JOHN) a learned antiquary, born at Strasburgh, in 1621, and according to some authors descended in a right line from Peter Schoeffer of Gernsheim, one of the inventors of typography. John Scheffer, after having acquired the reputation of great erudition by a work on the ships of the ancients, removed to Sweden, and in 1649 he obtained the chair of rhetoric and public law at Upsal. He was afterwards nominated honorary professor, assessor of the royal college of antiquities, and librarian to the university. He died March 26, 1679. Besides many tracts on classical archaeology, published in the collec-

tions of Grævius and Gronovius, he was the author of a work entitled "*Lapponia, seu Gentis Regionisque Lapponicæ Descriptio accurata*," of which there are English, French, and German translations; and he produced several treatises on Swedish history and antiquities; and edited the works of Ælian, Arrian, Phædrus, and Pacatus.—*Moreri. Biog. Univ.*—SCHEFFER (HENRY THEOPHILUS) grandson of the preceding, was an eminent chemist. He was born at Stockholm in 1710, and having lost his parents when young, his uncle, baron Scheffer, provided for his education. He studied mathematics and natural philosophy at Upsal, under professor Andrew Celsius; and he afterwards received lessons on chemistry from George Brandt, at Stockholm. He then visited the Swedish mines, and having established a laboratory at Stockholm, he made some useful experiments on the art of dyeing, and on the analysis of minerals. He was admitted into the Academy of Sciences in the Swedish metropolis, and he contributed largely to the memoirs of that learned society. In 1740 he was appointed assay-master in the royal college of mines; and having been ennobled in 1756, he died three years afterwards. Scheffer's lectures on chemistry were thought deserving of publication by Bergmann in 1776.—*Biog. Univ. Aikin's G. Biog.*

SCHELHAMMER (GUNTHER CHRISTOPHER) a physician and anatomist, born at Jena, where his father was professor of medicine, in 1649. He studied at Leipsic, and afterwards at Leyden; and having visited England, France, and Italy, he returned home in 1677, and took the degree of MD. He subsequently became professor of botany, at Helmstadt, whence he removed to Jena, and at length obtained the medical chair at Kiel, where he died in 1716. He was the author of several works on natural history, anatomy, and medicine, among which are "*The Anatomy of the Sword-fish*," Hamburg, 1707, 4to; "*The Anatomy of the Seal*," 1707, 4to; and a treatise entitled "*Ars Medendi universa*," 3 vols. 4to.—*Gronov. Bibl. Reg. Animag.* *Biog. Univ.*

SCELHORN (JOHN GEORGE) one of the most celebrated bibliographers of Germany, born at Memmingen, December 8, 1694. He studied at Jena, and then at Nuremberg; and returning to his native place, he took holy orders, and was attached as a preacher to one of the principal churches. Becoming known for his erudition, he was in 1724 appointed librarian of the academy of Memmingen, of which he soon after became co-rector. At the age of sixty he received the degree of doctor of theology, which was necessary in order to his obtaining the office of ecclesiastical superintendant, which he held till his death, May 31, 1773. He was a member of the imperial academy of Roveredo, and of the ducal society of Jena. Among his publications may be noticed "*Amenitates Litterariæ*," 1724—1731, 14 vols. 8vo; "*Amenitates Historiæ Ecclesiasticæ et Litterariæ*," 1737, 4 vols.

8vo; "*De Religionis Evangelicæ in Provincia Salisburgensi Ortu, Progressu, et Fatis*," 1732, 4to; "*De antiquissima Latinorum Bibliorum Editione, seu primo Artis Typographicæ Fœtu et rariorum Librorum Phenice*," 1760, 4to; and "*Commercii Epistolariæ Uffenbachiani selecta, variis Observationibus illustrata*," Ulm, 1753—56, 5 vols. 8vo.—*Biog. Univ.*

SCHELLER (EMANUEL JOHN GERARD) a philological writer, who was a native of Saxony. He studied at Leipsic, where he supported himself by acting as a private tutor and assisting in literary journals. In 1760 he published a dissertation "*De Historiæ antiquæ utilitate*;" and in 1761 he was appointed rector of a school in Lower Lusatia, which place he exchanged in 1771 for that of rector of the gymnasium of Brieg in Silesia. In 1778 he published a valuable work, entitled "*Præcepta Styli bene Latini, in primis Ciceroniani, seu Eloquentiæ Romanæ*," 2 vols. 8vo; and he was also the author of a Latin and German dictionary, 7 vols. 8vo; and a Latin grammar. He died July 5, 1803.—*Biog. Univ.*

SCHERZ (JOHN GEORGE) one of the writers who principally contributed to explain the ancient monuments of the German language. He was born at Strasburgh in 1678, and he studied at his native place, and in the university of Halle. In 1702 he obtained the philosophical chair, and in 1711 that of jurisprudence at Strasburg, where he died April 1, 1754. His principal work appeared posthumously, under the title of "*Glossarium Germanicum mediæ ævi, potissimum Dialectici Suevicæ*," published with the notes and supplements of Oberlin, in two volumes, folio, 1781—84. Scherz was a contributor to Schilter's "*Thesaurus*," and he edited the third volume of that work.—*Biog. Univ.*

SCHEUCHZER (JOHN JAMES) a physician and naturalist, the son of a physician of the same name at Zurich, in Switzerland, where he was born in 1672. He was educated partly at Altorf, and then went to Utrecht, and took the degree of MD. in 1694. He settled at Zurich, where he became one of the public stipendiary physicians, and professor of mathematics and natural philosophy. Botany was his favourite study, in the pursuit of which he made excursions in different parts of the Alps in 1702, 1703, 1704, and 1711, and published an account of his researches, entitled "*Itinera per Helvetiæ Alpinoes Regionis facta, Annis 1702—11*," 4to. In 1712 he received an invitation from Peter the Great to settle in Russia; but he was prevented from accepting it by offers of additional emolument from the council of Zurich. He died in 1733, leaving a valuable library, a cabinet of medals, and a rich museum of natural history, the result of his own researches. Besides his Alpine itineraries, he was the author of "*Specimen Lithologiæ Helveticæ curiosæ*," 1702, 8vo; "*Herbarium Diluvianum*," 1709, folio; "*Bibliotheca Scriptorum Historiæ Naturalis*," 1716, 8vo; "*Museum Diluvianum*," 1716, 8vo; "*Physica Sacra*," 1735, 4 vols. folio,

published the same year at Amsterdam, with descriptions in Dutch, fifteen volumes.—*Gronov. Bibl. Reg. Animal. Biog. Univ.*

SCHUCHER (JOHN) brother of the subject of the last article, was distinguished as a botanist. He was born in 1684, and after completing his studies at Zurich, he engaged in military service in Holland, and was secretary to count Marsigli, whom he accompanied to Italy. Returning home he applied himself to mechanics and fortification; and in 1712 he was appointed engineer of the canton of Zurich. In 1718 he became professor of botany at Padua, which office he lost on account of his being a Protestant. He then travelled in Holland, France, Italy, and Germany; and in 1732 he was made secretary of the states of the county of Baden. On the death of his brother he succeeded him as professor of natural history and physician at Zurich, where he died March 8, 1738. He published a work, entitled "Historia Graminum," 1719, 4to; "Dissertatio philosophica de Tessæris Badenensibus," 1735, 4to; "Agrostographia," and other works.—**JOHN CASPAR SCHUCHER**, the son of J. J. Schuchzer, became a physician, and resided many years in England, where he died in 1792, at the age of ninety. He was the author of an academical thesis "De Diluvio," Tiguri, 1722, 4to; and he translated into English Koempfer's "History of Japan."—*Moreri. Biog. Univ.*

SCHIAVONETTI (LOUIS) a very ingenious artist, was born at Bassano, in the Venetian territory, April 1, 1765. His father, who was a stationer, could give him but a limited education, but having shown an early taste for drawing, he was placed under an able painter named Golini, who, after affording him three years of useful instruction, died in his arms. He subsequently obtained employment from count Renaudini, whose extensive typographical and chalcographical concerns had previously given occupation to Bartolozzi and Volpato. He was ultimately induced to come to England, where he became acquainted with Bartolozzi, and lived in his house until enabled to work upon his own account. He cultivated his genius with a success commensurate with the expectation formed of him, and acted with a degree of uprightness and integrity that made him universally esteemed. He died at Brompton, June 7, 1810, in the forty-fourth year of his age. Some of his principal performances are the Madre Dolorosa, after Vandyck; Michael Angelo's celebrated cartoon of the Surprise of the Soldiers on the Banks of the Arno; the Landing of the British Troops in Egypt, from Louthenbourg; and the etching of Stothard's Canterbury Pilgrimage, from Chaucer, which he left unfinished. Schiavonetti, in the estimation of his biographer, ranks with Andrews, Edelinck, Strange, and Woollet.—*Life by Cromek, in Gent. Mag. vol. xxx.*

SCHIAVONI (ANDREA) an eminent artist, was born at Sebenico in Dalmatia, in 1522. His parents, who were in humble circumstances, placed him with a house-painter

at Venice, where at his leisure hours he studied the works of Parmegiano, Giorgione, and Titian. The latter great painter, informed of his talents, generously took him under his care, and soon after employed him in the library of St Mark, where he is said to have painted three entire ceilings. He was accounted one of the finest colourists of the Venetian school. Two of his compositions are in the church of the Padre Teatini at Rimini, representing the Nativity, and the Assumption of the Virgin. His Perseus and Andromeda, and the Apostles at the Sepulchre, are in the royal collection at Windsor. He died at Venice in 1582.—*D'Argenville Vies de Peint.*

SCHILL (FERDINAND VON) a Prussian officer, distinguished for his military talents and daring courage. He was born in 1773, at Soththoff in Silesia, of a noble family, originally from Hungary. He studied at the college of Breslau, and in 1789 he entered into a regiment of hussars as a cadet. He afterwards removed into the regiment of the queen of Prussia's dragoons, in which he served at the battle of Jena, where he was badly wounded. On his recovery, he formed a free corps, at the head of which he displayed great ability as a partizan officer. The peace of Tilsit put an end to his operations; and being appointed major, and afterwards colonel, he went with his regiment to Berlin, where he was much noticed by the court. Nourishing in his breast a profound hatred against the French, he was extremely dissatisfied at the subjection of his country to the influence of Buonaparte. He therefore boldly resolved to erect the standard of revolt, and make an effort for the liberation of Germany. He set off from Berlin at the head of his regiment on the 29th of April, 1809. He visited Wittenberg, Dessau, and other places, seizing the public money, and everywhere replacing the arms of Westphalia by those of Prussia. Near Magdebourg he gained some advantage over a body of French troops; and after various manœuvres he arrived at Stralsund, which place he entered the 25th of May. He had not time to repair the fortifications, which had been destroyed, when he was attacked by a numerous detachment of Dutch and Danish forces, under generals Gratian and Ewald. His little army, in spite of the obstinate valour of their leader, was overwhelmed and almost extirpated. Schill himself was found under a heap of dead, after he had, with his own hand, killed the Dutch general, Carteret. He thus perished, May 31, 1809.—*Land. Mag. vol. iv. Biog. Univ.*

SCHILLER (FREDERICK) one of the most illustrious of the German poets, was the son of a major in the Bavarian service, and was born at the little town of Marbach, in the Wurttemburgh territories, November 10, 1759. He was distinguished in his childhood for great ardour of imagination, and one of his favourite books was that of Ezekiel, in the Old Testament. His father, whose circumstances were far from flourishing, being extremely anxious that the boy should be brought up to the ministry, placed him at an early age under the

superintendence of the pastor of Lorch, from whose tuition he removed him at the expiration of three years to the public school at Ludwigsburg, the routine of which neither suited his temper nor genius. In classical acquirements he is said to have exhibited no premature or extraordinary progress, and in the opinion of his instructors, ranked by no means superior to the rest of his schoolfellows. A fondness for solitary contemplation, and for witnessing the grander operations of Nature, as exhibited in storms and tempests, seems even at this period of his life to have discovered the future and peculiar bent of his genius. Notwithstanding his repugnance to scholastic discipline, he remained at school for upwards of six years, when the invincible dislike which he manifested towards his destined profession, wrung from his father a reluctant consent that his studies should be henceforward directed to that of medicine. The works of Shakspeare, Goethe, Klopstock, and Lessing, continued however to occupy all his attention to the exclusion of the *materia medica*; and even at the early age of fourteen, like our own Pope, he became the author of an epic poem, which was subsequently most judiciously consigned to the flames. Five years after appeared his tragedy of "The Robbers," which at once raised him to the foremost rank among the dramatists of his country; it is so powerfully conceived, that it is said to have induced several students at Leipsic to desert their college, in order to form a troop of banditti in the woods of Bohemia. This play, wild and extravagant as it is, displays, according to madame de Staël, much of "the intoxication of genius," and is, perhaps, only to be considered inferior to the "Wallenstein" of his maturer years. The reputation he acquired by this, and two dramas which succeeded it, "Fiesco," and "Cabal and Love," induced the Mannheim theatre, then the most flourishing in Germany, to offer him the post of dramatic composer, for which he gladly resigned his situation as surgeon to a regiment. Here he completed his translation of "Macbeth," and commenced his tragedy of "Don Carlos," which, however, was not published until ten years afterwards. His "Philosophical Letters" were commenced about the same period; and on the termination of his Mannheim engagement he retired to Leipsic, where he commenced his labours as a historian. His first production in that capacity was a "History of the Remarkable Conspiracies and Revolutions in the Middle and Later Ages." A volume of poems having gained him the patronage of the duke of Saxe-Weimar, he removed to Weimar in 1787, and became acquainted with Wieland, Herder, and Goethe. His new patron also conferred upon him the title of aulic counsellor, and nominated him to the professorship of history and philosophy at Jena. He accordingly took up his residence in that university, and soon after married a woman of family and fortune, who is said to have fallen in love with him through his writings, and to have sent him a matrimonial challenge;

which he immediately accepted. At Weimar commenced his "History of the Thirty Years' War," which work appeared in 1791, and is considered his chef-d'œuvre as a historian. In the course of the same year he underwent a severe pulmonary attack, from which he never entirely recovered; for although he experienced a partial and temporary restoration, during which he composed "Wallenstein," the most elaborate and splendid of his dramas, as well as some other of the most finished of his productions, he was carried off by a relapse on the 9th of May, 1805, and was interred with great solemnity. In his private character Schiller was friendly, candid, and sincere; but in youth he affected eccentricity in his manners and appearance, and a degree of singularity seems always to have appertained to him. As a dramatist he has some pretensions to head the school which looks inward for character and sentiment; and is more or less disposed to give the metaphysical hue of the author to the creation of his fancy, than to enter into the real varieties of human existence, and to lose self in a borrowed train of associations. In his earlier dramatic productions, the brilliancy of his genius concealed its extravagance, and to the last he went to the extreme of the taste of his country for high wrought representations of passion, to the violation of nature and probability, to support which violation, an ingenious theory has in the mean time been expressly adopted. Both in this and every other department in which he engaged, however, his claims to exalted genius are undeniable. Besides the works already mentioned, Schiller wrote a singular romance, entitled "The Ghost Seer," which displayed his peculiar turn of mind as much as his other productions. Schiller was made a citizen of France without his solicitation, as also a German noble; but so little was he flattered by this sort of distinction, that he never adopted the title of baron, thereby conferred on him. It will be seen that this distinguished man of genius died in the prime of mental life, having fallen short of completing his forty-sixth year.—*Ann. Biog. Month. Mag.*

SCHILTER (JOHN) a German antiquarian and juridical writer, born at Pegau in Misenia, in 1632. He studied at Leipsic and Naumbourg, and afterwards at Jena. In 1662 he entered into the service of the duke of Saxe Zeitz, who nominated him bailiff of Suhl in 1668. Some years after, he became privy counsellor to the duke of Saxe Weimar, and on the death of that prince, in 1678, he went to Jena; but being disappointed of a professorship there, he removed to Frankfort-on-the-Mayne, and afterwards to Strasburgh, where he was nominated counsellor of the city and honorary professor. He died there in 1705. Besides some works of less importance, he produced "Codex Juris Allemannici Feudalis," 3 vols. 4to; and "Thesaurus Antiquitatum Teutonicarum," 3 vols. folio.—See SCHURZ (J. G.).—*Biog. Univ.*

SCHLOEZER or SCHLOTZER (AUGUSTUS LOUIS VON) knight of the order of St Wladi-

univ. and professor of history at Gottinger, where he died September 10, 1809. He distinguished himself by a number of valuable works on the history of the north of Europe, among which may be mentioned his "Universal History of the North," 4to; "History of Lithuania," 4to; "The Monetary and Metallurgic History of Russia, from 1700 to 1789," 8vo, in which he was assisted by his learned daughter, the wife of the senator Rodde of Lubeck; and a critical edition of the Annals of the Russian Chronicler Nestor. He has related by what means he was enabled to cultivate with so much success the study of Russian history and antiquities in his *Oeffentlichen und Privateben*," (Public and Private Life) during his residence in Russia, from 1761 to 1765. This autobiographical work is highly interesting to philologists and historians, containing much information relative to Russia, and anecdotes of Catherine II. Schloezer published, under the title of "Correspondence," a political, historical, and statistical journal, from 1776 to 1782, 10 vols. 8vo, which was continued to 1794, under the title of "Staatsanzeigen," 18 vols. 8vo. He was also one of the conductors of the "Literary Gazette of Gottingen," reckoned the most learned of the German journals.—*Zopf Hist. Univ. Biog. Univ.*

SCHNEBBELE (JACOB) an architectural draughtsman, born in 1760 in Westminster, where his father carried on business as a confectioner. He was brought up to the same employment, but having a taste for drawing, he relinquished his business, and applied himself particularly to the delineation of buildings and antiquities. He was appointed draughtsman to the Society of Antiquaries, and his pencil was employed in decorating their publications, and those of Mr Gough. He also conducted the "Antiquaries' Museum," and assisted in a collection of "Antique English Dresses." His death took place in 1792.—*Gent Mag.*

SCHNEIDER (EULOGUE) a German priest, who was vicar to the constitutional bishop of Strasburg, and afterwards civil commissary to the French republican army at Alsace, and public accuser before the criminal tribunal of the Lower Rhine. This wretch was one of the most pernicious agents of Robespierre and his confederates, whose tyranny was rendered more intolerable by his vindictive malice and wanton cruelty. Armed with the authority of St Just and Lebas, commissioners from the Convention at Strasburg, Schneider proceeded through the department with a body of troops, and followed by the guillotine, on which he immolated citizens of every rank, sex, and age, where interest or revenge furnished the slightest motive for their execution. In one of his progresses he arrived at the village of Epsig, where he found the local magistrate, M. Kuhn, about to sit down to dinner with some friends. Schneider was invited to join them; and he appeared for a time to be much pleased with his host and his entertainment. At length, suddenly starting up from the table, he asked the master of the house if he

had any more wine such as they were drinking. Kuhn replied, that he had a few bottles, which were much at his service. "Well, then," said the monster, "make haste, and fetch us one more, for in three quarters of an hour your drinking will be entirely at an end." He then ordered the guillotine to be drawn into the court-yard of his host, and on the pretext that he had been receiver-general to the cardinal de Rohan, formerly archbishop of Strasburg, he had him beheaded, in the presence of his family, friends, and domestics, who in vain begged for his life. Schneider was about to set on foot novades at Strasburg, similar to those of Nantes, when he was cut short in his career through the jealous policy of the conventional commissioners, whose pride he had insulted by making a pompous entry into Strasburg, in a carriage drawn by six horses, preceded by couriers, and surrounded by guards with drawn swords. St Just and Lebas displeased, not by his crimes, but by his arrogance, had him arrested on the 20th of December, 1793, and shortly after conveyed to Paris, where he was condemned by the revolutionary tribunal and guillotined, at the age of thirty-seven. His sentence purported that he had been convicted of having, by cruel and immoral violence, and vexatious proceedings, and by the most revolting and most sanguinary abuse of the name and authority of a revolutionary commissary, oppressed, robbed, assassinated, and ravished the honour, the fortune, and the tranquillity of peaceable families. Such were the miscreants to whom the French republicans delegated their power, and thus made themselves answerable for the enormities of their instruments.—*Dict. des H. M. du 18me S.*

SCHOEFLIN (JOHN DANIEL) a learned German historian, who was born at Sultzbourg, in the territory of Baden Dourlach, in 1694. He became professor of rhetoric and history at Strasburg; and his vast erudition procured him the title of historiographer to Louis XV. He published a number of works of research, among which may be noticed his "*Alsatia illustrata*," 2 vols. folio; "*Alsatia diplomatica*," 4 vols. folio; "*Vindiciæ Typographicæ*," 1760, 4to; and "*Historia Zaringo-Badensis*," 7 vols. 4to. This last work, which has been praised for the elegance of its style, was prepared for the press by M. Koch, a pupil of Schoepflin. This learned and industrious author, after having for more than half a century been the great ornament of the university of Strasburg, died in that city in 1771. He left to the public his valuable library and museum.—*Dict. Hist. Biog. Univ.*

SCHMIDT. There are three German writers of this name, of whom some brief mention may be desirable. CHRISTOPHER SCHMIDT, a learned German, was born at Nordheim in 1740, and studied law at Gottingen. In 1762 he visited Russia, in the train of count Munich; and contracted so great a fondness for that country, and its language, that he employed much of his future time on its history. He produced various works, published in

German; "Letters on Russia;" "Materials for a Knowledge of the Government and Constitution of Russia;" "Introduction to the History of Russia," &c. He was also author of "Historical Miscellanies," and a "History of Germany," which is well spoken of. On his return from Russia, he lectured on history, public law, and statistics, in the Caroline college at Brunswick; and in 1779 was made keeper of the archives at Wolfenbützel. He died in 1801.—ERASMUS SCHMIDT, an excellent Greek scholar, was born at Delitzsch, in Misnia, in 1560. He became eminent for his skill in the Greek tongue, and lectured in that language, and on mathematics, in the university of Göttingen. He died in 1637. He published an edition of Pindar, in 1616, -to, with a Latin version and learned notes, which, with some exceptions, is well spoken of by Heyne. He also wrote notes upon Lycophron, Dionysius Periegetes, and Hesiod; and was author of an able "Concordance to the Greek Testament," the best edition of which is that of 1717.—JOHN ANDREW SCHMIDT, a learned Lutheran divine, was born at Worms in 1632. He wrote various works upon subjects connected with ecclesiastical history, and is highly spoken of by Mosheim.—*Moreri. Nouv. Dict. Hist.*

SCHMITZ (NICHOLAS) a learned jesuit of the last century, was a native of Oldenburgh, in Hungary, and taught the belles lettres and theology in the schools of his order with great reputation. He died 1767, leaving several works, the principal of which is, "Imperatores Ottomanici, à Capta Constantinopoli cum Epitome Principum Turcarum, ad Annum 1718," 2 vols. folio, 1760. All his works are purely and elegantly written, but the foregoing Turkish history is particularly esteemed.—*Nouv. Dict. Hist.*

SCHOMBERG (ALEXANDER CROWCHER) an eminent writer on jurisprudence, who studied at Magdalen college, Oxford, where he proceeded MA. in 1781, and also obtained a fellowship. He took clerical orders, but never held any preferment in the church. In 1785 he published an ingenious tract, entitled "An Historical and Chronological View of the Roman Law," 8vo; which was followed by "A Treatise on the Maritime Laws of Rhodes," 8vo; "Remarks on the Commercial Treaty with France;" and a "Sea Manual, recommended to the young Officers of the British Navy," 1789, 8vo. He died in 1792, at the age of thirty-five.—*Gent. Mag.*

SCHOMBERG (FREDERIC duke of) a distinguished military officer, who was a native of Germany. He was born about 1619, and was the son of count Schomberg, a German nobleman, by the daughter of Edmund, baron Dudley. He commenced his military career under Frederick Henry, prince of Orange; and he afterwards went to France, where he became acquainted with the prince of Condé and marshal Turenne. He was then employed in Portugal, and he established the independence of that kingdom, obliging the Spaniards to recognise the claims of the house of Bra-

ganza. He commanded the French army in Catalonia in 1672; and was afterwards employed in the Netherlands, where he obliged the prince of Orange to raise the siege of Maestricht. For these services he was rewarded with the staff of a marshal of France in 1675; but on the revocation of the edict of Nantes, marshal Schomberg, who was a Protestant, quitted the French service, and went to Portugal. Being also driven from that country on account of his religion, he retired to Holland, and subsequently engaged in the service of the elector of Brandenburg. He came to England in 1688 with William III; and after the Revolution he was created a duke, and obtained a grant of one hundred thousand pounds. He was sent to Ireland in the following year to oppose the partizans of James II. Being joined by king William, he was present at the battle of the Boyne, in which he lost his life, July 1, 1690, owing, it is said, to an accidental shot from his own troops, as he was passing the river to attack the enemy.—*Aikin's Gen. Biog.*

SCHOMBERG (ISAAC) a Jewish physician, who was a native of Cologne, but settled as a practitioner of medicine in London, where he died in 1761. He was the author of "Aphorismi Practici," 1752, 8vo; and other professional publications. He had two sons who were physicians.—ISAAC SCHOMBERG, junior, studied at Leyden, where he obtained the degree of MD. He afterwards procured a diploma from Cambridge, and endeavoured to get admission into the Royal College of Physicians. Dr Battie, then one of the censors, distinguished himself by his opposition to Schomberg, who instituted a lawsuit against his opponent, and being unsuccessful, he took his revenge on Dr Battie by publishing a mock heroic poem, entitled the "Battiad," which he appears to have written in conjunction with Moses Mendez and Paul Whitehead. He died in 1780.—RALPH SCHOMBERG, brother of the preceding, practised medicine at Bath, and afterwards at Reading, where he died in 1792. He was the author of a life of Meccenas.—*Nichols's Lit. Anec.*

SCHOMBERG (ISAAC) a naval officer and historian, who died at Chelsea, January 20, 1813. He served as a lieutenant in the American war, and distinguished himself in the victory gained by admiral Rodney over count de Grasse. During the subsequent peace he commanded a frigate in the East Indies, where his health became impaired, and he contracted a disease of the liver, from which he never entirely recovered. He was captain of the Culloden, which belonged to the fleet of lord Howe, in his engagement with the French, June 1, 1794; and when hostilities commenced after the peace of Amiens, he commanded the sea-fencibles at Hastings. He subsequently retired from the maritime service, and obtained a seat as a commissioner at the navy-board. His leisure in the latter part of his life was devoted to the composition of a work entitled "Naval Chronology," 1802, 5 vols. 8vo, containing an account of maritime

SCH

affairs from the origin of the British navy to the peace of 1783.—*Gent. Mag.*

SCHONNING, or SCHOENING (GERARD) a learned Norwegian, was born in Nordland in 1722. He was educated at Copenhagen, and became a member of the Academy of Sciences in that capital, in 1758. In 1764 he was appointed professor of history at Sora, and received literary honours from various societies. He died in 1780. His works are numerous, but many of them are academical dissertations. Among those of a more permanent form, are "An Essay towards the ancient Geography of the Northern Countries;" "Observations on the old Northern Marriages;" "De Anno Rationale apud Veteres Septentrionales;" "A History of Norway," 1771—1781, 4 vols. 4to; "Travels through Norway," &c.—*Nouv. Dict. Hist.*

SCHOUWALOF (PETER IWANOF, count) a field-marshal in the Russian service, who was one of the first favourites of the empress Elizabeth. His services in promoting her accession to the throne were rewarded with the rank of major-general in 1741; and in 1746 he received the title of nobility, to which was added an ample fortune. Being an officer of the artillery, he contributed much to the improvement of that branch of the Russian army. He enjoyed the confidence of his imperial patroness till his death, and he survived her only two days, dying January 9, 1762.—His son, count ANDREW SCHOUWALOF, succeeded to his titles and fortune. He was chamberlain to the empress Elizabeth, and was in great favour with her and with Catherine II. He travelled in various European countries, and resided a long time at Paris, where he acquired an intimate knowledge of French literature, and he wrote the language with facility. Many of his poetical compositions are extant, the most remarkable of which are "Épître à Voltaire," and "Épître à Nivon," the latter of which attracted much notice. Count Schouwalof corresponded with Voltaire, whom he visited at Ferney, and who gave him the title of the Russian Mæcenas. His death took place in 1789.—Count PAUL SCHOUWALOF, son of the last mentioned, lieutenant-general and aide-de-camp to the emperor Alexander, attended him in his last war against the French. He was one of the commissaries who conducted Buonaparte to the Isle of Elba; and in 1817 he was present at the congress of Aix-la-Chapelle. He died December 12, 1823.—*Biog. Univ. Bing. Nouv. des Contemp.*

SCHOTT (ANDREW) a learned jesuit, born at Antwerp in 1552. He studied at the university of Louvaine, and afterwards at Paris, where he became acquainted with Dupuy, Scaliger, Passerat, and Pithou. He then went to Spain, and obtained the professorship of the Greek language at Toledo, whence in 1584 he removed to Saragossa. At length he entered into the order of the jesuits, and was sent to Rome, where, for three years, he taught rhetoric in the college of his order. He died at Antwerp, according to Niccron in 1629,

SCH

though other authors place his death in 1636. Schottus published a collection of Greek proverbs, with annotations; a work entitled "Hispania illustrata," 4 vols. folio; and editions of several of the classics, with notes.—*Nicron, xvi. Freheri Theatr. Moreri.*

SCHOTT (CASPAR) an ingenious philosopher, born in the diocese of Wurtsburg, in Germany, in 1608. He was the disciple of the celebrated Kircher, taught philosophy and mathematics at Palermo and at Rome, and died in 1666. He belonged to the order of St Ignatius. His works are "Physica curiosa, seu Mirabilia Naturæ et Artis, lib. xii," Heribol. 1662, 4to; "Magia universalis Naturæ et Artis," 1658-59, 4 vols. 4to; "Organum Mathematicum;" "Anatomia Physico-hydrostatica Fontium et Fluminum;" and "Technica curiosa." In these works he has collected with great industry the wonders of natural philosophy and natural history; but amidst the multiplicity of his details are inserted many questionable narratives, and not a few which are obviously erroneous, so that his authority can seldom be implicitly relied on.—*Reimman. Hist. Lit. vol. iv. Dict. Hist. Biog. Univ.*

SCHIRADER (JOHN) a modern Latin poet and philological writer, born in Friseland, in 1721. He studied at Leeuwarden, whence he removed in 1738 to Franeker, and subsequently to the university of Leyden. He became professor of rhetoric and history at Franeker, and in 1754 he was promoted to the chair of national history. He died November 26, 1782. His works are "Observationum Liber," 1761, 4to; "Liber Emenationum," 1776, 4to; "Carmina," published collectively after his death at Leeuwarden, 1786, 8vo; and "Epistola Critica," addressed to Peter Burman: and he also edited "Museum Hero et Leander," 1742, 8vo.—*Biog. Univ.*

SCHREBER (JOHN CHRISTIAN DANIEL, von) a German naturalist, born in 1739. He studied medicine at Halle; but being inspired with an extraordinary passion for natural history, he went to Upsal in 1758, that he might attend the lectures of Linnæus. Having taken his doctor's degree, and greatly extended his acquaintance with the science of nature, he returned to Germany, and was appointed physician to the school of Butzow. In 1764 he removed to Leipzig, where he became secretary to the Economical Society; and in 1769 he was called to the university of Erlangen, as ordinary professor of medicine, natural history, and botany, with the title of aulic counsellor. Twenty-two years after, he was nominated president of the imperial academy of naturalists, imperial counsellor, &c.; and he received from the emperor of Germany letters of nobility. He died December 10, 1810. Schreber, who was a member of forty learned societies, was the author of "Icones Plantarum minus cognitarum Decas," 1766, folio; a treatise on grasses, in German; "Spicilegium Floræ Lipsicæ," 1771, 8vo; "Plantarum Verticillatarum Unilabiatarum Genera et

Species," 1774, 4to; a treatise on mammiferous animals, in German, &c.; and he published the eighth edition of the "*Genera Plantarum Linnæi*," Frankfort, 1789, 8vo, in which he made considerable alterations. His principal work is that on grasses, ("*Beschreibung der Gräser*,") which is illustrated by coloured plates. A great number of dissertations by Schreber are printed in the *Acta Soc. Naturæ Curiosorum*.—*Biog. Univ.*

SCHREVELIUS (CORNELIUS) a learned critic, was the son of Theodore Schrevelius, rector of the school at Haerlem, where he was probably born in 1622. His father afterwards became rector of the school of Leyden, in which office he was succeeded by Cornelius in 1642. The latter had taken his degree in medicine; but on his promotion to the school he turned his attention exclusively to classical pursuits, in the course of which he published several variorum editions of the classics, which display more industry than taste or judgment. His name is now principally known by a manual Greek and Latin Dictionary, which has been reprinted in most countries of Europe, and in England has been improved by Hill, Bowyer, and others. He died in 1667. —*Foppen's Bibl. Belg. Moreri.*

SCHROEDER (JOHN JOACHIM) a learned Orientalist, distinguished for his knowledge of the Armenian language. He was born in the territory of Hesse Cassel, in 1680, and he studied at Marburg. His strong predilection for Eastern literature induced him to undertake a journey to Armenia; but various accidents impeded his progress, and he reached no farther than Moscow. He returned to Holland, where he had been previously studying under Schultens and Surenhusius. He prosecuted his researches concerning the Armenian language with the assistance of an Armenian settled at Amsterdam, where he published his "*Thesaurus Linguae Armenicæ*," 4to; he also composed a dictionary of the language, the MS. of which is preserved in the public library of Cassel. In 1713 he was nominated professor of the Oriental tongues, and of ecclesiastical history, at Marburg; and in 1737 he obtained the chair of theology. He died in 1756, leaving four sons, who all cultivated with success Eastern literature.—NICOLAS WILLIAM SCHROEDER, born at Marburg in 1721, was professor of the Oriental languages at his native place, and in 1748 became professor of Greek and the Oriental languages at Groningen. He died in 1798. He published various academical opuscula; and his "*Institutiones ad Fundamenta Linguae Hebrææ*," 1768, 8vo, is one of the most complete and philosophical works extant on Hebrew philology.—*Biog. Univ.*

SCHROEDER (PHILIP GEORGE) a German physician, brother of N. W. Schroeder, was born at Marburg in 1729. He studied there, and at Jena and Halle; and in 1754 he was chosen professor of anatomy and surgery at Rinteln. In 1763 he obtained the title of first professor at Marburg, and the following year he removed to fill the same office at Got-

tingen, where he died March 14, 1772. His academical writings, rich in scientific observations, were published collectively, under the title of "*P. G. Schroederi Opuscula Medica*," Nuremberg, 11 vols. 8vo.—*Id.*

SCHROETER (JOHN SAMUEL) a Lutheran minister, born in 1735, at Rastenburg in Thuringia, where his father was rector of the public school. He was educated at Jena, and became rector of the school of Dornburg in 1756, and in 1763 pastor at Thangelstaedt. He subsequently removed to Weimar, where he became inspector of the cabinet of natural history, and at length superintendent and first pastor at Bukstaedt. His death took place March 24, 1808. Schroeter cultivated natural history, and distinguished himself especially as a conchologist and mineralogist. Among his works, all in German, are a "*Lithological Dictionary*," Berlin, 1772—88, 8 vols. 8vo; "*An Introduction to Conchology*," Halle, 1783—86, 3 vols. 8vo; and "*Remarks and Observations on Natural History, particularly relating to Shells and Fossils*," Leipsic, 1784—87, 4 vols. 8vo.—*Baldinger's Biog. of Living Naturalists. Biog. Univ.*

SCHULTENS (ALBERT) a learned divine, was born at Groningen about 1680. He studied at Leyden and Utrecht, and entering the ministry was chosen pastor of Wassemæer, and afterwards professor of the Oriental languages at Franeker, and next at Leyden, where he died in 1750. Of the numerous learned works of Schultens the most considerable are "*A Commentary on the Book of Job*," 2 vols. 4to; "*Vetus et Regia Via Hebrazandi*," "*Origines Hebraicæ*;" and a Latin version of the "*Life of Saladin*," from the Arabic of Hariri.—He was succeeded by his son, JOHN JACOB SCHULTENS, who died in 1778.—*Nouv. Dict. Hist.*

SCHULTENS (HENRY ALBERT) son of John Jacob Schultens, and grandson of the above, was born at Herborn in 1749. He was educated at Leyden, where he studied Arabic and Hebrew. He also made himself master of the English language, and in 1772 published his "*Anthologia Sententiarum Arabicarum*." He soon after visited England, and became a commoner in Wadham college, Oxford, where he received the degree of master of arts. He also acquired the friendship of sir William Jones, who recommended him to study the Persian. On his return to Holland he was chosen professor of the Oriental languages at Amsterdam, where he resided until the death of his father, whom he succeeded at Leyden, and where he died in 1793. Besides the work already mentioned, he published an edition of Pilpay's Fables, and a supplement to the "*Bibliothèque Oriental*" of D'Herbelot. After his death appeared his translation of the Book of Job, and an edition of Me danus.—*Monthly Rev.* vol. xv. N. S.

SCHULZE (BENJAMIN) a Danish missionary of the Lutheran church, who, having finished his studies at Halle, was sent to the East Indies. He arrived at Tranquebar, Sep-

tember 16, 1719, shortly after the death of Ziegenbalg, the chief of the mission. He studied the Malabar language, and received ordination in 1720. He continued a translation of the Bible into the Tamul dialect, which had been commenced by Ziegenbalg, and the work was finished in 1725. He removed in 1726 to Madras, and engaged in the service of the English Society for the Propagation of the Gospel, under whose auspices he founded a new church. He then studied the Telinga and the Sanscrit; and into the former language he translated the Bible, and Arndt's *True Christianity*, and "Garden of Paradise." Ill health induced him to return to Europe in 1743. The following year he settled at Halle, where he employed himself till his death in 1760, in the printing of his translations and other learned labours, among which are "Conspicuum Litteraturæ Telingicæ, vulgo Warugicæ," 1747, 4to; and "The Master for the Oriental and Occidental Languages, containing One Hundred Alphabets, Polyglott Tables, &c." Leipsic, 1738, 8vo.—*Biog. Univ.*

SCHULZE (JOHN HENRY) professor of medicine in the university of Halle, was born at Colbitz, in the duchy of Magdebourg, in 1687. His father, who was a tailor, was unable to afford him the means of education; but he was fortunate enough to meet with friends who procured him admission into the orphan house at Halle, where he afterwards assisted as a tutor. In 1704 he was received into the university, where he studied medicine. He became, in 1708, teacher at the Pædagogium at Halle, in which situation he remained seven years. He then resumed the medical profession, and in 1720 obtained the anatomical chair at Altorf. In 1732 he was appointed professor of rhetoric and antiquities at Halle, where he died October 10, 1744. He was the author of "*Historia Medicinæ à Rerum Initio ad An. Urbis Romæ 535 deducta*," 1728, 4to; and other works which display great erudition.—*Dict. Hist. Biog. Univ.*

SCHURMANN (ANNA MARIA de) a lady who gained a high literary reputation in the latter part of the seventeenth century. She was descended from a noble family of the Protestant religion, and was born at Cologne, November 5, 1607. From her earliest years she displayed a taste for study, and to a knowledge of classical literature she added a great degree of skill in music, painting, sculpture, and engraving, which union of talents procured her the appellation of the modern Sappho. She knew enough of Greek and Hebrew to read the Bible in the original text; and she studied Ethiopic sufficiently to compose a grammar of that tongue. After the death of her father, in 1623, she settled with her mother at Utrecht, where she devoted her time to the cultivation of learning and the arts. She corresponded with men of letters at home and abroad, and she was visited by Christina, queen of Sweden, and other distinguished personages. This erudite female at length became the victim of fanatical delusion. In 1653 she retired to a country seat at Lex-

mund, near Vianen, where she gave an asylum to the enthusiastic Labadie, to whom she is said to have been secretly married. After his death she assembled his followers, and conducted them to Wivert in Friseland, where she died in 1678. Mademoiselle Schurmann wrote "*Opuscula Hebræa, Græca, Latina, Gallica, prosaica et metrica*," edited by Fred. Spanheim, Leyden, 1648, 8vo; a dissertation "*De Ingenii Muliebris ad Doctrinam et meliores Litteras Aptitudine*," 1641, 8vo, which was translated into French by Colletet; and "*Ευκλῆντα, seu melioris Partis Electio brevem Religionis ac Vitæ ejus Delineationem exhibens*," Altona, 1673, 8vo, a defence of the opinions of the Labadists.—*Nicéron*, vol. xxxiii. *Chaufepie. Aikin. Biog. Univ.*

SCHURTZFLEISCH (CONRAD SAMUEL) one of the most industrious philological writers Germany has ever produced. He was born in 1641, at Corbach, in the county of Waldeck; and he studied at his native place, at Giessen and at Wittemberg, where, at the age of twenty-three, he took the degree of doctor of philosophy. Returning to Corbach, he assisted his father, who was rector of a school, and afterwards he visited several German universities. In 1667 he engaged in the study of jurisprudence, and in private tuition, at Leipsic; where, in 1669, he gave offence by the freedom with which he expressed his opinion relative to the most celebrated German jurists, in a pamphlet, which he published under the Latinized appellation of Eubulus Theodatus Sarcasmus. This affair obliged him to remove to Wittemberg, where he became in 1671 extraordinary professor of history; four years after, he succeeded Carpow in the chair of poetry; and in 1678 he obtained the ordinary professorship of history, to which was added that of Greek. He travelled afterwards in the Low Countries, England, and Italy; and returning to Wittemberg, he in 1700 exchanged the Greek chair for that of rhetoric. He was also counsellor of the duke of Saxe Weimar, who made him his librarian. He died July 7, 1708, leaving to his brother a valuable collection of books, a cabinet of medals, and his MSS. Among his numerous works may be specified "*Disputationes Historiæ Civiles*," 1699, 4to; "*Dissertationes Academicæ*," 4to; "*Disputationes Philologico-philosophicæ*," 1700, 4to; "*Epistolæ selectiores*," 1712, 8vo; "*Epistolæ Arcanæ varii*," 1711-12, 2 vols. 8vo; and he continued Sleidan's treatise "*De Quatuor Imperiis*."—HENRY LEONARD SCHURTZFLEISCH, younger brother of the preceding, followed his example in his application to the study of classical and historical literature. In 1700 he succeeded him in the chair of history at Wittemberg, and he also, on his death, became librarian at Weimar. He died in 1723. He was the author of "*Historia Ensisferorum Ordinis Teutonici Livonorum*," 1701, 8vo; "*Notitia Bibliothecæ principalis Vimaricensis*," 1712, 4to, republished with additions at Jena, in 1714; and other learned works.—*Biog. Univ. Sazii Onom.*

SCHWARTZ (BERTHOLD) or Bartolus

Niger, a Franciscan friar of Friburg, or, according to some, a monk of Cologne, who has been regarded as the inventor of gunpowder and fire-arms. He is said to have been mixing together the ingredients of gunpowder, viz. nitre, sulphur, and charcoal, in an iron mortar, in the prosecution of some alchymical researches, when the composition exploded from an accidental spark occasioned by the collision of the pestle and mortar. The former being driven forcibly to a distance, Berthold thence conceived the idea of forming pieces of artillery. Such is the story commonly told of the invention of gunpowder, said to have occurred in the early part of the fourteenth century. There is however much discrepancy in the accounts of this discovery; and it is certain that Roger Bacon, who died in 1292, was acquainted with an inflammable composition similar to gunpowder, the knowledge of which Europeans appear to have derived from the Orientals.—*Orig.*

SCHWARTZ (CHRISTIAN FREDERIC) a German missionary to the East Indies, born at Sonnenburg, in the Newmark, October 26, 1726. He went to Halle in 1746, and entered at the university, by the advice of the missionary Schulze; and he was selected with another student to learn the Tamul language, that they might assist in the intended publication of Ziegenbalg and Schulze's Tamulian translation of the Bible.—(See SCHULZ, BENJAMIN.)—The printing of this work was relinquished; and Schwartz, who had continued his Oriental studies for a year and a half, was persuaded to go as a missionary to the East Indies. He proceeded to England with two other gentlemen destined for the same service; and in July 1750 they arrived at Tranquebar. In 1767 Mr Schwartz was employed by the English Society for the Promotion of Christian Knowledge, when he removed to Trichinopoly; and there and at Tanjore he passed the remainder of his life, labouring with great assiduity in preaching the gospel to the infidels of Hindostan. At both places he received from the government of Madras 100*l.* a year, as garrison preacher, which sum he is said to have expended in building a church at Trichinopoly and otherwise promoting the purposes of the mission. He was held in high esteem for his character by the Hindoos; and the rajah of Tanjore made him tutor to his son. He died February 13, 1798, at Tanjore, where his body was interred in the church which he had erected.—*Memoir in Evang. Mag.* vol. xv.

SCHWARZ (CHRISTOPHER THEOPHILUS) a learned and laborious writer in philology, born at Leisnig, in Saxony, in 1675. He studied at Leipsic and Wittenberg; and having taken his doctor's degree, he returned to Leipsic, and subsequently became professor of morals and then of history at Altorf. His reputation attracted numerous pupils from all parts of Germany; and he had very advantageous offers made to induce him to remove elsewhere, but he refused them, and died at Altorf, February 24, 1751. Among his works are, "Dis-

BIOG. DICT.—VOL. III.

sertationes de Ornamentis Librorum apud Veteres usitatis," 1705—6, 4to; "De Libris plicatilibus Veterum," 1717; "De varia Supellectile Rei Libraria Veterum," 1725, 4to; and "Primaria quedam Documenta de Origine Typographiæ," 1740, 4to.—*Harles Vita Philologor. Biog. Univ.*

SCIOPPIUS (CASPAR SCHOPF, known under the Latinized name of) a very learned grammarian and philologist, distinguished as one of the most satirical writers of his age. He was born at Newmark in the Palatinate, in 1576. His family was obscure, and he owed his initiation in learning to his own industry; such being his proficiency, that at the age of seventeen he published Latin poetry. Being at Ferrara in 1598, when pope Clement VIII went to take possession of that city, he wrote a panegyric on the pope and the king of Spain; and following to Rome the pontiff, whose patronage he had thus obtained, he there abjured the Protestant faith. He was created a knight of St Peter, and received the apostolic title of count Claravalle. He published an edition of Varro, notes on Apuleius, and a commentary on the Priapeia, which last he had the decency to disavow. He became, from an admirer, the most virulent adversary of Joseph Scaliger; and the history of literature scarcely affords an instance of a polemical writer so widely engaged in hostilities with his contemporaries as Scioptius, or of one who conducted controversy with such disgraceful violence and rancour. In 1611 he published his "Ecclesiasticus," directed principally against our king James I; and his abuse of the memory of Henry IV, occasioned the burning of his writings at Paris, by the hand of the common hangman, November 24, 1612. He went to Spain in 1613; and at Madrid he received from the servants of the English ambassador a cudgelling for his invective against James I. In 1618 he published at Milan "Classicum Belli sacri," against the Protestants; and he afterwards wrote a number of satirical works against the jesuits. In his latter years he turned commentator on the Apocalypse; and he endeavoured, but in vain, to interest in his speculations cardinal Mazarin, whose protection he wished to secure. He died at Padua, November 19, 1649. Besides his controversial productions, he wrote notes on the "Minerva" of Sanctius, and other philological pieces, which may still be consulted with advantage.—*Bayle. Sarii Onom. Nicéron.* vol. xxxv. *Biog. Univ.*

SCIPIO AFRICANUS (PUBLIUS CORNELIUS) an illustrious Roman general, descended from the patrician family of the Cornelii. He served under his father against Hannibal in Italy, and was present at the battle of Tesino, when he carried his father, who was wounded, off the field. He supported the sinking spirits of the Romans after their defeat at Cannæ, and proposed the bold measure of invading the territories of the Carthaginians, that they might be obliged to recall Hannibal. He was accordingly sent with an army into Spain, where he took New Car-

thage, and was generally successful. It was in this campaign that he displayed an example of generosity, in restoring the bride or betrothed mistress of Allucius, a Spanish prince, who had been taken captive. The continence and justice of Scipio, in not appropriating to himself his beautiful female prisoner, has been the subject of abundant panegyric, in poetry, declamation, and sculpture; a circumstance which indicates the low state of moral sentiment among the Romans, while it augments the glory of Scipio, that he was uncontaminated by the vicious practice of his contemporaries. Returning from Spain, he was elected to the consulship; after which he headed an expedition to Africa, and in two engagements he vanquished the Carthaginians under Asdrubal and Syphax, king of Numidia. The next year he beat Hannibal at the battle of Zama, and obliged the Carthaginians to submit to humiliating terms of peace. Scipio returning home triumphantly, was regarded as the saviour of Rome, and honoured with the surname of Africanus. Notwithstanding his great services, he became subsequently the object of public jealousy, being charged with carrying on a correspondence with Antiochus, king of Syria, prejudicial to the interests of the republic. Though he justified himself from this imputation, he was so disgusted at the ingratitude of his countrymen, in listening to his accusers, that he retired from the management of public affairs, and passed the remainder of his life in literary seclusion at Linternum. His death took place 189 BC.—**LUCIUS CORNELIUS SCIPIO**, brother of the preceding, was also a celebrated military commander. He was employed against king Antiochus, whom he defeated near Magnesia; and he was rewarded with a triumph, and the title of Asiaticus. He, like his brother, experienced the uncertainty of popular favour, and was the object of political persecution.—**PUBLIUS SCIPIO ÆMILIANUS**, called Africanus Minor, was the son of Paulus Æmilius, and was, according to the custom of the Romans, adopted by the son of the elder Africanus. In his youth he served in the army in Spain, when he obtained a mural crown for scaling the walls of a besieged city, and conquered in single combat a Spaniard of gigantic stature. He afterwards carried on the third punic war, which terminated in the destruction of Carthage, and the subjugation of the Carthaginians. He also took and destroyed the city of Numantia in Spain. He was both a cultivator and a patron of literature; and Polybius the historian, and the philosopher Panætius, were among his intimate associates. The celebrated dialogue of Cicero, "de Amicitia," has immortalized the intercourse between Scipio and Lælius, who partook in the military expeditions, and the learned recreations of his illustrious friend; and to their corrections and improvements the dramatist Terence is believed to have been indebted for the polished elegance of language which adorns his comic scenes. Scipio Æmilianus was found dead in his bed, 129 BC; and he was sup-

posed to have fallen the victim of party revenge, being in the fifty-sixth year of his age at the time of his decease.—**SCIPIO NASICA**, the son of Cornelius Scipio, and the cousin of the last-mentioned Africanus, was a Roman senator, distinguished for his eloquence, wisdom, and courage; and such was his reputation for those virtues that he was constituted the guardian of the sacred image of the mother of the gods, which was always committed to the custody of a citizen of singular probity. He opposed the destruction of Carthage in the senate, though without success. His death took place about 100 years BC.—*Plutarch. Moreri.*

SCOPAS, a celebrated Grecian sculptor and architect, who flourished in the fifth century before the Christian æra. He was a native of the island of Paros, and the beautiful marble which it produced was the material of some of his most admired productions, particularly of a statue of Venus, which having been removed from Greece to Rome, was, according to Pliny reckoned superior to one erected by Praxiteles. Scopas erected the famous sepulchral monument consecrated by Artemisia, queen of Caria, to the memory of her husband Mausolus, and thence termed the "Mausoleum;" and he likewise constructed one of the marble columns for the temple of Diana, at Ephesus.—*Plinii Hist. Nat. Orlandi Abeced. Pittor.*

SCOPOLI (**JOHN ANTHONY**) an Italian naturalist and philosopher, born at Cavalese near Trent, in 1725. He was educated at Inspruck, where he graduated as M.D.; and he practised as a physician at his native place. He afterwards went to Venice, where he extended his acquaintance with science; and an excursion among the mountains of the Tyrol, suggested his Flora and his Entomology of Carniola. In 1754 he attached himself to the prince bishop the count de Firmian, whom he accompanied to Gratz and Vienna; and he subsequently was appointed first physician to the mines of Tyrol. In 1766 he was nominated counsellor in the department of the mines, and professor of mineralogy at Schemnitz, where he published his "Anni tres Historico-naturales." At length he obtained the chair of chemistry and botany at Pavia; and he died in that city, May 8, 1788. He published a Journal of Natural History; Elements of Chemistry; and "Delicæ Floræ et Faunæ Insubricæ."—*Biog. Univ.*

SCOTT (**DANIEL**) a dissenting minister, was the son of a merchant of London; the time of his birth is not recorded. He was educated with Butler and Secker, afterwards eminent prelates, under the learned Mr. Jones of Tewkesbury, whence he was removed to the university of Utrecht, where he took the degree of doctor of laws. On his return to England, he divided his residence between London and Colchester, having previously become a baptist. In 1725 he published an "Essay towards a demonstration of the Scripture Trinity." He is also author of "A New Version of St. Matthew's Gospel, with Notes," and of an "Appendix to H. Stephens's Greek

Lexicon," in 2 vols. folio, 1745, a work exhibiting great diligence and erudition. He died March 29, 1759.—He had an elder brother, THOMAS SCOTT, who published several occasional sermons, and "A Poetical Version of the Book of Job," a second edition of which was printed in 1774.—Another brother, Dr JOSEPH NICOL SCOTT, was first a minister and afterwards a physician. He published two volumes of sermons, preached in defence of all religions, whether natural or revealed. He died in 1774.—*Chalmers's Biog. Dict.*

SCOTT (GEORGE LEWIS) a mathematician, was born at Hanover, where his father resided in a public character, in the reign of the elector, afterwards George I, from whom the subject of this article received his Christian names. He received a liberal education, and was appointed sub-preceptor for the Latin language to his late Majesty. He distinguished himself highly as a mathematician, and became a fellow of the Royal Society, a member of the Board of Longitude, and ultimately a commissioner of excise. He assisted in the "Supplement to Chambers's Dictionary," in two folio volumes. He died in 1780. His widow, who died in 1795, was sister to the celebrated Mrs Montagu. She wrote several novels, and the lives of Gustavus Ericson, king of Sweden, and of Theodore Agrippa d'Aubigné.—*Hutton's Math. Dict. Gent. Mag.* vol. lxxviii. and lxxv.

SCOTT (JOHN) a learned English divine, was the son of Mr Thomas Scott, a substantial grazier, and was born at Chippenham in Wiltshire, in 1638. He was apprenticed in London much against his will; but after a servitude of three years, he was allowed to enter himself a commoner of New-inn, Oxford. Having taken orders, in 1677 he was presented to the rectory of St Peter-le-Poor, and in 1684 collated to a prebend of St Paul's cathedral. In 1691 he obtained the valuable rectory of St Giles in the Fields, and was made a canon of Windsor. He died in 1694. Besides various sermons and controversial pieces, chiefly in opposition both to the church of Rome and the dissenters, he wrote a work held in much esteem, entitled "The Christian Life." All his works have been printed in two volumes folio.—*Biog. Brit.*

SCOTT (JOHN) a pleasing poet, was the youngest son of a respectable quaker tradesman resident in Grange-walk, Bermondsey, where he was born 9th January, 1739. In his tenth year his father retired with his family to Amwell, in Hertfordshire, where he carried on the malting trade. He was educated at a private day-school, and received little or no classical instruction. At the age of seventeen he discovered an inclination to cultivate poetry, and transmitted some of his earliest attempts to the *Gentleman's Magazine*. In 1760 he published "Four Elegies Descriptive and Moral," which were favourably received, and acquired him the valuable praise of Dr Young, Miss Talbot, and Mrs Carter. In 1766 he became known to Dr Johnson, and the following year married a lady who died in childbed, a

misfortune which produced an elegy from her husband, that obtained considerable admiration. In 1776 he published his "Amwell," a descriptive poem, the most finished of his poetical productions. He did not confine his attention to poetry, but is said to have written answers to Dr Johnson's "Patriot," "False Alarm," and "Taxation no Tyranny." In 1778 he also published a work of great utility, entitled "A Digest of the Highway and General Turnpike Laws;" and in 1782 sent out a volume of poetry, including "Amwell," decorated with beautiful engravings. He died in London, of a putrid fever, on the 12th of December, 1783. A volume of "Critical Essays," written, it is said, in consequence of his dissatisfaction with some of the lives of Dr Johnson, was published in 1785 by Mr Hoole, who composed a life of the author, from which these particulars are taken. As a poet he may be regarded as possessing no mean descriptive powers, and a pleasing vein of pathos and moral sensibility; while in the active duties of life he was regarded as a useful, conscientious, and benevolent man.—*Life by Hoole.*

SCOTT (MICHAEL) a celebrated Scottish philosopher of the thirteenth century, and a reputed magician, was born at Balwirie, his paternal estate in Fife, about the beginning of the reign of Alexander II. He made an early progress in the languages and the mathematics, and after residing in France some years, repaired to the court of the emperor Frederick II, and applied closely to the study of medicine and chemistry. On quitting Germany he proceeded to England, and was received with great favour by Edward II. When he returned to his native country, he received the honour of knighthood from Alexander III, by whom he was also confidentially employed. He died at an advanced age in 1291. Michael Scott was a man of considerable learning for his time and being much addicted to the study of the occult sciences, passed among his contemporaries for a magician, and as such is mentioned by Pictus of Mirandula, Boccaccio, Folenga, and Dante. Respecting the place of his burial there is some difference of opinion, but the major part declare for Melrose abbey, and all agree that his books were either interred in his grave or preserved in the abbey where he died, of which tradition sir Walter Scott has availed himself in his *Lay of the Last Minstrel*. A Latin translation of the works of Aristotle is ascribed to Scott by Mackenzie, and other writers; but he is thought to have been only one of the many hands who rendered them partly from the Greek and partly from the Arabic, by command of Frederick II. He is also author of "De Secretis Naturæ;" "Questio Curiosa de Natura Solis et Lune;" a work on the transmutation of metals; "Mensa Philosophica," a treatise replete with the visionary science of chiro-mancy and astrology. A rambling treatise on the Sphere of Sacroscoto is also attributed to Michael Scott.—*Mackenzie's Lives. Encyc. Brit.*

SCOTT (REYNOLD or REGINALD) a sensible and learned English gentleman of the sixteenth century, was the younger son of sir John Scott, of Scott's-hall, near Smeeth in Kent, where he was, probably, born. At the age of seventeen he was sent to Hart-hall, Oxford, which he left without taking a degree; and returned to his native place, where he married, and gave himself up to study, which he diversified with the pursuits of gardening and husbandry. His first work was entitled "A Perfect Platform of a Hop-Garden," 4to. In 1584 he gave to the world his celebrated "Discoveries of Witchcraft," which was reprinted in 1651, 4to, under the elaborate title of "Scott's Discovery of Witchcraft; proving the common Opinion of Witches Contracting with Devils, Spirits, Familiars, &c. to be but imaginary, erroneous conceptions and novelties; with a Treatise on the Nature of Spirits, Devils, &c." In a preface, very honourable to his understanding and benevolence, he declares that his views are to prevent the abasement of God's glory, the rescue of the Gospel from an alliance with "such peevish trumpery," and to advocate "favour and Christian compassion" towards the "poor souls" accused of witchcraft, rather than "rigour and extremity." A doctrine of this nature, in an age when the reality of witches was almost universally admitted, exposed the author to every species of obloquy, and, according to some accounts, his book was actually burnt. It was against the "damnable opinions of Wierus and Scott," that, according to his own preface, James I favoured the world with his "Demonologie," printed first at Edinburgh in 1597; and Dr John Raynolds, Meric Casaubon, and one of the greatest and latest defenders of witchcraft, Joseph Glanvil, all express either their horror or contempt of so daring a revival of the old error of the Sadducees. Scott did not live to witness the full effect of his useful endeavours, dying so early as 1599; but the call for two editions of his work in the next century allowed the effect of his labours, and the progress of good sense, in spite of the prejudices of the learned, the superstitions of the vulgar, and what, it is lamentable to add, was the last to yield, the statute law of the land.—*Athen. Orm.* vol. i.

SCOTT (SAMUEL) an eminent painter of scenery, &c. born at the beginning of the eighteenth century. He took for his model Vandervelde, whom he equalled in the beauty of his sea-pieces, and surpassed in the ductility and variety of his talents. His views of London-bridge, and of the Custom-house Quay, and other aquatic scenes, have been much admired. The figures with which his pictures are ornamented, are admirably appropriate and well chosen; and they are finished with great taste and judgment. His sketches are by no means inferior, as such, to his most laboured productions. Many of his paintings were executed for Sir Edward Walpole. He died of the gout in 1772.—*Biog. Univ.*

SCOUGAL (HENRY) an eminent Scotch

divine, the second son of Patrick Scougal, bishop of Aberdeen, was born in 1650, at Saltoun in East Lothian. He was educated in the university of St Andrews, where he became professor of Oriental philosophy at the age of twenty. In 1673 he was presented by his college to a living, but recalled the following year, and made professor of theology. His great exertions, both in this capacity and as a preacher, threw him into a consumption, and he died greatly lamented in 1678, at the early age of twenty-eight. He was the author of an eloquent and able work, entitled "The Life of God in the Soul of Man," which has run through many editions; and also of "Nine Sermons," by which he obtained the reputation of being one of the most elegant writers and able divines of his country and age.—*Encyc. Brit.*

SCRIBONIUS LARGUS, a Roman physician, who lived in the reign of the emperor Claudius. He studied under Apuleius Celsus, a physician of the Asclepiadic sect, and appears to have been a freedman. He was author of a work entitled "De Compositione Medicamentorum Liber," the best edition of which is that of Padua, 1655, 4to, with the notes of Rhodus. It is also printed in the *Medicæ Artis Principes* of Henry Stephens. It appears to be little more than a collection of nostrums and prescriptions, although of some value, as showing the state of medicine at that period.—*Halleri Bibl. Med.*

SCRIVERIUS (PETER) a Dutch poet and historian, professor of jurisprudence at Leyden, born in 1576 at Haerlem. His principal works are "Bataviæ Comitumque Omnium Historia;" "Batavia Illustrata" 4to; "Miscellanea Philologica;" "Hollandiæ Chronicon Populare;" "Collectanea Veterum Tragicorum;" and some miscellaneous poetry in the Dutch and Latin languages. He also published an edition of Vegetius "De Re Militari." Scriverius had retired from public life for some time previously to his decease, which took place in 1653.—*Moreri.*

SCRIMZEOR or **SCRIMGER** (HENRY) a native of Dundee in Scotland, who was educated at St Andrews and Paris, after which he went to Bourges, and studied jurisprudence under professors Baron and Duaren. He subsequently went to Italy with the bishop of Rennes, who was employed on a diplomatic mission; and he was at Padua at the time of the death of Francis Spira, whose history he wrote, and it was published under the name of Henry of Scotland. Scrimzeor afterwards went to Germany, where he was employed by Huldric Fugger to form a library, containing a number of valuable Greek and Latin MSS. He superintended the printing of these works at the press of Henry Stephen, at Geneva, where he was professor of philosophy, and afterwards of civil law. He died in 1571, at the age of sixty-five. Among the works which he published was an edition of the Novells of Justinian; and he wrote notes on Athenæus, which are praised by Casaubon.—*Teissier Eloges de H. S. Mackenzie.*

SCUDERI, the name of two French writers, brother and sister, who enjoyed considerable popularity in their day, but of whom the latter only has descended with any reputation to posterity. They were descended of an ancient family, settled at Apt, in Provence, and were born at Havre de Grace; GEORGE in 1603, his sister MAGDALENE in 1607. George de Scuderi devoted himself entirely to the cultivation of the belles lettres, and was the author of a great variety of compositions both in prose and verse, especially in dramatic poetry, of which he was also a professed critic; and in that capacity published a severe attack on the "Cid" of Corneille. His acrimony on this occasion is supposed to have been increased by the wish of paying his court to cardinal Richelieu, with whom his success was greater than with the public. The rapidity with which he wrote, producing generally, according to Boileau, a volume a month, is doubtless one great reason why his works are now so little known. He became a member of the French Academy, and died at Paris in 1667.—MAGDALENE was a woman of very superior intellectual endowments, and of a lively wit, of which latter quality the best proofs that have survived her are to be found in her poetical pieces, which have received the marked approbation of Voltaire. The taste of the age however in which she lived, tending principally towards romances, she, with the view of turning her talents as much as possible to pecuniary account, fell in with the reigning fashion, and produced many heavy tomes in this kind of composition, once much read, but now deservedly forgotten. They however contained some elegant writing and some real elevation and dignity of sentiment; although the long and affected compliments of the personages excited ridicule, especially when copied in real life by the precieuses of the time. Of these, "Artamenes, or the Grand Cyrus," 10 vols. 8vo; "Clelia," 10 vols. 8vo; "Ibrahim, or the Illustrious Bassa," 4 vols. (translated into English in one quarto volume); "Almahide, or the Royal Slave," 8 vols; "Celina;" "Celanira;" "Matilda d'Aguilar," &c. are the principal. She was also the authoress of a treatise "On Glory;" and "Conversations and Discourses," in ten volumes. Mademoiselle de Scuderi, whose house was the resort of all the wits of the age, died in 1701.—*Biog. Univ.*

SCYLAX, an ancient mathematician and geographer, was a native of Caryanda in Caria; and is noticed by Herodotus, and by Suidas, the latter of whom has evidently confounded different persons of the same name. There is a periphus existing bearing the name of Scylax, which is a brief survey of the Mediterranean and Euxine seas, with a portion of the western coast of Africa. It has reached modern times in a corrupted state, and was first published from a palatine MS. by Hoeschelius and others in 1600, and afterwards by Isaac Vossius in 1639, by Hudson in 1698, and by Gronovius in 1700.—*Athenæum*, vol. iv.

SCYLITZA or SCYLITZES (JOHN) called

also Curopalates, from an office which he held in the imperial household, a Greek historian, is known only for his abridgment of history, from the death of Nicephorus Logothetes in 811, to the deposition of Nicephorus Botaniates in 1081. This history from 1067 is the same with that of Cedrenus, which has raised a doubt as to which is the original author. A Latin translation of this history was published at Venice in 1570; and the part, concerning which there is no dispute, was printed in Greek and Latin at Paris in 1647.—*Vossii Hist. Græc.*

SEABURY (SAMUEL) the first bishop of the episcopal church of the United States of America, born in 1728. He was the son of a congregational minister at Groton in Connecticut, and was educated at Yale college, after which he went to Scotland to study medicine. Preferring, however, the ecclesiastical profession, he directed his studies to the requisite branches of learning; and in 1753 he was ordained in London. He returned to America, and became pastor at different places before he fixed finally at New London in Connecticut. In 1784 he made a voyage to England, to obtain consecration as bishop of Connecticut. Meeting with obstacles to his wishes from the English prelates, he went to Scotland, where he was consecrated by three bishops of the Scottish episcopal church. He returned thus qualified to his native country, and fulfilled the duties of his pastoral office in a very exemplary manner till his death, which happened in 1796. Bishop Seabury published two volumes of sermons, to which a supplement was added in 1798; and he was the author of two religious tracts. *Biog. Nouv. des Contemp.*

SEBASTIAN, king of Portugal, was the posthumous son of the infant John, by Joanna, daughter of the emperor Charles V. He succeeded to the crown at three years of age in 1577, on the death of his grandfather, John III. Possessed of a romantic disposition, and an extravagant admiration of valorous exploits, at the age of twenty he undertook an expedition against the Moors in Africa, in which, however, he performed nothing of consequence. Still impressed with this object, on the application of Muley Hamet, king of Fez and Morocco, to assist him against his uncle, Muley Moloch, who had dispossessed him of the throne, he determined to renew his attempt against the advice of his best friends and wisest counsellors. He accordingly embarked with all his military, and the flower of his nobility, in the summer of 1578, and proceeded to Arzila. Here he was met by a much more numerous army, headed by Muley Moloch in person, although so debilitated by sickness as to be carried on a litter. In the battle that ensued, the onset of the Portuguese army broke the first line of the Moors; and Muley, in rallying his men, was so exhausted, that he died in the arms of his guards; his last and much admired action being to lay his fingers to his lips, as an injunction to keep his death a secret, in order not to depress the spirits of the combatants. Sebastian, on the other hand,

fought with extreme bravery, and had two horses killed under him, while most of his attendants were slain by his side. He at length disappeared, nor was it ever known what became of him, although a body, supposed to be his, was restored by the Moors, and buried at Belem. So complete was the slaughter, not more than fifty Portuguese are said to have survived this wild expedition; yet such was the attachment of the people to a prince, who reminded them of their heroic times, that a disposition to believe that he would appear again, for many years prevailed, of which nation several impostors sought to avail themselves. An immediate consequence of this catastrophe was the annexation of Portugal to Spain, by Philip II.—*Mod. Univ. Hist.*

SEBUNDUS (RAYMOND) a Spanish physician and natural philosopher, who lived in the former part of the fifteenth century. He was professor in the university of Thoulouse; and wrote many treatises which remained unpublished, besides his *Physico-Theology*, or "*Liber Creaturarum sive de Homine*," printed at Strasburg, 1496, folio. Montaigne translated this work into French, and it was printed at Paris in 1581, 8vo.—*Trithemius de Script. Eccles. Moreri.*

SECKENDORF (VITUS LUDOVICUS de) a German divine and historian of the seventeenth century. He was born in 1626, at Aurach in Franconia, and received his education with the children of Ernest the Pious, duke of Saxe Gotha, to whom he became librarian, privy-counsellor, minister, and consistorial director. In 1664 he entered into the service of the duke of Saxe Zeitz; and at length into that of the elector of Brandenburg, who made him counsellor of state in 1681, and also chancellor of the university of Halle. His death took place in 1692. He was the author of an elaborate defence of Luther, in answer to father Maimbourg's *History of Lutheranism*, which appeared in 1688 and 1692, under the title of "*Commentarius Historicus et Apologeticus de Lutheranism, sive de Reformatione Religionis, ductu M. Lutheri*," 2 vols. folio; and he published a political work, entitled "*Deutschen Fürsten Staat*," Hanover, 1656, 4to, several times reprinted.—*Bayle. Nicéron*, vol. xxix. *Biog. Univ.*

SECKER (THOMAS) archbishop of Canterbury, a prelate distinguished for his piety and learning. He was born of dissenting parents, at Sibthorpe, Notts, in 1693, and after receiving the rudiments of a classical education in various seminaries in the counties of Derby and York, was finally placed at an academy at Tewkesbury in Gloucestershire, where he had for his fellow student and intimate acquaintance, Butler, afterwards bishop of Durham. Being originally designed by his friends for the ministry in their connexion, he early directed his attention to theological pursuits; but from scruples of conscience he at length declined the appointment of a pastor, and went to Paris in 1719, with the view of practising a medicine, to the study of which faculty he had devoted the principal part of the three

preceding years. While in this metropolis, an introduction from his friend Butler, then preacher at the Rolls chapel, first laid the foundation of an intimacy with their mutual friend Talbot, son of the bishop of Durham, which eventually ripened into the sincerest friendship. By the persuasion of the latter, who promised him his father's interest in promoting his advancement, Secker openly declared the scruples which had prevented his assenting to the tenets held by his family, and became avowedly a member of the church of England. Some difficulties existing as to his taking a primary degree in an English university, he went to Leyden for three months, where having graduated as a doctor of physic, all impediments were removed to his taking the degree of bachelor of arts at Exeter college, Oxford, of which society he had entered himself a gentleman commoner. In 1722 he was ordained by bishop Talbot, and two years afterwards was collated by that prelate to the valuable rectory of Houghton le Spring, in the Palatinate. This piece of preferment he held till 1727, when he vacated it on being promoted to a stall in Durham cathedral, with the rectory of Ryton, near Newcastle. This last-mentioned living he exchanged in 1733 for that of St James's, Westminster, having, in the course of the preceding year, been appointed a king's chaplain, on which occasion he graduated as LL.D. Two years after, he was elevated to the see of Bristol, whence he was translated in 1737 to that of Oxford, with which he held the valuable deanery of St Paul's. On the death of archbishop Hutton in 1758, the duke of Newcastle, then at the head of the cabinet, placed bishop Secker in the vacant primacy, without any solicitation on his part, or previous consciousness of the dignity about to be conferred on him. In this exalted situation he conducted himself with great dignity, munificence, and proper severity against any laxity in the morals and manners of the clergy under his more especial superintendence. At the coronation of king George III, archbishop Secker officiated as primate, and placed the crown upon the head of the sovereign: he afterwards, in the same capacity, baptized the present king. As a scholar he was elegant rather than profound, although in some of his writings, especially in his "*Lectures on the Catechism of the Church of England*," he displays much depth of argument as well as perspicuity of style. His works, consisting of the productions already mentioned, charges, and sermons, have been collected and printed in twelve octavo volumes, 1795, with a life by Dr (afterwards bishop) Porteus, his chaplain. There was also published by him in his life-time, a reply to "*Mayhew on the Charter and Conduct of the Society for propagating the Gospel*," without the author's name. This controversy relates to a proposed establishment of bishops in the American colonies. Archbishop Secker died at Lambeth palace, August 3, 1768, of a complication of chronic disorders, aggravated by the fracture of a thigh bone,

which having become perfectly carious, was broken by an effort that he made to turn himself in his bed. The great increase of methodism took place under the primacy of archbishop Secker, who, perceiving a large body of zealous religionists wavering between an adherence to and a separation from the church, thought it best to treat them as future friends rather than enemies. Moderation and discretion, without negligence or laxity, formed the basis of his ecclesiastical policy, and although some difference of opinion has been entertained in respect to his general merit, perhaps few have filled the same station more usefully to the public and reputably to themselves.—*Life prefixed to Sermons.*

SECOUSSE (DENIS FRANÇOIS) a learned and ingenious French writer, born at Paris, January 8, 1691. He studied under Rollin, and commenced life as an advocate, but subsequently abandoned the dry study of the law for the belles lettres. Besides a great variety of papers to be found among the transactions of the Academy of Inscriptions, of which he was a member, he wrote a "History of Charles the Bad," in two quarto volumes; and "Mémoires of Coudé," 4to, 6 vols.; but the work by which he is chiefly distinguished, is his continuation of the great collection of statutes under royal patronage, commenced by M. Laurier, of which he composed five volumes, concluding at the ninth. He died at Paris, March 15, 1754, in his sixty-third year.—*Nouv. Dict. Hist.*

SECUNDUS NICHOLAIUS (JOANNES) or JOHN VAN TWEEDE, a modern Latin poet, descended from an ancient and illustrious family of the Netherlands, was born at the Hague in 1511. He studied the civil law at Bourges, under the famous Alciat, and took his doctor's degree in 1532. He then passed some time in Italy; after which he went to Spain, and became Latin secretary to cardinal Traversa, archbishop of Toledo. While in this situation he employed his leisure in the composition of a number of elegant Latin poems, of the lyric kind, in the style of Catullus, which he called "Basia,"—"Kisses." These exquisite little pieces have been alike admired for the purity and elegance of the language, and the singular delicacy of sentiment which they exhibit. Secundus accompanied Charles V in his unfortunate expedition against Tunis; and he was afterwards obliged, through ill health, to return to his native country, where he died in 1536. The "Basia" were translated into English in the seventeenth century by Stanley, author of the History of Philosophy; another version of them was published in 1731; and a third, with the original text, and an essay on the life and writings of Secundus, in 1774, 8vo.—*Biog. Univ. Nicéron*, xvi. and xx.

SECURIS (JOANNES) a physician and medical writer of some eminence in the sixteenth century. He studied at New college, Oxford, in the reign of Edward VI, and afterwards went to Paris, where he applied himself to medicine and astronomy. Returning home

he settled at Salisbury, where he probably continued till his death, towards the close of the reign of queen Elizabeth. He annually published his "Prognostications," which appear to have been a kind of almanacs, in which astrological predictions were combined with medical counsels. Anthony à Wood mentions two, for the years 1579 and 1580, to the latter of which was appended "A Compendium of Instructions how to keep a moderate Diet." He was also the author of "A Detection and Querimony of the Daily Enormities and Abuses committed in Physic," London, 1566, reprinted in 1662; and of a tract with the strange title of "A great Galley lately come into England out of Terra Nova, laden with Physicians, Surgeons, and Pothecreries." 1554.—*Aikin's Biog. Mem. of Medic.*

SEDAINE (MICHAEL JOHN) a French dramatic writer, was born at Paris June 4, 1719. Abandoned by his friends at the age of thirteen, he was obliged to quit his studies, and learn the business of a mason, from which he ascended to the profession of architecture. He was also led by inclination to cultivate polite literature, and the drama, and wrote various small pieces and comic operas, which rather exhibit a knowledge of stage effect than higher qualifications. The principal of these, "The Deserter," and "Richard Cœur de Lion," have been very popular, both in France and England. He died in May 1797, aged seventy-eight.—*Nouv. Dict. Hist.*

SEDLEY (sir CHARLES) a celebrated wit, courtier, and poet of the age of Charles II. He was the son of sir John Sedley, of Aylesford, near Maidstone in Kent, where he was born in 1639. At the age of seventeen he was entered a gentleman commoner of Wadham college, Oxford, but quitted the university without a degree; and retired to his estates till after the Restoration, when he became at once one of the most distinguished gallants about the court. His credit with the king was not a little heightened by the circumstance of his never asking him a favour, although the debauchery into which he plunged soon made serious inroads on his pecuniary resources. These were not mended by a fine of 500*l.* in which he was amerced by chief-justice Hyde, for an indecent riot committed by him at a public-house, in Bow-street, Covent-garden, where he was accused of haranguing the mob naked from the balcony, in company with lord Buckhurst and sir Thomas Ogle. The termination of this outrageous frolic seems to have sobered him a little, as from this period he turned his attention less to pleasure and more to politics; and being returned member of parliament for the borough of New Romney in Kent, in 1661, sat for that place in four successive parliaments. Though himself a profligate, he yet had sufficient virtue left to be much annoyed by an intrigue which James II carried on with his daughter, afterwards created by that monarch countess of Dorchester. Sir Charles was so little pleased by this elevation, that it is said to have been the principal cause of his subse-

quently taking so strenuous a part in bringing about the Revolution; and an anecdote has been repeated of his replying to a gentleman who taxed him with a want of loyalty on the occasion, that "as the king had made his daughter a countess, the least he could do in common gratitude was to assist in making his majesty's daughter a queen." Sir Charles died about the commencement of the last century, preserving his spirits and the fascination of manners for which he was remarkable, to the last. In his poetical character he is known as the author of six dramatic pieces, printed together with his miscellaneous poems by Briscoe, in 1719, in two octavo volumes, with a dedication to the duke of Chandos. These latter consist of Pastorals, original and translated, Prologues, Songs, Epilogues, and occasional pieces, which, if they are not altogether free from the licentiousness of the age in which he lived, are at least clear of much of its grossness.—*Cibber's Lives*.

SEED (JEREMIAH) an English clergyman of the last century, whose merits as an able scholar and ingenious writer were universally acknowledged at the time in which he lived. He was a native of Clifton, near Penrith in Cumberland, and after receiving the rudiments of a classical education at the grammar-school of Lowther in that county, became a member of Queen's college, Oxford, where he graduated in 1725, and seven years after became a fellow. Having taken holy orders, he was appointed curate to the celebrated doctor Waterland, at Twickenham, till, in 1741, the college living of Enham, Hants, becoming vacant, fell to him as an option. This piece of preferment he held nearly six years, till his death, which took place at his rectory in 1747. As a divine he was eloquent and impressive, as well as exemplary in his moral character. Two octavo volumes of his sermons were printed by him during his lifetime, and after his decease two additional volumes were published by his friend and fellow-collegian Mr Hall, in 1750.—*Biog. Brit.*

SEELN (JOHN HENRY van) a philological writer, born in the duchy of Bremen in Germany, in 1687. After finishing his academical studies at the gymnasium of Stade, he became a Lutheran minister, but devoted his time to literary occupations. He taught Latin and Greek in the seminary where he was educated, and in 1713 he was appointed rector of a similar institution at Flensburg, and five years after of another at Lubeck, where he died in 1672. Besides a great number of dissertations, and biographical eulogies and notices, he was the author of "*Stada Litteraria*," 1711, 4to; and several other works, principally relating to the history of literature; and he assisted in a periodical journal, called "*Bibliotheca Lubecensis*," 1725—31, 12 vols. 8vo.—*Biog. Univ. Saxii Onom. Lit.*

SEEMILLER (SEBASTIAN) an Orientalist, born in 1752, at Veldin in Bavaria. He studied among the jesuits at Landslut and Munich, and in 1770 he entered into the order of the Augustine canons at Polling. He after-

wards applied himself to theology, history, and the Oriental languages, at the university of Ingolstadt; and having taken the degree of doctor of theology and philosophy in 1776, he returned to his convent. In 1781 he became professor of the Eastern languages at Ingolstadt, librarian to the university, and electoral counsellor. He was appointed minister of Fontenney at Munich in 1797, and he died the following year. His works, which are all in Latin, relate to bibliography and biblical criticism. Among the former may be mentioned "*Bibliotheca Acad. Ingolstadiensis Incunabula Typographica*," 1787—92, 4to; and the latter include a translation of the Catholic Epistles of St James and St Jude, with notes.—*Biog. Univ.*

SEETZEN (ULRIC JASPER) a German traveller, who was a native of East Friseland, and was educated at Gottingen, where he particularly studied the sciences of philosophy and natural history, under professor Blumenbach. Having published some tracts on natural history, statistics, and political economy, he was appointed aulic counsellor to the czar in the principality of Jever. He was desirous of visiting Africa and the East, and being encouraged by the dukes Ernest and Augustus of Saxe-Gotha, he set off in August 1802 for Constantinople. He proceeded to Syria, and remained a considerable time at Aleppo, making excursions into the neighbouring territories. In 1806 he explored the course of the river Jordan and the Dead Sea, travelled through Palestine, and went to Hebron and mount Sinai. His enthusiastic desire of knowledge prompted him to profess Mahometism, that he might undertake a pilgrimage to Mecca and Medina, which he visited in 1809 and 1810. In the month of November 1810 he was at Mocha, whence he wrote the last letters which arrived from him in Europe. Having had his property seized by the Arabs, under the pretext of his being a magician, he proceeded towards Saana, in December 1811, to complain to the imam of that place; and a few days after his departure he died suddenly at Taëa, probably from the effects of poison given him by order of the imam. No complete account of the researches of this unfortunate traveller ever appeared; but his letters, which he addressed to baron von Zach, were inserted in his "*Geographical and Astronomical Correspondence*," a periodical work published at Gotha; and a translation was printed in the French "*Annales des Voyages*," 1809—14. Extracts from his letters to Blumenbach and others also were published in the "*Magasin Encyclopédique*."—*Biog. Nouv. des Contemp. Biog. Univ.*

SEGAR (sir WILLIAM) an English herald in the reigns of Elizabeth and James I. He was imprisoned in consequence of a shameful imposition, by which he was induced to make out a grant of a coat of arms for the common executioner, whose name was Brandon; (not knowing his office or character, but viewing him merely as a descendant of the noble family of Brandon,) he made a grant of the

royal arms of Arragon, with a canton of Brabant. It being made manifest that he had been the dupe of a conspiracy, he was released from his confinement. He held the office of Norroy herald in 1602, when he published a work entitled "Honor, Military and Civil, contained in four bookes," folio; and he was afterwards garter-king-at-arms. His death took place in 1633. Edmondson's Baronage is said to have been principally compiled from sir W. Segar's MSS.—*Rees's Cyclop.*

SEGNÉ (JOHN ANDREW von) a learned professor of mathematics and physics, born at Presburg in Hungary, in 1704. After some preliminary application to study in his native country, he went to Jena in 1725, to apply himself to medicine and mathematics; and in 1730 he took the degree of MD. Returning to Presburg he engaged in the practice of medicine, and in 1731 became town-physician at Debreccin. Thence he removed to Jena to give lectures on mathematics on the invitation of professor Teichmeyer, whose daughter he married. In 1733 he was nominated extraordinary professor of philosophy in that university, whence, in 1735, he went to Gottingen, where he obtained the chair of mathematics and natural science. He exchanged this situation for one in the university of Halle, with the title of privy counsellor; and the Prussian government conferred on him letters of nobility. He died October 5, 1777. Professor Segner enriched both mathematics and natural philosophy with new discoveries, and acquired the credit of being one of the greatest mathematicians of his time. He belonged to many scientific societies, and was the author of various academical dissertations and essays, besides an "Introduction to Physics," Gottingen, 1746, 8vo; "Astronomical Lectures," Halle, 1775—6, 2 vols. 8vo, both in the German language; and several mathematical treatises, written in Latin.—*Meusel Gehl. Teutschl. Biog. Univ.*

SEGRAIS (JEAN RENAUD de) a French poet, was born at Caen in 1624, and studied in the college of jesuits in that town. As he grew up he applied himself to French poetry, and by his literary industry supported a large family of brothers and sisters, whom the extravagance of their father had left in very narrow circumstances. In his twentieth year he was recommended to mademoiselle de Montpensier, who appointed him her gentleman in ordinary, which situation he lost by opposing her marriage with M. de Lauzun. He found a new patroness in madame de la Fayette, whom he assisted in her celebrated romances of Zaide, and the Princesses of Cleves. In 1679 he retired into the country, and married his cousin, a rich heiress. He was admitted a member of the French Academy in 1662, and was the means of re-establishing that of Caen. He died of a dropsy in 1701. Segrais obtained his chief distinction by his lyric and pastoral poetry, and by a collection of stories, entitled "Nouvelles Françaises," the style of which is entitled to much commendation. He also translated the *Æneid*

into French verse, a work which, although feeble, was much esteemed at the time. After his death appeared his version of the "Georgics" of Virgil, which is praised by Boileau and d'Alembert; and a "Segraisiana," or miscellany of anecdotes and literary opinions.—*Moreri. Nouv. Dict. Hist.*

SEGUR (JOSEPH ALEXANDER, viscount de) the second son of the marshal de Segur, who died in 1801. He engaged when young in military service, and was successively colonel of the regiments of Noailles, of royal Lorraine, and of the dragoons of his own name. Having attained the post of mareschal de camp in 1790, he gave up his time entirely to the cultivation of literature. His first production was a romance, entitled "Correspondence Secrète entre Ninon de l'Enclos, le Marq. de Villarsceaux, et Mad. de Maintennon." He published in 1791 another romance, "La Femme Jalouse;" and between 1789 and 1804 he wrote a number of dramatic pieces. His last work, which has been translated into English, is entitled "Les Femmes, leur Condition, et leur Influence dans l'Ordre Social," 1802, 3 vols. 8vo. He died at Baginieres, July 27, 1805.—*Biog. Univ.*

SEID MOUSTAPHA, a Turkish engineer, employed by the grand seignor Selim III, in whose misfortunes he became involved, and perished in the insurrection at Constantinople in 1808. He published in 1803 a French work, entitled "Diatribes sur l'Etat actuel de l'Art Militaire, du Génie et des Sciences à Constantinople," 8vo. This little tract issued from the printing-press established by sultan Selim at Scutari, which was destroyed by the insurgent janizaries in 1808. M. Langlès reprinted it in the *Magasin Encyclopédique*, 1809, vol. v.—*Biog. Univ.*

SEJANUS (ÆLIUS) the son of a Roman officer of the equestrian order, who became the favourite and prime-minister of the emperor Tiberius. Having attained the utmost ascendancy over his imperial patron, his ambition prompted him to aim at securing the sovereignty to himself; and with that view he caused several individuals, among whom was Drusus, the emperor's son, to be assassinated. He had carried on an intrigue with the wife of that prince, after whose death he wished to have married her; but Tiberius, offended at his presumption, and alarmed for his own safety, gave orders to have him arrested on the charge of treason, and he was executed on the same day, A.D. 31. Being the object of general hatred, the people of Rome displayed the utmost joy at his destruction, throwing down the statues erected in honour of him, and treating his corpse with the utmost indignity.—*Suetonius. Crevier.*

SËLCHOW (JOHN HENRY CHRISTIAN von) a German jurist, born at Werningerode in 1732. He studied at Gottingen, where he was appointed professor of jurisprudence in 1757, and he passed with the same title to Marburg in 1782. His lectures on jurisprudence for a long time attracted students from all parts of Germany; and his reputation was

increased by the publication of his "*Elementa Juris Germanici privati hodierni*," of which eight editions appeared between 1757 and 1795, and which was adopted as a text-book in most of the universities of Germany. He died April 25, 1795. He was the author of "*Elementa Juris privati Germanici*," 1769; and he was concerned in several critical journals.—*Schlichtegroll's Necrology. Biog. Univ.*

SELDEN (JOHN) a distinguished scholar and eminent political character, was born December 16, 1584, of a respectable family at Sabington, near Tering in Sussex. He received his early education at the grammar-school of Chichester, and at the age of fourteen, or, as Wood says, of sixteen, was removed to Hart-hall, Oxford. After a residence of three or four years he repaired to Clifford's-inn, London, to study the law, and about two years after removed to the Inner Temple, and on being called to the bar acted principally as a chamber counsel. The first object of his studies was the history and antiquities of his own county; and so early as 1607 he drew up a work entitled "*Analectum Anglo-Britannicum*," a treatise on the civil government of Britain before the coming of the Normans. It was succeeded in 1610 by "*England's Epinomes*," and "*Jani Anglorum Facies altera*," a Latin and an English treatise on the progress of English law. These performances acquired him the esteem of several eminent literary characters, among whom were Camden, Spelman, sir Robert Cotton, Ben Jonson, Browne, and Drayton, whose *Polyolbion* he copiously illustrated. In 1614 appeared his largest English work, a treatise on "*Titles of Honour*," which is regarded as a standard authority in regard to all which concerns the degrees of nobility and gentry in this kingdom. This able production was followed in 1617 by his celebrated work "*De Diis Syriis*," the primary purpose of which was to treat on the heathen deities alluded to in the Old Testament; but he extended it to an inquiry into the Syrian idolatry in general. He had hitherto passed his life as a man of letters; but in 1618 he entered the field of politics by his "*History of Tythes*," the object of which was to deny their divine right, although allowed to be due to the clergy by the laws of the land. This publication highly offended James I, and brought the author before the high-commission court, on which, without retracting any portion of his opinions, he declared his sorrow for publishing the work in question. Several replies to him were written by divines and others, to which he was not permitted openly to rejoin. In 1621, James I, in his speech to parliament, having asserted that their privileges were grants from the crown, Selden was resorted to as the ablest legal antiquary; on which occasion he spoke so freely before them in opposition to this doctrine, and was so instrumental in drawing up their spirited protestation, that on their dissolution he was committed to custody. His confinement was not, however, rigorous; and he was discharged at the expiration of six weeks on pe-

tion. In the following year he was elected member of parliament for Lancaster, and was again a member in the two first parliaments of Charles I, in the second of which he was appointed to support the impeachment of the duke of Buckingham, and otherwise became a leading opposer of the arbitrary measures of the court. In 1629 he drew up his learned treatise, entitled "*Marmora Arundelliana*," on the occasion of the importation of the celebrated Greek marbles by the earl of Arundel. On the dissolution of the parliament, Selden was one of the eight members of the Commons who were imprisoned in the Tower on a charge of sedition, and who refused to give security for their good behaviour. This confinement lasted two or three years, with more or less severity; but at length he was admitted to bail, and finally released in the beginning of 1634. During this suspension of political action, he wrote some of his learned treatises on Jewish antiquities; and in 1635 he sent out his important treatise, entitled "*Mare Clausum*," in answer to the "*Mare Liberum*" of Grotius; in opposition to the reasoning of which he endeavours to historically establish the British right of dominion over the circumjacent seas. Some of the following years of his life were occupied in Hebrew studies, the result of which appeared in a work entitled "*De Jure Naturali et Gentium juxta Disciplinam Ebraeorum*," a valuable, but not very well digested repertory of all the matter afforded by history or tradition in relation to the subject. In 1640, memorable for the meeting of the long parliament, Selden was unanimously elected member for the university of Oxford. His name appears on several committees appointed to inquire into abuses; but he neither concurred in the prosecution of lord Strafford, nor seemed desirous to abrogate the episcopal form of church government, although anxious to check the encroachments of ecclesiastical power. So well affected was he on the whole to the existing constitution of church and state, that when the king withdrew to York, he had some notion of appointing him chancellor. When the differences between king and parliament were manifestly tending to open hostilities, he opposed the attempts of both parties to gain possession of the sword, and when he failed, withdrew as much as he was able from public business. He remained, however, with the parliament, and was one of the synod which met at Westminster for the establishment of church government. In 1643 he was appointed by the house of Commons keeper of the records in the Tower, and the year following he was induced to subscribe the solemn league and covenant. The year following he was elected one of the twelve commissioners of the Admiralty; and in 1646 the parliament voted him 5,000*l.* as a reward for services. He continued to sit in parliament after the execution of the king, but employed all his influence for the protection of learning, and rendered considerable services to the king's friends in the university of Oxford, and other places. He also refused to gratify Cromwell by writing

SEL

an answer to the Eikon Basilike. In the beginning of 1654 his health began to decline, but he lingered until the 30th of November in that year, when he expired in the seventieth year of his age. The public character of this eminent scholar and politician will be sufficiently obvious from the tenor of the preceding abstract. Like most of the ablest characters of the period on both sides, he seems to have been often led by the current of circumstances to act against his own personal convictions; but he certainly enjoys the merit of having done his utmost both to prevent the ultimate appeal to the sword, and uniformly exercised his influence to moderate the injurious consequences which flowed from it. In private life he appears to have been universally esteemed for his goodness of heart and urbanity of manners, while as a liberal benefactor and protector of literature he has extorted praise from all parties. As a scholar, he must be deemed one of the most learned men of his day; but possibly a portion of this learning may not have been expended on the most useful subjects, added to which, his style is often laboured and uncouth, although his speeches and conversation were peculiarly luminous and clear. Some opinion of the latter may be collected from his very popular "Table Talk," published after his death by his amanuensis. He died rich, and left his valuable library and museum to his executors, who honourably gave it up to the Bodleian library, for which he had intended it, until offended by a refusal to lend him a book without security. Having adverted to the principal of his works, it is unnecessary to add the titles of his numerous productions of minor notoriety, especially as the whole were collected in three folio volumes (usually bound in six), by Dr David Wilkins, 1726. Of these volumes the two first contain his Latin, and the third his English works; and the editor has also added a long Latin life of the author.—*Wilkinsii Vit. Seldenii. Aikin's Lives of Selden and Usher.*

SELKIRK (ALEXANDER) a Scottish sailor, who passed some years alone on the island of Juan Fernandez, and whose adventure has been supposed to have been the foundation of the story of Robinson Crusoe. He was a native of Largo in Fifeshire, and went to sea when young. In 1703 he sailed as master in the Cinque Ports privateer, under captain Stradling. In consequence of some difference with his commander, he was, with his own consent, put ashore at Juan Fernandez. Before the vessel quitted the island he changed his mind, but the captain would not receive him; and he remained in his solitude till he was taken away by captain Woods Rogers in January 1709. Returning to England he is said to have employed Daniel Defoe in drawing up a narrative of his adventures for the press.—*Barrow's Collection of Voyages and Discoveries*, vol. ii.

SELLE (CHRISTIAN THEOPHILUS) a physician, who was born at Stettin in Pomerania, in 1748. He was educated at Jena, Göttingen, and Halle, at which last university he

SEN

graduated as MD. in 1770. His treatise on fevers, "*Rudimenta Pyretologiae Methodice*," published at Berlin in 1773, procured him much reputation; and soon after he went to Heilsberg, to reside in a medical capacity with the bishop of Warmia. Returning to Berlin, he became physician at the hospital of Charity. In 1777 he published in German an "Introduction to the Study of Nature and of Medicine," 8vo, which was translated into French by Dr Coray; and other works, which were extremely well received. Selle was favoured with the confidence of Frederick the Great, who made him his physician; and after the death of that prince he drew up a particular detail of his last illness. He was admitted into the Berlin Academy of Sciences; and in 1790 he went to Paris, where he visited, incognito, the hospitals and other public establishments, and on his return he published two memoirs on animal magnetism, and others against the critical philosophy of Kant, inserted in the Transactions of the Academy. He attained the highest honours in his profession, being appointed privy counsellor and director of the college of medicine and surgery, &c. His death took place at Berlin, November 9, 1800, in consequence of phthisis pulmonalis.—*Biog. Univ.*

SEMLER (JOHN SOLOMON) a celebrated Lutheran divine, born in 1725, at Saalfeld in Saxony, where his father was a minister. He was educated under professor Baumgarten at Halle; and after quitting the university he resided some time at Saalfeld, whence in 1750 he removed to Coburg, to become editor of the Gazette. In 1751 he obtained the chair of rhetoric and poetry at Altorf; and two years after, that of theology at Halle, where he remained till his death, which happened March 14, 1791. Semler was one of those German divines who reduced the principles of Christianity to a near accordance with deism, explaining away every thing miraculous in the Gospel history, and criticising the Bible with a temerity beyond all bounds, rather like an advocate of infidelity than of Revelation. Michaelis, who had witnessed the commencement of the great revolution which took place in the opinions of the German Protestant clergy in the last century, said, "Heretofore I was reckoned heterodox, but now I am only too orthodox." The principal works of Semler are "Historica Ecclesiastica selecta Capita," 1767—69, 3 vols. 8vo; "An Introduction to Exegetic Theology," 8vo; "Apparatus ad liberalem N. Test. Interpretationem," 8vo; "Apparatus ad lib. V. T. Interpretationem," 8vo; and he also wrote the history of his own life, published at Halle, 1781, 2 vols. 8vo.—*Biog. Univ.*

SENAC (JOHN BAPTIST) first physician to Louis XV, was born in Gascony in 1693. In his youth he was a Protestant, and a candidate for the ministry; but he afterwards became a Catholic and a jesuit, previously to his adopting the profession of medicine. Before he appeared at court he was attached to marshal Saxe, whom he cured of a dangerous dia-

ease during the war in 1745. In 1762 he was appointed first physician to Louis XV, who bestowed on him the utmost confidence, and he retained his situation and credit till his death, which took place December 20, 1770. He had a patent of counsellor in ordinary to the king, and he was superintendent of the mineral waters of the kingdom, and was also a member of the Academy of Sciences. Senac is principally known as the author of "Traité de la Structure du Cœur," 1748, 2 vols. 4to, republished in 1777 and 1783 with additions and corrections by M. Portal. He also wrote some other works, besides memoirs published by the Academy of Sciences.—GARRIET SENAC DE MEILHAN, son of the preceding, was born at Paris in 1736. He became a master of requests, and afterwards successively intendant of the provinces of Aunis, Provence, and Hainault; and in 1775 he was nominated intendant at war, under the ministry of the count de St Germain. At the Revolution he went to Germany, and afterwards to Russia, which country he left on the accession of Paul I. His death took place at Vienna in August 1803. He was the author of "Des Principes et des Causes de la Revolution Française," 1790, 8vo; "Du Gouvernement, des Mœurs, et des Conditions en France avant la Revolution," 1795, 8vo; besides novels, a translation from Tacitus, and other works.—*Biog. Univ.*

SENDIVOGIUS (MICHAEL) a Polish alchemist, born about 1566. He was destined for the church, but before he had finished his studies he acquired a taste for books on alchemy; and having made an acquaintance with Nicholas Wolsky, grand-marshal of Poland, who was a firm believer in the mysteries of that delusive science, he was sent by his patron into Germany, to learn the secret of the philosopher's stone. He returned, of course, unsuccessful; but for a considerable time he kept up the expectations of Wolsky, who supplied him with money which he wasted in the prosecution of his researches. At length he went to Germany, where he is said to have imposed on the emperor Ferdinand II, and to have obtained from that prince the gift of an estate in Silesia, and a house at Olmutz, where he died in 1646; but according to some authors he died in poverty at Cracow in Poland. His writings, amidst abundance of jargon, contain some chemical information of importance. An English translation of his "New Light of Alchymy, with a Treatise of Sulphur," and other tracts, was printed in London, 1650, 4to.—*Biog. Univ.*

SENEBIER (JOHN) a natural philosopher and historian of eminence, born at Geneva in 1742. He adopted the ecclesiastical profession, and having finished his course of theology he was admitted a minister in 1765. Philosophy and natural history occupied more of his attention than divinity; and he made a visit to Paris to study declamation under the actor Brizard, and to consult the royal library. Returning to Geneva, he published "Moral Tales," in imitation of those of Marmontel,

which were translated into German. By the advice of Bonnet he wrote a memoir on the question proposed by the literary society of Haerlem, "En quoi consiste l'Art d'observer?" and he obtained the prize which had been offered. In 1769 he was chosen minister of Chancy; and in 1773 he obtained the office of public librarian at Geneva. He became one of the conductors of the Journal of Geneva in 1787, and he enriched it with a great number of important articles. The revolutionary commotions at Geneva in the latter part of the last century obliged him to remove into the Pays de Vaud; but he afterwards returned home, and died in 1809. His principal works are "Essai sur l'Art d'observer, et de faire des Experiences," 1802, 3 vols. 8vo, an amplification of his prize essay; "Mémoires Physico-Chimiques sur l'Influence de la Lumière Solaire sur les Trois Règles de la Nature," 1782, 3 vols. 8vo; "Rapports de l'Air avec les Êtres organisés," 1807, 3 vols. 8vo; and "Histoire Littéraire de Genève," 1786, 3 vols. 8vo; and he also published "Catalogue des MSS. dans la Bibliothèque de la Ville de Genève," 1779, 8vo.—*Biog. Univ.*

SENECA (MARCUS ANNEUS) a Roman orator, who was a native of Corduba in Spain, and settling at Rome he obtained great eminence in his profession. His declamations, or forensic discourses, are still extant, and have been repeatedly published together with the works of his son. He flourished AD. 59.—SENECA (LUCIUS ANNEUS) the eldest son of the preceding, was a most celebrated Roman philosopher, moralist, and statesman, born at Corduba near the commencement of the Christian æra. He received a liberal education at Rome, being instructed in rhetoric by his father, and in philosophy by Attalus the stoic, Demetrius the cynic, and other professors of different sects. He adopted the principles of the stoics, which he illustrated by his writings. His prudence prevented him from appearing in the forum in the reign of Caligula, but he afterwards pleaded some causes, and filled the offices of quæstor and prætor. Having offended Messalina, the profligate wife of the emperor Claudius, she procured his banishment to the island of Corsica, on the charge of adultery; and he resided there eight years, devoting his time to study. He wrote two treatises, "De Consolatione," one addressed to his mother Helvia, and the other to Polybius, one of the imperial attendants. In the latter he has not been sparing of adulation towards the emperor, which is so much the more reprehensible, as he satirized the object of it unmercifully after his death. Agrippina, the second wife of Claudius, obtained his recall from exile, and appointed him tutor to her son Nero. On the accession of his pupil to the empire, he was for a while the confidential adviser of Nero; but his credit diminished when the latter became attached to Tigellinus and Poppæa; and it is related that the emperor endeavoured to rid himself of a troublesome monitor by getting Seneca poisoned, which scheme was rendered abortive by the cautious

policy of the philosopher, who subsisted entirely on fruits. At length he was accused of being an accomplice in the conspiracy of Piso against the imperial monster whom he had educated, and his death being decreed, he was permitted to choose the method of execution. He consequently, with the characteristic ostentation of a stoic, finished his life in the midst of his friends, conversing on philosophical topics while the blood was flowing from his veins, which he had caused to be opened for that purpose. His death happened A.D. 65, at the age of sixty-three. A warm bath having been used to hasten the mortal hæmorrhage, Tacitus says that as Seneca entered the bath, he took some of the water and sprinkled it on the friends who stood near him, saying, that he offered it as a libation to Jupiter the Deliverer. This statement sufficiently confutes the idle tale of Seneca's having been a convert to Christianity; in support of which notion have been produced some of his alleged letters to the apostle Paul, which are manifestly spurious. The character of Seneca presents the not unfrequent anomaly of a moral philosopher, deeply skilled in the theory of virtue, but unable to practise his own precepts. His marriage, late in life, with the young, rich, and beautiful Paulina, has been considered as an action not consistent with the rigid principles of stoicism. But this is quite a venial transgression compared with his intrigues as a statesman and a courtier; his concern in the murder of Agrippina, which he advocated; and his accumulation of vast wealth by very unjustifiable means, particularly by lending money on usury. Dion Cassius ascribes the revolt of the Britons under Boadicea to the distress to which they were driven through the rapacity of Seneca, or rather of his agents. His works have been often published, and among the best editions are those of Leydeu, 1649, 4 vols. 12mo; and the Bipontine, 1782—1810, 5 vols. 8vo. There are translations of the works of Seneca extant by Lodge and L'Estrange; and Dr Morell published his "Epistles" in English, with notes, 1786, 2 vols. 4to. The only existing specimens of Roman tragedy are ascribed to L. Annæus Seneca; but whether they were written by the philosopher is uncertain. A valuable edition of "Senecæ Tragediæ" was published by Schroder, Delphis, 1728, 4to. —*Moreri. Biog. Univ.*

SENNERTUS (DANIEL) an eminent physician and philosopher, born in 1572, at Breslau, in Silesia. His father was a shoemaker, but he received an academical education, studying first at Wittemberg, and afterwards at Leipsic, Jena, and Frankfurt on-the-Oder; and in 1601 he visited Berlin. He returned to Wittemberg the same year, took the degree of M.D., and was appointed to a medical professorship in that university. He gained high reputation by his writings and his practice, and received applications for advice from various parts of Europe. He attended the elector of Saxony, whom he cured of a dangerous disease in 1626, and he was physician in ordinary to that prince, though he continued to

reside at Wittemberg. Notwithstanding the plague repeatedly prevailed there, he remained at his post; and after having escaped for a time, he at length fell a victim to professional duty, dying of that malignant disease in July 1637. He had the merit of first introducing the study of chemistry into the university of which he was a professor; and he distinguished himself by the boldness of his speculations, and his independence of the trammels of authority. Having advanced some peculiar opinions concerning the origin and nature of souls, he was accused of impiety and blasphemy, and represented as teaching that the souls of brutes were immortal. But he denied this inference, which his accusers deduced from his principles, and thus avoided the danger of persecution. Among his writings are, "Epitome Naturalis Scientiæ," 1618, 8vo, repeatedly printed; "Liber de Chymicorum consensu et dissensu cum Aristotelicis et Galenicis," 1629, 4to; and "Hypomnemata Physica," 1630. His works, which were much in request in the seventeenth century, were published collectively at Lyons, 1676, 6 vols. folio.—*Bayle. Nicéron*, vol. xiv. *Hutchinson's Biog. Med.*—**SENNERTUS** (ANDREW) eldest son of the preceding, received a learned education at Wittemberg; and after visiting Leipsic, Jena, and Strasburg, and the Dutch universities, he returned to Wittemberg, where he became professor of the Oriental languages. He died in 1679, aged sixty-three. Besides a number of philological dissertations, he was the author of "Hypotyposis Harmonica Linguarum Orientalium, Chaldaæ, Syræ, Arabicæ, cum Matre Hebræa," 1666, 4to; "Sciagraphia Doctrinæ inextricabilis adhuc de Accentibus Hebræorum," 1664, 4to; "Dissertatio de Linguarum Orientalium Originibus, Antiquitate, Progressione, Incrementis," 1669; besides other works.—*Goetii Elog. Philolog. quorund. Hebræor.*

SEPULVEDA (JOHN GNES de) a Spanish divine and historian, was born at Cordova in 1491, and became historiographer to the emperor Charles V. He is ignobly conspicuous as the author of a "Vindication of the Cruelties of the Spaniards against the Indians," in opposition to the benevolent representations of Bartholomew Las Casas. Sepulveda affirmed that it was the duty of the Indians to submit to be governed by the Spaniards in consequence of their own inferiority: but, to their credit, the Spanish universities, as well as Charles V, prohibited the circulation of the book, which was, however, printed at Rome. This defender of some of the greatest barbarities that ever disgraced human nature, died at Salamanca, of which he was a canon, in 1572. He was author of several Latin translations, as also of a life of Charles V, in 4 vols. 4to, which was reprinted at Madrid in 1780.—*Anton. Bibl. Hisp.*

SERAPION (JOHN) an Arabian physician, who flourished, according to Priestley, A.D. 190. He is cited by Rhazes and by Hali Ebn Abbas, the latter of whom censures him for not treating more fully of the small-pox. His

works were first printed at Venice, 1497, folio, and reprinted in 1550.—SERAPION OF ALEXANDRIA, has been sometimes confounded with the preceding. He was a Greek physician, who lived in the first century.—Another SERAPION, of the eleventh century, is supposed to have been the writer of a tract, "*De Medicamentis tam simplicibus quam compositis*."—*Freind. Hutchinson.*

SERASSI (PIER ANTONIO) an Italian biographer, was born at Bergamo in 1721. At the age of twenty, he was elected a member of the Academy of Transformati; and on his return to Bergamo was appointed professor of belles lettres. His first work was a dissertation on the birth-place of Tasso; after which he published several biographies, which are much esteemed, including the lives of Maffei, Molza, Politian, Capella, Dante, Petrarch, and Tasso; the last and most distinguished of which productions has proved serviceable to Mr Black, in his life of the same eminent poet. Serassi was employed in several offices of the papal government, and in the college of Propaganda. He died February 19, 1791, at Rome, in the seventieth year of his age.—*Black's Preface to Life of Tasso.*

SERENUS SAMMONICUS (QUINTUS) a Roman physician of the third century, who is said to have written various tracts on natural history, which are no longer extant. He was also the author of a poem, "*De Re Medica*," published in the "*Corpus Poetarum*" of Mattaire. Serenus was put to death by the emperor Caracalla, about AD. 217; and he left behind him a library, containing six thousand two hundred volumes.—*Hutchinson's Biog. Med.*

SERGEL (JOHN THOMAS) a celebrated Swedish sculptor. He was born at Stockholm September 8, 1740, and began his career as a stone-mason; but afterwards became a pupil of L'Archeveque, whom he accompanied to France. He subsequently went to Italy, at the expense of the king of Sweden, where he acquired great celebrity. In 1778 he returned to Sweden, visiting Paris in his way, where he was nominated a member of the Academy of Fine Arts. He then visited London, and reached Stockholm in 1779, where, on the decease of his old preceptor, he succeeded to his place. In 1784 he accompanied Gustavus III on his travels to Italy, and in 1795 was a knight of the polar star; and 1810 received letters of nobility, and was appointed superintendent of the police. His numerous able works are chiefly confined to Sweden; but an admired "*Diomedes stealing the Palladium of Troy*," is in England. He died February 26, 1814.—*Biog. Univ.*

SERRES (JOHN DE) in Latin Serranus, a learned Frenchman, was born in the sixteenth century, and was of the reformed religion. He studied at Lausanne, where he was taught Latin and Greek; and on his return to France, applied himself to divinity, in order to become a minister. He distinguished himself by his writings, and became a minister of Nismes in 1582, but was never looked upon as a very zealous Protestant. He

is supposed to be one of the four ministers who declared to Henry IV that he might be saved in the Romish as well as the Protestant religion, a concession which much offended his brethren. He published in 1597 a tract to reconcile the two religions, which as usual pleased neither side. He died suddenly in 1598. Serranus published several works in Latin and French, relating to the history of France; and among the rest, "*Mémoires de la troisième Guerre civile et derniers Troubles de France sous Charles IX*;" "*Inventaire général de l'Histoire de France*;" "*Recueil des Choses mémorables sous Henri II, François II, Charles IX, et Henri III*." Besides his theological and historical works, he gave a Latin version of Plato, which is printed with Henry Stephens's edition of that author. Stephens also published, in 1575, a Greek version, by Serranus, of twenty-four of the Psalms, with two "*Idyllia*," from Daniel and Isaiah, of which scarce work a new edition was published in London, 1772, 12mo.—*Niceron. Moret.*

SERRES (JOHN THOMAS) an artist of considerable merit and reputation in the delineation of sea pieces, which procured him the appointment of marine painter to the king. He was descended of a noble family, long resident in their seat of Beaupierre, near Oche in France, whence his father, count Domenic de Serres, nephew of the then archbishop of Rheims, eloped, in order to avoid an ecclesiastical life, to which he was destined by his family. Entering the Spanish service he was taken prisoner by the English, received his liberty on parole, and though afterwards all restrictions were removed, he continued to reside in this country, and to exercise his talents as a marine draughtsman, which at length procured him the honour of a seat among the fellows of the Royal Academy.—His eldest son, the subject of this article, inherited his father's genius, and besides the many proofs of his talents as a painter yet extant, was the author of a work, entitled "*The Little Sea Torch, a Guide for Coasting Pilots*," folio, 1801. Mr Serres, who was husband to the soi-disant princess Olive of Cumberland, so notorious since his decease, died December 28, 1825.—*Ann. Biog.*

SERRES (OLIVER) an able French agriculturalist, was born in 1539, at Villeneuve de Bery, near Viviers. He showed himself so able a manager of his own estate, that Henry IV called him to Paris, and entrusted him with the management of the royal domains. Serres had the merit of introducing the white mulberry tree into France, and was the author of so many valuable agricultural improvements, as to be regarded as an eminent benefactor to his country. He died in 1619. The works of this respectable and philanthropic individual are, "*A Treatise on the Culture of Silk*," 1599; "*Feconde Richesse du Murier Blanc*," 1603; "*Théâtre d'Agriculture et Ménage des Champs*," which last work has been repeatedly printed, and is much esteemed.—*Nouv. Dict. Hist.*

SERVANDONI (JEAN NICOLAS) an eminent architect, particularly celebrated for his talents in theatrical decorations, was born at Florence in 1685. He was employed by most of the sovereigns of Europe on the occasion of magnificent public spectacles, and at Paris was under-architect, painter, and decorator to the king of France. He gave a number of designs for the theatres of London and Dresden, and was similarly employed at Vienna and Lisbon. As an architect he has left an admired specimen of his taste in the portico and front of the church of St Sulpice. He died in 1766.—*Nouv. Dict. Hist.*

SERVETUS (MICHAEL) a learned Spaniard, memorable as a victim of religious intolerance, was born in 1509, at Villa Nueva in Arragon. He was the son of a notary, who sent him to Toulouse for the study of the civil law. Excited by the discussions of the reformers in that city, he began to read the Scriptures, and conducted his researches with so free a spirit, that he printed a tract in disparagement of the orthodox doctrine of the Trinity, entitled "*De Trinitatis Erroribus*," printed at Haguenau in 1531; which production was followed the next year by his "*Dialogorum de Trinitate Libri duo*." His circumstances being depressed, he engaged for some time with the Frellons, booksellers of Lyons, as corrector of the press. He then went to Paris, where he studied physic, and carried into that science the same inquisitive and pertinacious spirit which distinguished him in theology. He graduated at Paris, but quarrelled with the faculty, and repaired to Charlieu, near Lyons, where he practised three years, whence, at the instance of the archbishop of Vienne, he removed to the latter city. During this time he was in constant correspondence with Calvin, with whom he discussed points of controversy, consulting him, it is said against his will, in respect to his writings and Arian notions. Of this confidence Calvin subsequently made a most base and indefensible use, by producing his letters and MSS. as matters of accusation against him. In 1553 Servetus published his matured theological system, without his name, under the title of "*Christianismi Restitutio*;" but Calvin took care that the magistrates of Vienne should be duly informed of it, and Servetus was committed to prison, whence he contrived to escape, and thereby avoided that fate from Catholic hands which he was soon after to suffer from those of the reformers. Purposing to proceed to Naples, he imprudently took his way through Geneva, where Calvin, who by this time indulged against him the full bitterness of theological hate, induced the magistrates to arrest him on a charge of blasphemy and heresy, advanced against him by a person who had been a servant in Calvin's family. In order to ensure his condemnation his various writings were sifted for accusations, and as a proof of the malignity and injustice which he encountered, one of the charges was extracted from his edition of Ptolemy's *Geography*, in which he asserted that Judea

had been falsely extolled for its beauty and fertility, modern travellers having found it both sterile and unsightly. The magistrates of Geneva were, however, aware that many eyes were on them, in respect to this extraordinary treatment of a person who was neither a subject nor a resident, but, properly speaking, a traveller kidnapped in his passage. They thought proper, therefore, to consult the magistrates of all the Protestant Swiss cantons, who referring the matter to their divines, the latter unanimously declared for his punishment. As he refused to retract his opinions, therefore, he was condemned to the flames, which sentence was carried into execution the 27th of October, 1553, in the forty-fourth year of his age. This act, says the authors of the *Nouveau Dictionnaire Historique*, has furnished Catholic writers with an irresistible argument *ad hominem* against the Protestants when they complain of the similar treatment of the Calvinists of France. That it was, however, disapproved by many is rendered probable by Calvin's earnest attempt at apology; but it is melancholy to observe that the deed was warmly sanctioned by Melancthon. The main defence of Calvin rests on the fact that every Christian church sanctioned persecution: but the use that he made of documents addressed to himself, and the spirit in which the charges were brought forward, cannot be sanctioned even by this general plea, and accordingly the fate of Servetus will remain an eternal blot upon the memory of the stern reformer of Geneva. The Arian doctrines of Servetus are described by Mosheim, who dwells, and probably with justice, on his proud and contentious spirit and "invincible obstinacy," which he himself no doubt regarded as steadiness of principle, as he chose to die for its maintenance. This remarkable person is numbered among the anatomists who made the nearest approach to the doctrine of the circulation of the blood. The passage is in his latest work, "*De Restitutione Christianismi*," and it clearly states the circulation of the blood through the lungs, and the production of a vital principle from the mixture of air and blood in that organ, but proceeds no further. The life of Servetus has been written in Latin by Mosheim.—*Nouv. Dict. Hist. Halleri Bibl. Anat. Life by Mosheim.*

SERVIN (LOUIS) a patriotic French lawyer, was born of a good family in the Vendomois. He cultivated polite literature with assiduity, and in 1589 was chosen advocate-general to the parliament of Paris. In 1590 he published a work in favour of Henry IV of France, entitled "*Vindiciæ secundum Libertatem Ecclesiæ Gallicanæ*;" and in 1598 was joined in a commission for the reformation of the university of Paris. In the reign of Louis XIII he made some strong remonstrances in favour of the right of parliament to register the royal edicts; and was firmly, but respectfully, making a remonstrance to the king on the subject, when he fell down and expired. This event occurred in 1626.—*Nouv. Dict. Hist.*

SERVIUS (MAURUS HONORATUS) a grammarian and critic, who flourished in the reign

of Arcadius and Honorius. He is principally known by his commentaries on Virgil, which contain some valuable notices of the geography and the arts of antiquity. The commentaries of Servius are given most correctly in the Virgil of Burman, 1756. A tract on the prosody of verse, by the same author, entitled "Centimetrum," is printed in the collections of the ancient grammarians.—*Tiraboschi*.

SESOSTRIS, a famous king of Egypt, who by some has been deemed the Sesaac of Scripture. He is generally placed by chronologers in the fifteenth century BC.. Among the many fabulous stories concerning him, it may be collected that he was a great politician and conqueror, who overran Asia, and probably crossed the Ganges. He is also thought to have left an Egyptian colony at Colchis, and it is agreed that Thrace was his farthest western progress. He is said to have erected, by the hands of his captives, magnificent temples in all the cities of his empire, to have built a great wall on the eastern boundary of Egypt, and to have dug a number of canals from the Nile, for the purposes of commerce and irrigation. He is reported to have died a voluntary death on becoming blind. Sir Isaac Newton thinks that he is the Osiris of the Egyptians, and the Bacchus of the Greeks.—*Hist. Univ.*

SETTLE (ELKANAH) an English poet of the 17th century, was the son of Joseph Settle, a resident of Dunstable in Bedfordshire, where he was born in 1648. At the age of eighteen he entered as a commoner at Trinity college, Oxford, but quitted the university without taking a degree; and coming to London, commenced author by profession. His first essay in literature was as a political writer, attached to the whig party, in which capacity he produced a piece, entitled "The Character of a Popish Successor," in favour of the Exclusion Bill, then the principal subject of conversation. This was answered by a pamphlet called "The Character of Rebellion," printed in 1682, in which the author inveighs bitterly against Settle; and another reply soon after appeared, from the pen of sir Roger L'Estrange, under the title of "The Character of a Papist in Masquerade." To this latter performance Settle rejoined in a pamphlet, "The Character of a Popish Successor compleat," which was considered the smartest and best written piece which appeared on either side. On the coronation of James II, these two obnoxious pamphlets were, together with the Exclusion Bill itself, publicly burnt by the fellows of Merton college, Oxford, in the middle of their quadrangle. During the party squabbles of this period, Dryden had published a poem, entitled "The Medal," occasioned by the whig party striking a medal to commemorate the throwing out of the bill against the earl of Shaftesbury; in reply to this, Settle wrote a piece called "The Medal Reversed;" and soon after a poem, entitled "Azaria and Hushai," designed as an answer to the "Absalom and Achitophel" of the same poet. Eventually however, if Anthony à Wood is to be depended on, Settle changed

sides; and it is certain that in 1683 he wrote a "Narrative," in eight folio sheets, against Titus Oates. He is also said to have been the author of some "Animadversions on the last Speech and Confession of Lord William Russell," as well as of some "Remarks on the Paper delivered by Algernon Sidney to the Sheriffs at his Execution," London, 1683. In 1685 he published a poem on the coronation of James II, and commenced a weekly paper in favour of the court; he also about the same time obtained a pension from the city, for writing an annual inauguration panegyric on lord mayor's day. Settle was besides an indefatigable writer for the stage, and produced fifteen dramatic pieces, none of which are now known on the boards. In the decline of life he received an annual salary from the proprietor of a booth at Bartholemew fair, as a writer of "Drolls," which were generally very successful; and he is said to have been at that time the best contriver of theatrical machinery in the kingdom. He died at the Charterhouse in 1724.—*Cibber's Lives*.

SEVERUS (CORNELIUS) a Roman poet, who lived in the reign of Augustus, was the author of a poem, entitled "Ætna," which has been attributed to Virgil. An elegant edition of the remains of this writer, with notes, was published at Amsterdam, by Le Clerc, 12mo, 1703; and they are also printed in Mattaire's "Corpus Poetarum."—*Fossii Poet. Lat.*

SEVIGNE (MARIE DE RABUTIN marquise de) a French woman of quality, greatly distinguished for her epistolary talents, was born in 1626. Her father, the baron of Chantail, who was the head of the house of Bussy Rabutin, left her, during infancy, his sole heiress. The graces of her person and conversation procured her many admirers; and in 1644 she married the marquis de Sevigné, who was killed in a duel in 1651, leaving her the mother of a son and daughter. She formed no second union; but devoted herself to the education of her children, and to the cultivation of her mind, by reading and literary society. She was extremely attached to her daughter, who in 1669 married the count de Grignan, and accompanied him to his government of Provence, an absence from the metropolis, which gave rise to the greater part of the letters which have gained her so much reputation. The subject of many of these epistles are so entirely domestic as to produce little interest; but others abound with court anecdotes, remarks on men and books, and the topics of the day, which are conveyed with great ease and felicity. In point of style, they are deemed models of the epistolary, which have seldom been surpassed, owing to a perfectly natural mode of expression, animated with lively touches of sentiment and description, and a gay playfulness, which gives grace and interest to trifles. In her letters to her daughter, the reader is sometimes wearied with an excess of flattery of her beauty and talents, the preservation of the former of which seems to have formed the principal ob-

SEW

ject of her maternal anxiety. In fact, although endowed with abilities and penetration, she did not rise much above the level of her age in taste and principles. She was highly attached to rank and splendour, loved admiration, and felt the usual predilection of high life for manners and accomplishments in preference to solid worth. She had a strong feeling of religion, but was often inconsistent in her sense of it, and in reference to the proceedings against the French Protestants, expresses herself with bigotry and want of feeling. The best editions of her "Letters" are that of Perrin, 1775, 8 vols. 12mo; and of 1801, 10 vols. 12mo. An English translation was published in London about 1758. She died in 1696, at the age of seventy.—*Nouv. Dict. Hist.*

SEVIN (FRANÇOIS) a French man of letters, was born in the diocese of Sens, in 1699, and educated in the seminary of the *Trente Trois* of Paris. In 1724 he became an associate in the Academy of Belles Lettres, and in 1728 was sent by the order of Louis XIV, with the abbé Fournart the younger, to Constantinople, in search of MSS. of which he brought back a large number, and was rewarded in 1737 with the office of keeper of the MSS. in the king's library. His letters relative to this journey were published in 1801, 8vo, and are deemed very curious and interesting. Various papers by Sevin are published in the *Memoirs of the Academy of Inscriptions and Belles Lettres*.—*Moreri. Nouv. Dict. Hist.*

SEWARD (THOMAS) an English divine and poet, who was rector of Eyam in Derbyshire, and canon residentiary of Lichfield, where he died at a very advanced age, March 4, 1790. He was the author of a treatise entitled "The Conformity between Popery and Paganism illustrated in several Instances, and supported by a variety of Quotations from the Latin and Greek Classics;" and he likewise published an edition of the dramatic works of Beaumont and Fletcher, 1750, 10 vols. 8vo; and was a contributor to Dodsley's Collection of Fugitive Poetry.—SEWARD (ANNA) daughter of the preceding, obtained considerable celebrity in the literary world. She was born at Eyam in 1747; and even in childhood she exhibited a taste for poetical composition, which was rather checked than encouraged by her father. At length she became acquainted with Mrs. Miller, of Bath Easton, and was a contributor to that lady's literary vase and volumes of "Poetical Amusements." Miss Seward's first separate publication was an "Elegy on the Death of Captain Cook, with an Ode to the Sun," 1780, 4to; and this was followed by a "Monody on Major André, with Letters to her from Major André, written in 1769," 1781, 4to; a "Poem to the Memory of Lady Miller, of Bath Easton Villa," 1782, 4to; "Louisa, a Poetical Novel, in four Epistles," 1784, 4to. In 1799 she published a collection of sonnets; and in 1804 appeared her "Life of Dr Darwin," in which she preferred a claim to the authorship of the first fifty lines of Darwin's "Botanic Garden." She died at the Brooc. Dict.—Vol. III.

SEX

episcopal palace at Lichfield, March 25, 1809, and by will she left her MS. correspondence to Mr Constable of Edinburgh, and it was published with a biographical memoir, 6 vols. 8vo.—*Gent. Mag.*

SEWARD (WILLIAM) a writer of biography and personal anecdote, who was born in London in 1747. His father was a partner in Calvert's brewery, and from him he derived an independent fortune, which enabled him to lead a life of literary leisure. He studied at the Charter-house school and Oxford university; and he became a fellow of the Royal and Antiquarian Societies, and cultivated the acquaintance of Dr Johnson, and other eminent writers. In 1789 he began publishing, in the *European Magazine*, a series of literary anecdotes; and in 1794 appeared the first two volumes of his "Anecdotes of some distinguished Persons, chiefly of the present and two preceding Centuries," to which he added three more volumes. He subsequently published a sequel to this work, under the title of "Biographiana," 1799, 2 vols. 8vo. He died of dropsy, April 24, 1799.—*Europ. Mag.*

SEWEL (GEORGE) an ingenious poet and miscellaneous writer of the last century, by profession a physician, born at Windsor, where his father held the situation of treasurer and chapter clerk. From Eton he removed to Peter-house, Cambridge, where he graduated as a bachelor in medicine, and then passed over to Holland for the purpose of completing his physical education under the celebrated Boerhaave. On his return to England, he commenced practice at Hampstead, his vicinity to the metropolis enabling him at the same time to cultivate the acquaintance of many of the wits of the age, and to bring forward his own literary productions. These consist of "Sir Walter Raleigh," a tragedy, 1719; "Epistles to Mr Addison, on the Death of Lord Halifax;" "Cupid's Proclamation," &c. His prose writings are, "A Life of John Phillips, Author of the Poem on Cyder;" "A Vindication of the English Stage," and some political pamphlets levelled principally against the bishop of Salisbury. He also published translations of Addison's Latin poems, and of part of the works of Lucan, Ovid, and Tibullus. His death took place at Hampstead, February 8, 1726.—SEWEL (WILLIAM) the son of an English refugee, was born at Amsterdam in 1650, where his father followed the profession of a surgeon. He was apprenticed to a weaver, but is principally known as the author of a History of Quakerism, to which class of dissenters he belonged. This work, originally written in Dutch, he afterwards translated into English, folio, 1722. There is also a Dictionary of the English and Dutch Languages, which goes under his name. His death took place in 1725.—*Cibber's Lives Chalmers's Biog. Dict.*

SEXTUS EMPIRICUS, a Greek philosopher and physician, is supposed to have flourished in the reign of the emperor Commodus. He is not the same with Sextus the Stoic, the preceptor of Marcus Aurelius; and

his surname of Empiricus indicates that he belonged to the sect of physicians so called. He was the author of many works, two of which have been preserved, "Pyrrhonianum Hypotyposium Lib. III," or "Institutes of Pyrrhonism," deemed the most elegant summary of the principles of the Pyrrhonian or Sceptic sect; and "Adversus Mathematicos, Lib. X," a work against dogmatists in philosophy. The former of these dissertations was translated into Latin by Henry Stephens, and the latter by Hervetus; and both versions, with the original Greek, were printed at Geneva, in 1621. A later and superior edition, by Fabricius, was published at Leipsic in 1718, folio.—*Vossii Hist. Lat.*

SEYBOLD (DAVID CHRISTOPHER) a German philologist and miscellaneous writer, born in 1747, at Brakenheim in the territory of Wurtemberg. Having taken the degree of MA., he became professor of the belles lettres at Jena, in 1771, when he pronounced an inaugural oration "On the Eloquence of Homer." He was afterwards rector of the gymnasium of Spire, and then successively of those of Grunstadt, in the county of Linange; and of Buchsweiler, in Alsace. The French Revolution having occasioned the destruction of the latter seminary, he removed to Tubingen, and obtained in that university the chair of ancient literature. He died in 1804. Among a multitude of works which he published, may be mentioned with approbation his "Christomathia Poetica Græco-Latina;" and his "Mythology," written in German.—*Biog. Univ.*

SEYMOUR (EDWARD) duke of Somerset in the reign of Edward VI, to whom he was maternal uncle, being the son of sir John Seymour, of Wolf-hall in Wiltshire, and brother of lady Jane Seymour, the third wife of Henry VIII. He was educated at Oxford, and early devoted himself to the military profession. In 1533 he attended the duke of Suffolk in his expedition to France, when he received the honour of knighthood. On the marriage of his sister with the king, in 1536, he was raised to the peerage, by the title of viscount Beauchamp, and the following year created earl of Hertford. In 1540 he was made a knight of the garter; and in 1542 appointed lord chamberlain of England for life. He commanded in a maritime expedition against the Scots in 1544, when he landed a body of troops at Leith, and took and set fire to the city of Edinburgh. The same year he was with the king at the expedition to Boulogne, and participated in the victory gained over the French before that place. On the death of Henry VIII, he rose to unbounded power, both in the church and state. By the will of Henry he had been nominated one of the sixteen executors forming the council of regency, during the minority of Edward VI; but not content with his share of power, he set aside the testamentary disposition of his brother-in-law, and procured himself to be appointed governor of the king and protector of the kingdom; and he obliged the bishops to take out new com-

missions for their ecclesiastical offices. In 1548 he obtained the post of lord treasurer, was created duke of Somerset, and made earl marshal. The same year he headed an army, with which he invaded Scotland; and after having gained the victory of Musselburgh, he returned in triumph to England. His success excited the jealousy of the earl of Warwick and others, who procured his confinement in the Tower, in October 1549, on the charge of arbitrary conduct and injustice; and he was deprived of his offices, and heavily fined. But he soon after obtained a full pardon from the king, was admitted at court, and ostensibly reconciled to his adversary, lord Warwick, whose son, lord Lisle, espoused one of the daughters of Somerset. The reconciliation was probably insincere, as Warwick, who had succeeded to his influence over the young king, caused Somerset to be again arrested in October 1551, on the charge of treasonable designs against the lives of some of the privy counsellors. He was tried, and being found guilty, was beheaded on Tower-hill, January 22, 1552. While in confinement the first time, he wrote a religious tract, entitled "A spiritual and most precious Pearl, teaching all Men to love and embrace the Cross as a most sweet and necessary thing," printed in 1550, 18mo; and some other pieces are ascribed to him.—*Birch's Lives of Illust. Pers. Berkenhout's Bing. Lit. Walpole's Cat. of Royal and Noble Auth.*

SEYSSSEL (CLAUDE de) an historical and political writer, was born, according to some, in Savoy, and to others in Bugei. He professed the law with great credit at Turin, and obtained the place of master of requests and counsellor to Louis XII of France. He was promoted to the bishopric of Marseilles in 1510, and to the archbishopric of Turin in 1517. He died in 1520. He published a number of works, theological, political, and historical; as also French translations of Eusebius, Thucydides, Appian, Diodorus, Xenophon, Justin, and Seneca. His "Grande Monarchie de France," published in 1519, and translated by Sleidan into Latin, maintains the bold proposition that the French constitution was a mixed monarchy. In his "Histoire de Louis XII, Père du Peuple," 1508, he is a great panegyrist of that prince, but he freely exposes the vices of Louis XI. He is praised as the first who wrote French with an approach to purity.—*Nouv. Dict. Hist.*

SFORZA (JAMES) a partizan officer, in the wars in Italy, in the beginning of the 15th century, whose proper name was Jacomuzzo Attendulo. He was the son of a shoemaker at Cotignola, in the Roman territory, and was bred to husbandry. As he followed the plough, he was attracted by the glittering arms and martial music of a band of soldiers, and he quitted his peaceful occupation to become a common soldier. His courage procured him promotion, and at length he found himself at the head of seven thousand men, entirely at his devotion. He afforded the assistance of his mercenaries to various of the contending states of Italy, and thus became so powerful, that pope John

XXIII appointed him gonfalonier of the church, and made him a count. He was also constable of Naples; and after having driven Alphonso, king of Arragon, from the walls of that city, he was suddenly cut off in the midst of his successful career, being drowned in crossing the river near Pescara, in pursuing the flying enemy. This catastrophe took place in 1424.—FRANCIS SPORZA, the natural son of Jacomuzzo, following the example of his father, and possessing equal courage and ambition, raised himself to sovereign power. He married the daughter of the duke of Milan, on whose death he made himself master of the duchy; and he afterwards gained possession of Genoa. He died in 1466, and his descendants long held the dukedom of Milan.—*Comines. Mort.*

SHADWELL (THOMAS) an English dramatic poet, was descended from a good family in the county of Stafford, but was born at Stanton-hall, Norfolk, a seat of his father's, about 1640. He was educated at Caius college, Cambridge, and afterwards placed at the Middle Temple, where he studied the law for some time, and then visited the continent. On his return from his travels, he applied himself to the drama, and wrote seventeen plays with so much success, at least, as introduced him to several critics of wit and quality, by whom he was much esteemed. His model was Ben Jonson, whom he imitated in drawing numerous characters, chiefly in caricature, of eccentricities in the manners of the day. Although coarse, and of very temporary reputation, the comedies of Shadwell are not destitute of genuine humour; but it appears that his writing was far excelled by his conversation. At the Revolution he was created poet laureat, on the recommendation of the earl of Dorset; and as he obtained it by the dispossession of Dryden, the latter exhibited the bitterest enmity towards his successor, against whom he composed his severe and able satire of "Mac Flecknoe." He died December 6, 1692, in consequence, it is supposed, of taking too large a dose of opium, to which dangerous custom he was perniciously attached. Besides his dramatic writings, he was author of several pieces of poetry of no great merit. The best edition of his works was printed in 1720, 4 vols. 12mo.—He left a son, Dr JOHN SHADWELL, who was physician to Anne, George I, and George II, by the former of whom he was knighted.—He had also a nephew, or younger son, named CHARLES SHADWELL, who wrote seven dramatic pieces, all of which were confined to the Irish stage, except "The Fair Quaker of Deal," and "Humours of the Army." His comedies were printed in 1720, in one volume, 12mo. He died in Dublin, where he enjoyed a post in the revenue, in 1726.—*Biog. Dram. Ciber's Lives.*

SHAKSPEARE (WILLIAM) the most illustrious name in the history of English dramatic poetry, and with some pretensions to the same rank as regards the drama in general, was born at Stratford-upon-Avon, on the 23d of April,

1564. His father, who sprang from a good family, was a considerable dealer in wool, and had been an officer and bailiff of Stratford, where he for some time acted as justice of the peace. His mother was of the ancient family of Arden in the same county, one of undoubted gentility. The subject of this article, who was the eldest of ten children, received the common education of a country free-school, consisting of "a little Latin, and no Greek." At an early age he was taken by his father to assist in his own business; although Mr Malone is of opinion that he was placed in the office of some country attorney. Be this as it may, in his seventeenth or eighteenth year he married Ann Hathaway, the daughter of a substantial yeoman, who was eight years older than himself. Of his domestic establishment, or professional occupation, at this time, nothing determinate is recorded; but it appears that he was wild and irregular, from the fact of his connexion with a party who made a practice of stealing the deer of sir Thomas Lucy. This imprudence brought upon him a prosecution, which he rendered more severe by a lampoon upon that gentleman, in the form of a ballad, which he had affixed to his park gates. He also drolls in a kindred spirit upon the same magistrate, in the character of Justice Shallow, in the opening scene of "The Merry Wives of Windsor;" which continued hostility, as he was indisputably a kind-hearted man, may presume an excess of rigour and of pertinacity on the part of sir Thomas Lucy. The consequence of this youthful imprudence drove him to London for shelter; and it is some proof that he had already imbibed a taste for the drama, that his first application was to the players, among whom, in one Thomas Green, a popular comedian of the day, he met a townsman and acquaintance. This removal is thought to have taken place in 1586, when he was in his twenty-second year. If tradition may be depended upon, he was necessitated, in the first instance, to become the prompter's call-boy or attendant, while another less probable story describes him as holding the horses of those who attended the play without servants, a custom of the period. As an actor, the top of his performance is said to have been the ghost in his own Hamlet. How soon he began to try his powers as a dramatist is uncertain, but it appears that Romeo and Juliet, and Richard II and III, were printed in 1597, when he was thirty-three years of age. There is however reason to believe that he made his first attempt in 1592, and Malone even places the first part of Henry VI in 1589. He appears to have been not only popular, but approved by persons of the highest order, as we are informed on the authority of sir William D'Avenant, that the earl of Southampton, to whom he dedicated his Venus and Adonis, and Rape of Lucrece, presented him with the then magnificent sum of 1000*l.* to complete a purchase. It is also asserted that he received a command from queen Elizabeth, who was much delighted with his Falstaff in Henry IV,

SHA

to write another play, in which the facetious knight might appear in love; a task which he accomplished in "The Merry Wives of Windsor." He was also favoured with an amicable letter from James I, in return, as Dr Farmer supposes, for the compliment in Macbeth. How long he acted has not been discovered, but he finally became a proprietor and manager by license, of the Globe Theatre in Southwark; and it was in this situation that he afforded Ben Jonson the opportunity of appearing as a dramatic writer. His connexion with the latter has been variously related; but the imputed malignity of Jonson has been much impugned, by the able research of Mr Octavius Gilchrist, in confirmation of the previous reasoning of Dr Farmer to the same effect. Nor does it follow that an occasional remark in Jonson's "Discoveries," upon the deficiency of Shakespeare's learning, and his careless manner of writing, the only apparent ground of the imputation, merits to be so regarded. Having a sobriety and moderation in his views of life, not very common in the profession which he adopted, our great dramatist retired early with a respectable fortune of from 200*l.* to 300*l.* per annum, adequate possibly to 1000*l.* in our own day, and spent the remainder of his life in ease, retirement, and the conversation of his friends. For some years before his death he resided at Stratford, in a house which he bought from the Clopton family, and which continued in the possession of his descendants until the Restoration, when it was repurchased by a member of the same family, the representative of which, sir Hugh Clopton, a baronet knighted by George I, entertained Garrick, Macklin, and others, in 1742, under the mulberry-tree, planted by Shakespeare. It may be interesting to know, that his executor sold the house to a clergyman of the name of Gastrel, who being rated for the poor higher than it pleased him to pay, peevishly declared that the house should never pay again; and in spite to the inhabitants of Stratford, who were benefited by the company it brought to the town, he pulled it down, and sold the materials. He had previously cut down the mulberry-tree for fuel, but an honest silversmith purchased the whole of it, which he profitably manufactured into memorials of the poet. Having thus wreaked his vengeance, this sentimental divine finally quitted Stratford. Such was the fate of a residence in which Shakespeare exhibited so little solicitude for fame, or consciousness of his own merits, that a similar example of modesty is scarcely to be found in literary biography. He died on his birth-day, April 23, 1616, having exactly completed his fifty-second year. He was interred on the north side of the chancel of the great church of Stratford, where a monument is placed on the wall, in which he is represented under an arch in a sitting posture, a cushion spread before him, with a pen in his right hand, and his left resting on a scroll of paper. The following Latin distich is engraved under the cushion:—

SHA

"Judicio Pylum, genio Socratem, arte
Maronem,
Terra tegit, populus mæret, Olympus
habet."

An error in quantity in the first syllable of Socrates, induces Mr Steevens to think that Sophocles was intended. To this Latin inscription may be added the lines to be found underneath it:—

"Stay, passenger, why dost thou go so fast?
Read, if thou canst, what envious death
hath plac'd
Within this monument; Shakespeare, with
whom
Quick nature dy'd; whose name doth
deck the tomb
Far more than cost; since all that he
hath writ

Leaves living art but page unto his wit."
This monument was erected within seven years of his death; but on his grave-stone beneath are written the following lines, which seem to have been engraven in a strange mixture of large and small letters, at the time of his interment:—

"Good Frend for Jesus sake forbear
To digg the dust enclosed here
Blese be the man that spares these stones
And curst be he that moves my bones."

His monument in Westminster abbey, which was erected in 1741, under the direction of the earl of Burlington, Mr Pope, and Dr Mead, and paid for by the produce of benefita for the purpose at the two patent theatres, is too well known to need description. Shakespeare left two daughters, the eldest of whom, Susannah, married Dr Hall, a physician, and left a daughter, married first to T. Nashe, esq. and afterwards to sir John Barnard, of Abington, Northamptonshire, but died without issue. Judith, the poet's second daughter, married a Mr Thomas Quiney, by whom she had three sons, who all died unmarried. The only notice recorded of the person of Shakespeare is to be found in Aubrey, who says, that "he was a handsome well-shaped man;" and adds, what is otherwise amply corroborated, that he was "verie good company, and of a verie ready, pleasant, and smooth witt." The first edition of Shakespeare's plays, in number thirty-six, did not appear until seven years after his death; of these only seven had been printed during his life-time, owing, it is thought, to his interest as proprietor and manager interfering with their publicity. This first edition was printed from copies in the hands of his fellow-managers, Heminge and Condell, who gave a second in 1632; but both these and some subsequent ones were full of errors, until in some degree corrected by the poet Rowe's edition of 1714. It is unnecessary to enumerate the various editions which have since appeared, or to describe the critical labours of Rowe, Pope, Theobald, Hanmer, Warburton, Steevens, Malone, and Johnson, by which much has been elucidated, and, in the confusion of opposing opinions, something perhaps obscured. The dramatic reputation of Shakespeare, although great in his own days

became partially obsolete during the period when French taste prevailed, and French models were studied under the second Charles; and rising again as it did on its own intrinsic pretension, until his productions established a national taste, the fact is still more honourable to his genius. That much of the admiration entertained for him is national and conventional, may be freely allowed; but giving all due weight to the cold hints of this nature, which pervade criticism of a certain tone, a fair appeal may be made on the ground of positive qualification, and a knowledge of the human heart, which, in its diversity at least, has never been surpassed. To this faculty must be added that of an imagination powerful, poetical, and so felicitously creative, that presuming the existence of the vivid offspring of his fancy, the adopted feelings and manners seem to belong to them alone. When he describes, to use the language of Dryden, "You more than see, you also feel it; and the force and copiousness of his moral sentiment are most extraordinary." That he frequently quibbles in his comedy, and swells to bombast in his tragedy, is indeed undeniable; but the fault in the first instance is redeemed by so much easy, natural, and spontaneous humour; and in the latter by such profound exhibitions of genuine passion, deep feeling, and elevated conception, that the flaw in the diamond is lost in the intensity of the blaze; and the faults of Shakspeare, when summed up in English hearing, are listened to with a degree of impatience that savours more of idolatry than criticism. Very lately a theory, favoured it may be feared by lord Byron—(see article SCHILLER)—has been encouraged, in disparagement of the order of intuitive genius, of which that of Shakspeare affords so brilliant an example. The spirit which can lose itself in its conceptions, is deemed inferior to that which eternally exhibits the author in his exertions; and the very ease and spontaneity which form the grand distinction of the genius are made the ground of its inferiority. That law of nature which clogs the most rich and luxuriant vegetation with a correspondent proportion of weeds, is forgotten on this occasion; and the prevalence of the one is more than fairly opposed to the fertility of the other. Voltaire observes, that Shakspeare has been the favourite of the English nation for more than a century; and that that which has engrossed national admiration for a hundred years, will by prescription, ensure it for ever. There is some truth in this remark, but, as in the case of Homer, great native strength of genius can alone establish the prepossession. Of late years, too, the genius of Shakspeare has engaged foreign attention in no mean degree; and that too with correspondent admiration. It has been conjectured that much in his least disputed plays may not have been his own, as it is known that he accommodated the pieces of other writers for representation; but in whatever degree this may have been the case, there is a predominant vein in all the superior passages, which is evidently the

flowing of one particularly constituted mind, which mind, being common to all of them, must necessarily have been that of Shakspeare. Another peculiarity attends the dramatic characters of this great master; whoever treats upon them is insensibly led to discuss them like realities, and not, as in most other instances, as mere fictions of the brain. This article may be concluded with a remark, that Shakspeare has been the innocent cause of much imposition, one of the latest and most impudent being the fabrication, in 1796, of an entire play called "Vortigern," with a mass of prose, verse, letters, &c. pretendedly in the hand-writing of Shakspeare. As in the similar attempt of Chatterton, the forgery deluded some very zealous antiquarians, and had produced much elaborate controversy, when the confession of the audacious contriver soon set it at rest for ever. Portraits have been forged with similar and safer impudence. Besides his immortal plays, Shakspeare was the author of two poems, entitled "Venus and Adonis," and "Lucrece;" and a collection of sonnets, which, although lost in the blaze of his dramatic genius, exhibit many scattered beauties. At all events they have been treated much too cavalierly by Stevens; although it is probable that they would not have availed of themselves to have made their author much known to posterity.—*Life prefixed to Variorum Edition of 1806. Rowe. Malone. Farmer.*

SHARP (ABRAHAM) an eminent mathematician, mechanist, and astronomer, was born at Little Horton in Yorkshire, about 1651. He was apprenticed to a merchant at Manchester; but his inclination and genius for mathematics induced him to choose the more congenial occupation of a schoolmaster at Liverpool. Having acquired an introduction to Flamsteed, the latter obtained for him a profitable employment in the dock-yard of Chatham; and aware of his mechanical accuracy, called him to his assistance in completing the astronomical apparatus at Greenwich, and forming the catalogue of fixed stars. This able and ingenious man seems entitled to the credit of being the first who exhibited any thing like modern accuracy in the department of hand division; his scales and instruments, both in wood and iron, far exceeding in precision and firmness every thing which had preceded them. He ultimately retired to a small estate at his native place, where he erected an observatory, furnished with instruments made by himself. He published a work, entitled "Geometry Improved," 4to, 1717. He died in 1741.—*Hutton's Math. Dict.*

SHARP (JAMES) archbishop of St Andrews in Scotland, an active and distinguished prelate of the 17th century. He was a native of Banffshire, born 1618; and from a strong development of precocious talent, was early destined by his family for the ministry. With this view he was placed at the Marischal college in Aberdeen, but objecting to take the "solemn league and covenant," quitted the university, and went to London. During the civil wars of the period he returned to his native country,

and there, through the patronage of the lords Leslie and Crauford, obtained a professorship in the university of St Andrews, with the appointment of pastor to a congregation at Crail. While in this situation his eloquence and reputation for general as well as theological attainments, caused him to be selected by the moderate presbyterian party in Scotland to advocate their cause with the Protector, Cromwell, against the demands of the more rigid Calvinists; and he was subsequently sent to Breda by Monk, then general of the troops in that part of the kingdom, for the purpose of procuring the sanction of Charles II to the proposed settlement of the ecclesiastical affairs of Scotland. He returned to Scotland, and delivered to some of the ministers of Edinburgh a letter from the king, in which the latter promised to protect and preserve the government of the church of Scotland, "as it is settled by law." The clergy, understanding this declaration in its obvious sense, were satisfied; but it subsequently appeared, that Sharp acted thus with a view to subvert the church government which he affected to maintain, pleading to the friends of episcopacy that this letter would keep the presbyterians quiet, and pledge the king to nothing, as the parliament had only to enact episcopacy, to transfer the pledge of the monarch to its support. The presbytery being accordingly overturned by parliament, Sharp was rewarded with the primacy, and appointed archbishop of St Andrews; a preferment which at once set opinion at rest upon the perfidy of his conduct and the profligacy of his character. The absurd and wanton cruelties which followed, confirmed the horror entertained against him as a traitor and a renegade, and raised the fury of some of his more bigoted opponents to attempts against his life. In 1678 he narrowly escaped assassination from the hand of James Mitchell, an enthusiast, who was some time after taken and executed. A similar attempt the following year was more successful. His carriage, in which he was travelling in Magnus Muir, about three miles from St Andrews, on the 3rd May, 1679, was met by some fanatics, headed by John Balfour of Burley, who were waiting there to intercept a servant of the archbishop's, named Carmichael, who had rendered himself odious by his cruelty. To tempers thus heated and blinded by fanaticism, the appearance of the archbishop himself was deemed a sign of the intention of providence to substitute a more important victim; and regardless of the tears and entreaties of his daughter, they dragged him from his carriage, and despatched him with their swords, with which they inflicted no less than twenty-two wounds.—*Laing's Hist. of Scotland. Encyc. Brit.*

SHARP (JOHN) archbishop of York, descended of an ancient but decayed family of the same name, long settled at Little Norton in Bradford Dale, in that county. His father was a tradesman of some note at Bradford, where he was born in 1644; and after studying at Christ college, Cambridge, he completed

his degrees, and became domestic chaplain to sir Heneage Finch, the then attorney-general, in 1667. Five years afterwards he was promoted, through the interest of his patron, to the archdeaconry of Berkshire, which piece of preferment was succeeded by a stall in Norwich cathedral, and the rectory of St Bartholomew in the city of London. This latter living he exchanged soon after, for the more valuable one of St Giles-in-the-Fields; and the elevation of sir Heneage to the woolsack, paved his way for still further preferment. In 1681 he was accordingly made dean of Norwich; but before he had filled that situation five years, a sermon which he preached against the Romish church, gave such offence to James II, that an order was issued by that monarch to the bishop of London for his suspension. The prelate, refusing to carry this command into execution, incurred a similar sentence from the court. Dr Sharp appears, however, to have regained the king's favour, as he was eventually made one of his chaplains. In 1689 king William presented him to the deanery of Canterbury, and a bishopric was even offered to his acceptance, of those vacated by the prelates deprived for refusing to take the oaths. This he declined, but on the death of archbishop Lamplugh in 1691, succeeded him in the see of York. He was afterwards sworn of the privy council to queen Anne, made grand almoner, and preached the coronation sermon of that sovereign in 1702. This learned and eloquent prelate was the author of a great variety of sermons, which still maintain their popularity. After his decease, which took place at Bath in February 1714, they were collected and printed in seven octavo volumes. There is an elegant inscription to his memory in York Minster, where he lies buried.—*Eng. Brit.*

SHARP (THOMAS) a younger son of the preceding, was born about 1693. He was admitted at Trinity college, Cambridge, in 1708, and became a fellow of his college and DD. in 1729. He received various preferments in the church of England, including the rectory of Rothbury in Northumberland, and a prebend in York cathedral; and was finally collated to the archdeaconry of Northumberland, and made prebendary of Durham, where he died in 1758. He published "The Rubric in the Common Prayer, and Canons of the Church considered;" "Discourses on the Hebrew Tongue;" "Two Dissertations concerning the Meaning of the Hebrew Words Elohim and Bareith," in relation to the Hutchinsonian controversy.—*Hutchinson's Hist. of Durham.*

SHARP (GRANVILLE) an English gentleman, eminent for his philanthropy, purity of principles, and learning, and one of the sons of the preceding, was born in 1734. He was educated for the bar, but did not practise at it; he obtained a place in the Ordnance office, which he resigned at the commencement of the American war, the principles of which he did not approve. He then took chambers in the Temple, and led a life of private

study. He first became known to the public by his spirited defence of a poor and friendless negro named Somerset. This man, having been brought to England by his master, during a fit of sickness was turned out into the streets to die. With unparalleled baseness, when by the charity of Mr Sharp and others he had been restored to health, he was claimed again as property, the result of which was a series of law proceedings, which not only cleared Somerset from the contemptible being who asserted a right to his person, but determined that slavery could not exist in Great Britain. Such an incident could not fail to deeply impress a benevolent mind, and slavery in every country became the object of his unceasing hostility. Having succeeded in the case of an individual negro, he interested himself in the condition of others, whom he found wandering in the streets of London, and at his own expense sent a number of them to Sierra Leone; he also soon after became the institutor of the celebrated Society for the Abolition of the Slave Trade, and with similar humanity sought to modify the harsh practice of impressment. He was likewise led by his political principles to be the warm advocate of parliamentary reform, in support of which he published "A Declaration of the People's Natural Right to a Share in the Legislature," in which work he contends for a revival of the system and political institutions of Alfred. This worthy individual, who attained the age of seventy-nine, died July 6, 1813, unceasing in study, and active in benevolence to the last. He was an able linguist, and versed in theology; in respect to which he exhibited an ardent zeal for the principles of the church of England; and his private conduct was as pious and regular as his exertions in the cause of humanity were spirited and enthusiastic. His library was very extensive, and he possessed a curious collection of Bibles, some of which he presented to the British and Foreign Bible Society, of which he was also a zealous promoter. The principal works of this indefatigable scholar and philanthropist are, "Remarks on the Uses of the Definitive Article in the Greek Testament, &c. to which is added a plain matter-of-fact Argument for the Divinity of Christ," 1798, 8vo; "A Short Treatise on the English Tongue;" Remarks on the Prophecies; Treatises on the Slave Trade, on Duelling, on the "Law of Nature and Principles of Action in Man;" Tracts on the Hebrew Language; Illustrations of the 68th Psalm, &c. In regard to most of these productions, the impression is likely to be very temporary; but as connected with a standing controversy, the Remarks on the Definitive Article may probably form a lasting manual in defence of the doctrine of the divinity of Christ, against the arguments of the Unitarians.—*Nichols's Lit. Anec. Life by Hoare.*

SHARP (WILLIAM) a modern engraver of great eminence and skill in his art, the son of a reputable gun-maker residing in Haydon-yard in the Minories, where he was born January 29, 1740. His father, observing early

manifestations of a taste for drawing in his son, apprenticed him to Mr Longmate, an artist who practised what is technically termed bright engraving, because it attracts attention to itself, and not to impressions from it. At the expiration of his indentures Sharp, then very young, married a Frenchwoman, and commenced business on his own account in Bartholomew-lane, when soon finding himself capable of greater things than the engraving of dog-collars and door-plates, he resolutely applied himself to the study of the higher branches of his art. One of his first essays is said to have been a plate of Hector, an old lion then in the Tower of London, from an original drawing by himself. In 1782 he removed to the neighbourhood of Vauxhall; but increasing fast both in business and reputation, soon after took a larger and more respectable residence in Charles-street, Middlesex hospital. About this period he became a convert to the mysterious reveries of Mesmer and Emanuel Swendenborg, in common with De Louthourbourg, and some others of the same profession as himself, none of whom, however, appear to have suffered their enthusiasm to carry them so far as the subject of this memoir. To these visionaries succeeded the notorious Richard Brothers, of whom Sharp immediately became a strenuous disciple, and actually engraved two separate plates of the soi-disant prophet, lest one should be insufficient to produce the requisite number of impressions which would be called for on the arrival of the predicted Millennium. When Brothers was incarcerated in a mad-house, Sharp, whose faith was not yet shaken in him, notwithstanding the failure of his prophecies in point of time, attached himself to the then rising school of Joanna Southcote, of whose pretensions he continued a staunch supporter to the day of his own death, although he survived considerably the object of his credulity, whom, in spite of the evidence of his own senses, he persisted in affirming to be only in a trance. In 1814, being then in the zenith of his reputation as an artist, he was elected member of the Imperial Academy of Vienna and of the Electoral Academy of Bavaria; and received through the president, sir Joshua Reynolds, an offer of a recommendation as an associate of the Royal Academy in London, which, in conformity with Woollett, Hall, and other engravers, who thought their art slighted by their not being allowed to become royal academicians, he declined. From London, Mr Sharp removed to Acton, and thence to Chiswick, where he died of a dropsy in the chest, July 25, 1824. Although professing Tory principles in the latter part of his life, he was at one time a member of the Society for Constitutional Information, and narrowly escaped being put upon his trial for high treason, with his friends Messrs. Horne Tooke, Holcroft, and Thelwall. He was arrested by order of government on this occasion, and was even examined before the privy council, when, it is said, the naïveté of his answers and behaviour fully convinced ministers that a person of his

description was little likely to engage in any serious conspiracy, and he was liberated after exciting a hearty laugh among the members who composed the board. Among the best productions of his graver are reckoned his "St Cecilia," after Domenichino; "Diogenes," from a painting by Salvator Rosa; an "Ecce Homo," from Guido; a "Madonna and Child," from Carlo Dolce; and a "Zenobia," from a picture by Michael Angelo in the collection of sir J. Reynolds. He also engraved several valuable portraits, and a large historical picture, by Turnbull, of the "Sortie from Gibraltar on the Morning of November 27, 1781."—*Ann. Bing.*

SHARPE (GREGORY) an eminent Oriental scholar and able divine, a native of Yorkshire, born 1713. He was first placed by his friends at the grammar-school of Hull in the same county, whence he removed to Westminster under Dr Freind, and thence again to the Scottish university of Aberdeen, where he became a pupil of professor Blackwell. Having taken holy orders in the communion of the established church, he obtained the appointment of preacher at a chapel in Westminster, but distinguishing himself by his learning and polemical disquisitions, was made a king's chaplain, and master of the Temple. He was the author of a variety of able works on theological subjects, the principal of which consist of "Three Discourses in Defence of the Christian Religion;" "Review of the Controversy concerning the Demoniacs of the New Testament," 8vo; "Defence of Dr Clarke against the Attacks of Leibnitz," 8vo; "Letter to Bishop Lowth;" "Rise and Fall of Jerusalem;" "On the Origin of Languages and the Powers of Letters, with a Hebrew Lexicon;" "On the Greek Language;" "On the Latin Tongue;" "Syntagma Dissertationum quarum olim Auctor doctissimus Thomas Hyde;" a volume of sermons; and a translation of Holberg's "Introduction to Universal History," 8vo. This excellent scholar and amiable man died in London, 1771.—*Nichols's Lit. Anec.*

SHAW (CUTHBERT) a minor poet and miscellaneous writer, was born at Rickmond, Yorkshire, about the year 1738 or 1739. Being the son of a shoemaker in humble circumstances, he received a very common education, which however enabled him to become usher at the grammar-school of Darlington. Here, in 1756, he wrote a poem entitled "Liberty," and soon after came to London, and obtained employment from the newspapers, and subsequently became a player both in London and Dublin. In 1762 he quitted the stage, and again took up the pen, and wrote a satire against Lloyd, Churchill, Coleman, and Shirley, which he entitled "The Four Farthing Candles." In 1766 he published "The Race," a poetical satire on the poets of the day. He soon after married, but lost his wife on the birth of her first child, which produced a pathetic "Monody," esteemed his best performance. The remainder of his life was miserable in the extreme, being equally the victim of disease and

poverty. He still, however, continued to write, and produced "Corruption," a satire, and an "Elegy on the Death of the Hon. Charles Yorke," just appointed chancellor, which was bought up, as intending to have all the effects of satire. This reckless and improvident man died in great distress, in 1771.—*Europ. Mag.*

SHAW (GEORGE) a distinguished writer on zoology and other branches of natural history, born in 1751, at Bierton, in Buckinghamshire, of which parish his father was minister. He studied at Magdalen-hall, Oxford, where he took the degree of MA. in 1772; and entering into clerical orders, he became curate to his father. In adopting the profession of an ecclesiastic, he had not however consulted his own inclinations, and he therefore quitted it, in order to study medicine, as a pursuit with which he could connect those scientific researches for which he had a peculiar predilection. He accordingly went to Edinburgh, as the best school of medical science; and after attending the lectures of the celebrated professors who adorned that university in the latter part of the last century, he returned to Oxford, where he regularly graduated as MD. doubtless with a view to the exclusive advantages enjoyed by physicians who have been admitted to their degrees at the English universities. But he had also a more immediate motive for securing his academical honours, as he became a candidate for the professorship of botany at Oxford, though in this he did not succeed, owing, it is said, to his having taken orders in the church. He then settled as a physician in London, and by his lectures and publications soon made himself known as a man of talent and information. On the foundation of the Linnæan Society, he was appointed one of the vice-presidents; and he delivered a course of lectures on zoology at the Leverian Museum, and published a descriptive account of the natural curiosities comprised in that collection. In 1789 he was elected a fellow of the Royal Society; and in 1791 he became one of the librarians and assistant keeper of the cabinet of natural history at the British Museum. In 1807 he obtained the office of principal keeper in the same department, which he retained till his death. That event took place July 22, 1813. Dr Shaw published "General Zoology," 1800—19, continued after his death to eleven volumes octavo; "Zoological Lectures," delivered at the Leverian Museum and at the Royal Institution, 2 vols. 4to; second edition, 1809, 2 vols. 8vo; "The Zoology of New Holland;" "Cimelia Physica;" and he conducted the "Naturalist's Miscellany," and other periodical works on natural history. He was also a contributor to the Transactions of the Linnæan Society; and he co-operated with Dr Charles Hutton and Dr R. Pearson in the abridgment of the Philosophical Transactions. 1809, &c. 18 vols. 4to.—*Gent. Mag.*

SHAW (PETER) a physician and natural philosopher of the last century, who was the author of some useful scientific publications.

S H A

Nothing appears to be known of his early history. In 1725 he published "The Philosophical Works of the Hon. Robert Boyle, abridged, methodized, and disposed under the general Heads of Physics, Statics, Pneumatics, Natural History, Chymistry, and Medicine; with Notes, containing the Improvements made in the several Parts of Natural and Experimental Knowledge since his Time," 3 vols. 4to. This was followed by a treatise, entitled "The New Practice of Physic," 1726, 2 vols. 8vo; an abridgment of the works of Lord Bacon, 3 vols. 4to. &c. He probably delivered lectures on chemistry in the metropolis, which were published in an octavo volume, and they are still valuable on account of the technical and economical information they afford. Dr Shaw was chosen FRS. in 1755; and he obtained the appointment of physician to the king (George II), but he resigned it in favour of his son-in-law, Dr Richard Warren. His death took place in 1763.—*Nichols's Lit. Anec. Edit.*

SHAW (STEBBING) a divine and able topographer, was the son of a clergyman, and born in 1762, at Stone, in Staffordshire. He was educated at Queen's college, Oxford, where he obtained a fellowship, and entered into orders. He subsequently became tutor to Sir Francis Burdett, with whom he made the tour of the Highlands, an account of which he published. In 1788 he travelled through the western counties of England, a narrative of which journey he also published. In 1789 he commenced a periodical publication, entitled "The Topographer," in monthly parts, after which he commenced his "History of Staffordshire," the first volume of which appeared in 1798, and met with great approbation; a part of the second followed in 1801, previously to which the author had succeeded his father as rector of Hartshorn in Derbyshire. He died in the prime of life, the 28th October, 1802.—*Gent. Mag.*

SHAW (THOMAS) a learned divine and Oriental traveller, born at Kendal, in Westmoreland, about 1692. He entered at Queen's college, Oxford, in 1711, and he took the degree of AM. in 1719. He then entered into holy orders, and was appointed chaplain to the English factory at Algiers; in which situation he continued several years, and during that time he visited Egypt, Palestine, &c. In 1727, while absent from England, he was chosen a fellow of his college; and returning home in 1735, he received the degree of DD. in the following year, when he was also elected a fellow of the Royal Society. In 1738 Dr Shaw published at Oxford his "Travels in Barbary and the Levant," folio. On the death of Dr Felton, in 1740, he was nominated principal of Edmund-hall; and he was also presented to the vicarage of Bramley in Hampshire. He died in 1751. His travels are highly valuable, not only on account of their erudition and accuracy, but also for the information they afford relative to natural history, illustrative of the ancient classics, and of the sacred writings. A French translation of

S H E

Dr Shaw's Travels was published in 1743, 4to; and a second edition of the original work, with additions, appeared in 1757, 4to, reprinted at Edinburgh, 1808, 2 vols. 8vo.—*Mem. pref. to Trav.* 1808, vol. i. *Aikin's Gen. Biog.*

SHEBBEARE (JOHN) a physician and political writer in the reign of George II. He was a native of Bideford in Devonshire, where his father was a solicitor, and he was educated at a grammar-school kept by the rev. Z. Mudge at Exeter. At the age of sixteen he became apprentice to an apothecary at his native place, after which he settled in business at Bristol. Removing to London he commenced his career as a public writer, having previously made a visit to Paris, where he obtained the degree of MD. and was admitted into the Academy of Sciences. On his return to England, he published, in 1754, "The Marriage Act," a satirical romance; and "Lydia, or Filial Piety," another satire. In 1755 appeared his "Letters on the English Nation," 2 vols. 8vo, a pretended translation from the Italian of Batista Angeloni, a jesuit. This was followed by a series of "Letters to the People of England," the most successful of his works, though it subjected him to a prosecution. On the publication of his "Third Letter," 1756, orders were issued for his arrest; but it was not till January 1758, after the "Sixth Letter addressed to the People of England" had made its appearance, that he was taken into custody, when a "Seventh Letter," then at the press, was likewise seized. He was tried for the alleged libel, and being convicted, he was sentenced to pay a fine of five pounds, be imprisoned three years, and to stand in the pillory. The latter part of his punishment was rendered nugatory by the indulgence of the under-sheriff of London, who permitted him to stand unconfined on the platform of the pillory, with a servant at his back, holding an umbrella. The populace were also favourably disposed towards him, so that his exposure was a scene rather of triumph than disgrace. On his release from confinement, under the reign of a new sovereign, and the administration of lord Bute, he obtained a pension, for which he defended the conduct of government in the American war. His apostasy from the popular cause consigned him to contempt, and he died almost forgotten in 1788, aged seventy-nine.—*Lempriere. Biog. Univ.*

SHEFFIELD (JOHN) duke of Buckingham, a nobleman of some note as a wit and a statesman, was born in 1649, being the son of Edmund earl of Mulgrave, to whose title he succeeded in 1658. He was privately educated, but early dismissed his tutor, and at the age of seventeen engaged as a volunteer in the first Dutch war. On his return, by the union of wit and spirit so agreeable to Charles II, he became a great favourite at court, and when only in his twentieth year, by his interest contributed to promote Dryden to the office of poet laureat. He again served in the second Dutch war, and was subsequently appointed colonel of a regiment of foot. As no military

transaction intervened, it must have been through special favour that, in 1674, he received the order of the garter, and in 1679 the posts of governor of Hull and lord lieutenant of Yorkshire. On the accession of James II he was made lord chamberlain; and his zealous attachment to that weak sovereign induced him to take a seat in the ecclesiastical commission, and practise other compliances, though, being himself free from bigotry, he opposed many of the counsels which brought speedy ruin on his unfortunate master. At the Revolution he took the part of an anti-courtier, but in 1694 became member of the cabinet, with a pension, and the additional title of marquis of Normanby. The accession of Anne, to whom he is said once to have been a suitor, advanced him to the dukedom of Buckingham, with other honours; but jealousy of the duke of Marlborough drove him from office until the change of 1710, when he was made first steward of the household, and then president of the council under the administration of Harley. After the death of Anne, he was again in opposition, but employed his time chiefly in literary pursuits, until his death in 1720. He was thrice married, and each time to a widow; his last wife, by whom he left a son, was natural daughter of James II by Catherine Sedley. The literary fame of this prosperous nobleman was mainly assisted by his rank and influence in his own day. Dr Johnson represents him as a poet who sometimes glimmers, but rarely shines; feebly laborious, and at best but pretty. In his "Essay on Satire" he was supposed to have been assisted by Dryden; and few of his other pieces merit attention. His duchess and widow published a splendid edition of his works in 1723, in two volumes quarto; the first of which contained his poems upon various subjects, and the latter his historical memoirs, character, speeches, critical observations, and essays, some of which were suppressed in subsequent editions, in consequence of matter offensive to the government. Johnson speaks with encomium of his style in history. He was buried in Westminster abbey, where a magnificent monument is erected to his memory, with something of a sceptical epitaph, written by himself, which in its day produced considerable animadversion.—*Biog. Brit. Johnson's Poets.*

SHEIDIUS, or SCHEID (EVERARD) a philological writer, distinguished for his acquaintance with Oriental learning. He was born at Arnheim in Holland, in 1742, and he became professor in the university of Harderwyck. Thence he removed to Leyden, where he succeeded professor J. Albert Schultens in the chair of Oriental literature; but he did not long enjoy that honourable office, dying in 1795. He published several works on biblical criticism, besides his "Glossarium Arabico-Latinum Manuale," 1769, 4to; "Præmæ Linææ Institutionum, sive Specimen Arabicæ Grammaticæ," 1779, 4to; "Opuscula de Ratione Studii," 1786—92, 8vo; and "Ebn Doreidi Katsyda, sive Idyllium Arabicum, cum Scholiis," 1786, 4to. Scheid had projected a

new Dutch translation of the Bible, and other works, which death prevented him from executing.—*Biog. Nouv. des Contemp. Biog. Univ. Sari Onom. Litt.*

SHELLEY (PERCY BYSSHE.) See Appendix.

SHENSTONE (WILLIAM) a popular and agreeable poet, was born at Hales Owen, in Shropshire, in 1714. His father was a gentleman farmer, who cultivated a moderate estate of his own, called the Leasowes, which has since been rendered very celebrated by the reputation and taste of his son. The latter was educated at the grammar school of Hales Owen, whence he was removed to that of a schoolmaster at Solihull; and in 1732 to Pembroke college, Oxford. Here he began to exercise his poetical talents upon some light topics, and he entertained thoughts of taking his academical degrees, and proceeding to the study of some profession, but was seduced, by obtaining full possession of his paternal property, to take up his abode in his own house, and to decline all farther views of an active life. Here he occupied himself in rural embellishments, and the cultivation of poetry. In 1737 he printed a volume of juvenile poems, which obtained little notice; and in 1740 he visited London, when Dodsley published his "Judgment of Hercules," addressed to his neighbour, lord Lyttelton. In the following year appeared his pleasing poem in the stanza of Spenser, entitled "The Schoolmistress," possibly the best of all his poems. After amusing himself with a few rambles to places of public resort, he sat down for life at the Leasowes, which it was his great object to render famous for picturesque beauty and elegance. He succeeded but too well, as it drew visitors from all parts, and led to expenses which he could but ill support, and he was by no means a happy inhabitant of the Eden which he had created. He seems to have been led into more than one amatory predilection, but his passion generally vented itself in elegy and pastoral, without leading to further consequences. As he was much respected, an application was made to the earl of Bute, to place him in easier circumstances by a pension; but he was carried off by a fever before the result of the application could be known, in February, 1763, in his fiftieth year. His works were collected by Dodsley, in three volumes, octavo, and they still retain a respectable share of popularity. The first consists of elegies, odes, songs and ballads, levities, or pieces of humour, and moral pieces; the second contains his prose works; and the third is made up of his "Letters to his Friends." Of his merits as a poet the general opinion seems tolerably uniform. He is regarded as elegant, melodious, tender and correct in sentiment, and often pleasing and natural in description, but verging towards the languid and the feeble. The prose works display good sense and cultivated taste, and, with occasional paradox, contain just and sometimes new and acute observations on mankind.—*Life by Johnson and by Graves.*

S H E

SHERARD (WILLIAM) a learned botanist, whose proper name was Sherwood, instead of which he assumed that by which he is commonly known. He was born in Leicestershire in 1659, and was educated at Merchant Tailors' School, London, and St John's college, Oxford, where he entered in 1677. He afterwards obtained a fellowship, and proceeded bachelor of law in 1683. He then travelled in France and Italy, as tutor to two young noblemen; and he formed an acquaintance with Boerhaave, Hermann, Tournefort, Vaillant, Micheli, and other men of science abroad. In 1689 was published at Amsterdam an anonymous work, entitled "*Schola Botanica*," a systematic catalogue of the plants in the royal garden at Paris, reprinted in 1691 and 1699, of which Sherard appears to have been the author. In 1702 he was appointed British consul at Smyrna, a post which furnished him with an opportunity of forming a valuable collection of the plants of Greece and Asia Minor. He returned home in 1718; and in 1721 he made a new visit to the continent, and brought back with him from Germany the celebrated Dillenius, who became professor of Botany at Oxford. With Dillenius and his brother, Dr James Sherard, he devoted his time especially to the study of the Cryptogamic order of plants; and to their researches that obscure department of botany is indebted for considerable improvements. His death took place August 12, 1728. Besides the work already noticed, he assisted in editing Hermann's "*Paradisus Batavus*," and Vaillant's "*Botanicon Parisiense*;" and he aided with information, as well as with money, Catesby in his "*Natural History of Carolina*," and Dillenius in his "*Hortus Elthamensis*," though both these works appeared some time after his death. He left 3000*l.* for the foundation and support of a botanical professorship at Oxford; and to that establishment he bequeathed his library, herbarium, and the manuscript of his "*Pinax Botanicus*," which was never published.—His brother, **JAMES SHERARD**, acquired a considerable fortune by medical practice in London, first as an apothecary and then as a physician. He retired to Eltham in Kent, where he cultivated a number of exotic plants, and applied himself to the study of botany. He died February 12, 1737, aged seventy-two, and was buried at Fvington near Leicester.—*Rees's Cyclop. Pulteney's Sketches of Botany.*

SHERBURN (sir EDWARD) was descended from an ancient family of the same name at Stonyhurst in Lancashire. His father was knighted by Charles I, and made clerk of the ordnance, which office he held when his son was born in London, in September 18, 1618. The latter received a private education, after which he travelled on the continent, but was obliged to return in consequence of the illness of his father, to whose office he succeeded by reversion. The civil war soon deprived him of it; and being a Roman Catholic, and firmly attached to the king, he endured a long and expensive confinement in the custody of the

S H E

usher of the black rod. On his release he followed the fortunes of the king, who made him commissary general of the artillery, in which capacity he witnessed the battle of Edge Hill, and afterwards attended Charles to Oxford, where he received the degree of A.M. On the surrender of Oxford, he repaired to London, and endured considerable distress, but appears not to have been molested, as he published his translation of Seneca's *Medea*, and other works, openly. In 1651 sir George Savile, afterwards marquis of Halifax, made him superintendant of his estates; and on the Restoration he regained his office in the ordnance, to which, in 1682, was added the honour of knighthood. At the Revolution, being unable to take the oaths, he again lost his post, and died at the advanced age of eighty-four, on the 4th November 1702. His works consist of "*Poems and Translations*," 1651; a "*Translation of Seneca's Tragedies*," and another of "*The Sphere of Manilius*." The poetry is not destitute of genius, although overloaded with the strained metaphors and allusions so common to his time. As a translator he appears to more advantage, and frequently conveys the sense of his author with considerable spirit. His sacred poems often display superior warmth and elegance.—*Biog. Brit. Dodd's Ch. Hist.*

SHEREBATOFF (prince) a Russian nobleman, who published several works in his native language, including "*The History of Russia from the earliest Times*," 4 vols. 4to. He also edited "*A Journal of Peter the Great*," 2 vols. 4to, published by order of the empress; "*The Russian History by an ancient Annalist, from 1114 to 1472*," and "*The Life of Peter the Great*," first published at Venice, which the prince reprinted with additions in 1773. Mr Coxe describes the History of Prince Sherbatoff as a most valuable work, founded on authentic materials drawn from the imperial archives, and supported by accurate references to the best authorities.—*Rees's Cyclop.*

SHERIDAN (THOMAS) an Irish divine, who was the son of a Protestant country gentleman possessed of an estate at Uagheraghy in the county of Cavan. He was born in 1694, and was educated at Trinity college, Dublin, through the kindness of his relative, Dr William Sheridan, the deprived bishop of Kilmore, the prodigality of his father having put it out of his power to assist him. Having taken his degrees, and entered into holy orders, he obtained a fellowship, which he soon forfeited by marrying a woman named Elizabeth Macfadden, whose mind, person, or manners, do not appear to have furnished any apology for such a piece of imprudence. As he was a good classical scholar, he set up an academy for youth at Dublin; and in this undertaking he was patronized by dean Swift, with whom he was a great favourite, partly on account of his facetiousness and good-humour, and partly on account of his high church principles. His success at first was great, but an attachment

to company and the pleasures of the table soon occasioned a reverse of fortune. His school, which at one time is said to have produced nearly a thousand a year, having declined so as to become unprofitable, he capriciously refused the offer of the endowed grammar-school of Armagh, worth about four hundred pounds per annum, and exchanged a living procured for him by Swift for one of half the value. He then mortgaged his landed property, persevered in all his former expenses, exchanged his new living for the free-school of Cavan, value only eighty pounds a year; and, at the end of two years, sold this for the sum of four hundred pounds. He at length settled in Dublin, where he died of a polypos of the heart, September 10, 1738, closing his singular and imprudent career in great poverty. Dr Sheridan was the author of some sermons, and of a prose translation of the satires of Persius.—*Month. Mag. Chalmers's Biog. Dict.*

SHERIDAN (THOMAS) the third son of the preceding, was born at Quilca near Dublin, in 1721. At the age of fourteen he was sent to Westminster, where he was admitted on the foundation. Being recalled in consequence of his father's embarrassments, he, after some delay, entered as a student of Trinity college, Dublin. After having proceeded to the degree of MA. he suddenly quitted the university for the stage, and made his first appearance in the character of Richard III, January 9, 1743-3, at the theatre in Smock-alley, Dublin. He obtained much celebrity in his new profession, both in his native country and in England. After a visit to London in 1744, he returned to the Irish metropolis, and became a theatrical manager. In this situation he experienced various misfortunes, partly arising from his attempts to reform the irregularities which prevailed among the frequenters of the Dublin theatre. At length the establishment of a rival theatre completed the ruin of his affairs; and he then for a while relinquished the stage, and commenced lectures on elocution, to which subject he endeavoured to draw the attention of the public by means of the press. He delivered his lectures in different parts of the kingdom, and was at first very successful, owing more to the novelty of the scheme than to its intrinsic merit. He was, however, fortunate enough to obtain a pension of 200*l.* a-year during the ministry of lord Bute, to whom he had dedicated one of his publications. He subsequently repaired to Blois in France, to avoid the persecution of his creditors; and while there he had the misfortune to lose his wife.—(See the next Article.)—Returning to England after the retirement of Garrick from the stage, he became manager of Drury-lane theatre, of which his son was one of the proprietors; but some disputes taking place, he retired from the office in disgust, and resumed his attention to oratory. The latest and most important of his literary labours was an "Orthoepical Dictionary of the English Language," which appeared in a quarto volume in 1788. The declining state of his health induced him to set out

for Lisbon, in the hope of deriving benefit from its mild climate; but he had scarcely embarked when he died, off Margate, August 14, 1788, and his corpse was interred at that place. He published "British Education," Dublin, 1756, 12mo; and other pieces relative to elocution, besides his Dictionary, and a "Life of Dean Swift."—*Month. Mag. Theop. Dict.*

SHERIDAN (FRANCES) the wife of Thomas Sheridan the actor, was the grand-daughter of sir Oliver Chamberlayne. Before she was married, she advocated the cause of her husband in a well-written pamphlet, against a party in opposition to him on account of some theatrical disputes. She subsequently employed her pen in writing a novel, entitled "Sidney Biddulph," 3 vols. a very interesting but sombre tale; "Nourjahad," an eastern romance, since dramatized; and two comedies, "The Discovery" and "The Dupe." She was born in Ireland in 1724, and died at Blois in France, in 1767. An account of the life of this amiable and accomplished woman was recently published by her grand-daughter, Alicia Lefanu.—*Month. Mag.*

SHERIDAN (RICHARD BRINSLEY) the third and youngest son of the last-mentioned Thomas Sheridan, was distinguished as a statesman, wit, and dramatist. He was born in Dorset-street, Dublin, October 30, 1751. For the early development of his talents he was indebted to the instructions of his accomplished mother, and he was afterwards placed at a grammar-school at Dublin, whence, in 1759, he was removed in consequence of his parents leaving Ireland. They settled at Windsor, and he remained at home till 1762, when he was sent to Harrow-school, which seminary he left at the age of eighteen, owing to his father's embarrassments. With a view to the legal profession, he entered subsequently as a student of the Middle Temple; but the close application and industry requisite for success as a lawyer, were incompatible with his volatile disposition, and he relinquished all thoughts of being called to the bar, for politics and the drama. His early marriage also doubtless induced him to look out for some more immediate means of support than the practice of a junior barrister would have been likely to afford him. Having very soon after his marriage dissipated the moderate property with which he set out in the world, he turned his attention to dramatic composition as the means of adding to his resources. His first production was the comedy of "The Rivals," acted at Covent Garden in January 1775, with moderate success; but "The Duenna," a musical entertainment, which followed, was received with general admiration; and his "School for Scandal" gained him the highest reputation as a comic writer. On the retirement of Garrick from the management of Drury-lane Theatre, Sheridan, in conjunction with Dr Forde and Mr Linley, purchased Garrick's share of the patent. This property qualified him for a seat in parliament; and in 1780 he was chosen member for the borough of Stafford. Lord

North was then minister, and Sheridan, joining the opposition, displayed so much ability, that on the retreat of the premier, and the conclusion of the American war, he was made under secretary of state for the war department. He resigned with his principal, in consequence of a dispute with Lord Shelburne, afterwards marquis of Lansdowne, who was at the head of the ministry. His intimate connexion with Fox brought him again into office on the coalition of that statesman with Lord North, when Sheridan held the post of joint secretary of the treasury under the late duke of Portland. The dissolution of that ministry threw him again into the ranks of opposition, where he remained during the whole period of the political ascendancy of Mr Pitt. He now attained distinguished celebrity as a parliamentary orator, and his talents were particularly exhibited in his opposition to the extension of the revenue laws, and on the subject of the Westminster election; but the grandest display of his eloquence occurred during the progress of the impeachment of Warren Hastings. His triumph on this occasion has been thus celebrated by Lord Byron:—

“When the loud cry of trampled Hindoostan
Arose to Heav’n in her appeal to man,
His was the thunder, his the avenging rod,
The wrath—the delegated voice of God!
Which shook the nations through his lips,
and blazed,

Till vanquished senates trembled as they
praised.”

In 1792 Mr Sheridan lost his wife, who left one son; and three years afterwards he married Miss Ogle, daughter of the dean of Winchester. With this lady he had a considerable fortune, which enabled him to purchase the estate of Polesdon, in Surrey; and as he held the office of receiver-general of the duchy of Cornwall, worth 1200*l.* a year, and retained his interest in Drury-lane Theatre, he seemed to be placed beyond the reach of pecuniary distress. The political changes consequent to the death of Mr Pitt in 1806, occasioned the exaltation of the party with which Sheridan was connected, and he obtained the lucrative post of treasurer of the navy, and the rank of a privy counsellor. This administration being weakened by the loss of Mr Fox, who survived his celebrated rival only a few months, new alterations took place, and Sheridan was deprived of office, to which he never returned. At the general election in 1806 he obtained a seat for Westminster, the great object of his ambition; but he was afterwards nominated for the borough of Ilchester, which he continued to represent during the remainder of his parliamentary career. The latter part of the life of this highly-talented individual was embittered by misfortunes, principally arising from his own indolence and mismanagement, though the destruction of Drury-lane Theatre by fire contributed to increase his difficulties. When the affairs of that establishment were arranged in 1811, Mr Sheridan and his son were to have on various accounts 40,000*l.* for their share of the property; but the portion

of the former was not sufficient to liquidate the debts and reserved claims to which it was liable. The dissolution of parliament, and his failure in an attempt to obtain a seat for Stafford, the borough he had formerly represented, completed his ruin. In the latter part of 1813 he had relinquished all thoughts of returning to the house of Commons; and the remainder of his existence was spent in attempts to ward off the dangers to which his improvidence had exposed him. At length every resource failed, and the disappearance of his property was followed by the arrest of his person. After a few days' detention, he was released, but only to experience fresh apprehension and alarm, from which he sought a temporary relief in that unrestrained indulgence and dissipation which had occasioned his misfortunes. Intemperance had undermined his constitution, and mental anxiety completed the destruction of his health. Even on the bed of sickness he was not exempted from the terrors of being arrested for debt; and his death, which took place July 7, 1816, amidst a complication of miseries, affords a striking example of the disastrous consequences of personal imprudence. Besides the plays already mentioned, Mr Sheridan was the author of “St Patrick's Day, or the Scheming Lieutenant,” a farce; “A Trip to Scarborough,” a comedy, altered from Vanbrugh; “The Camp,” a farce; “The Critic, or the Tragedy rehearsed;” “Robinson Crusoe, or Harlequin Friday,” a pantomime; and “Pizarro,” a play, from the German of Kotzebue. He also wrote “Verses to the Memory of David Garrick,” 1779, 4*to*; and “A Comparative Statement of the two Bills for the better Government of the British Possessions in India,” 1788, 4*to*. As a public man, on party principles, Mr Sheridan is entitled on the whole to the praise of consistency and disinterestedness, as he certainly might have obtained office and encouragement, had he chosen to desert the political body to which he adhered in all fortunes. This, as the embarrassment of his circumstances increased, was the more honourable to him, and even the imprudence of the man added to the self-denial of the politician. As a speaker he ranks among the most finished and varied of the rhetorical school; and his speech already alluded to against Warren Hastings has been deemed one of the most striking specimens of English eloquence upon record. As a dramatist he may be deemed the head of the department of that line of comedy which exhibits the polite malice, the civil detraction, the equivocal, intrigue, persiflage, and lurking irony which characterize social intercourse in the more cultivated grades of life. Wit usually takes the lead of humour in this species of composition; and, like Congreve, Sheridan has incurred the imputation of giving a portion of it to all his characters to a correspondent destruction of nature and verisimilitude. Something of this may be true, and still leave “The School for Scandal” the head of the comic modern drama in its own peculiar walk, and a very felicitous exemplification of

character, and of some of the most conspicuous of the well-bred vices and follies of fashionable life. The works of Sheridan appeared in 1821, in two volumes octavo, edited by Mr Thomas Moore, who has published an interesting life of the subject of this article.—*Genl. Mag. Month. Mag. Moore's Life of Sheridan.*

SHERIDAN (ELIZABETH) daughter of Thomas Linley, the musician, and first wife of the celebrated R. B. Sheridan. She was alike distinguished for her beauty, her fascinating manners, and her musical talents. There was a brilliancy and mellifluous sweetness in the tone of her voice, which penetrated the hearts of her hearers as much as her angelic looks delighted their eyes. In Handel's pathetic songs, in Purcell's *Mad Bess*, in the upper part of serious glees, or in any vocal music expressive of passion, she was sure to delight every hearer of sensibility. Sacchini, on hearing Miss Linley sing for the last time in public at Oxford, observed, that if she had been born in Italy, she would have been as much superior to all Italian singers as she was then to all of her own country. She relinquished her profession as a public singer on her marriage with Sheridan in 1773; and her death took place in 1792.—*Ross's Cyclop.*

SHERLEY or SHIRLEY (ANTHONY) a famous English traveller, who was born of a good family at Wiston in Sussex, in 1565. He studied at All Souls college, Oxford, where he took the degree of B.A. in 1581; after which he joined the English troops in the Netherlands. In 1596 he engaged in an expedition to the West Indies, against the Spaniards; and on his return home he was knighted. He was then sent by queen Elizabeth into Italy, to assist the people of Ferrara in their contest with the pope; but that being accommodated previously to his arrival, he proceeded to Venice, and, accompanied by his brother Robert, travelled thence to Persia, where he rose to great favour with the sovereign of that country, Shah Abbas, who despatched him in 1599 on an embassy to invite the Christian princes of Europe to join him in a war against the Turks. Hussein-Ali Bey, a Persian of distinction, was joined in this mission; and the two plenipotentiaries reached Moscow, whence Sherley despatched Hussein into Spain, and directed his course to Venice. The Persian was well received, while his coadjutor, having committed some crime, was thrown into prison, and would probably have been put to death, but for the interference of the Spanish ambassador, who procured his liberty. He then went to Spain, where he so advantageously distinguished himself, that the king made him admiral of the *Levant Seas*, and appointed him a member of the council of Naples. These honours excited the jealousy of his sovereign, James I, who commanded him to return home, but he refused to obey the order. He is supposed to have died about 1631. His *Voyage to the West Indies* was published by Hakluyt, and his *Travels in Persia* in Purchas's *Pilgrimages*.—**SHERLEY**

(**ROBERT**) younger brother of the preceding, born about 1570, after having served different European princes, went to Persia with Anthony, and was left there in a military employment in 1599. As he wished to return home, Shah Abbas sent him, in 1604, to propose a treaty of commerce with England. Sherley staid some time in Italy and at Prague, and did not reach England till 1612. On his return to Persia, the emperor gave him in marriage a Circassian who was related to one of his wives. He left Persia a second time, about 1616, on a mission to the European powers, to propose a league against the Turks. He reached England in 1623, and on his return to Persia he died, it is said, of a broken heart, July 23, 1627, chagrined at having been treated as an impostor by another ambassador from Persia, whom he encountered at the English court.—**SHERLEY (THOMAS)** elder brother of the two former, studied at Oxford, and afterwards resided for some years at Wiston with his father. The fame of his brothers' achievements at length roused his ambition, and he also became a traveller, and wrote an account of his adventures. The Sherleys had rendered themselves so famous by their travels and exploits, that in 1607 they were made the subject of a drama, entitled "*The Travels of the Three English Brothers*," written by John Day.—*Wood. Granger. Biog. Univ.*

SHERLEY (THOMAS) of the same family with the foregoing, was a native of Westminster, and was educated at Magdalen college, Oxford. He afterwards went to France, where he took his degrees in medicine, and returning home, he became physician to Charles II. He died in 1678. Dr Sherley was the author of a "*Philosophical Essay on the Probable Causes whence Stones are produced in the Greater World, &c.*" 8vo, said to be a curious performance; a paper in the *Transactions of the Royal Society*; besides other works.—*Lempriere's Univ. Biog.*

SHERLOCK (WILLIAM) an episcopal clergyman, born in Southwark about 1641. He studied at Eton, and afterwards at Peterhouse, Cambridge, where he proceeded D.D. in 1680. He was then presented to the rectory of St George, Botolph-lane, London; after which he obtained a prebend in St Paul's cathedral, and became master of the Temple, and rector of Therfield, Hertfordshire. After the Revolution he refused to take the oath of allegiance to William III, in consequence of which he was suspended from the pastoral office; but on his subsequent compliance, he was restored, and in 1691 promoted to the deanery of St Paul's. His death took place in 1707. Dr Sherlock distinguished himself as a polemical divine against the dissenters, and he carried on a controversy with Dr South relative to the doctrine of the Trinity. His works on practical theology, especially his *Discourses on Death and on Judgment*, are much esteemed, and have passed through numerous editions.—**SHERLOCK (THOMAS)** son of the preceding, also adopted the clerical profession,

and distinguished himself as a theological writer. He was born in London in 1678, and received his education at Eton school, and Catherine-hall, Cambridge, where he obtained a fellowship. He succeeded his father as master of the Temple in 1704; and ten years after, he was chosen master of Catherine-hall. He was promoted to the deanery of Chichester in 1716, after which he entered into a controversy with bishop Hoadly, in defence of the corporation and test acts. In 1725 he published "Discourses on the Use and Intent of Prophecy," preached at the Temple church. These sermons, which were intended to obviate the infidel objections of Anthony Collins, were severely animadverted on by Dr Couyers Middleton, whose criticisms did not prevent the work from attaining a considerable degree of popularity. Dr Sherlock, in 1728, succeeded his antagonist Hoadly in the bishopric of Bangor, and in 1734 he again replaced him at Salisbury. He was offered the primacy on the decease of archbishop Potter in 1747, but he thought proper to refuse it; and the following year he was translated to the see of London, where he remained till his death, which took place at Fulham, July 18, 1761. Bishop Sherlock was the author of an ingenious tract entitled "The Trial of the Witnesses of the Resurrection of Jesus;" and his "Sermons" are among the best specimens of English pulpit eloquence extant.—*Aikin's G. Biog.*

SHERWIN (JOHN KRYER) an eminent historical engraver, who, till the age of nineteen, exercised the humble occupation of a wood-cutter. He was at that period employed on the estate of Mr Mitford, near Petworth in Sussex, and being one day at the house of that gentleman on business, he was admitted into a room where some of the family were amusing themselves in drawing, when, on his appearing to view the process with more attention than could be excited by common curiosity, he was asked if he could do any thing in that way. Sherwin said that he could not tell, but he should like to try. Mr Mitford gave him a crayon, when he produced on the spot a drawing which surprised not a little those who witnessed his performance; and on its being exhibited to the Society for the Encouragement of Arts, &c. the self-taught artist was rewarded with a silver medal. He then removed to London, and was enabled to become a pupil of Bartolozzi, under whom he improved very rapidly. Among his principal works are engravings of "Christ and Mary Magdalen in the Garden;" and "Christ bearing his Cross;" from the altar-pieces of All Souls and Magdalen colleges, Oxford; and an admirable print representing the "Finding of Moses," which, with other excellent productions of his burin, render his early death, which took place in 1790, a subject of regret to the admirers of the fine arts.—*Europ. Mag.*

SHIPLEY, the name of two distinguished divines of the established church, father and son. JONATHAN SHIPLEY, the elder, was born in 1714, and received his education at

Christchurch, Oxford, where he graduated in 1738. Having taken holy orders, he obtained a stall in Winchester cathedral, and the appointment of domestic chaplain to the duke of Cumberland, whom he accompanied in his continental campaign. On his return to England, he was preferred to a canonry at Christchurch, which he resigned in 1760, for the valuable deanery of Winchester. From this responsible situation he was afterwards elevated to the see of Llandaff, and thence translated to that of St Asaph in 1769. Bishop Shipley wrote some elegant lines on the death of queen Caroline, as well as some other miscellaneous poems of considerable merit, which have been collected and published in two octavo volumes. In the house of Lords he much distinguished himself against the American war, during which he signalized himself as a spirited, able, and eloquent opposer of administration. At his death, which took place in 1788, besides two daughters, he left behind him a son, WILLIAM DAVIES SHIPLEY, born at Midgham in Berkshire, October 5, 1745, who at an early age was sent by his father to Westminster school. On the appointment of the latter, however, to the deanery of Winchester, he carried his son with him to that city, and placed him in the college there, whence he removed to Oxford in 1763, and was admitted a student of Christchurch in that university. Here he graduated as M.A. in 1770, and the year following he was collated by his father to the vicarage of Wrexham in Denbighshire. On the death of Dr Herring, 1774, he was farther promoted to the deanery and chancellorship of the diocese of St Asaph. Dean Shipley appears to have inherited from his father a strong attachment to Whig principles, which engaged him in a contest then as attractive of public attention as ultimately productive of public benefit. His brother-in-law, the celebrated sir William Jones, having, about the close of the American war, published a little piece on the subject of government, entitled "A Dialogue between a Gentleman and a Farmer," the dean republished it in Wales, on which he was indicted for a libel by a political adversary. The prosecution was long and vexatious, being twice brought for trial into the Welsh courts, and then removed by certiorari to Shrewsbury. It was in this celebrated cause that the question was first mooted, whether the jury were or were not judges of law as well as of fact. Judge Buller, in summing up, charged, in conformity with the doctrine laid down by the counsel for the prosecution, that the jury were not to decide whether the matter was or was not libellous; notwithstanding which the verdict brought in was, "Guilty of publishing only;" afterwards altered, at the suggestion of the prosecutor's counsel, to "Guilty of publishing, but whether a libel or not, we do not find." On the question being subsequently brought before the court of King's Bench, the whole was quashed, through a flaw in the proceedings; but from this memorable contest arose the statute by which the right of the

jury to decide upon law, as well as fact, in cases of libel, was afterwards recognized and established, in opposition to the opinions of lords Thurlow and Kenyon. Throughout the whole transaction the dean's conduct was irreproachable; and it is not a little remarkable that the real and avowed author was, pendent lite, appointed a judge of the Supreme Court of Judicature at Calcutta. Dean Shipley, in whom were united high intellectual powers, independence of mind, and great benevolence of heart, died at Bodryddan, June 7, 1826.—*Gent. Mag.* 1788. *Ann. Biog.*

SHIPPEN (WILLIAM) a distinguished political character during the administration of sir Robert Walpole. He was the son of the rev. W. Shippen, rector of Stockport in Cheshire; and about 1672 he married the daughter of sir Richard Stote, knight, with whom he obtained a fortune of seventy thousand pounds. He was chosen successively representative in parliament for the boroughs of Bramber in Sussex, Saltash in Cornwall, and Newton in Lancashire. One of his speeches in the house of Commons, in opposition to Walpole, was published; and he was the author of several pamphlets and political poems against that minister. Pope and Sheffield have alluded to him in their writings; the former terms him "downright Shippen." He died about 1741.—His brother, Dr ROBERT SHIPPEN, was a man of eminent abilities, and was principal of Brazenose college, Oxford, from 1710 to 1745.—*Cor's Life of Sir R. Walpole*, vol. iii.

SHIRLEY (A.) See SHERLEY.

SHIRLEY (JAMES) a poet and dramatic writer, was descended from an ancient family, and born in London about 1594. He was educated at Merchant Tailors' School, and thence removed to St John's college, Oxford. He became a favourite with Dr Laud, who, however, discountenanced his entry into the church, on account of a large mole upon his cheek, which he deemed a disqualification by deformity, according to the canons. On removing to Cambridge, he met with no difficulty on this score, but entered into orders, and obtained a curacy near St Albans. His religious opinions being unsettled, he soon after went over to the church of Rome, and giving up his curacy, sought to establish a grammar-school in the same town. Failing in this endeavour, he removed to London, and became a fertile writer for the stage; and his efforts being successful, he acquired a reputation which caused him to be taken into the service of queen Henrietta Maria. His first comedy is dated 1629, and he wrote nine or ten between that year and 1637, when he accompanied the earl of Kildare to Ireland. He returned the following year, and when the civil war broke out, he left London, with his wife and family; and being invited by the earl of Newcastle, he accompanied that nobleman to the wars. On the decline of the king's cause, he returned to London; and the acting of plays being prohibited, he returned to his old occupation of a school, and educated several eminent men. At the Restoration many

of his plays were brought upon the theatre again, and he appears to have been comparatively prosperous. In 1666 he was forced, with his second wife Frances, by the great fire, from his house in St Giles's parish; and being extremely affected, both by the loss and terror that fire occasioned, they both died on the 29th October, within the space of twenty-four hours, and were buried in the same grave. Besides thirty-seven plays, tragedies, and comedies, he published a volume of poems, some very beautiful specimens of which may be found in Ellis's Selection. As a dramatist he may be said to rank immediately between Beaumont and Fletcher; and his comedies have been recommended into so much observation of late, as to induce Mr Gifford to undertake a complete edition of his works. Shirley, in fact, may be deemed one of those secondary men of genius of his own age, who have been too much neglected by posterity, and who go a great way towards justifying the revived attention with which they have been recently favoured.—*Biog. Dram. Ellis's Specimens.*

SHORT (JAMES) an eminent mechanic and natural philosopher, who was a native of Edinburgh. He received his education at the high-school and the university of the Scottish metropolis, where he applied himself particularly to mathematics; and having taken the degree of MA., he was, through the recommendation of professor MacLaurin, appointed mathematical tutor to the duke of Cumberland, the son of George II. In 1739 he was employed by government to make a survey of the Orkney Islands. He afterwards settled in London, as a mathematical instrument-maker, and obtained deserved celebrity for his skill in the construction of telescopes. He was chosen a fellow of the Royal Society, to whose Transactions he was a contributor. His death took place in 1768, at the age of fifty-seven.—*Rees's Cyclop.*

SHORT (THOMAS) a physician and medical writer, who was a native of North Britain. He studied at Edinburgh, and established himself as a practitioner of medicine at Sheffield in Yorkshire, whence he removed to Rotherham in the same county. In 1734 he published a "History of the Mineral Waters of Derbyshire, Lincolnshire, and Yorkshire," 4to; and he was also the author of "Observations on the Bills of Mortality," 1750, 8vo; "A General Chronological History of the Air, Weather, Seasons, Meteors, &c." 2 vols. 8vo; "A Comparative History of the Increase and Decrease of Mankind in England, and Countries abroad," 1767, 4to; besides other works. He died at Rotherham in 1772.—*Gent. Mag.*

SHOVEL (sir CLOUDSLEY) an able English admiral, was born near Clay, in Norfolk, about 1656. He was put apprentice to some mechanical trade, but taking a liking to sea, he went out under the protection of sir Christopher Seymour, as cabin-boy, and in due time attained the commission of a lieutenant, in which capacity he served under sir John

Harborough in 1647. He was employed by that commander to wait upon the dey of Tripoli with a requisition, which the latter treated with contempt. On his return, he stated to the admiral the practicability of burning the shipping in the harbour, which service he performed the same evening, without the loss of a single man. For this exploit he was appointed to the command of a ship, and he gradually rose in his profession, until the era of the Revolution, in which he heartily concurred. He was employed to convey William and his army to Ireland; and for the skill with which he performed this service, was knighted, and made rear-admiral. He also commanded the squadron which in 1692 conveyed William to Holland; and he had a share with Russel in the victory of La Hogue. In 1708 he commanded a fleet in the Mediterranean, and in the year following partook of the victory of Malaga. In 1705 he sailed for England, and on the night of the 22d October fell by mistake upon the rocks of Scilly, when his ship, with some others, was totally lost, and all on board perished. His body was discovered by some fishermen, who stripped and buried it; but the fact becoming known, his remains were brought to London, and interred in Westminster abbey, where a memorial in miserable taste records his fate and services.—*Campbell's Admirals.*

SHOWER (JOHN) an eminent puritan divine, was born at Exeter in 1657, and educated privately in his native city, and at the dissenting academies of Taunton and Newington-green. In 1679 he received ordination from the dissenting ministry, and officiated at a chapel in Tothill-fields, which situation he left in 1686, to escort the nephew of sir Samuel Barnardiston to the continent. Being disgusted with the measures of James II, with the exception of occasional visits to London, he took up his residence in Holland until after the Revolution, when he returned to England, and became assistant to the learned John Howe, in Silver-street. He finally removed to the chapel in the Old Jewry, where he preached with great reputation until his death, in 1715. His works, which are very numerous, consist chiefly of sermons adapted for the press, which have been much read by those of similar opinions. He was also author of a letter to the lord treasurer Oxford, respecting the occasional conformity bill, dated December 20, 1701; which letter, with the lord-treasurer's answer, written, it is said, by Swift, in his most vituperative style, will be found in Swift's works, vol. xi. p. 201.—*Life by Tong.*

SHOWER (sir BARTHOLOMEW) an eminent lawyer, was brother to the preceding, but apparently of very different sentiments. Little is known of him, except that by the appointment of James II, he became recorder of London during the time that the city was deprived of its charter; but was obliged to resign when that monarch's fears induced him to restore it. As a pleader he distinguished himself before the two houses of parliament in petitions and appeals. He died in 1701. He is author of

"Cases in Parliament resolved, and adjudged upon Petitions and Writs of Error," 1698 and 1740; as also of "Reports of Cases in Banco Regis, from 30 Car. II. to 6 W. III," 1708 and 1720, 2 vols. folio.—*Bridgman's Legal Bibliog.*

SHUTER (EDWARD) a celebrated actor in low comedy, said to have been the son of a clergyman, though stated by some to have been a person of mean origin, which is most probable, as he was utterly unacquainted with literature, and was, before he went on the stage, employed as a marker at a billiard-table. Having been engaged at Covent-garden theatre, he displayed such talents in the delineation of humorous characters as raised him into high favour with the public. Notwithstanding his professional emoluments were considerable, such was his carelessness and extravagance, that he was involved in perpetual embarrassments, which were, doubtless, increased by his contributions in support of Methodism; for it is a singular fact that Shuter was a devoted follower of George Whitefield. He was gifted by nature with strong features, over the expression of which he had the most perfect command, exercising a despotic power over the risible faculties of the spectators. Among his principal characters were Falstaff, Scrubb, Master Stephen, Trapolin, Lancelot, &c. He at one time carried on a paper war (by proxy) with Mrs Clive, which originated in the collision of their interests, owing to their benefits happening on the same night. Churchill satirized him in the Rosciad; but he was so little affected by the criticism, that he took the first opportunity of making merry with the author over a bottle. His death took place November 1, 1776.—*Lempriere. Thesp. Dict.*

SIBBALD (sir ROBERT) a Scottish physician and naturalist, born near Leslie in Fife-shire, about 1643. He was educated at the university of St Andrews, after which he travelled for improvement in France and Italy. On his return to Scotland he was nominated physician and geographer to Charles II, by whom he was honoured with knighthood, and appointed to write the history of the kingdom. He contributed to the foundation of the College of Physicians at Edinburgh, of which he became the first president; and he was also a fellow of the Royal Society of London. Having renounced Protestantism for the faith of the Catholic church, he returned to the communion of the Kirk of Scotland in the reign of James II; and his religious versatility subjected him to the sarcasms of the Jacobite physician, Pitcairne. Sir Robert Sibbald died about 1712. He was the author of "Scotia Illustrata, sive Prodrum Historiæ Naturalis Scotiæ," 1684, folio; "The Liberty and Independency of the Kingdom and Church of Scotland," 4to; "The History of Fife;" besides many other works, of which a list may be found in the first of the annexed authorities.—*Watt's Bib. Brit. Chalmers's Biog. Dict. Biog. Univ.*—SIBBALD (JAMES) a bookseller at Edinburgh, published in 1802 a "Chro-

M

nicle of Scottish Poetry, from the thirteenth Century to the Union of the Crowns," 4 vols. 8vo. He died a short time after the publication of this work.—*Watt*.

SIBTHORP (JOHN) a physician, distinguished as a writer on botany. He was a native of Oxford, and received his education at Lincoln college, in the university of that city, where he obtained a travelling fellowship on Dr Radcliffe's foundation. Having taken the degree of BA. and spent some time at Edinburgh, he visited France, Switzerland, and Germany; and on his return to England in 1784, he succeeded his father as professor of botany at Oxford. He twice travelled into Greece, viz. in 1786, 1787, and in 1794, 1795, with a view to the improvement of his favourite science. The result of his researches was a collection of plants, destined to form a splendid work, in ten volumes folio, entitled "Flora Græca;" and being prevented by death from publishing his observations, he bequeathed to the university an estate of 300*l.* a-year, to be applied in the completion of the undertaking, and the foundation of a professorship of rural economy. Dr Sibthorp died at Bath, February 7, 1796, in consequence of a pulmonary disease occasioned by the fatigues he underwent in the course of his last tour. He was elected a fellow of the Royal Society in 1789; and he became one of the earliest fellows of the Linnæan Society. In 1794 he published a work on local botany, entitled "Flora Oxoniensis," 8vo.—*Gent. Mag. Rees's Cyclop.*

SIBTHORPE (ROBERT) a divine, who obtained considerable notoriety in the reign of Charles I, by his defence of the royal prerogative and of high church principles. He was a native of Lincolnshire, and received his education at Oxford, where he took the degree of DD, after which he became rector of Water Stratford in Buckinghamshire, and vicar of Brackley in Northamptonshire. His services as a political partizan were rewarded with a prebend in Peterborough cathedral, and the rectory of Burton Latimers in Northamptonshire; but he lost his preferments after the destruction of the monarchy, and the discourses which had contributed to his advancement were severely censured by the house of Commons. He survived the Restoration, dying in 1662. Dr Sibthorpe published a "Sermon upon Jeremiah v. 7," Lond. 1618, 4to; and "Apostolical Obedience, or a Sermon on Romans, xiii. 7," 1627, 4to.—*Lempriere's Univ. Biog. Watt's Bibl. Brit.*

SICARD (CLAUDE) a French missionary, born at Aubagne, in 1677. He entered young among the jesuits, and taught rhetoric and classical literature at Lyons. In September 1706, he left France to engage in the missionary service in Syria; and arriving at Aleppo, he entered on the study of Arabic. Being removed to Cairo, he was employed by the regent duke of Orleans in investigating the antiquities of Egypt. He consequently visited the Thebais, the cataracts, and the coasts of the Red Sea, and extended his re-

searches to mount Sinai; in the course of his labours he made plans and views of buildings and other objects of curiosity; and in his travels in the Delta, in 1723, he discovered the remains of several ancient cities. He died of the plague, April 12, 1726. Some of his observations on Egypt were published in the "Lettres Edifiantes," in tom. ii. v. vi. vii. of the Memoirs from the Levant, first collection, and in the Memoirs of the Academy of Sciences. A Description of the Ancient and Modern State of Egypt, which he had projected and partly executed, was left unpublished, in consequence of his death. The accuracy of father Sicard is attested by all subsequent Egyptian travellers.—*Biog. Univ.*

SICARD (ROCH AMBROSE CUCURRON) successor of the abbé l'Epée at the Parisian institution for the education of the Deaf and Dumb. He was born September 20, 1742, at Fousseret, near Toulouse, in which city he completed his studies, and then entered into holy orders. He devoted himself to the instruction of persons born deaf and dumb, and became in 1786 director of a school established for that purpose by the archbishop of Bordeaux; whence in 1789 he removed to Paris, and was chosen successor to the abbé l'Epée, in whose system he made some important improvements. On the 26th of August 1792, he was arrested in the midst of his pupils, by order of the commune of Paris; and, notwithstanding various efforts of his friends, he was on the 2nd of September transferred to the prison of the abbey of St Germain, where he narrowly escaped becoming a victim in the ensuing massacres. After a few days' imprisonment he was set at liberty, and during the reign of terror he suffered no further molestation. On the foundation of the normal school in 1795, he was appointed professor of grammar; and about the same time he was made a member of the Institute. He then became one of the conductors of a periodical work entitled "Annales religieuses, politiques, et littéraires," on account of which he was included by the directory in the number of the journalists sentenced to be exiled to Synamari. This persecution obliged him to conceal himself, and he thus avoided deportation; but it was not till after the overthrow of the directory that he was able to return to his situation at the school of instruction for the Deaf and Dumb. The old age of Sicard was clouded with misfortunes arising from his own improvidence, and Buonaparte, to whom he applied in his pecuniary difficulties, treated him with neglect. After the restoration of the king he was more fortunate, being successively made a knight of the legion of honour, administrator of the hospital of Quinze Vingts, administrator of that of blind youths, and knight of the order of St Michael. He was also honoured with attentions from the foreign princes who visited Paris in 1814 and 1815. His death took place May 10, 1822. Besides various other works, he was the author of "Elémens de Grammaire générale appliquée à la Langue Française," 2 vols. 8vo; "Cours

d'Instruction d'un Sourd-muet de Naisance," 8vo; and "Théorie des Signes pour l'Instruction des Sourds-muets," 2 vols. 8vo. He also contrived a method of pasingraphy, or universal language, of which he published only some slight sketches.—*Biog. Univ.*

SIDNEY (ALGERNON) a celebrated English republican and martyr to liberty, was the second son of Robert, earl of Leicester, by Dorothy, eldest daughter of Henry Percy, earl of Northumberland. He was born, according to some accounts in 1617, and to others in 1622, and was carefully educated under the inspection of his father, whom he accompanied in his embassies to Denmark and France. He was also early trained to a military life, received a commission in a regiment of cavalry commanded by the same nobleman, and served with considerable distinction under his brother, lord Lisle, during the Irish rebellion. In 1643 both brothers returned to England, and joined the parliament; and in 1645 Algernon was promoted by Fairfax to the colonelcy of a regiment of horse; and after being present in several actions, was entrusted with the government of Chichester. In 1646, lord Lisle being constituted lieutenant-governor and commander of the forces in Ireland, he accompanied him thither, and was raised to the post of lieutenant-general of the cavalry and governor of Dublin. He was however soon after superseded by a senior officer, and returned to England, where he was thanked by parliament for his services, and made governor of Dover. When the high court of justice was formed for the trial of the king, he was nominated a member, but was neither present when sentence was pronounced, nor signed the warrant for the execution. It appears however that he was in the habit of vindicating that catastrophe, which has led to a supposition that, in withholding his presence and signature, he only yielded to the influence of his father. A politician so inimical to the encroachments of regular authority was not likely to acquiesce in an usurpation, and he therefore warmly opposed the designs of Cromwell; during the government both of the protector and his son Richard, he lived in retirement at Penshurst, where he is supposed to have composed his celebrated "Discourses on Government." When the return of the long parliament gave expectations of the establishment of a republic, he willingly assumed a public character, and was nominated one of the council of state. He was soon after appointed a commissioner to mediate a peace between Denmark and Sweden, and while engaged in this embassy, the Restoration took place. Conscious of the offence he had given the royal party, he refused to return, and remained an exile for seventeen years; and although occasionally assisted by his family, he found it difficult to support himself in conformity to his birth and rank. At length, in 1677, the influence of his father obtained leave for him to return with a pardon for all offences. According to Hume, the acceptance of this favour should have prevented him from

engaging against the measures of the court; but it is doubtful how far a man of the strong sentiments of Sidney might balance the account between private obligation and public duty, or whether he did not regard his pardon as a mere reparation of injustice. At the time of his return parliament was urging the king to a war with France; and it was feared by the opposition that Charles II would agree to it, until he obtained the supplies, which he would either squander on his pleasures, or devote to arbitrary purposes. The English patriots were therefore opposed to this war, and some of the leaders intrigued with the French ambassador, Barillon, to defeat the measure.—(See Article RUSSEL, lord William.)—It even appears, according to the Barillon papers, as given by sir John Dalrymple, that the name of Sidney was among those who received pecuniary aid from France. The testimony thus afforded against a man of high character, and whose sacrifices to principle were notorious, has of course met with different degrees of credence, and both fabrication and interpolation have been surmised. The death of his father soon after his return led him openly to join in the opposition, and he consorted much with the duke of Monmouth and others who held views kindred or similar to his own. In the Rye-house plot he is named as one of a council of six who were to organize an insurrection in conjunction with the Scottish malcontents. It was, however, for his supposed share in the subordinate conspiracy for assassinating the king, that he was arrested with lord William Russel and others. After the sacrifice of the latter, he was tried, as the next most obnoxious person, for high treason, before the hardened tool, chief-justice Jeffreys, on the 21st November 1678. There was no direct evidence against him, except that of the miserable disgrace to nobility, lord Howard, while the law for high treason required two witnesses. To help this defect, the attorney-general had recourse to the expedient of producing passages from some Discourses on Government, found in MS. in his closet, which maintained the lawfulness of resisting tyrants, and the preference of a free to an arbitrary government. Although there was no proof that these papers were in his own handwriting, in defiance both of law and common sense, they were deemed equivalent to a second witness; and, in spite of his spirited defence, he was declared guilty. After his conviction he sent, by his relation the marquis of Halifax, a paper to be laid before the king, requesting his review of the whole matter; but it served only to delay his execution about a week. Hume, obliged to acknowledge the illegality of his condemnation, for which he observes "the jury were very blamable," with his usual sophistication in respect to Stuart injustice, remarks, that an interference on this occasion by the king, after his former pardon, might be regarded as an act "of heroic generosity, but could never be deemed an indispensable duty." Would it not be more to the purpose to say, that a monarch who exercised

the crown influence, and employed the crown lawyers, to procure an iniquitous verdict, could scarcely be expected to spare a victim thus secured? Sidney was executed on Tower-hill, December 7, 1678, when he delivered the sheriff a paper, alleging the injustice of his condemnation, and concluding with a prayer for "the good old cause." This document was printed some time after, and made a considerable impression, a circumstance which gave great offence to the court. He suffered with all the firmness and constancy belonging to his character. One of the first acts of the Revolution was to reverse his attainder, and the name of Algernon Sidney has since been held in great honour by the majority of those who maintain the fundamental principles of free government. Burnet speaks of him as of extraordinary courage, steady, even to obstinacy, impatient of contradiction, and a decided enemy to monarchy and church government. His "Discourses on Government" were first printed in 1698, and reprinted in 1704 and 1751, in folio and in 4to 1772, at the expense of Thomas Hollis, esq., with the trial and letters prefixed. They contain considerable historical information, and are composed with the clearness, acuteness, and force, which usually accompany the arguments of those who are sincere and able converts to the opinions which they support.—*Hume, Biog. Brit.* Sir J. Dalrymple's *Mem. of Great Britain*.

SIDNEY (sir PHILIP) an ingenious writer and accomplished officer and statesman in the reign of queen Elizabeth. He was the son of sir Henry Sidney, of Penshurst in Kent, where he was born the 29th November, 1554. After previous instruction at a grammar-school at Shrewsbury, he was sent to Christchurch, Oxford, whence he removed to Trinity college, Cambridge. At the age of eighteen he set off on his travels, and arriving at Paris, Charles IX made him a gentleman of his bed-chamber. The massacre of the Huguenots, which soon after took place, disgusted Sidney with the service of the French monarch, which he speedily quitted, and went to Frankfort in Germany, where he formed an acquaintance with the famous Hubert Languet. In 1573 he visited Vienna, whence he proceeded to Hungary, and then to Italy; and returning through Germany and Flanders, he arrived in England in 1575. He became deservedly a favourite with the queen, who in 1576 sent him on an embassy to congratulate the emperor Rodolph II on his accession, at the same time charging him with important negotiations with other princes of Germany. In 1579 he addressed to the queen a private letter, dissuading her from contracting a marriage then projected with the duke of Anjou, brother to the king of France; and his advice seems to have been favourably received. The following year he had a quarrel with Edward Vere, earl of Oxford, in consequence of a previous dispute at a tournament; and her majesty thought proper to interpose her authority to prevent a duel from taking place. Sidney, displeased at the issue of the affair,

retired to Wilton in Wiltshire, the seat of his brother-in-law, the earl of Pembroke, and amused himself with the composition of a pastoral romance, which, in compliment to his sister, was entitled "The Countess of Pembroke's Arcadia." While thus occupied, his assistance was requested by Don Antonio, who was endeavouring to vindicate his right to the kingdom of Portugal, which had been seized by the Spaniards. In 1581 he again appeared at court, where he distinguished himself in the jousts and tournaments, celebrated for the entertainment of the duke of Anjou, who had visited England; and on the return of that prince to the continent, he, with several of the nobility, accompanied him to Antwerp. The prince palatine being invested with the order of the garter in 1583, Mr Sidney was appointed his proxy, when he received the honour of knighthood. At this period he married the daughter of sir Francis Walsingham. In 1585 he projected, in concert with sir Francis Drake, an expedition against the Spaniards in America; and he had gone to Plymouth to embark on the undertaking, when an express mandate from the queen recalled him to court. Her influence also was exerted to prevent him from being elected king of Poland, "refusing," as Camden says, "to further his advancement, out of fear that she should lose the jewel of her times." He was subsequently appointed governor of Flushing, and general of the cavalry under his maternal uncle, Dudley, earl of Leicester, who commanded the forces which the queen had sent into the Netherlands to assist the Dutch against the Spaniards. On the 22d of September, 1586, being at the head of a detachment of the English troops, he fell in with a convoy of the enemy marching towards Zutphen. An engagement took place, in which his party gained the victory, dearly purchased with the life of their commander, who received a shot in his thigh, which shattered the bone. He was carried to Arnhem, where he expired on the 17th of October; and his body being brought to England was interred in St Paul's cathedral. Thus perished the gallant, amiable, and accomplished sir Philip Sidney, in his thirty-second year, whose fate was the object of general regret, and whose talents and acquirements have been made the subject of almost universal panegyric. His works, besides the "Arcadia," consist of "The Defence of Poesy;" "Astrophel and Stella;" a collection, entitled "Songs and Sonnets;" and other poetical pieces. "The Defence" was republished in 1752, 12mo; and a complete edition of his works appeared in three volumes, 8vo. Lond. 1725. The work by which sir Philip Sidney is principally known is his "Arcadia," which is one of the earliest specimens of the grave or heroic romance. It is a mixture of prose and verse, the latter exhibiting various attempts to naturalize the measures of Roman poetry. It is spoken of with great contempt by lord Orford (Horace Walpole); but Dr Zouch, the late biographer of sir Philip, while he acknow-

ledges that the changes in taste and manners have rendered it unsuitable to modern readers, contends that there are exquisitely beautiful passages, sound observations on life and manners, animated descriptions, sage lessons of morality, and judicious reflections on government and policy. Upon the whole it was a sort of fashion to exalt both the literary and chivalric reputation of sir Philip Sidney in exaggerated terms in his own time; but it cannot be denied that he fully merited to be recorded among the most distinguished persons of his age and nation.—*Biog. Brit. Life of Sir P. Sidney, by Sir F. Grevile.*

SIDNEY (MARY) countess of Pembroke, sister of the preceding, married in 1576, Henry earl of Pembroke. She had received a liberal education, and possessed a talent for poetry, which she assiduously cultivated. Congenial qualities and pursuits united her closely with her brother, sir Philip, who, as already intimated, wrote the "Arcadia" for her amusement. She translated many of the Psalms from the Hebrew into English verse, as also "A Discourse on Life and Death," from the French of Mornay, London, 1600, 12mo; "The Tragedie of Antonie," London, 1595, 12mo. She likewise wrote "An Elegy on Sir Philip Sidney;" "A pastoral Dialogue in Praise of Astræa" (queen Elizabeth); and a long poem in six line stanzas, entitled "The Countess of Pembroke's Passion," to be found in the Sloane MSS. She survived her husband twenty years, her death taking place in London, September 25, 1601. The following admired epitaph by Ben Jonson was designed for an inscription on the tomb of this lady:

Underneath this sable hearse
Lies the subject of all verse;
Sidney's sister, Pembroke's mother;
Death, ere thou hast kill'd another,
Fair, and learn'd, and good as she,
Time shall throw a dart at thee.

Ballard's Memoirs.

SIDONIUS (CATUS SOLLIUS APOLLINARIUS MODESTUS,) a learned ecclesiastic of the sixth century, was born at Lyons. He married the daughter of Avitus, who was raised to the imperial dignity on the death of Maximus, but was afterwards deposed by Majorianus. Sidonius was on that occasion carried a captive to Rome, where he obtained favour by his learning and talents. He was subsequently made governor of Rome, and a patrician, but quitted his secular employment in 472, on being chosen bishop of Clermont. He died in 487, leaving behind him many works, of which nine books of epistles, with about four-and-twenty poems interspersed, are still extant. They contain many particulars relative to the learning and history of the times, and were published by father Sirmond, at Paris, 1614, 8vo, and after his death, with additions, in 1632, 4to.—*Cave. Vossii Hist. Lat.*

SIEBENKEES (JOHN PHILIP) an eminent Greek critic, who was a native of Nuremberg in Germany. After studying at that place, he went in 1778 to Altorf, where he applied himself to theology and the ancient lan-

guages. He then removed to Venice as a private tutor, and there he wrote the "Life of Bianca Capello, Grand Duchess of Tuscany," published at Gotha, 1789, 8vo; and translated into English. In 1788 he went to Rome, where he was patronized by cardinal Borgia; and returning to Nuremberg, he was in 1791 nominated professor at Altorf, where he died of apoplexy, June 25, 1796. He was the author of a "History of the Inquisition of the State of Venice," 1791, 8vo, and other works; and he was one of the editors of the Leipsic Strabo, and of the Characters of Theophrastus, published by Goetz at Nuremberg, 1798, 8vo.—*Biog. Univ.*

SIGAUD DE LAFOND (JEAN RENE) a French philosopher, born at Dijon in 1740. He studied among the jesuits, and afterwards entered as a surgical pupil at the school of St Come, at Paris. In 1768 he communicated to the Royal Academy of Surgery a memoir recommending the section of the symphysis pubis, in certain cases of difficult parturition; and though his proposal did not receive the sanction of the Academy, he determined to put it to the test of experiment at the first opportunity. In 1770 he was admitted a master of surgery, and he devoted himself chiefly to obstetrical practice. In October 1777 he first performed the projected operation on the wife of a soldier at Paris; and his success was rewarded by the Parisian faculty of medicine with the gift of a medal struck to commemorate the occurrence. His plan however has found but few advocates among his professional contemporaries or successors, and has seldom been adopted. He practised medicine in various countries, and delivered lectures on natural philosophy, which procured him much reputation. He was a member of several academies; and at the establishment of the Institute, in 1796, he became an associate. The preceding year he had obtained a gratuity of three thousand francs from the National Convention. He died in 1810 at Bourges, where he was professor of physics. Sigaud was the author of "Elemens de Physique theoretique et experimentale," 4 vols. 8vo, translated into Spanish by Taddeo Lope; "Dictionnaire de Physique," 1780, 4 vols. 8vo, with a supplement, published in 1782; and "Dictionnaire des Merveilles de la Nature," 1781, 2 vols. 8vo, translated into German by Webel; besides several other works.—*Biog. Univ.*

SIGNORELLI (PIETRO NAPOLI) a distinguished Italian writer, born at Naples in 1731. He received his education under the jesuits, and at the university of his native place, after which he became an advocate. That profession he abandoned to devote himself to literature, and especially to dramatic poetry. In 1765 he went to Madrid, where he obtained the office of keeper of the seal of the royal lottery. Returning after about three years' absence to Italy, he settled at Naples, where, in 1784, he published "Vicende della Coltura delle due Sicilie," 5 vols. 8vo, enlarged to 8 vols. in the edition of 1810. He

was appointed secretary to the academy of Naples; and he engaged in writing a "Critical History of ancient and modern Theatres," of which a sketch had appeared in 1777. When the French became masters of Naples in 1798, Signorelli was made a member of the committee of legislation; and he subsequently went to Milan, where he was nominated dramatic professor at the Lyceum of Brera. Soon after, he became professor of diplomatics and history at Bologna, where he continued till 1806, when he returned to Naples, in which city he died of apoplexy, April 1, 1815. His works are numerous, including "Faustina," a comedy, 1779, 8vo; "A Sketch of the present State of the Sciences and Literature in Spain," Madrid, 1780, 8vo; "Delle migliori Tragedie Greche e Francesi, Traduzione ed Analisi comparative," 1804, 3 vols. 8vo; and "Elementi di Critica Diplomatica, con Istoria preliminare," 1805, 4 vols. 8vo.—*Biog. Nouv. des Contemp. Biog. Univ.*

SIGONIUS (CHARLES) a learned Italian, was of an ancient family of Modena, where he was born in 1524. He studied physic at Bologna, but renounced that profession for literature, and at the age of twenty-two became Greek professor in his native city. In 1550 he made himself advantageously known to the learned world by publishing the "Fasti Consulares," with a learned and ample commentary. The reputation which he acquired by this work introduced him, in 1554, to the professorship of belles lettres at Venice, whence he removed successively to Padua and Bologna. He had some literary controversies with Robortellius and Gruchius on Roman antiquities, in which he was exceedingly well versed. Of his numerous works the most esteemed are "De Republica Hebraeorum," "De Republica Atheniensium," "Historia de Occidentali Imperio," and "De Regno Italie." He died in 1585, aged sixty. His works were collected and printed at Milan in 1733-4, 6 vols. folio. His "Fasti Consulares" were printed with the Oxford Livy in 1800.—*Life by Muratori. Moreri.*

SIKE, or SIECKE (HENRY) a philological writer, who was a native of Bremen in Germany. He studied the Oriental languages, and was professor at Utrecht, and afterwards at Cambridge. In 1697 he published, with notes, in Arabic and Latin, "Evangelium Infantie Christi, adscriptum Thomæ," 8vo, one of the most curious of the apocryphal gospels, reprinted by Fabricius in his Codex apocryphus Nov. Test. Sike also co-operated with Kuster in the "Bibliotheca Novorum Librorum," a Latin review published at Utrecht. He put an end to his own life in 1712.—*Saxii Onomast.*

SILANION, a Greek sculptor, who was a native of Athens, and, according to Pliny, contemporary with Lysippus and Alexander the Great. Among the most celebrated works of this artist were statues of Corinna the poetess, of Theseus, and of Achilles. He also made a statue of Sappho, which ornamented the city of Syracuse, and became the prey of

Verres the Roman governor of Sicily, whose rapacity is recorded in the famous orations of Cicero. A statue of Plato by Silanion is believed to have served as the model of all authentic portraits of that philosopher. He was alive 346 BC. but the period of his death is not known.—*Biog. Univ. Plinii H. N.*

SILBERSCHLAG (JOHN ISAIAH) a German divine, born at Aschersleben in 1721. He was educated at Halle, and in 1745 he was appointed professor at the school of Kloster Bergen, near Magdebourg. After having for some years been pastor of a church at Magdebourg, he was called to Berlin to become director of the Royal School, and he was also minister of the church of the Trinity in that capital. In 1784 he resigned the former office, only retaining his ecclesiastical employment, and that of member of the supreme council of buildings [board of works]. Frederic II had erected this council in 1770; and to the great astonishment of the public, he made Silberschlag a member, justly conceiving that his religious character formed no ground of exclusion from a civil office for which he was highly qualified by his extensive acquaintance with mechanics and physical science. He published, in the German language, "Geogony, or an Explication of the Creation of the World according to Moses, on mathematical and physical Principles," 1780, 3 vols. 4to; "Chronology rectified by the Holy Scriptures," 1784, 4to; and "A Treatise on Hydrotechnics, or Hydraulic Architecture," 1772-3, 2 vols. 8vo; besides dissertations in the Memoirs of the Academy of Berlin. His death took place November 22, 1791. In 1788 he printed his "Biography," written by himself for his family, quarto.—*Biog. Univ.*

SILHOÛETTE (STEPHEN de) a French writer, distinguished by his taste for English literature, was born at Limoges in 1709. He purchased the office of master of requests, and after having managed the affairs of the duke of Orleans, he became comptroller general and minister of state in 1759. At this time France was carrying on a ruinous war, and the finances were in a very low condition, which induced him to propose retrenchment and economy. Finding that the proposal only excited ridicule, he quitted his post, after a short occupation of nine months, and retired to his estate of Brie-sur-Marne, and devoted his time to study, and his wealth to benevolence. He died in 1767. He published "Idée générale du Gouvernement Chinois;" "Réflexion Politique," from the Spanish of Gracian; translations of Pope's "Essay on Man," and "Miscellanies," and of Bolingbroke's "Dissertation on Parties;" "Lettres sur les Transactions publiques du Règne d'Elizabeth;" "Traité mathématique sur le Bonheur;" a translation of Warburton's "Alliance;" "Epîtres morales, Lettres philosophiques, et Traités Mathématiques;" "Memoirs," relative to the rights of England and France in America; "Voyage de France, Espagne, Portugal et d'Italie."—*Nouv. Dict. Hist.*

SILIUS ITALICUS (CAIUS) a Latin poet

S I L

and author of a poetical history of the second Punic war, was born in the reign of Tiberius, about the year 15. He is supposed to have derived his name of Italicus from the place of his birth, but whether Italica in Spain, or Corsinium in Italy (sometimes so called), is unknown, or even if his name be connected with his birth-place at all. When he came to Rome he applied himself to the bar, and by a close imitation of Cicero succeeded so well, that he became a celebrated orator and advocate. It appears from a letter from Pliny the younger to Canidius Rufus, announcing his decease, that he was consul at the time of Nero's death, and that he incurred some reproach for assisting in that tyrant's prosecutions. It is added, however, that he made a humane use of the friendship of Vitellius, and acquired much honour from his conduct in the proconsulate of Asia, assigned to him by Vespasian, from which he retired into private life, and maintained the rank of one of the principal inhabitants of Rome, without power and without envy. He was fond of elegance, purchased villas, collected books, statues, and busts of eminent men, to the latter of which he paid a kind of religious veneration. Among his villas one had belonged to Cicero; and he possessed a farm near Naples which had been the property of Virgil, and on which was that great poet's tomb. For Virgil, whom he imitated, his veneration was so great, that he annually solemnized his birth-day with more splendour than his own. He finally retired altogether to his seat in Campania, where, being seized with an incurable ulcer, he determined to put an end to his life by refraining from sustenance, which resolution he maintained, and expired in the early part of the reign of Trajan, in his seventy-fifth year. The only work of Silius which has reached modern times, is the poem on the second Punic war, already mentioned, which is an epic, consisting of sixteen books. Like Voltaire's *Henriade*, it is too much within the range of history to congenially mix with fiction; and, as Pliny judiciously remarks, he writes with more diligence than genius. He however occasionally elaborates passages into splendour, and his description of the passage of Hannibal across the Alps is particularly admired. The best editions of his work are those of Drakenborch, 1717, 4to; of Villebrun, Paris, 1781, 8vo; of Ernesti, Leipsic, 1791, 2 vols. 8vo; of Heber, 1792, 2 vols. 12mo; and of Ruperti, Göttingen, 1795—8, 2 vols. 8vo.—*Vossii Hist. Lat. Plinii Epist.*

SILVA (JOHN BAPTIST) a French physician, born of a Jewish family, at Bordeaux, in 1682. He studied at Montpellier, and took the degree of MD. at the age of nineteen. He went to Paris, where he was encouraged by the physicians Chirac and Helvetius, and his own skill soon raised him to eminence. In 1724 he was appointed consulting physician to Louis XV, and he was invited to Munich by the elector of Bavaria, afterwards emperor; and in 1738 was offered the post of first physician to the empress of Russia, which he refused. The king bestowed on him a patent of

S I M

nobility a few years before his death, which took place at Paris, August 19, 1742. M. Silva was the author of "*Traité de l'Usage des différentes Sortes des Saignées, et principalement de celle du Pied*," 2 vols. 8vo; and "*Dissertations et Consultations*," 3 vols. 12mo.—*Dict. Hist. Bing. Univ.*

SILVESTER II (Pope).—See **SYLVES-TER II.**

SIMEON OF DURHAM, an early English historian, was a contemporary of William of Malmesbury, in the twelfth century. He both studied and taught the sciences, and particularly the mathematics, at Oxford. He became preceptor of the church of Durham, and died probably soon after the year 1130, at which time his history terminates. He employed himself assiduously in collecting ancient records, especially in the north of England, after they had been scattered by the Danes. From these he composed a history of the Saxon and other kings, from the year 616 to 1130. This work, which was continued by John, prior of Hexham, to 1156, is printed among Twyden's "*Decem Scriptores*," and separately in 1732, 8vo.—*Cave*, vol. ii.

SIMEON, surnamed **METAPHRASTES**, an ecclesiastical writer of the tenth century, who being nobly born and well educated, rose to high employments under the emperors Leo and Constantine Porphyrogenitus. His writings consist of the lives of about 120 saints, the history of which, in respect to style, Baronius asserts was not contemptible, although the original Greek being lost, this judgment being formed from Latin translations, is of course problematical. With respect to facts, the same authority gives him up as one who composed panegyrics rather than biography. He also wrote sermons and other pieces, which are still extant. Of his "*Lives of the Saints*," several Latin versions exist; and it is supposed that his translators have made many additions to his narratives, which at this time of day merit and receive the least possible attention. He died in 976 or 977.—*Baronii Annales. Mosheim.*

SIMEON, surnamed **STYLITES**, a remarkable fanatic, was born about 392 at Sison, a town on the borders between Syria and Cilicia. He was the son of a shepherd, and followed the same occupation until the age of thirteen, when he entered a monastery. After some time he left it, and betook himself to abodes on the tops of mountains, or in the caverns of rocks, fasting for many days together in all the spirit of ascetic devotion. At length he worked himself to such a pitch of extravagance, that he adopted the strange fancy of fixing his habitation on the tops of pillars (whence his Greek appellation), and with the notion of climbing higher and higher towards heaven, successively emigrated from a pillar of six cubits high to others of twelve, twenty-two, thirty-six, and forty cubits. What is most extraordinary, he was enabled, in the mild climate of Syria, to pass forty-seven years upon his pillars, and his wretched existence was at last terminated by an ulcer, at

the age of sixty nine. The age was stupid enough to consider this madness as a proof of extraordinary sanctity, and he was supplied with food, &c. with all the zeal of profound admiration. His body was taken down from his last pillar by the hands of bishops, and conveyed to Antioch by an escort of 6000 soldiers, and with almost imperial honours. Such was a part of the Christianity of the fifth century; and what is still more lamentable to this day, writers have been found to exalt the almost incredible, but well-authenticated acts of insanity of this madman, as the deeds of a Christian saint. His fanaticism produced many imitators, and an existence on pillars, in the mild climate of Asia, was exhibited by similar lunatics until the twelfth century, when the folly was suppressed.—*Moreri. Mosheim.*

SIMLER (JOSIAS) a learned Protestant divine, born at Cappel in Switzerland, in 1530. His father, who had been prior of the monastery of Cappel, embraced the doctrines of the reformers, and became a minister of the Swiss church. The son studied at Zurich under Henry Bullinger, whose daughter he subsequently married; and having completed his education at Basil and Strasburg, he returned to his native country, and was employed both as a tutor and a preacher at the age of twenty. In 1563 he succeeded to the theological professorship at Zurich, on the death of Peter Martyr, in which station he industriously employed himself in confuting the various heresies which sprang up among the Protestants in Poland and other parts of Europe. But he did not confine his labours to theological controversy, having published several works relative to history, mathematics, and philology. The productions which have procured him the most lasting reputation are those which relate to the history of his native country, and his abridgment of Gesner's *Bibliotheca*. He died in 1576.—*Teissier Elog. des H. S. Biog. Univ.*

SIMMIAS of Rhodes, a Greek poet, some of whose works are still extant, but of whose history little or nothing is known. According to Suidas, he flourished 406 years after the taking of Troy, or 778 B.C.; but this is a manifest error, and the conjecture of Vossius, which places him under the reign of Ptolemy Lagus, is probably not far from the truth. He must have lived at a period when a corrupt taste prevailed, for his works are chiefly distinguished for singularity of form. Three pieces of his composition remain, "The Wings," "The Egg," and "The Ax," thus denominated from the arrangement of the verses so as to form the respective figures. These elaborate trifles may be found in various editions of the "Poetæ Græci Minores.—*Biog. Univ.*

SIMMONS (SAMUEL FOART) a physician and anatomical writer, born at Sandwich in 1750. He commenced his professional studies in France, and pursued them afterwards at Edinburgh and Leyden, at which last university he took the degree of M.D. In 1778 he established himself as a practitioner of medi-

cine in the metropolis, and the following year he was elected a fellow of the Royal Society. In 1780 he became physician to the Westminster Dispensary; and in 1781 he commenced the publication of a review and magazine, entitled "The London Medical Journal," which first appeared in monthly numbers, and was for some years conducted with great spirit and ability. Having obtained the office of physician to St Luke's hospital, he resigned his situation at the dispensary. In 1803 he was consulted relative to the indisposition of the late king; on whose recovery he received the appointment of physician extraordinary to his majesty. His death took place in 1813. Dr Simmons was the author of "Elements of Anatomy," 8vo; "A Treatise on Consumption," 8vo; and "Memoirs of Dr William Hunter," besides contributions to the Philosophical Transactions.—*Gent. Mag.*

SIMON (RICHARD) an eminent French divine and theological writer, born at Dieppe in Normandy, in 1638. After he had finished his studies, he entered into the congregation of the Oratory, and became lecturer on philosophy at the college of Juilly. He distinguished himself as a bold and original speculator, exhibiting a fondness for paradoxical opinions, which however he supported with great learning and ingenuity. In 1678 he published "Histoire Critique du Vieux Testament," in which the latitude of sentiment exhibited was such that the work was suppressed in France. That circumstance, as usual, served to excite public curiosity, to satisfy which a Latin version was published at Amsterdam, and an English one in London. M. Simon subsequently withdrew from the society of the Oratory, and settling at Paris, devoted his time to theological and critical inquiries. He at length removed to Dieppe, where he died in April 1712. Besides the work already mentioned, he was the author of "Histoire Critique du Nouveau Testament," 4to; "Histoire Critique de la Créance et des Coutumes des Nations du Levant," 12mo; "Disquisitiones criticæ de variis Bibliorum Editionibus, quibus acced. Castig. Theolog. ad Opuscul. Vossii de Sibilin. Orac." 4to; "Lettres Choïsies," 12mo; and various other works, including a French translation of the New Testament, with remarks. He likewise, under the pseudonym of Sainjoris, edited an interesting miscellany, entitled "Bibliothèque Choïsie, ou Recueil de divers Pièces critiques, dont la plupart ne sont point imprimées, ou ne se trouvent que très difficilement," Paris, 1708—10, 4 vols. 12mo.—*Moreri. Biog. Univ. Stollii Introd. in Hist. Litt.*

SIMON (RICHARD) a lexicographer, a native of Dauphiny, who must not be confounded with the subject of the last article. Having entered into the ecclesiastical state, he obtained the cure of a parish in the diocese of Vienne; but he was obliged to resign it on account of ill health. He then settled at Lyons, where he employed himself in compiling a "Dictionary of the Bible," 1693, folio, republished in 2 vols. in 1703. This

work is not destitute of merit, but it has been superseded by the dictionary of father Calaneo.—*Biog. Univ.*

SIMONIDES, a celebrated Grecian poet, was born in the island of Ceos, one of the Cyclades, where he flourished in the fifth century B.C. He excelled in various kinds of poetry, but particularly in the elegiac; and is mentioned by Plato and Cicero, not only as a good poet, but as a man of wisdom and virtue. Xenophon, in his Dialogue on Tyranny, makes him one of the interlocutors, and his famous answer to Hiero, king of Sicily, has often been quoted. Hiero having one day asked him a definition of God, he requested a day to consider of it. When this day expired he doubled the time, and this he did repeatedly until the king wished to know his reason for thus proceeding. "It is," he replied, "because the longer I reflect on the question, the more difficult it appears to be." He was frequently employed by the victors at the games, to write panegyrics and odes in their praise, like the celebrated Pindar, who was his pupil; and he is reproached with being the first who took money on that account. He was accused of avarice in his old age, and in excuse asserted, that he would rather leave money to his enemies after his death, than be troublesome to his friends when living; and obtained the prize in poetry at the public games, when he was eighty years of age. He was celebrated among the ancients for the sweetness, correctness, and purity of his style. Addison, in the Spectator, No. 209, has an ingenious paper on Simonides' "Characters of Women," which fragment, preserved by Stobæus, was published in Greek and Latin, by Kohler, Göttingen, 1781, 8vo; and in Latin only, in 1789, to which version, professor Heyne prefixed a letter on the condition of women in ancient Greece. Simonides' fragments of poetry are printed in the Corpus Poetarum Græc. This ancient poet reached the advanced age of eighty-nine.—*Fabric. Bibl. Græc. Bayle.*

SIMPLICIUS, a philosopher of the sixth century, was a native of Cilicia. He endeavoured to unite the Stoic and Platonic doctrines with the Peripatetic, of which combination of tenets his commentary upon the Enchiridion of Epictetus is a remarkable example. Of this work Fabricius affirms that there is nothing in Pagan antiquity better calculated to form the morals, or which affords juster views of divine providence. Simplicius was one of the philosophers who took refuge with Chosroes, king of Persia, from an apprehended persecution by Justinian; the whole of whom returned to Athens upon a truce between the Romans and Persians in 549, which stipulated a toleration for them. The commentaries of Simplicius upon Aristotle have been several times published in Greek, and those on Epictetus in Greek and Latin, Leyden, 1639, and London, 1670. They have also been translated into English and French by Stanhope and Dacier.—*Fabricii Bibl. Græc. Brucker.*

SIMPSON (CHRISTOPHER) one of the

most eminent English musicians of the seventeenth century. Of his birth or family little is known, but it is ascertained that during the civil wars he served with credit in the army raised by the duke of Newcastle in support of the royal cause against the parliament. He is now principally known by some able treatises on musical subjects. Of these his "Chelys Minutionum," printed in columns, English and Latin, 1665, folio, dedicated to his scholar and patron, sir John Bolles, contains instructions for the viol de gamba, an instrument popular in his time. His next work, "A Compendium of practical Music," published in five parts, 1667, is an able one, and treats of vocal as well as instrumental music. The time of his decease is uncertain.—*Biog. Dict. of Mus.*

SIMPSON (EDWARD) a learned English divine, was born in 1578, at Tottenham, in Middlesex, of which parish his father was rector. He was educated at Westminster school, whence he removed to Trinity college, Cambridge, where he obtained a fellowship, and took the degree of D.D. He obtained the living of Eastbury in Kent, and was also made a prebend of Canterbury. He devoted much of his time to study, and died in 1651. His principal works are "Mosaica, sive Chronici Historiam Catholicam complectentia, &c." 4to; "Chronicon Catholicum ab exordio Mundi;" "Prælectiones in Persii Satyras;" "Notæ Selectiones in Horatium;" "Anglicanæ Linguæ Vocabularium Etymologicum," with several theological tracts, and other pieces. *Life by Wesseling. Lloyd's Memoirs.*

SIMPSON, FRASER (THOMAS) a very eminent mathematician, was born at Market Bosworth, in the county of Leicester, in 1710. His father, who was a stuff-weaver, intended him for the same business, and perceiving his taste for study, forbade him the use of books, which produced an open rupture, and he was left to shift for himself. He in consequence left Bosworth, and took lodgings at the house of a tailor's widow at Nuneaton, whom he afterwards married. Here he lived some time, working at his trade, and while thus employed became acquainted with a pedlar, who professed astrology. His new friend lent him Cocker's arithmetic, a treatise on algebra, and Partridge's book of genitures; which he studied so diligently, that he soon became astrologer on his own account, and the fortune-telling oracle of the neighbourhood. An unlucky undertaking to raise the devil, by which piece of imposture a simple girl was nearly frightened into confirmed insanity, obliged him to quit Nuneaton, and he repaired to Derby, where he occupied himself in his trade by day, and instructed pupils at night. He remained at Derby until 1736, when he repaired to London, and resided near Spitalfields, where he wrought at his business, and taught mathematics in the evening. His exertions being attended with success, he brought his wife and children to town, and his name becoming known, he was encouraged to publish by subscription "A new Treatise of Fluxions,"

1737, 4to. This able work was followed in 1740 by a "Treatise on the Nature and Laws of Chance," 4to; and a quarto volume of "Essays on several curious and interesting Subjects in speculative and mixed Mathematics." In 1742 appeared his "Doctrine of Annuities and Reversion," which involved him in a dispute with De Moure, in which however he maintained a decided advantage. Such was his industry, that the ensuing year he produced a large volume of "Mathematical Dissertations;" his celebrated "Treatise on Algebra" was published in 1745; his "Elements of Geometry" in 1747; his "Trigonometry, plane and spherical," in 1748; his "Doctrine and Application of Fluxions" in 1750; in 1752 his "Select Exercises for young Proficients in Mathematics;" and in 1757 his "Miscellaneous Tracts." He had previously, in 1743, been appointed to the professorship of the mathematics at Woolwich, by the instrumentality of Mr Jones, father of the celebrated sir William Jones, and in 1745 admitted a fellow of the Royal Society. He had a peculiar and happy mode of teaching, but owing to his great simplicity of character, he was often the butt of his more waggish pupils. He had also a predilection for low company, and for some of the habits consequent thereon. When his constitution began to decline, a proper regimen was enforced; but it was too late, as he gradually sank under a depression of spirits, which rendered him incapable of his professional duties. Being recommended to try his native air, he set out in February 1761, to Bosworth, where he lingered until the 14th of May following, when he expired in the fifty-first year of his age. Besides the works already mentioned, he wrote several papers which were read at the Royal Society, and printed in its Transactions; and also assisted in, and superintended the "Ladies' Diary" for several years. In 1760 he was consulted on the plan for Blackfriars bridge, and made a report to the committee, which, with several of his letters on the subject, were collected in the Gentleman's Magazine. The widow of this self-taught and extraordinary man, who was allowed a pension of £200. per annum after his death, reached the age of 102.—*Hutton's Math. Dict.*

SIMSON (ROBERT) a distinguished mathematician of the last century. He was born in 1687, at Kirtonhall in Ayrshire, and received his education at the university of Glasgow. He studied medicine, and took the degree of doctor in that faculty; but he never practised, and in 1711 he was elected to the mathematical chair at Glasgow, which he filled during a period of nearly fifty years, maintaining the highest reputation for geometrical science. He became a fellow of the Royal Society, and furnished many mathematical papers to the Philosophical Transactions. He published a translation of Euclid's Geometry, which superseded all former elementary works; and he was also the author of "The Loci of Apollonius restored," 4to, and a treatise on Conic Sections, 4to. His death took

place October 1, 1768; and a volume of his posthumous tracts on mathematics appeared in 1776.—His brother, THOMAS SIMSON, was professor of medicine and anatomy at the university of St Andrews. He published, in 1726, "Quatuor Disertationes de Re Medica," Edinburgh, 8vo; "An Essay on Muscular Motion," 1752, 8vo; besides memoirs in the Transactions of the Edinburgh Philosophical Society.—*Hutton's Math. Dict. Biog. Univ.*

SINCLAIR (CHARLES GIDEON, baron) a distinguished Swedish general, who served in his youth in France, in Prussia, and in Saxony, and was subsequently engaged in the wars which took place in various parts of Europe in the last century. He made himself known likewise by his writings, which display a profound acquaintance with military tactics. Among his published works are "Regulations for Infantry," still adopted in Sweden; and "Military Institutions, or an elementary Treatise on Tactics," Deux Ponts, 1773, 3 vols. 8vo. Baron Sinclair died near Westeras, in Sweden, September 1, 1803, aged seventy-three.—*Biog. Univ.*

SINCLAIR, or SINCLARE (GEORGE) a philosopher, distinguished for his researches in physical science, and, very inconsistently, also as the advocate for popular superstition. He held the office of philosophical professor at Glasgow about the middle of the seventeenth century; but being a zealous Presbyterian, he resigned, after the Restoration of Charles II, rather than submit to the renunciation of the solemn league and covenant required under the new government. He was then employed as an engineer in procuring a supply of water from the Pentland hills for the city of Edinburgh; in the course of which undertaking, in 1668—70, he made use of the mercurial column to ascertain the height of Arthur's seat and other hills in the vicinity of the Scottish metropolis; and he is said to have been the first who applied to this instrument the appellation of baroscope, since changed for that of barometer. In 1672 he published a treatise on hydrostatics and the working of coal mines, 4to, which was somewhat illiberally animadverted on by Dr Gregory, the inventor of the reflecting telescope. Sinclair appended to his work a strangely irrelevant piece, entitled "A true Relation of the Witches of Glenluce." After the Revolution he recovered his professorship, and retained it till his death in 1696. He was the author of a book called "Satan's Invisible World discovered," long popular among the Scottish peasantry; besides which he published several works on mathematics and natural philosophy.—*Hutton's Math. Dict.*

SINDIAH, or SCINDIA (MAHAJEE) the son of a Mahratta officer, at the court of the Peishwa, in Hindostan, was born about 1743. He was at the battle of Panniput in 1761, where his uncle, one of the Mahratta generals, was killed, and he himself was badly wounded and taken prisoner. Having made his escape, he took refuge in the Decan; and when the Mahrattas recovered the province

of Malwa some years after, he was restored to his patrimonial domain. His ambition prompted him to aspire to the possession of sovereign power, and his courage and address rendered him successful. In 1770 he invaded Hindostan in concert with Holkar, at the head of a Mahratta army, when he made himself master of Delhi, and obtained the tutelage of the nominal emperor Shah Aulum, who had been the pensioner and vassal of the English. He then attacked the Rohillas, who were supported by the nabob Shujah-Doulah and the English; and this contest was terminated by the treaty of 1782, ratified towards the close of the following year. After this he pursued his projects of aggrandisement; and in 1785 he a second time made himself master of Delhi and of the person of the emperor. He also took Agra, where he established a cannon-foundry; and he was the first Indian prince who possessed troops armed and disciplined in the European manner. He had taken into his service general Leborgne de Boigne, a Frenchman, to whose talents and courage he was indebted for much of the success which attended his undertakings; and it was this officer who, at the head of an array of Mahrattas and Moguls, gained the famous battle of Patan in June 1790. Sindiah was called a third time to Delhi, to the assistance of Shah Aulum, who had been deposed and cruelly treated by a rebel chief. The Mahratta prince restored him to the empty title of sovereignty, reserving to himself the imperial power, with the quality of vizir. In 1791 he returned to the Decan, where he endeavoured to obtain the office of minister of the Peishwa, who was a minor; but in this scheme he was disappointed. He seems to have conceived ambitious designs of much greater importance, but these were frustrated by his sudden death in 1794. The dominions of this prince extended from the Ganges to the gulf of Cambaya, and from the frontiers of Lahore to those of Candahar. He was succeeded by his nephew Dowla Rao Sindiah.—*Biog. Univ.*

SINNER (JOHN RODOLPH) a philological writer, born at Berne, of a patrician family, in 1730. After finishing his studies, he travelled abroad, and on his return was made keeper of the public library at his native place. He published "Extracts from some Poems of the twelfth, thirteenth, and fourteenth Centuries," Lausanne, 1759, 8vo; which was followed by his catalogue of the MSS. in the library of Berne, with critical annotations, 3 vols. 8vo; and a catalogue of the printed books in the same collection, 2 vols. 8vo. He was also the author of a French translation of the satires of Persius; an Essay on the doctrines of transmigration and purgatory; and a tour in Switzerland. He resigned his office of librarian in 1776, to enter into the grand council of Berne, and he became bailli of Erlach. His death took place February 28, 1787.—*Biog. Univ.*

SIRI (VITTORIO) an Italian annalist, was born at Parma about 1613. He took the Benedictine habit in the monastery of St John, and

there began to publish a work, entitled "Mercurio Politico," which obtained great celebrity, and of which fifteen volumes appeared successively from 1635 to 1655. He afterwards joined to it "Memorie Recondite," in eight volumes. The writer's purpose was not only to record facts, but to investigate their causes in the secret negotiations of cabinets, and to give documents in support of his narrative. Through the influence of cardinal Mazarin he was invited to Paris, and presented with a secular abbacy, and allowed to entitle himself counsellor, historiographer, and almoner to his most Christian majesty. He died in 1683, aged seventy. He is said to have had a venal pen, but he had opportunities for good information; and the number of original documents which he published still give a certain value to his works. A translation into French of the most important part of both the *Mercurio* and *Memorie*, have been published by M. Requier, under the title of "Mémoires Secrets."—*Tiraboschi. Lundi. Moreri.*

SIRMOND (JAMES) a French jesuit, distinguished for his learning and ability. He was born at Riom in the province of Auvergne in 1539, and he prosecuted his youthful studies with such diligence, that having entered into the order of St Ignatius at the age of fifteen, he was immediately employed as a classical tutor in the college of Paris. For several years he taught with great reputation, and among his pupils were the duke d'Angouleme, a natural son of Charles IX, and Francis de Sales, afterwards bishop of Geneva. In 1590 he was called to Rome, and appointed secretary to Claudius Aquaviva, the general of his order. Returning to Paris, he employed himself in various undertakings, which display immense literary industry and acuteness of intellect. In 1629 appeared his greatest work, "Concilia antiqua Gallie," 2 vols. folio; and he edited the writings of Sidonius Apollinaris, and other early Christian authors. As a controversial writer, he obtained great celebrity, particularly in his dispute with James Godefroi, relative to the extent of the pope's jurisdiction; and in his defence of himself, against the abbé de St Cyran, who attacked his work on the councils of the French church. In 1637 he was chosen confessor to Louis XIII, which appointment interrupted his literary avocations; but on the death of that prince in 1643, he returned to his favourite studies, and prosecuted them with great assiduity till his death. That event took place in 1651, in the ninety-third year of his age. The works of this learned jesuit are very numerous, extending to fifteen folio volumes, inclusive of his editions of ancient writers. In 1728 appeared "Sirmondi Opera Varia, cura Theodori," Venice, 5 vols. folio.—*Niceron Mem. vol. xvii. xx. Perrault. Moreri.*

SISENNA (LUCIUS CORNELIUS) a Roman orator and historian, descended from the same family with the dictator Sylla. He was quaestor of Sicily in the year of Rome 676, and afterwards praetor and governor of Achaia, as lieutenant of Pompey. He wrote a History

of Rome, from the taking of the city by the Gauls to the time of Sylla, in twenty-two books; and a history of the wars of Sylla, besides which he composed a commentary on the comedies of Plautus; and translated from the Greek the Milesian Tales. All his works have perished except some fragments of the history collected by Curtius, and published in the notes to his edition of Sallust; and relics of the Tales cited by Charisius and Servius.—*Biog. Univ.*

SIXTUS V (Pope) was born in 1521 at Montalto, in the marche of Ancona, where his father, Francis Peretti, was a vinedresser. The son, whose name was Felix, was employed by a neighbouring farmer in keeping swine, in which mean situation he attracted the notice of a Franciscan friar, who obtained admission for him into the convent of Ascoli, in the quality of lay-brother. His natural acuteness and thirst for learning being remarked, he was taught the Latin language; and being received into the order, went through the usual courses of philosophy and theology. He was ordained priest in 1545, and soon after made a doctor in theology, when he assumed the name of Montalto. Having acquired a high character by his preaching, he was nominated commissary general at Bologna, and inquisitor at Venice, where, however, he excited the jealousy of the senate, and in consequence retired to Rome, where he became procurator general of his order. On his pupil, cardinal Alexandri, being raised to the papal throne under the name of Pius V, he was made general of his order, and cardinal. On the accession of Gregory XIII, finding himself without influence or connexions to push him forward, he suddenly changed his demeanour, and assumed quite an opposite character of gentleness and meekness, and appeared all humility and condescension. He even carried his hypocrisy so far as to treat his family with neglect, and affecting the infirmities of age, to assure them that he was dead to the affairs of the present world. With similar craftiness he took no part in political contentions, and so imposed on the cardinals, that in derision they used to call him "the ass of La Marca." At length Gregory XIII died, on which a strong contest took place; and the interest of the more influential candidates being nearly equal, they agreed to choose Montalto for the present, who appeared before them incessantly coughing, as if about to expire. He was accordingly elected on the 24th April 1585; and scarcely had the tiara been placed on his head, than he threw away his staff, walked erect, and chanted *Te Deum* with a voice so strong, that the roof of the chapel re-echoed with the sound. He took the name of Sixtus V, and commenced his reign with a degree of rigour in the administration of justice which was quite unknown in Rome, and which, although much severity had become necessary, was in many instances cruel and implacable. His foreign policy was equally significant of the strength and audacity of his character. He excommunicated Henry IV of France, while

only king of Navarre, and deprived him of the right of succession; and solemnly approved the assassination of Henry III, by the domineau Clement. He however refused on that event to renew the excommunication against Henry IV, who he said was worthy of a crown; and he also much admired our queen Elizabeth for the freedom and vigour of her government. After the defeat of the Spanish Armada, he intended to struggle with Philip II, for the full possession of Naples, but death prevented him. Although he reigned only five years and four months, he undertook and completed numerous magnificent works, and on his death left a large sum in his treasury. He was by no means exempt from nepotism; he raised his poor sister, the widow of a peasant, to the rank of a princess, exalted her grandson to the cardinalship, and married his nieces into the first families. This celebrated pontiff was the first who fixed the number of cardinals at seventy. He also caused the vulgar edition of the Bible to be revised; and to the great dismay of the Catholic priesthood, even allowed of an Italian version of it. He died August 27, 1590, after a short but active reign. His death created great joy at Rome, owing to his extreme rigour; but the vigour of his administration and the mighty works which he effected, have thrown a considerable lustre about his name, and have constituted him one of the most distinguished characters in an age which abounded with great men.—*Life by Leti. Tiraboschi.*

SKELTON (JOHN) an old English poet, descended from an ancient family in Cumberland, was born towards the latter part of the fifteenth century. He appears to have studied at both universities, but certainly at Oxford, where about 1489 he received the laureateship as a degree, not being at that time a court officer as at present. He took orders in 1498, and in some of his works he alludes to his being curate of Trompington in Cambridgeshire in 1507, as well as rector of Diss in Norfolk. Tradition informs us that he occasionally created disgust by his buffooneries in the pulpit; and there were three objects at which he delighted to aim his satire, which were the mendicant friars, Lily the grammarian, and cardinal Wolsey. His attacks even when merited were extremely coarse, nor was his own life either moral or regular. His attacks on Wolsey at length roused the resentment of that powerful prelate, and an order being issued for his apprehension, he took refuge in the sanctuary at Westminster, where the abbot Islip afforded him protection until his death, on the 21st June 1529, not long before the fall of Wolsey. Skelton appears to have been deemed a more important person in his own day than has been generally imagined. However obscured by indecency, scurrility, and the broadest burlesque, he occasionally exhibits much sound sense, and his vein of satire is often copious and original. Its application to the clergy of the day was certainly unsparing, but vices that almost justified the plunder of the church by Henry VIII, in the

eyes of his subjects, might naturally enough excite the spleen of a caustic satirist; and Skelton himself insinuates that he was chiefly reviled for his blunt exposure of the reigning follies of the day. His works will be found in Chalmers's edition of the English poets, with the exception of a few which, owing to their coarseness, it was thought proper to omit. The whole are enumerated by Ritson.—*Life in Chalmers's Edition of Poets. Warton's Hist. of Eng. Poet.*

SKELTON (PHILIP) a learned Irish divine, was born in the parish of Derriaghly near Lisburne in 1707. Being one of a numerous family of ten children, after being sent to Lisburne school, he lost his father, and he was in 1724 entered as a sizar in the university of Dublin. He left college after taking his first degree, and assisted his brother, a clergyman and school-master, at Dundalk. He was himself ordained in 1729, and first served a curacy in the county of Fermanagh, whence he removed to another in Monaghan. While in this situation he published several able controversial tracts anonymously, some of which exhibited a peculiar vein of satire; one of them, entitled "Proposals for the Revival of Christianity," being attributed to Swift. His conduct as a clergyman was exemplary for its correctness and benevolence; yet he obtained no preferment until 1750, when he received the small living of Petego in Donnegal. He had previously written his principal work, called "Deism Revealed," which appeared in 1749, in 2 vols. 8vo. In 1759 he obtained the living of Devenish near Enniskillen, and in 1766 that of Fintona in the county of Tyrone. This active and conscientious, but in some respects eccentric clergyman, died May 4, 1787, in his eightieth year. His works, in five volumes octavo, which were published by himself in 1770, for the benefit of the Magdalen charity, consist of "Deism Revealed," various sermons, and some curious original tracts, too numerous for detail.—*Life by S. Burdy.*

SKINNER (STEPHEN) a philological writer of eminence in the seventeenth century, who was a native of London or its vicinity. He studied at Christchurch, Oxford, but left the university at the commencement of the civil war in the reign of Charles I, and went to the continent. In 1646 he returned home, and took his degrees in arts, after which he again travelled abroad, and at the university of Heidelberg he was admitted M.D. In 1654 he obtained the same degree at Oxford, after which he engaged in practice as a physician at Lincoln. Dr Skinner devoted much of his time to etymological researches, especially relative to the dialects of his native country; and at his death, in 1667, he left the materials of a valuable work, edited by Thomas Henshaw, under the title of "Etymologicon Lingue Anglicanæ," 1671, folio.—*Wood's Athen. Oxon.*

SLATER or SLAYTER (WILLIAM) a divine and poet, was born in Somersetshire in 1587, and was admitted a member of St Mary-hall, Oxford in 1600, whence he removed to

Brazenose in 1607. In 1611 he entered into orders, and was beneficed at Otterden in Kent, where he died in 1647. He obtained a considerable reputation for poetical talent, and a knowledge of English history, which is to be estimated by the following works, "Threnodia sive Pandionium," being elegies and epitaphs on queen Anne of Denmark, 1619; these elegies and epitaphs are in Hebrew, Greek, Latin, and English verses, and some of them are in the fantastical shapes of pillars, circles, &c.; "Palæ-Albion, or the History of Great Britain," folio, in Latin and English verse, with historical notes, which production Grainger deems his "capital work;" "Genethliacum, sive Stemma Regis Jacobi," folio, Latin and English, in which work the genealogy of James, from Adam, is laboriously deduced; "The Psalms of David, in four Languages, Hebrew, Greek, Latin, and English, set to the Tunes of our Churches." Both words and music are neatly engraved in sixty copper-plates, and taken as a whole, Dr Burney esteems it one of the most curious productions of the seventeenth century.—*Athen. Oxon. Burney's Hist. of Music.*

SLEIDAN (JOHN) an able and learned German historian, so named from the place of his nativity, Sleidna, a small town in the vicinity of Cologne, where he was born in 1506. He was the son of humble parents, and was distinguished by a certain precocity of talent, which, having cultivated by all the means afforded him at home, he accompanied his fellow-townsmen and friend, John Sturm, to France, where he completed his studies in the universities of Paris and Orleans. The recommendation of his companion secured him in 1535 a situation in the household of the cardinal archbishop John du Bellay, to whom he acted many years as confidential secretary, and obtained from the munificence of that prelate a comfortable pension. He accompanied the French ambassador to the diet at Haguenau, and afterwards resided at Paris, until in 1542 his attachment to the doctrines of the Reformation caused him to retire to Strasburgh. The sect which he first embraced was that of Zuingle, but he afterwards joined the Lutherans, and became considerable in that party both by his writings and public employment. He was deputed in 1545 to the king of England, and in 1551 was one of the Protestant envoys to the Council of Trent, which was soon after dissolved by the troops of Maurice, elector of Saxony. He ultimately retired to Strasburgh, where he occupied his leisure hours in writing the memoirs of his own times, from 1517, the year when Martin Luther first commenced his opposition to the see of Rome, to 1553, that in which the work appeared. This elaborate history, which is written in twenty-five books, and has been translated into most of the European languages, is entitled "De Statu Religionis et Reipublicæ Carolo Quinto Cæsare Commentarii." He was also the author of another historical treatise in three books, "De quatuor summis Imperiis," and of a few tracts, principally po-

litical, collected and printed in 1608, under the title of "Opuscula, &c." The death of his wife, to whom he was much attached, in the same year in which his principal work appeared, produced in him a morbid melancholy, which impaired his faculties, and at length terminated in death in 1556. The "De Statu Religionis" of Sleidan has always been in great credit with the Protestants, although charged with partiality by the Catholic writers and the adherents of Charles V. It is highly praised by the impartial De Thou. His compendium of ancient history, "De quatuor summis Imperiis," has also been frequently reprinted.—*Melchior Adam. Moreri. Thuanus.*

SLINGELAND (JOHN PETER van) a Dutch artist, celebrated as a painter of portraits and conversations, was born at Leyden in 1640. He was a pupil and decided imitator of Gerard Douw, whom he is sometimes thought to surpass. His extreme attention to finish caused him to work very slowly, and he was once three years engaged in one family piece. He imitated nature with extreme accuracy, but with very little taste in the way of selection. He is however esteemed one of the best painters of the Flemish school.—*Argenville Vies de Peint.*

SLOANE (sir HANS) a celebrated English physician and naturalist, who by a testamentary bequest laid the foundation of that most important national establishment, the British Museum. He was of Scottish extraction, his father Alexander Sloane being the head of a colony of Scots which, in the reign of James I, settled in the north of Ireland, where the subject of this article was born, at the town of Killileagh, April 16, 1660. He manifested a predominant taste for natural history at an early age, which led him to choose the profession of medicine, as affording the greatest facility for indulging in his favourite studies. He went to London, where he attended lectures on anatomy, botany, and chemistry, and formed an acquaintance with Boyle and Ray. After remaining in that metropolis four years, he removed to Paris, and then to Montpellier, where he appears to have taken his medical degrees. In 1684 he returned to London, to engage in the practice of his profession. The following year he was elected a member of the Royal Society, and in 1687 he was chosen a fellow of the College of Physicians. He shortly after went to Jamaica as physician to Christopher, duke of Albemarle, who had been appointed governor of that island. The death of that nobleman, shortly after his arrival in the West Indies, occasioned the return of Dr Sloane to England, after an absence of about fifteen months, which period he had most sedulously employed in collecting from Jamaica and some of the Caribbee Islands, plants and other objects of natural history, which served as the foundation of a splendid work subsequently published. He resumed his practice as a physician in London; and in 1694 he was chosen physician to Christ's hospital, which office he held till 1730. Being appointed se-

cretary to the Royal Society, he renewed the publication of the Philosophical Transactions, which had for some time been interrupted. In 1701 he obtained the diploma of M.D. from the university of Oxford; and he was likewise elected an associate of the Academy of Sciences at Paris. His most important work, the "Natural History of Jamaica," was partly published in 1707, when the first volume made its appearance; but the numerous avocations of the author delayed the publication of the second till 1725. He was one of the medical attendants of queen Anne in her last illness; and George I created him a baronet in 1716; being, it is said, the first physician on whom that honour was conferred. He was likewise appointed physician-general to the army during the reign of that king; and on the accession of George II, he was nominated physician in ordinary to his majesty. In 1719 he became president of the physician's college; and on the death of sir Isaac Newton, in 1727, he succeeded to the presidency of the Royal Society. He held the latter post till 1740, when his great age and infirmities induced him to resign it. The following year he retired to Chelsea, where he died January 11, 1752, and his remains were interred in a vault in the parish church. Sir Hans Sloane was not only distinguished as a man of science but also as a liberal and patriotic citizen. He was a governor of most of the metropolitan hospitals, to which he was not only a constant benefactor while living, but he also left considerable sums to them at his death. He set on foot the scheme of a dispensary for the poor; and he gave to the apothecaries' company a piece of ground for a botanic garden. He contributed greatly to the execution of other schemes for the public benefit; but the share he had in the institution of the British Museum will most effectually preserve his name from oblivion. Having with great labour and expense, during the course of his long life, collected a rich cabinet of medals, objects of natural history, &c. and a valuable library of printed books and manuscripts, he bequeathed the whole to the public, on condition that the sum of 20,000*l.* should be paid to his executors, being little more than the intrinsic value of the medals, metallic ores, and precious stones, comprised in his collection. Parliament fulfilled the terms of the legacy, and in 1753 an act was passed—"for the purchase of the museum or collection of sir Hans Sloane, bart. and of the Harleian collection of MSS. and for procuring one general repository for the better reception and more convenient use of the said collection, and of the Cottonian library, and additions thereto." Such was the commencement of the British Museum, every department of which, and especially the library, has recently been vastly augmented.—*Biog. Brit. Martin's Biog. Phil.*

SMALBROKE (RICHARD) bishop of Lichfield and Coventry, a learned and zealous, but somewhat fanciful polemic, who flourished in the earlier part of the last century. He was a native of the town of Birmingham, born

1672, and took his degrees in divinity at Magdalen college, Oxford, where he obtained a fellowship, and continued to reside, till in 1723 he was raised to the see of St David's. Over this diocese he presided about seven years, when he was farther preferred to the more valuable one of Lichfield. In the Whistonian controversy he maintained the Anti-Socinian side of the question with considerable ability; but much weakened the effect of a subsequent treatise in vindication of the miracles of Christ against the objection of Woolston, by certain calculations, as useless as absurd, on the precise number of devils in the Gadarene herd of swine. Of this anecdote a very facetious use was once made by Mr Horne Tooke, in ridicule of some ministerial calculation in the house of Commons. Some observations made by bishop Smalbrooke in one of his pastoral charges also drew down upon him from bishop Warburton all the caustic severity for which that learned but acrimonious disputant was so celebrated. Bishop Smalbrooke died in 1749. Some of his sermons and other devotional writings were published by him previously to his decease.—*Nichols's Lit. Anec.*

SMALBRIDGE (GEORGE) bishop of Bristol, was descended of a respectable family of that name, and was born at Lichfield, where his father was a dyer, in 1663. After receiving the rudiments of a classical education at the grammar-school in that city, his friends placed him at Westminster, on the foundation, whence he was in due course elected to a studentship at Christchurch, Oxford, at the age of nineteen. Here he soon distinguished himself by his general powers, and at an early age he was selected with Aldrich and Atterbury as a manager of the controversy with Obadiah Walker, master of University college, and a convert to popery. He was also much distinguished by the elegance of his Latinity, of which the first specimen appeared in 1689, in a poem written on the unpromising subject of a bookseller's auction, entitled "Auctio Davisiana." Having taken holy orders, his rise in the church was rapid; and after obtaining some previous preferment from his college, he was collated in 1693 to a stall in the cathedral of his native city. His strict intimacy with Dr Atterbury involved him in the proceedings of party; but he avoided the animosities too prevalent in its disputes, and held an amicable correspondence with Whiston and Dr Samuel Clarke, to whom he was serviceable in moderating the proceedings of the Convocation against them. He was the proposer of a conference with Dr Clarke on the subject of the Trinity, which accordingly took place, and in which he appeared the advocate of orthodoxy. These connexions and this candour as usual produced an accusation of a leaning towards the opinion of those whom he forbore to treat with rancour, from which imputation he formally vindicated himself in a letter to bishop Trelawny. In 1711 he was made canon of Christchurch, Oxford, in the college of which he had so long

been a member, which he only resigned in 1713 for the deanery, in succession to his friend Atterbury. The following year the see of Bristol was added, together with the appointment of grand almoner. On the breaking out of the rebellion of 1715, he lost his post of almoner, in consequence of refusing to sign the declaration of the bishops on that occasion, which was interpreted into friendship to the exiled family. Of his writings, "A Reply to Walker on Church Government," and a volume containing twelve discourses, were printed in his life-time; but a collection of sixty sermons appeared after his decease, which soon ran to a second edition. His death took place in 1719. Bishop Smalbridge, who was much beloved and esteemed, lies buried in Christchurch cathedral, Oxford.—*Biog. Brit.*

SMART (CHRISTOPHER) a wit and poet of the last century, descended of an ancient and respectable family in the north of England, where his father superintended the management of the earl of Darlington's estates. He was born in 1722 at Shipbourne, a village near Maidstone in Kent, and was first placed at the grammar-school in that town, but soon after removed to that of Durham, where his strong developement of precocious talent obtained him the steady patronage of the duchess of Cleveland. His father dying much involved in his circumstances, her grace placed young Smart, when only seventeen years of age, at Pembroke college, Cambridge, with an allowance of forty pounds a-year, a pension he continued to receive during the three years which his patroness survived. At her decease, in 1742, he was thrown upon his own resources; but having by this time distinguished himself much in his literary career, in the course of which he carried off the Seatonian prize on four successive occasions, a fellowship was conferred on him by his college in 1745. The gaiety of his disposition, and the buoyancy of his spirits, which even poverty could not depress, now rendered him an acceptable companion to most of the beaux esprits of the day, with many of whom, especially with Pope, Johnson, Garrick, and Hawkesworth, he became intimate. His friendship with the first-named poet was much increased by the elegant translations which he made of the "Ode on St Cecilia's Day," and the "Essay on Criticism," into Latin verse. He appears however to have acquired more in point of reputation than of pecuniary profit from both these performances, while an unsuccessful dramatic effusion, entitled "A Trip to Cambridge," added to neither. His marriage in 1753 with Miss Carnan, daughter-in-law to Mr Newberry, the bookseller in St Paul's church-yard, having vacated his fellowship, he settled in London, and commenced author by profession; in which capacity he became a principal contributor to "The Old Woman's Magazine," and "The Universal Visitor," besides publishing a volume of original poems, "The Hilliad," &c. Poverty however, so often the attendant upon genius

again overtook him; and his distresses, aided perhaps not a little by the intemperance to which he gave way, at length unsettled his intellects, and compelled his relations to place him for a while under personal restraint. Yet even in this melancholy state the ruling passion still manifested itself; and his "Song to David," written in a madhouse, and partly with charcoal on the walls of his cell, bears a strong though melancholy attestation to the strength of his mental powers, even in their derangement. A temporary recovery restored him to liberty for a few years, but only to terminate in a confinement on another score. During the interval he gave to the world his translations of Horace's works, both in prose and verse; of those of Phædrus in verse, a metrical version of the Parables; Hannah, an oratorio, with several odes, fables, and other miscellaneous pieces. Although, as before stated, given to occasional fits of intemperance, Smart possessed a strong devotional feeling, and is even said to have written certain passages, in his poems on religious subjects, upon his knees; while the whole of his compositions exhibit proofs of a refined taste, and much originality of thought, combined with a style at once animated and correct. This unfortunate votary of the Muses died at length of a liver complaint, within the rules of the King's Bench prison, May 12, 1771.—*Chalmers's Poets.*

SMEATHMAN (HENRY) a traveller, who after having been secretary to the board of trade, visited the intertropical regions of Africa. He was well acquainted with natural history; and on his return to England in 1781, he addressed to sir Joseph Banks a letter, containing an account of the termites, or white ants, found in Guinea and other hot countries, which was published in the Philosophical Transactions, and also separately in London, 1781. His death took place July 1, 1786.—*Reuss. Biog. Univ.*

SMEATON (JOHN) a celebrated civil engineer, distinguished as the architect of Eddystone lighthouse, and the conductor of various other important undertakings. He was born at Austhorpe, near Leeds, in Yorkshire, May 28, 1724; and was the son of an attorney, who, observing that he had a strong taste for mechanics, wisely allowed him to follow the impulse of his genius, and become a mathematical instrument-maker. He commenced business in that capacity in Holborn, in 1750; but he subsequently adopted the profession of an engineer. He was in 1753 elected a fellow of the Royal Society, and in 1759 he obtained a prize medal for a paper on the power of wind and water to turn mills. His great undertaking, the erection of the lighthouse on the Eddystone rock in the English channel, was finished in the year last mentioned, and it was executed in such a manner as almost to bid defiance to the power of time or accident, and to place in a strong point of view the enterprising talents and industry of the architect. He became in 1764 one of the receivers of the Derwentwater estates, the property of

Greenwich hospital, to the revenues of which he added by his improvements. Among his various enterprises were the rendering the river Calder navigable, and the superintendence of the grand canal in Scotland. In 1771 he engaged in the management of the Greenwich and Deptford waterworks, and he was subsequently employed in improving the harbour of Ramsgate. His death took place at Austhorpe, September 8, 1792. He published "An Experimental Enquiry concerning the Natural Powers of Wind and Water to turn Mills, and other Machines depending on a circular Motion, &c." 1760, 4to; "An Answer to the Misrepresentation of his Plan for Blackfriars Bridge," 1760, folio; "An Historical Report on Ramsgate Harbour," 1791, 8vo; "A Narrative of the Building, and a Description of the Construction of Eddystone Lighthouse with Stone; to which is subjoined an Appendix, giving some Account of the Lighthouse on the Spurn Point, built upon Sand," 1791, imp. folio. He was also the author of a number of papers published in the Philosophical Transactions; and his "Reports made on various Occasions, in the course of his Employment as an Engineer," appeared posthumously in 3 vols. 4to; "A Narrative of the Genius, Life, and Works of J. Smeaton," was published in 1793, 12mo; and a biographical memoir was also prefixed to his "Reports."—*Gent. Mag.*

SMELLIE (WILLIAM) an eminent practitioner of midwifery, who was a native of Scotland. He practised first in the country, and then settled in London, where he was very extensively employed, and was also distinguished as an obstetrical lecturer. He states in one of his publications, that he had educated nearly one thousand pupils, who had, while attending his lectures, afforded assistance to eleven hundred and fifty poor women, such patients being supported during their confinement by a subscription raised among the pupils. In 1752 Dr Smellie published the substance of his lectures, under the title of a "Treatise on Midwifery," 8vo, which he had been six years in preparing for the press. This was followed in 1754 by a volume of cases illustrative of the method of practice which he recommended. Both works were translated into French, and another volume of cases was published posthumously. In 1754 he also laid before the public a set of "Anatomical Tables," with explanations, and an abridgment of the Practice of Midwifery; and the plates of this work, thirty-six in number large folio, are well executed, and fully adapted for the purposes of the author. Dr Smellie, in the course of his professional career, was engaged in a controversy with Dr Burton of York, and with Dr William Douglas, physician extraordinary to the prince of Wales; but though some of the critical animadversions of those gentlemen were not destitute of foundation, they by no means detracted from the reputation of their antagonist, whose numerous improvements in the art he professed, give him a permanent claim to the

gratitude of posterity. He died at Lanark, in Scotland, at an advanced age, in 1763.—*Hutchinson's Biog. Med.*

SMELLIE (WILLIAM) a Scottish printer, distinguished as a man of learning and science. He was born at Edinburgh in 1740, and he served an apprenticeship to Messrs Hamilton and Co. printers in that city. While in their office he displayed his ability as the composer and corrector of an immaculate edition of Terence's comedies, for which he received a premium from the Edinburgh Philosophical Society. He also made himself acquainted with natural history, and in 1764 he published a prize dissertation on the sexes of plants. Such was his proficiency as a botanist, that he was employed as an occasional assistant lecturer to the professor at the university, Dr Hope. He entered into business for himself in 1765, and he was employed to print the first edition of the "Encyclopædia Britannica," 1771, 3 vols. 4to, for which he wrote some articles. The "Edinburgh Magazine and Review" was another of his undertakings, carried on in conjunction with Dr Gilbert Stuart, whose imprudence and illiberality occasioned the termination of the work three years after its commencement. Mr Smellie translated Buffon's "Natural History," and he was also the author of an original work entitled "The Philosophy of Natural History," 1790—95, 2 vols. 4to. He was a fellow of the Royal Society of Edinburgh, and secretary to the Society of Scottish Antiquaries; and was much esteemed among the literati of his native city, where he died June 25, 1795. Some biographical sketches and essays from his pen were published in an octavo volume, after his death.—*Life of Smellie, by Kerr.*

SMITH (ADAM) a distinguished writer on morals and politics, was the only son of Adam Smith, comptroller of the customs at Kirkcaldy, where he was born June 5, 1723, a few months after the death of his father. He received his early education at the school of Kirkcaldy, whence he was removed at the age of fourteen to the university of Glasgow, where he remained until 1740, when he repaired to Balliol college, Oxford, as an exhibitioner on Snell's foundation. Quitting Oxford and all views to the church which had led him there, in 1748 he took up his abode at Edinburgh, and read some courses on rhetoric and polite literature, under the patronage of lord Kames. In 1751 he obtained a more permanent provision by being elected professor of logic at Glasgow, and the year following to that of moral philosophy at the same university. He was now in a situation which perfectly agreed with his talents and inclination, and both in matter and manner his lectures were of the first degree of merit. Those on moral philosophy contained the rudiments of two of his most celebrated publications, of which the first, entitled "The Theory of Moral Sentiments," appeared in 1759, and was most favourably received. He founds it upon the principle of sympathy, which he makes the source of all our senti-

BROG. DICT.—VOL. III.

ments on the propriety or impropriety of actions. To this work he afterwards added "An Essay on the Origin of Languages;" and the elegance and acuteness displayed in these treatises introduced him to several eminent persons, and among others to Mr Charles Townshend, who engaged him in 1763 to attend the duke of Buccleugh in his travels: a long residence in France with this nobleman introduced him to the acquaintance of Turgot, Quesnoi, Necker, D'Alembert, Helvetius, and Marmontel, to several of whom he was recommended by David Hume. He returned to Scotland in 1766, and immediately retired with his mother to Kirkcaldy, where he led a life of strict study and retirement for ten years, the fruits of which resolution was his celebrated "Inquiry into the Nature and Causes of the Wealth of Nations," 2 vols. 4to, 1776. It is unnecessary to say that this work has become a standard one in Europe, and that it may be deemed the formal precursor of the modern science of political economy. About two years after the publication of this able production he obtained, through the patronage of the duke of Buccleugh, the lucrative place of commissioner of the customs in Scotland, in consequence of which he removed with his mother, who attained a great age, to Edinburgh. After the death of his friend Hume, he published that philosopher's memoirs of his own life, with some additions, in which he expressed himself so favourably of his character and opinions, it was at once inferred that his own could not be very different. This drew upon him attacks from various quarters, the ablest of which was an ironical anonymous letter, since known to have proceeded from the pen of Dr Horne, bishop of Norwich. In 1787 he was chosen rector of the university of Glasgow, and soon after his health began to decline, and he sank under a chronic disease in July 1790, at the age of sixty-seven. A short time before his death, he ordered all his MSS. to be burnt except a few detached essays. Dr Smith was a man of much simplicity of character, subject to absence of mind in society, and better fitted for speculation than action. He was at the same time much beloved by his friends for his kind and benignant disposition, and died generally admired and highly respected.—*Life by Dugald Stewart.*

SMITH (CHARLES) an Irish topographer and naturalist, who resided at Dublin, and appears to have belonged to the medical profession. He was the author of "The ancient and present State of the County and City of Cork, in four Books," Dublin 1750, 2 vols. 8vo, republished with additions in 1774; "The ancient and present State of the Co. and City of Waterford," 1751, 8vo, second edition, 1774; and "The ancient and present State of the Co. of Kerry, being a natural, civil, ecclesiastical, historical, and topographical Description thereof, &c." 1756, second edition 1774. These works were executed under the patronage of the Physico-historical Society of Dublin, an association formed for

N

the purpose of collecting the materials for a work on the plan of Camden's *Britannia*, to be entitled "Hibernia, or Ireland ancient and modern." Besides these productions of Dr Smith, an account of the county of Down was published in 1744, and a natural history of the county of Dublin, by Dr Ratty, 1772, 2 vols. 8vo; through the exertions of the Physico-historical Society.—*Gough's Brit. Topog.*

SMITH (CHARLOTTE) an ingenious but unfortunate poetess and novel-writer, a native of Sussex, in which, as well as in the adjoining county of Surrey, her father, Mr Turner, was possessed of considerable landed estates. She was born in 1749, and married at a very early age a West India merchant, whose imprudence aggravated (if we are to believe the allusions of his wife in her fictitious narratives) by legal chicanery, ultimately dissipated the whole of a once handsome property, and consigned its former possessor to a prison. In this melancholy situation he was not however abandoned by his wife, who appears to have clung to him in his fallen fortunes with a devotedness of affection not often witnessed, and to have dedicated her talents to the support of her husband and family. Her first production was a series of "Elegiac Sonnets," printed at Chichester in 1784, which, though tinged with the melancholy naturally occasioned by her misfortunes, exhibit considerable poetic talent as well as pathos. It is however as a writer of novels that she is principally known, in which capacity she far excels most of her contemporaries, though a vein of querulous egotism, arising from her situation, is perhaps too perceptible through the whole. Of these the principal are her "Romance of real Life;" "Emmeline;" "Desmond;" "Marchmont;" "Ethelinda;" "Old Manor House;" "Celestina," &c. Much of the latter part of her life was passed in the closest retirement with her family in Normandy, but neither there was she inaccessible to the same species of persecution which had tormented her at home, and at length returning to England, she ended her days in comparative comfort at Thetford, near Farnham, Surrey, in the autumn of 1806. Besides the works already mentioned, Mrs Smith wrote several pleasing volumes for young persons, entitled "Rural Walks;" "Rambles Farther;" "Minor Morals;" and "Conversations." She also composed a poem called "The Emigrant," in addition to a second volume of sonnets.—*Gent. Mag.*

SMITH (EDMUND) the adopted name of a wit, scholar, critic, and poet. He was the only son of a Mr Neale, a merchant of some eminence, by a daughter of baron Lechmere, and was born in 1668. He lost his father in his infancy, the latter having fallen into difficulties, which injured his health, and tended much to the premature termination of his life, on which his mother retired to Worcester, leaving her son to the care of a brother-in-law of his father, named Smith. By this worthy man he was brought up as his own child, and placed at Westminster-school under

the celebrated Dr Busby, who considered him one of his best scholars. His generous relation died before he left school, but his aunt furnished him with the necessary supplies for a university education; and such was his progress in literature, that at the annual election Trinity-college, Cambridge, and Christchurch, Oxford, contended which should number him among their members. Young Smith, for he had now assumed the name of his benefactor, made his election for a studentship at Christchurch, whither he soon after removed, and continued occasionally to reside till within five years of his death. Through the exercises of his college and the university he passed with unusual credit, and acquired considerable reputation in the schools, both as a philosopher and a polemic, especially distinguishing himself by his Bodleian oration, which is to be found in the printed collection of his works. In 1707 a tragedy from his pen, entitled "Phædra and Hippolytus," was brought out, supported by Betterton, Booth, Barry, and Oldfield; yet, notwithstanding their talents, its merits being rather poetical than dramatic, the success of it was questionable, a circumstance which drew down some severe animadversions on the vitiated taste of the public from Addison in a spirited prologue written for the occasion. His other works consist principally of an excellent translation of "Longinus on the Sublime," a poem to the memory of his friend John Philips, some odes, &c.; and according to his biographer Oldisworth, it is much to be regretted that he did not live to complete a spirited translation of the works of Pindar, which he had commenced. Habits of intemperance and great personal imprudences reduced him to poverty; yet, notwithstanding, the oddity of his appearance and his carelessness in dress procured him the appellation of "Captain Ragg," yet such was the natural gracefulness of his person and demeanour, that from the female part of his acquaintance he received to the last the more complimentary designation of "the handsome slob." His death took place at Hartham in Wiltshire, the seat of George Duckett, esq. in 1710.—*Life by Cibber.*

SMITH (ELIHU HUBBARD) an American physician, who was born at Litchfield in Connecticut, in 1771. Having adopted the medical profession, and taken the degree of MD. he settled as a physician at New York, where he died September 19, 1798. Dr Smith was one of the conductors of the American journal called the "Medical Repository," to which he contributed papers "On the Plague of Athens;" "On the Origin of the pestilential Fever which prevailed in the Island of Grenada in 1793 and 1794;" "On the natural History of the Elk;" "On the pestilential Diseases which at different times appeared in the Athenian, Carthaginian, and Roman Armies in the Neighbourhood of Syracuse; and two medical cases."—*Gent. Mag. Month. Mag.*

SMITH (ELIZABETH) a lady of great natural abilities, aided by unwearied cultivation.

She was descended of a respectable family settled at Burnhall in the palatinate of Durham, where she was born in 1776. Besides most of the modern European languages, she was a considerable proficient both in classical and Oriental literature, extending her researches even into the Arabic, Syriac, and Persian, as well as into the Greek and Hebrew tongues. She had also made a considerable progress in the science of mathematics, and the art of drawing, to which attainments were added a lively wit and a poetic talent far above mediocrity. The physical powers of this accomplished young female were however unequal to support the unceasing activity of her mind, and symptoms of decline, soon terminating in rapid consumption, carried her off in the month of August, 1806. The only monument of her talents which survives her, is a translation of the book of Job from the original.—*Memoir by Miss Bouldier.*

SMITH (HUGH) a medical writer and practitioner of eminence in the metropolis, during the latter part of the last century. He was originally an apothecary, but afterwards he became physician to the Middlesex hospital, and an alderman of London. He died at Trevor park, near Barnet, June 26, 1789, at the age of fifty-three. His principal publications are "The Family Physician," 1760, 4to; "A Treatise on the Use and Abuse of Mineral Waters, with Remarks on the immoderate Use of Sea-water," 1777, 8vo; "An enlarged Syllabus of Philosophical Lectures delivered by Hugh Smith, M.D. with the Principles on which his Conjectures are founded concerning Animal Life and the Laws of the Animal Economy," 1778, 4to; and "Letters to Married Women upon the Management of Infants, with a View to prevent the Diseases incident to Children," 8vo.—There was another Dr HUGH SMITH, a very popular metropolitan physician, who was a native of Hertfordshire, and died at Westham, in Essex, December 26, 1790. He was the author of "Essays, physiological and practical, on the Nature and Circulation of the Blood, and the Effects and Uses of Blood-letting," 1761, 12mo; and "Formula Medicamentorum, or a Compendium of the Modern Practice of Physic," 1768, 8vo.—*Lysons's Environs of London*, vol. iv. *Clutterbuck's Hist. of Hertfordshire*, vol. i.

† SMITH (JOHN) commonly called Captain John Smith, was born at Willoughby in the county of Lincoln. He flourished in the reigns of Elizabeth and James I, and is distinguished by the number and singularity of his travels and adventures. In the war in Hungary, about 1602, he overcame three Turks successively in single combat, and cut off their heads, for which and other exploits Sigismund, duke of Transylvania, under whom he served, gave him his picture set in gold, with a pension of 300 ducats, and allowed him to bear the Turks' heads in his arms. He afterwards went to America, where he was taken prisoner by the Indians, from whom he found means to escape. He had subsequently a considerable

share in reducing New England; and is probably the same captain John Smith who is mentioned in "Stow's Survey" as some time governor of Virginia and admiral of New England. He died June 21, 1631. He is author of a "History of Virginia, New England, and the Summer Isles," 1624, folio; "A Map of Virginia," 1612, 4to; "New England's Tryals, &c." 1620, 4to; "Travels in Europe, &c." 1630, 4to, reprinted in Churchill's *Voyages*.—*Fuller's Worthies. Granger.*

SMITH (JOHN) a learned divine, was the son of a farmer at Achurch in Northamptonshire, where he was born in 1618. He was educated at Emanuel college, Cambridge, where he took his degree as AM. in 1644, and the same year was chosen fellow of Queen's college. Here he became an eminent tutor, and died in 1652. He published in 1640 a quarto volume of "Select Discourses," which, as exhibiting great judgment and erudition, were much esteemed, and went through a second edition in 1673, 4to; one of these discourses "On Prophecy," was translated into Latin by Le Clerc, and prefixed to his "Commentary on the Prophets."—*Funeral Sermon by Patrick.*

SMITH (JOHN) a learned divine, was born in 1659, at Lowther in Westmoreland, of which parish his father was rector. He became a student of St John's college, Cambridge, where he took the degree of MA. in 1681, and the following year was appointed a minor canon of Durham. Bishop Crew, to whom he became chaplain, gave him the rectory of Greenwich, and soon after a prebend at Durham, on which he took the degree of DD. He made collections for a History of Durham; and at the time of his death, in 1715, was engaged in preparing an edition of the works of Bede, which was completed by his son, GEORGE SMITH, who took orders among the nonjurors, and became titular bishop of Durham. Besides completing his father's edition of Bede, he wrote a book entitled "Britons and Saxons not converted to Popery."—*Biog. Brit.*

SMITH (JOHN RAPHAEL) an eminent designer and engraver in mezzotinto, born in London about 1740. This most industrious artist executed a vast number of plates of different kinds, including ten portraits from his own drawings, thirty-seven after sir Joshua Reynolds, and fourteen after other masters. Among the historical engravings which he produced was one of the Bard, from Gray's celebrated ode, and others from the designs of Fuseli. He drew portraits in crayons with great felicity.—*Biog. Univ.*

SMITH (J. STAFFORD) was born at Gloucester about the year 1750, where his father was organist at the cathedral. Having been initiated in music at Gloucester, he was sent to London, and placed under Dr Boyce. From the excellence of his voice he obtained the situation of chorister of the chapel royal, and some years after was chosen one of the organists. He distinguished himself in composition while yet a youth, and gained a prize

from the Noblemen's Catch Club for the best glee. Besides a great number of admired glees and other compositions, he published a "Collection of Songs of various kinds and for different Voices, with the Music," folio, 1785, and "Musica Antiqua," a selection of music from the twelfth to the eighteenth century," 2 vols. folio, 1812.—*Biog. Dict. of Music.*

SMITH VANDER KETTEN (JOHN) better known by the Latinized name of Smetius, an historian and antiquary, born in the province of Gueldres in the Netherlands, towards the end of the sixteenth century. He studied at Harderwyck under Pontanus, and afterwards visited France. He then entered into the ministry among the Lutherans, and became pastor and professor of philosophy at Nimeguen. He formed a valuable cabinet of ancient medals and other antiquities, which was some time after his death purchased by the elector palatine, John William, for 20,000 florins. He died at Nimeguen May 30, 1651. His principal works are, "Oppidum Batavorum, seu Noviomagum, lib. sing." Amst. 1644, 4to; and "Thesaurus Antiquarius, seu Smetianus, sive Notitia elegantissimæ supellectilis Romanæ et rarissimæ Pinacothecæ, &c." 1658, 12mo, reprinted with additions by his son, under the title of "Antiquitates Noviomagenses," 1678, 4to.—JOHN SMITH, or SMETIVS, son of the preceding, was born at Nimeguen about 1630, and having adopted the ecclesiastical profession he exercised the office of minister first at Alcaer, and then at Amsterdam, where he died May 23, 1710. He was the author of an explanation of the Book of Ecclesiastes, and several other theological works.—*Biog. Univ.*

SMITH (MILES) a learned prelate, was born in the city of Hereford about 1568, and was educated at Corpus Christi college, Oxford, whence he removed to Brazen-nose, and took his degrees in arts. In 1594 he took his doctor's degree, and in 1612 was advanced to the see of Gloucester. He is chiefly distinguished as one of the translators of the Bible, for which he also wrote the preface. He died in 1624. A volume of his sermons was printed in 1632, folio.—*Wood. Fuller.*

SMITH (ROBERT) an eminent divine and mathematician, was born in 1689. Very little is known of his family or early career, except that he was educated at Trinity college, Cambridge, where he took the degree of DD. in 1739, on succeeding to the mastership by the death of Dr Bentley. He was appointed mathematical preceptor to William duke of Cumberland, and master of mechanism to the king. He was cousin to the celebrated Roger Cotes, whose "Hydrostatical and Pneumatical Lectures" he published in 1737, 8vo, as also a collection of the same writer's papers from the Philosophical Transactions. His own works, which acquired considerable reputation, are "A System of Optics," 2 vols. 4to; and "Harmonics, or the Philosophy of Musical Sounds," 1760. He died in 1768, in the seventy-ninth year of his age.—*Hutton's Math. Dict.*

SMITH (SAMUEL) an American historian, who was born in New Jersey, and died in 1778. He was the author of a "History of New Jersey, from the foundation of the Colony to 1721, with an Appendix," in which he gives an account of the most important events from that year to the publication of his work (1765) with a short view of the situation of New Jersey at that period. This history is deserving of commendation for impartiality, and the writer appears to have drawn his information from original sources.—*Biog. Univ.*—SMITH, DD. (SAMUEL STANHOPE) president of the college of New Jersey, was probably a relative of the preceding. He published an ingenious "Essay on the Causes of the Variety of Complexion and Figure in the Human Species, with Strictures on Lord Kames's Discourse on the original Diversity of Mankind," reprinted at Edinburgh, 1788, 8vo; and "Sermons on various Subjects," 1800, 8vo.—*Reuss.*

SMITH (sir THOMAS) an eminent statesman, philosopher, and linguist of the sixteenth century, was born at Saffron Walden in Essex, in 1512, or according to some authorities, two years later. He received his education at Queen's college, Cambridge, of which he became fellow in 1531, and afterwards obtained in succession the appointments of Greek professor 1533, public orator to the university 1536, and regius professor of civil law 1542. It was in the former capacity that, in conjunction with the learned John Cheke, he ventured on the experiment of introducing a new and, as they contended, a more correct pronunciation of the Greek language. Ascham, Poynt, and other distinguished scholars of the time, concurred with the associates in their opinion and practice; but a dread of innovation, raised among others of the leading members of the university a strong feeling of opposition to the new method, and Gardiner, bishop of Winchester, then its chancellor, was easily induced by their representations to fulminate a prohibition on the attempt. This arbitrary mandate, if obeyed, was at least not silently acquiesced in by Smith, who printed a vindication of his orthoepy in an epistle addressed to the bishop, and entitled "De rectâ et emendatâ Lingvæ Græcæ Pronunciatione." In 1539 he visited the continent, and having spent some time among the learned in several French as well as Italian universities, graduated as LLD. in that of Padua. After the death of Henry VIII, the lord-protector Somerset, who held his talents as well as scholarship in high esteem, placed him about his person, and employed him in various political services, the rewards of which were the stewardship of the Stanneries, the provostship of Eton college, and the deanery of Carlisle. The ability which he continued to display in his diplomatic functions, raised him in 1548 to the post of secretary of state with the honour of knighthood. He was afterwards despatched on an embassy to the States General, but on Somerset's disgrace fell for a while with his patron. His acknowledged skill as a political

agent, however, soon restored him to a comparative degree of favour; he was liberated from the Tower to which he had been consigned; and in 1551 sent on a mission to Paris, the object of which was to conclude a matrimonial treaty between Edward VI and a daughter of France. His journey proved unsuccessful; and the premature death of the young king placing Mary upon the throne, sir Thomas, whose religious principles were strongly opposed to the prevailing sentiments of the court, was again discharged from his employments. His dismissal, though abrupt, was not followed up by any more serious manifestation of the royal displeasure, and though forbidden to quit the realm, he had even a pension granted him of 100*l.* per annum. The accession of Elizabeth once more called him into active life, and a prominent part was assigned him by that princess, in settling the constitution both of church and state. In 1562 he returned to France, in quality of ambassador; and during his residence in that country employed his leisure hours in completing his treatise "*De Republica Anglorum*," which he printed on his return in 1565. In 1570 he was sworn of the privy council, and two years after resumed his post of secretary of state. The chancellorship of the order of the garter was subsequently added to his other dignities, which he continued to enjoy till his decease, which took place at his seat Mounthall, Essex, in 1577. Sir Thomas carried with him to his grave a high character as an acute metaphysician, an able scholar, an enlightened statesman, and an honest man.—*Bios. Brit.*

SMITH (sir THOMAS) a native of Abingdon in Berkshire, who was educated at Oxford, and obtained preferment in the court of James I. Fuller says that he raised himself to eminence by his talents alone. He was master of requests and Latin secretary to king James, and was about to receive farther promotion, when he died November 28, 1609. He was interred at Fulham, in Middlesex, where a monument was erected for him by his widow, the daughter of William lord Chandos, who afterwards became countess of Exeter. Probably he was the author of a very scarce tract entitled "*Sir Thomas Smithe's Voyage and Entertainment in Russia, with the tragical Ends of two Emperors and one Emperesse during his being there, and the miraculous Preservation of the now reigning Emperor, esteemed dead for eighteen Yeares*," 1605, 4*to*. Tanner, in his *Bibliotheca Britannico-Hibernica*, strangely attributes this work to the foregoing sir Thomas Smith, secretary of state to queen Elizabeth.—*Fuller's Worthies. Edit.*

SMITH, DD. (THOMAS) a learned English divine of the seventeenth century, especially eminent for his acquaintance with the Hebrew and other Oriental languages. He was born in the metropolis in 1638, and received his education at Oxford, being elected off from Queen's college in that university, where he had graduated, on a fellowship to Magdalen, with which he united the situation of master

of the school. Towards the close of James's reign, the president of his college being a Catholic, deprived him of his fellowship, to which he was however soon afterwards restored, and accompanied the English embassy to the Porte in 1688, in quality of chaplain. After remaining three years in the East, he returned to England, when a proposal was made to him that he should set out for the Levant, with a view to the collecting of manuscripts, especially from the libraries of the Greek monasteries, those then almost unexplored depositaries of buried literature. This task he declined, and subsequently again lost his fellowship, as well as a stall to which he had been inducted in Salisbury cathedral for refusing to take the oaths to king William. He was the author of a great variety of learned works, among the principal of which are his "*Diatriba de Chaldaicis Paraphrasis*," 8*vo*; "*De Græcæ Ecclesiæ hodierno Statu*;" "*Vitæ quorundam eruditissimorum et illustrium Virorum*," in which work are to be found biographical sketches of archbishop Usher, Patrick Young, &c.; "*De Druidum Moribus et Institutis*," 8*vo*; a "*Life of Camden*," written in Latin; a "*Catalogue of the MSS. in the Cottonian Library*;" "*On the Manners, Religion, &c. of the Turks*," in Latin; "*On the Credibility of the Mysteries of the Christian Religion*;" "*The Causes and Remedies of Religious Differences*;" "*The Lives of Huntingdon and Bernard*," and a volume of miscellaneous tracts. His death took place at London in 1710.—*Biog. Brit. Athen. Oxon.*

SMITH (WALTER) a poet of the sixteenth century, who was the author of a satire entitled "*The merry gestys of one called Edyth, the lying Wydow, which still livith*," printed in 1525. This composition is curious on account of the sketches which it presents of the manners which prevailed in England just before the Reformation. The narrative is founded on facts, the satirist himself having been in the number of the false widow's dupes; and one of her tricks, it seems, was played off at the house of sir Thomas More at Chelsea. This poem, somewhat modernized, was reprinted in 1573, 4*to*.—*Tanner's Bib. Brit. Hibern. Ames's Hist. of Printing.*

SMITH (WILLIAM) an industrious antiquary and topographer of the sixteenth century. He held in the herald's office the situation of rouge dragon pursuivant; and being a native of Cheshire he devoted much of his attention to the history and antiquities of that county. Under the patronage of the son of sir Ranulph Crew, chief-justice of the King's Bench, he drew up an account of Cheshire, which together with the similar composition of William Webb, clerk in the mayor's court at Chester, was published by Daniel King in 1656, under the title of "*The Vale-Royall of England, or the County Palatine of Chester illustrated*," folio. King added a "*Discourse of the Island of Man*," and engraved the plates for this work, as he likewise did those for Dugdale's *Monasticon*. In the herald's office is extant a large MS. description of England,

with fair draughts of its cities and towns, 1588, by William Smith, rouge dragon. Mr Gough also mentions as existing among Dr Rawlinson's MSS. in the Bodleian library a "Description of the County Pallatine of Chester; a Work deserving to be better handled, but want of accuracy in the Author was the cause. Collected and set down by William Smith, citizen of Noremburgh." He died October 1, 1618.—There was a WILLIAM SMITH, who in the reign of James I wrote three dramatic pieces, "Hector of Germanie," hist. play, 1615, 4to; and "Freeman Honour;" and "St George for England." Coxeter conjectures that he was the Cheshire antiquary.—*Fuller's Worthies. Gough's Brit. Topog. Biog. Dram.*

SMITH (WILLIAM) a learned English divine, was the son of the rev. Richard Smith, rector of All Saints, Worcester, where he was born in 1711. He was educated at New college, Oxford, where he took the degree of MA. in 1737. In 1737 he was presented to the rectory of Trinity church, Chester, by the Derby family; and in 1758 the same interest obtained him the deanery of Chester, when he took his doctor's degree. He died January 12, 1787. He is chiefly known to the learned world by his valuable translations, comprising "Longinus on the Sublime," 1739, 8vo, which has gone through four editions; "Thucydides," 1753, 2 vols. 4to, reprinted in 1781, 8vo; "Xenophon's History of the Affairs of Greece," 1770, 4to; "Nine Sermons on the Beatitudes;" and a volume of poems published posthumously in 1791, by the rev. Thomas Crane of Chester, with his life prefixed.—*Life by Crane. Gent. Mag.*

SMITH (WILLIAM) a traveller, born about the end of the seventeenth century. He was sent in 1726 by a commercial company to the coast of Guinea, to make plans and views of the forts, and to survey the country from the mouth of the river Gambia to Juidah. He returned to England in September 1727, after having visited Barbadoes; and he subsequently published the result of his labours, under the title of "A New Voyage to Guinea, containing an exact Description of the Country and of the Manners and Customs of the Inhabitants," London, 1744, 8vo, which work was translated into French; and "Draughts of Forts on the Coast of Guinea," 4to.—Another WILLIAM SMITH was the author of "The History of the Province of New York (N. A.) to the year 1732," London. 1757, 4to; reprinted 1765, 8vo, and published in French, Paris, 1767, 12mo.—*Biog. Univ.*

SMITH (WILLIAM) an eminent dramatic performer, born about 1730 in the city of London, where his father carried on business as a wholesale grocer and tea-dealer. He was educated at Eton school and St John's college, Cambridge, with a view to the clerical profession; but having subjected himself to the danger of academical censure by some youthful irregularities, he left the university, and relinquished his prospects of ecclesiastical preferment. Returning to London he directed

his attention to the stage, and in January 1753 he made his first appearance at Covent-garden theatre, in the character of Theodosius, in the tragedy of "The Force of Love." He was very successful; and he continued to fill some of the principal parts in a variety of plays for twenty-two years with established reputation. In 1774 he removed to Drury-lane, and continued to belong to the company there till 1788, when he retired from the stage, in consequence of having married a lady of fortune, the widow of Kelland Courtenay, esq. and daughter of viscount Hinchinbrooke. He then retired into the country, devoting his time to the cultivation of polite literature, with which he was intimately conversant; and to the enjoyment of rural pleasures, especially fox-hunting, to which he was very partial. His death took place September 13, 1819, at Bury St Edmunds in Suffolk, where he had long resided. The characters in which he chiefly excelled were Richard, Hastings, and Hotspur, in tragedy; and Kiteley, Oakley, and Charles Surface, in comedy; and in the latter especially he was almost without a rival.—*Thesp. Dict. Gent. Mag.*

SMITS (DIEDERIC) a Dutch poet, who was a native of Rotterdam. He united with a poetical genius a taste for music, and his verses are said to be distinguished for smoothness and harmony in no common degree. M. de Vries, in his History of Dutch poetry, prefers the heroic poem of Smits, "On the Delivery of the Children of Israel from the idolatrous Worship of Baal-peor," to "Abraham the Patriarch," the celebrated epopee of Nicholas Hoogvliet. Smits wrote a poem on the river Rotte, which gives name to the city of Rotterdam; and he translated Pope's Epistle from Heloise to Abelard, and other pieces.—*Biog. Univ.*

SMOLLETT (TOBIAS) a writer of considerable reputation and varied powers, was the grandson of Sir James Smollett of Bonhill, one of the commissioners for the union, being the youngest son of Archibald, the fourth son of that baronet. He was born at Dalquhurn in Dumbartonshire, in 1721, and after being educated at the grammar-school of Dumbarton, where he discovered an early taste for poetry and satire, he was apprenticed to a surgeon at Glasgow, and at the same time attended the medical lectures in that university. While in this situation he composed his tragedy of "The Regicide;" and in his nineteenth year was induced by the death of his grandfather, which left him without a provision for the prosecution of his studies, to repair to London, in quest of professional employment in the army or navy. Having failed in his application to the managers to produce his tragedy, in 1741 he procured the situation of a surgeon's mate in a ship of the line, and sailed on the expedition against Carthage, of which ill-conducted enterprise he subsequently published an account, in his Compendium of Voyages. He was soon disgusted with the naval service, which he quitted in the West Indies, and resided some time in Jamaica. On his return

In 1746, the severities used by the king's troops in Scotland after the battle of Culloden, induced him to write his short poem entitled "The Tears of Scotland," which by its spirit, pathos, and elegance, attracted considerable attention. This was followed by two satires, entitled "Advice" and "Reproof," in which, besides a very free attack on public characters, he severely lashed the managers and others who had personally offended him. He soon after married a lady with whom he had become acquainted in Jamaica; but received only a small part of the fortune which he had expected, and in consequence was under the necessity of applying once more to his pen. The novel of "Roderick Random" was the first fruits of this application, which soon became highly popular; and although part of its attraction consisted in its supposed allusion to the life of the author, and adroitness to the public events and characters of the day, it will probably ever remain so. He soon after published his tragedy of "The Regicide," which his growing reputation rendered profitable, without convincing the critics that the managers had done wrong in refusing it. In 1750 he enlarged his acquaintance with the world by a trip to Paris, which enabled him in 1751 to give to the public his "Adventures of Peregrine Pickle," another novel, in which, with no inconsiderable sacrifice of morality and delicacy, he exerted his strong powers of humorous invention and delineation. He next thought of settling as a physician at Bath, but he soon experienced that confidence is seldom reposed in medical men who divide their attention between literature and their profession. He accordingly resumed his pen, and soon after produced his "Adventures of Ferdinand Count Fathom," and a new translation of Don Quixote, by subscription. The latter is little more than an improvement of that by Jarvis, which however in its conveyance of the more composed humour of Cervantes, is still preferred by many critics. His next undertaking was "The Critical Review," set up, it is said, in reliance on the patronage of the tory and high-church party, in opposition to the Monthly Review. To this task he brought many necessary qualifications, which were however much alloyed by his acrimonious, jealous, and irritable propensities, which involved him in much coarse and illiberal controversy, and subjected him in one instance to fine and imprisonment for a libel on admiral Knowles. In 1757 he attempted the stage a second time, in a farce called "The Reprisals, or the Tars of Old England," which, notwithstanding his attack on Garrick in Roderick Random, that manager accepted; and it is pleasant to observe that this kindness not only produced a reconciliation between them, but a handsome apology from Smollett in a subsequent publication. Notwithstanding his numerous engagements, he produced in 1758 his "Complete History of England," in four quarto volumes, a work which, with many imperfections, is to be regarded as an extraordinary instance of literary activity and industry, being completed in four-

teen months. It was afterwards printed in weekly numbers, and continued by Guthrie to 1765, under the auspices of the original author. The portion from the Revolution, when that of Hume ceases, is generally published as a sequel to that author. During his confinement in the King's Bench for the libel on admiral Knowles, he composed his "Adventures of Sir Lancelot Greaves," which he gave in detached parts to the British Magazine. It was subsequently published in two volumes, 12mo, but will bear no comparison with his previous works of humour. When lord Bute assumed the ministerial lead, Smollett was engaged to support him in a weekly paper called "The Briton," which was rapidly encountered by the celebrated North Briton of Wilks, which, backed by the public voice, soon reduced it to silence, and dissolved a friendship which had long subsisted between the respective authors. In 1763 grief at the loss of his daughter induced him to make a tour through France and Italy, in which he spent two years, and on his return published his "Travels," in 2 vols. 8vo. Ill at ease with himself, although they contain acute and sensible remarks, a querulous disposition to complain is exhibited from beginning to end, for which the author is lashed by Sterne in his "Sentimental Journey," under the name of Smelfungus. In 1764 he published his "Adventures of an Atom," a political satire, in ridicule of different administrations, but particularly that of lord Chatham. Increasing disease induced him to revisit Italy in 1770, as a last resource, and he had still sufficient mental vigour to compose his last, and as many think his best novel, the "Expedition of Humphry Clinker." In the cynical but humane character of Matthew Bramble the author is supposed to have had an eye to himself, whom he also more formally sketches under the name of Serle in the same work. This was the last flash of his genius. He died in the neighbourhood of Leghorn, October 21, 1771, in the fifty-first year of his age. Dr Smollett was undoubtedly a man of considerable talents and various powers, but his claim to original genius rests principally on his novels. In these, although the portraiture often approaches to caricature, and the incident to extravagance, he exhibits a knowledge of life and manners and an exuberance of humour which have seldom been excelled. At the same time it is not to be concealed that morals and decency are frequently violated, nor ought a reader who expects much pleasure from them to be very fastidious on the score of taste. As a historian he has obtained some credit for ease and animation of style; but in the higher qualities of judgment, impartiality, and philosophical appreciation, he falls infinitely below the rank maintained by Hume, Gibbon, and Robertson. His poetic powers were considerable. "The Tears of Scotland," "Ode to Leven Water," and other short pieces are polished, tender, and picturesque. His "Ode to Independence" is also a very spirited and noble production. His satires are vigorous.

but virulent and disgusting.—*Life prefixed to Works by Dr Moore.*

SMYTH (JAMES CARMICHAEL) an eminent physician, fellow of the Royal Society, was born in Scotland in 1741. He studied at Edinburgh and Leyden, where he took his degree, and subsequently settled in the metropolis. Not meeting with the success he expected, he obtained a situation in the medical department of the army, and in 1780 had the charge of the French prison hospital at Winchester. A fever breaking out in this receptacle, he employed the three mineral acids with great effect in preventing contagion; a discovery the value of which was sufficiently proved on farther trial, and the doctor in consequence received a remuneration from parliament in 1802. A claim was notwithstanding made by Monsieur Chaptal for Guyton Morveau, whom he alleged to have practised the same method as early as 1773. Dr Johnstone of Kidderminster also made a similar claim; but it did not appear on examination that he had ever tried it on a sufficient scale. Dr Smyth's writings are, an essay "On the Effect of Swinging as a Remedy in Pulmonary Complaints," 8vo, 1787; "A Description of the Jail Distemper, as it appeared among the Spanish Prisoners at Winchester in 1780, &c.," 8vo, 1795; "The Effects of Nitrous Vapour in preventing and destroying Contagion ascertained, &c.," 8vo; "A Letter to W. Wilberforce, Esq. on Dr Johnstone's Pamphlet," 8vo, 1805; "Remarks on the Report of M. Chaptal, &c.," 8vo; and "A Treatise on Hydrocephalus," 8vo, 1814. He also published an edition of Dr W. Stark's works, 4to, 1788. He died June 18, 1821.—*Ann. Biog.*

SMYTHE (JAMES MOORE) a miscellaneous writer of the last century, who was the son of Arthur Moore, one of the lords commissioners of trade in the reign of queen Anne. He derived the surname of Smythe from his maternal uncle, who left him a large fortune. He was educated at Worcester college, Oxford, and he held jointly with his brother the office of paymaster to the band of gentlemen pensioners. He wrote songs in conjunction with the duke of Wharton, and he commenced a Jacobite paper, called "The Inquisitor;" but he is principally remembered at present as one of the characters who figure in Pope's Dunciad. He had offended the irritable bard of Twickenham by a comedy entitled "The Rival Modes," published in 1727, 8vo. His death took place October 18, 1734.—*Biog. Dramat.*

SNELL, or SNELLIUS (RODOLPH) an eminent mathematician and philological writer, born at Oudewater, in Holland, in 1546. He studied at Cologne, Heidelberg, and Marburg, where, in 1562, he took the degree of MA. He then travelled into Italy, and on his return to his native country he settled at Leyden as a classical teacher, but he was afterwards made professor of Hebrew and then of mathematics in the university there. He died in 1612, after having twice been rector of the university to which he belonged. His works

comprise a restoration of the geometry of Apollonius Pergæus, published under the title of "Apollonius Batavius," 4to, and "Ethica methodo Ramæa concepta," Herborn. 1597, 8vo.—*M. Adam. Vit. Philos. Stollii Introd. in Hist. Lit.*

SNELL (WILLEBROD) son of the preceding, greatly distinguished as a mathematician, was born at Leyden in 1591. He succeeded his father in the mathematical professorship, and published several scientific works; but he is chiefly known on account of his mensuration of a degree of the earth's surface. He carried on his operations between Alcaer and Bergen-op-Zoom, and also between Alcaer and Leyden, and published an account of them in a treatise entitled "Eratosthenes Batavus." Willebrod Snell is said to have been the third geometer who measured a degree of the meridian, which he estimated at 55,021 toises. Muschenbroek, who repeated his measurements in the last century, found a degree to consist of 57,033 toises, which number nearly corresponds with the determination of Picard and Cassini. Besides the work above noticed Snell was the author of "Elements of Trigonometry;" "Hessian and Bohemian Observations," with his notes; "Libra Astronomica et Philosophica," wherein he undertakes the examination of the principles of Galileo concerning comets; and a treatise on the comet of 1618. His death took place in 1666.—*Martin's Biog. Philos. Huston's Math. Dict.*

SNELLING (THOMAS) an English writer on numismatics, who died in 1773. He published a treatise on the "Silver Coin and Coinage of England," 1762, 4to; "The Gold Coin and Coinage of England," 1763, 4to; and after his death appeared "Thirty-three Plates of English Medals," 1776, 4to; and "A View of the Origin, Nature, and Use of Jettons or Counters, especially those commonly known by the name of Black Money and Abbey Pieces," 1779, 4to.—*Orig.*

SNORRO STURLESON, or SNORRO STURLEUS, an Icelandic historian and antiquary of the thirteenth century, who was counsellor to the kings of Sweden and Norway, and afterwards governor of Iceland. He wrote in the Icelandic language the history of the Norwegian kings from the time of Odin, translated into Danish by Peter Claudius, about 1559, and published with a Latin version by Peringskiöld in 1697. Snorro was also the compiler of the later "Edda," or Bible of Icelandic mythology, printed with a Latin translation and notes by Resenius, Copenhagen, 1665, 4to. He was killed by his enemy Gysarus in 1241.—*STURLA LAGIFER*, the son of Thordus, and nephew of Snorro, was a distinguished Icelandic historian, who wrote the life of Haco the elder, king of Norway. He was also the author of "Sturlungorum Historia," relating to the affairs of Iceland down to his own time; and "Liber Originum Islandicum." He was governor of Iceland, but he resigned his office, and died in retirement in 1284.—*Sibbern Bibl. Hist. Danu. Norveg.*

SNYDERS (FRANCIS) an eminent artist of

the Flemish school of painting, born at Antwerp in 1579. He studied the rudiments of his art under his celebrated countryman Van Balen, after which he travelled through great part of Italy, visiting the most esteemed collections in that country. On his return to Flanders he attached himself to the household of the archduke Ferdinand, with whom he was a great favourite, as he was also with the cardinal Infant of Spain, and finally took up his abode at Brussels. Snyders, who is considered never to have been surpassed in his delineation of beasts, fish, hunting-parties, &c. was accustomed to work in concert with Rubens and Jordaens, and some of the most valuable paintings of that school are their joint production. Many of his choice pieces were to be found in the collections of the elector palatine, and at the Escorial. His death took place in 1657.

SOCINUS (**LÆTIUS**) an eminent Italian scholar, the third son of Marianus Socinus, an eminent civilian of Bologna, was born at Sienna, 1525. He was designed for the legal profession by his father, but having been led to doubt the truth of certain doctrines of the Roman Catholic church, he directed his studies towards scriptural investigation, for which purpose he acquired the Greek, Hebrew, and Arabic languages. About the year 1746 he attached himself to a society friendly to the principles of reformation in religion, which held secret meetings at Vicenza. Being discovered, several of them were apprehended, and two of the number suffered death as heretics. In 1547 Lælius quitted Italy, and travelled into France, England, the Low Countries, and Poland, after which he settled at Zurich, and maintained a correspondence among the leading reformers, which, as he showed a predilection for Arian doctrines, gradually made him an object of suspicion; Calvin in particular wrote him a letter of admonition, which being followed by the detestable immolation of Servetus, was, outwardly at least, attended to. He subsequently visited Italy and Poland, but ultimately returned to Zurich, where he died in 1562. He appears to have been a mild, conscientious man, and much averse to contest, which disposition led him to adopt the Helvetic profession of faith. He doubtless indulged many of the opinions of his more celebrated nephew Faustus, but as the authenticity of the writings attributed to him are much doubted, it is difficult to ascertain the exact extent of his Arian predilections.—*Bayle. Tiraboschi.*

SOCINUS (**FAUSTUS**) nephew of the preceding, being the son of his brother Alessandro, a professor of law, was born at Sienna in 1539. Having lost his parents at an early age, his education was neglected, and he reached his twenty-third year with but a small stock of general learning, and some acquaintance with the law, his intended profession. Having imbibed the theological opinions of his uncle, he was obliged to quit his native city, when he repaired to the court of the grand duke of Tuscany. Here he obtained honour-

able employments, which however at the expiration of twelve years he resigned, and visited Basil in order to study theology. He remained at Basil three years, during which time he confirmed himself in the religious opinions of his uncle, which he further extended and modified. About this time some differences took place among the anti-trinitarian reformers of Transylvania, owing principally to certain doctrines propagated by Francis David concerning the adoration due to Christ. To heal these divisions, Blandrata, a leader of much influence, sent for Socinus, who argued the various points with David, but with no success; and the latter was thrown into prison by the prince of Transylvania, where he died, so little was toleration understood at this time in any quarter. This circumstance was the source of much obloquy against Socinus, who ultimately justified himself from the charge of promoting these severities, which it does not however appear he exercised any influence to prevent. In 1579 he repaired to Poland, where he was desirous of being admitted a member of the Unitarian churches, but was harshly repulsed; and as usual in theological quarrels, he was represented to the king of Poland as a person dangerous to authority, although he carried the doctrine of passive obedience to its entire extent, so as even to condemn the resistance of the Netherlands to the tyranny of Spain. It was with difficulty he found protection under the roof of a noble Pole, whose daughter he married; and the publication of his hitherto suppressed work, "*De Christo Servatore*," so enraged his opponents, it was with difficulty he was rescued from the fury of a mob, who, instigated by the students of Cracow, would have torn him to pieces. His house being pillaged, and his MSS. destroyed, he was obliged to retire from Cracow to a distant village, where at length his unremitting exertions to compose the differences between the Unitarian churches in some degree succeeded. He did not long survive this successful labour, but died in 1604, in his last retreat, in the sixty-fifth year of his age. The private character of Socinus is spoken of with uniform encomium, and as he made great sacrifices for his opinions, their foundation in rigid principle is not to be denied. The main distinction of the system to which he has given name, is that stated by Mosheim—the use of reason in judging of the doctrines of Christianity, which, although to be derived solely from the Scriptures, according to Socinus and his followers are to be explained according to the dictates of reason. Hence a rejection of all that appears to them inconsistent or incomprehensible in the orthodox creed, and a disposition to regard the mission of Christ upon earth as chiefly designed to introduce a new moral law, distinguished by its superior sanctity and perfection. As regards the person and divinity of Christ, however, they retained notions which verge much more towards Arianism than those of the modern Unitarians. Socinus was the author of many tracts in rela-

tion to his system, and to the controversies in which he was engaged, which form collectively two volumes folio of the "*Bibliotheca Fratrum Polonorum*."—*Bayle. Mosheim. Toulmin's Life of Socinus*.

SOCRATES, the most eminent of the Grecian philosophers, was born about B.C. 469, at Alopece, a village near Athens. His father, named Sophroniscus, was a statuary, and his mother, Phænarete, exercised the profession of a midwife. He was brought up to his father's pursuit, in which he obtained some proficiency; but the cultivation of his mind was the object nearest his heart, and that to which he devoted his chief attention. On the death of his father he succeeded to a small inheritance, which he lost by the knavery of a relation, and was obliged to labour for his maintenance. At length a wealthy Athenian, who admired his ingenuous disposition and acute understanding, appointed him preceptor to his children, by which means he was enabled to attend the lectures of the most celebrated philosophers of that time, and Anaxagoras, of the Ionic sect, is mentioned as the one by whom he benefited philosophically; while he imbibed from other masters the principles of eloquence, poetry, music, and geometry, the usual branches of a course of liberal education at Athens. Thus highly endowed he lived as an humble but meritorious citizen, anxious to perform every duty enjoined by the laws of his country. He served as a soldier at the siege of Potidæa, and several years afterwards joined an expedition against the Bœotians, and, in an unsuccessful engagement, retired with great deliberation, and bore away on his shoulders the wounded Xenophon. A third campaign in which he served, is mentioned, after which he returned to Athens, and never again quitted it. He was sixty years of age before he was employed in any civil office, when he was elected one of the representatives of his district to the senate of Five Hundred. In this situation he quickly displayed a firmness and integrity which placed him above all his colleagues. He singly stood forth in defence of the commanders at the battle of Arginusæ, who having been prevented by a storm from paying funeral honours to the slain, were cruelly and absurdly condemned to death, in obedience to the clamours of the populace. With equal courage and rectitude he also hazarded his life in opposing the violence and oppression of the thirty tyrants. It was however as a teacher of morality that Socrates has acquired his best and noblest fame. Despising philosophy as a mere art of disputation, or as principally occupied in subtle questions, which it was at once impossible and useless to solve, he made it his great object to inculcate the wisdom which has an immediate reference to practice. Instead of opening a private school like other teachers, he passed his time chiefly in places of public resort, and frequently collected an audience in the Lyceum on the borders of the Ilyseus, where he sometimes delivered a discourse from an elevated chair. The mode of instruction which he chiefly

practised towards individuals, was to propose questions to them, and upon their answers to found other questions, and thus to lead them step by step to conclusions upon their own admissions; a mode of argument ever since termed Socratic. His own conduct was in all respects exemplary, exhibiting all the temperance, forbearance, and self-command which principally constitute elevation of character. Tried in domestic life by the proverbial shrewishness of his wife Xantippe, he bore her provocation with his usual equanimity, and in all respects practised the noble lessons which he taught. A distinguished man, whose life formed a tacit reproach upon so many persons, and who did not spare his ridicule of the numerous pretenders to wisdom and knowledge with which Athens abounded, necessarily created many enemies, who repaid him both with insult and slander. The famous comic writer Aristophanes, in particular, employed all the licence of the Grecian comedy, in regard to living characters, to bring him personally on the stage, in a piece entitled "*The Clouds*," in which the character intended to satirise him was made to utter nothing but absurdity and profaneness. Socrates coolly attended the performance, and as a sort of tacit appeal to the audience, stood up in their view while it proceeded. This calm contempt had its effect, for the next year it was received with marked disapprobation, and withdrawn. Until lately the views taken of the conduct of Aristophanes have been uniform, but recently a writer in a leading review has taken up the cause of the latter, by assuming the fact that Socrates was a specious opposer of the established religion and social order of his day, in other words a reformer—an example of the influence of modern associations over the most established facts and conclusions of history, in the highest degree curious. It appears, however, that this distinguished character held it to be the duty of a citizen to comply with the religious rites of his country; and as to the rest, while he reprobated many of the popular and indecent stories of the gods, he seems to have believed in the existence of a plurality of deities, in obedience to one supreme. Whether by his allusion to the inspiration of an attendant genius, he indulged in an artifice to create an opinion of something extraordinary belonging to his nature or character, or that he really entertained some superstitious notions in relation to his impulses and convictions, is doubtful. Neither his virtues nor his pretensions could, however, save him from the almost general fate of a reformer; and the sophists whose fallacies he exposed, and the many influential political pretenders whose views he thwarted, with a multitude of zealots who detested him as dangerous to the popular superstitions, gradually raised a storm against him, the result of which was a criminal accusation before the supreme court of judicature. It was brought by Melitus, a young rhetorician, aided by Anytus, a sordid man enriched by trade, and by an individual named Lycon. He was

accused in the following terms:—"Socrates violates the laws in not acknowledging the gods which the state acknowledges, and by introducing new divinities. He also violates the laws by corrupting youth." The manner in which he met this ancient specimen of a species of persecution which unhappily has met with much modern imitation, was in the highest degree noble and characteristic. After Plato, then a young man, had been forbidden to speak in his behalf, he rose, and with the calm confidence of innocence, rebutted the charges against him, by appealing to his regular attendance on religious ceremonies, the pure morality of his inculcation, and the personal example which he afforded of temperance, moderation, and obedience, to the laws. All availed nothing against a premeditated intention to condemn; and he was sentenced to die by the poison of hemlock. It is to be regretted that the limits of this work will not allow of those interesting details of his deportment in prison, and on the day of his death, which are narrated with so much affecting simplicity by Xenophon. When at last the fatal cup was presented to him, he received it with a steady hand, and after a prayer to the gods for a favourable passage to the invisible world, he serenely swallowed the fatal draught. His disciples at that awful moment could not refrain from marks of the most poignant sorrow; on which he gently reproved their want of courage, and observed that such a change ought to be hailed by better omens. He then, as he was directed, walked about until he began to feel the benumbing effects of the poison; upon which symptom he lay down, and wrapped himself in his mantle. After a short silence he raised his mantle, and said to his friend Crito, "We owe a cock to Esculapius, do not forget to pay it;" and then covering himself again, presently expired. Such, in his seventieth year, was the end of a man whom all heathen antiquity has pronounced the wisest and most virtuous of mortals. Party enmity for a while pursued his memory; but at length the Athenians became sensible of their injustice, and turned their anger against his accusers, of whom they condemned Melitus to death, and banished Anytus. In further testimony of their penitence, they recalled his friends, and erected a statue to his memory. As this eminent person left nothing in writing, his reputation must have been founded on the reports of his discourses, handed down by his disciples, of whom the principal were Xenophon and Plato. Of these the former is judged to have given the most faithful idea of his master's manners and sentiments, the "Socratic Dialogues" of Plato being intermixed with his own language and conceptions. Of the leading doctrines of Socrates some account has been already given. It is certain that he was a pure theist, as far as the term is applicable to a belief in a supreme intelligence, without excluding the existence of subordinate agencies. His system of morals was founded on the basis of religion; as he held that virtuous principles are the laws of God, from

which no one can depart with impunity, however they may evade the penalties of human laws. Concerning the soul of man, according to Xenophon, he regarded it as allied to the Supreme Being, not by a participation of essence, but similarity of nature, and consequently believed that it was immortal. As he was in all respects a modest inquirer, he was more allied to the sceptical than dogmatical philosophy, and hence it is not surprising that after his death his followers broke into a variety of sects. The person of this great moral philosopher was very homely, being bald, and of a dark complexion, with a flat nose, projecting eyes, and severe downcast look.—*Diogenes Laert.* *Cicero.* *Xenophon's Memorabilia.*

SOCRATES, surnamed SCHOLASTICUS, an ecclesiastical historian of the fifth century, was born at Constantinople in the beginning of the reign of Theodosius. He had for some time been a professor of law, when he undertook to write a history of the churches, which he commences at the year 309, where that of Eusebius terminates, and brings it down to 440. As a historian he is deemed judicious and exact, and his observations are generally calm and impartial. He has however fallen into some mistakes, especially in relation to theological dogmas; and is accused of being too favourable to the sect of the Novatians. Nothing more is known of his personal history. His work has been translated into Latin and published in Greek and Latin by Valesius, folio, Paris, 1668, and republished with additional notes by Reading, London, 1720, 3 vols. folio.—*Cave.* *Dupin.* *Vossii Hist. Græc.*

SOLANDER (DANIEL CHARLES) a Swedish naturalist, born in the province of Norrland, February 28, 1736. He studied at Upsal under Linnaeus, and took the degree of MD. In 1760 he visited England; and in 1762, through the recommendation of Peter Collinson, he was employed by the trustees of the British Museum to draw up a catalogue of the natural curiosities belonging to that institution. He was subsequently appointed an assistant keeper of the cabinet of natural history; and in 1764 he was chosen a fellow of the Royal Society. In 1766 he assisted in a publication entitled "Fossilia Hantoniensis, collecta et in Museo Britannico deposita à Gustavo Brauder, R. S. et S. A. S. Mus. Brit. Cur." 4to. Dr Solander accompanied Mr (afterwards sir Joseph) Banks in his voyage round the world, with captain Cook in 1768—1771; and he was afterwards employed in arranging and describing the valuable botanical collections which were the result of their researches in this expedition. He was created DCL. at Oxford in 1771; and in 1773 he was made one of the assistant librarians at the British Museum. He died of apoplexy, May 16, 1782. Dr Solander being a pupil of Linnaeus, and intimately acquainted with the system of that great naturalist, contributed materially to its general reception in this country; though his published productions are few and unimportant, consisting chiefly of papers in

periodical works, and a Letter to Philip Carteret Webb, FRS, entitled "An Account of the Gardenia (Jasminoides)" in the *Philosophical Transactions*.—*Hutchinson's Biog. Med. Pulteney's Sketches of the Prog. of Botany in England.*

SOLINUS (CAIUS JULIUS) a Latin grammarian, who is thought to have lived at Rome in the third century. He is known only as the author of a work, which he first entitled "Collectanea Rerum Memorabilium," but afterwards "Polyhistor." This is a collection without method or judgment of the remarkable things in different countries, a great part of which is borrowed from the natural history of Pliny. As however it contains some things not in that writer, and serves to elucidate his text, it has been deemed worthy of notice by the critics, and has served as a repository for the unwieldy erudition of Salmassius, who published an edition of it in 1629, in 2 vols. folio, illustrated or rather overwhelmed by his copious commentary. Solinus was also author of a poem entitled "Ponticon," of which a few verses only remain.—*Vossii Hist. Lat.*

SOLIS (ANTONIO DE) a Spanish poet and historian, born at Placenza in Old Castile in 1610. He wrote a comedy at the age of seventeen, which was exhibited with great applause, and he obtained considerable reputation for his poetical productions of various kinds; but he is principally known at present as an historical writer. Having been appointed historiographer of the Indies, he drew up a work entitled "Historia de la Conquista de Mexico," which passed through many editions, and of which an English translation was published in 1724, folio. He took orders in the church in the latter part of his life, and died at an advanced age in 1686. An edition of the History of the Conquest of Mexico, in the original Spanish, was printed in London in 1809, 3 vols. 8vo.—*Antonio Bibl. Hisp. Biog. Univ.*

SOLON, one of the seven sages of Greece, and the celebrated lawgiver of the Athenians, was born in the sixth century BC. at Salamis, of parents descended from Codrus. His father leaving him but a small patrimony, he had recourse to commerce, but at the same time cultivated poetry, and applied himself to the study of moral and political wisdom. He first distinguished himself by an elegy, by which he prevailed on the Athenians to rescind an ignoble resolution, never to attempt regaining the island of Salamis. He afterwards increased his reputation by advocating a necessary war with the people of Cirrha, and by contributing to the reduction of their city. Athens, being at that time in a turbulent state, arising from the contention of different political factions, and the oppression of the lower classes by their creditors, Solon was regarded as one who could devise the best means of restoring them to tranquillity. A large party was desirous ofaising him to the sovereignty; this however he declined, but being chosen archon by acclamation, BC. 594, he set himself to compose the dissensions by moderate

measures. He relieved the poor in respect to their debts, and rescued them from bondage; but he refused to gratify them by dividing the lands, and in the first instance pleased neither party. The wisdom of his conduct was however soon generally acknowledged, and he was unanimously invested with the high trust of remodelling the laws and constitution of Athens. In the exercise of this power he began by abrogating the sanguinary laws of Draco, and then made a new distribution of the people, formed on different scales of property, with a view to a well-formed democracy. He also formed new seats of judicature, and framed a code of laws which afterwards became the basis of those of the twelve tables at Rome. As a supreme judicial court, the guardian of the laws and morals of the nation, he revived the ancient Areopagus, and ordained that it should be composed of those only who had passed the office of archon, by which means it rapidly obtained a reputation that rendered its decrees revered throughout Greece. After the promulgation of this code Solon travelled; and having obtained leave of absence for ten years, exacted an oath from the citizens that nothing should be altered until his return. He visited Egypt, Cyprus, and, as it is said, the court of Croesus, king of Lydia, although it is difficult to reconcile his reputed adventure with that monarch with chronology. On his return to Athens he found parties running high, and his kinsman Pisistratus aiming at the sovereignty, which, notwithstanding the attempts of Solon to rouse up the people, he acquired. He then withdrew from Athens, to which he never returned, and the time and place of his death are uncertain; but it is commonly said that he died at Cyprus, at the age of eighty. The Athenians held his memory in great reverence, and placed his statue in the forum. Laertius has mentioned among his writings his orations, poems, laws, and Atlantic History, left unfinished, and afterwards continued by Plato, who has also preserved some of his supposed epistles. Of his sayings, as one of the wise men of Greece, the best is that which compares laws to cobwebs, which hold the weak, but are broken through by the strong.—*Plutarchi Vit. Solon. Diog. Laert.*

SOLVYNS (FRANCIS BALTHAZAR) an artist and Oriental traveller, born at Antwerp in 1760. He displayed his abilities at an early age, and acquired skill both as a painter and an engraver. His first works were sea views. He went to Germany with the archduchess Maria Christina, who had been governess of the Netherlands; and after the death of that princess he accompanied sir Home Popham in a voyage to the Red Sea and the East Indies. On his arrival at Hindostan he studied the languages of the Hindoos, and their religion, manners, and customs, that he might be able accurately to illustrate them by the joint aid of the pen and pencil. After fifteen years' absence he returned to Europe with a valuable stock of materials for the execution of his design. Having settled at Paris, he commenced a work entitled "Les Hindoos, or Description

pittoresque des Mœurs, Costumes, et Cérémonies religieuses de ce Peuple," which was completed in four volumes, large folio, in 1812. After the restoration of the prince of Orange, Solvyns returned to his native country, and was made captain of the port of Antwerp, where he died October 10, 1824.—*Biog. Nouv. des Contemp. Biog. Univ.*

SOMBREUIL (CHARLES VEROT de) a French royalist officer, who distinguished himself by his courage in the opening scenes of the Revolution. During the tumults of the Palais Royal he saved from the fury of the mob, one of the Mess. de Polignac. He at length emigrated, and in the campaign of 1792 he served in the Prussian army, when his bravery was rewarded with the military order of merit. In 1793 he entered into the army of the prince of Condé; and in the winter of 1794 he commanded a corps of emigrants in Holland. He subsequently went to England, and became one of the victims of the ill-concerted expedition to Quiberon. The English government placed under his command seven regiments, with which he arrived on the coasts of Brittany, July 7, 1794. Sombreuil was taken prisoner, tried before a military commission, and shot at Vannes shortly afterwards.—*Dict. des H. M. du 18me S. Biog. Univ.*

SOMERS (JOHN LORD) a distinguished lawyer and statesman, was the son of a respectable attorney at Worcester, where he was born in 1652. He received his education at the college school of his native city, and was entered a gentleman commoner at Trinity college, Oxford. Being destined for the legal profession, he passed some time as clerk to sir Francis Winnington, an eminent barrister, and when called to the bar himself, quickly evinced talents of a very high order. As his principles led him to oppose the measures of Charles II, he was the reputed author of several tracts, in which their tendency was exposed. On the accession of James II he continued a firm opposer of the court, and acquired great credit as one of the counsel for the seven bishops. He heartily concurred in the Revolution, and sat as one of the representatives for Worcester in the convention parliament summoned by the prince of Orange, and was one of the managers appointed by the Commons to confer with the Lords on the word *abdicate*. In 1689 he was knighted, and made solicitor-general; in 1692 attorney-general, and lord-keeper of the great seal the following year, in which capacity he displayed equal ability, integrity, and gentleness. He was one of the first patrons of Addison, for whom he procured an allowance to enable him to make the tour of Italy. In 1695 he was advanced to the dignity of lord high chancellor of England, and was raised to the peerage by the title of lord Somers, baron Evesham. Being now regarded as the head of the whigs, he made great exertions to moderate the zeal and jealousy of that party, and possibly was too compliant in some points to ensure to it the royal favour. His acquiescence in the first partition treaty

in 1699, with other measures, produced great dissatisfaction, and an address was moved in the house of Commons, praying the king to remove him from his council. This was defeated by a great majority; but to appease the malcontents, the king deprived him of the seals. King William soon after died, and the new reign being unfavourable to the principles of lord Somers, he spent his time in literary retirement, and was chosen president of the Royal Society. In 1706 he drew up a plan for effecting a union between England and Scotland, which was so much approved, that queen Anne appointed him one of the commissioners to carry it into execution. He is also said to have had a great share in the bill of regency for securing the protestant succession. Upon a change of ministry in 1708, he was nominated president of the council, but was again dismissed in 1710, and although he continued for some time to take an active part in debate, a gradual decline in health rendered him unfit for public business. In the ensuing reign, therefore, he only retained a seat at the council board, until in April 1716 he was carried off by an apoplectic fit at the age of sixty-four. The memory of lord Somers is highly esteemed by the friends of constitutional liberty and of the Revolution, to which no one contributed more than he. His abilities were at the same time very considerable, and few statesmen have passed through life with a purer political character. He was also a great patron of men of letters, and was one of those who redeemed Milton's "Paradise Lost" from the obscurity in which party prejudice and hatred had involved it. Besides the many speeches and political tracts attributed to this able nobleman, he translated some of Ovid's Epistles, and Plutarch's life of Alcibiades. He also made a large collection of scarce and curious tracts, of which there has been published a selection in four parts, each consisting of four volumes, quarto. His collection of original papers and letters was unfortunately destroyed by a fire at Lincoln's Inn. He never married, and the present noble family of Somers is descended from his sister, married to — Cocks, esq.—*Biog. Brit.*

SOMERVILLE (WILLIAM) a minor poet, was the son of Robert Somerville, esq. at whose estate at Edston, in Warwickshire, he was born in 1692. He was educated at Winchester school, whence he was removed to New college, Oxford. He made a due proficiency in classical literature, and early cultivated his talent for poetry. His political attachments were to the whig party, as he proved by his praises of Marlborough, Stanhope, and Addison. He inherited a considerable paternal estate, on which he chiefly lived, acting as a magistrate, and mingling an ardent attachment to the sports of the field with the studies of a man of letters. He was courteous, hospitable, convivial, and what is too often attendant upon those qualities, careless in pecuniary matters, which, by involving him in embarrassments, preyed on his mind, and produced habits which shortened his life.

He died in 1742, and having lived in celibacy, made over the reversion of his estate to lord Somerville, a branch of the same ancient family. As a poet, Somerville is chiefly known by his "Chace," a poem in blank verse, which maintains a respectable rank in the didactic and descriptive class, his enthusiasm as a sportsman aiding his talents as a poet. Its language is free and nervous, and its versification tuneful and correct. Another piece connected with the same subject is entitled "Field Sports." His "Hobbinol, or Rural Games," is a kind of mock heroic, in which the burlesque is often well managed. Of his other pieces, serious and comic, a few tales are rather free, and in other respects not calculated to increase the poet's reputation.—*Johnson's Lives of the Poets. Shenstone's Letters.*

SOMNER (WILLIAM) a distinguished English antiquary and philologist, born at Canterbury in 1598. His father was registrar of the metropolitan court, and the son was educated at the grammar-school of his native city. He became a clerk in his father's office, where his abilities attracted the notice of that great patron of learning, archbishop Laud, who bestowed on him a situation in the ecclesiastical court better suited to his merit. In the early part of the reign of Charles I, he collected the materials for his history of Canterbury, which however was not published till 1640. He formed the design of writing the history of the whole county of Kent, but the misfortunes which befel his patron Laud, and the impetuous storm of civil discord and fanaticism which supervened, obliged him to relinquish his purpose, and turn his thoughts to the preservation of his property and the safety of himself and his family. He however drew up a "Treatise on the Roman Ports and Forts in Kent," published in 1693; and gathered some MS. collections relating to a few of the Kentish towns and churches, preserved in the library of the dean and chapter of Canterbury. The language and literature of our Anglo-Saxon ancestors engaged much of his attention; and in 1652 he completed a Saxon glossary to the "Historiæ Anglicanæ Scriptores," published by Twysden; which was succeeded in 1659 by his grand work, "Dictionarium Saxonico-Latinum Anglicum," folio, in the publication of which he was assisted by the liberality of the university of Cambridge, from which he received the salary attached to the Anglo-Saxon professorship founded by sir H. Spelman. On the restoration of king Charles II Somner was one of the royalist sufferers, who were fortunate enough to obtain some compensation for the sacrifices they had made at the shrine of loyalty. He was appointed master of St John's hospital and auditor of Christchurch, Canterbury, which offices he held till his death in 1662. Besides the works already mentioned, he was the author of a "Treatise of Gavelkind," 1660, 4to, republished by Kennet, with a life of the author; "Julii Cæsaris Portus Ictici illustratus," 1694, 8vo; and elegiac poems on the death of Charles I. Nicholas Batteley reprinted Somner's Anti-

quities of Canterbury, to which he added a sequel or second part, 1703, folio. Somner also translated the old Saxon Laws, collected by Lambarde, into Latin and English, but this work has never been made public.—*Hasted's Hist. of Kent, Pref. Gough's Brit. Topog. Chalmers's Biog. Dict.*

SONNERAT (PETER) a naturalist and voyager, born at Lyons about 1745. Having obtained some knowledge of natural history, and studied drawing, he entered into the administration of the marine. In 1768 he left Paris to go to the Isle of France, where his relation M. de Poivre was intendant. After making various voyages to Madagascar, the East Indies, the Philippine Islands, &c. he returned to France in 1774 with a rich collection of natural curiosities, which were deposited in the royal cabinet at Paris. The same year he returned to India, to continue his researches, with the title of commissary of the marine. He then visited Ceylon, the Malabar coast, Malacca, and various other places. At the siege of Pondicherry he acted as inspector of the hospitals, and after the capitulation of that fortress in 1778, he returned to Europe. He made subsequent voyages to the East Indies, and passed several years in that part of the world. He was at Pondicherry in 1801; but at length returned to his native country, and his death took place at Paris, April 12, 1814. He published "Voyage à la Nouvelle Guinée, dans lequel on trouve la Description des Lieux, des Observations physiques et morales, et des Détails relatifs à l'Histoire naturelle dans le Règne Animal et le Règne Végétal," Paris, 1776, 4to; and "Voyage aux Indes Orientales et à la Chine, fait par Ordre du Roi depuis 1774 jusqu'en 1781," Paris, 1782, 2 vols. 4to.—*Biog. Univ.*

SONNINI DE MANONCOURT (CHARLES NICHOLAS SIGISBERT) a distinguished traveller and naturalist, born at Lunéville, February 1, 1751. He was the son of a gentleman of Roman descent, who was counsellor and treasurer to Stanislaus I, the ex king of Poland. He studied under the jesuits at Pont-à-Mousson, and before he was sixteen he received the degree of doctor in philosophy. Being destined for the magistracy, he went to Strasbourg as a student of law, and in November 1768 he was admitted an advocate of the sovereign court of Nancy. He had become acquainted with Buffon, who inspired him with a taste for natural history; and being of an active disposition, he relinquished the law for the army, and afterwards entering into the corps of marine artillery, he was in 1772 sent to Cayenne. He travelled over various parts of Guiana, and after a voyage made to the western coast of Africa, he returned to France in 1775, with a collection of rare birds for the cabinet of natural history. An account of his researches appeared in the Journal de Physique of the abbé de Rozier. He passed part of the years 1776 and 1777 at Montbard, where he drew up for Buffon that part of his Natural History which relates to foreign birds. In 1779 he was sent to Greece and Egypt to

make new observations; and returning home the following year, he employed himself in the cultivation of science till the commencement of the Revolution. For some time he was administrator of the department of La Meurthe; but during the reign of terror he was displaced and imprisoned. Being set at liberty on the fall of Robespierre, he first of all engaged in agricultural pursuits, but being unsuccessful, he went to Paris, and published an account of his travels in Greece and Egypt; and occupied himself in other literary undertakings. Under the consular and imperial governments he was unable to obtain any public office, notwithstanding the patronage of Lucien Buonaparte, who in vain endeavoured to overcome the prepossessions of Napoleon against Sonnini, on account of his remarks on the Egyptian expedition in his travels. In 1805 he became director of the college of Vienne, which post however he was soon after forced to resign. He had subsequently a prospect of an establishment in Moldavia; but he was again destined to meet with disappointment; and after travelling in Moldavia and Wallachia, he returned to Paris in December 1811. His death took place in that metropolis May 29, 1812. Among his works are "Voyage dans la Haute et Basse Egypt," 1799, 3 vols. 8vo; "Voyage en Grèce et en Turquie," 1801, 2 vols. 8vo; besides which he published the seventh edition of the Natural History of Buffon in 127 vols. 8vo; assisted in the "Dictionnaire d'Histoire Naturelle," in 24 vols. 8vo; and was conductor of the "Bibliothèque Physico-économique." The Egyptian Travels of Sonnini were translated into English by Dr Henry Hunter, 1799, 3 vols. 8vo; and his Travels in Greece also appeared in an English dress, 1801, 2 vols. 8vo.—*Biog. Nouv. des Contemp. Belg. Univ.*

SOPHOCLES, a famous Greek tragic poet, was born at Athens about BC. 497. He was of a condition that entitled him to the best education of his age and country; and in the first instance applied himself to lyric poetry, but the fame acquired by Æschylus induced him to try his powers in tragedy. In his twenty-eighth year he accordingly contended with that veteran for the prize, which being decreed to him, Æschylus retreated, and left him undisputed master of the field. The improvements which he made in the drama were very considerable; he brought more than two interlocutors on the stage at a time; interested the chorus in the subject of the piece, and invented a more artful construction of fable and development of incident. In these points he is even deemed superior to his younger rival, Euripides, and upon the whole appears to have stood at the head of tragedy in the estimation both of Greece and Rome. Sophocles was a man of general capability, and entrusted with civil and military employments, being joined in one instance with Pericles, in a commission against the revolted Samians. He continued to write tragedies at an advanced age, and the benignity of his character ac-

quired him a number of friends. It is related to his honour, that at the death of his great rival Euripides he put on mourning, and would not suffer the actors in a new piece of his to wear crowns. He is said to have passed his ninetieth year, and to have died with joy on obtaining the prize for his last tragedy. Above a hundred pieces were attributed to him by ancient writers, of which only seven have reached modern times. These however have produced a pretty general opinion, that he is to be regarded as the most masterly of the three Greek tragedians, the most correct in development, the most just and sublime in sentiment, and the most vivid in description. His tragedies have been frequently published separately and together, with the Greek scholia and Latin versions, and without. Among the most esteemed are those of Johnson, 3 vols. 8vo, Oxon. and London; Capertonier, Paris, 4to, and 2 vols. 8vo, 1781; Brunck, 1786, 2 vols. 4to, 1788, 3 vols. 8vo; Musgrave, Oxon. 3 vols. 8vo; and Bothe, 1786, 2 vols. 8vo. They have all been translated into English by Franklin and Potter.—*Vossii Poet. Gr. Dindin's Classics. Moreri.*

SORANUS EPHESIUS, a physician, who lived in the second century of the Christian æra. He was probably a native of Ephesus; but he practised medicine at Alexandria, and afterwards at Rome, in the reigns of Trajan and Adrian. He belonged to the sect of the Methodists, and was a disciple of Theasalus. Some of his writings are still extant, particularly a life of Hippocrates, usually prefixed to the works of that author; and a treatise "De Via saluberrima in Artem Medendi," published at Basil in 1528.—*Hutchinson's Biog. Med.*

SORBIERE (SAMUEL) a miscellaneous French writer, by profession a physician, born at St Ambroise in 1615. He was originally a Protestant; but he exchanged his religion for that of the church of Rome, as was supposed, through interested motives, for going to Rome he was much disappointed at receiving from the pope empty honours, instead of substantial preferment. Soon after the restoration of Charles II he visited England, where he obtained an introduction to many men of learning and science, was noticed by the king, and admitted to a sitting of the newly founded Royal Society. He published in 1664 an interesting account of his observations, entitled "Relation d'un Voyage en Angleterre, où sont touchés plusieurs choses qui regardent l'Etat des Sciences, et de la Religion, et autres matières curieuses." This work was translated into English, and was severely criticised by Dr, afterwards bishop Sprat, who was offended by the freedom of Sorbierre's remarks. His death took place in 1670. He was much acquainted with Hobbes, some of whose works he translated into French; and he corresponded with many persons of eminence, whose epistolary intercourse with him was published after his death.—*Biog. Univ. Moreri.*

SORBONNE (ROBERT de) founder of the celebrated theological college which bears his

name, was born in 1201, of an obscure family at Sorbonne, or Sebron, a village in the diocese of Rheims. After receiving the degree of doctor at Paris, he devoted himself to preaching and pious conference, and became chaplain and confessor to the king, St Louis. Having become a canon of Cambrai in 1251, his recollection of the difficulties which he had experienced in the course of his own studies, suggested to him a plan for facilitating to poor scholars the means of proceeding to graduation. This was to provide a society of secular ecclesiastics, who living in common, and provided with a maintenance, should read lectures gratuitously. With the assistance of his friends, therefore, he founded in 1263 the celebrated college of the Sorbonne, in the street of Deux Portes at Paris. It was particularly dedicated to the study of theology; and its constitution has served for a model for all the colleges subsequently erected. He afterwards added a college for languages and philosophy, under the name of the College of Calvi, or the Little Sorbonne. He was made canon of Paris in 1258, and rose to such a height of reputation, that princes frequently chose him arbitrator in their disputes. He died in 1274, at the age of seventy-three, and left very considerable property to his college. He was the author of several works on divinity, which are preserved in MSS. in the library of the Sorbonne.—*Moreri. Nouv. Dict. Hist.*

SOSIGENES, an Egyptian mathematician, who lived in the century preceding the Christian era. He appears to have directed his attention principally to astronomy and chronology; and he is said to have been well acquainted with the works of Thales, Archimedes, Hipparchus, Calippus, and other ancient mathematicians, who had endeavoured to regulate the solstices, and ascertain the length of the solar year. When Julius Cæsar undertook the reformation of the kalendar, he sent for Sosigenes to Rome, and availed himself of his talents in the formation of the Julian year, first adopted 45 BC. There are no writings extant of this mathematician; nor is any thing farther known of his history.—*Martin's Biog. Philos. Hutton's Math. Dict.*

SOSTRATUS, the most eminent architect of his time, was a native of Gnidos in Lesser Asia, and flourished in the third century BC. He was in particular favour with Ptolemy Philadelphus, king of Egypt. One of his great works was the famous Pharos, or light-house of Alexandria, said to have cost 800 talents, and reckoned one of the wonders of the world. He transmitted his name to posterity by the following inscription on the Pharos in the Greek language:—"Sostratus of Gnidos, the son of Dexiphanes, to the preserving gods for navigators."—*Pliny. Strabo.*

SOUCIET (STEPHEN) a learned French Jesuit, born at Bourges in 1671. He took the vows at the age of nineteen, and going to Paris he soon distinguished himself by his talents. Being employed by his superiors to answer a work of the English divine, Dr. Pearson, he found it necessary to study the Oriental lan-

guages, in which he made a rapid progress. He also applied himself to history, astronomy, chronology, and mathematics; and quitting the chair of theology, which he had occupied for some years, he was appointed keeper of the library at the college of Louis le Grand. He died at Paris, January 14, 1744. Besides various other works, he was the author of "Observations mathématiques, astronomiques, géographiques, et physiques, tirées des anciens Livres Chinois, ou faites nouvellement aux Indes et à la Chine, par les Missionnaires Jésuites," Paris, 1729, 4to.—His brother, STEPHEN AUGUSTIN SOUCIET, was the author of several Latin poems, distinguished for beauty and elegance.—Another brother, JOHN SOUCIET, was one of the principal co-operators in the *Journal de Trevoux*. All the brothers belonged to the society of the Jesuits.—*Biog. Univ.*

SOULAVIE (JEAN LOUIS GIRAUD) an historical and miscellaneous writer, who was a native of the province of Viverais in France. He embraced the ecclesiastical profession, and at the beginning of the Revolution he was curé of Sevent and vicar-general of the diocese of Chalons. He became a warm partizan of popular opinions, and was one of the first among the priests who threw off the yoke of the church, and entered into the state of wedlock. In 1793 he was nominated resident of the French republic at Geneva, whence he was recalled the following year and imprisoned. At the amnesty in 1796 he was liberated; and in 1798 he was destined to deportation, but Buonaparte prevented the execution of the decree of his brother consuls. Soulavie then devoted himself entirely to literature. Towards the close of his life he appears to have repented of his apostasy, and reconciled himself to the church. He died in March 1813, a few days after he had made the retraction of his errors. Among his numerous publications may be mentioned "Mémoires du Marechal Duc de Richelieu;" "Mémoires historiques et politiques du Règne de Louis XVI.," 1801, 6 vols. 8vo; and "Histoire de la Décadence de la Monarchie Française," 1805, 3 vols. 8vo. He also edited many volumes of memoirs, and left a large quantity of manuscripts.—*Biog. Univ.*

SOUTH (ROBERT) a celebrated divine of the church of England, who was the son of a London merchant, and was born at Hackney in 1633. He was educated at Westminster school and Christchurch, Oxford. In 1654 he wrote a copy of Latin verses, addressed to Cromwell, on the conclusion of peace with the Dutch; and the following year he produced a poem entitled "Musica Incantans." In 1660 he was chosen public orator of the university of Oxford; and soon after he was nominated domestic chaplain to lord Clarendon, then lord chancellor. In 1663 he became a prebendary of Westminster, was admitted DD. and obtained a living in Wales. On the disgrace of his patron, he was made chaplain to the duke of York. In 1670 he was installed canon of Christchurch; and in

1676 he went to Poland, as chaplain to the English ambassador, Lawrence Hyde. On his return home in 1678 he was presented to the rectory of Islip in Oxfordshire, where he rebuilt a part of the church and the parsonage-house. In the latter part of the last century Dr South commenced a controversy with Dr William Sherlock, relative to the doctrine of the Trinity, which was continued for some time, exciting a great deal of interest among the clergy of that period. Both these disputants professed to be orthodox sons of the church, their difference relating to the mode of explaining the doctrine in question; in which fruitless undertaking much wit and learning were expended to little purpose. Dr South died in 1716, after having for several years been in an infirm state of health. He possessed an abundant share of wit and humour, which he not unfrequently displayed in his most serious compositions. His "Sermons," which have been much admired, were published in 11 vols. 8vo. He also wrote an account of his journey to Poland, and other works.—*Biog. Brit. Aikin's Gen. Biog.*

SOUTHCOTT (JOHANNA) a singular fanatic, who, in the early part of the present century, attracted by her extravagant pretensions a numerous band of converts in London and its vicinity, which is said to have at one period amounted to upwards of a hundred thousand. She was born in the west of England, about the year 1750, of parents in very humble life, and being carried away by the fervour of a heated imagination, gave herself out as the woman spoken of in the book of Revelations. In this her assumed capacity, although in the highest degree illiterate, she scribbled much mystic and unintelligible nonsense in the way of vision and prophecy, and for a while carried on a lucrative trade in the sale of seals, which were, under certain conditions, to secure the salvation of the purchasers. A disorder of rather rare occurrence subsequently giving her the outward appearance of pregnancy after she had passed her grand climacteric, she unhesitatingly announced herself as the mother of the promised Shiloh, whose speedy advent she as confidently predicted. The faith of her followers, among whom were more than one clergyman of the established church, rose to enthusiasm. A cradle of the most expensive materials, and highly decorated, was prepared by her expectant votaries at a fashionable upholsterer's, and every preparation was made for the reception of the miraculous babe that superstition and credulity could induce; and so fully persuaded were many of her deluded attendants of the reality of her mission, that one of the ecclesiastics already alluded to, on receiving a remonstrance from his diocesan, actually offered to bind himself to resign a benefice he possessed into the bishop's hands, if the holy Johanna, as he styled her, should fail to appear on a specified day with the expected Shiloh in her arms. About the close of the year 1814, however, the prophetess herself began to have her mis-

Biog. Dict.—Vol. III.

givings during some comparatively lucid intervals, in which she declared that "if she was deceived, she was convinced she had at all events been the sport of some spirit, either good or evil," and on the 27th of December in that year, death put an end to both her hopes and fears. With her followers, however, it was far otherwise; and though for a time confounded by her decease, which they could scarcely believe to be real, a speedy resurrection was confidently anticipated, and one of her most devoted adherents, Mr Sharp, the eminent engraver (see *SHARP*), publicly asserted his conviction that "she was only gone to heaven for a season, in order to legitimate the embryo child." In this persuasion he, as well as many others, lived and died, nor is her sect yet extinct; on the contrary, within a very short period several families of her disciples were living together in the neighbourhood of Chatham in Kent, remarkable for the patriarchal length of their beards and the general singularity of their appearance. The body of Johanna underwent an anatomical investigation after her death, when the extraordinary appearance of her shape was fully accounted for upon medical principles, and her remains were conveyed for interment under a fictitious name to the burying-ground attached to the chapel in St John's Wood. A stone has since been erected to her memory, which, after reciting her age, and other usual particulars, concludes with some lines, evidently the composition of a still unshaken believer, the fervour of whose faith far exceeds his inspiration as a poet.—*Original Communication.*

SOUTHERN (THOMAS) an eminent dramatic poet of the age of the second Charles, born at Dublin in 1660, and educated there at Trinity college. In 1678 he came to London with the view of making the law his profession, and entered himself of the Middle Temple; but like many a kindred genius similarly circumstanced, soon abandoned a study so little congenial to persons of his vivacity of temperament, and dedicated his time to the cultivation of his muse. His first dramatic effort was a tragedy entitled the "Persian Prince, or the Loyal Brother," founded on the story of Schah Thamas, but written with a strong bias towards the tory party, then prevalent in England, and full of compliment to its head, the duke of York, under the character of the Loyal Brother. To this tragedy Dryden, whose friendship he enjoyed, furnished the prologue and epilogue, the former however especially being more remarkable for party virulence than for poetry. The play was first performed in 1682, and besides raising the author's reputation by its success, procured him a reward of a more substantial nature, in the favour of the prince to whom he had paid his court in it. On the accession of James to the throne, Southern went into the army, and rose gradually to the command of a company in the regiment raised by lord Ferrers, in which he served during Moomouth's rebellion.

Another of his tragedies, "The Spartan Dame," though written in 1687, was not acted till 1721, and then with considerable alterations, from some supposed resemblance in the situation of its heroine to that of queen Mary. It was very strongly cast, and produced its author 150*l.* for the copyright, an extraordinary sum at that time. From this period he continued to produce occasionally a variety of comedies as well as tragedies; in the former style of composition however he was far from being successful, all his lighter pieces having perished, while of the latter, two especially yet keep possession of the stage. These are his "Oronooko," founded, it is said, on a true story, which forms the groundwork of one of Mrs Behn's novels; and "Innocent Adultery," which under its modern name "Isabella, or the Fatal Marriage," is one of the most pathetic and effective dramas in the language, and has in succession tried the strength of all our principal female tragedians, from Mrs Porter and Mrs Woffington, down to Mrs Siddons and Miss O'Neil. The latter part of his days was passed by Mr Southern, who had long quitted the service, in ease and affluence. His writings and his commission had produced him a handsome competency, and he is recorded to have been the first who raised the advantage derived by dramatic authors from the treasury of the theatre to a second and third night, a circumstance alluded to by Pope. During the last ten years of his life he resided in Westminster, and was a constant attendant at the abbey from his partiality for sacred music. His death took place May 26, 1746, when he had attained the advanced age of eighty-six. His works have gone through several editions.—*Life by Cibber.*

SOUTHWELL (ROBERT) an English jesuit and poet, was born in 1560, as it is said, of an ancient family in Norfolk or Suffolk. Being sent abroad for education, he became a jesuit at Rome in 1576. He was a few years after sent missionary to England, and in 1592 was apprehended and examined with the strictest rigour. He was confined three years, and, as he himself affirms, he endured the torture several times, until at length he owned that he came to England to propagate the Catholic religion, and was ready to lay down his life for it. He was accordingly tried in February 1593, under the existing law, and the presence of a jesuit in England being treason, he was condemned, and executed the next day at Tyburn. According to Dodd, Warton, Headley, and others, there is considerable beauty in some of the poetical pieces of Southwell, a few pleasing examples of which will be found in Ellis's *Specimens*. On these his fame must now principally rest, as copies of this work are rarely to be met with, although the remnant of twenty-four editions. The title of his principal works are, "A Consolation for imprisoned Catholics;" "A Supplication to Queen Elizabeth;" "St Peter's Complaint, with other Poems;" "Mœonie, or certain excellent Poems and spiritual Hymns;" "Mary Magdalene's Funeral Teares," re-

printed in 1772 by the rev. William Tooke.—*Dodd's Ch. Hist. Ellis and Headley's Specimens.*

SOUZA BOTELHO (JOSEPH MARIA, baron de) a Portuguese nobleman, equally distinguished as a diplomatist and a man of letters, born at Oporto in 1758. Having terminated his studies at Coimbra, he entered into the army, and served from 1778 to 1791. At that period he was nominated ambassador to Sweden, whence in 1795 he proceeded in the same capacity to Lisbon. After the peace of Amiens he resided as Portuguese minister at Paris till 1805, when he was chosen to fill the post of plenipotentiary from the court of Lisbon at Petersburg; but he declined the office, and spent the rest of his days in literary retirement. He devoted his leisure to the preparation of an edition of the *Lusiad* of Camoens, with a bibliographical memoir and life of the poet. This magnificent work, printed by Didot at Paris, in folio, with engravings by M. Gerard, appeared in 1817. M. de Souza afterwards formed the design of writing the history of Portugal; but ill health prevented the execution of his plan. In 1804 he published a translation in his native language of the famous "Lettres Portugaises," with the French on the opposite pages, and prefatory observations relative to the authenticity of the work. His death took place June 1, 1825. After the death of his first wife, he married at Paris, in 1802, the countess de Flabault, widow of the count de Flabault de la Billarderie, guillotined in 1792. This lady is well known in the literary world as the authoress of "Emilie et Alphonse, ou le Danger de se fier à ses premiers Impressions;" "Adèle de Senanges;" "Charles et Marie;" and other very popular and interesting works of fiction.—*Biog. des Contemp. Biog. Univ.*

SOUZA (JOHN de) a Portuguese historian, born at Damas or Damascus, in Syria, of Catholic parents, about 1730. He went to Portugal in 1750, and he was patronized and employed by Gaspar de Saldanha, rector of the university of Coimbra, who introduced him to the count d'Oeyras, afterwards marquis de Pombal. In 1770 he entered into the order of St Francis, soon after which he was withdrawn from his convent, to be employed as secretary-interpreter to the Spanish ambassador at Morocco. He subsequently became professor of Arabic at the convent of St Jesus, at Lisbon, where he died January 29, 1812. Father de Souza, who was a member of the Portuguese Academy of Sciences, published "Vestiges of the Arabic Language in Portugal, or an Etymological Dictionary of Portuguese Words derived from the Arabic," 1789; "Arabian Documents from the Archives of Lisbon;" and other works. He also left many valuable MSS.—*Biog. Univ.*

SOWERBY, FLS. MGS. (JAMES) an ingenious artist and naturalist, born 1766. In the early part of his life Mr Sowerby supported himself by instructing pupils in the art of drawing; but being fond of botany, and

exercising his pencil chiefly in the delineation of plants, he attracted the notice of sir J. E. Smith, the president of the Linnæan Society, who employed him to illustrate his works. He published several works afterwards, connected with his favourite pursuit; among others, "A Botanical Drawing Book," 4to, 1789 and 1791; "Florist's Delight," folio, 1791; "English Fungi," folio, 1796; "British Mineralogy," 8vo, 1803; "Description of Models to Explain Crystallography," 8vo, 1805; and "English Botany," 8vo, 1805. Mr Sowerby was a correspondent and fellow of the Linnæan Society, among whose transactions are several papers from his pen; and had collected a considerable museum, which was always accessible to students and scientific men. He died in Lambeth, October 25, 1822.—*Ann. Biog.*

SOZOMEN (HERMIAS) a native of Palestine, was in great repute as an advocate at Constantinople about the year 440, and is known as the author of a "History of the Christian Church," from its first establishment to his own times. Of this work the latter part only has reached posterity, containing an account of transactions from the year 324 downwards. It is visibly copied from the similar history of Socrates, and is equally remarkable for the marvellous legends which it details, and the florid style in which they are narrated. He is supposed to have died about the middle of the fifth century. His history was translated and published by Valesius, with Eusebius and other ecclesiastical historians; and separately, with additional notes by Reading, London, 1720, 3 vols. folio.—JOHN SOZOMEN, a Venetian lawyer, of the seventeenth century, is known as having rendered Plato's work on Republics into the Italian language. In this translation, or rather adaptation, the original form of dialogue is abandoned for that of a continuous treatise.—*Cave. Dupin.*

SPAENDONCK (GERARD van) an eminent flower-painter, born at Tilbourg in Holland, in 1746. He studied under Herreyns, an artist of Antwerp; and at the age of twenty-four he went to Paris, where he expected to meet with more encouragement than in his own country. He distinguished himself by his miniatures as well as his flower-pieces, and through the friendship of Watelet he obtained, in 1774, the reversion of the place of miniature-painter to the king. In 1781 he was admitted into the Academy of Painting; and after the Revolution he was made professor of iconography at the Jardin des Plantes. After having enjoyed an excellent state of health to a very advanced age, he died suddenly, May 11, 1822. The works of Spændonck are extremely numerous, and some of the most valuable are preserved in the museum of the Louvre.—*Biog. Univ.*

SPAGNOLETTI. See RIBERA.

SPALDING (JOHN JOACHIM) a celebrated Protestant preacher and man of letters, born at Triebseß in Swedish Pomerania, in 1714. He studied at the university of Rostock, whence he removed to Griefswald, to become

tutor to the children of one of the professors in that university, who kindly directed his studies. In 1735 he supported a thesis "De Calumnia Juliani Apostatæ in Confirmatione Religionis Christianæ versa." Having adopted the ecclesiastical profession, after assisting his brother, who was pastor and rector of the gymnasium at Triebseß, he went in 1742 to Halle, with a young man to whom he was tutor. In 1745 he became secretary of legation to M. de Rudenskiöld, Swedish envoy at Berlin. He now published translations of the works of lord Shaftesbury, of Silhouette, and of Le Clerc, having studied the English and French languages as well as the Swedish. In 1748 appeared his "Destination of Man," a work which established the reputation of the author as a moralist and a general scholar. In 1749 he was appointed pastor of Lassahn in Swedish Pomerania; and in 1757 he removed to Barth, near Stralsund. He published his second classic work, "Thoughts on the Importance of Religious Sentiments," in 1761; and three years after he became member of the general consistory, and first pastor of the church of St Nicholas at Berlin. In 1765 he published a volume of "Sermons," distinguished for elegance of style and sound morality; and this was followed by another a few years after. In 1772 appeared his treatise on "The Utility of Preaching;" and in 1784 "Confidential Letters concerning Religion." Spalding was an advocate for free inquiry in matters of religion, his own sentiments tending towards that system of rationalism so prevalent among the German theologians of the last century. Whence, on the publication of the famous edict of religion of 1788, he relinquished preaching altogether; but he still retained his consistorial functions. In 1797 he published his last work, "Religion the most important Affair of Mankind;" and the same year he was honoured by the university of Halle with the diploma of doctor of theology. His death took place at Berlin, May 26, 1804.—*Biog. Univ.*

SPALDING (GEORGE LOUIS) second son of the preceding, eminent as a philological writer. He was born at Barth, April 8, 1762, and he studied under the famous Busching, at the gymnasium of Berlin. He afterwards directed his attention to philology and divinity at the universities of Göttingen and Halle; and in 1784 he engaged in a literary tour through Germany, Switzerland, France, England, and Holland. Returning to Berlin, he was appointed tutor to the children of prince Ferdinand; and in 1787 professor at the gymnasium of Berlin. His religious sentiments coinciding with those of his father, the edict of religion induced him to renounce his intention of becoming an ecclesiastic, and devote himself entirely to literature. In 1792 he went to Halle, and graduated as MA, having published a dissertation entitled "Vindiciæ Philosophorum Megaricorum, subjecitur Commentarius in priorem Partem Libelli de Xenophane, Zenone et Gorgia," which procured him great reputation. Being employed by a

bookseller of Leipzic to revise the text of Quintilian for a new edition, he dedicated the last nineteen years of his life to that undertaking, which he executed in a masterly manner, and the work appeared in 4 vols. 8vo, 1798—1816, the last volume having been published after the death of the learned editor, which took place June 7, 1811. G. L. Spalding published in 1804 a volume of "Didactic Poetry;" and the same year he printed his father's Autobiography.—*Id.*

SPALLANZANI (LAZARUS) an eminent modern naturalist, was born at Scandiano in Italy, January 10, 1729. He studied polite literature under the jesuits at Reggio de Modena, whence he removed to Bologna, where he cultivated science under his relation Laura Bassi, the celebrated female professor of physics in that place. Being nominated physical professor at Pavia, he devoted himself to experimental researches into nature, which course of scientific study he pursued for many years with more assiduity and intelligence than most of his contemporaries. He began in 1765 to publish in Italian, various works on physiology, chiefly animal, which made his name known throughout Europe. He employed some of the intervals of his academical labour in travelling for information. In 1779 he made a tour through the Swiss cantons; in 1785 he took a voyage to Constantinople, visiting in his way the isles of Corfu and Cythera, of which he described the geology and fossil remains. In 1788 he journeyed through the two Sicilies, and part of the Appennines, to collect volcanic products for the museum at Pavia. This celebrated natural philosopher, whose private character was in the highest degree sincere and benevolent, died of apoplexy, February 1798. The numerous writings of Spallanzani may be comprised under the following classes: experiments on animal reproductions, in which he pursued the steps of Reaumur and Bonnet; on infusory animalcules, in which, in opposition to Buffon and Needham, he establishes their claim to the rank of complete animals; microscopical experiments, relative to reviviscient animalcules; memoirs on mucus, or mould; on the phenomena attendant on the circulation of the blood; on digestion, and the manner in which it is effected; inquiries concerning generation; on the influence of confined and unchanged air on animals and vegetables; travels in the two Sicilies; observations on the transpiration of plants; and lastly, a curious and elaborate correspondence with the most distinguished naturalists of the age. That in so wide and curious a range of inquiry he was sometimes mistaken in his conclusions will not be deemed wonderful, but he will always be regarded as one of the most industrious inquirers into nature of his day. It must not be concealed, that much humane objection has been made to the deliberate cruelty of many of his experiments, for which, as in some later instances of a similar nature, it has been doubted if the knowledge attained would entirely atone.—*Left by Tourdes Halleri Bibl. Anat.*

SPANGENBERG (AUGUSTUS THEOPHILUS) a Moravian bishop, who was the son of a clergyman of Klettenburg in Germany, where he was born in 1704. He became a student of law at Jena, and in 1726 he obtained the degree of doctor of philosophy. The following year he formed an acquaintance with the famous count Zinzendorf, founder of the sect of Moravians or Herrnhutters, of whom he some time after became a follower. On his forming this connexion he was sent on a mission to the West Indies and North America, whither he went in 1735, and remained till 1739. Having established a colony of the united brethren, as they styled themselves, in Georgia, and visited Pennsylvania, he returned to Europe. He displayed his zeal and activity in the cause which he had embraced, both in Germany and in England; and in 1745 he was elected bishop of the Moravians, and sent again to America as inspector of all the establishments of the brethren among the English and savage nations. He returned from this mission in 1749, and in 1751 he crossed the Atlantic a third time. On the death of Zinzendorf in 1760, he was called to the supreme council of the Herrnhutters; and in 1764 he was appointed general inspector of the establishments in Upper Lusatia. He took up his residence at Zeitz, whence in 1769 he removed to Herrnhut, devoting his time especially to the seminaries for the education of foreign missionaries. In 1789 he accepted the office of president of the general directory, with which he settled two years after at Berthelsdorf near Herrnhut, where he died September 18, 1792. Among his works are "The Biography of count N. L. de Zinzendorf," 1772—75, 8 vols. 8vo; and "Idea Fidei Fratrum, or a Summary of the Christian Doctrine of the Evangelical Community of the Brethren," 1779, 8vo, translated into English by Latrobe.—*Biog. Univ.*

SPANHEIM (FREDERICK) professor of divinity at Leyden, was the son of a learned Protestant divine, who filled the post of ecclesiastical counsellor to the elector palatine, and was provost of the college of Amberg, where the subject of this article was born in 1600; and after benefiting a while by his father's instructions, he completed his education at the universities of Heidelberg and Geneva, in the latter of which he obtained the divinity professorship in 1627, having previously declined one offered him at Lausanne. This honourable situation he resigned in 1642 for a similar one at Leyden, where he distinguished himself both as a lecturer in theology and a preacher, acquiring by his learning and talents the especial favour of the prince of Orange and the celebrated Christina of Sweden, with whom he was in habits of correspondence. He was the author of "Exercitationes de Gratia Universalis," 8vo, 3 vols.; "Dubia Evangelica," 4to, 2 vols.; a "Life of Count Dhona;" "The Swiss Mercury," &c. He died in the spring of 1649, his great labours shortening his days. He was a cor-

respondent of, and highly esteemed by archbishop Usher.—*Niceron. Freheri Theatrum.*

SPANHEIM (EZEKIEL) eldest son of the preceding, was born in 1629, during his father's residence at Geneva. At a very early age he manifested the possession of considerable talent, which received ample cultivation under the care of his father, whom he accompanied to Leyden in 1642; and although at that period the animosity between Daniel Heinsius and Salmasius was at its height, he succeeded by his modesty and abilities in obtaining the friendship and esteem of both these eminent scholars. The death of his father destroying the tie which bound him to Leyden, he accepted a professorship of rhetoric which was offered him in his native city; but the reputation he had by this time acquired inducing the elector palatine to select him as superintendent of his son's studies, he entered the service of that prince, and soon after confirmed the favourable impression made on his patron's mind by an eloquent tract in support of his pretensions to the grand vicarship of the empire. The prudence which seems to have been one distinguishing characteristic of Spanheim, did not desert him at this time in the difficult situation in which he was placed between the elector and electress, with both of whom, though at open variance with each other, he continued a favourite. An opportunity at length occurred which enabled him to carry into effect a desire he had long formed of visiting Italy, the best school for the study of antiquities. His sovereign wishing to keep an eye upon the intrigues carrying on by the Catholic electors at the papal court, dispatched him as his accredited envoy to Rome, where he became personally acquainted with his father's patroness, queen Christina, who treated him with much distinction. In 1665 he returned to Heidelberg, and was afterwards employed by his master in a variety of diplomatic missions to the States-General, Breda, London, &c. all which he executed with great ability, and highly to the satisfaction of his employer. Circumstances induced him at length to quit the Palatinate and enter the service of the elector of Brandenburg, afterwards king of Prussia, who on his assumption of the regal title, raised him into the order of nobility by a baron's patent, while acting as his ambassador extraordinary at the court of Paris. In 1702 he proceeded in the same capacity once more to London, where he remained till the day of his decease, Oct. 28, 1710. It is difficult to conceive how in the midst of such active and various political employments he could find time to compose the several works which he produced, all of which are distinguished by their acuteness and erudition. The principal of these are a "Dissertation on the Excellence and Use of the Medals of the Ancients," folio, 2 vols.; "Letters and Essays on Medals;" "A Commentary on the Writings of Aristophanes and Callimachus." An edition of the writings of the emperor Julian, in Greek and Latin, and a French translation of the same work, illustrated by medals.

His remains lie buried in Westminster abbey.

—There was also a second FREDERICK SPANHEIM, son of the first, and younger brother of Ezekiel, born in 1631 at Geneva. He studied at Leyden under the celebrated Herboord and other learned men, and succeeded through the patronage of the elector to the divinity chair at Heidelberg in 1665, which he exchanged for that at Leyden in 1670. He was a voluminous writer, principally on theological subjects, and compiled an elaborate history of the Christian church. His death took place in 1701 from a paralytic attack, brought on by incessant and laborious application to study.—*Niceron. Biog. Brit.*

SPARRÉ (ERIC) a Swedish statesman, descended from an ancient and powerful family, and born in 1550. He was made a senator in 1582, and in 1587 he was sent by John III to Warsaw, where he succeeded in securing the crown of Poland for Sigismund, son of the Swedish monarch, whom he accompanied to his new kingdom. Having entered into the views of a party desirous of separating the interests of king John from those of his son, Sparre was arrested and accused with other senators before the states of Sweden; and he was deprived of all his dignities. On the death of John he declared against his successor, Charles duke of Sudermania, and wrote a tract "Pro Lege, Rege, et Grege," in which he openly attacked the duke's pretensions. He subsequently submitted to his authority, and was restored to his employments. Again opposing Charles he took refuge in Poland, and being delivered up to that prince, he was tried before the states assembled at Lindköping, condemned, and beheaded in 1600. His famous treatise "De Rege, &c." which has been printed, is extremely scarce. He composed many other works relative to the political affairs of his own time.—*Dict. Hist. Bing. Univ.*

SPARRMAN (ANDREW) a Swedish naturalist and traveller, born in the province of Upland about 1747. He studied medicine at Upsal, and by his attention to natural history attracted the notice of Linneus. In 1765 Sparman made a voyage to China with his cousin captain Ekeberg, who commanded a vessel belonging to the Swedish East India company. On his return he described in an academical thesis the previously unknown animals and vegetables which he had discovered; and wishing to continue his researches in distant countries, he accepted the office of tutor to the children of a Dutch inhabitant of the Cape of Good Hope, where he arrived in April 1772. Dr Forster and his son visiting the Cape with captain Cook, persuaded Sparman to accompany them, as an assistant in their researches; and accepting a proposal so agreeable to his taste, he made the voyage round the world, returning in 1775 to Africa, where he engaged in the practice of medicine and surgery. As soon as the state of his funds permitted, he undertook a journey into the interior of the country, and after penetrating to the distance of three hundred and

fifty leagues from the Cape, he returned to that settlement in April 1776, bringing a copious collection of African plants and animals. The same year he revisited his native country, and during his absence he had been raised to the degree of MD. He was chosen a member of the Academy of Sciences at Stockholm; and on the death of baron de Geer he was nominated conservator of the fine museum left to the Academy by that celebrated naturalist. He was subsequently made president of that institution, but he held the office only three months. In 1787 he engaged in an abortive attempt to explore the interior of Africa, and he returned home in 1788. His death took place at Stockholm July 20, 1820. He was the author of several works, among which is an Account of his Voyage to the Cape of Good Hope, and Travels in Africa, written in Swedish, and published in German at Berlin; and in an English dress in London, 1785, 2 vols. 4to.—*Biog. Univ.*

SPARROW (ANTHONY) bishop of Norwich, a native of Depden in Suffolk. He was educated at Queen's college, Cambridge, where he obtained a fellowship; but was rejected in 1643 by the parliamentary visitors, on account of his adherence to the royal cause. On the restoration of monarchy he was reinstated in this as well as in another piece of preferment, from which he had been ejected, the living of Hawkedon in his native county. This act of justice was followed up by a greater manifestation of gratitude than Charles was accustomed to display towards many who had suffered in his cause, and Dr Sparrow obtained through court influence the headship of his college, the archdeaconry of Sudbury, and a stall in Ely cathedral, till in 1667 he vacated the two last mentioned benefices, on being elevated to the see of Exeter; over this diocese however he had presided scarcely a twelvemonth when he was translated to the more lucrative one of Norwich. As a prelate he was distinguished for his learning, piety, and benevolence; as a writer he is known by his "Rationale of the Book of Common Prayer," 8vo, 1657, reprinted 1722; and his collection of "Articles, Injunctions, Canons, &c. of the Church of England," 4to. His death took place in 1685.—*Athen. Oxon.*

SPARTIANUS (ÆLIUS) a Latin historian of the time of Diocletian, to whom he dedicated the lives of Adrian, Ælius Verus, Didius Julianus, Severus, and Pescennius Niger, which, as well as his lives of Caracalla and Geta, have come down to our own times. He makes one of the *Historiæ Augustæ* Scriptores, but his historical merits are very inconsiderable. The life of Severus is by some attributed to Lampridius, while many critics have come to the conclusion that Spartianus and Lampridius (see his article) were the same persons, and that Spartianus was a third name of the latter.—*Vossii Hist. Lat. Moreri.*

SPECKBACHER (—) a Tyrolese chief, who took arms in 1809 to defend his country against foreign invasion, and acquired high reputation among his fellow-citizens, by his

astounding activity, courage, and intellectual superiority. He for a long time seconded the operations of Hofer; and he gained signal advantages over the Bavarians, and defeated some detached parties of the French, but at length, after a severe struggle, he was overwhelmed by superior forces. He distinguished himself no less by his moderation and humanity towards such of the enemy as fell into his hands, than by his courage and conduct. After the successive defeats suffered by Hofer, and the total dispersion of their followers, Speckbacher had the good fortune to escape the pursuit of the victors, and thus avoided the sad fate of his companion in arms. [See **HOFER (ANDREW.)**] On the evacuation of the Tyrol by the French troops, and the restoration of the country to Austria in 1813, he returned home, and resided many years among his fellow-citizens, by whom he was highly honoured and respected. Speckbacher died at Hall, in the Tyrol, in the beginning of 1820.—*Biog. Nouv. des Contemp.*

SPEED (JOHN) an industrious elucidator of the geography and history of Great Britain, was born at Farrington in Cheshire, about 1555. He was brought up to the business of a tailor, and became a freeman of the company of Merchant Tailors in London, in which situation he obtained the notice of sir Fulk Greville, who gave him an allowance to enable him to quit his mechanical employment, and devote himself to the study of English history and antiquities. His first publication was entitled "The Theatre of the Empire of Great Britain," presenting an exact geography of the kingdoms of England, Scotland, and Ireland, and the isles adjoining, London, 1606, folio. This was a set of maps of all the counties, with short descriptions, mostly copied from Camden's *Britannia*. His greatest work, which was the labour of fourteen years of his life, is his "History of Great Britain under the Conquests of the Romans, Saxons, Danes, and Normans, &c." folio, which was published in 1614. It is chiefly a compilation from Camden and previous writers, but he also received considerable assistance from sir Robert Cotton, sir Henry Spelman, and other antiquaries of his day, with whom he was well acquainted. Although rude in style, it much exceeded in matter and arrangement the preceding chronicles; and according to Tyrrel and bishop Nicolson, he was the first who, slighting Geoffrey of Monmouth and other legends, commenced at once with solid and rational matter. He was also author of "A Cloud of Witnesses, or the Genealogies of Scripture," prefixed to the new translation of the Bible in 1611. This useful and industrious compiler lived fifty-seven years with one wife, by whom he had twelve sons and six daughters. He died in 1629.—*Biog. Brit. Fuller's Worthies. Granger.*

SPELMAN (sir HENRY) a celebrated English antiquary and philologist, born at Congham in Norfolk, in 1562. He was taken from a grammar-school in the country at the age of fifteen, and sent to Trinity college, Cambridge,

where he remained two years and a half, and then returned to Congham to reside with his mother, who had lost her husband. The following year he went to London, and entered as a law student at Lincoln's Inn; but he seems to have paid but little attention to legal science at this period, and within three years he left the metropolis, and settled on his estate in the country. He married, and for some time led a retired and domestic life, only interrupted by desultory study, and the temporary assumption of a civil office, for in 1604 he was high sheriff for the county of Norfolk. At length the embarrassments partly arising from a numerous and increasing family aroused him to the exertion of his talents. He went to Ireland in 1607 as member of a board of commissioners for settling the titles to lands and manors in certain counties of that kingdom; and he was afterwards employed to investigate the subject of the exaction of fees by the civil and ecclesiastical courts. On this occasion he drew up his learned treatise "*De Sepulturâ*," in which he demonstrates the flagrant abuses which had occurred to his notice. His services were rewarded with a pecuniary gift, and the honour of knighthood. In 1612 he settled in London, devoting his leisure to the study of the juridical antiquities of his native country. Having purchased the lands which had belonged to two suppressed monasteries, and becoming involved in a law-suit, and meeting with other obstacles to the quiet enjoyment of the property, he began to entertain scruples of conscience relative to the alienation of church lands; and at length he wrote on the subject a work entitled "*De non temerandis Ecclesiis*," in which he maintains the inviolability of property devoted to religious purposes. On the revival of the Society of Antiquaries in 1614, sir H. Spelman became a member; and on that occasion he produced a "*Discourse concerning the Original of the four Law-terms of the Year*." In his researches into legal archæology he found it necessary to study the Saxon language, and this led to the composition of his great work, the *Archæological Glossary*. He printed a specimen in 1621, and in 1626 appeared the first part, entitled "*Archæologus in modum Glossarii ad Rem antiquam posteriorum*," folio. The sale of this valuable book was so unpromising, that the second part was not published till after the death of the author. Before he had completed the glossary, he engaged in preparing a "*History of English Councils*," of which the first part, to the Norman conquest, appeared in 1639; and two additional volumes were subsequently published, partly from the papers of Spelman, by sir W. Dugdale. In 1639 likewise appeared the last work of our author, entitled "*The History of Teures by Knights' Service in England*." His death took place in 1641, and his body was interred in Westminster abbey. Besides the works already noticed, he was the author of a "*History of the Civil Affairs of the Kingdom from the Conquest to the Grant of the Magna Charta*;" "*A Treatise concerning*

Tithes;" a "*History of Sacrilege*;" "*Aspiologia*;" &c. His English works were published collectively in a folio volume in 1727.—Sir JOHN SPELMAN, the eldest son of sir Henry, inherited his father's taste for archæological inquiries. He published the *Psalter* in the Saxon language, and was the author of a "*Life of Alfred the Great*," printed at Oxford, 1709, 8vo, and which had previously appeared in a Latin translation. He was master of Sutton's hospital; and was knighted by king Charles I. He died at Oxford in 1643.—EDWARD SPELMAN, who was a descendant of Sir H. Spelman, translated *Xenophon's Cyropædia*, and the *Roman History of Dionysius of Halicarnassus*; and also was the author of a treatise on the Greek accents. He died in 1767.—*Biog. Brit. Aikin's Gen. Biog.*

SPEENCE (JOSSEPH) an ingenious critic of the last century, who belonged to the clerical profession. He was born in 1698, and received his education at Winchester school and New college, Oxford, where he obtained a fellowship. About 1725 he attended as a travelling tutor to Edward Rudge, esq. of Wheatfield in Oxfordshire, in whose family he was a frequent inmate in the subsequent part of his life. In 1727 he laid the foundation of his literary reputation by his *Essay on Pope's Translation of the Odyssey*, which led to an intimate friendship between the poet and his critic. In 1728 he was elected professor of poetry at Oxford; and he afterwards travelled abroad with the earl of Lincoln. On his return he obtained the living of Great Horwood in Buckinghamshire; and in 1754 he was promoted to a prebendal stall in Durham cathedral. After the death of his friend Mr Rudge in 1763, he resided much with the widow of that gentleman, who usually spent the summer months at Weybridge in Surrey. On the morning of August 20, 1768, Mr Spence was found by a servant, who was sent to call him to breakfast, lying on his face in a shallow piece of water in the garden, into which it appeared that he had fallen by accident, and being unable to extricate himself, he was unfortunately drowned. His principal work is entitled "*Polymetis, or an Enquiry into the Agreement between the Works of the Roman Poets and the Remains of ancient Artists*," 1747, folio. He distinguished himself also by his patronage of Stephen Duck, the poetical thresher; Robert Hill, the Hebrew tailor; and Dr Thomas Blacklock. In 1819 appeared "*Observations, Anecdotes, and Characters of Books and Men, collected from the Conversation of Mr Pope, and of other eminent Persons of his Time*," from a MS. of Mr Spence, with his life, &c. by S. W. Singer, 8vo.—*Chalmers's Biog. Dict. Gent. Mag.*

SPENCER (JOHN) a learned and ingenious divine, was born in 1630 at the village of Boughton, Kent, received the rudiments of a classical education at the foundation school in Canterbury, whence he removed on a scholarship to Corpus Christi college, Cambridge, and succeeded in due course to the fellowship annexed. In 1687 he was elected to the head-

slip of his college, and obtained shortly after a prebend at Ely, with the archdeaconry of Sudbury. In 1677 he vacated his stall for the deanery, but still continued to reside occasionally in his college, where he died in the spring of 1695, and lies buried in the chapel. Dean Spencer was an acute biblical critic and a good Hebraist, as is evinced by his learned treatise "On the Laws, Ritual, and Customs of the Jews," folio, 2 vols. Cambridge, 1727. He was also the author of a Latin dissertation "On the Urim and Thummim," 1668; an "Essay on Miracles," and another "On Prophecies," with some occasional sermons.—WILLIAM SPENCER, another able divine, held a fellowship at Trinity college in the same university in 1658, in which year he published an edition of the works of Origen, with a Latin translation annexed.—*Biog. Brit.*

SPENER (PHILIP JAMES) a Lutheran divine of Frankfort on the Maine, but born in Alsatia in 1635. He signalized himself by his exertions to free divinity from scholastic subtleties, and about 1680 became founder of a new sect entitled pietists, which unfortunately in the sequel produced quite as much disorder by the substitution of fierce and intemperate zeal and enthusiasm. At length in many places severe laws were passed against the pietists, and Spener retired first to Dresden and afterwards to Berlin, where he held ecclesiastical offices of trust under the elector of Brandenburg. His principal religious work was entitled "Pious Desires;" but he also wrote some works on heraldry and genealogy in Latin. He died in 1705.—His son, JAMES CHARLES SPENER, wrote a "Historia Germanica universalis et pragmatica," 2 vols. 8vo; and "Notitia Germanicæ antiquæ," 1717, 4to, both works of authority. He died in 1730.—*Moreri. Nouv. Dict. Hist.*

SPENGLER (LAWRENCE) an ingenious artist, born at Schaffhausen in Switzerland, in 1720, and died at Copenhagen in 1808. He was originally a common turner, but by his skill he acquired great reputation, and was invited to Denmark, where he executed works in ivory of the highest merit. He also applied himself to the study of natural history, and published in the *Memoirs of the Academy of Copenhagen* a multitude of observations on that science. Spengler possessed the richest collection of shells known, and he printed many memoirs on the different species of shells. He likewise composed a useful work on the method of cleaning ivory when become discoloured, and the means of preserving it in its state of natural whiteness.—*Biog. Nouv. des Contemp.*

SPENSER (EDMUND) a justly celebrated English poet, descended from the ancient family of Spenser, was born in London near the Tower about 1553. It is not known where he received his early education, but he was admitted as a sizar of Pembroke-hall, Cambridge, May 20, 1569, where he graduated MA. in 1576. On leaving the university he took up his residence with some relations in the north of England, probably as

a tutor, where he unsuccessfully wooed a lady, whom he records in his "Shepherd's Calendar," under the name of Rosaline, which elegant poem, his first publication, appeared in 1576. The year preceding he had been advised by his friend Gabriel Harvey to remove to London, where he was introduced to sir Philip Sidney, to whom he dedicated the *Shepherd's Calendar*. The patronage of men of genius in Spenser's age was frequently exerted in procuring for them public employment; and it was probably by the interest of the Sidney family that in 1580 he accompanied lord Grey de Wilton, appointed lord-lieutenant of Ireland, as his secretary. He returned in 1582 with lord Grey, who in conjunction with the earl of Leicester and sir Philip Sidney, procured for him in 1586 a grant of 3028 acres in the county of Cork, out of the forfeited lands of the earl of Desmond; on which however, by the terms of the gift, he was obliged to become resident. He accordingly fixed his residence at Kilcolman in the county of Cork, where he was visited by sir Walter Raleigh, who became his patron in lieu of sir Philip Sidney, then deceased, and whom he celebrates under the title of "The Shepherd of the Ocean." He was then engaged in the composition of "The Faery Queen," of which he had written the first three books. With these he accompanied Raleigh the next year to England, where they were published with a dedication to queen Elizabeth, and an introductory letter to Raleigh, explaining the nature of the poem. The latter celebrated person also ensured him the favour of the queen, who rewarded his poetry and dedication with a pension of 50*l.* per annum; and he has been termed her laureate, although the title was not formally conferred on him. In 1591 he returned to Ireland, and the succeeding year his rising reputation induced his bookseller to collect and print his smaller pieces. He then passed an interval of two or three years in Ireland, where in 1594 he married, being then in his forty-first year. He had not long enjoyed his connubial happiness before it was disquieted by the disturbances excited by the earl of Tyrone, which were probably the cause of his revisiting England the following year. Here he printed some poems, and drew up his "View of the State of Ireland;" which, in consequence it is supposed of the severity of some of its suggestions, lay in MS. until printed in 1633 by sir James Ware, who bestows much applause on the information and judgment otherwise displayed in it. In 1596 he published a new edition of his "Faery Queen," with three additional books. Of the remaining six, which were to complete the original design, two imperfect cantos of "Mutabilitie" only have been recovered, which were introduced into the folio edition of 1609, as a part of the lost book, entitled "The Legend of Constancy." Much controversy has been maintained in respect to the presumed loss of the remainder of these six books on the poet's flight from Ireland; the most probable conclusion

from which investigation is, that they were never finished, but that some parts of them were lost on that melancholy occasion. In 1597 he returned to Ireland; and in September 1598 was recommended to be sheriff of Cork. The rebellion of Tyrone, however, took place in October, and with such fury as to compel Spenser and his family to quit Kilmolman in so much confusion that an infant child was left behind, whom the merciless cruelty of the insurgents burnt with the house. The unfortunate poet arrived in England with a heart broken by these misfortunes, and died the 16th of the following January, 1598-9, in the forty-sixth year of his age. It is asserted that he terminated his life in great distress; but it has been contended, that the poverty referred to by Camden and several of his poetical contemporaries, applies rather to his loss of property generally, than to absolute personal endurance. This inference seems the more probable, as he was interred in Westminster abbey at the expense of the earl of Essex, who would scarcely have allowed the man to starve whom he thus honoured. Several of his brother poets attended, and threw copies of verses into his grave; and a monument was afterwards erected over his remains by the celebrated Anne, countess of Dorset. Of his family but few particulars are known, except that two sons survived him, named Sylvanus and Peregruginine; and, that a son of the latter, recovered a part of the Irish estate in the reign of Charles II, which he subsequently forfeited by his adherence to James II. It also appears, that after the Revolution his cousin William, the son of Sylvanus, became a suitor for the forfeited property, which he obtained by the influence of Montagu, earl of Halifax. Of the personal character of Spenser there is no direct testimony, but the friendships which he formed are favourable to its respectability, which is also to be implied from the purity, devotion, and exalted morality of his writings. Neither, although he paid assiduous court to the great, was he guilty of the mean adulation so common in his time, except indeed to queen Elizabeth, by whom, both as a sovereign and a woman, it was levied as a kind of tax. As a poet, although his minor works contain many beauties, Spenser will be judged chiefly from the "Faery Queen," the predominant excellencies of which are imagery, feeling, and melody of versification. Its defects are those of Ariosto and the Italian school, including a still more absurd mixture of Christian and Pagan allusions. With all its defects, however, it furnishes admirable examples of the noblest graces of poetry—sublimity, pathos, unrivalled fertility of conception, and exquisite vividness of description. Its great length, and want of interest as a fable, added to the real and affected obsolescence of the language, may indeed deter readers in general from a complete perusal, but it will always be resorted to by the genuine lovers of poetry as a rich storehouse of invention. To this day, detached personifications of moral ideas, in the manner of Spenser, remain a

favourite exercise with our best poets, of which it is scarcely necessary to mention The Castle of Indolence of Thomson as a memorable example.—*Todd's Life of Spenser. Biog. Brit.*

SPERONI (SPERONE) an Italian poet and statesman, born at Padua about the commencement of the sixteenth century. In the earlier part of his life he studied at the university of Bologna, where he afterwards obtained a professorship in dialectics. At the age of sixty he went to Rome, and entered into the service of pope Pius the Fourth, who having employed him to conduct various negotiations with the courts of Paris and Madrid, and with the Venetian republic, rewarded his labours with the honour of knighthood; but his infirmities increasing with his years, he retired at length to pass the remainder of his days in his native city. As a writer he is distinguished for the purity and elegance of his style, especially in his letters and orations. His other works consist of "Cannacc," a tragedy; dialogues, essays, &c.; all of which have been collected and printed in five quarto volumes. His death took place at Padua in 1588.—*Tiraboschi.*

SPEUSIPPUS, an Athenian philosopher, the son of Eurymedon, by the sister of Plato. He succeeded his uncle in his school, over which he presided eight years, commencing at the death of that celebrated philosopher about B.C. 348. He closely adhered to the doctrines of his master, but his manners did no honour to them, being both avaricious and a lover of pleasure. He was the author of several philosophical treatises, which have perished, although Aristotle thought them worth purchasing at the price of three talents. Becoming paralytic in his limbs, he was borne to and from the academy on a vehicle, which produced a rude rebuke from Diogenes the cynic, at his abiding to live in such a condition. "I live," replied Speusippus, "not in my limbs, but my mind." At length, according to Laertius, overcome by age and maladies, he voluntarily resigned life, having first constituted Xenocrates his successor in the academy.—*Diog. Laert. Brucker.*

SPIELMANN (JAMES REINHOLD) an eminent chemist, born at Strasburg in Germany, in 1722. He studied medicine, and obtained the professorship of chemistry in the university of his native city. He travelled through several countries of Europe, with a view to the acquisition of knowledge, and returning to Strasburg engaged in practice as a physician, and held also for a time the professorships of medicine and poetry. The science of botany engaged much of his attention, and he procured the foundation of a botanical garden at Strasburg, and likewise published "Prodromus Floræ Argentinensis." Among his other works are, "Pharmacopœia generalis," 2 vols. 4to; "Institutiones Chemicæ," 8vo; and "Institutiones Matæ Medicæ," 8vo. He died in 1783.—*Biog. Univ.*

SPIGELIUS. The Latin name by which Adrian Vander Spiegel, an eminent Flemish medico-chirurgeon, is known in his writings.

He was a native of Brussels, born 1578, and received his education at Louvain and Padua, in which latter university his reputation rose to a great height, while filling the professor's chair in the science of anatomy. The Venetian government, out of respect to his talents, conferred on him the order of St Mark, and an honorary gold chain of considerable value. He is considered to have been the first who pointed out the smaller lobe of the human liver, which has since been called after him, and to have thrown many other interesting lights upon surgery. A short time previously to his death, Spigelius returned and settled in his native city, where his decease took place in 1625. Twenty years afterwards Vander Linden collected and published an edition of his professional writings, at Amsterdam, in two olio volumes.—*Eloy Dict. de Méd.*

SPILLER (JOHN) a young and classical sculptor of very great promise, was born December 1763, in London, and after a liberal education became a pupil of Bacon. He distinguished himself at the Royal Academy, and on his talents becoming known was chosen to execute a statue of Charles the Second for the centre of the Royal Exchange. While engaged in this work, the pulmonary disease, to which he had a constitutional tendency, became much aggravated; and soon after his very able and much-admired production was placed on its pedestal he expired, in May 1794, at the premature age of thirty. It is of this accomplished and promising artist that the author of the *Curiosities of Literature* gave the following interesting notice, as illustrative of the enthusiasm of genius: "The young and classical sculptor who raised the statue of Charles the Second, placed in the centre of the Royal Exchange, was, in the midst of his work, advised by his medical friends to desist from working in marble, for the energy of his labour, with the strong excitement of his feelings, already had made fatal inroads on his constitution. But he was willing, he said, to die at the foot of his statue. The statue was raised, and the young sculptor, with the shining eyes and hectic blush of consumption, beheld it there, returned home, and shortly was no more." He married in 1792. His beautiful and accomplished wife died a few months after him, of a similar disease. They left behind them, at the tender age of a few months, an only daughter, who has since become, in every respect, an ornament to her sex.—*Orig. Com.*

SPINA (ALEXANDER de) a friar of Pisa in Italy, who lived in the beginning of the fourteenth century, and who is regarded as the inventor of optical glasses, or spectacles. The mode of constructing these useful instruments is said to have been first discovered by some other person, who not being willing to communicate his invention to others, Spina found it out by his own application, and made it generally known. He was not only an ingenious mechanic, but likewise a good singer, an elegant scribe, and a skilful illuminator of MSS. Such is the account given of this artist in the

Chronicle of Domenico da Peccioli, a Dominican friar, who was a native of Pisa, and who farther states that Fra Alessandro della Spina died in the year 1312.—*New Mem. of Lit.* vol. iv.

SPINELLO (ARETINO) an Italian painter of portrait and history, was born at Arezzo in 1328. He gave a singular grace to his figures, especially to his Madonnas, and was particularly successful in his portraits of the popes Innocent IV and Gregory IX. His fresco paintings on the life of the Virgin, in the chapel of St Maria Maggiore at Florence, are also much valued. He died in 1420, at the age of ninety-two.—PARIS SPINELLO, his son, was also an able painter, whose style much resembled that of his father. To him, and not to the latter, must belong the anecdote which is related in some books, that having painted a hideous figure of the devil, in a picture representing the fallen angels, he dreamed that Satan appeared, and angrily asked his authority for representing him as so frightful. Being of a morbid gloomy temperament, this vision so alarmed him, that he became melancholy, and died only two years after his father, in 1422.—*Pilkington.*

SPINOLA (AMBROSE, marquis) one of the most celebrated generals of his time, was born in Spain in 1563, of a noble family originally of Genoa. He commanded a Spanish army in Flanders, and signalized himself by the reduction of Ostend, after every other commander had failed. For this exploit he was made general of all the Spanish troops in the Low Countries, where he was opposed by prince Maurice of Nassau. During a cessation of operations, Spinola visited Paris, where he was interrogated by Henry IV on the plans of the ensuing campaign. He readily communicated his projects, on which Henry instructed prince Maurice the direct contrary, but finding Spinola as good as his word, he exclaimed, "Others deceive by telling falsehoods, but this man by telling the truth." In the next year he obtained several successes, until impeded by prince Maurice, between whom and Spinola the whole art of war was exhausted to no decisive result, and a truce was agreed upon. In the war produced by the disputed succession to the duchy of Cleves, he took Aix-la-Chapelle, Wesel, and Breda, during the siege of which last strong place prince Maurice died. On the capitulation of Breda he resigned the command, and was subsequently employed in Italy, where in 1630 he took Casal; but being unable, to subdue the citadel of that town, in consequence of the imprudent orders sent to him from Madrid, chagrin co-operated with despair to put an end to his life the same year, at a time when he stood at the pinnacle of military reputation.—*Moreri. Nouv. Dict. Hist.*

SPINOZA (BARUCH, or BENEDICT de) a celebrated modern sceptic, was born in 1632 at Amsterdam, where his father, a Portuguese Jew, was occupied in commerce. Of an inquiring turn of mind, he early engaged in the study of theology and philosophy, by which

he was led to doubt the authority of the Jewish religion. Not being satisfied with the answers of the rabbins, he made no secret of his state of mind, but did not altogether desert the synagogue until stabbed by a Jewish zealot as he was coming from a play. His open defection produced a sentence of excommunication against him, upon which he frequented the churches of the Armenians and Mennonites. He then applied himself to the study of the Cartesian philosophy, and either with a view to more privacy, or as some say in consequence of an accusation of impiety, withdrew from Amsterdam to Rhensburg, and subsequently to the neighbourhood of the Hague, where he led a retired life, and for an independent subsistence employed himself in grinding glasses for microscopes and telescopes. While thus situated he was resorted to by several of the followers of Descartes, at whose request he published in 1664 a treatise entitled "The Principles of the Cartesian Philosophy demonstrated geometrically," adding an appendix, in which he broached metaphysical doctrines of quite an imposing tendency. In 1670 he published his most celebrated work, entitled "Tractatus Theologico-politicus," which made him extensively known, and produced numerous attacks from divines of every persuasion. Previous to this publication he had received an invitation from the elector palatine to occupy a chair in the university of Heidelberg, accompanied with the offer of full liberty to philosophize, provided he would not exercise it to the disturbance of the prevailing religion; but Spinoza, whose only wish was literary retirement, declined the proposal. This extraordinary individual, whose private character was unexceptionable, died of a decline in 1677, at the early age of forty-five, in full persuasion of the truth of his system; and lest reports might be circulated to the contrary, he charged his hostess not to allow any minister to approach his death-bed. His system, which was more fully developed in his posthumous works, had some resemblance to that maintained by several of the Greek and Oriental philosophers, who held the notion of a soul of the world, and a universal whole. The sum of his doctrine is thus estimated by Brucker. The essence of substance is to exist. There is but one substance, with its modifications, thought and extension. This substance is infinitely diversified, having within itself the necessary causes of the changes through which it passes. No substance can be supposed to create or produce another; therefore, besides the substance of the universe there can be no other, and this substance Spinoza calls God, and assigns to it divine attributes. His doctrines therefore differ from that of the philosophers who he d God to be the universal whole, since, according to them, the visible and intellectual worlds are produced by emanation from the eternal fount of divinity, and are the effect of intelligence or design; whereas, according to Spinoza, all things are immanent, and necessary modifications of one eternal substance. These

notions, which seem to have originated in certain refinements on the abstract notions of substance, essence, and existence, to the neglect of the arguments for a Deity derived from the productions of nature, and the marks of design, met with many patrons in the United Provinces, but at the same time they were also encountered by refutations from all descriptions of thinkers; even the scepticism of Bayle allows him to speak with acrimony and contempt of the opinions of Spinoza. Toland, in his *Pantheisticon*, approaches the nearest to his doctrines. In 1802 a new edition of his works was published by professor Paulus of Jena.—*Nicron. Brucker. Bayle.*

SPIZELIUS (THEOPHILUS) a learned German ecclesiastic, born about the year 1639. He took his degrees in theology in the university of Leipsic, when he distinguished himself by his proficiency in Oriental learning. The fruits of his labours are an elaborate "Commentary on the State of Literature among the Chinese;" three treatises, somewhat fancifully entitled "Felix Litteratus," "Infelix Litteratus," and "Litteratus Felicissimus;" and biographical sketches of fifty of the most eminent scholars and divines of his own times, portrayed in a work entitled "Templum Honoris reseratum." He died in 1691, at Augsburg, where he had for some time officiated as pastor to a numerous congregation.—*Nicron. Moreri.*

SPOHN (FREDERIC AUGUSTUS WILLIAM) an eminent German writer on philology and classical literature. He was born at Dortmund in 1792, and he studied at the university of Wittenberg. His house and part of his library having been destroyed at the bombardment of that place in 1813, he removed to Leipsic, where in 1817 he was nominated extraordinary professor of philosophy, and in 1819 professor of ancient literature. He died January 16, 1824, in consequence of disease brought on by his excessive application to study. Though his life was short, his literary labours were numerous and important. He published in 1815 a dissertation "De Agro Trojano in Carminibus Homeri descripto," 8vo; and "Commentarius de extrema Parte Odysseæ indè à Rhapsod. v. v. 297, Ævo recentiori orta quam Homérica;" and in the last year of his life he printed three pieces under the title of "Lectiones Theocriteæ." He left a large quantity of manuscripts, containing the materials for several works which he had projected, and some part of them has been published since his decease.—*Biog. Univ.*

SPON (JAMES) a physician and man of letters, was the son of the learned Charles Spon, also an eminent physician, and the friend and correspondent of Guy Patin. He was born at Lyons, and studied physic at Montpellier; after which he travelled into Italy, with the celebrated antiquary Vaillant. In 1675 and 1676 he accompanied Mr. afterwards sir George Wheeler, in a tour through Italy to Dalmatia, Greece, and Lesser Asia. The observations made in this journey were published by him in a work entitled "Voyages

d'Italie, de Dalmatie, de Grèce, et du Levant," 3 vols. 12mo, 1677. These chiefly relate to antiquities, but are also interspersed with remarks relative to medicine and natural history. Dr Spon returned to France, where he remained until 1685, when, being a Protestant, he was forced by the revocation of the edict of Nantz to quit France, and intended to retire to Zurich, but he fell sick on the way, and died at Vevay in the same year. He was the author of several curious works, the principal of which are "Recherches des Antiquités de Lyons," 1674, 8vo; "Ignorantur atque obscurum Deorum Aræ," 1677, 8vo; "Histoire de la Ville et de l'Etat de Genève," 1680, 2 vols. 12mo; "Lettre sur l'Antiquité de la Religion," 12mo; "Recherches curieuses d'Antiquité," 1683; "Miscellanea eruditæ Antiquitatis," 1679 and 1683, folio. He also wrote some medical treatises, which exhibit him as a strenuous advocate for the use of Peruvian bark.—*Moreri. Eloy Dict. Hist. de Med.*

SPONDE (HENRY de) or SPONDANUS, a French prelate and ecclesiastical historian, was born in 1568 at Mauleon-de-Soule, a town between Navarre and Bearn. His father was secretary to Joan, queen of Navarre, and being a Calvinist, educated his children in the same persuasion. He studied at Ortiz, where the reformed had a college; and became so distinguished for his classical and legal attainments, that he was made master of requests by Henry IV, then prince of Bearn. A perusal of the controversial works of Du Perron and Bellarmine, and the example of his elder brother John, induced him in 1595 to abjure Protestantism. In 1600 he accompanied cardinal de Sourdis to Rome, where he was induced to take orders in 1606, and after a visit to Paris he returned and accepted office under pope Paul V; but in 1626 was recalled to France, and made bishop of Pamiers, in which station he distinguished himself by his zeal and benevolence. He died at Toulouse in 1643, aged seventy-five. Sponde's principal work is an abridgement and continuation of the Ecclesiastical Annals of Baronius, in 3 vols. folio, which work, although in esteem with those of his own communion, contains many errors, and exhibits strong marks of a party spirit. He was also author of a work entitled "De Cœmeteriis Sacris," stating the grounds of his conversion; and of "Annales Sacri, à Mundi Creatione ad ejusdem Re-emptionem," with other works.—*JOHN DE SPONDE*, elder brother of the preceding, was the author of "Commentaries on Homer;" "An Account of the Motives which induced him to join the Catholic Church;" and an "Answer to Beza's Treatise on the Marks of the Church." He also published an edition of Aristotle's Logic, with notes. He died prematurely, in 1595.—*Moreri. Bayle. Nouv. Dict. Hist.*

SPOTSWOOD or SPOTISWOOD (JOHN) an eminent Scottish prelate, was descended from an ancient family, one of whom, his grandfather, was killed in the battle of Flod-

den-field. He was born in 1565, and was educated at the university of Glasgow, where he received a degree in his sixteenth year. In 1601 he attended the duke of Richmond as chaplain in his embassy to France, and in 1603, upon the accession of James VI to the throne of England, accompanied the king into that kingdom, and the same year was advanced to the archbishopric of Glasgow, and made one of the privy council of Scotland. He very actively seconded the wishes of James to restore the church of Scotland to episcopacy, and is supposed to have made no less than fifty journeys to London on that account. In 1615 he was translated to the see of St Andrews, and thus became primate of Scotland, in which capacity he presided in the assembly of Aberdeen and elsewhere, to restore the ancient discipline, and produce a uniformity with the church of England. He was held in no less esteem by Charles I, than by his father; and in 1635 was made chancellor of Scotland, which post he had not held four years when the popular confusions obliged him to retire into England, and he had scarcely reached London when age, grief, and sickness consigned him to the grave, in 1639. In 1655 his "History of the Church of Scotland" was published in London, in folio; it bears a general character of fidelity and impartiality, although Dr Jamieson wrote critical notes to point out several errors in his two first books. Spotswood, in regard to whose political conduct and opinions historians have given different accounts, also wrote a tract in defence of the ecclesiastical establishment of Scotland, entitled "Refutatio Libelli de Regimine Ecclesiæ Scotticæ."—*Life prefixed to History. Granger. Laing's Hist. of Scotland.*

SPRAT (THOMAS) bishop of Rochester, an accomplished divine, was born in 1636 at Tallaton in Devonshire, where his father was a clergyman. He received his academical education at Wadham college, Oxford, of which he was elected a fellow in 1657. Upon the death of Oliver Cromwell, in the following year he composed an "Ode to the happy Memory of the late Lord Protector," which poem, abounding with the most high-flown adulation, was of the irregular class then termed Pindaric. Another, "On the Plague of Athens," followed in the same style, which was that of Cowley. On the Restoration he atoned for former subserviency by an equal excess in the contrary direction, and taking orders, was recommended by Cowley to Villiers duke of Buckingham, who made him his chaplain, and whom he assisted in the composition of the "Rehearsal." Being introduced by that nobleman to the king, the latter took much pleasure in his conversation, and nominated him one of his chaplains. His intimacy with bishop Wilkins caused him to be chosen one of the fellows of the new Royal Society; of which, in 1667, he wrote the history, and obtained great praise for the elegance and style of sentiment displayed in the composition, which, however, was by no means a model for that order of narrative. In 1665 he

published some observations in castigation of Sorbiere's Voyage to England, the freedom of whose strictures had given much offence; and in 1668 edited the Latin poems of Cowley, to which he added a life of that author in the same language, afterwards amplified by himself in English, and annexed to the same author's English works. His reputation and talents for conversation and society now rapidly advanced him in the career of preferment, and he became successively prebendary of Westminster, rector of St Margaret's, canon of Windsor, and finally, in 1686, bishop of Rochester. This last elevation was probably his reward for drawing up an account of the Rye-house plot, which was first published in 1685. The manner in which he accomplished this task, undertaken as he asserts at the king's command, rendered it expedient for him after the Revolution to print an apology. He was nominated by James II one of the commissioners for ecclesiastical affairs, in the execution of which office he exhibited compliances, in expectation, it is said, of the archbishopric of York, which produced general censure, that was only partially alleviated by his withdrawing from the commission in 1688. When James retired, Sprat spoke in his favour in the great conference on the vacancy of the crown, but submitted to the new government, and was left unmolested. In 1692 he was involved with Sancroft, Marlborough, and others in a pretended conspiracy. He was enabled to detect the infamous practices of the informers, and to clear himself from the charge; but he was so affected by the danger, that he commemorated his deliverance by an annual thanksgiving. He passed the rest of his life in tranquillity, and expired at Bromley in 1713, in the seventy-ninth year of his age. The writings of this prelate were all highly applauded in his own time; but notwithstanding the favourable mention of Dr Johnson, they are little esteemed at present. His few poems make part of the mass of minor English poetry, but can only be regarded as inferior specimens of a bad manner.—*Biog. Brit. Johnson's Poets. Cibber's Lines.*

SPURINNA (VESPICIUS) a Roman, who obtained celebrity as a warrior and a man of learning, born about A.D. 23. Being the friend of the emperor Otho, he proceeded from Rome to his assistance at the head of some troops, and with some difficulty joined him previous to the battle with the army of Vitellius, to whom Spurrinna submitted after the death of Otho. Under Vespasian and his successors he filled various offices, governed provinces, and commanded the army in Germany. He there subjugated the Bructeri, a nation of ferocious barbarians, and performed other exploits, for which the senate decreed him a triumphal statue. Being advanced in years, he retired into the country; where he died, but at what period is not exactly known. Pliny describes his mode of life in his retreat, and eulogizes his character and his talents, comparing him with Marcus Antonius. He

says that Spurrinna composed with equal success, both in Greek and in Latin, and that he published some admirable lyric poems. These appear to be entirely lost, though Barthius discovered in an ancient MS. fragments of odes, bearing the name of Vespucius, which he attributed to Spurrinna; but they are probably the work of some other writer. Sir Thomas Bernard has commemorated the virtues of this illustrious Roman, in his Ciceronian dialogue, entitled "Spurrinna, or the Comforts of Old Age."—*Biog. Univ.*—SPURINNA, or SPURINA, was also the name of a mathematician in the time of Julius Cæsar, who warned that dictator to beware of the ides of March. As Cæsar was going to the senate-house on that day he met the astrologer, and tauntingly said to him, "Well, Spurrinna, the ides of March are come." "Yes," replied he, "but they are not yet past." A few minutes after Cæsar was assassinated. Such is the story told by Suetonius and Valerius Maximus, of this mathematician, who is said to have assisted in Cæsar's reformation of the calendar.—*Lempriere's Bibl. Class.*

SQUIRE (SAMUEL) a learned English prelate, was the son of an apothecary at Westminster, where he was born in 1714. He was educated at St John's college, Cambridge, of which he became a fellow, and after obtaining various preferments, through the patronage of the duke of Newcastle, he was in 1760 presented to the deanery of Bristol, and the following year advanced to the see of St David's. He died in 1766, leaving an exemplary character both in a professional and a private capacity. He was the author of various works in different classes. As a divine, besides a number of single sermons, he published "The Ancient History of the Hebrews vindicated;" "Indifference for Religion inexcusable;" and "The Principles of Religion made easy to young Persons." In classical literature he composed "Two Essays," consisting of a defence of the ancient Greek Chronology, and an Inquiry into the origin of the Greek Language; and an edition of "Plutarch de Iside et Osiride," Greek and English, with commentaries. His political works are, an "Enquiry into the Nature of the English Constitution;" "An Essay on the Balance of Civil Power in England;" "Remarks upon Mr. Carte's Specimen of a Genuine History of England." He also assisted his chaplain, Dr Dodd, in his "Letter to Lord Halifax on the Peace." He was a fellow of the Royal and Antiquarian Societies, and left a Saxon Grammar in MS. compiled by himself.—*Nichols's Lit. Anec.*

STAAL (Madame de) an ingenious French writer, first known as mademoiselle de Haunai, was the daughter of a painter of Paris, where she was born towards the close of the seventeenth century. Her father, being obliged to quit the kingdom, left her in great indigence, but some female recommendation procured her a good education at a priory in Rouen. Her patroness dying, she was compelled to hire herself as bed-chamber woman to the duchess of Maine. Unfit, however, for the duties of

such an office, she was about to quit it, when a singular event rescued her from obscurity. A beautiful girl of Paris, named Tetard, was induced by her mother to counterfeit being possessed; and all Paris, including the court, flocking to witness this wonder, mademoiselle de Launai wrote a very witty letter on the occasion to M. de Fontenelle, which was universally admired. The duchess of Maine having discovered the writer in the person of her waiting-woman, employed her from that time in all her entertainments given at Sceaux, and treated her as a confidante. Thus encouraged she wrote verses for some of the pieces acted at Sceaux, drew up the plans of others, and was consulted in all. She was involved in the disgrace incurred by the duchess, her patroness, during the regency, and was kept two years a prisoner in the Bastille. On her release, the duchess found her a husband in M. de Staal, lieutenant in the Swiss guard, having previously refused the learned but then too-aged Dacier. She died in 1750; and some "Memoirs of her Life," written by herself, were soon after published in 3 vols. 12mo. They contain nothing of much importance, but are composed in a pure and elegant style, and are very entertaining. A fourth volume has since appeared, consisting of two comedies acted at Sceaux, entitled "L'Engouement," and "La Mode." This lady, who, even by her own description, did not abound in personal attractions, was nevertheless engaged in various gallantries or amours more or less sentimental. Being asked how she would treat such matters in her life, "I will paint myself en baste," was the reply. Her Memoirs have been poorly translated into English.—*Nouv. Dict. Hist.*

STACKHOUSE (JOHN) an ingenious naturalist, was the youngest son of the rev. William Stackhouse, rector of St Erme in Cornwall, and nephew of the subject of the next article. He was for some time fellow of Exeter college, Oxford, but resigned it in 1763, on succeeding to an estate in Cornwall. He resided for the latter part of his life at Bath, where he died November 22, 1819, aged seventy-nine. Mr Stackhouse was a fellow of the Linnæan and several foreign societies, and his studies in natural history, and particularly botany, were very extensive. He directed much attention to marine plants, the result of which was published by him in 1801, in a folio volume, entitled "*Nereis Britannica*." This work contains coloured figures of all the British Fuci, as far as discovered, with descriptions in Latin and English. Of this work a second edition, in a reduced size, appeared in 1816. He also gave an edition of "Theophrastus on Plants," with notes, in 2 vols. 8vo; and lastly, a Catalogue of the Plants of Theophrastus, arranged according to the system of Linnæus, Oxford, 1811.—*Gent. Mag.*

STACKHOUSE (THOMAS) a learned and laborious divine, was born in 1680, but in what part of the kingdom, or where educated, is not known. He was some time

minister of the English church at Amsterdam, and afterwards successively curate at Richmond, Ealing, and Finchley, near London, in all which places he was much respected. In 1733 he was presented to the vicarage of Beenham in Berkshire, where he died, October 11, 1752, aged seventy-two. The principal works of this laborious divine, who appears to have had to encounter with narrow circumstances during the whole of his life, are, "Miseries and Hardships of the Inferior Clergy;" "Memoirs of Bishop Atterbury;" "A Complete Body of Divinity;" "State of the Controversy between Woolston and his Opponents;" "New History of the Bible," (his most important work, which has been often reprinted, and the best edition of which is that of 1817); "Defence of the Christian Religion;" "Exposition of the Creed;" various sermons and abridgments; and lastly, a poem entitled "Vana Doctrinæ Emolumenta," in which he deploras his unfortunate condition, in the language of disappointment and despair.—There was also another rev. THOMAS STACKHOUSE, who published a "Greek Grammar;" "A General View of Ancient History, Chronology, and Geography;" and an "Atlas of Ancient and Modern Geography."—*Nichols's Lit. Anec.*

STADIUS (JOHN) an eminent mathematician and astronomer of the sixteenth century, who was a native of Brabant. He was first professor at Louvain, and afterwards succeeded the famous Ramus in the university of Paris. De Thou says that Stadius, after acquiring great celebrity by his astronomical computations, injured his character by turning astrologer to gratify the curiosity of the French courtiers, and other inquisitive persons of both sexes. He was intimately acquainted with Joseph Scaliger, who, in his letters, testifies his high esteem for the virtues and the learning of Stadius. He died October 31, 1579. Among his works are, "*Tabulæ Berganæ sive Ephemerides Astrologicæ secundum Antwerpiæ Longitudinem*, ab An. 1554 ad 1606;" "*Tabulæ æquabilis et apparentis Motus Cælestium Corporum*;" and "*Provinciæ Brazilæ Historia*."—*Teisier Eloges des H. S.*

STAEL HOLSTEIN (ANNE LOUISE GERMAINE NECKER, baroness de) the most celebrated female writer of the present age, was the daughter of Necker the French financier, and was born at Paris, April 22, 1766. She soon displayed signs of a precocious genius, to the development of which her education, under the care of her parents (who were both highly-talented persons), greatly contributed. At the age of fifteen she was capable of discussing with her father the most serious and important subjects; and at the same time she manifested a strong taste for the lighter kinds of literature. Theatrical compositions particularly interested her; and before she was twenty she wrote a comedy in three acts, entitled "*Sophie, ou les Sentiments secrets*;" and the year following she produced a tragedy on the story of Lady Jane Gray. In 1786 she was married to the baron de Stael Hol-

stein, the Swedish ambassador, through the patronage of the queen of France; and she was consequently introduced at court. Her "Lettres sur J. J. Rousseau," soon after published, greatly attracted the public notice. But the state of national affairs at this period rendered all other subjects subordinate to politics, at least in France; and madame de Staël, who was warmly attached to the cause of liberty, took a lively interest in the success of the measures then adopted by the patriotic party. In the month of August, 1788, she had the pleasure of announcing to her father his appointment to the ministry; but her triumph was not of long duration, for M. Necker was dismissed from office, and he left France, accompanied by his daughter. He had scarcely reached Basil, when he was recalled, only however to experience the inconstancy of popular favour, as he was soon obliged again to resign and quit the country, to which he never returned. Mad. de Staël followed him in his retreat to Coppet; but she revisited France in 1792, when she endeavoured to save some of the victims of revolutionary fury. Her own life was endangered by the attempt, and she only escaped through the care of Manuel, attorney of the commune of Paris, who himself afterwards perished by the guillotine. She returned to Switzerland, and subsequently went to England, where she heard of the execution of Louis XVI. She immediately rejoined her father, and she published an elegant discourse, entitled "Défense de la Reine." After the fall of Robespierre she produced two anonymous pamphlets, "Réflexions sur la Paix, adressées à M. Pitt et aux Français;" and "Réflexions sur la Paix intérieure." Under the government of the Directory she again returned to France, where, through her influence with Barras, she was the means of procuring the elevation of her friend Talleyrand to the post of minister of foreign affairs. In December 1797, she for the first time saw Buonaparte, then at Paris, preparing for his expedition to Egypt; and the admiration with which she had regarded the conqueror of Italy, was succeeded by a sentiment bordering on aversion, which appears to have become mutual. She continued in France after the return of Buonaparte from Egypt, and his assumption of supreme authority; and her influence was frequently employed in opposition to his views and sentiments. This conduct having exposed her to the displeasure of Napoleon and his partisans, she at length left France, and went to reside with her father. During her journey to Coppet she lost her husband, who had long been in an ill state of health. She remained about twelve months in her retreat, and composed at that time the romance of "Delphine," which was not published till 1803. She returned to Paris; but this work, and a tract entitled "Les Dernières Vues de Politique et de Finance," published by M. Necker, had given so much offence to Napoleon, that he banished madame de Staël from his territories at the close of the year 1803. She was consequently obliged to leave her fa-

ther, whom she never afterwards saw. After visiting Germany and Italy, she was permitted to return to Coppet in 1805; and subsequently she resided at Auxerre and at Rouen. In 1807 appeared her "Corinne," a novel, the sentiments of which revived the anger of the French ruler, and she was exiled to Coppet. In this retirement she was visited by a young French officer, M. de Rocca, whom she afterwards married, and by whom she had a son; but the union was kept a secret till after her death. In the beginning of 1812 she took a journey into Austria; thence she went to Russia, and afterwards visited Sweden and England, where she was received with enthusiasm. She was in London at the period of the taking of Paris; and on the restoration of Louis XVIII. she returned to France. On the escape of Buonaparte from Elba, she retired to Coppet; and after the battle of Waterloo, and the decree of the 5th of September 1815, she made her appearance at Paris, with her daughter, who was married to the duke de Broglie. She was favourably received by Louis XVIII, who was pleased with her conversation; and she obtained an order on the royal treasury for the payment of two millions, which had been deposited there by M. Necker. In 1816 she went to Italy, and resided some time at Pisa. Returning to France, she became seriously indisposed, and her death took place July 14, 1817. Her works, including, besides those already mentioned, "Considerations sur les principaux Evénemens de la Revolution Française," "De la Littérature considérée dans ses Rapports avec les Institutions Sociales," and "L'Allemagne," or Observations on Germany, &c. have been published since her death by her son the baron de Staël Holstein, in 18 vols. 8vo.—*Biog. Nouv. des Contemp. Bing. Univ.*

STAHELIN, or STÆHELIN, (JOHN HENRY) a Swiss physician, who was born at Basil in 1668; and died July 19, 1721. He devoted himself to the study of botany, and more especially to the anatomy of plants, on which subject he published "Theses Anatomico-Botanicæ," 1711, 4to; and he also furnished some materials for the works of Scheuchzer, relative to Swiss botany.—His son, BENEDICT STAHELIN, engaged in similar pursuits, and became the disciple of the famous Vaillant at Paris. Returning home, he employed his time in studying the vegetable productions of his native country, and particularly the mosses and fungi. He discovered many new species; and connecting himself with Haller, then a young man, they prosecuted their inquiries in concert, with a view to the completion of a Swiss Flora. Besides his contributions to the works of Haller, he wrote "Observationes Anatomico-Botanicæ," 1721, 4to; "Tentamen Medicum," 1724, 4to; "Observationes Anatomicæ et Botanicæ," 1731; and papers in the "Memoirs of the Parisian Academy of Sciences," of which he was a corresponding member. He became professor of natural philosophy at Basil, in

1727, and died in that city in 1750, aged fifty-five.—JOHN RODOLPH STÄHELIN, probably of the same family with the preceding, was born at Basil in 1724, and obtained the chair of anatomy and botany in the university there in 1753, that of medicine in 1776, and died about the end of the last century. He published in 1751 "*Specimen Observationum Anatomicarum et Botanicarum*;" and in 1753 "*Specimen Observationum Medicarum*;" besides observations in the "*Memoirs of the Helvetic Society*." Linnæus, in commemoration of the family of Stähelin, has given the appellation of Stähelina to a genus of plants of the composite order.—*Biog. Univ.*

STAHL (GEORGE ERNEST) a German physician and chemist, born at Anspach, October 21, 1660. He studied at Jena under Wedelius; and in 1687, he became physician to the duke of Saxe Weimar. In 1691 he was chosen second professor of medicine at Halle; and he rendered his name famous over all Germany by his academical prelections and his publications. He was in 1700 elected a member of the *Academia Curiosorum Naturæ*. His fame at last procured him the appointment of physician to the king of Prussia, in 1716; and going to Berlin, he died there in 1734. Stahl was undoubtedly one of the most illustrious medical philosophers of his age; his name marks the commencement of a new æra in chemistry. He was the author of the doctrine which explains the principal chemical phenomena by the agency of phlogiston; and though his system was in a great measure overturned by the discoveries of Priestley, Lavoisier, and others, it nevertheless displays powerfully the genius of the inventor. This theory maintained its ground for more than half a century, and was received and supported by some of the most eminent men which Europe had produced. He was also the proposer of a theory of medicine, founded on the principle of the dependance of the state of the body on the mind; in consequence of which he affirmed that every action of the muscles is a voluntary effort of the mind, whether attended with consciousness or not. Though Stahl and his followers carried this theory too far, there can be no doubt of its general foundation in truth and nature; and the advice which he gives to physicians to attend to the state of mind of the patient is highly deserving of attention. His principal works are "*Experimenta et Observationes Chymicæ et Physicæ*," 8vo; "*Disputationes Medicæ*," 2 vols. 4to; "*Theoria Medica vera*," 4to; "*Opusculum Chymico-physico-Medicum*," 4to; "*Negotium Otiosum*," 4to, in which he defends his system relative to the influence of the mind against Leibnitz; "*Fundamenta Chymicæ dogmaticæ et experimentalis*," 3 vols. 4to; "*De Venæ Portæ portâ Malorum Hypochondriaco-spleneticosuffocativo-hysterico-hæmorrhoidarum*," 4to.—*Encyclop. Britan. Biog. Univ.*

STÄHREMBERG (GUIDO BALDI, count de) an Austrian general, born November 11, 1657. His father was an officer of the court

of Austria, and he was destined for the church; but he preferred the army, and commenced his career at the siege of Vienna by the Turks, in 1680. He obtained a regiment for his bravery at the attack of Buda in 1686, when he was badly wounded. In 1692 he was nominated lieutenant-field-marshal, and sent to defend the fortress of Ehrenbreitstein. In 1700 he was with Prince Eugene in Italy, at the battles of Carpi, of Chiari, and of Luzzari; and the following year he first had the chief command, when he distinguished himself by his defence of the territory of Savoy against the French; and in 1704 he was made field-marshal. He afterwards served with distinction in Hungary, and in the war about the succession to the crown of Spain. He returned to Vienna in 1713, and in 1716 he was appointed president of the aulic council of war, which post he held till his death in 1737.—*Biog. Univ.*

STANHOPE (GEORGE) dean of Canterbury, was the son of the incumbent of Hertishorn, a parish in the county of Derby, where he was born in 1660. He received the rudiments of a classical education at the grammar schools of Uppingham and Eton, from which latter seminary he removed on the foundation to King's college, Cambridge. Having graduated as M.A. in 1685, he took holy orders, and obtained as his first piece of preferment the living of Tewing, Herts. The earl of Dartmouth, to whose son he had acted in the capacity of private teacher, soon after gave him the vicarage of Lewisham in Kent, in which parish the family seat is situated; and through the same interest he was afterwards appointed one of the royal chaplains. In 1701 he preached the Boyle lecture; and two years after exchanged his living of Tewing for that of Deptford, rendered more desirable from its adjoining his other preferment. On the elevation of bishop Hooper to the episcopal bench, Dr Stanhope was nominated to succeed him in the vacant deanery, which he enjoyed till his death, in 1728. He was a divine of singular learning and integrity, to which he united great simplicity of manners. As an author, he is known by his Boyle Lectures "*on the Truth and Excellence of Christianity*," 4to; a set of miscellaneous Sermons; and a "*Paraphrase of the Gospels and Epistles*," 8vo, 4 vols. He also published translations of the *Meditations of Marcus Aurelius Antoninus*, and those of St Augustine, of Andrews's Greek Devotions, Rochefoucault's *Maxims*, Charron on Wisdom, the "*De Imitatione Christi*" of Thomas à Kempis, 8vo; Epictetus, with the *Commentary of Simplicius*, 8vo; and other works of various writers on devotional subjects. After his decease, his remains were brought from Bath and interred in his parish church at Lewisham.—*Todd's Deans of Canterbury.*

STANHOPE (JAMES, first earl) was the son of Alexander Stanhope, esq. descended from an ancient family of the name in the county of Nottingham. He was born in Herefordshire in 1673; and after being educated

with great care, he accompanied his father to the court of Spain, when the latter was sent early in William's reign as an envoy extraordinary. He continued in Spain some years, and then made the tour of France and Italy; after which he served as a volunteer in Flanders, and being much noticed by king William, received the commission of colonel at the age of twenty-two. In the first parliament of Anne he was chosen member for Cockermonth, and he soon after gained great reputation in Spain, where he served as brigadier-general under the earl of Peterborough, at the capture of Barcelona. In 1708 he was raised to the rank of major-general and commander-in-chief in Spain; and the same year he reduced the island of Minorca. In a subsequent campaign in 1711 he was made prisoner, but was exchanged the following year, when he returned to England, and acted vigorously in opposition. On the accession of George I he was received with particular marks of favour, and appointed one of the secretaries of state. In 1716 he attended the king to Hanover, where he was principally concerned in the formation of the alliance concluded with France and the States General, which removed the Pretender beyond the Alps. The next year he was appointed first lord of the treasury and chancellor of the exchequer, and was soon after created a peer by the title of baron Stanhope of Elvaston. In 1718 he was succeeded in the treasury by lord Sunderland, whose office of secretary of state he assumed in return, and was created earl Stanhope. This sensible and able peer terminated his active and faithful services to the newly acceded house of Brunswick on the 4th of February 1721, when a sudden impulse of resentment at an abusive speech from the profligate duke of Wharton produced a degree of emotion which broke a blood-vessel, and he died the following day, to the great grief of the king. As a statesman the earl of Stanhope, who inherited a confirmed attachment to the principles established at the Revolution, evinced great abilities, integrity, and disinterestedness; and he was also esteemed a very skilful soldier. He is said to have been learned, and a curious inquirer into ancient history; and some queries addressed by him to the abbé Vertot, respecting the constitution of the Roman senate, with the answers of the abbé, were published in 1721.—*Collins's Peerage*. *Coxe's Life of Walpole*.

STANHOPE (CHARLES, the third earl) grandson of the above, was born August 3, 1753. He received the early part of his education at Eton, and finished it at Geneva, where his genius led him to pay a close attention to the mathematics; and such was his progress, that he obtained a prize from the society of Stockholm for a memoir on the pendulum. In 1774 he stood candidate for Westminster without success; but was introduced by the earl of Shelburne into parliament as member for the borough of Wycombe, which he represented until 1786, when the death of his father called him to the house of Peers.

BIOG. DICT.—VOL. III.

He was one of the many English politicians who regarded with pleasure the dawn of the French Revolution; but what was much more extraordinary in a peer by birth, he openly avowed republican sentiments, and went so far as to lay by the external ornaments of the peerage. He was also a frequent speaker against the war; and although singular in many of his opinions, a strong vein of sense and humour often qualified his statements of peculiar views. As a man of science he ranked high, both as an inventor and patron; and among other things was the author of a method for securing buildings from fire, an arithmetical machine, a new printing press, a monochord for tuning musical instruments, and a vessel to sail against wind and tide. He was twice married, first to lady Hester Pitt, daughter of the first earl of Chatham, by whom he had three daughters; and secondly to Miss Grenville, by whom he had three sons. This scientific, ingenious, but eccentric nobleman published several philosophical and a few political tracts. He died 14th December 1816.—*Ann. Biog.*

STANHOPE (PHILIP DORMER) earl of Chesterfield, a nobleman celebrated as a wit, statesman, and man of letters, was the eldest son of Philip, third earl of Chesterfield, by lady Elizabeth Savile, daughter of the marquis of Halifax. He was born in London September 22, 1694, and received a private education until his eighteenth year, when he was entered of Trinity-hall, Cambridge, where he applied to his studies with great assiduity. On quitting the university he made the tour of Europe, and on his return to England, having early declared in favour of the principles of freedom which placed the house of Hanover on the throne, he was appointed one of the gentlemen of the bedchamber to the prince of Wales. He was also elected member for the borough of St Germans, and commenced his parliamentary career in a speech in support of the impeachment of the persons concerned in the treaty of Utrecht. The following year he spoke in favour of the septennial bill; and soon after, on the difference between the king and the prince of Wales, he became one of the opposition which was headed by the latter. In 1723 he was made captain of the yeomen of the guards, from which post he was dismissed in 1725; and the following year the death of his father removed him to the house of Lords. This theatre was better suited than the Commons to his style of eloquence, which was less characterised by force and compass than by elegance, perspicuity, and a vein of delicate irony. On the accession of George II in 1727, he was nominated ambassador to the Hague, a post which he filled with great ability. On his return in 1730 he was appointed lord steward of the household, and created a knight of the garter; after which he again repaired to Holland, and was instrumental in forming an important treaty between the courts of London and Vienna and the States General. In 1732 he obtained his recall, and the next year married Melusina de

Schulemberg, countess of Walsingham, natural daughter of George I. by the duchess of Kendal. He had previously deserted the minister, sir Robert Walpole, whose excise bill he vehemently opposed, and thereby lost his office of steward of the household, and was so ill received at court that he desisted from attending it. He continued in opposition until the coalition of parties in 1744, during which long interval he distinguished himself by many able speeches, none of which were more generally admired than that against the bill for granting the lord chamberlain the power of licensing dramatic performances. In 1741 he was obliged to visit the continent on the score of health, when he confirmed his intimacy with Voltaire, whom he had previously known in England; while the facility and grace of his address rendered him a general favourite. In 1745 he was again sent ambassador to the Hague, and succeeded in acquiring the concurrence of the States General in the war against France. On his return the rebellion had broken out, and he was selected for the then critical post of lord-lieutenant of Ireland. This office he filled with a degree of dignity and ability which has seldom been equalled. He acquired the good will of the Catholics by discouraging officious and rancorous informations, without neglecting the precautions rendered necessary by the ominous state of affairs. He returned to England in 1746, and having entirely recovered the favour of the king, he received the seals of secretary of state, which office he resigned in 1748, in consequence of being overruled in his wish for peace by the rest of the Cabinet. He never again took part in any administration, but lived as a private nobleman attached to arts and to letters, and was deemed inferior to none of his rank throughout Europe for brilliancy of wit, elegance of manners, and the polish of cultivated society. The senatorial exertions of lord Chesterfield after he quitted office were few, and of little political importance; his health being delicate, and deafness being added to his other complaint. He, however, distinguished himself on more than one occasion, and especially by a speech in support of the bill for the reform of the English calendar, concerning which some curious observations will be found in his letters to his son. He was also anxious to be thought, and in some respects merited the character of a patron of literature; but he managed his advances to Dr. Johnson so ill on the subject of his Dictionary, that on the appearance of his two papers in "The World," written expressly in favour of it, he received the celebrated letter of dignified severity, which although he affected to despise, it was impossible for him not to feel. In 1768 he lost his natural son Mr. Stanhope, who from his infancy, in consequence of his want of legitimate issue, had been the principal object of his solicitude. This heavy affliction was aggravated by the intelligence that the deceased had been long secretly married, and had left a widow and two children, the latter of whom he immediately took under his protection. His

infirmities from this time increased fast upon him, and he gradually was reduced to a state in which, as he himself observed, he rather endured than enjoyed life, until the scene was tranquilly closed on the 24th March 1773, in his seventy-ninth year. The character of this nobleman, although far from faultless, and founded infinitely too much on the love of applause and of popular esteem, exhibited many excellencies, which enabled him to perform important services to his country, as a consummate diplomatist and sagacious, sound, and able statesman. In his literary capacity, to much wit, ease, and information, he united good sense and good taste in a high degree, and his style is of very pure and unaffected English. No sooner was he defunct than the widow of Mr Stanhope, who had sold to him the originals, and preserved copies, published his celebrated "Letters to his Son," in 2 vols. 4to. 1774. Of these it is proper to say, that they were intended for an individual of a particular disposition, and never meant for publication. That portions of them upon a sound moral principle are altogether indefensible, is not to be denied; and it is also necessary to recollect that they were written to an embryo diplomatist, to reconcile ourselves to much of the casuistry regarding the simulation and dissimulation which is so ingeniously inculcated. On the other hand it may be confidently asserted, that no work in the English language contains more valuable lessons for the early cultivation of the understanding in the way of acquirement, and for the formation of the temper and manners. Besides this continually reprinted collection, his miscellaneous works appeared in 1774, in 2 vols. 4to, which contain his various papers in the literary and political journals, speeches, state papers, letters, French and English, &c. with a memoir of his life by the editor, Dr Maty. To these a third 4to volume was published in 1778, the authority of which being doubtful, attracted little comparative attention.—*Life by Maty. Lord Orford's Works. Boswell's Life of Johnson.*

STANISLAUS I, king of Poland, was born at Leopold, October 20, 1677. His family name was Leczinski, and his father held the important post of grand treasurer to the crown. He very early displayed indications of an amiable and estimable character, and at the age of twenty-two was entrusted with an embassy to the Ottoman court. In 1704, being then palatine of Posnania, and general of Great Poland, he was deputed by the assembly of the States at Warsaw to wait upon Charles XII of Sweden, who had invaded the kingdom with a view to dethroning Augustus of Saxony. In a conference with the Swedish monarch he so rapidly acquired his esteem, that Charles immediately resolved to raise him to the throne of Poland, which he effected at an election held in the presence of the Swedish general on the 27th July 1704. Stanislaus being then in his twenty-seventh year. He was however soon after driven from Warsaw by his rival Augustus; but another change brought him back to that capital, where he

was crowned, with his wife, in October 1705, and the next year Augustus was compelled solemnly to abdicate. The fatal defeat of his patron Charles XII at Pultowa, in 1709, again obliged him to retreat into Sweden, where he endeavoured to join Charles XII at Bender, in disguise, but being detected, he was held captive in that town until 1714. Being then suffered to depart, he repaired to Deux Pouts, where he was joined by his family, and remained until the death of Charles XII in 1719, when the court of France afforded him a retreat at Weissembourg, in Alsace. He remained in obscurity until 1725, when his daughter, the princess Mary, was unexpectedly selected as a wife by Louis XV, king of France. On the death of Augustus in 1733, an attempt was made by the French court to replace Stanislaus on the throne of Poland; but although he had a party who supported him and proclaimed him king, his competitor, the electoral prince of Saxony being aided by the emperors of Germany and Russia, he was obliged to retire. He endured this, like every other reverse of fortune, with great resignation, and at the peace of 1736 formally abdicated his claim to the kingdom of Poland, on condition of retaining the title of king, and being put in possession for life of the duchies of Lorraine and Bar. Thenceforward he lived as the sovereign of a small country, which he rendered happy by the exercise of virtues which acquired him the appellation of Stanislaus the Beneficent. He not only relieved his people from excessive imposts, but by strict economy was enabled to found many useful charitable establishments, and to patronize the arts and sciences. He was himself attached to literature, and wrote various treatises on philosophy, morals, and politics, which were published under the title of "*Œuvres du Philosophe Bienfaisant*," 4 vols. 8vo, 1765. He died much lamented, February 23, 1766, in consequence of the injury which he sustained from his nightgown being accidentally set on fire.—*Nouv. Dict. Hist. Hist. par l'Abbé Prayrat.*

STANISLAUS II, king of Poland, whose proper name was Stanislaus Augustus Poniatowski, a prince more distinguished on account of the great events in which he was interested than for his talents or personal character. He was the son of count Poniatowski, a Lithuanian nobleman, by the princess Czartorinska. After receiving an education suitable to his quality, he went to Paris, where he was imprisoned for debt, and liberated through the generosity of the famous Madame Geoffrin. He then visited England, whence he proceeded to Russia with the English ambassador, sir C. Hanbury Williams. At Petersburg he acquired the particular favour of Catharine II, then grand duchess. This attachment was not forgotten when she was raised to the throne, and in 1764 her influence placed her ancient lover on that of Poland, vacant by the death of Augustus III. Had the new sovereign possessed any energy of character, he would at once have taken a decided part, and either have uniformly endeavoured to maintain the

ascendancy of Russia over Poland, and supported the interests of his imperial patroness, or have acted in the spirit of honourable and manly patriotism, and consulted the welfare of his own subjects, and the prosperity of his kingdom. But although possessed of respectable talents for a private station, he wanted such as were requisite to govern a state like Poland, even setting aside the degrading nature of the influence which made him its sovereign. He began his reign with moderate councils, but was soon involved in troubles in consequence of the disputes between the Protestants, who were called Dissidents, and the Catholics. The former demanded the execution of the treaty of Oliva, by virtue of which they were entitled to certain immunities; and this demand, being seconded by the Russian, English, and Prussian ministers, it was granted, to the extreme disgust of the Catholics. The bigots on this event enrolled themselves into a confederacy for the alleged defence of the faith, and a body of them, headed by a leader, termed Palawski, formed the daring resolution of carrying off the king, which they successfully effected on the night of the 3d of November, 1771, when he was surrounded in his coach by forty military conspirators, who, in spite of the resistance of his attendants, made themselves masters of his person, and forced him out of the city. After leaving Warsaw, however, the party missed the road which they intended to take, and a part of the company being separated from the rest, Stanislaus induced Kosinski, who headed the few who remained with him, to relent, and allow him to write to Warsaw. A guard being immediately dispatched from the capital, he returned amidst the acclamations of the people, but only to remain powerless amidst the distractions of the country, and to endure the ignominy of witnessing the first infamous partition of his country in 1773, by Russia, Prussia, and Austria, and of being suffered to exercise a mere limited and precarious authority over the remainder. Poland thus became little more than a province of Russia; and the orders of the ambassador of Catharine, resident at Warsaw, were of more force than those of the king and the Polish government. This state of things continued till 1789, when the disputes between Russia and Prussia tempted the Poles to make an effort for the recovery of their freedom. On the 3d of May, 1791, a revolution took place in Poland, and a new constitution was proclaimed, which provided for the independence of the kingdom. But the tyrannical interference of her more immediate neighbours, and the apathy of other European powers, prevented the liberation of Poland from being completed; instead of which her chains were more firmly rivetted by a second partition of her territories in 1793. The Poles made, however, another effort to shake off the foreign yoke in the following year, under the guidance of the famous Kosciusko; but this contest, like the preceding, terminated unfavourably; and the wretched

people, after suffering all the horrors of war and conquest from the Russians, led by the ruthless Suwarrow, were completely subjugated, and their name was erased from the list of European nations. The imbecile monarch, after having been alternately the puppet of various parties, was obliged by the command of Catharine to sign a formal act of abdication, November 25, 1795. He lived in obscurity till the accession of the emperor Paul, when he was invited to Petersburg, where he died April 2, 1798.—*Dict. Hist. des H. M. du 18me S. Biog. Univ.*

STANLEY (JOHN) a singular instance of musical genius contending against the disadvantage of a total loss of sight, which the subject of this article experienced when only two years old. He was born about the year 1713, in London, and the melancholy deprivation alluded to was caused by his falling on a marble hearth with a basin in his hand. In teaching him music, his own amusement was the first object with his parents, but making a considerable proficiency in the science, and discovering a strong taste for it, he was afterwards placed under Dr Greene, with whom his progress was so rapid, that at the age of eleven he obtained the situation of organist to the church of Allhallows, Bread-street, and two years afterwards was elected to that of St Andrew's, Holborn, in preference to a numerous body of candidates. At sixteen he took the degree of Mus. Bac. at Oxford, and in 1734 became organist at the Temple church, which is considered to contain the finest instrument in the kingdom. On the death of Handel, Mr Stanley, in conjunction with Smith, and afterwards Linley, carried on the oratorios till within two years of his death in 1786.—*Biog. Dict. of Mus.*

STANLEY (THOMAS) an English writer of considerable erudition, was the son of sir Thomas Stanley, knight, of Laytonstone, Essex, where, or at Cumberlow-green, in Hertfordshire, another residence of the family, he was born in 1625. He was educated at home, under the care of William Fairfax, son to the celebrated translator of Tasso, after which he was admitted a gentleman commoner of Pembroke-hall, Cambridge, where in 1641 he took the degree of M.A. After travelling upon the continent he returned to England during the civil wars, and took up his residence in the Middle Temple. He there pursued his studies with much assiduity, and in 1649 published a volume of original poems, chiefly amatory, with a number of translations from the ancient and modern languages. In 1655 appeared the first volume, in folio, of the work by which he is principally known, entitled "The History of Philosophy, containing the Lives, Opinions, Actions, and Discourses of the Philosophers of every Sect," of which three more volumes were published successively in 1656, 1660, and 1662. All these were reprinted collectively in 1687 and 1700, in one volume folio, and in 1743, 4to. Its reputation abroad was commensurate, a Latin edition being printed at Leipsic in 1711,

another translation of the part relative to the Oriental philosophy having been previously published by Le Clerc in 1690. It is rather however a work of industry and compilation than of criticism, and the style is deemed harsh and obscure. His other works are an edition of "Æschylus," 1663—4. He also left behind farther monuments of his erudition, in MSS. consisting of commentaries on Æschylus, in 8 vols. folio; "Adversaria," or remarks on passages in various ancient authors; "Prelections on the Characters of Theophrastus;" and "A critical Essay (in Latin) on the First-fruits and Tenth of the (Hebrew) Spoil." The poems and translations of Stanley were republished by sir E. Brydges in 1814 and 1815, with a biographical memoir, from which this account is chiefly taken. He died in 1678, leaving a son of the same name, who translated Ælian's "Various Histories."—*Life by Sir E. Brydges. Biog. Brit.*

STANYHURST (RICHARD) a Catholic divines and historical writer, born at Dublin about 1546. He studied at University college, Oxford, and afterwards at Lincoln's Inn. He then returned to his native country, and married. He was originally a Protestant, but he forsook the church in which he had been educated, and became a Catholic. Going to the continent he entered into holy orders after the death of his wife, and died himself at Brussels in 1618. Stanyhurst published several works, historical and theological, of little value. Among the former is a treatise "De Rebus in Hibernia gestis;" and he was also the author of a translation of the first four books of Virgil's Æneis into very ludicrous hexameter verse.—*Wood's Athen. Oxon.*

STAPEL (JOHN BODÆUS de) a Dutch physician, born at Amsterdam about the beginning of the seventeenth century. He studied at Leyden, and devoted his time to botany and the Greek language. The fruit of his labours was an edition of the botanical works of Theophrastus, which he had prepared for the press at the time of his death, in the flower of his age, in 1636. His researches appeared in "Theophrasti Eresii de Historia Plantarum Libri decem, Græce et Latine," Amst. 1644, folio, edited by his father, Dr Engelbert Stapel. He had commenced a commentary on the work of Theophrastus "De Causis Plantarum," but his MSS. were too imperfect for publication. Linnæus has consecrated to the memory of this young botanist a genus of plants called Stapelia.—*Biog. Univ.*

STAPPER (JOHN FREDERIC) one of the most celebrated theologians of the reformed church, born at Brugg in Switzerland, in 1708. He studied at Berne and Alarburg, and afterwards went to Holland. Returning into his native country, he applied his talents to the defence of Christianity; and he enriched Protestant theological literature with some valuable works. These are "Institutiones Theologiae Polemicæ," Zurich, 1743—47, 5 vols. 8vo; "The Foundations of the true Religion," 1746—53, 12 vols.; and "Chris-

tian Morality," 1756—66, 6 vols. 8vo. He was pastor of the parish of Diesbach, in the canton of Berne, an office which he filled with distinguished zeal and ability. His death took place in 1775.—STAPPER (JOHN) brother of the preceding, was also a Protestant divine, and was professor of theology in the university of Berne. He died in 1801, aged eighty-two. He was the author of "*Theologia analytica*," 1763, 4to; and he published eleven volumes of sermons, to which another was added after his death.—*Biog. Univ.*

STAPLETON, or STAPYLTON (sir ROBERT) a soldier and poet of the seventeenth century, descended of a respectable Catholic family, settled at Carleton, in Yorkshire. He was sent to the continent by his friends, for education, and was brought up in the Scotch college at Douay, notwithstanding which, on his return to England, he abjured the Romish church, and entered into the service of the court. Charles I gave him the appointment of one of the gentlemen of the bedchamber to the prince of Wales, whose fortunes he followed; and on the breaking out of the civil wars, distinguished himself by his gallant behaviour at the battle of Edgehill in 1642. For his good service on this occasion, he received the honour of knighthood at the king's hand, and afterwards received an honorary degree of LL.D. from the university of Oxford. On the restoration of monarchy, he accompanied Charles II to London, and remained about the court till his decease in 1669. As a poet he is not without merit, which is more especially exhibited in his translations of Juvenal and Mæneus. Four plays of which he was the author are less known; they are entitled "*The Slighted Maid*," "*The Step-mother*," "*Hero and Leander*," and "*The Royal Charm*." He also published a translation of Strada's History of the War in Flanders—*Cibber's Lives*.

STARCK (JOHN AUGUSTUS von) a German divine and theological writer, who was preacher to the court of Hesse Darmstadt. He was born at Schwerin in 1741, and being brought up a Lutheran, he applied himself with success to the study of theology and the Oriental languages. In 1761 he became a member of the Teutonic academy of Göttingen; and the following year he was invited to fill the chair of Eastern literature and antiquities at St Petersburg. Having conceived a disgust for the doctrines of Luther, from the perusal of the writings of that reformer, Bossuet's "*Histoire des Variations*" completed his dissatisfaction with the faith in which he had been educated. The result was a journey to Paris, where he made his abjuration of Protestantism, February 8, 1766. Being disappointed of obtaining, as he probably expected, some lucrative establishment among the Catholics, he yielded to the solicitations of his friends and relatives in Germany, and returning thither, resumed the exercise of his former religion. His abjuration was privately made, and in consequence of his subsequent conduct it remained a secret. In 1770 he be-

came professor of divinity and court preacher at Königsberg, which offices he resigned in 1777 for the chair of philosophy at Mittau, and in 1781 he was appointed first preacher at the court of Darmstadt, where he was highly esteemed by the Landgrave of Hesse, who in 1807 conferred on him the grand cross of the order of Louis pour le mérite; and in 1811 made him a baron. He died in March, 1816. His works are numerous. Among the most important are "*The History of the first Age of the Christian Church*," 1779—80, 3 vols. 8vo; "*The Triumph of Philosophy in the eighteenth Century*," 1803, 2 vols; "*The Banquet of Theodulus*," translated into French by the abbé de Kentsinger, and published at Paris under the title of "*Entretiens philosophiques sur la Réunion des différentes Communions Chrétienues*," 8vo. He also wrote on freemasonry.—*Biog. Univ.*

STARK (WILLIAM) an ingenious physician and physiological experimentalist, descended from a Scottish family, but born at Manchester in 1740. He studied under Adam Smith and Dr Black at Glasgow, and completed his education at Edinburgh, London, and Leyden, where he graduated as MD. in 1768 or 1769. He then returned to London, and commenced a series of interesting but eccentric researches on diet. He made himself the subject of a multitude of culinary experiments, the object of which seems to have been precisely contrary to that of the famous Dr Kitchener. The strange and impalatable combinations of food on which he successively subsisted for some months, manifestly injured his health, which suffered also from chagrin and disappointment in his expectations of success in his profession. Thus a martyr to science, after much suffering, he died, February 23, 1770. The works of Dr Stark, containing an account of his experiments, were published by Dr Carmichael Smyth, 1788, 4to.—*Encyclop. Brit.*

STATIUS (PUBLIUS PAPINIUS) a Roman epic poet, born at Naples in the reign of the emperor Domitian. He was educated by his father, who was a rhetorician. His principal productions are two epic poems, the "*Thebais*," in twelve books; and the "*Achilleis*," in two books, which last is unfinished. These works are both dedicated to Domitian, whom the adulatory bard ranks among the gods. The style of Statius is bombastic and affected, often exhibiting the art of the declaimer rather than that of the poet; but he probably studied the taste of his contemporaries, as he attracted general admiration in his own time, and even some modern critics have considered him as inferior only to Virgil. He wrote some shorter poems, called "*Sylvæ*," which have been distributed into four books, and some of these compositions are eminently beautiful. Statius is supposed to have been destitute of the gifts of fortune, as he is said to have supported himself by writing for the stage; none however of his dramatic compositions are extant. He died about the hundredth year of the Christian era. Among the

best editions of the works of Statius are those of Barthius, Leips. 1664, 2 vols. 4to; and the Variorum, Lugd. Bat. 1671, 8vo; of the Thebais separately that of Warrington, 1778, 2 vols. 12mo, and of the Sylva Notis Marklandi, Lond. 1728, 4to.—**STATIUS (CÆCILIUS)** was a comic poet of the age of Ennius, who was a native of Gaul, and originally a slave. His language was inelegant, but he is said to have possessed much dramatic talent.—*Moreri*.

STAUNTON, bart. (sir GEORGE LEONARD) a modern traveller and diplomatist, who was a native of the county of Galway in Ireland. He was destined for the medical profession, with a view to which he studied at the university of Montpellier, and took the degree of MD. About the year 1762 he established himself in practice in the island of Grenada in the West Indies, where he obtained the patronage of the governor, lord Macartney, who made him his secretary; and he likewise held the office of attorney-general of Grenada, till the taking of that island by the French. His lordship being appointed governor of Madras, took Mr Staunton with him to the East Indies, where he was employed in the arrest of general Stuart, who had opposed the authority of the governor. He also induced the French admiral Suffren to suspend hostilities before Goudelour, previously to the official announcement of the peace in 1714; and he negotiated a treaty with Tippoo Saib. Returning to England, the East India Company repaid his services with a pension of 500*l.* a-year, the king created him a baronet, and the university of Oxford bestowed on him the diploma of LL.D. When lord Macartney went as ambassador to China, sir George accompanied him as secretary of legation, with the provisional title of envoy extraordinary and minister plenipotentiary. Of that mission and of the empire and people of China he published an interesting account in 1797, 2 vols. 4to, which was translated into French and German. He died in London, in January 1801.—*Gent. Mag. Biog. Univ.*

STAVELEY (THOMAS) an English lawyer of the seventeenth century, eminent for his acquaintance with the antiquities of his native country. He was born of a respectable family at Cussington in Leicestershire, and having gone through a regular course of academical education at Peterhouse, Cambridge, became a member of the society of the Inner Temple, by which he was in 1654 regularly called to the bar. The local influence of his family having procured him in 1662 the situation of steward of the records of Leicester, an appointment previously filled by a relation, he removed to that city, and employed his leisure hours in a manner most congenial to his favourite study of antiquities, by compiling a history of Leicestershire, an undertaking to which the access afforded him by his post to rare and interesting documents materially contributed. He was also the author of a "History of English Churches," 8vo. 1712; and of a singular volume exposing the avarice of the

Romish church, entitled "The Romish Horse-leech," 8vo, 1674. A total depression of spirits, the result of laborious application, clouded the latter part of his life, which terminated in 1683.—*Nichols's Hist. of Leicestershire*.

STAVEREN (Augustus van) a Dutch critic of the last century. He was a native of Leyden, where he became rector of the philological school. In 1734 he published a variorum edition of Cornelius Nepos, Lugd. Bat. 8vo; the same author with a more condensed commentary, 1755, 12mo; and a third edition, augmented and improved from his MSS. appeared after his death, "curante Carolo Antonio Wetstenio," 1773, 8vo. He died in 1772, aged sixty-eight.—*Saxii Onom. Lit.*

STAY (Benedict) a modern Latin poet, born at Ragusa in 1714. He was educated at a college of the jesuits, and gave early proof of his talents for poetical composition. He attempted didactic versification in the style of Lucretius; and in 1732 appeared his "Essay on Man," in which he has expounded with skill and elegance the philosophy of Descartes. He went to Rome, and was made professor of rhetoric and history in the college of Wisdom in that city. His reputation induced the pope to appoint him Latin secretary at the Vatican; and in 1769 Clement XIV placed him at the head of the office of briefs for princes, one of the most important posts at the court of Rome. He was successively made a canon of St Mary Major, domestic prelate, consultator of the judex, and dotary of the penitentiary. Pius VI intended to have raised him to the purple; but this design was prevented by the political troubles in which his holiness was involved in the latter part of his reign. Stay lived in retirement during that disastrous period; and on the accession of Pius VII he begged to be excused from engaging again in public affairs. He was however employed to prepare the bull for the reorganization of the papal government. His death took place February 25, 1801. His works are "Philosophiæ [Cartesianæ] versibus traditæ, libri vi.;" "Philosophiæ recentioris [Newtonianæ] verss. trad. lib. x." with notes, &c. by father Boscovich, 3 vols. 8vo; and Latin discourses before the sacred college.—*Fabroni Vit. Italor. Biog. Univ.*

STEDMAN (JOHN GABRIEL) a military officer, was born in Scotland in 1745. Little is known of his birth or education; but it appears that he obtained a commission in the Dutch service, and was employed in an expedition against the revolted negroes of Surinam. Of this enterprise he has published an entertaining account in two vols. quarto, in which much curious and useful information is blended with some romance and eccentricity in the way of personal adventure. On his retirement from the Dutch service he resided at Tiverton in Devonshire. A "History of the American War," has been improperly attributed to him. He died in 1797.—*Gent. Mag.*

STEELE (sir RICHARD) the first of the modern class of essayists for a long time pe-

culiar to this country, was born at Dublin in 1671. His family was of English extraction, and respectable, his father being counsellor and secretary to James, the first duke of Ormond. He was educated at the Charterhouse, whence he removed to Merton college, Oxford. He left the university without taking a degree, and, a thing not unusual at that time with needy young men of good connections, he for some time rode as a private trooper in the dragoon guards. His frank and generous temper soon however gained him friends, and he obtained an ensigncy in the foot guards. Being led into many irregularities, he drew up and published a little treatise as a testimony against himself, entitled "The Christian Hero," the seriousness of which work excited much ridicule among his companions, his conduct, as might be expected, falling far short of his theory. For this reason, as he himself observed, to enliven his character, he wrote his first comedy, entitled "The Funeral, or Grief à-la-mode," which was acted in 1702, with considerable success. About this time he appears to have been recommended to the notice of king William, who was only prevented by death from providing for him. He however obtained a company in a regiment of fusileers, by the interest of lord Cutts, to whom he was secretary, and through the recommendation of Addison, he was appointed, in the beginning of the reign of Anne, to the post of writer of the London Gazette. His comedy of "The Tender Husband" successfully appeared in 1703, and his "Lying Lover" with less success in 1704. In 1709 the happy idea occurred to him of that series of periodical papers so celebrated under the title of "The Tatler." Although comparatively crude in its plan, which, included a portion of the information of a common newspaper, it may be doubted whether for the genuine raciness of the humour, and spontaneous vivacity and urbanity of its tone, it has been exceeded by the most celebrated of its successors. As it sided with the existing ministry, and was extensively circulated, its projector was appointed one of the commissioners of the stamp duties. In 1711 the "Tatler" was brought to a close, and succeeded by the still more celebrated "Spectator," in which the assistance of Addison and other eminent writers was more regular than in its predecessor, although Steele, as before, supported the chief burthen. The "Spectator" terminating, he commenced the "Guardian" in 1713, and also produced a political periodical, called the "Englishman," with several other political pieces of temporary celebrity. His object was now to obtain a seat in parliament, for which purpose he resigned his place in the stamp office, and a pension. He was accordingly elected for Stockbridge, but was soon after expelled the house for an alleged libel in the last number of the "Englishman," and in another paper called the "Crisis." His expulsion being purely the result of temporary ministerial resentment, he regained favour on the accession of George I,

and received the appointments of surveyor of the royal stables, and governor of the king's comedians, and was knighted. He also again entered the house of Commons as member for Boroughbridge, and received 500*l.* from sir Robert Walpole for special services. On the suppression of the rebellion of 1715, he was appointed one of the commissioners for the forfeited estates in Scotland, when he busied himself in an abortive scheme for a union between the churches of England and Scotland. Unhappily devoid of all prudential attention to economy, although he married two wives successively with respectable fortunes, he was uniformly embarrassed in his circumstances, one cause of which was his love of projecting. Always engaged in some scheme or other, few or none of which succeeded, he wasted his regular income in the anticipation of a greater, until absolute distress was the consequence. A scheme for bringing fish to market alive, in particular involved him in much embarrassment, which was heightened by the loss of his theatrical patent, in consequence of his opposition to the peerage bill. He appealed to the public in a paper called the "Theatre," and in 1720 honourably distinguished himself against the famous South Sea scheme. He was restored the following year to his authority over Drury-lane theatre, and soon after wrote his comedy of "The Conscious Lovers," on a hint from Terence, first acted in 1722, and dedicated to the king, who rewarded the author with 500*l.* His pecuniary difficulties however increased, and he was obliged to sell his share in the playhouse, and retire to a seat in Wales, his property by his second wife, where a paralytic stroke in the first instance impaired his understanding, and finally terminated his life, on the 1st of September, 1729. The general character of sir Richard Steele may be estimated by the foregoing sketch. As a public man he supplies an example of one of those many individuals of open and originally generous spirit, who, by the neglect of prudence and a due regard to economy, are reduced to expedients unworthy of their character, and even opposed to their principles. In this respect his contrast to his friend Addison was complete; and it is to be hoped that a harsh recourse to law for a pecuniary claim on the part of the latter, does not, with all faults, give Steele a claim to a higher degree of unsophisticated regard. Nor is it quite certain that, as to original humour, and a careless felicity of social observance, the projector of the "Tatler" was not equal to his great coadjutor, although with less precision and refinement. The comedies of Steele at least are superior to the "Drummer," and in having nothing to oppose to "Cato," he will lose little in the fair race of comparison; not to mention his indisputable claim to the invention of a species of periodical, which may be said to have given a distinctive tone to British sentiment, manners, and general feeling. Besides the works already mentioned, sir Richard Steele published two periodical papers called the

"Lover," and the "Reader," as well as various political pieces too numerous for detail.—*Biog. Brit.*

STEEN (JAN) a distinguished painter, was born at Leyden in 1636. He studied under Brouwer and Van Goyen, and married the daughter of the latter. Being imprudent and intemperate in his habits, he neglected all the advantages which lay in his way, until finally reduced to paint for a mere subsistence. He had a strong, manly style of execution, the result of native talent rather than of application, which, together with a fine feeling of humour, conducted him to a high degree of professional excellence. Among his capital pictures are mentioned, a Mountebank surrounded with Spectators, a Quaker's Funeral, and a Marriage Contract, all which bear a striking air of nature and probability. His works did not obtain an extraordinary price during his life, but after his death, being far from numerous, they so rose in value as to become some of the highest priced of his peculiar school. His death is generally dated 1689, but by Houbraken eleven years earlier.—*Pilkington. Sir Joshua Reynolds's Discourses.*

STEEVENS (GEORGE) a celebrated dramatic critic and biographer. He was born at Stepney, where his father resided, who was an East India director. His education was conducted at the grammar-school at Kingston, and at King's college, Cambridge. He applied himself to the cultivation of polite literature, and in 1766 he published twenty of the plays of Shakspeare, with notes, in 4 vols. 8vo. The skill which he displayed as a commentator induced Dr Johnson to take him as a coadjutor in the edition of the works of our great dramatist, which he published in 1773, 10 vols. 8vo. A new edition of the Shakspeare of Johnson and Steevens appeared in 1785; and in 1793 Mr Steevens produced an enlarged and improved edition of the same work in 15 vols. 8vo. He was one of the contributors to Nichols's "Biographical Anecdotes of Hogarth;" and he also assisted in the "Biographia Dramatica." His death took place at Hampstead, January 22, 1800. Mr Steevens left a valuable library of dramatic and other English literature, of which a catalogue appeared after his decease.—*Nichols's Literary Anecdotes. Monthly Mag.*

STEFFANI (AGOSTINO) an Italian prelate, eminent as an ecclesiastic, a musician, and a diplomatist. He was born in 1650 at Castello Franco, a small town in the Venetian states, and was brought up as a chorister in a neighbouring church, till attracting the attention of a German nobleman by the sweetness of his voice, he was by him carried into Bavaria, and received a classical education; his musical studies being especially superintended by Ercole Bernabei. Taking holy orders, he obtained an abbey, and distinguishing himself by his compositions, both in sacred and secular music, was appointed by the duke of Brunswick, father of George I. of England, to direct the opera at Hanover. While in this situation he produced several operas, the principal

of which are his "Alexander the Great," "Alcibiades," and "Orlando," performed between the years 1694 and 1700. He was also celebrated for his madrigals and some beautiful vocal duets, afterwards avowedly imitated by Handel in those composed by him for queen Caroline. Becoming a favourite with his adopted sovereign he turned his attention to politics as well as music; and exerted himself so effectually towards erecting the duchy of Brunswick Lunenburg into an electorate, that he obtained from his master a pension of fifteen hundred rix-dollars. Shortly after Innocent XI conferred on him the bishopric of Spigna, from which period, although he still continued to amuse himself by musical composition, he no longer put his own name to his productions, but used that of Gregorio Puia, his secretary. About the year 1724 the London Academy of Ancient Music chose him their president; and several specimens of his style are to be found in the collections of Stevens and Dr Crotch, especially a beautiful "Qui diligit Mariam," in the latter. His death took place at Frankfort in 1730.—*Biog. Diet of Mus.*

STEINBACH (ERWIN VON) a German architect, who lived in the latter part of the thirteenth century. The celebrated Minster of Strasburg was begun and carried on under his superintendence for twenty-eight years; and he was therefore probably the designer of that edifice, which is said to be a specimen of the purest Gothic style.—*Moller's Essay on the Origin and Progress of Gothic Architecture. Elmes's Dict. of the Fine Arts.*—See HILTZ (JOHN).

STELLA (JAMES) an eminent painter, was born at Lyons in 1596, being the son of a Flemish artist, who settled in that city. At the age of twenty he travelled into Italy for improvement, and at Florence engaged the notice of the grand duke Cosmo II, who employed him in his service for several years, during which time he exhibited many proofs of his skill in painting, engraving, and design. He then went to Rome, where he acquired so great a reputation, that on his return to France cardinal Richelieu presented him to the king, who assigned him a pension, and apartments in the Louvre. After executing several great works for the king and cardinals, he was decorated with the order of St Michael, and received the brevet of first painter to the crown. His manner of painting resembled that of Poussin, but although upon the whole an excellent artist, he was defective in spirit and force. His principal works are in the churches of Rome, Paris, Lyons, and Abbeville. Many of them are engraved. He died in 1647.—*D'Argenville. Pilkington.*

STELLER or STOELLER (GEORGE WILLIAM) a German physician and traveller, born at Windsheim in Franconia, in 1709. He studied at Halle, and afterwards went to take his degrees at Berlin. Thence he proceeded to Russia, where he became physician to Procopius, the learned archbishop of Novogorod, with whom he continued till the death of

that prelate. Having been nominated an adjunct of the Academy of Sciences at Petersburg, he offered to join a commission for exploring Siberia and Great Tartary; and in 1738 he commenced his journey, and arriving the year following at Kamtschatka, he accompanied commodore Behring in his voyage to the north-west coast of America. On the death of that commander he succeeded to the direction of the expedition, and after encountering great suffering he returned to Kamtschatka. He received orders to repair to Petersburg. In March 1745 he was at Yakutsk in Siberia, on his way thither; and a painter, whom he had sent forward, arrived at Moscow with all his effects; but the fate of Steller himself is enveloped in obscurity. It is only certain that he died soon after, as he was buried near Tumen, November 12, 1745. He was the author of "A Description of Kamtschatka, its Inhabitants, their Manners, Customs, &c." published at Leipsic, in 1774, 8vo; a Journal, published by Pallas; and memoirs in "Novi Commentarii Acad. Scient. Petropolit." all containing much information relating to natural history and geography.—*Biog. Univ. Aikin's Gen. Biog.*

STENBOCH or STEINBÖCK (MAGNUS) a Swedish general, born in 1664. He made his first campaign in the war of the allies against France, under the princes of Waldeck and Baden. In 1700 he followed Charles XII in Russia, Poland, and Saxony; and especially distinguished himself at the battle of Narva. In 1707 he returned to Sweden, and assumed the government of the province of Scania; and in 1709 he defeated the Danes at Helsingborg. He gained the battle of Gademusch against the Danes and Saxons in 1712, and the following year burnt Altona. From that time he experienced nothing but misfortunes; and having shut himself up in the fortress of Tonningen, he was besieged and obliged to capitulate for want of provisions. He was conveyed a prisoner to Denmark, where he died in 1717. He wrote an account of his reverses of fortune and his sufferings, published in a collection of Swedish anecdotes in 1773. His life has been written in Swedish by Laenborn, Stockholm, 1757—65, 4 vols. 4to.—*Biog. Dict. of Gaselius. Biog. Univ.*

STENNET (SAMUEL) an anabaptist clergyman, who was pastor of a congregation in Loudon, born in 1727, died August 22, 1795, at his residence, at Muswell-hill near Highgate, in Middlesex. He was a man much respected among the Protestant dissenters, both for the excellence of his character and for his learning and ability. Besides some single sermons, he was the author of "Discourses on Personal Religion," 2 vols. 12mo; "Discourses on Domestic Duties," 8vo; "Sermons on the Divine Authority and various Use of the Holy Scriptures," 1790, 8vo. He also carried on a controversy on the subject of baptism with Dr Stephen Addington.—*Reus's Cat. of Eng. Auth.*

STENO IL or STENO STURE, admini-

strator of the kingdom of Sweden, succeeded his father in that office in 1513. His government giving offence to a part of his subjects who suspected him of arbitrary designs, they resolved to depose him, and invited Christiern II, king of Denmark, to their assistance. That prince having invaded Sweden, and laid siege to Stockholm, Steno marched against him, and obliged him to raise the siege, having taken the baggage of the Danes and many prisoners, including officers and persons of distinction. The Danish fleet being detained by contrary winds, and a great mortality taking place among the troops, owing to a scarcity of water and provisions, Christiern sent to the administrator to propose a truce, which the latter readily granted, and sent several boats loaded with provisions for the use of the king and his navy. After some time Christiern invited Steno on board the fleet to treat of peace, but the senate opposed his acceptance of the insidious proposal; and Christiern having treacherously seized some Swedish noblemen, set sail for Denmark. He sent a second expedition against Sweden, and a battle taking place, Steno was killed by a cannon-shot, in consequence of which his people were disheartened, and the country fell under the power of the Danish tyrant. These events took place in 1519.—*Univ. Hist. Biog. Univ.*

STENO (NICHOLAS) an anatomist, born at Copenhagen January 10, 1638. His father, who was goldsmith to Christiern IV, was a strict Lutheran, and he instructed his son in the principles of the Reformation. He studied professionally under Bartholine, Borrichius, and Pauli at Copenhagen, whence, after taking the degree of doctor, he proceeded to Leyden, attracted by the celebrity of professor Sylvius. There he also became acquainted with Blasius, to whom he demonstrated the excretory duct of the parotid gland, since called Ductus Stenonius, from the discoverer, who was subsequently obliged to vindicate his title to the discovery against the claims of Blasius. After travelling for improvement in Germany, France, Holland, and Italy, he became physician to Ferdinand II, grand duke of Tuscany. He had previously embraced the Catholic faith at Paris, having been converted by the eloquent arguments of the famous Bossuet. In 1672 Christiern V offered him the anatomical chair at Copenhagen, which he accepted; but though the free exercise of his religion had been guaranteed, he experienced so much annoyance from the bigotry of the Lutherans, that he thought fit to return to Tuscany, where the duke Cosmo III entrusted him with the education of his son Ferdinand. He then renounced his medical studies for the church, and Pope Innocent XII consecrated him bishop, in partibus, of Titopolis, and vicar apostolic in the north of Europe. He then resided some time with duke John Frederic of Brunswick, who like himself had abjured Lutheranism. After the death of that prince (1679) he removed to Munster; and he died at Schwerin, November 25, 1687. A list of his numerous works,

medical and theological, may be found in the annexed authority.—*Biog. Univ.*

STENWYCK, or **STEENWYCH** (**HENRY**) usually called the Old, to distinguish him from his son, a painter of singular excellence in a particular line, was born at Steenwyck in Flanders, in 1550. He was the disciple of John de Vries, who was eminent for painting architecture and perspective. Following the steps of his master, he became celebrated for his admirable delineation of the insides of convents and churches of Gothic architecture, viewed by the light of torches or lustres, to which pictures his perfect knowledge of chiaro-scuro, and the lightness and delicacy of his pencil, gave a surprising effect. The pictures of this artist, which are very rare, bear a high price throughout Europe. He died in 1603.—**HENRY STENWYCK** the Younger, son and pupil of the preceding, copied his father's manner, and by competent judges was thought frequently to equal him. He was introduced by Vandyke to the court of Charles I, and he painted many pictures in England, where he died, but in what year is unknown.—*D'Argenville. Pilkington.*

STEPHANUS, or **STEPHEN** (**JOHN**) a learned Dane, was born at Copenhagen in 1599. He received a good education, and after twice travelling in foreign countries, was made professor of eloquence at Soroe in 1630. In 1639 he became professor of history in the same seminary, and afterwards historiographer to Christian IV. He died in 1650. Among his works are "Breves Emendationes et Notæ in Saxone Grammaticum;" "De Regno Danicæ et Norvegiæ Insulis adjacentibus Tractatus vari;" "Svenonis Aggonis Filii Opuscula, Notis illustrata;" "Notæ uberiores in Hist. Dan. Saxonia Grammatici;" "Historiæ Danicæ, Libri duo, ab anno 1550 ad annum 1559," &c.—*Saxii Onom.*

STEPHANUS BYZANTINUS or **STEPHEN OF BYZANTIUM**, a grammarian of the age of the emperors Arcadius and Honorius, who resided at Constantinople. He was the author of a treatise "De Gentibus," or a Geographical Lexicon, which throws great light on the state of the ancient world. Unfortunately however the work is lost, except a fragment published in the "Thesaurus Antiquitatum Græcarum" of Gronovius; but there is extant an epitome or abridgement by Hermolaus, who lived under Justinian. The epitomised lexicon of Stephanus has been published by Aldus, 1502, folio; Steph. de Pinedo, Amst. 1678, folio; with the commentary of Abr. Berkelius, and the observations of James Gronovius, Lugd. Bat. 1688, folio; and by Gronovius, L. B. 1694, 2 vols. folio.—*Fabricii Bibliog. Antiq.*

STEPHEN, king of England, was the son of Stephen, count of Blois, by Adela, fourth daughter of William the Conqueror. He was born in 1104, and invited when young into England by his uncle Henry I, who gave him the earldom of Mortaigne in Normandy, and also large estates in England. He likewise procured for him in marriage the daughter

and heiress of Eustace, count of Boulogne, for all which favours he professed the most grateful attachment to the king, and was the most zealous in taking the oath for securing the succession to Henry's daughter, the empress Matilda. No sooner, however, did that monarch's death take place, than he hastened from France to England, and laid claim to the crown for himself. Having for a long time courted popularity, and ingratiated himself with both nobles and people, he was at once received as king in London. The concurrence of the clergy was however necessary, which was at length obtained by Stephen's brother, the bishop of Winchester, aided by the oath of a nobleman of the late king's testifying his intentions in favour of his nephew while on his death bed. Such were the lax ideas of the age in regard to hereditary succession, these intrigues succeeded, and Stephen was crowned. Having possessed himself of the treasure of Henry, he was enabled to bribe some of the most restive of his opponents, while he sought the support of the people at large by promising to restore the laws of Edward the Confessor. His first disturbance was on the side of Scotland, David, the king of which, marched an army into England, and Carlisle and the county of Cumberland formed the price which Stephen was obliged to pay for peace. He was however enabled to master the resisting nobles of England, and was also invited by the barons to take possession of the duchy of Normandy. The earl of Gloucester, natural son of the late king, being much attached to the empress, his half-sister, naturally fell under the suspicions of Stephen; and although the earl had sworn a conditional fealty, the king laid a plan to seize his person, which however failed, and he was obliged to take an oath never to make a second attempt of the same kind. Another war with Scotland followed, which was terminated by the famous battle of the Standard, wherein the Scots were entirely defeated by the northern barons. In the mean time Stephen involved himself in a dangerous contest with the ecclesiastical power, in consequence of the castles which several bishops held in defiance of the regal authority. He was no sooner extricated from this difficulty by the firmness of his barons, than the empress Matilda landed in England with her brother, the earl of Gloucester; and being joined by several powerful barons a civil war ensued, which for cruelty and devastation proved one of the most calamitous in the English annals. Stephen performed his part with vigour and courage, but being taken prisoner in 1141 his party was broken up, and Matilda was generally acknowledged queen. The haughty and impolitic conduct of the new sovereign excited an insurrection against her government almost immediately; and being invested in Winchester castle she escaped with difficulty, while her great support, the earl of Gloucester, was taken prisoner. This circumstance occasioned the liberation of Stephen, who was exchanged for the earl, and the civil war was renewed.

After various conflicts Matilda was induced, by the death of the earl, to retire to Normandy, and the contest was carried on by her son, Henry Plantagenet, who in 1153 landed an army in England, and being joined by the barons of his mother's party, the competitors met at the head of their respective forces at Wallingford. An armistice however took place instead of a battle, and a treaty was set on foot, the difficulties of which were alleviated by the death of Eustace, Stephen's eldest son. It was at length concluded that Stephen should reign during his life-time; that Henry should succeed him, leaving William, the remaining son of Stephen, the inheritance of his father's patrimonial estates. The death of the king the following year prevented the disputes which might otherwise have followed, and Henry quietly ascended the throne. Stephen died in the fiftieth year of his age, and the nineteenth of his uneasy reign. Had he succeeded fairly to the throne he possessed talents which would have enabled him to fill it with honour. His resistance to the encroachments of the clergy and the see of Rome were spirited and creditable; and he was active and able both in the cabinet and the field.—*Hume. Henry.*

STEPHENS, STEPHEN, STEPHANUS, or ESTIENNE, the name of a family of learned French printers in the sixteenth century. HENRY STEPHENS, the elder, the first of these eminent typographers, settled at Paris about 1503, and appears to have been patronized by Louis XII. The books which he published were chiefly in Latin, and among the most valuable is an edition of the "Itinerarium Antonini," 1512. He died about 1520; and his widow married his partner, Simeon de Colines (Colinæus) who continued to conduct the affairs of the printing-office till his death.—H. Stephens left three sons, Francis, Robert, and Charles, of whom ROBERT STEPHENS, born in 1503, was highly distinguished for his learning and professional skill. While young he studied with great success the Latin, Greek, and Hebrew languages, and made himself acquainted with general literature. At the age of nineteen his father-in-law Colines entrusted him with the management of his office. He soon after published an edition of the New Testament, in a more correct and convenient form than any which had previously appeared. About 1526 he quitted Colines, and established a press, where he published works in his own name. In 1532 appeared the first edition of his "Thesaurus Lingue Latine," a work of great research; and in 1539 Francis I appointed him his printer, and gave orders for casting a new and beautiful set of types for his use. Having given offence to the doctors of the Sorbonne by the freedom of opinion manifested in some of the theological works which he printed, and especially by the notes to an edition of the Bible in 1545, he experienced so much annoyance from the inordinate zeal of those divines, that at length, after the death of his patron and protector Francis I, he removed to Ge-

neva, and openly professed the Protestant faith. He settled in that city in 1552, and the same year, in conjunction with his brother-in-law Conrad Badius, he printed an edition of the New Testament in French. In 1556 he was admitted a Burgess of Geneva, and he died there September 7, 1559. Robert Stephens was the author of the present division of the New Testament into verses, which literary labour he says that he performed during a journey from Paris to Lyons on horseback (inter equitandum). Among the works from his press one of the most famous is his edition of the Greek Testament, 1549, called the "pulres edition," from an erroneous opinion that the only typographical error in it is the word "pulres," instead of "plures," in the preface. It is however (though not quite immaculate) exceedingly correct.—CHARLES STEPHENS, younger brother of the preceding, received a liberal education, and added to the professional pursuits of his family the study of medicine. His learning recommended him to Lazarus Baif, the education of whose son he superintended, and afterwards accompanied the father in embassies to Germany and Italy. He was admitted a doctor of the faculty of medicine at Paris, and he published several medical works. In 1551 he commenced business as a printer, and the same year he published the first edition of the works of Appian, from MSS. in the French king's library. It appears that he was unsuccessful in business, as he was confined in the prison of the Chatelet for debt in 1561, and he died there in 1564. He was the author as well as printer of a great number of works, of which a complete list is given by Nicéron. His "Dictionarium Historico-geographico-poeticum" appeared posthumously, at Geneva, 1566, 4to. As a typographer his productions are distinguished for accuracy and elegance.—He left an only daughter, NICOLE ESTIENNE, who was married to Jean Liebaud, and died in 1570. She spoke and wrote with facility several languages, and she left in MS. "Apologie pour les Femmes contre ceux qui en médisent;" "Contrestances, ou Réponses aux Stances de Desportes contre le Mariage;" "Mépris d'Amour;" and other poetical pieces, none of which have been printed.—HENRY STEPHENS, the son of Robert, born at Paris in 1528, was one of the most learned men of his time. From his earliest years he gave proofs of his predilection for literature. His mother, the daughter of Jodocus Badius, a printer, was a woman of extraordinary acquirements, and the Latin language was used in common conversation in his father's family. He soon made himself familiar with the Greek also, and at the age of eighteen he assisted his father in collating the MSS. of Dionysius of Halicarnassus. He then travelled into Italy, whence he brought the "Odes of Anacreon," which he afterwards published. Having visited England and the Netherlands, he returned to Paris about the time his father quitted it; and he appears to have accompanied him to Geneva, but he was again at Paris in 1551, when

his edition of Anacreon was published from the press of his brother Charles. He established a printing-office of his own at Paris in 1557, at which period he began printing various Greek authors, the MSS. of which he had collected during his travels, all which he corrected and enriched with annotations. In 1572 appeared the "*Thesaurus Linguae Græcæ*," 4 vols. folio, a work of vast erudition, which has principally contributed to establish his literary reputation. John Scapula, a person employed in his office, treacherously compiled an abridgment of this lexicon, as it was passing through the press, and by its publication greatly injured the sale of the original work. This was not his only misfortune. He was patronised by his sovereign Henry III, whose flattering promises of assistance and protection proved utterly delusive, owing to the civil broils with which France was at that time distracted. The loss of his wife, to whom he was tenderly attached, deeply affected his mind; and the death of the king in 1589, putting an end to his hopes of court favour, he thenceforth led a wandering and distracted life. He resided alternately at Geneva, at Paris, in Germany, and even in Hungary. At length he died in an almshouse at Lyons, in a state of mind bordering on insanity, in 1598. Among his works, besides those already mentioned, are "*An Apology for Herodotus*," designed as a satire on the legends of the Catholics; "*A Treatise on the French Language*;" and "*Lexicon Græco-Latinum Ciceronianum*." He also published a great number of the ancient classics.—His son, PAUL STEPHENS, was a printer at Geneva, where he died in 1627. He distinguished himself both as an author and an editor.—*Maittaire de Vitis Stephanorum. Biog. Univ. Art. ESTIENNE.*

STEPHENS (ROBERT) was born of an ancient family at Eastington in Gloucestershire, about the middle of the seventeenth century. His first education was at Wotton school, whence he removed to Lincoln college, Oxford, in 1681. He was subsequently entered very young in the Middle Temple, where he applied himself to the law, and was called to the bar. As his fortune was ample, he did not practise his profession, but engaged in the study of history and antiquities. Having, while a young man, met with some original letters of lord Bacon at the house of a relation, and finding they would contribute to a better knowledge of the events of the reign of James I, he published a complete edition of them in 1702, with useful notes, and an excellent historical introduction. Being a relation of Harley, earl of Oxford, he was made chief solicitor to the customs, which office he resigned in 1726, and was appointed historiographer royal. He died, much esteemed, in November, 1732.—*Nichols's Lit. Anec.*

STEPNEY (GEORGE) an ingenious poet and political writer, descended of an ancient family settled at Pendegraat in Pembroke-shire, but born in Westminster in 1663. Being placed on the royal foundation in the vicinity he removed at the usual age to Trinity college,

Cambridge, where he acquired the friendship of Mr Montagu, afterwards earl of Halifax. By the steady patronage of this nobleman he afterwards rose to be employed on several important and confidential missions to the courts of Brandenburg, Vienna, Dresden, Mentz, and Cologne, as well as to the congress of Frankfort. In 1706 queen Anne dispatched him on an embassy to Holland; and on all these occasions he appears to have conducted the business committed to his charge with equal prudence and success. He survived his return to England from this last mission only a few months, dying at Chelsea in 1707, and he lies buried in Westminster abbey, with a somewhat pompous inscription over his remains. One of his first poems was an inflated address to king James II on his accession, at which period he favoured the tory interest, although he subsequently accommodated his principles to those of the dominant party. His poetical works, which if occasionally felicitous in expression, do not in general rise above mediocrity, consist of a translation of the eighth satire of Juvenal; imitations of Horace; "*The Austrian Eagle*;" "*On Dreams*," &c. and are to be found in Toulson's collection of minor poets. His prose writings are "*An Essay on the present Interest of England*," 1701, and "*The Proceedings of the House of Commons in 1677, on the French King's Progress in Flanders*," in Lord Somers's Collection.—*Cibber's Lives.*

STERNE (LAURENCE) a divine, and popular writer of a very original cast, was the son of Roger Sterne, a lieutenant in the army, and grandson of Sterne, archbishop of York. He was born at Clonmell, in Ireland, in November 1713, and was put to school at Halifax in Yorkshire, in 1722, whence he removed to Jesus college, Cambridge, and studied for the church. He took his degree of M.A. in 1740, before which time he was advanced, and by the interest of Dr Sterne, his uncle, who was a prebendary of Durham, he obtained the living of Sutton, a prebend of York, and subsequently, by the interest of his wife, whom he married in 1741, the living of Stillington, at which and at Sutton he performed the duty for nearly twenty years. During this period he appears to have amused himself with books, painting, music, and shooting, but was little known beyond his vicinity, the only production of his pen being his humorous satire upon a greedy church dignitary of York, entitled "*The History of a Watch Coat*." In 1759 following, appeared the two first volumes of his celebrated "*Tristram Shandy*," which drew upon him praise and censure of every kind, and became so popular that a bookseller engaged for its continuance on very lucrative terms. Accordingly a third and a fourth volume appeared in 1761, a fifth and sixth in 1762, a seventh and eighth in 1764, and a ninth singly in 1766. If in the ground-work of this extraordinary production a resemblance may be traced to the ridicule of pedantry and false philosophy in Scriblerus, the style and filling up are chiefly his own, although the late

Dr Ferriar, of Manchester, incontestably proved his loan of entire passages from Burton's *Anatomy of Melancholy*, and the works of bishop Hall and others. In 1768 he produced his "Sentimental Journey," in 2 vols. 12mo, which, by a number of pathetic incidents and vivid strokes of national and characteristic delineation, is rendered extremely entertaining, and acquired a more general reputation than even its predecessor. Its chief fault is an exaggeration of impulsive feeling, which, when imitated by inferior writers, became very sickly and disgusting. In 1760 appeared two volumes of "Sermons of Mr Yorick," to which he added two additional volumes in 1766, with his own name. These are lively, unmethodical moral essays, containing many striking passages, and some light ones, which not very materially differ from the tone of his former works. A tendency to pulmonary consumption at length became a confirmed disease, under which he sank in March 1764, leaving a widow and one daughter. The latter, who was married to a French gentleman, published a collection of her father's letters, in three volumes, 12mo, to which were prefixed memoirs of his life and family. In the same year an anonymous editor published "Letters between Yorick and Eliza," which were regarded as the authentic correspondence, in a strain of high sentimental friendship, between Sterne and Mrs Draper, an accomplished East Indian lady. It is unpleasant to be obliged to observe, that the private character of this eccentric writer was by no means honourable to his indisputable genius, affording another proof that the power of expressing and conceiving strong feelings by no means supplies grounds for a presumption that they will influence the conduct.—*Life prefixed to Works.*

STERNHOLD (THOMAS) noted as the principal author of the metrical version of the Psalms long used in public worship in our churches, and not yet entirely discontinued. He was a native of Hampshire, and apparently of a respectable family, as he was educated at Oxford, and became groom of the robes to Henry VIII. in whose will he is so designated, and who left him a legacy of one hundred marks. He held the same, or a similar office, under Edward VI, in whose reign he died in August 1549. The principal coadjutor of Sternhold, in his versification of the Psalter, was JOHN HOPKINS, and the names of these unfortunate persons have passed into a proverbial designation of bad poets. The wicked wits of the reign of Charles I, as Fuller informs us, termed their translations of the Psalms "Geneva Gigs." Sternhold also produced "Certayne Chapters of the Proverbs of Solomon, drawn into Metre," which were published after his death.—*Fuller. Wood. Warton.*

STESICHORUS, a Greek lyric poet, was born at Himera, in Sicily, about BC. 612. He appears to have been a man of note among his fellow-citizens, and to have had a great deal to do in the transactions between Himera and

the tyrant Phalaris. Much of his history, however, depends upon the authenticity of the pretended epistles of Phalaris, which are now generally given up. It is certain, however, that he composed a number of works which were highly esteemed by the ancients. Horace speaks of "Stesichori graves camænen;" and Dionysius Halicarnassus says, that he had all the graces of Pindar and Simonides, while he surpassed them both in the grandeur of his subjects. He was the first who introduced into the ode the triple division of strophe, antistrophe, and epode, and he was thence said to have derived his name, which was before *Tisias*, as signifying "places of the chorus." A few fragments of his works, to the amount of fifty or sixty lines, alone remain, which were printed in the collection of Fulvius Ursinus. His death is placed BC. 556.—*Suidas. Vossii Poet. Græc.*

STEVENS (GEORGE ALEXANDER) a whimsical and eccentric character, was born in London, and brought up to a mechanical business, which he quitted to become a strolling player. In 1751 he published a poem, entitled "Religion, or the Libertine repentant," which was succeeded in 1754 by "The Birthday of Folly." He followed these productions by a novel called "Tom Fool," and "The Dramatic History of Master Edward (Shuter) and Miss Ann" (Cattley). He subsequently invented his entertainment, called a "Lecture on Heads," which possessed no small portion of ribbald drollery, and became very popular. Several of his songs have also been much and deservedly admired.—*Europ. Mag.*

STEVENS (WILLIAM BAGSHAW) an episcopal clergyman, who obtained some distinction as a poet. He was born in 1756 at Abingdon, in Berkshire, and received his education at Magdalen college, Oxford, where he obtained a fellowship, and took the degree of DD. He also became rector of Seckington, and vicar of Kingsbury, in the county of Warwick; and he died at Repton, in Derbyshire, May 28, 1800. Dr Stevens was a corresponding contributor to the Gentleman's Magazine, under the signature M. C. S. (i. e. Magdalen. Colleg. Semisoc.); and in the second volume of the Topographer are three "Idylls" of his composition. He was also the author of "Retirement, a Poem," 1782, 4to; and "Sermons," 3 vols. 8vo.—*Gent. Mag.*

STEVENSON (JOHN HALL) a gentleman, possessed of a landed estate in Yorkshire, who resided at Skelton castle, in that county, and was distinguished for his talents as a writer of satirical and humorous poetry. He was born in 1718, and received his education at Jesus college, Cambridge. He became the friend of Lawrence Sterne, and it is supposed that their intimacy commenced at the university, as they were members of the same college. Mr Hall Stevenson afterwards made the tour of Europe, and on his return home passed his time in convivial society or literary occupation, either in London or the country, till his death, which took place in March 1785. He was a man of

a peculiar genius and turn of fancy, and it appears from his writings, that as he sought amusement in tracing the ridiculous features in human life and manners, so he also felt for the misfortunes of his fellow-creatures. He sat for the portrait of Eugenius in Sterne's *Tristram Shandy*; and though the hand of friendship is obvious in the graces of the portrait, its likeness has been acknowledged by all who knew the original. His works consist of "Crazy Tales;" "Fables for Grown Gentlemen;" "Lyric Epistles;" "Moral Tales;" &c. first published separately, and together with some additional pieces, printed in 3 vols. 8vo, 1795.—*Pref. to the Works of J. Hall Stevenson, Esq.* 1795.

STEVENSON (WILLIAM) an able and industrious antiquarian, of which society he was a fellow. He was a native of East Retford, Notts, where his father, who held the rectory of Tresswell in the same county, resided. In 1799 Mr Stevenson served the office of sheriff of the city of Norwich, and died May 13, 1821, in his seventy-second year, having been upwards of thirty-five years proprietor of the *Norfolk Chronicle*. He published in 1812, from his own press, a corrected edition of Bentham's *History of Ely Cathedral*, with a memoir of the author, which he followed up five years afterwards by a supplement, and drew up an interesting memoir of his friend Ignatius Sancho, printed in the ninth volume of Nichols's "Literary Anecdotes."—*Nichols's Lit. Anec. Gent. Mag.*

STEVIN (SIMON) or STEVINUS, a Flemish mathematician, born at Bruges, some time beyond the middle of the sixteenth century. He was employed in Holland, as inspector of the dykes, by prince Maurice of Nassau, and he is celebrated for the invention of the sailing chariot, which was moved entirely by the impulse of the wind. He was an excellent practical mathematician and mechanist, and was the author of several useful works in the Dutch language, on arithmetic, algebra, geometry, statics, optics, trigonometry, geography, astronomy, and fortification, all of which have been translated into Latin by Snellius, and published in two volumes, folio. A full account of the inventions of Stevinus will be found in our authority, under the article *Algebra*.—*Hutton's Math. Dict.*

STEWART DENHAM (sir JAMES) an eminent political writer, was born at Edinburgh October 10, 1713. He was the only son of sir James Stewart of Goostrees, baronet, solicitor-general of Scotland, under queen Anne and George I. Having gone through his academical courses at Edinburgh he went to the bar as an advocate; and then proceeded on a tour through all the principal countries of Europe, which occupied him five years. He returned to Scotland in 1740, and in 1742 he married lady Frances, daughter of the earl of Wemyss. While abroad he had formed an intimacy with the pretender, which connection it was presumed led him to Edinburgh in 1745, in support of that unfortunate personage, on the defeat of whose party he retired to

France, and settled at Sedan. In 1755 he removed his family to Flanders, and began to communicate his literary labours to the public. The works which first appeared were a "Vindication of Newton's Chronology," 1757; "A Treatise on German Coins," 1758; "A Dissertation on the Doctrine and Principles of Money as applied to the German Coin," 1761. He had during this time removed to Tubingen, whence he subsequently repaired to Antwerp; from which town having made an excursion to the Spa, he was, in consequence of some suspicion on the part of the French authorities, arrested as a spy; but a peace soon after taking place he was restored to liberty. Having at length received an assurance that he would not be molested on account of his former political attachments, he returned to Scotland in 1763, and soon after settled at his estate of Coltness. In this retirement he concluded his "Inquiry into the Principles of Political Economy," the result of eighteen years' laborious research. Upon this work there has existed much difference of opinion; but it is now generally admitted to exhibit great acuteness and industry, which are unhappily obscured by considerable defects in style and method, which induced Dr Adam Smith to say that he could understand his system better from his conversation than his writings. By the interest of his friends he obtained a full pardon under the great seal in 1771, and from that period until his death published various works, the principal of which are "Principles of Money applied to the present State of the Coin of Bengal;" "A Plan for introducing a Conformity of Weights and Measures;" "Observations on Beattie's Essay on Truth;" "Critical Remarks on the Atheistical Falsehoods in Mirabaud's System of Nature;" "A Dissertation concerning the Motive of Obedience to the Law of God;" all which, with the rest of his productions, were published in 1805 in 6 vols. 8vo. He died in November 1780, aged sixty-seven.—*Life annexed to Works.*

STEWART (JOHN) commonly called Walking Stewart, from his pedestrian feats, an eccentric but clever individual, who in the course of a long life wandered on foot over the greater part of the habitable globe. He was born in Bond-street, London, and having received the rudiments of education at the Charterhouse, was sent out in 1763 as a writer to Madras, through the interest which his friends had with the earl of Bute. In this situation he remained not quite two years. Being smitten with a strong inclination to travel, he wrote a letter to the court of directors, which, from its remarkable character, has been preserved on their records as a curiosity to this day. Adverting to his design of travelling, he told them that "he was born for nobler pursuits than to be a copier of invoices and bills of lading to a company of grocers, haberdashers, and cheesemongers;" and within a few weeks after the transmission of his epistle, he took his leave of the presidency. In spite of the remonstrances of his friends, who sent after him, intreating him to return,

he prosecuted his route over Hindostan, walking to Delhi, to Persopolis, and other parts of Persia, traversing the greater part of the Indian peninsula, and visiting Abyssinia and Nubia. Entering the Carnatic, he obtained the favour of the then nawaub, who made him his private secretary, and to this circumstance he in his latter days owed his support, the British house of Commons voting him a few years since the sum of 15,000*l.* in liquidation of his demands upon the nawaub. Quitting the service of this prince, he imprudently set out to walk to Seringapatam, where he was arrested by the orders of Tippoo Saib, who compelled him to enter his army, in which he bestowed on him a commission as captain of sepoys. While serving in this capacity, he was engaged in several actions with the Mah-rattas, and received a wound in the right arm, nor did he succeed in quitting the situation in which he was thus involuntarily placed, till the exertions of sir James Sibbald, the commissioner for settling the terms of peace between the Presidency and the Sultan, procured his liberation. This at length effected, Mr Stewart started to walk to Europe, crossing the desert of Arabia, and arriving at length safely at Marseilles. Thence he proceeded in the same manner, through France and Spain, to his native country. Having walked through England, Scotland, and Ireland, he crossed the Atlantic, and perambulated the United States of America. In the course of these peregrinations he was frequently exposed to dangers of no common magnitude, and once on crossing from Ireland, narrowly escaped shipwreck, in anticipation of which he entreated earnestly some of the crew, in case they should survive him, to take care of a MS. he then had about him, and intended to publish, which he called his "*Opus Maximum*." The last ten years of his life were passed in London, in the vicinity of Charing Cross, that he might be, to use his own expression, "in the full tide of human existence;" and in this neighbourhood he died, his decease taking place at his house in Northumberland-street, on the 20th of February, 1822.—*Ann. Bing.*

STEWART, DD. (MATTHEW) professor of mathematics in the university of Edinburgh, was the son of the rev. Dugald Stewart, minister of Rothsay in the isle of Bute, where he was born in 1717. He received his academical education at the university of Glasgow, where he paid a devoted attention to the mathematics, under the able instructions of the celebrated Dr Simson, whose predilection for the ancient geometry, in preference to modern analysis, he fully imbibed. Pursuing the same line of inquiry, he was led to a discovery of the curious propositions which he published in 1746, under the title of "*General Theorems*." While thus engaged he had entered into the church, and obtained the living of Rosemeath; but the mathematician's chair in the university of Edinburgh becoming soon after vacant by the death of Maclaurin, he was in 1747 elected his successor. In this situation he still more systematically pursued the

object nearest his heart, namely, the application of geometry to such problems as the algebraic calculus alone had been deemed able to resolve. His solution of Kepler's problem was the first specimen which he gave the world. It appeared in the second volume of the *Essays* of the Society of Edinburgh, and with farther discoveries in the same line of inquiry. His "*Tracts, Physical and Mathematical*," followed in 1761, in farther prosecution of his plan of introducing into the higher branches of the mixed mathematics the strict and simple form of ancient demonstration. The transit of Venus, which took place the same year, led to the composition of his "*Essay on the Sun's Distance*," which although not free from error, will always be interesting to the lovers of geometry. Soon after the publication of this work his health declined, and in 1772 he retired into the country. In 1775 his son, the since celebrated Dugald Stewart, was elected joint professor with him; and still pursuing his mathematical researches as an amusement, he lived ten years longer in retirement, dying in January 1785, at the age of sixty-eight. Besides the works already mentioned, he wrote "*Propositiones Geometricæ modo Veterum demonstratæ*."—*Edinb. Phil. Transactions.*

STEWART (ROBERT) marquis of Londonderry, a conspicuous modern statesman, was the second son of the first marquis by lady Sarah Frances Seymour Conway, sister to the first marquis of Hertford. He was born in the north of Ireland, June 18, 1769, and was educated at Armagh, after which he became a commoner of St John's college, Cambridge. On leaving the university he made the tour of Europe, and on his return was chosen member in the Irish parliament for the county of Down. He joined the opposition in the first place, and declared himself an advocate for parliamentary reform; but on obtaining a seat in the British parliament he took his station on the ministerial benches. In 1797, having then become lord Castlereagh, he returned to the Irish parliament, and the same year became keeper of the privy seal for that kingdom; and was soon after appointed one of the lords of the treasury. The next year he was nominated secretary to the lord-lieutenant, and by his strenuous exertions and great abilities in the art of removing opposition, the union with Ireland was very mainly facilitated. In the united parliament he sat as member for the county of Down, and in 1802 was made president of the board of control. In 1805 he was appointed secretary of war and colonies; but on the death of Mr Pitt he retired until the dissolution of the brief administration of 1806 restored him to the same situation in 1807; and he held his office until the ill-fated expedition to Walcheren, and his remarkable duel with his colleague, Mr Canning, produced his resignation. In 1812 he succeeded the marquis of Wellesley as foreign secretary; and the following year proceeded to the continent, to assist the coalced powers in negotiating a general peace. His services

after the capture of Napoleon, and in the general pacification and arrangements, which have been usually designated by the phrase "the settlement of Europe," form a part of history. It is sufficient to notice here that he received the public thanks of parliament, and was honoured with the order of the garter. On the death of his father in April 1821 he succeeded him in the Irish marquissate of Londonderry, but still retained his seat in the British house of Commons, where he acted as leader. After the arduous session of 1824, in which his labour was unremitting, his mind was observed to be much shattered, but unhappily, although his physician was apprised of it, he was suffered to leave London for his seat at North Cray in Kent, where on August 24, 1824, he terminated his existence by inflicting a wound in his neck with a penknife, of which he died almost instantly. The political character of this nobleman will be regarded differently by opposing partisans. It was certainly never in a strict sense very popular, although exceedingly influential in his immediate sphere. He has been censured on the one side for severe, rigid, and persecuting domestic government; and for an undue countenance of despotic encroachment and arrangement as regards the social progress of Europe. His party and supporters in answer to these strictures for the most part plead political necessity and expediency, while no mean portion of them defend his views on the stronger ground of principle. The change of temper produced in the cabinet by his death, and the increase of its popularity which followed, will possibly be regarded as decisive of the more general sentiment of the nation. For the rest he was an active man of business, and a ready although not an elegant orator. His remains were interred in Westminster abbey with great ceremony, but not without an exhibition of some marks of popular ill-will. He married a daughter of the earl of Buckinghamshire, by whom he left no issue, being succeeded in his title by lord Stuart, his half-brother, now marquis of Londonderry.—*Ann. Bing.*

STIERNHJELM (GEORGE) a learned Swede, born in 1598. He travelled through various European countries; and being in London a little before the Restoration, he assisted in those conferences of the English philosophers which led to the foundation of the Royal Society. Returning to his own country, he was employed in public affairs, and was highly esteemed and trusted by his sovereign Christina. Stiernhielm was skilled in mathematics, natural philosophy, history, and philology; and he also cultivated poetry. He is chiefly known as a philosopher, and especially on account of his microscopical experiments. He died in 1672. He published the Gothic version of the Gospels by Ulphilas, Stockholm, 1671, 4to; and several works relating to the languages and archæology of the northern nations.—*Biog. Univ.*

STILES, DD. and LLD. (EZRA) an American divine and historian, born at North-

haven in the United States, November 29, 1727. He became president of Yale college, at Newhaven, in Connecticut, in 1778, when he published "Oratio Inauguralis habita in Sacello Collegii Yalensis," Hartfordæ, 1778, 8vo. He was also the author of a sermon entitled "The United States elevated to Glory and Honour," second edition, Worcester, 1785, 8vo; and of a very curious "History of three of the Judges of King Charles I., Major General Whalley, Major General Goffe, and Colonel Dixwell, who, at the Restoration, 1660, fled to America, and were secreted in Massachusetts and Connecticut for near thirty years; with an Account of Theophilus Whale, of Narragansett, supposed to have been one of the Judges," Hartford, 1794, 8vo. Dr. Stiles was also a contributor to the "American Museum," in which appeared his "Correspondence with Noah Webster, respecting the Fortifications in the Western Country." He died May 12, 1795.—*New York Magas. Reuss.*

STILICHO, a Vandalic general, in the service of the emperor Theodosius the Great, whose niece Serena he married. Theodosius having bequeathed the empire of the East to his son Arcadius, and that of the West to his second son Honorius, the former was left under the care of Rufinus, and the latter under the guardianship of Stilicho. No sooner was Theodosius no more, than Rufinus stirred up an invasion of the Goths in order to procure the sole dominion, which Stilicho not only put down, but was enabled to effect the destruction of his rival. After suppressing a revolt in Africa, he marched against Alaric, whom he signally defeated at Pollentia. After this, in 406, he repelled an invasion of barbarians, who penetrated into Italy under Rhadagaisius, a Hun or Vandal leader, who formerly accompanied Alaric, and produced the entire destruction both of the force and its leader. Either from motives of policy or state necessity, he then entered into a treaty with Alaric, whose pretensions upon the Roman treasury for a subsidy, he warmly supported. This conduct excited suspicion of his treachery on the part of Honorius, who withdrew from his protection, and massacred all his friends during his absence. He received intelligence of this fact at the camp of Bologna, whence he was obliged to flee to Ravenna. He took shelter in a church, from which he was inveigled by a solemn oath that no harm was intended him, and conveyed to immediate execution, which he endured in a manner worthy his great military character. Stilicho was charged with the design of dethroning Honorius, in order to advance his own son Eucherius in his place, and the memory of this distinguished captain has been treated by the ecclesiastical historians with great severity. Zosimus, however, although otherwise unfavourable to him, acquits him of the treason which was laid to his charge, and he will live in the poetry of Claudian as the most distinguished hero of his age.—*Gibbon. Univ. Hist.*

STILL (JOHN) bishop of Bath and Wells, was born in 1543, at Grantham, in Lincoln-

shire. He was admitted of Christ's college, Cambridge. In 1570 he was Margaret professor at Cambridge, and he received various collegiate and other preferment, until in 1590 he was advanced to the see of Bath and Wells, in which he continued till his decease, February 26, 1627. The historians of the drama are of opinion that he was the author in his youth of the curious old characteristic play of "Gammer Gurton's Needle," performed at Cambridge in 1575, and which has been republished in Dodsley's and other collections.—*Athen. Oxon. Fuller's Worthies.*

STILLINGFLEET (Edward) bishop of Worcester, a prelate of great learning and ability, as well as an acute and argumentative polemic. He was descended of a respectable Yorkshire family, but his immediate ancestors were settled at Cranbourne, Dorsetshire, where he was born in April, 1635. He received his education at St John's college, Cambridge, where he distinguished himself so much by his industry and talent, that he was elected in 1653 to the first fellowship that became vacant after he had taken his bachelor's degree in arts. His reputation for wit at this period was not inferior to that which he had acquired for severe qualifications, and his Tripos speech is quoted as being peculiarly replete with it. On quitting the university, he lived for a short time at Nottingham, in quality of tutor to the marquis of Dorchester's nephew; and about this period commenced a work calculated, as he imagined, though erroneously, to heal the existing schisms into which the nation was then more especially divided. This treatise, entitled "Irenicum, or a weapon Salve for the Wounds of the Church," appeared in 1659, and had no other effect than that of uniting both parties against it. Previous to its publication the author had taken up his abode at Wroxall in Warwickshire, the family seat of his friend and patron, sir Roger Burgoyne; and having taken holy orders, obtained in 1657, through the interest of that gentleman, the rectory of Sutton in Bedfordshire. Five years afterwards appeared his greatest work, under the title of "Origines Sacre, or a Rational Account of Natural and Revealed Religion." This has since gone through a variety of editions, and is justly prized for the elegance of its style and the erudition which it displays. He followed it up in 1664 by a similar treatise "On the Origin and Nature of Protestantism," which, together with an able answer to "Laud's Labyrinth," a severe attack upon the primate, written about the same time, gained him the preacher'ship of the Roll's chapel and the valuable rectory of St Andrew's, Holborn, together with a stall in St Paul's cathedral. His subsequent rise in the church was rapid, being appointed in succession chaplain to Charles II, archdeacon of London 1677, dean of St Paul's 1678. Having distinguished himself by the prominent part which he took previous to the Revolution, against the establishment of the Romish church in these realms, he was elevated to the see of Worcester by

BIOG. DICTION.—VOL. III.

William III. Besides the writings already enumerated, this eminent controversialist was the author of numerous others, especially an answer to Crellius's reply to Grotius, an appendix to Tillotson's "Rule of Faith," 1676; "The Unreasonableness of Separation," 1683; and a highly valuable work, replete with antiquarian research, "Origines Britannicæ, or Antiquities of the Churches in Britain," folio, 1685. A short time before his death bishop Stillingfleet engaged in a controversy with the celebrated John Locke, respecting some part of that philosopher's writings, which he conceived had a leaning towards materialism; but found in his opponent a much sturdier antagonist than he had before experienced, and has generally been regarded as in this instance defeated. His decease took place March 27, 1699, of an attack of the gout, at his house in Park-street, and his remains were interred in Westminster abbey, with an inscription from the pen of Dr Bentley. As a diocesan he was equally celebrated for his piety, learning, and munificence; and, with some loftiness of temper, in private life for the general amiability of his disposition and manners. His works have been collected and published entire in six folio volumes, 1710.—*Biog. Brit.*

STILLINGFLEET (BENJAMIN) grandson of the above, and son to the rev. Edward Stillingfleet, rector of Wood Norton, in the county of Norfolk, where he was born in 1702. His father appears to have displeased his family, by what they considered an unequal alliance, and this circumstance seems to have had a material and unfriendly influence upon the prospects of his son. Its ill effects were first manifested when, after having gone through the grammar-school of Norwich with credit, and distinguished himself at Trinity college, Cambridge, the interference of the master, who had been chaplain to the bishop, prevented his being elected a fellow of that society. Having taken the degree of BA. Mr Stillingfleet went abroad, and travelled through Italy in quality of tutor to the son of Mr Windham; but being fortunate enough to obtain the patronage of lord Barrington, that nobleman, on his return to England, obtained him the situation of barrackmaster at Kensington in 1760. The emoluments of this appointment, and a handsome bequest left him by his former pupil, enabled him to live in comfort, and to devote himself to the study of natural history, of which he was passionately fond. The fruits of his literary labours are "The Calendar of Flora;" "Miscellaneous Tracts on Natural History;" "On the Principles and Power of Harmony," 4to; an octavo volume of travels, and some poetical pieces. His death took place at his lodgings in Piccadilly, Dec. 15, 1771, and his remains were interred in the parish church of St James, Westminster.—*Ann. Reg. Life by Core.*

STILPO, the Megarean, a Stoic philosopher, who flourished about the commencement of the third century before the Christian era. He was held in great esteem by his contemporaries, for his sagacity, moderation, and

integrity, and several disputes, which threatened serious consequences, occasioned by the clashing interests of the Grecian cities, were arranged by his mediation, while his virtues and character so far conciliated the regard even of the enemies of his country, that on the storming of his native city, especial directions were issued by the assailants, that the person and property of the philosopher should be respected. He was a very subtle dialectician, and it was one of his positions that species, or universals, have no real existence, which appears to be an anticipation of the doctrine of the nominalists, which so long afterwards was to produce so much heat in the field of logic and metaphysics.—*Diog. Laert. Brucker.*

STIRLING (JAMES) an English mathematician, who was born towards the end of the seventeenth century, and educated at Oxford. In 1717 he published "*Lineæ Tertii Ordinis Neutonianæ, sive Illustratio Tractatûs Neutoni de Enumeratione Linearum Tertii Ordinis*," 8vo, which procured him admission into the Royal Society. This work was followed by "*Methodus Differentialis, sive Tract. de Summatione et Interpolatione Seriarum Infinitarum*," 1730, 4to; and in 1735 he published in the *Philosophical Transactions* a memoir on the figure of the earth. The time of his death is uncertain.—*Biog. Univ.*

STOBÆUS (JOHN) the name of a Greek writer, who, about the middle of the fifth century, was the author of a variety of miscellaneous works, most of which have perished; but his collection of excerpts from those of other learned philosophers and poets, has come down to posterity under the title of "*Eclogæ*," "*Sententie*," and "*Sermones*." Of this work there are several editions, the first is that of Venice, 1536, in 4to; another was published in four octavo volumes by Heeren, about the latter end of the last century. Gesner printed his "*Sententie*" in 1659. There is also an edition of Stobæus entitled "*Sermones*," Lips. 1797. He is regarded as a pagan writer by Fabricius, as he quotes exclusively from heathen authors.—*Gesner Prolegom. Fabricii Bibl. Gr.*

STOCK (CHRISTIAN) a learned German professor, born in 1672, at Camburg. He studied at the university of Jena, where he distinguished himself by his proficiency in the eastern languages, and at length obtained the professorship of Hebrew. Of his writings the most valuable are his keys to the languages of the Old and New Testaments. He was also the author of an erudite treatise on the existence, mode, &c. of inflicting capital punishment among the ancient Jews. His death took place at Jena in 1733.—*Moreri.*

STOCKDALE (PERCIVAL) the name of an English clergyman, a native of Brantton, in the county of Northumberland, where he was born about the year 1736. He was sent into Scotland for education, and studied at the university of St Andrew's, where he graduated, but afterwards embraced a military life, and served abroad. His predilection for the army at length gave way to circumstances,

and on his return to England he recurred to the line of life for which he had been originally designed, and entered the church in 1759. Settling in the metropolis, he for some time continued to support himself by combining the profession of an author with that of his adoption, till an opportunity offering in the royal navy, he again entered the service, in the capacity of chaplain to a king's ship, and eventually obtained the livings of Long Houghton and Lesbury, in his native county. He was a tolerable critic, and published a series of "*Lectures on the Poets*," an "*Essay on the Genius of Pope*," and a "*Biographical Memoir of Waller*," besides a volume of miscellaneous poems of no great merit, and a few sermons adapted for the navy. He also wrote his own life with a most surprising degree of vanity and self-sufficiency. His death took place at the Rectory house, in Long Houghton, in 1811.—*Gent. Mag.*

STOERK (ANTHONY, baron von) physician to the court of Vienna, was born at the town of Sulgau in Suabia, February 21, 1731. Being left poor and friendless in his early years, he was brought up at a house for the indigent at Vienna; and he repaid by his talents, application, and good behaviour, the generosity of his benefactors. He studied with great application, and in 1752 he took the degree of M.A. In 1757 he received the diploma of doctor of medicine; and in 1760 he was nominated physician to the court. A few years after he attended the empress Maria Theresa, when ill with the small-pox; and her recovery raised him to the first rank in his profession. He was made an aulic counsellor and a baron of the empire. As the successor of van Swieten he powerfully contributed to the improvement of the art of medicine in the Austrian states, and his professional zeal and ability were conspicuous on every occasion. He died September 11, 1803, leaving behind him a fortune of half a million of florins. Stoerk chiefly distinguished himself by his experiments relative to the medical properties of hemlock and other poisonous plants, particularly stramonium, hyosciamus, aconite, and colchicum. Besides his tracts on these medicines, he published "*Annus Medicus, quo sistuntur Observat. circa Morbos acutos et chronicos*;" "*Instituta Facultatis Medicæ Vindobonensis*;" and "*Medico-practical Instructions for Austrian Physicians in the Army and the Country*," 2 vols. 8vo.—*Biog. Univ.*

STOEVER (JOHN HERMAN) a German historian, born at Verden in 1764. He was coadjutor with Schirach in a political journal from 1783 to 1786; and for several years editor of the *Courier of Altona*. At length he became rector of the gymnasium of Buxtehude, where he died in February 1792. He published several historical works without his name.—When he quitted Schirach in 1786 his brother, DESIDERIUS HENRY STOEVER, succeeded him, and was till 1793 the principal co-operator in the political journal. In 1788 he took the degree of doctor in philo-

STO

sophy at Helmstadt, when he maintained a thesis on Danish history. In 1793 he was entrusted with the management of the celebrated journal called the "Impartial Correspondent of Hamburg," which he conducted in a manner creditable to his talents till his death in April 1822. Though he held no public office he had the honorary title of counsellor of legation to the duke of Mecklenberg, and he was a knight of the order of Vasa. He published a *Life of Linnæus*, 2 vols. 8vo; a *Collection of the Letters of that Naturalist* in Latin, 8vo; and a German work entitled "Our Age," or a view of remarkable things, and of the most celebrated men, forming a manual of modern history, Altona, 1791, 3 vols. 8vo.—*Biog. Univ.*

STOFFLER, STOFFLERINUS, or STOFFLERUS (JOHN) a mathematician of the fifteenth century, who was a native of Suabia. He was professor of mathematics at Tübingen, and enjoyed considerable reputation; but being, according to the fashion of the age in which he lived, addicted to the study of astrology, he hazarded a prediction of the occurrence of a great deluge to take place in 1524; and even the failure of his prophecy did not convince him of his folly. Besides works on astrology, he was the author of "Cosmographical Delineations;" "An Elucidation of the Structure of the Astrolabe;" "Commentaries on the Sphere of Ptolemy;" &c. His death took place in 1531.—*Biog. Univ.*

STOFFLET (NICHOLAS) general in chief of the royalist armies of La Vendée. Having entered young into the army, he served for some time as a common soldier, and afterwards became gamekeeper to the count de Mauverrier. In March 1793 observing that the people of lower Anjou and the neighbouring provinces were exasperated against the republican government, he raised the standard of revolt; and having taken possession of Bressuire he set free Messrs. de Marigny, de la Rochejacquin, de Lescurc, Desessarts, and others who had been confined by the republicans, and who became leaders of the Vendean royalist forces. He afterwards resigned the command of the army of Upper Poitou to M. d'Elbée, under whose orders he acted till the death of that general, when he resumed his station. In 1795 Stofflet concluded a species of armistice with the French government; but subsequently taking up arms he was made a prisoner, and was shot at Augers, February 23, 1796. He was a native of Luneville, and was forty-four years of age at the time of his death.—*Dict. des H. M. du 18me S. Biog. Univ.*

STOKE (MELIS, or EMILIUS) a Dutch chronicler, who wrote in verse, about the beginning of the fourteenth century. He was a priest, attached to the service of Florence V, earl of Holland, to whom his work is dedicated. The *Chronicle of Stoke* was first published by Janus Doua, in 1591; and reprinted in 1620; but the best edition is that of Balthasar Huydecoper, 1772, 3 vols. 3vo, enriched with a valuable historical and philological commentary.—*Biog. Univ.*

STO

STOLBERG (FREDERIC LEOPOLD, count) a nobleman distinguished for his talents, descended from one of the sovereign houses of Germany. He was born November 7, 1730, at Bramstedt, in Holstein, where his father held the office of grand bailli. He studied at Halle and Göttingen, and on quitting the latter university he published a poetical translation of the *Iliad*. He then travelled with his brother into Switzerland and Italy; and on his return home, the duke of Oldenburg, prince-bishop of Lubeck, appointed him his minister plenipotentiary in Denmark. In 1785 he accepted a territorial government in the country of Oldenburg; but previously to entering on the duties of his office he was employed on a diplomatic mission in Russia. He subsequently resided some time at Berlin, as ambassador from the prince regent of Denmark. Having visited Italy a second time in 1790, he published his travels in Germany, Switzerland, Italy, and Sicily, 1794, 4 vols. 8vo, translated into English by Thomas Holcroft, 1796-7, 2 vols. 4to. On his return to Futin, after eighteen months' absence, he was made head of the government, of the consistory, and the finances of the bishopric of Lubeck. His leisure was dedicated to study, and he employed himself in translating some of the dialogues of Plato, and the last discourse of Socrates, which were published in three volumes, octavo. On the death of Catherine II he was dispatched on an embassy of congratulation from the duke of Oldenburg to the emperor of Russia, Paul I, who bestowed on him the order of St Alexander Newski. The latitudinarian principles of the Lutheran clergy in the latter part of the last century, had such an effect on the mind of count Stolberg, that he determined at length to quit their communion, in which he had been educated, and to become a Catholic. He accordingly made a public renunciation of Protestantism in 1800, and in the month of September that year he relinquished all his employments. Literary pursuits and the education of his children occupied the remainder of his life, which was terminated December 5, 1819. He was twice married, first to Agnes von Witzleben, who died in November 1788, and then to the countess Sophia von Redern. He published, besides the works already noticed, "The History of the Christian Religion," 1806, 15 vols. 8vo; "The History of Alfred the Great," 1815; Odes; Satires; Translations from Æschylus, Sophocles, Pindar, &c.—His brother, CHRISTIAN, count Stolberg, was distinguished among the modern poets of Germany, and was an admirer and disciple of Klopstock. He was born Oct. 15, 1748, and died January 18, 1821.—*Biog. Univ.*

STOLL (MAXIMILIAN) a celebrated German physician, born in Suabia, in 1742. His father was a surgeon, and he was destined for the same profession; but the sight of an operation so much disgusted him, that he relinquished the study of surgery, and obtained admission into the college of the jesuits at Rotweil. After a three years' novitiate, he

entered into the order in 1761; but being employed to teach the classics at Halle, in the Tyrol, his mode of instruction displeased his superiors, and he left the society in 1767. He then determined to apply himself to the study of medicine, which he prosecuted at Strasburg and at Vienna, where he was admitted M.D. in 1772. A few months afterwards he was nominated physician to a canton in Hungary, and in 1776 he removed to Vienna, where he succeeded Dr de Haen as a medical lecturer. He died March 23, 1788. Among his works are "Ratio Medendi," 1777—80, 4 vols. 8vo, of which there is a French translation; "Aphorismi de Cognoscendis et Curandis Febris," 1787, 8vo; "Prælectiones in diversos Morbos chronicos," 1788—9, 2 vols. 8vo; and "Dissertationes medicæ ad Morbos chronicos pertinentes, in Universitate Vindobouensis habitæ," 1788—9, 4 vols. 8vo, which, as well as the preceding, was published after the death of the author, by Eyerel. Professor Stoll was a great advocate for inoculation of the small-pox, which he extensively practised.—*Biog. Univ.*

STOLLE (GOTTLIEB), THEOPHILUS STOLLIUS, a German critic and bibliographer, born at Lignitz in Silesia, in 1673. He studied at Breslau and Leipsic, and afterwards travelled in Holland and Germany with a young nobleman, to whom he was tutor. He then went to Halle and Jena to complete his academical education, and in 1705 maintained a thesis "De splendida magis quam solida Ethnicorum Philosophorum Doctrina morali." Having taken his degrees he became rector of the gymnasium of Hildburghausen; and in 1714 having been aggregated to the faculty of philosophy at Jena, he subsequently obtained the professorship of that science. In 1738 he was nominated keeper of the university library at Jena; and he died in that city, March 14, 1744. His principal work is an "Introduction to the History of Literature," of which there is a Latin translation by Charles Henry Lange, 1728, 4to. He also published remarks on "Heumanni Conspectus Reipublicæ Literariæ;" "Observations on the most important Books in the Library of G. Stolle;" "An exact View of the Lives, Writings, and Doctrines of the Fathers of the Church in the first four Centuries," &c.—*Biog. Univ.*

STONE (EDMUND) an eminent mathematician, who was a native of Scotland, and was the son of the duke of Argyle's gardener; but the time and place of his birth are not exactly known. With the assistance of books only, he learnt Latin and French and the elements of mathematics. Before he was eighteen he had acquired a knowledge of geometry and analysis; and his proficiency having engaged the attention of the nobleman, in whose gardens he was employed under his father, an occupation was procured for him which left him leisure for his favourite pursuits. He at length went to London, where he made himself known by his talents; and in 1725 he was chosen a fellow of the Royal Society, but his

name was erased from the registers of that learned corporation in 1742 or 1743. Being obliged to employ himself in writing for a subsistence, he rather injured than increased his reputation by some of his productions; and he died in poverty in March or April 1768. Besides several articles in the Philosophical Transactions, he published English translations, and improved editions of mathematical works. His principal work is "A New Mathematical Dictionary," first printed in 1726, 8vo; and he was the author of "A Treatise on Fluxions," 1730, 8vo, partly taken from the marquis de l'Hospital's "Analyse des Infiniments Petits," and "Some Reflections on the Uncertainty of the Figure and Magnitude of the Earth, and on the different Opinions of the most celebrated Astronomers," 1766, 8vo.—*Encyclop. Britan. Biog. Univ.*

STONE (JEROME) the son of a mariner, was born in the county of Fife in Scotland. His father dying abroad when he was but three years old, and his mother being in straitened circumstances, he obtained only such a common education as was afforded by the parish school, after which he became a travelling chapman or pedlar. The love of literature induced him to exchange the sale of haberdashery for that of books, that he might have an opportunity for reading. He studied Greek and Hebrew, and after learning enough of those languages to be able to read the Old and New Testaments in the original tongues, he acquired a knowledge of Latin. He was encouraged to prosecute his studies at the university of St Andrew's, whence he was recommended as usher to the school of Dunkeld; and two or three years after he succeeded to the office of master in that seminary. He died in the thirtieth year of his age in 1757, leaving imperfect an ingenious and learned work, entitled "An Inquiry into the Original of the Nation and Language of the Ancient Scots, with Conjectures about the primitive State of the Celtic and other European Nations;" an allegorical tract entitled "The Immortality of Authors," which he also left in manuscript, has been published and often reprinted since his death. Some very humorous poetical pieces of his composition appeared in the Scots' Magazine.—*Encyclop. Brit.*

STONE (NICHOLAS) an English statuary of eminence in the reigns of James I and his son. He was employed under Inigo Jones on the embellishments of the Banqueting-house, Whitehall; and the gate and porch of St Mary's church, Oxford, also afford fine specimens of his productions. He executed many sepulchral monuments, among which the best known is that of the Bedford family, for which he was paid 120*l*. He died in 1647, aged sixty-one.—HENRY STONE, his son, was also a sculptor, but he was principally noted as a painter. He was an imitator of Vandyck, some of whose portraits he copied with remarkable fidelity. He passed several years in Holland, France, and Italy; but he died in London in 1653.—His younger brother, JOHN STONE, was likewise a painter, and was emu-

played in England in the reigns of the two Charleses. He studied under Cross, and going abroad for improvement, he remained there thirty-seven years, and acquired a knowledge of several languages.—*Walpole. Rees's Cycl.*

STORACE (STEPHANO) an eminent composer of dramatic music, the son of an Italian performer on the bass viol of the same name, long settled in London, where the subject of this article was born in 1763. Displaying early in life a strong musical talent, he was sent by his father to Italy, that he might enjoy every opportunity of cultivation, where his progress was so rapid, that at this, the very commencement of his career, he produced his celebrated finale to the first act of the "Pirates," and some others of his most finished compositions. On his return to England he resided at Bath, till the friendship of the well-known Michael Kelly procured him the appointment of composer to Drury-lane theatre. In this capacity he continued to act with a daily increasing reputation, till a violent attack of gout in the head carried him off in the flower of his age in 1796. His compositions are remarkable for their fire and spirit, and his melodies especially have not often been excelled. His productions are the music to "The Doctor and Apothecary," a farce, 1788; "Haunted Tower," opera, 1789; "No Song no Supper," farce, 1790; "Siege of Belgrade," opera, 1791; "Cave of Trophonius," musical interlude, 1791; "Pirates," and "Dido," operas, 1792; "Prize," and "Glorious First of June," musical entertainments; "Cherokee," and "Lodoiska," operas, 1794; "Three and the Deuce," comic drama, 1795; "My Grandmother," farce, "Iron Chest," musical play, and "Mahmoud," an opera, 1796.—His sister, ANNA SELINA STORACE, an excellent comic actress and accomplished singer, was a pupil of Sacchini; and after singing at Florence, Vienna, &c. between the years 1780 and 1787 with great reputation, came to London in the latter year, and soon rose to be a first-rate favourite in her profession, a station which she maintained till her decease, which took place in the neighbourhood of London in 1814.—*Biog. Dict. of Music.*

STOSCH (PHILIP, baron) a distinguished antiquary, born March 22, 1691, at Custrin in Germany, where his father was a physician and burgo-master. He studied at Frankfurt-on-the-Oder, and was designed for the ecclesiastical profession, but his taste led him to devote his time to numismatics. In 1708 he visited Jena, Dresden, Leipsic, and other places in Germany, for the purpose of examining cabinets of medals and antiquities. In 1710, going to the Hague, he was recommended by his uncle, baron Schmettau, the Prussian minister, to the celebrated Dutch statesman Fagel, who employed him on a mission to England, where he became acquainted with sir Hans Sloane, lords Pembroke, Winchelsea, Carteret, and other virtuosi. In 1713 he went to Paris, and the following year to Rome; and returning to Germany, he engaged in collecting other antique curiosities besides me-

dals, particularly engraved gems. At Augsburg he fortunately discovered the celebrated ancient itinerary called the "Peutingerian Table," which he subsequently sold to prince Eugene; and it is at present preserved in the imperial library at Vienna. He then went to Dresden, where he was well received by the king of Poland, who appointed him his counsellor. At length he accepted the office of resident from the English court at Rome, for the purpose of observing the conduct of the pretender and his adherents. This not very honourable post becoming extremely hazardous after the accession of pope Clement XII, who was disposed to favour the Stuarts, baron Stosch thought proper to withdraw to Florence, where he died of apoplexy, November 7, 1757. He deserves a place among the most skilful and industrious antiquaries of his time; his collections, and especially those of cameos and engraved gems, being peculiarly valuable. A catalogue of the latter was drawn up by Winkelmann. The baron himself published two volumes of plates representing his gems, engraved by Picart and Adam Schweickard; and he was also the author of a "Letter on a newly-discovered Medal of the Emperor Carinus and his Consort," 1755, 4to.—*Biog. Univ.*

STOTHARD (CHARLES ALFRED) an artist and antiquary of great talent and research, son of Thomas Stothard, R.A. born July 5, 1789. He exhibited at an early age a great fondness for drawing, which afterwards ripened into a love for the art little short of enthusiasm. His paintings are remarkable for the faithful delineation which they exhibit of ancient costume, a subject to which he more especially directed his attention, visiting for that purpose not only the principal vestiges of antiquity in our own country, but extending his researches to the continent. His drawings of the effigies of various members of the house of Plantagenet, taken from the abbey of Fontevraud, are equally curious and accurate; and it is gratifying to reflect that his efforts not only succeeded in preserving copies of these interesting relics, but mainly contributed to save the originals themselves from destruction. In 1810 appeared his celebrated picture of the death of Richard II, equally valuable for the excellence of its execution, and from the accuracy with which the costume of the period to which it refers is represented. In the same year appeared the first number of his *Monumental Effigies of Great Britain*, the tenth number of which was preparing for publication when a melancholy accident caused him an untimely death. In 1816 he visited France, and commenced at the instance of the Antiquarian Society his elaborate drawings from the celebrated tapestry deposited at Bayeux; which he afterwards, in a memoir addressed to the society, proved from internal evidence to be contemporary with the commonly received era of its production, the period succeeding the Norman conquest, satisfactorily refuting the objections of the abbé de la Rue. This little essay is to be found in

the nineteenth volume of the *Archæologia*. In July 1819 he was elected a fellow of the Antiquarian Society; and in the same year made a series of drawings from the paintings then lately discovered on the walls of the painted chamber in the house of Lords. Being engaged to make some illustrations for Mr Lysons's *Magna Britannia*, he set out for that purpose on a tour through Devonshire, and was employed in the act of tracing the stained glass in a window over the altar of the parish church of Bere Ferrers in that county, when the ladder on which he was standing giving way, he was precipitated to the earth, and his head striking against the monument of a knight in the chancel, his life was instantaneously terminated by a concussion of the brain. This fatal accident took place on the 28th May 1821, in the thirty-fourth year of his age. He left behind him several unfinished manuscripts and unpublished drawings, especially a work on ancient seals, which he had begun, and materials for a work illustrative of the age of Elizabeth. He lies buried in the church which was the scene of his decease.—*Ann. Biog.*

STOW (JOHN) a valuable historian and antiquary, was born about 1525, in London, and as is usually supposed in the parish of St Michael, Cornhill. His father was a tailor, to which business he was also brought up; but his mind early took a bent towards antiquarian researches, which became his leading pursuit through life. He first exhibited himself as an antiquary in an able settlement of the boundaries between Lime Street and Bishopsgate wards. Continuing his studies, about the year 1560 he formed the design of composing the annals of English history, to the completion of which work he sacrificed his domestic concerns, and quitted his trade. For the purpose of examining records, charters, and other documents, he travelled on foot to several cathedrals and other public establishments, and as far as his means would go, purchased old books, MSS. and parchments, until he had made a large and valuable collection. The want of patronage obliged him at length to intermit his favourite pursuits, until the assistance which he received from archbishop Parker enabled him to resume them. In common with many other antiquaries he was thought to be favourable to the ancient religion, and in 1568 an information was laid against him as a suspicious person who possessed many dangerous and superstitious books. Dr Grindal, bishop of London, accordingly ordered an investigation of his study, in which of course were found many popish books among the rest, but the result has not been recorded. Two years afterwards an unnatural brother having defrauded him of his goods, sought to take away his life by preferring one hundred and forty articles against him before the dreaded ecclesiastical commission. So base, however, was the perjury and means employed on this occasion, that he was acquitted. He had previously printed his first work, entitled a "Summarie of the

Englyshe Chronicles," compiled at the instance of the favourite Dudley, afterwards earl of Leicester, which production was published in 1565, and afterwards continued by Edmond Howes, who printed several editions. In 1585 he petitioned the lord mayor and court of aldermen for two freedoms, in which request he pleads his honourable mention, in various works, of the worthy deeds of the notable citizens of London. Four years afterwards he claimed a pension on the same score, but with what success does not appear. He contributed largely to the improvement in the second edition of Hollingshed, in 1587, and gave corrections and notes to two editions of Chaucer. At length, in 1598, appeared his "Survey of London," the work on which he had been so long employed, and which came to a second edition during his lifetime. He was very anxious to publish his large chronicle, or history of England, but lived only to print an abstract of it, entitled "*Flores Historiarum*, or *Annals of England*." From his papers Edmond Howes published a folio volume, entitled "Stow's Chronicle," which does not however contain the whole of that "far larger work" which he had left in his study, transcribed for the press, and which is said to have fallen into the possession of sir Symonds Dewes. It is painful to record the final suffering and poverty of this ingenious and industrious man, one proof of which is recorded in a licence granted him by James I., "to repair to churches or other places to receive the gratuities and charitable benevolence of well-disposed people." "This act, so discreditable to the period, took place in the seventy-eighth year of his age. He died afflicted by poverty and disease, in 1605, at the age of eighty. Stow's "Survey" has run through six editions, the sixth and last of which was published in 1754, with considerable additions, and a continuation of all the useful lists. Stow is described as a man of cheerful aspect, and mild and courteous behaviour. He was a correct and zealous antiquary, and a sincere lover of truth, who never would be satisfied without a recourse to original documents. He is uniformly referred to with respect, and may be considered entitled to the lead among those in his line of inquiry who claim the praise of humble and industrious utility.—*Fuller's Worthies. Biog. Brit. Life by Strype.*

STRABO, a famous ancient geographer, who was a native of Amasia, a city of Pontus, or Cappadocia. He lived in the reigns of the first two Roman emperors, but the time of his birth and death are not known. It appears that he studied grammar and rhetoric at Nyssa, and that he was instructed in the principles of philosophy in several of the most celebrated schools of Asia. He was a great traveller, and visited a considerable proportion of the countries which he describes in his treatise of "Geography," in seventeen books, the only one of his works which have been preserved, and which is justly reckoned among the most important relics of antiquity. He also wrote "Historical Memoirs," which are cited by

STR

Josephus, by Plutarch, and by the author himself in his *Geography*. The principal editions of Strabo are those of Aldus, Ven. 1516, folio; of Casaubon, Geneva, 1587; and Paris, 1620, folio; of Almeloveen, Amsterd. 1707, 2 vols. folio; of Siebenkees and Tzschucke, Leips. 1796—1811, 6 vols. 8vo; of Falconer, Oxford, 1807, 2 vols. folio; and of Coray, Paris, 1818—19, 4 vols. 8vo. A French translation was published at Paris, 1805—19, 5 vols.—*Aikin's Gen. Biog.*

STRABUS or STRABO (WALAFRIDUS) a Benedictine monk of the ninth century, who distinguished himself by the extent of his knowledge, and who was the author of numerous works, including verses of extraordinary elegance for the period to which they are attributed. Bale and Pits represent him as an Anglo-Saxon, and the brother, or relation, of the famous Beda; but it is more probable that he was a native of Suabia. He was educated at the abbey of St Gall, whence about 818 he removed to the abbey of Fulda. Returning to St Gall he was appointed dean of that monastery in 842, and he at length became abbot of Reichenau, in the diocese of Constance. The emperor Louis I sent him on an embassy to Charles the Bald, king of France, and Strabo died at Paris, in the course of that mission, about 849. A list of his works may be found in the annexed authority. Among them is a poem entitled "*Hortulus*," or the Little Garden, which displays to great advantage his talents as a writer of didactic poetry, and the worthy precursor of Pontanus, Rapin, and other georgical authors.—*Biog. Univ.*

STRADA (FAMIANUS) an Italian historian and elegant writer of modern Latin poetry, born at Rome in 1572. He entered into the society of the jesuits in 1592, and became professor of rhetoric at the Roman college, where he resided till his death in 1649. His most famous work is a "*History of the Wars in the Netherlands*," in Latin, written at the request of the princes of Farnese, and extending from the death of Charles V to the year 1590. This production was criticized by cardinal Bentivoglio, who wrote on the same events; and it was virulently attacked by Scipoppius, in his "*Infamia Famiani Stradae*," the exaggerated censure of which injured the credit of the critic more than that of the historian. Strada is also advantageously known on account of his "*Prolusiones Academicæ*," which have been repeatedly published. In one of these prolusiones he has introduced ingenious imitations of the style of the most celebrated Roman poets, of which there are many translations, including those published by Addison in the *Guardian*.—*Tiraboschi. Biog. Univ. Aikin.*

STRADELLA (ALESSANDRO) a Neapolitan musician and composer, who with the exception perhaps of Carissimi, was the most celebrated writer of vocal music in the seventeenth century, about the middle of which his reputation had reached its zenith. His private history is as romantic in its progress as melancholy in its termination. While yet a

STR

very young man he was employed by a Venetian noble to instruct his mistress, Hortensia (a girl descended of a parician family at Rome, whom he had seduced), in the art of singing. A strong and mutual attachment between the master and the pupil ensued; an elopement was the consequence, and the lovers fled to Rome. To this city they were followed by two ruffians, dispatched by the forsaken Venetian with peremptory orders to assassinate Stradella. The opportunity selected by the villains to carry their murderous design into execution was the evening after an oratorio of their intended victim's own composition, in which he was both to play and sing the principal part in the church of St John Lateran; on his return from which they determined to avail themselves of the darkness of the evening. Entering the church during the performance of the music, they resolved to wait quietly till its conclusion, but long before that took place their hearts were so softened by its excellence, that they found it impossible to execute their design, and accosting him afterwards in the street, confessed their errand, recommending him to flee to some safer asylum. He took their advice, and retired to Turin, where the duchess of Savoy, to whom they confessed their danger, placed the lady in the security of a convent, and retained Stradella in the palace in quality of chapel master. Their vindictive enemy however, enraged at learning their escape, sent after them two other emissaries of a more determined character and less accessible to the charms of music, who after residing for some time in the city under a passport from the abbé D'Estrade, the French ambassador at Venice, in the character of merchants, at length surprised Stradella walking one evening on the ramparts, and plunged their daggers into his breast. This done, they took refuge in the house of the marquis de Villars, ambassador from the court of France to that of Turin, who insisting on his privilege, refused to give them up; and eventually, though undeceived as to their assumed characters, allowed them to escape. In the mean time Stradella, whose wounds, though serious were not mortal, slowly recovered, and a year having elapsed, he fancied the vengeance of his enemy had been satiated. In this supposition he was fatally deceived, for being invited to Genoa to compose an opera in the year 1678, he set out with his wife Hortensia for that city, intending to return to Turin in time for the carnival; but scarcely had they reached the place of their destination when a third set of assassins found means to enter their chamber early one morning, and stabbing them both to the heart effected their escape, by means of a boat which waited for them in the port. Of the works of this unfortunate man and delightful composer the most celebrated are "*John the Baptist*," an oratorio written for five voices; and a serious opera, the production of which at Genoa proved so disastrous to him, entitled "*La Forza dell' Amor paterno*."—*Biog. Dict. of Mus.*

STR

STRADIVARIUS (ANTHONY) a celebrated musical-instrument-maker, born at Cremona, about 1670. He was the last and the most skilful pupil of the Amati, who for more than a century enjoyed the reputation of being the first lute-manufacturers in Europe. The violins of Stradivarius are extremely valuable, especially those fabricated between 1700 and 1722. He died about 1728.—*Biog. Univ.*

STRAHAN (WILLIAM) an eminent printer, who was a native of Edinburgh. Having acquired a knowledge of his profession, he removed to London, and entered into business. He succeeded so well that in 1770 he was enabled to purchase a share of the patent office of king's printer. In 1775 he became MP. for the borough of Malmesbury, having for his colleague the celebrated C. J. Fox; and in the next parliament he had a seat for Wotton Bassett. Mr Strahan, who was much esteemed by persons of rank and learning, was himself an author, having written a paper in "The Mirror," and some other pieces. He died in 1785, aged seventy.—*Nichols's Lit. Anec.*

STRALENBERG (PHILIP JOHN) a Swedish military officer, born in Pomerania in 1676. His proper name was Tabbert, which was changed for that of Stralenberg, when his family was ennobled by Charles XII in 1707. After having served in Poland, he accompanied the king of Sweden in his Russian expedition, and was present at the battle of Pultowa, where he was taken prisoner. He was carried to Moscow, and at length sent to Siberia, where he continued thirteen years. He obtained permission to travel in the interior of the country, of which he made a geometrical survey, and confided the care of his papers to a merchant of Moscow, on whose death they fell into the hands of the emperor Peter I. Stralenberg continued his labours, and having preserved copies of his charts and memoirs, when he had completed his design he was allowed to return to Sweden. The emperor would willingly have retained him in his service, but he rejected the offers made him, and went to Stockholm, where his sufferings in the cause of his sovereign were but indifferently rewarded. He obtained in 1724 the rank of lieutenant-colonel, with the pay of a captain; and in 1740 he was appointed commandant of the fortress of Carlsham, where he died in 1747. He published at Lubeck, in 1730, in the German language, his "Historico-Geographical Description of the North-east Portion of Europe and Asia," 4to.—*Aikin's Gen. Biog. Biog. Univ.*

STRANGE (sir ROBERT) an eminent engraver, born in Pomona, one of the Orkney islands, in 1725. He first studied painting, and being at Edinburgh in 1745, he was induced to enter the army of the pretender, after whose defeat at Culloden he concealed himself for some time in the Highlands, and then returned to Edinburgh to pursue his studies. At length he went to Paris, and became the pupil of Le Bas, who excelled as a landscape engraver. Strange however devoted his talents to historical engraving, in which he arrived at great

STR

eminence. In 1751 he settled in London, and after residing there about seven years, he took a journey to Italy, where he remained a considerable time, and was admitted a member of several Italian academies of the fine arts, and of the academy of painting at Paris. He received the honour of knighthood in 1787, and died in London in 1795. He published in 1769 "A Descriptive Catalogue of a Collection of Pictures selected from the Roman, Florentine, Lombard, Venetian, Neapolitan, Flemish, French, and Spanish Schools, with Remarks on the principal Painters and their Works, with a List of thirty-two Designs from the best Compositions of the great Masters, collected and drawn during a Tour of several Years in Italy," 8vo.—*Aikin's Gen. Biog.*

STRAPAROLA DI CARAVAGGIO (JOHN FRANCIS) an Italian novelist of the sixteenth century, of whose personal history so little is known that it is uncertain whether the designation applied to him is that of his family or a name assumed, according to a common custom of his literary contemporaries. One of his publications, "Sonetti, Strambotti, Epistole e Capitoli," was printed at Venice in 1508; and he was living in 1554, the period when the second part of his Tales was published. Straparola obviously imitated Boccaccio, from whom, as well as from Poggio, Morlino, Machiavel, and others, he has borrowed with great freedom the incidents of many of his narratives, so as to have not undeservedly incurred the imputation of plagiarism. His tales or novels, "Le Piacevoli Notti," have been often printed.—*Biog. Univ.*

STRATO, a philosopher of Lampsacus, who flourished in the reign of Ptolemy Philadelphus, to whom he gave lessons in metaphysics. Although of the Peripatetic or Aristotelian school, his tenets approached nearer to those of the materialists of modern times than those of Theophrastus, his immediate predecessor, or any of the sages who had preceded him at the Lyceum. According to Brucker he maintained that there is inherent in nature a principle of motion or force, without intelligence, which is the only cause of the production or dissolution of bodies. It was a more rational deduction from his physical inquiries, that the seat of the soul is in the brain, and that it only acts by means of the senses.—*Diog. Laert. Bayle, art. Spinoza.*

STRAUCHIUS (ÆGIPIUS, or GLISS) an eminent mathematician and zealous controversialist of the seventeenth century, a native of Wittemberg in Germany, born 1632. Having graduated in the university of Leipsic, he returned to the place of his birth, where he obtained a divinity professorship, which he afterwards resigned for a similar appointment at Dantzic. Polemical disputes running high, the earnestness and acrimony with which he indiscriminately attacked both Catholic and Calvinist, as a devoted partizan of Luther, not only lost him his situation, but was the occasion of his being thrown into prison by the elector of Brandenburg (whom he had personally re-

STR

affected upon in his sermons) at a time when he was travelling through that prince's dominions. His principal writings consist of "Breviarium Chronologicum," a work of considerable merit, of which there is an English translation by Sault; "Breviarium Historicum;" "Doctrina Astrorum Mathematica;" and "Geographia Mathematica." He survived his liberation some years, and died in 1682.—*Jocher, Allgem. Gelehrte Lexicon.*

STRIGELIUS (VICTORINUS) a philosophical divine of the sixteenth century, distinguished among the first reformers. He was a Suabian by birth, being born in 1524, at Kaufbier, and completed his education at Wittenberg, of which university he became a member in his twentieth year. Here he attached himself particularly to Melancthon and Martin Luther, whose doctrines he strongly advocated; and among the many absurd schisms into which Protestantism, even in those days of its infancy, was divided, he appears to have uniformly shown much moderation and good sense, especially in regard to the disputes carried on between Major and Amadorf, at Eisenach, in 1556, on the efficacy of good works, wherein the latter controversialist went so far as to denounce them as being actually pernicious to the soul. This, which may be called the fourth Lutheran schism, was ably treated of by Strigelius. In 1556 he held a public disputation at Weimar, against Illyricus, but at length falling into discredit on account of the part he took in the argument between the theologians of Weimar and those of Wittenberg, he suffered an imprisonment of three years' duration. In 1563 having obtained his liberty, he took up his abode at Leipsic, where he continued to lecture in theology, logic, and metaphysics, till the arm of power again interfered, and drove him for refuge into the Palatinate. The offer of an ethical professorship at length induced him to settle at Heidelberg, where he remained till his death in June 1569. He was the author of a commentary on the Old and New Testaments; "Scholæ. Historicæ;" "Epitome Doctrinæ de primo Motu," &c.; but although a man of considerable learning, which he was especially famed for conveying to his pupils by his admirable mode of instructing them, his writings are now but little known.—*Id.*

STRITTER (JOHN GOTTFRIED von) a Russian historian, born in 1740. After he had finished his studies, he went to Petersburg, and obtained the office of inspector of the gymnasium of the academy of Sciences. In 1780 he was appointed archivist of the empire, and at length counsellor of state. He died March 2, 1801. He distinguished himself by his erudition, and his numerous researches into the works of the Byzantine historians. The result of his labours appeared in his "Memorie Populorum olim ad Danubium, Pontum Euxinum, Paludem Mæotidem, Caucasum, Mare Caspium, et inde magis ad Septentriones incolementium, e Scriptoribus Historiæ Byzantinæ erutæ et digestæ," Petersburg. 1771—80, 4 vols. 4to. He also drew up an

STR

abridgment of this work in Latin; and he wrote historical dissertations, and a history of Russia, in the Russian language.—*Biog. Univ.*

STROEMER (MARTIN) professor of astronomy, born in 1707 at Upsal, where he died in 1770. To the study of astronomy he joined that of natural philosophy; and he was one of the first who applied electricity to medical purposes. After having been appointed to organize the school of marine cadets at Carlscrena, he was employed in constructing improved charts of the coasts of Sweden. Stroemer succeeded the learned Andrew Celsius in the astronomical chair at Upsal; and he was a member of the Academy of Sciences at Stockholm, to whose Memoirs he was a contributor. He also published a Swedish translation of the Elements of Euclid; and remarks on the ancient Runic calendars used in Sweden.—*Biog. Univ.*

STROGONOFF (count ALEXANDER de) a Russian nobleman, born about the middle of the eighteenth century. He received a good education, and in his youth displayed a strong taste for literature, especially that of the French. Several years which he passed at Paris in intercourse with men of letters, doubtless occasioned this partiality. Returning to Petersburg, he was nominated president of the Academy of the Fine Arts, and he made a noble use of his immense riches, by giving an asylum in his palace to authors and artists, and by forming a valuable collection of paintings, medals, and engravings, and a rich library, which was ever open to the lovers of the arts and sciences. He died at Petersburg, September 27, 1811.—Count PAUL STROGONOFF, his nephew, entered into the army, and served in Austria in 1805, and in Prussia in 1807, when he was made adjutant major-general. He was afterwards employed against the Swedes in Finland, and against the Turks in Moldavia; and after being engaged against the French, in the campaigns of 1812 and 1813, he was killed under the walls of Laon, in February 1814.—Baron ALEXANDER de STROGONOFF, born in 1772, displayed an early genius for learning and the arts, and travelled for improvement in Germany, France, and Italy. He published at Geneva, in 1809, two volumes of "Letters to his Friends," written with taste and sensibility, to which were added two remarkable little pieces, entitled, "The History of the Chevaliers de la Vallée," and "The History of Pauline Dupuis." The baron de Strogonoff then laboured under a state of blindness and debility, which did not however disturb the tranquillity of his mind. His death took place in September, 1815.—*Biog. Univ.*

STROZZI (TITUS and HERCULES) father and son, were two poets of Ferrara, who both wrote in Latin. Their poems were printed together at Venice, 1513, 8vo, and consist of elegies and other compositions in a pure and pleasing style. Titus died about 1502, and Hercules, his son, was killed by a rival in 1508. There have been several other writers

of the name.—**CYRIAC STROZZI** was born at Florence in 1504, and became professor of Greek at Florence, Bologna, and Pisa. He added a ninth and tenth book to Aristotle's *Politics*, and composed them both in Greek and Latin. He died in 1565.—**THOMAS STROZZI**, a jesuit of Naples of the seventeenth century, wrote a Latin poem in praise of chocolate, a discourse on liberty, and other works.

—**GIULIO STROZZI** distinguished himself by a fine piece on the origin of the city of Venice, entitled "*Venetia edificata*." He died about 1636.—**NICOLAS STROZZI**, who died in 1654, another poet, was author of two tragedies, "*David of Trebisonde*," and "*Conradus*;" also "*Idylls*," "*Sonnets*," and other works.—*Moveri. Tiraboschi.*

STROZZI (PHILIP) a celebrated Florentine patriot, was a member of the eminent commercial family of the same name, and one of the richest citizens of Florence in the early part of the sixteenth century. He was allied by marriage with the Medici, but was too much attached to the ancient republican constitution, to acquiesce in the domination of that house. Accordingly, when the sovereignty was assumed by Alessandro de' Medici, he joined the party which aimed at restoring a free government. Their application for support to the emperor Charles V being unattended to, Strozzi exercised the influence of a master spirit over Lorenzo de' Medici, and induced him to assassinate the duke. The only result of this action was the immediate succession of Cosmo, whom he opposed at the head of a body of troops, but being defeated at the battle of Marona, he was made prisoner. Apprehending that he should be put to the torture to force a disclosure of his accomplices, he resolved to anticipate the trial by a voluntary death, which he accomplished by a poniard which had been negligently left in his apartment. Having first traced with the point of it upon the mantle-piece the line from Virgil, "*Exoriare aliquis nostris ex ossibus ultor!*" he pierced his breast, and immediately expired. This event took place in 1538. He was doubtless a man of great qualities, and disinterestedly sincere in his republican sentiments. His sons went to France, where one of them became a marshal of France.—*Bayle. Nouv. Dict. Hist.*

STRUENSEE (JOHN FREDERICK) a celebrated political adventurer, was the son of a clergyman at Halle in Saxony, where he was born in 1737. He was brought up to medicine, and on taking his degree of doctor in 1757, removed to Altona. Here he acquired a connexion, which so far promoted his interest, that through its influence he was in 1768 appointed physician to the king of Denmark, whom he accompanied on his tour to Germany, France, and England. Soon after the marriage of Christiern VII with the princess Matilda of England, a coolness was observed between the king and queen, which was fomented by the queen-dowager by every means in her power. At length the young queen being led into an observation of the influence

of Struensee over the king, and of his accomplishments and attractive qualities, sought by his means to effect a reconciliation with her husband, and succeeded. After a long course of conflicts and court intrigues, count Bernstorff and the other ministers of Christiern were obliged to yield to the influence of the queen and the new favourite, with his firm coadjutor, count Brandt. The manner in which Struensee exercised his new authority was that of a man whose presumption was far greater than either his courage or his talents; and although some of his measures and reforms were in themselves desirable and well intended, his manner of advancing them occasioned very great disgust. Taking advantage of the extreme imbecility of the monarch, he gradually contrived in the name of the king to direct the whole machine of government. Such a state of things could not last, and a conspiracy was formed by a strong party of the nobility, headed by count Rantzau and aided by the queen-dowager. So well were their measures taken, that on the night of the 16th Jan. 1772, the young queen, Struensee, then become count, his brother, and count Brandt, with all their friends and adherents were arrested; and the weak monarch Christiern, who had been roused in his bedchamber, and made to believe that his life was in danger, signed an order by which all this was rapidly effected. The unfortunate and imprudent queen was conveyed with much indignity to the castle of Cronenburgh; and an immediate prosecution was instituted against Struensee, who was convicted of treason, and sentenced on the 25th of the following April to lose his right hand, to be then beheaded, and his body to be quartered. This barbarous sentence he endured on the 28th of the same month along with his friend and associate, count Brandt, who had also been condemned. An elaborate account of the conversion of this presumptuous and unfortunate adventurer, from a state of scepticism to religious belief, forms the subject of a narrative by a Dr Munter, who attended him in his last moments. The life of the queen was in some danger, and what the result might have been, were so much imprudence existed to countenance imputation, had not a British fleet appeared in the Baltic, is doubtful. By that fleet she was conveyed to Zell, where she died in 1776, leaving issue the present king of Denmark.—*Papers respecting Trial of Count Struensee.*

STRUTT (JOSEPH) an artist and antiquary, was born in 1749, at Springfield in Essex, where his father followed the business of a miller. In 1764 he was articled to the unhappy engraver, W. Wynn Ryland, and in 1770 obtained the gold and silver medals of the Royal Academy. Uniting the study of antiquities with the practice of his art, he published in 1773 his first work, entitled "*The Regal and Ecclesiastical Antiquities of England*," 4to, which contained representations of all the English monarchs from Edward the Confessor to Henry VIII. This was followed by "*Horda Angel Cynnann*," or a complete

STR

view of the manners, customs, arms, habits, &c. of the English, from the arrival of the Saxons to the times of Henry VIII, &c. 1774, 1775, and 1776, 3 vols. with 157 plates. In 1777 and 1778 he published "A Chronicle of England," which he meant to extend to six volumes, but dropped the design for want of encouragement. His "Biographical Dictionary of Engravers" appeared in 1785 and 1786, in 2 vols. In 1790 he was obliged by the state of his health to quit the metropolis, and retire into Hertfordshire, where he occupied himself in a series of plates for the *Pilgrim's Progress*. In 1795 he returned to London, and began to collect materials for his "Complete View of the Dresses and Habits of the People of England," &c. the first volume of which appeared in 1796, and the second in 1799, 4to. In 1801 he published his last and most favourite work, entitled "The Sports and Pastimes of the People of England," with forty plates, of which a new octavo edition, with a hundred and forty plates, edited by William Hone, is now (1827) in publication. He died in London in October 1802, aged fifty-three. His modest character scarcely met during his lifetime with the encouragement it deserved. He left some MSS. in the possession of his son, from which have since been published his "Queen Hoo Hall, a Romance," and "Ancient Times, a Drama," 4 vols. 12mo; also "The Test of Guilt, or Traits of Ancient Superstition, a dramatic Tale," and verses, which may be deemed an entire failure.—*Nichols's Lit. Anec.*

STRUVE (GEORGE ADAM) an eminent German jurist, born of an honourable family at Magdeburg in 1619. He studied at Jena and Helmstadt; and was appointed in 1645 assessor of the juridical court at Halle. He took his degrees at Helmstadt the following year, and became professor of jurisprudence at Jena. In 1669 he relinquished this situation for that of first counsellor of the city of Brunswick; and he was employed in several important affairs by the elector and the princes of Saxony. He returned in 1673 to Jena, to occupy the chair of canon law, the first office in the university; and after being elected president of the senate and the consistory, he died December 15, 1692. The titles of his principal works, relating to the feudal and the civil law, may be found in the *Biographie Universelle*—His son, BURCHARD GOTTHELF STRUVE, one of the most learned and industrious of German bibliographers, was born at Weimar in 1671. He was educated at the gymnasium of Zeitz, after which he passed some time at Jena and other universities. His original destination was to the bar, at which he practised for a time, and then left it for the study of history and bibliography. He travelled repeatedly in Germany, Holland, and Sweden, after which ill-health and family misfortunes plunged him into a state of religious melancholy, which lasted two years. At length he was able to resume his studies, and being appointed librarian to the university of Jena, in 1697 he commenced lectures on philosophy, Greek literature, and antiquities. In

STR

1702 he was admitted doctor of law and philosophy at Halle, and received the same degrees at Jena, where two years after he succeeded professor Schubart in the chair of history. His talents attracted a great concourse of pupils, whence the curators of the university were induced to give him the title of professor extraordinary of law, and to procure for him that of counsellor to the elector of Saxony. He died May 28, 1738. Among his numerous and valuable works may be mentioned "Bibliotheca Juris Selecta," 1703, 8vo; "Introductio in Notitiam Rei Litterariæ, et Usuum Bibliothecarum," 1704, 8vo; "Bibliotheca Philosophica, in suas Classes distributa," 8vo; "Selecta Bibliotheca Historica," 1705, 8vo; "Syntagma Historiæ Germanicæ," 1716, 4to; "Antiquitatum Romanarum Syntagma," 1728, 4to; most of which have been repeatedly printed, and variously enlarged by succeeding writers.—*Saxii Onom. Lit. Biog. Univ.*

STRUYS (JOHN) a Dutch traveller, who about the middle of the seventeenth century made several voyages to the Japanese Islands, the Levant, and other parts of the East, an account of which was published by Glarius at Amsterdam, in quarto, in 1681, the year succeeding that of his decease. A French edition of the work, in three duodecimo volumes, appeared subsequently at Rouen in 1730.—*Nouv. Dict. Hist.*

STRYPE (JOHN) a voluminous contributor to English ecclesiastical history and biography, was of German extraction, but born in the suburban parish of Stepney in 1643. He was educated at St Paul's school, whence in 1661 he was removed to Jesus college, and afterwards to Catherine-hall, Cambridge. He graduated MA. in 1666, and taking orders was nominated to the perpetual curacy of Theydon Boys in Essex. He was soon after appointed minister, but never regularly inducted to the living of Low Layton in Essex, in which parish was Rickholts, formerly belonging to sir Michael Hickes, secretary to lord Burleigh, and still containing his numerous MSS. It is thought that his accidental access to these papers inspired Mr Strype with his strong attachment to historical antiquities, the first fruits of which was his publication entitled "Ecclesiastical Monuments, relating chiefly to Religion and the Reformation of it, and the Emergencies of the Church of England under Henry VIII, King Edward VI, and Queen Mary I," in three vols. folio, which volumes were printed in succession, the last in 1721. His "Annals of the Reformation," 4 vols. folio, began to be published in 1709, and were not completed until 1731. He also published an augmented edition of Stow's "Survey of London," in 2 vols. folio, 1720; and was a considerable benefactor to English biography, by publishing separately, in folio volumes, the lives of the archbishops Cramer, Parker, Grindal, and Whitgift, and in three octavo volumes, those of sir John Cheke, sir Thomas Smith, and bishop Aylmer. His diligence and exactness procured him considerable countenance from the leaders of the church,

with whom he was in constant correspondence, and although he was not adequately exalted, he seems to have been rewarded with various minor preferment. This laborious student was for many years rector of Hackney, in which he spent many years of the latter part of his life, which was prolonged to the age of ninety-four, his death taking place in December 1797. His works for some time after his death were much neglected, but have since risen in value from an increasing opinion of his industry and fidelity, however ungraced by style and the art of connexion. His life of Cranmer, &c. has been reprinted at the Clarendon press.—*Biog. Brit. Lysons's Environs. Gent. Mag.*

STUART (ARABELLA). See ARABELLA.
STUART (sir CHARLES) an English general, son of the marquis of Bute, born in 1753. He was educated under the superintendence of his father, and after having been presented at the principal European courts, he entered into the army, and was appointed aide-de-camp to the viceroy of Ireland. In 1775 he was sent to America, where he distinguished himself on several occasions. At the beginning of the war with the French republic, he was made a major-general, and employed in the Mediterranean, where he made himself master of the island of Corsica, and after having conciliated the minds of the inhabitants towards the British government, he returned home in 1796. His next service was in Portugal, whither he was sent at the beginning of 1797, at the head of an auxiliary corps of 8000 men; and his measures not only secured the country against the hostile designs of the French Directory, but also contributed to the future success of the British arms in the Peninsula. In 1798 he distinguished himself by the conquest of Minorca, which he had scarcely completed when he was summoned to the defence of Sicily, which he effectually guarded from the threatened danger, arising from the French invasion of Naples. At the close of the same year he was ordered to Malta, which Buonaparte had conquered in his voyage to Egypt. General Stuart, after having taken the fortress of La Valette by blockade, returned to England; and to his representations it was partly owing that the British government retained possession of that island, against the transfer of the sovereignty of which he strongly remonstrated. He died in 1801, leaving two sons, the elder of whom, the present sir Charles Stuart, was ambassador from the court of London to that of France, after the restoration of the Bourbons.—*Biog. Univ.*

STUART (JAMES EDWARD FRANCIS) the eldest son of James II by his second wife, Mary of Modena, born in London June 10, 1688. He was but five months old when his father was dethroned, and his mother with her infant fled to France, where Louis XIV afforded an asylum to the exiled family at St Germain. An attempt was made at the peace of Ryswick, in 1697, to insure the restoration of this young prince to the throne of his ancestors, which was only defeated by the op-

position of his father, as William III had agreed to procure the recognition of the prince of Wales, as he was styled, as his successor; but James II rejected the proposal, observing that he could support with resignation the usurpation of his son-in-law, but he could not suffer his son to become a party to it. On the death of the ex-king in 1701, Louis XIV recognised his son as king of England, by the title of James III, and a proclamation in the name of the latter was addressed to the English nation; but no effective measures were adopted in his favour. The death of William III revived the hopes of his party; but nothing beyond unavailing negotiation took place till 1708, when a maritime expedition against Scotland was fitted out, in which the prince embarked, under the command of the chevalier Forbin. This armament, however, being attacked by an English fleet of superior force, returned to France without landing the invading forces; and the young adventurer (who now assumed the name of the chevalier de St George) joined the French army in Flanders, and distinguished himself by his valour at the battle of Malplaquet. In the latter part of the reign of Anne repeated intrigues were set on foot to secure the restoration of her brother, or his succession to the crown after her death, but they proved entirely abortive; and on the treaty of Utrecht taking place in 1713, he was obliged to submit to a temporary retirement from France, and when he returned to Paris he resided there incognito. Had not the decease of queen Anne been speedily followed by that of Louis XIV in 1715, the invasion of Scotland by the pretender, as he was called, might have led to a very different result from that which actually took place. The regent duke of Orleans wished to maintain peace with George I; and the British ambassador at Paris was informed of the projects of the chevalier de St George by the abbé Strickland, one of his agents, who betrayed his confidence. The earl of Mar in Scotland raised the standard of revolt against the house of Hanover, proclaiming the heir of the Stuarts king, under the title of James III; and the latter embarking at Dunkirk, made a descent on the Scottish coast; but he soon perceived that success was hopeless, and he was obliged to return to France. Even that kingdom no longer yielded him an asylum, and he was forced to remove first to Avignon and then to Rome. In consequence of the disputes which occurred between the duke of Orleans and cardinal Alberoni, the prince was a few years after invited to Spain, where he was well received by Philip V; but the visit had no important influence on his affairs, and Rome again became his retreat, as it was his future residence. In 1720 he married the princess Mary Casimira Sobieska, grand-daughter of the famous John Sobieski, king of Poland. This union was not attended with domestic happiness, and a separation between the husband and wife was with difficulty prevented by the interference of cardinal Alberoni, then a resident at Rome. He took no active part

STU

in the expedition against Scotland under his son in 1745; and the latter part of his life was dedicated to exercises of piety. He died January 2, 1766.—*Life of James II. Biog. Univ.*

STUART (CHARLES EDWARD LOUIS PHILIP CASIMIR) son of the preceding, known in England by the appellation of the young pretender, born at Rome December 31, 1720. In his youth he was styled the count of Albany, and under that title, at the age of seventeen, he travelled in the north of Italy, and visited Parma, Genoa, and Milan. The war which broke out between England and France in 1740, inspired the partizans of the exiled family with hopes of a restoration, and excited the young prince to risk his personal safety in an attempt towards the recovery of the throne of his ancestors. In June 1745 he embarked at Nantes with a few followers, and landing on the western coast of Scotland, he found himself ere long at the head of a considerable army. He marched to Perth, and having taken possession of that place he proclaimed his father king of England, Scotland, and Ireland, by the style of James III., and himself regent of the three kingdoms. Success for a while attended his arms; and the submission of Edinburgh, and the victory of Prestonpans raised the hopes of his adherents, and induced them to march into England. They proceeded as far as Derby, and terror and confusion pervaded the metropolis; but disappointed in his hopes of a general insurrection in his favour, and alarmed at the approach of an English army, the prince found it necessary to return to Scotland. The battle of Falkirk, which he gained in January 1746, was the last instance of success which he experienced; for he was soon after obliged to raise the siege of Stirling, and followed by the duke of Cumberland at the head of a considerable force, he retreated to Inverness. The decisive battle of Culloden, fought on the 27th of April, gave the death blow to his hopes and those of his followers. For several succeeding months the young pretender suffered the miseries and privations of a wretched outcast and proscribed wanderer on the territories where his ancestors had held sovereign sway. At length he embarked on board a French vessel, and after escaping the pursuit of some English cruisers, he landed in safety at St Pol de Leon in Brittany, October 10, 1746. New mortifications however awaited him; and on the signature of the treaty of Aix-la-Chapelle, two years after his return to France, he found himself obliged to quit that country. He then went to reside with his father at Rome. In 1755 the French ministers, in consequence of disputes with the English government, appear to have projected a new invasion; and Charles Edward, who went to Nanci, held a conference on the subject with the famous count Lally, and opened a correspondence with the Jacobites in England; but the differences between the two governments being adjusted, the design of invasion was relinquished, and the prince returned to Rome. The court of

STU

France, to make him some amends, negotiated a marriage for him with the young princess of Stolberg Gædern; but this union did not answer the views of any of the parties concerned in it. He had no children by his wife, whom he appears to have used in a most brutal manner, which induced her at length to flee from him, and take refuge in a convent in Florence, where they then resided; and she subsequently found an asylum with her brother-in-law, the cardinal of York, at Rome. Charles Edward Stuart spent the latter part of his life at Florence, not only ingloriously but disgracefully, being abandoned to the lowest sensual indulgences; and he died in that city January 31, 1788. He is said to have been in England in 1753, when lord Holderness, secretary of state, inquiring of George II what should be done with him, the king said, "Nothing; when he is tired of staying here, let him go away." It has been also asserted that he came here again, and witnessed the coronation of his late majesty.—His widow, the princess LOUISA MAXIMILIANA DE STOLBERG GÆDERN, born at Mons in 1752, had before her marriage been a canoness. On obtaining her freedom by his death she went to Paris, where and in Italy she resided with her favourite, the celebrated Alfieri; and having long survived him, she is said to have married secretly Francis Xavier Fabre, a painter of history, whom she at all events constituted her general legatee on her decease, which occurred January 29, 1824.—*Chevalier Johnstone's Memoirs of the Rebellion in 1745. Boswell's Journal of a Tour to the Hebrides. Dutens's Memoirs. Biog. Univ.*

STUART (HENRY BENEDICT MARIA CLEMENT) cardinal of York, younger brother of the preceding, and the last descendant of the royal line of the Stuarts. He was born at Rome, March 20, 1725, and being destined for the church, the Pope, as a peculiar favour, bestowed on him the right to hold benefices without receiving the ecclesiastical tonsure. The incidents of his life are by no means important. In 1745, when the last grand effort was made for the restoration of his family, he went to France, and assumed the command of troops assembled at Dunkirk to aid the operations of his brother in Great Britain; but the news of the battle of Culloden prevented the embarkation of this armament, and prince Henry returned to Rome. The visions of regal splendour in which he might have indulged being thus dissipated, he took holy orders, and in 1747 pope Benedict XIV raised him to the purple. He was subsequently made chancellor of the Basilic of St Peter, and bishop of Frascati. On the death of his brother in 1788, he assumed the barren title to which the family had aspired; and on that occasion he caused a medal to be struck, with the inscription "Henricus nonus, Angliæ Rex;" and on the obverse, "Gratia Dei, non Voluntate Hominum." The great events which marked the close of the last century had the singular effect of rendering the cardinal of York, as he was styled, a dependant on the bounty of the king of England; for

when the French conquered Italy, he was obliged to flee to Venice, and was indebted for his support to a pension from the English court. In 1801 he returned to Rome, and became dean of the sacred college. His death took place in 1807. The valuable papers of his grandfather, and his father, which had remained in his possession, were after his decease sent to England, and have since been published.—*Biog. Univ.*

STUART (Dr GILBERT) an eminent historical writer, born at Edinburgh in 1742. He was educated in the university of that city, where his father was professor of humanity, and he was destined for the legal profession, which he relinquished for that of an author. In 1767 he published "An historical Dissertation concerning the Antiquity of the British Constitution," 8vo, the merit of which procured him the degree of LL.D. This was followed a few years after by his "View of Society in Europe, in its Progress from Rudeness to Refinement; or Inquiries concerning the History of Laws, Government, and Manners," 4to, a work which shows that he had deeply studied the records of the middle ages. Being disappointed in an attempt to obtain the professorship of public law in the university of Edinburgh (as he alleged through the jealousy of Dr Robertson) he removed to London, and from 1768 to 1774 he was a contributor to the *Monthly Review*. He then returned to his native city, and in conjunction with Smellie the printer, and others, he established a new literary journal, entitled the "Edinburgh Magazine and Review," which was at first very successful; but the illiberality and virulence of criticism with which Stuart assailed several authors respectable for talents and learning, whom he considered as personal enemies, ruined the credit of the work, which was discontinued in 1776. About this time he revised and published Sullivan's "Lectures on the Constitution of England," 4to; and soon after appeared his "Observations concerning the public Law and constitutional History of Scotland," 8vo. This was followed by "The History of the Establishment of the Reformation of Religion in Scotland," 1780, 4to; and "The History of Scotland from the Reformation till the Death of Queen Mary," 1782, 2 vols. 4to. In the year last mentioned he again repaired to London, and engaged as a writer in the "Political Herald," and in the "English Review," besides other literary undertakings. Habits of intemperance had however undermined his constitution, and subjected him to attacks of jaundice and dropsy; and these diseases recurring in a more violent degree, he once more returned to his native place, where he died at the house of his father, on the 13th of August, 1786. Few writers have afforded more striking examples of the misapplication of talents and learning than Gilbert Stuart, whose disingenuous illiberality as a critic has exposed his memory to deserved execration. Mr Chalmers, in his life of Rudiman, affirms, that "such was Stuart's laxity

of principle as a man, that he considered ingratitude as one of the most venial sins; such was his conceit as a writer, that he regarded no one's merits but his own; such were his disappointments, both as a writer and a man, that he allowed his peevishness to sour into malice, and indulged his malevolence till it settled in corruption." His cruel treatment of Dr Henry, author of the *History of England*, has been fully exposed by Mr D'Israeli. It is proper however, in justice to the literary character of Stuart, to remark, that his works display erudition, industry, and sound judgment, wherever the latter quality is not influenced by his jealousy and hatred of contemporary writers.—*Encyclop. Brit. Biog. Univ.*

STUART (JAMES) a distinguished antiquary, and architectural draughtsman, descended from a Scottish family, but born in London in 1713. His father died when he was young, and having acquired some knowledge of drawing, he assisted his mother in the support of a young family, by practising fan-painting. Prompted by inclination he studied anatomy, geometry, and other branches of science conducive to his improvement in the art of designing; and having by his industry provided for the support of his younger brother and sister, he set out with a very slender supply of money on a journey to Rome. He supported himself during his travels by the exercise of his talents; and at Rome he was fortunate enough to make an acquaintance with Mr Nicholas Revett, a skilful architect. With that gentleman he visited the northern parts of Italy, and then went to Athens, where they arrived in March 1751. In that seat of ancient arts and learning they remained till the latter part of 1753, employing themselves in making drawings and taking exact measurements of the architectural relics, which have escaped the ravages of time and violence. In Greece Mr Stuart met with sir Jacob Bouverie and Messrs Wood and Dawkins, whom a similar taste for antiquities had drawn into that country, and they were happy to patronize a man of so much genius and industry. Leaving Athens, Stuart and Revett, after visiting Salonica, Smyrna, and some of the Ægean islands, they returned to England in the beginning of 1755. The result of their labours partly appeared in the first volume of a work entitled "The Antiquities of Athens," published in 1762, folio, containing accurate delineations of the remains of ancient edifices and sculpture in that literary metropolis of Greece. Mr Stuart, through the interest of those friends he had met with abroad, was appointed surveyor of Greenwich hospital; and his abilities becoming known, he obtained much employment as an architect. He was likewise chosen a fellow of the Royal and of the Antiquarian Societies. Late in life he entered into wedlock a second time, and one of his children by this marriage, a boy three years old, dying of the small-pox, he was so affected by the melancholy misfortune, that he survived it only a short time, his own death taking place February 2, 1788. A second volume of the

"Antiquities of Athens" appeared in 1787; a third, edited by Mr Reveley, in 1799; and the fourth and last, with an account of the life of Stuart, in 1816. One is at present in progress (1827), published by Priestley and Weale.—*Aikin's Gen. Biog.*

STUBBS (GEORGE) a celebrated anatomist and painter of animals, was born at Liverpool in 1724, and at the age of thirty went to Rome for improvement. He subsequently settled in London, which was the best theatre for maturing his anatomical skill in the portraiture of animals, more especially the horse. His excellence lay chiefly in precision, and the accuracy with which he painted the object before him, rather than in imaginative spirit; but in accordance with this faculty, none ever exceeded him in the representation of race horses, which are usually portraits of existing animals. He was one of the first who painted on enamel on a large scale, and he finally became an associate of the Royal Academy. He died in 1806. He is the author of a work entitled "The Anatomy of the Horse;" and of part of another, called a "Comparative Anatomical Exposition of the Structure of the Human Body with that of a Tiger and a common Fowl."—*Pikington by Fuseli.*

STUBBS, or STUBBE (JOHN) a spirited lawyer in the reign of Elizabeth, was born about 1541, and is said by Strype to have been a member of Corpus Christi college, Cambridge. He removed thence to Lincoln's-inn, and became a puritan, a turn of mind which led him to regard the possible marriage of the queen with the French duke of Alençon with considerable alarm, as fraught with injury to the Protestant establishment. The result of this opinion was the publication of a satirical work, entitled "The Discovery of a gaping Gulf, wherein England is likely to be swallowed up by another French Marriage." This highly incensed the queen, who immediately issued a proclamation against it, and the author and printer or bookseller being discovered, they were soon apprehended, and sentenced, according to an act of Philip and Mary, to have their right hands cut off. When Stubbs came to receive his sentence, which was inflicted with a butcher's knife and mallet with great barbarity, he immediately took off his hat with his left hand, and exclaimed "God save the queen." He carried with him the sympathy of the people for his protestant zeal; and some time after he was employed by Burleigh to answer cardinal Allen's Defence of the English Catholics; but it is not known whether his answer was ever published. He also translated Beza's Meditations on the first Psalm, and the seven penitential psalms from the French, which he dedicated to the lady of sir Nicholas Bacon. It is said that he was afterwards a commander of the army in Ireland, but nothing farther is known of him; nor has the date of his death been recorded.—*Strype's Life of Grindal. Athen. Oxon. vol. i.*

STUCK or STUCKIUS (JOHN WILLIAM) a critic and antiquary of the sixteenth century, who was a native of Zurich. He was

the author of a learned work on the festivals and sacrifices of the ancients, printed at Zurich in 1591, folio, and republished with other writings on the same subject in 1695, Leyden, 2 vols. folio. He likewise composed a Commentary on Arrian; and a parallel between Henry IV and Charlemagne, entitled "Carolus Magnus redivivus," 1598, 4to. He died in 1607.—*Biog. Univ. Rees's Cyclop.*

STUCK (THEOPHILUS HENRY) a bibliographical writer, born at Halle, in Saxony, in 1716. He was appointed inspector of the salt-works in 1744, and in 1751 treasurer of his native city. All his leisure was devoted to study; and mineralogy, geography, and history especially engaged his attention. His death took place July 30, 1787. He was the author of a work of considerable value, entitled "A Catalogue of Accounts of Voyages and Travels, and Descriptions of Countries ancient and modern, forming a View of the literary History of Geography," 1784, 8vo; supplement, 1785; second part, 1787, 8vo, published posthumously.—*Biog. Univ.*

STUKELEY (WILLIAM) a celebrated English antiquary, born at Holbeach in Lincolnshire, November 7, 1687. He received his early education at the free grammar school of his native place, whence in 1703 he removed to Bennet college, Cambridge. While an undergraduate he indulged his inclination by collecting antiquities, and making drawings of the subjects of ancient art which occurred to his notice; but he devoted his time principally to medical studies; and in 1709 he took the degree of M.B. After having attended St Thomas's hospital, London, as a pupil of Dr Mead, he settled as a physician at Boston, in his native county. In 1717 he removed to the metropolis, and soon after he was elected a fellow of the Royal Society. The following year he contributed to the revival of the Society of Antiquaries, of which he was one of the earliest members, and for some time secretary. He took the degree of M.D. at Cambridge in 1719, and the following year he was admitted a fellow of the College of Physicians, and was subsequently chosen one of the censors of the college. In 1726 he left London for Grantham in Lincolnshire, where he settled as a medical practitioner, and acquired great reputation. Severe attacks of the gout at length induced him to relinquish his profession, and to enter into holy orders, which he received from the hands of archbishop Wake in July 1720; and shortly after he was presented to the living of All Saints, Stamford. He was afterwards appointed chaplain to the duke of Ancaster, who in 1739 gave him the living of Somerby near Grantham. His last preferment was the rectory of St George the Martyr, Queen-square, London, for which he was indebted to the duke of Montagu. He then resided occasionally at Kentish-town, near the metropolis; but his death occurred at his house in Queen-square, March 3, 1765, in consequence of a paralytic stroke. Dr Stukeley was a learned, indefatigable, and ingenious antiquary; but the bold and fanciful

nature of some of his speculations exposed him to censure and ridicule, not wholly undeserved. He however pursued his researches with a degree of spirit and enthusiasm highly deserving of commendation, and made important accessions to our knowledge of the early monuments of human art and industry belonging to our native country. His principal works are "Itinerarium Curiosum, or an Account of the Antiquities and Curiosities of Great Britain," 2 vols. folio; "An Account of Stonehenge," folio; "The History of Carausius," 1757—59, 2 vols. 4to; besides which he published papers in the Philosophical Transactions and the Archaeologia; and also a treatise on the structure and uses of the spleen, 1723, folio.—*Hutchinson's Biog. Med.*

STURM (CHRISTOPHER CHRISTIAN) a German divine and religious writer, born at Augsburg in 1740. He studied at Jena and Halle, and in 1761 he was appointed one of the college tutors in the latter university; in 1764 inspector of the gymnasium of Sorau; and in 1767 pastor of one of the churches of Halle. In 1769 he removed to Magdeburg to fill a similar office; and he subsequently became first pastor of the parish of St Peter, at Naumburg, where he died August 26, 1786. Sturm is well known in England as the author of "Reflections on the Works of God and his Providence," which have been repeatedly translated, and published both at Edinburgh and London; and of which there are Dutch, Danish, and Swedish versions, and one in the French language, by queen Christina of Prussia. He also published "Anecdotes from the ancient Greek and Roman Authors," 2 vols. 8vo; and "Morning Converse with God, for every Day in the Year," 2 vols. 8vo, which passed through several editions.—*Biog. Unit.*

STURMIUS, a name distinguished in German literature as that of several erudite and ingenious scholars. Of these the first in point of chronology was JAMES, a native of Strassburg, born in 1490. He was the friend and associate of many of the early reformers, and besides exerting himself strenuously in the defence and promulgation of their doctrines, was avowedly the coadjutor and assistant of the celebrated Sleidan, in compiling his history of the rise and progress of the Reformation in the empire. His influence with those in power, which was considerable, from his acknowledged talents as a statesman and diplomatist, was also actively employed in the behalf of the Protestants at Strassburg; and to it they were indebted for much of the countenance which they received in that city. As a politician he conducted himself with great prudence and ability in various missions to different courts, especially to those of London and Vienna; and having lived to witness the establishment of a reformed college in his native city, died there in the autumn of 1553.—JOHN STURMIUS, the most celebrated of the name, whose learning and eloquence acquired him the honourable appellation of "The German Cicero," was born in 1507 at Sleidan, a small

town of Eisel in the immediate vicinity of Cologne, where his father resided in quality of steward to the count Von Manderscheid. He received the rudiments of a classical education with the sons of his patron, after which he was removed to the college of St Jerome at Liege, and thence in 1524 to Louvaine. Having passed five years in this university, he in conjunction with Rescius formed a plan for publishing improved editions of the Greek classics; and in furtherance of his views set up a press, which he superintended till the year 1529, when he quitted Louvaine for Paris. In the French metropolis he remained upwards of seven years, reading lectures with great ability and reputation in the classics and dialectics, till at length taking alarm at the suspicions which had begun to be excited of his leaning towards the reformed doctrines, he thought it advisable to retire to Strassburg. In this city, where he arrived in 1537, his reputation which had preceded him soon acquired him a numerous and most respectable body of disciples; and the credit of his establishment increasing, the emperor Maximilian II was induced to raise it to the rank and privileges of a university in 1566. Of this foundation Sturmius was appointed the first rector; but being at length too honest to disavow the religious opinions which he thought it perhaps no crime to conceal, his candour lost him his situation. His talents were by no means confined to mere scholastic learning, but well adapted to politics and the business of life, of which he gave many striking proofs; while to the sufferers for conscience-sake his liberality was squared rather by the benevolence of his disposition than the dictates of prudence; and his private finances suffered in consequence materially, through his bounty to refugees. As an author he is known by some valuable original works, especially by his "In Partitiones Oratorias Ciceronis Lib. ii.," "De Literarum Ludis recti Aperiendis," "Anti-pappi," "Rhenani Vita," &c. besides some good editions which he printed of Aristotle's Rhetoric and some of the works of Cicero and Galen. His death took place in the spring of 1589.—JOHN CHRISTOPHER STURMIUS, a native of Hipolstein, born 1635, was a sound classical scholar and a good mathematician. He settled at Altdorf, where he lectured on general philosophy and mathematics with great credit, and distinguished himself as the author of some valuable treatises on different subjects connected with literature and science. Of these the best known are his "Mathesis Juvenilis," 2 vols. of which there is an English translation in three octavo volumes; "Physica Moderna Compendium;" "Prælectiones Academicæ," 2 vols; "Collegium experimentale curiosum," 4to; "Scientia Cosmica," folio; "Physica Electiva et Hypothetica," 4to, 2 vols; "Tyrocinia Mathematica;" "Architectura militaris Tyrocinia;" "Physicæ conciliatrix Conamina," 12mo; "De Veritate Propositionum Borelli de Motu Animalium;" "Contra Astrologia Divinatrice Vanitatem," 4to, 2 vols; "Mathesis Ecu-

cleata," and a translation of the works of Archimedes. He died in 1703 at Altdorf, leaving a son, LEONARD CHRISTOPHER STURMIUS, born in that city in 1669, who acquired some celebrity as an architect and engineer. He commenced his studies at Leipsic, but quitted that university for a mathematical professorship at Wolfenbuttel. He subsequently held a similar appointment at Frankfort, which he resigned on entering the service of the duke of Mecklenberg Strelitz, who made him his surveyor of works. Some time previous to his decease he accepted a similar appointment under the duke of Brunswick. He was the author of "A Complete Course of Architecture," printed at Augsburg in sixteen volumes, in which work he advocates a new system of national architecture, but his ideas gained few proselytes. He also translated a work of Boker's on a similar subject into the German language. His death took place in 1719.—*Freheri Theatrum. Bayle.*

STURT (JOHN) an engraver of some note, was born in London in 1658. His works are exceedingly numerous, but he is principally celebrated for his excellence in the engraving of letters, and the minuteness with which they were executed. His best work is the "Book of Common Prayer," which he engraved on silver plates. Each page is headed with a vignette, and prefixed thereto is a portrait of George I, in which the lines of the king's face are expressed by writing so small as scarcely to be read with a magnifying glass. This work was published by subscription in 1717, 8vo, and was followed by a "Companion to the Altar," executed in the same manner. In 1694 he contrived to accomplish an elegy on queen Mary on so small a size that it might be set in a ring. He died in 1730, aged seventy-two.—*Walpole's Anecd.*

STURZ (HELFRICH PETER) a German writer, born at Darmstadt in 1736. After having studied law at Gottingen, Jena, and Gieassen, he became, in 1759, private secretary to baron Widmann, minister of the empress-queen at Munich. The following year he entered into the service of M. D'Eyben, chancellor of the duchy of Holstein, by whom in 1762 he was sent to Copenhagen, with a recommendation to count Bernstorff, who made Sturz his private secretary, and gave him a place in the office of foreign affairs. In 1768 he obtained the title of counsellor of legation; and he accompanied the king, Christiern VII, in his voyage to England. On his return he published "Letters of a Traveller," comprising interesting notices of the English and French literati. In 1770 his patron being removed from the ministry by count Struensee, he attached himself to the new favourite, and obtained the lucrative office of director general of the posts. On the fall of Struensee he was imprisoned, but after a few months being set at liberty, he was nominated member of the regency of Oldenburg; and in 1775 the prince of Holstein, to whom the duchy of Oldenburg belonged, made him a counsellor of state. He died November 12, 1776. His works, in-

BIOC. DICR.—Vol. III.

cluding the letters already mentioned, were published collectively at Leipsic, 1786, 2 vols. 8vo, with an account of the life of the author.—*Biog. Univ.*

SUÁRES, or SUAREZ (FRANCIS) a learned theologian, born at Grenada, in Spain, in 1548. After having completed his education as a law student at Salamanca, he entered into the society of the jesuits, who employed him to teach philosophy at Segovia, and he subsequently occupied the chairs of theology at Valladolid, Rome, Alcalá, and Salamanca. The first professorship in the university of Coimbra becoming vacant, it was bestowed on Suarez by Philip II at the request of the heads of that institution. He took an active part in the disputes which originated from the theological doctrine of father Molina, on the subject of grace, which Suarez endeavoured to explain by means of the principle termed "Congruism." He published a work against our king James I, in defence of the Catholic faith, for which he received the public thanks of the pope and the king of Spain; but the book was prohibited in England and France, and ordered to be burnt in London by the common hangman. His death took place in September 1617, at Lisbon, whither he had gone to be present at conferences to be held before the legate of the holy see. His works, extending to twenty-three volumes, folio, were published at Mentz and Lyons, 1630, &c. and reprinted at Venice in 1740. His "Tractatus de Legibus, ac Deo Legislatore," esteemed his best work, was printed in London, 1679, folio. An abridgment of the works of Suarez, by father Noel, appeared at Geneva, 1732, 2 vols. folio.—*Moreri. Biog. Univ.*

SUARES (JOSEPH MARIA) a learned antiquary, the son of an auditor of the Rota at Avignon, where he was born about the end of the sixteenth century. Having adopted the ecclesiastical profession, he was appointed provost of the cathedral of Avignon, whence cardinal Francis Barberini took him to Rome, made him his librarian, and procured him the title of chamberlain to pope Urban VIII. In 1633 he was raised to the bishopric of Vaison, which he resigned in favour of his brother in 1666, and returning to Rome he became keeper of the Vatican library, and vicar of the Basilic of St Peter. His death took place December 8, 1677. Among his principal works are "Prænestes antiqua libri duo, cum Numismatibus, Inscriptionibus, et Figuris," 1655, 4to; "Vindicia Sylvestri II. Pont. Max." Lyon. 1638, 4to; and "Arcus Sept. Severi Aug. æri incis. cum Explicatione," 1676, folio.—*Biog. Univ.*

SUCKLING (sir JOHN) a wit, courtier, and dramatist, who flourished in the seventeenth century, when those characters were so frequently united. He was the son of a knight of the same name, who held a seat in parliament for the city of Norwich and the post of comptroller of the household to Charles I. He was born in 1613 at Witham in Middlesex, and according to some of his biographers gave promise of being an extraordinary character

R

even before his birth, the period of gestation having been prolonged in his mother to eleven months. A story no less marvelous is told of his precocity and early proficiency in the classics; and we are gravely informed that he spoke Latin fluently at five years old, and wrote it with ease and elegance at nine. After lingering some little time about the court, during which period he seems to have given some uneasiness to his father, whose gravity but ill accorded with the gaiety and French manners adopted by his livelier offspring, he was despatched upon his travels; and while on the continent served a campaign under the celebrated Gustavus Adolphus, in the course of which he was present at three battles and several sieges. On his return to England, the civil war being then in its infancy, sir John raised a troop of horse for the king's service, at the expense of 12,000*l.* to himself, throwing away, it would seem, a great deal of money on much useless finery; as notwithstanding the complete equipment of his men, they behaved so badly in the field as to disgrace both themselves and their commander. An abortive attempt to effect the escape of the earl of Strafford, then confined in the Tower under articles of impeachment from the Commons, implicated sir John so seriously, that he thought it advisable to retire to France, where he died in 1641 of a fever, increased it is said, if not brought on, by vexation at his double miscarriage. He is described as having been a good musician, though the want of harmony in his verses would seem to indicate a defective ear. His writings have gone through several editions; they consist of letters written with much ease and spirit; some miscellaneous poems; "*Aglaura*," a play of which Langbaine says, "it is at the pleasure of the actors, by altering the last act, to make it either a tragedy or tragi-comedy;" "*Brennoralt*," a tragedy; "*The Sad One*," a tragedy left incomplete; and "*The Goblins*," a tragi-comedy.—*Cibber's Lives*.

SUE (PETER) an eminent French surgeon, born at Paris December 28, 1739. He succeeded in 1762 to the office of surgeon of the city of Paris; and the following year he was admitted a master of surgery, when he maintained a thesis "*De Sectione Cæsarea*." In 1767 La Martinière nominated him professor and demonstrator at the school of practice, in conjunction with Lassus, a circumstance which produced considerable jealousy between the two practitioners. In 1770 Sue published a translation of the pathology of Gaubius; and this was followed by a Dictionary of Surgery, 1771, 8vo. The Academy of Surgery appointed him provost of the college, then counsellor, commissary for extracts and correspondence, and at length receiver of the funds of the institution. On the death of professor Hevin he succeeded to the chair of therapeutics in 1790, which post he soon after lost on the suppression of the Academy of Surgery. In 1794, on the establishment of the School of Health, now the Faculty of Medicine, he was appointed librarian, then professor of bibe-

liography, and afterwards of medical jurisprudence, and treasurer. He died at Paris, April 8, 1816. Besides the works already mentioned he published "*A Memoir on Aneurism of the Crural Artery*," 1776; "*Historical and Critical Essays on the Art of Midwifery, among the Ancients and the Moderns*," 1779, 2 vols. 8vo; "*Anecdotes of Medicine, Surgery, &c.*" 1785, 2 vols. 12mo; "*A History of Galvanism*," 1801, &c. 4 vols. 8vo.—*Biog. Univ.*

SUETONIUS PAULINUS (CAIUS) a Roman warrior, flourished about the commencement of the ninth century of the Roman era, and is celebrated as an able and enterprising commander. He was the first Roman general who led his troops beyond Mount Atlas, in the victorious contest which he carried on against the Mauri, while governor of Numidia, anno urbis 794. He went subsequently into Britain, where he crushed a rebellion, and distinguished himself by his severity towards the vanquished in 814 and the following year. These demonstrations of a cruel disposition, however, procured him recall at a time when it was considered that conciliation would prove better policy than barbarity. In 819 he obtained the consulship, and afterwards espoused the cause of Otho against Vitellius; not, it has been said, without undergoing some suspicion of entertaining views upon the empire for himself; an imputation, however, which Tacitus considers to have been altogether unmerited.—*Hooker. Lempiere*.

SUETONIUS TRANQUILLUS (CAIUS) the second and more celebrated of the two, was the friend of the younger Pliny, who obtained for him the dignity of military tribune under Trajan. He was also secretary to the emperor Hadrian; but falling into disgrace with Sabina, that prince's consort, was dismissed from his employment. He was the author of a variety of works, the principal of which has come down to posterity is his history of the first twelve Cæsars. His treatise "*De Claris Grammaticis*," and some fragments of another "*De Rhetoricis*," are also extant. Of the former work there are several editions, the first of which appeared at Rome, in folio, 1470. That by Grævius in 4to, 1691, and that, cum notis auctoribus Pitisci, 1714, are considered the best. There is also an English translation of the book, in one volume, octavo. Suetonius's *Lives of the Cæsars* form one of the most interesting remains of historical antiquity; for although the work cannot rank high in respect to style or sentiment, it abounds with anecdotes and incidents of the times, and affords striking views of the private life of those elevated personages, who in history are scarcely seen but in their public actions. He has been accused of unnecessary freedoms in his details of the detestable actions of some of the sovereigns who form the subjects of his narrative; but possibly more would have been lost as an instructive lesson on some of the most disgusting consequences of absolute power, than could have been gained by the greater reserve contended for on the score of decorum.—*Biog. Classica*.

SUE

SUETT (RICHARD) a comic actor of great note in low and humorous characters, who was a native of London, and in the early part of his life belonged to the choir of St Paul's cathedral. He made his first appearance on the stage at the Haymarket theatre, while yet very young; but on arriving at manhood, he made his novitiate in the country, and attained considerable reputation at York, where he performed for some time. In 1781 he first exhibited his peculiar talents at Drury-lane theatre, and he gradually rose to great eminence, particularly in ludicrous comedy and broad farce. His Robin (in the Waterman), Endless (No Song no Supper), and Dicky Gossip (My Grandmother), may be mentioned as almost inimitable. The love of convivial society unfortunately led him to indulge in habits of intemperance, which brought on incurable disease, and occasioned his death in 1805, at the age of forty-seven. His body was interred in the cemetery belonging to the metropolitan cathedral, of whose choir he had formerly been a member.—*Thesp. Dict. Jones.*

SUEUR. There were three distinguished personages of this name.—**EUSTACHIUS LE SUEUR**, a native of Paris, born 1617, was one of the most eminent masters of the Parisian school of painting, and acquired the appellation of "The French Raphael." He was the pupil of Simon Vouet, but far surpassed his master. Although he was never out of his native country, his compositions are chiefly remarkable for their sublimity and judgment, but prove him to have been at the same time very deficient in the knowledge of local colours and chiar' oscuro. His principal work is the life of St Bruno, in twenty-two pictures, which it took him three years to complete, and which are still to be seen, though much defaced (it is said by the malignity of a rival), in the Carthusian convent at Paris, in which metropolis the artist died in 1655.—**JEAN LE SUEUR**, a French ecclesiastic minister to a Protestant congregation at Feste-sous-Journe en Brie, is known as the author of a treatise on the divine inspiration of the Scriptures, and a "History of the Church and of the Empire," of which latter work, originally printed in Holland about the year 1730, Pictet has since published a continuation.—**THOMAS LE SUEUR**, a French ecclesiastic and eminent mathematician, born at Reithel in Champagne, in 1703. He entered into the order of friars Minims in 1722; and after having been a teacher of philosophy and theology, he was called to Rome, and made professor of mathematics at the college of wisdom, and of theology at the propaganda in that city. He afterwards went to Parma, to assist in the education of the infant duke; and returning to Rome he died there September 22, 1770. He exhibited, like many other individuals on record, an instance of "the ruling passion, strong in death." Two days previous to his decease he appeared to have entirely lost his memory; but on his scientific associate, father Jacquier, inquiring whether he knew him, the dying mathematician replied, "Yes, you are the person with

SUH

whom I have integrated a very difficult equation." Le Sueur was the author of several mathematical works, but he is principally known in England as a commentator on Newton, having published "*Neutoni Philosophiæ Naturalis Principia Mathematica, perpetuis Commentariis illustrata*, à T. le Seur et F. Jacquier," Genev. 1739—40, 2 vols. 4to.—*D'Argenville. Nouv. Dict. Hist. Biog. Univ.*

SUFFREN ST. TROPEZ (PETER ANDREW de) a distinguished French naval officer, born at the castle of St Cannat in Provence, in 1726. His family was noble, and being destined for the sea service, he received a suitable education at Toulon. He entered the navy as garde-marine in 1743, and in 1748 he was appointed enseigne de vaisseau. Being made prisoner at the battle of Bellisle he was sent to England; and on the conclusion of peace he went to Malta, where he was admitted a knight of the order of St John. On the commencement of hostilities in 1755 he was again employed; and serving as a lieutenant in the fleet commanded by De la Clue, he was captured a second time in the engagement off Cape Lagos. In 1772 he was made a captain, and he commanded a vessel in the fleet of the count de Grasse at the conquest of the isle of Grenada in the West Indies, in 1779. But the most important services of Suffren were performed in the East Indies, after he obtained the rank of an admiral. He returned from that part of the world to Toulon in March 1784, when he was received by his countrymen with the most flattering honours. A medal was struck with his effigy and the following inscription: "Le Cap protégé; Trinquemalé pris; Goudelour délivré; L'Inde défendue; Six Combats glorieux. Les Etats de Provence ont décerné cette Médaille MDCCCLXXXIV." Admiral Suffren died at Paris December 8, 1788.—*Biog. Univ.*

SUGER, abbot of St Denis, a French statesman of the twelfth century, born in 1082 at Touri in Beauce. He was successively minister of state to Louis VII and Louis the Fat, and was raised by the latter, whose confidence he enjoyed, to the benefice which he retained until his death in 1152. Père Germaine, a monk of the order of St Dominic, who wrote his life, gives him a high character both for talents and integrity, while his celebrity among his contemporaries is somewhat attested by the simplicity of his epitaph, "Here lies the abbé Suger."—*Nouv. Dict. Hist.*

SUHM (ULRIC FREDERIC von) a Saxon diplomatist, born at Dresden in 1691. He studied at Geneva, and then went to Paris, where his father was ambassador from the elector of Saxony. In 1718 his sovereign appointed him minister plenipotentiary at Vienna, and in 1720 at Berlin. He remained there ten years, and became the personal friend of the prince royal, afterwards Frederick the Great. This intimacy gave rise to an epistolary commerce, which was printed in 1787, under the title of "*Correspondence familière et amicale de Frederic avec Suhm*," 2 vols. 8vo. In 1737 he was sent to replace the count

de Lynar, as Saxon minister at Petersburg; and he remained there till after the accession of his royal friend to the throne, at whose invitation he set out for Berlin in November 1740; but he was seized with a fit of illness at Warsaw, which carried him off in a few days.—*Biog. Univ.*

SUHM (PETER FREDERIC) a distinguished Danish historian, born at Copenhagen October 18, 1728. He descended from a family originally from Germany, but long settled in Denmark, and his father was an admiral in the Danish navy. He displayed in his youth an unconquerable passion for reading; and in 1746 he was admitted into the university of Copenhagen, where the ensuing year he received the title of hof-junker, or gentleman of the court, which he owed to his merit. He was after appointed assessor of the court tribunal; but having accepted of this office merely to gratify his father, he ere long resigned it, that he might dedicate all his time to literature. Though the government successively made him gentleman of the royal chamber, counsellor of conference, chamberlain, and at last historiographer royal, he scarcely ever interfered in public affairs; the only occasion on which he is known to have done so having been at the revolution, which proved fatal to Struensee, when he joined the party of the queen-dowager, and drew up for the use of the conspirators a plan of a temperate monarchical constitution, which however was not adopted. M. Suhm, who was a member of almost all the literary academies in the north of Europe, died of the gout September 7, 1798. His principal writings are "An Introduction to the Critical History of Denmark," 1769—73, 5 vols. 4to; "The Critical History of Denmark during the Pagan Ages," 1774—81, 4 vols; "The Modern History of Denmark," of which seven volumes have been published, the first of which appeared in 1782. His miscellaneous works were collected and reprinted, with an account of his life at Copenhagen, 1788—98, 15 vols.—*Month. Mag. Biog. Univ.*

SUIDAS, the name of an ancient Greek writer, the era of whose life has been variously fixed at the commencement and the close of the eleventh century. He is however generally considered to have flourished in the reign of the emperor Alexia Comnenus. He was the compiler of a valuable lexicon, which, if not altogether to be relied upon as to accuracy in the historical facts which it alludes to, is yet highly interesting from the references which it occasionally makes to, and the quotations it gives from the writings of lost authors. Of this work, which was first printed about the close of the fifteenth century at Milan, there are several editions, the best of which is the English one of Kuster with a Latin version, printed at Cambridge in 2 vols folio, 1705.—*Fabricii Bibl. Græc.*

SULGHER FANTASTICI MARCHE-SINI (FORTUNE) a celebrated improvisatrice, who was a native of Leghorn, and at an early age manifested extraordinary poetical abilities.

She settled at Florence, as a situation favourable for improvement; and she there gave up her attention to the study of the belles lettres, the learned languages, and natural philosophy. Thus furnished with knowledge, she was accustomed to reply, impromptu, in verse to all questions, and to pour forth in elegant but unpremeditated poetry her sentiments on a variety of subjects. Her excellence is said to have been unrivalled, and the charms of her voice, her gestures, and her person, extorted the admiration of those who were emulous of her fame. She was admitted into the Arcadian Academy by the title of Themira Parnasida, under which she published some of her verses. She died at Florence June 13, 1824, after having been twice married. Her works are "Poesie," Florence, 1782; "Ero e Leandro, Poemetto," Leghorn, 1803; "La Morte di Abele, Tragedia," 1804; and "Favole Eeopiane," 1806.—*Biog. Univ.*

SULLIVAN, bart. (sir RICHARD JOSEPH). He was a native of Ireland, and in early life, together with his brother, John Sullivan, sent out to India under the patronage of their relation Laurence Sullivan, chairman of the East India Company. On his return to England he made a tour through Ireland, Scotland, and Wales; of which he gave an account in a series of letters, in two octavo volumes in 1780. He soon after published a "Letter to the East India Directors," which was followed by an "Analysis of the Political History of India;" "Thoughts on Martial Law;" and "Philosophical Rhapsodies, being Fragments of Akber of Betlis," 3 vols. 8vo. His last and most elaborate work appeared in 1794, under the title of "A View of Nature, in Letters to a Traveller among the Alps," 6 vols. 8vo. In 1790 he was elected member of the house of Commons for New Romney, and in 1802 for Seaford. He was created a baronet in 1804. He died in 1806.—*Gent. Mag.*

SULLIVAN (JOHN) an American general during the revolutionary war, who was born at Berwick in the territory of Maine (NA.) in 1741. He was appointed general of brigade by the congress in 1775, and the next year being made a major-general, he was sent to replace Arnold in the command of the army in Canada. The superiority of the English forces obliged him to retreat from that country; and he was then employed in Long Island, where he was taken prisoner. Being speedily exchanged, he served with great reputation at the battles of Brandywine and German town in 1777 and 1778; and subsequently against the Indians. Having been deprived of his command, on account of a charge of peculation, he lived in retirement till 1788, when he became a member of the congress; and he was afterwards president of New Hampshire, and then judge of that district. He died in 1795.—His brother, JAMES SULLIVAN, adopted the legal profession, and was successively justice, attorney-general, and governor of the province of Massachusetts. He was also a member of the American Academy of Arts and Sciences, and long prei-

dent of the Historical Society of Massachusetts. He died in 1808, leaving, besides detached memoirs, "Observations on the Government of the United States of America," 1791, 8vo; a "History of the District of Maine," 1795, 8vo; a "History of the Territory of Massachusetts," 1801, 8vo; and a "Dissertation on the Constitutional Liberty of the Press in the United States," 8vo.—*Biog. Nouv. des Contemp. Biog. Univ.*

SULLY (HENRY) an English artist, who contributed greatly to the improvement of horology in the eighteenth century. He studied his profession in London, and attracted the esteem of sir Isaac Newton, by his researches on the longitude. He then visited Holland and Germany, and afterwards going to Paris, the duke of Orleans gave him the direction of a manufactory of time-pieces, which he established at Versailles. Having lost this situation by his imprudence, he endeavoured to found another manufactory at St Germain; but his affairs were ruined by the Mississippi scheme of the projector Law. He afterwards went to England, and being disappointed in his expectations there, he returned to Versailles, where he executed his principal work of art, a lever-pendulum, to measure time at sea, for which he received from the king a pension of six hundred livres. He died at Paris October 13, 1728, and his body was interred in the church of St Sulpice, in which he had traced a meridian line, afterwards repaired by Lemonnier. Sully was distinguished not only as an artist, but also as an author. He published, "Règle artificielle du Temps," Paris, 1717, 8vo; "Description d'une Horloge," 4to; and "Méthode pour régler les Montres et les Pendules," 1728, 8vo.—*Biog. Univ.*

SULLY (MAXIMILIAN de BETHUNE, duke de) was born at Rosny, December 13, 1560, of an illustrious family, being the second son of Francis de Bethune and Charlotte d'Auvert. He was educated in the Protestant faith, to which he always adhered; and his father possessing but a moderate fortune, presented him at the age of eleven to the queen of Navarre, and he was educated with her son, afterwards Henry IV. He accompanied the latter to Paris, where he narrowly escaped becoming a victim in the detestable massacre of St Bartholomew. When the young king of Navarre escaped from the court of France, the baron du Rosny, as Sully was then called, followed him. And in the subsequent wars which Henry carried on before he obtained the French crown, his friend greatly distinguished himself in various campaigns, particularly at Marmande, Lectoure, Coutras, where he commanded the artillery, and at Ivry, where he took the standard of the duke of Maine, and was most dangerously wounded. In 1591 he took Gisors; and the capture of Dreux in 1593, Laon in 1594, La Fere in 1596, Amiens in 1597, and Montmelian in 1600, added new lustre to his reputation as a warrior. But his abilities as a diplomatist and financier were no less remarkable. In 1586 he concluded a

treaty with the Swiss for a supply of 20,000 troops for his master's service; and in 1597 he was placed at the head of the department of finance, and two years after he was declared superintendent. About the same time he also negotiated the marriage of Henry with Mary de' Medici. In his embassy to England after the death of queen Elizabeth, he displayed great penetration and address, and concluded a treaty with James I, advantageous to the interests of both countries. In addition to his other offices he was appointed grand surveyor of France, grand master of the artillery, governor of the Bastille, and superintendent of fortifications throughout the kingdom. His labours as minister of finance were attended with the happiest success; and the revenues of the government, which had been reduced to a state of complete dilapidation by the combined effect of civil anarchy and open warfare, were by his care restored to order, regularity, and affluence. Though frequently thwarted in his purposes by the rapacity of the courtiers and mistresses of the monarch, he nobly pursued his career, ever distinguishing himself as the zealous friend of his country, and not the temporizing minister of his master. His industry was unwearied. He rose every morning at four o'clock, and after dedicating some time to business, he gave audience to all who solicited admission to him, without distinction of persons. Though he persevered in the reformed religion himself, he appears to have viewed the subject of religious belief as by no means of paramount importance, since it was principally owing to his counsels that the king was reconciled to the Catholic church. The pope having addressed to him a letter, in which, after paying him many compliments on the score of his abilities, he invited him to become a Catholic, and concluded with declaring that he should always pray for his conversion to the true faith; Sully, in his reply, observed that on his part he would never cease to pray God for the conversion of his holiness. After his return from his mission to England, he was made governor of Poitou, and grand master of the ports and harbours of Provence, and the territory of Sully-sur-Loire was erected into a duchy in his favour in 1606. After the murder of Henry IV he was obliged to retire from court; but after some years he was recalled by Louis XIII, and on making his appearance in the royal circle, the courtiers did not treat him with that respect to which he thought himself entitled, on which he said to the king, "Sire, when your father did me the honour to consult me, we never spoke on affairs till he had dismissed his flatterers and buffoons to the antechamber." In 1634 he received the staff of a marshal in exchange for the office of grand master of the artillery. His death took place at Villebon, Dec. 22, 1641. His well-known "Memoirs" were partly published by himself, under the title of "Economies Royales," Amsterdam, 1634, 2 vols. folio, but printed in his own house; and the third and fourth volumes were published at Paris in 1662. They have often appeared

since, and the abbé l'Ecluse in 1745 edited them in a modernized form, not much to the advantage of the work, with which he has taken great liberties. The "Memoirs" have been translated into English by Mrs Charlotte Lennox, 8 vols. 12mo.—*Dict. Hist. Biog. Univ.*

SULPICIA, a Roman poetess, who lived in the reign of the emperor Domitian. She was the wife of Calenus, to whom she addressed a poem on Conjugal Love, which is highly praised by Martial, in one of his epigrams, but it is unfortunately no longer extant. The only specimen remaining of her productions is a fragment of a satire against Domitian, composed on the promulgation of his edict for the banishment of the philosophers from Rome. This piece may be found in the "Corpus Poetarum" of Maittaire, and in the "Poetæ Latinæ minores." The "Elegies" annexed to the fourth book of those of Tibullus have been erroneously attributed to this poetess.—*Elton's Specimens of the Classic Poets. Biog. Univ.*

SULPICIUS GALLUS, a member of the illustrious Roman family of the Sulpicii, who was one of the earliest astronomers his country produced. He first made known to the Romans the cause of solar and lunar eclipses; and being a tribune in the army of Paulus Æmilius, in Greece, the year 168 BC., his skill enabled him to discover that an eclipse of the moon would happen on the night previous to the day fixed for giving battle to Perseus, king of Macedon, he explained the cause of the approaching phenomenon to the soldiers, and thus prevented the panic with which they might otherwise have been seized. Two years after Sulpicius filled the office of consul; but the time of his death is uncertain.—*Dict. Hist.*

SULPICIUS SEVERUS, an ecclesiastical historian of the fifth century, was a native of Aquitania. He was brought up to the bar, acquired wealth, and married, but upon the death of his wife embraced a religious life. He was the author of a "Sacred History," written in a pure Latin style, but otherwise incorrect, and of little value. He also composed a life of St Martin; but his most entertaining work is a dialogue illustrative of the mode of life of the eastern monks, which piece affords an instructive view of the monachism of the period. His works have been several times published, and the best editions are that of Le Clerc, Lips. 1709, 8vo; and that of Hieron. à Prate, Veron., 4to, 2 vols. 1741, 1754.—*Vossii Hist. Lat. Dupin.*

SULZER (**JOHN GEORGE**) an ingenious Swiss writer, was born in the canton of Zurich in 1720. At the age of nineteen he became an ecclesiastic, and two years afterwards published "Moral Contemplations of the Works of Nature," and "A Description of the most remarkable Antiquities in the Lordship of Kronau." He subsequently became a tutor at Magdeburg, and professor of mathematics in the royal college of Berlin. Besides the works already mentioned, he published a

"Universal Theory of the Fine Arts," a sort of dictionary, which is deemed his principal performance; and "Remarks on the Philosophical Essays of Hume." He died in 1779.—*Eloge by Formey.*

SUMOROKOF (**ALEXANDER**) regarded as the founder of the Russian theatre, was the son of a Russian noble, and was born at Moscow, November 14, 1727. He received the rudiments of education in his father's house, whence he was removed to the seminary of cadets at St Petersburg, where he gave early proofs of his genius for poetry. On quitting the seminary he was appointed to an adjutancy, and being noticed by count Struvalof, that nobleman introduced him to the empress Elisabeth. He had reached the age of twenty-nine, when having contracted an enthusiastic admiration for the works of Racine, his attention was turned to the drama, and he composed his tragedy of "Koref," which was first acted by some of his former companions among the cadets. Being informed of this first native attempt, the empress Elisabeth caused it to be represented at the private court theatre. Thus encouraged, he followed with other tragedies, several comedies, and two operas; in addition to which he attempted almost every species of poetry, except the epic—love-songs, idylls, fables, satires, Anacreontics, versions of the Psalms, and Pindaric odes. He was also author of a few historical pieces, the titles of which are "A Chronicle of Moscow;" "A History of the first Insurrection of the Strelitzes in 1682;" and "An Account of Stenko Rasin's Rebellion." Elisabeth gave him the rank of brigadier, and appointed him director of the Russian theatre, with a pension; and Catherine II created him a counsellor of state, and conferred upon him the order of St Anne, with many other marks of favour. He died at Moscow, October 1, 1777, in his fifty-first year. The characteristics of Sumorokof as a poet, are harmony, softness, and elegance, and he shines most in the class of poetry which is best calculated to exhibit them. His tragedies possess great merit, regarded as the first in the language, and his comedies are very humorous, with now and then a tendency to farce. His pastorals, elegies, and fables are deemed the most finished of his compositions, and his satires the most defective. Sumorokof possessed all the caprice and waywardness of genius; his extreme sensibility approached to morbidity, and the caprice and irritability of his nature were equally troublesome to his friends and to himself. He may be regarded with Lomonozof, as one of the chief inspirers of a native poetical taste in Russia.—*Cors's Travels in Russia.*

SURENHUSIUS (**WILLIAM**) a celebrated Hebrew and Greek professor in the university of Amsterdam. He is chiefly known for his edition of the "Mishna" of the Jews, with notes, and a Latin version, which he began to publish in 1698, and finished in 1703, in three volumes, folio. It contains also the commentaries of the rabbins Maimonides and Bartenora. He likewise published in 1713 a Latin

work, in which he professes to vindicate and reconcile the passages in the Old Testament quoted in the New, according to the critical principles of the ancient Hebrew theologians. Neither the date of his birth nor of his death is recorded.—*Saxii Onom.*

SURITA (JEROME) a Spanish historian, was born at Saragossa, of an ancient family, December 4, 1512. He made a great progress in his academical studies at the university of Alcalá, and subsequently became secretary to the Inquisition. He died October 31, 1580. His principal historical work is entitled "Anales de la Corona del Reyno de Aragon," 7 vols. folio, of which the edition of 1610 is deemed the most complete. He also published in Latin "Indices Rerum ab Aragonis Regibus gestarum, libri tres;" and edited the Itinerary of Antoninus, his notes to which have been adopted by Gale.—*Antonio Bibl. Hispan.*

SURIUS (LAURENTIUS) a voluminous compiler, was born at Lubeck in 1522, and entered the Carthusian order in that city, where he became celebrated for his integrity and learning. The principal among his numerous works are a "Collection of Councils," 1567, 4 vols. folio; "The Lives of the Saints," 1687, 7 vols. folio; "A History of his own Times," 1569, 8vo. He was learned, but credulous, and destitute of judgment. He died at Cologne in 1578.—*Saxii Onom.*

SUSSMILCH (JOHN PETER) a German Lutheran divine and an eminent writer on statistics, was born about the beginning of the last century. He applied himself with great diligence to the study of history, and made a great progress in mathematics, which enabled him to be a good calculator in political arithmetic. He is principally known by a work in the German language, entitled "The Order observed by God in the Changes of the Human Race, demonstrated by the Births, Deaths, and Propagation of Man," a fourth edition of which was published at Berlin in 1775. In this work the author treats of the multiplication of mankind in general, the proportion of the two sexes to each other, the relative operation of diseases and of deaths at different periods, as also of the uses of bills of mortality, and of the best method of keeping registers. It has been of great use to subsequent writers on population, and is frequently quoted by Mr Malthus. He died in 1767.—*La Prusse Littéraire sous Frederic II.*

SUTCLIFFE (MATTHEW) an English divine, was born in Devonshire, and educated at Trinity college, Cambridge. Of his early history nothing is recorded; but in 1586 he was installed archdeacon of Taunton, and in 1588 confirmed dean of Exeter. He died in 1629. He was eminent in his day as a controversialist, and wrote a great number of tracts against the Catholic propagandists. He is chiefly mentioned here as the founder of a singular college at Chelsea, the fellows of which were to be employed in writing the annals of their own times, and in combating Popery and Pelagianism. He was himself the first provost; but his bequest turning out less

valuable than was expected, the establishment fell to decay, and finally was transformed into an asylum for decayed soldiers, being a part of the existing one at Chelsea.—*Lysons's Environs of London.*

SUTTON (DANIEL) a medical practitioner, distinguished for his successful treatment of the small-pox. His father, ROBERT SUTTON, was an apothecary, who, in 1757, established at Debenham, in Suffolk, a house for the reception of persons under inoculation for the disease just mentioned, where, in the course of ten years, he is said to have inoculated 2541 subjects, all of whom recovered from their disorder. Daniel simplified and improved his father's mode of practice, and settled first at Ingatestone, Essex, and afterwards in London, where he was very successful. Baron Dimsdale, a rival of the Suttons, published a work, professedly developing their mode of practice, in 1767; and in 1796 appeared a tract entitled "The Inoculator, or the Suttonian System of Inoculation fully set forth in a plain and familiar manner," 8vo.—*Biog. Univ.*

SUTTON (SAMUEL) a native of Alfreton, Derbyshire, who having served with some credit under the great duke of Marlborough, commenced business as a brewer in Aldersgate-street, where he also opened a coffee-house. He was a man of strong though uncultivated genius, and in 1744 obtained a patent for an invention which he had discovered four years before, of a method of extracting the foul air from the wells of ships by pipes communicating with their coppers. Dr Stephen Hales about the same time produced his scheme for obtaining the same end by means of ventilators, and a warm discussion ensued on the comparative merits of the two plans, in which doctors Mead and Watson warmly advocated that of Mr Sutton; the interest of his rival with the navy-board, however, eventually prevailed, and the ventilators were adopted. His death took place in 1752.—*Nichols's Lit. Anec.*

SUTTON (THOMAS) a wealthy and philanthropic English merchant of the age of Elizabeth, born in 1532 at Knaith in Lincolnshire, where his family, which was ancient and respectable, had been settled for several generations. After receiving a sound classical education at Eton and Cambridge, he became a member of the society of Lincoln's-inn, but soon quitted it for the continent, and spent some time in visiting the Low Countries, France, Italy, and Spain. On his return to England he attached himself to the earl of Warwick; and having, through the interest of that nobleman, obtained the appointment of master of the ordnance at Berwick-upon-Tweed, he distinguished himself so much by his gallant behaviour against the insurgents, under the earls of Westmorland and Northumberland, that he received a grant of that office for his life. While resident in the north he was singularly fortunate in a purchase which he made of two valuable manors from the then bishop of Durham, on which a vein of coal was subsequently discovered, and laid the foundation of the immense riches which after-

wards flowed in upon him. A marriage which he contracted with an opulent widow added still more to his already large property, which he increased still farther by trade, maintaining; it is said, no fewer than thirty agents at various continental ports. So powerful indeed was the influence which his wealth acquired for him, that owing to the large drafts which he designedly made on the bank of Genoa, when that city had entered into a treaty with the king of Spain to supply him with money for his expedition against England, the sailing of the armada was necessarily deferred a twelve-month. Part of the money which he thus drew together was farther employed against the enemies of his country in fitting out a ship of war, which he completely equipped at his own expense, called by his own name, and sent to join the fleet under Drake. In his personal expenditure he was singularly magnificent, till the death of his wife in 1602 threw him into a degree of melancholy which occasioned a total change in his mode of living. As he was without issue much speculation existed with respect to the person who might inherit his property, and overtures were even made him from the court, which by the offer of a peerage endeavoured to divert a portion of it at least to the young duke of York, afterwards Charles I. Sutton however was seized with a more noble ambition, and resolved to raise a more lasting fame by dedicating his wealth to the benefit of his fellow-creatures. With this view he laid out thirteen thousand pounds in purchasing from the earl of Suffolk the dissolved monastery of the Chartreux, then called Howard-house, and there founded a munificent institution, under the name of the Charter-house. This noble establishment, which comprises in itself a hospital for decayed tradesmen and a public grammar-school, he endowed in 1611 most liberally with the whole of his property, which amounted to the then large sum of sixty thousand pounds in money and landed estates to the value of five thousand a-year. The founder scarcely lived to witness the infancy of his establishment, dying at Hackney on the 11th of December in the same year. His remains, which were at first deposited in Christchurch, Newgate-street, were afterwards exhumed and interred again in 1614, in a vault prepared for their reception in the chapel belonging to the Charter-house.—*Life by Bearcroft. Hearne's Domus Carthusiana.*

SUVAROFF or SUWARROW (ALEXANDER, count Riminisky, prince of Italisky) a field-marshal of the Russian armies, equally renowned for his desperate courage in battle and his barbarity to the conquered. He was descended of a noble Swedish family, born in 1730, and was originally intended by his father for the profession of the law, in order to avoid which destination he left his home abruptly, and entered the army as a private soldier when only thirteen years of age. His distinguished gallantry in the ranks during the seven years' war gained him promotion, and after twenty years' service he was raised to the com-

mand of a regiment. In 1768 he obtained the rank of brigadier-general, and served several campaigns in Poland, receiving, in reward for his courage and conduct, the crosses of three Russian orders of knighthood. In 1773 he was appointed to the command of a division of the troops under count Romanzoff, and completely defeated a portion of the Turkish army at Turtukey, killing, it is said, several of the enemy with his own hand, and sending their heads with a laconic message announcing the victory to his general-in-chief. Crossing the Danube, he afterwards, in conjunction with the force under Kamenskoy, routed the army of the reis effendi with great slaughter, and the capture of all his artillery. In 1783 he marched against the Budziac Tartars, and reduced them under the Russian yoke. In 1787 being then chief in command, he was entrusted with the defence of Kinburn, then attacked by the Turkish forces both by sea and land; and after an obstinate siege succeeded in repulsing his assailants with considerable loss. At Oczacow and Fockzani (at the former of which places he received a severe wound) his daring valour was equally displayed; and in the September of 1789 the Austrian troops under the prince of Saxe Coburg being surrounded on the banks of the Rymynisk by a hundred thousand Turks, owed their preservation to his timely arrival with ten thousand Russians, who not only rescued them from a destruction that appeared inevitable, but occasioned the utter overthrow of the enemy. To this victory he was indebted for the first of his above-named titles and the dignity of a count of both empires. The next and perhaps the most sanguinary of his actions was the storming of Ismailoff in 1790. This strongly fortified town had resisted all attempts to reduce it for a period of seven months, when Suwarrow received preperatory orders from prince Potemkin to take it without delay, and pledged himself to execute the task assigned him in three days. Of the sacking of the place on the third, and the indiscriminate massacre of forty thousand of its inhabitants of every age and sex, the accounts of the period give a report the most revolting to humanity, while the announcement of his bloody triumph was made by the general, who affected a Spartan brevity in his despatches, in two short sentences, "Glory to God! Ismailoff is ours." Peace being proclaimed with Turkey, the empress had leisure to mature her designs against the devoted kingdom of Poland, and Suwarrow was selected as a fit instrument to carry them into execution. He marched accordingly at the head of his troops to Warsaw, destroying about twenty thousand Poles in his way, and ended a campaign, of which the unprincipled partition of the invaded country was the result. On this occasion he received a field-marshal's baton, and an estate in the dominions which he thus contributed to annex to the Russian crown. The last and most celebrated of his actions was his campaign in Italy in 1799, when his courage and genius for a while repaired the disasters

of the allied forces in arms against the French, whom he defeated at the battle of Novi. A more formidable antagonist than any he had yet encountered was at length opposed to him in Moreau; the obstinate valour of the Russian, however, continued to baffle the generalship of his opponent, and though ultimately compelled to retire by way of Switzerland, his retreat was conducted in so masterly a manner, that the glory he acquired by it was not inferior to that which he had derived from his victories. The change of politics in the Russian cabinet, or rather in the vacillating mind of the capricious autocrat who then wore the imperial diadem, by producing a peace with France, occasioned the recal of the veteran to St. Petersburg, where, although he was received with honour and distinction, the chagrin which he experienced at the new turn affairs were taking is said to have injured his health, and to have materially accelerated his decease, which took place near that capital in the spring of 1800. The virtues of Suwarrow were those of a barbarian, intrepidity, disinterestedness, and affability to his soldiers, whose labours he shared, and who followed him with a blind devotedness little short of adoration; but these were disfigured by the most reckless cruelty and barbarity, which must ever cause his name and actions to be held in abhorrence by all civilized nations. Civil diplomacy he disdained, as unworthy of a soldier; and the most absurd superstition reigned predominant in a mind utterly inaccessible to the dictates of all real and practical religion. In this respect his character appears to have borne no slight resemblance to that of Louis XI. of France, and like that pitiless despot, he always carried about him a small image of his patron saint, to which he affected the greatest devotion. His manner of appearing in the field exhibited occasionally a singularity which would almost seem to indicate a disordered intellect. In the conflict especially which took place during his celebrated passage of the St. Gothard Alps, he is represented as continuing the whole day in his shirt, with a boot on one leg and a shoe on the other, in accomplishment, as was generally supposed, of some vow or other superstitious observance. — *History of his Campaigns by Anking. Encyc. Brit.*

SWAMMERDAM (JOHN) a very distinguished naturalist, was born at Amsterdam in 1637. His father, who was an apothecary, designed him for the church, but as he preferred physic, he was allowed to pursue his studies in that profession. He was sent to Leyden, where he quickly distinguished himself by his anatomical skill, and the art of making preparations. After visiting Paris for improvement, he returned to Leyden, and took the degree of MD. in 1667, and about the same time began to practice his invention of injecting the vessels with a ceraceous matter, which kept them distended when cold; a method from which anatomy has derived very important advantages. Entomology however became his great pursuit, and in 1669 he pub-

lished in the Dutch Language a "General History of Insects." In this work are many curious observations on the changes produced in this class of animals, which he demonstrated to be a mere evolution of parts, and he ascribed generation altogether to evolution, a theory which has been widely countenanced. He was so devoted to these pursuits, that he neglected his practice as a physician, but consulted his reputation as a medical anatomist, by publishing in 1672 a work entitled "Miraculum Naturæ, seu Uteri Muliebris Fabrica," to which was added an account of his new method of waxen injection. Rendered hypochondriacal, by intensity of study and other causes, he became totally unfit for society, in which state he unfortunately received impressions from the mysticism of Antoinette Bourignon. By her desire it is said that he published in 1675 an account, in Dutch, of the insect named *Ephemera*; and he followed this selfish and unamiable fanatic to Holstein, although he afterwards returned to Amsterdam, where, reduced to a skeleton by his abstractions and mortifications, he terminated his life in 1680. Previously to his death, in a paroxysm of enthusiasm, he burnt all his remaining papers; but under the pressure of indigence, having sold the greater part of his writings and drawings to Thevenot. These, half a century afterwards, came into possession of Boerhaave, who caused them to be published in Latin and Dutch, under the superintendence of Gaubius, with the title of *Biblia Naturæ, sive Historia Insectorum in Classibus certas reducta, &c.*" 2 vols. folio, Leyden, 1737, of which papers the substance had appeared in the previous and less perfect edition of 1633, 4to. This publication which has been translated into English by sir John Hill, abounds with the most curious discoveries. Besides the works before mentioned, he is author of "Tractatus Physico-Anatomico-Medicus de Respiratione," Leyden, 1679, 8vo, and 1738, 4to. — *Life by Boerhaave. Halleri Bibl. Anat.*

SWARTZ (OLAF) a Swedish botanist, born at Nordkoping in 1760. He studied under Linnæus at Upsal, and afterwards improved his acquaintance with science by travelling in search of plants through the provinces and islands of Sweden. At the age of twenty-three he undertook a voyage to the West Indies and South America; and on his return he resided a year in London, where he became acquainted with sir Joseph Banks. He reached his native country in 1789, bringing with him a rich collection of vegetable treasures. He then visited the Alpine mountains of Norway and a part of Lapland. On his return he was elected a member of the Academy of Stockholm, of which the following year he was president; and the king appointed him professor of natural history at the medico-surgical institution, and made him a knight of the orders of Vasa, and of the Polar Star. He died September 18, 1817. Among his works are "Nova Genera et Species Plantarum," 1788; "Icones Plantarum inognitarum," 1794, fol. fascicul. prim.; "Flora

Indiæ Occidentalis," 1797—1806, 3 vols. 8vo; "*Fasciculus Lichenum Americanorum*," 1811.—*Biog. Univ.*

SWEDENBORG (the hon. EMANUEL) a philosophical Swedish enthusiast of the last century, who, though greatly distinguished for his valuable contributions to science, is now better known on account of his remarkable views in theology. He was born at Stockholm in the year 1688, and educated under the care of his father, who was bishop of Skara in Westrogothia. He gave early indications of great aptitude for learning; and by the publication of some Latin verses under the title of "*Ludus Heliconius, sive Carmina Miscellanea*," he displayed a singular vivacity of mind, and proved that the period of youth had been well employed. After pursuing his studies in the university of Upsal, he proceeded on his travels; during the four years of which, from 1710 to 1714, he visited the universities of England, Holland, France, and Germany. In 1716 he commenced the publication of his "*Dædalus Hyperboreus*," a work consisting of essays and remarks on questions in mathematics and physics, which evinced his taste for those sciences. At this time his learning and other qualities had procured him the favourable notice of his sovereign Charles XII, who appointed him assessor extraordinary of his board of mines. By the king's direction also he was associated with his friend, the celebrated Polhem, in the construction of various mechanical public works. He had thus an opportunity of bringing his knowledge and genius into exercise; and during the siege of Frederickshall in 1718, he invented machinery, by means of which two galleys, five large boats, and a sloop, were transported from Stromstadt to Iderfjol, over valleys and mountains, a distance of fourteen English miles. His mind however was not wholly employed by works of this kind; for in the same year he printed an introduction to algebra, which was followed in the next year by three other treatises on different subjects. Having lost his patron during the siege, he was protected and ennobled in 1719 by his sister and successor. In order to obtain a practical knowledge of metallurgy, and thus qualify himself for better performing the duties of his office, he went in 1720 and 1721 to inspect the mines of Saxony and Harts, as well as those of his own country; and during these journeys he collected much information in science and natural philosophy, which, on his return, was given to the world in several small publications. In 1734 was published, in three folio volumes, a collection of his philosophical and mineralogical works, the merit of which was acknowledged throughout Europe, and procured for him those honours and distinctions which universities and other learned bodies have it in their power to bestow. His fame was now established, but he still assiduously cultivated science. Between 1738 and 1740 he travelled in France and Italy; and in the latter year he published his "*Economia Regni Animalis*;" in 1744—5. his "*Regnum Animale*;" and

also a work entitled "*De Cultu et Amore Dei*." From this time his industry was not diminished, nor were his publications less numerous, but they were of a very different description. "Whatever of worldly honour or advantage may appear to be in these things," wrote the baron, "I hold them but as matters of very low estimation, compared to the honour of the holy office to which I have been called by the Lord himself, who was graciously pleased to manifest himself to me his unworthy servant, in a personal appearance in the year 1743, to open to me a sight of the spiritual world, and to enable me to converse with spirits and angels; and this privilege has continued with me to this day." After this extraordinary call, that he might wholly devote himself to the great work which he supposed assigned to him, he obtained permission to retire from his office, and was allowed to retain half the salary attached to it. For the greater convenience of printing the works suggested to him by this peculiar state of mind (all of which were printed at his own expense), he resided alternately in Sweden, Holland, and England. All his theological as well as his philosophical works were originally published in Latin, but have been subsequently translated into English. They are very voluminous, one alone, entitled "*Arcana Cælestia*," occupying twelve closely printed octavo volumes. There are also several distinct treatises, the most remarkable of which are the aforesaid "*De Cultu et Amore Dei*," "*De Telluris in Mundo nostro Solari*," 1758; "*De Equo Albo in Apocalypsi*," 1758; "*De Novo Hierosolyma*;" "*De Cælo et Inferno*;" "*Sapientia Angelica de Divina Providentia*," Amst. 1764; "*Vera Christiana Religio*," Amst. 1771. The whole may be divided into two general classes, one containing religious doctrines grounded on his peculiar interpretations of Scripture, and the other including his assumed communications concerning the state of man after death. He died in London, in the month of March, 1772, and his remains, after lying in state, were deposited in a vault at the Swedish church, near Ratcliffe Highway. His followers, who were not numerous during his lifetime, have rapidly increased since his death, and his sect may be now deemed established, under the title of "*The New Jerusalem Church*." One of their discriminating tenets is the identity of God with Jesus Christ. In this sense they are Unitarians, yet they hold that in this one person there is a trinity, consisting of the divinity, the humanity, and the operation of both on Christ, who always existed in a human form, and who assumed a material body in order to redeem the world. This redemption consists in bringing the hells or evil spirits into subjection, and in preparing the way for a more spiritual church. They maintain that the Scriptures are to be interpreted not only in a literal but in a spiritual sense, unknown to mankind until revealed to baron Swedenborg. They also inculcate a spiritual influence over man by means of good and bad

angels residing within their affections, who are continually struggling against each other; and assert that by the former God assists them under temptation. Their leader indeed held that there is a universal influx from God into the soul of man, which he compares to the communication of light from the sun. The existence of two worlds, the natural and the spiritual, which exactly correspond with each other, is also taught; and that at his death a man enters into the latter, and is clothed with a substantial, although not a material body. Such are a few of the leading doctrines of the "new and perpetual church," which this extraordinary personage declared himself appointed to make known; and which he asserts is predicted in the Apocalypse, under the figure of the New Jerusalem descending from God out of heaven. "When once," says Swift, "the imagination gets astride of the senses, there is nothing which a man may not bring himself to believe, and if he once believe himself, to persuade other people to believe." Thus there is not the least reason to impute intended imposition to the extraordinary tissue of ingenuity and fancy, which is contended for as inspiration by the followers of Emanuel Swedenborg. Some of them indeed insist that he was neither visionary nor enthusiastic; an assertion which, out of pure regard to the best tempered alternative, all other persons will hesitate to admit. There are societies formed in London and Manchester for the express purpose of printing and keeping the works of Swedenborg in circulation.—*Sandel's Eul. Atkin's Gen. Biog. Orig. Com.*

SWEDIAUR (FRANCIS XAVIER) a physician and writer on medicine, born at Steyer, in Upper Austria, in 1748. He studied at Vienna, and afterwards travelled for three years in different parts of Europe. He then settled in London, and engaged in practice; but at the commencement of the Revolution he went to reside at Paris, where he became connected with the Jacobin leaders, and especially with Danton. He died August 27, 1824. He published several professional works, the most important of which is his "*Traité complet sur les Symptomes, les Effets, la Nature et le Traitement des Maladies Syphilitiques*," Paris, 1798. He was also the author of a "*Philosophical Dictionary*," 1786, 8vo, characterised by the Monthly Reviewers as the quintessence of impiety.—*Biog. Univ.*

SWERT (FRANCIS) an industrious man of letters, was born at Antwerp in 1567. Little is known of his personal history beyond the fact that he devoted himself exclusively to literature, and was connected with most of the learned men of his day. He was particularly conversant with Belgic history and Roman antiquities. He died at Antwerp in 1629. Of his numerous works the principal are "*Reum Belgarum Annales, Chronicon et Historicos*," 2 vols. folio; "*Athenae Belgicae*," folio; "*Deorum et Dearum Capita ex Antiquis Numismatibus*," 4to; "*Monumenta Sepulchralia Ducatus Brabantiae*."—*Moreri. Sarii Onom.*

SWIFT (JONATHAN) an eminent English divine, wit, humorist, and politician. His grandfather was a clergyman, possessed of a paternal estate near Ross in Herefordshire, who held the vicarage of Goodrich in the same county. By his wife Elizabeth Dryden, aunt to the poet, this gentleman had a number of sons, who for the most part settled in Ireland. One of the youngest, named Jonathan, who was brought up an attorney, before he went to Ireland married Mrs Abigail Erick, a Leicestershire lady, whom at a very early age he left a widow, with one daughter, and pregnant with the subject of this article, who was born November 30, 1667. This event took place under the roof of his elder uncle Godwin, who had kindly afforded protection to his sister-in-law and family. He was placed at a school in Kilkenny when six years old, and in his fifteenth year was removed to Trinity college, Dublin, where applying himself to history and poetry, to the neglect of academical pursuits, especially the mathematics, he was at the end of four years refused the degree of B.A. for insufficiency, and even at the end of seven years was only admitted speciali gratiâ, a species of favour which was deemed highly discreditable. To this mortification is attributed the contempt with which he treats mathematical learning in his various writings; but another and a better effect of it was evinced in a resolution to apply to his studies with more diligence. This determination he steadily adhered to for the following seven years, three of which he spent at the university of Dublin, during which last-mentioned period he is said to have composed his celebrated "*Tale of a Tub*." In his twenty-first year the death of his uncle rendered it necessary for him to pay a visit to Leicester, for the purpose of consulting his mother, then resident in that neighbourhood. By her advice he was induced to communicate his situation to the celebrated air William Temple, who had married one of her relatives, and who at that time lived in retirement at Moor park, Surrey. He was received by the latter with great kindness, and he rendered himself so acceptable to the aged statesman, that he resided with him at Moor park and Sheene for nearly two years. At the latter place he was introduced to king William, who often visited Temple privately; and the king, whose feelings were all military, offered him a captaincy of horse, which, having already decided for the church, he declined. Being attacked by the disorder which occasioned those fits of vertigo that afflicted him more or less all his life, and finally destroyed his reason, he was induced to revisit Ireland, but soon returned and resided with sir William Temple as before. Some time after he determined upon graduating M.A. at Oxford, and having entered at Hart-hall in May 1692, he received the deserved honour in the July following. He was probably indebted to his known connexion with Temple for this mark of respect; but it has also been suspected that the words speciali gratiâ in his Dublin testimonials, were mistaken for a com-

pliment at Oxford. He had certainly not distinguished himself at this time by any public specimen of talent, although he made some attempts at poetry in the form of odes to his patron and king William. This species of composition being wholly unfitted to his genius, his relation Dryden is said honestly to have told him that he would never be a poet, to which brief observation is attributed the extraordinary rancour with which he always alluded to that eminent writer. After residing two years longer with his patron, conceiving the latter to be neglectful of his interest, he parted from him in 1694 with some tokens of displeasure, and went to Ireland, where he took orders with very moderate expectations from the church. A recommendation to the lord-deputy Capel, however, procured him a prebend in one of the northern dioceses, which he soon resigned, in order to return to sir William Temple, who, sinking under age and infirmities, required his company more than ever. During the few remaining years of that statesman's life, they therefore remained together; and on his death Swift found himself benefited by a pecuniary legacy and the bequest of his papers. From the latter he selected two volumes of "Letters," which he dedicated to king William, who taking no notice of him, he accepted an invitation from the earl of Berkeley, one of the lords justices in Ireland, to accompany him as chaplain and secretary. The latter office was soon taken from him, as fit only for a layman; and he was also disappointed of the deanery of Derry, which had been promised him, acquiring only the comparatively poor livings of Laracor and Rathbiggin in the diocese of Meath. While in the family of the earl of Berkeley he began to make himself known by his remarkable talent for humorous verses, as may be seen by the petition of Frances Harris and various other excellent specimens. On the return of that nobleman to England, he went to reside at his living of Laracor; and during his residence there he invited to Ireland Miss Johnson, the lady whom he has so much celebrated by the name of Stella, and who had become known to him owing to her father having held the office of steward to sir William Temple. She came accompanied by a Mrs Dingley, a distant relation of the Temple family, who was fifteen years older than herself; and of circumstances so confined as to render the situation eligible. The two ladies resided in the neighbourhood when Swift was at home, and at the parsonage-house during his absence; and this mysterious connexion lasted till her death. In 1701 he took his doctor's degree, and the same year, being then of the mature age of thirty-four, first entered on the stage as a political writer, by a pamphlet in behalf of king William and his ministers, entitled "A Discourse of the Contests and Dissensions between the Nobles and Commons of Athens and Rome," a work of no great force. In 1704 he published, although anonymously, his famous "Tale of a Tub," of which eccentric production, although he would

never own it, he is the undoubted author. This very original piece of humour, while it advanced his reputation as a wit, did him no small injury as a divine, being deemed light and indecorous, if not irreligious, by the graver functionaries of the church. The "Battle of the Books" was appended to the "Tale of a Tub;" it is a burlesque comparison between ancient and modern authors, in which he exercises his satire with great unfairness against Dryden and Bentley, but whose fame, in their respective lines, even his satire could not permanently affect. In 1708 he began to appear as a professed author, by the publication of four different works, "The Sentiments of a Church of England Man, in respect to Religion and Government;" "Letter concerning the Sacramental Test;" "Argument for the Abolition of Christianity;" and "Predictions for the Year 1708, by Isaac Bickerstaff, Esq." Of these pieces the former two set the seal to his adhesion to the Tories, while the others exhibit that inimitable talent for irony and grave humour which forms his principal distinction as a man of genius. Returning to Ireland he commenced an intimacy with Addison, then secretary to the lord lieutenant. In 1710, being engaged by the Irish prelate to obtain a remission of the first-fruits and twentieths, payable by the Irish clergy to the crown, he was introduced to Harley, afterwards earl of Oxford, and to secretary St John, subsequently lord Bolingbroke. He gained the confidence of these leaders to such a degree, that he became one of the sixteen brothers who dined weekly at each other's houses, and took a leading share in the famous Tory periodical, entitled "The Examiner." Although now immersed in politics, he did not neglect literature, and in 1711 published a "Proposal for correcting, improving, and ascertaining the English Tongue," in a letter to the earl of Oxford, the object of which scheme was to establish an institution to secure the purity of the language, in some respects resembling the French Academy. The same year produced his celebrated tract, entitled "The Conduct of the Allies," written to dispose the nation to peace, and which, as the nation was beginning to be weary of the war, was received with great applause. "Reflections on the Barrier Treaty" followed in 1712, in which year he also printed "Remarks" on Burnet's introduction to his third volume of the History of the Reformation, in which he freely indulged in the spleen produced by his personal enmity to that prelate. A bishopric in England was the secret object of his ambition, but archbishop Sharpe, on the ground, it is said, of his "Tale of a Tub," having infused into the mind of queen Anne suspicions of his orthodoxy, the only preferment his ministerial friends could venture to give him, was the Irish deanery of St Patrick's, to which he was presented in 1713. The following year he published anonymously his "Public Spirit of the Whigs," which evinced so much contempt of the Scottish nation, that the peers of that country went in a body to demand repara-

ration, and a prosecution was with great difficulty avoided. He was hastily recalled the same year from his deanery, to which he had repaired to take possession, by the violent dissensions between Oxford and Bolingbroke, whom he in vain attempted to reconcile; and the death of the queen, which soon followed, put an end equally to their power and his own prospects, and condemned him to unwilling residence for life in a country which he disliked. He accordingly returned to Dublin, and introduced a meritorious reform into the chapter of St Patrick's, over which he obtained an authority never before possessed in his station. He now opened his house twice a week to the best company, on which occasion Mrs Johnson regulated the table although only in the character of guest. In 1716 he was privately married to this lady by Dr Ashe, bishop of Clogher; but the ceremony was attended with no acknowledgment which could gratify the feelings of the amiable victim of his pride and singularity. The ascendancy which this extraordinary man had acquired over Miss Heister Vanhomrigh, another accomplished female, was attended with circumstances which appear even still more censurable and conflicting. He became acquainted with this lady in London in 1712, and as she possessed, with a large fortune, a taste for literature, Swift took pleasure in affording her instruction. The result was a second part of the story of Abelaar and Heloise; the pupil became enamoured of her tutor, and even proposed marriage to him; but being probably at that time engaged to Stella, he indefensibly avoided a decisive answer. That he however felt her attractions, seems obvious from his *Cadenus* and *Vanessa*, the longest and most finished of his poems of fancy. This affair terminated fatally; for ultimately discovering his secret union with Stella, the unfortunate lady never recovered the shock, but died fourteen months after, in 1723. She previously cancelled a will she had made in his favour, and left it in charge to her executors (one of whom was bishop Berkeley) to publish all the correspondence between her and Swift, which however never appeared. After residing some time in Ireland without attending to public affairs, in 1720 he was roused by the illiberal manner in which Ireland was governed, to publish "A Proposal for the universal Use of Irish Manufactures," which rendered him very popular. His celebrated *Letters* followed, under the name of M. B. Drapier, in which he so ably exposed the job of Wood's patent for a supply of copper coinage. A large reward was offered for the discovery of the author, but none took place, and the dean became the public idol of the Irish people. It was about this time that he composed his famous "Gulliver's Travels," which appeared in 1726, a work too well known to require any thing beyond advertance to the indescribable union of misanthropy, satire, irony, ingenuity, and humour which it exhibits. Its popularity was unbounded, and the imitations of it have been very numerous. In the same year he joined Pope in three

volumes of miscellanies, leaving the profit to the poet. On the death of George I, he paid his court to the new king and queen, and seems to have flattered himself with some hopes of notice, through the influence of the favourite Mrs Howard. He was however disappointed, and the death of Stella, about this time, who had been long languishing in a state of decline, completed his chagrin. When her health was ruined, it is said, that he offered to acknowledge her as his wife, but she emphatically replied, "It is too late." He allowed her to make a will in her maiden name, in which she consigned her property to charitable uses. From the death of this injured female, his life became much retired, and the austerity of his very acrid temper increased. He continued however, for some years to exercise both his patriotic and his splenetic feelings, in various effusions of prose and verse, and was certainly very earnest in his exertions to better the condition of the wretched poor of Ireland, in addition to which endeavours he dedicated a third of his income to charity. Some of his most striking poems were written about this time, including his celebrated "Verses on his own Death," formed on one of the maxims of Rochefoucault. He kept little company at this advanced period, but with inferiors, whom he could treat as he pleased, and especially that of a knot of females, who were always ready to administer the most obsequious flattery. In 1736 he had so severe an attack of deafness and giddiness, that he never afterwards undertook any work of thought or labour, although he allowed his "Polite Conversation" to be published. This piece and his "Directions for Servants," not printed until after his death, curiously evince his close attention to the minutest oddities and improprieties of every station. The fate, which owing to the peculiar nature of his constitutional infirmities he always feared would befall him, at length reached him; the faculties of his mind decayed before his body, and a gradual abolition of reason settled into absolute idiocy early in 1742. Some glimmerings of reason subsequently appeared at distant intervals, until the latter end of October, 1745, when he died without a pang or convulsion, in his seventy-eighth year. He bequeathed the greatest part of his fortune to a hospital for lunatics and idiots, the intention of which he had announced in the verses upon his own death:

"To show, by one satiric touch,
No nation needed it so much."

The character of this celebrated person is so strongly denoted by his life and writings, it can scarcely be mistaken in its principal features. Pride, misanthropy, and stern inflexibility of temper formed its basis; but the superstructure was strangely compounded of sincerity and absence of paltry jealousy, with arrogance, implacability, carelessness of giving pain, and a total want of candour as a politician or partizan. Of his obdurate and unfeeling nature, besides his culpable and indefensible treatment of his wife and Miss Vanhomrigh

(for which various reasons, including secret constitutional infirmities, have been conjectured), his utter abandonment of an only sister simply for marrying a tradesman, and many other instances, might be adduced. Even his whim and humour was indulged with a most callous indifference to the pain which he might inflict, or the sensibilities he might wound. As a writer, his claim to originality is unimpeachable, and probably he will never be exceeded in the walk of grave irony, which he veils with an air of serious simplicity, admirably calculated to set off the humour it is apparently suited to conceal. He also abounds in ludicrous ideas of every kind, and these, as if intent to prove his own position that a nice man (and he was fastidiously so) is a man of dirty ideas, often deviate, both in his poetry and prose, into very unpardonable grossness. His style in each department forms the most perfect example of easy familiarity that the language affords; but although admirable for its pureness, clearness, and simplicity, it exhibits little of the glow or impress of genius, its highest characteristic consisting in its extreme accuracy and precision. As an argumentative and didactic writer, he has therefore been not only equalled, but excelled by many; but in wit, humour, and irony he is more than the Lucian of the modern world, and in his own especial vein is never likely to be surpassed. To conclude, this great and singular man will always be regarded as among the most original of English writers, while on the part of Ireland he will ever claim respect as one of the most powerful and fearless of the literary and social advocates who have been roused into honourable indignation by her wrongs. His works have been often printed, and in various forms, one of the latest and best editions of which is that under the superintendence of Nichols, in 19 vols. 8vo.—*Biog. Brit. Orvery's Life. Johnson's Lives of the Poets. Aikin's Gen. Biog.*

SWIFT (DRANE) a near relation to the subject of the preceding article, being grandson to Godwin Swift, his eldest uncle. He was named Deane from his maternal great-grandfather, who was the admiral Deane that sat as one of the judges on the trial of Charles I. He was introduced in 1739 to Pope as a learned ingenious man and the lineal representative of the Swift family. He published in 1755 an "Essay upon the Life, Writings, and Character of Dr Jonathan Swift;" in 1765, the eighth 4to volume of the Dean's Works; and in 1768, two volumes of his "Letters." He meditated a complete edition of Swift, and had collected many materials for the purpose, when he was interrupted by death, July 12, 1783.—*Swift's Works by Nichols.*

SWINBURNE (HENRY) an eminent ecclesiastical lawyer, flourished about the close of the 16th and during the early part of the 17th centuries. He was born at York; and after going through the usual course of academical education at Hart-hall and Broadgate-hall, Oxford, graduated as LL.D., and obtained the situation of proctor and judge of the

archbishop's court in his native city. He was the author of several professional works connected with the practice of the civil courts. In particular, of "A Treatise on Matrimonial Contracts," 4to; and "On Last Wills and Testaments," 4to, a useful book, which has been frequently reprinted. His death took place at York in 1620, or, as some say, 1624.—*Bridgeman's Legal Bibliog.*

SWINBURNE (HENRY) a learned traveller, was descended of a respectable family in Northumberland, where, as well as in the neighbouring county of Durham, he possessed some property. The date of his birth is not recorded, but he received the rudiments of a classical education at the grammar-school of Scorton, Yorkshire; after which the religious opinions of his family, who were of the Romish church, precluding his matriculation at an English university, he visited France and Italy for the purpose of completing it. A second tour, which occupied his time from 1774 to 1780, carried him through great part of the south of Europe; and on his return to England he published an account of his Travels through Spain and the Sicilies, the former work in one, the latter in two 4to volumes, both being regarded as works of great merit. Pecuniary embarrassments, arising from the marriage of his daughter to Paul Benfield, and consequent involvement in the misfortunes of that adventurer, eventually induced him to return to the island of Trinidad, where he died in 1803.—*Nichols's Lit. Anec.*

SWINDEN (JOHN HENRY VAN) a Dutch philosopher, born at the Hague, in 1746. He was educated at Leyden, and became professor of philosophy, logic, and metaphysics at Franeker in 1767. Nineteen years after he was called to the chair of physics, mathematics, and astronomy at the Athenæum at Amsterdam. In 1770 he became a member of the Academy of Sciences at Paris, and he gained the prize offered by that learned body for the best memoir "Sur les Aiguilles Aimantées et leurs Variations;" and in 1780 he obtained a prize from the Academy of Munich, for a memoir in answer to the question "What analogy is there between Electricity and Magnetism?" which was afterwards printed in 2 vols. 8vo. In 1798 he appeared at Paris, at the National Institute, to assist in the establishment of a new metrical system, when he was appointed to draw up the reports on those subjects. In 1803 he was nominated a correspondent of the French Institute; and he belonged to the principal learned societies in Europe. He also occupied the offices of member of the Executive Directory, under the Batavian republic, and that of counsellor of state in the service of the king of the Netherlands. He died March 9, 1823. Van Swinden was the author of several works besides those already mentioned, of which notices may be found in the annexed authorities.—*Big. Nouv. des Contemp. Biog. Univ.*

SWINTON (JOHN) a learned antiquary, was born at Bexton, Cheshire, in 1703. In 1719 he was entered a servitor at Wadham

college, Oxford, and after obtaining the usual degrees, took priest's orders in 1727. In the following year he was elected fellow of his college, and soon after became chaplain to the English factory at Leghorn. He visited, while abroad, the capitals of Venice, Vienna, and Petersburg, and was made member of one or two Italian academies, having previously been admitted a fellow of the Royal Society. On his return to Oxford, he was appointed keeper of the archives of the university and chaplain to the jail. The monuments of his literary life, which are numerous without being of magnitude, consist principally of Dissertations on the ancient Etruscan language, on Phœnician and Samaritan coins and inscriptions; on Parthian and Persian coins, and similar subjects, most of which appear in the *Philosophical Transactions*. He also composed the account of the Carthaginians, Jews, Tartars, Moguls, Indians, and Chinese, &c. for the *Universal History*. He died in 1774, aged 71.—*Gent. Mag.*

SYBRECHT (JOHN) a Flemish artist of considerable celebrity, son of a painter of the same name who instructed him in the principles of his art. He was a native of Antwerp, born about the year 1630, and became distinguished at an early age by the beauty of his landscapes. Villiers duke of Buckingham, on his return through the Low Countries from his embassy to the court of Paris, was much struck with his performances; and prevailing upon him to accompany him to England, retained him several years in his service, during which time he employed him in adorning his magnificent mansion at Chiseldon. Sybrecht died in the metropolis in 1703, and was buried at St James's church in Piccadilly. Of his works the most admired are some beautiful scenes on the Rhine and views in Derbyshire.—*Walpole's Anec.*

SYDENHAM (FLOYER) a learned man, whose misfortunes are said to have given rise to the institution of the Literary Fund Society. He was born in 1710, and studied at Wadham college, Oxford, where he proceeded MA. in 1734. He published in 1759 "Proposals for Printing by subscription the Works of Plato, translated into English," with Notes critical and explanatory. Between 1757 and 1767, he produced, in succession, versions of the "Io," the "Greater and Lesser Hippias," and the "Banquet, Parts I and II." His undertakings met with little encouragement, and after living for some time in indigence, he died while confined in prison for debt, April 1787. Such was the sympathy which his sad fate excited, that it led a few individuals to commence the institution mentioned at the head of this article, which has subsequently obtained very extensive patronage and support, and been the means of frequently affording relief to the unfortunate members of the literary profession.—*Aikin's Gen. Biog. Univ.*

SYDENHAM (THOMAS) a celebrated English physician and medical writer, who was the son of a gentleman of Winford Eagle in

Dorsetshire, where he was born in 1624. After having studied for some time at Magdalen-hall, Oxford, he left the university, when the partisans of Charles I garrisoned Oxford, and withdrew to London with his brother, who was a colonel in the parliament army. Having determined to adopt the medical profession, he returned to Oxford in 1646, and in 1648 he took the degree of bachelor of medicine. His connexion with the prevailing party, or the interest of a relation, procured him a fellowship at All Souls college, in the room of an ejected cavalier. He subsequently commenced practice as a physician at Westminster, and for some unexplained reason he took his doctor's degree at Cambridge. Such was the success of his practice that he speedily arrived at great reputation; and from 1660 to 1670 he held the first place in his profession, though it was not till the latter part of his career that he became a licentiate of the college. Being a great sufferer from the gout, he was unable in the latter part of his life to go much from home; but he continued to benefit society by his writings and advice till near the time of his decease, which occurred at his house in Pall Mall, December 29, 1689. Dr Sydenham's improvements form an era in the history of medicine. He first applied himself to an attentive observation of the phenomena of diseases, founding his practice on the obvious indications of nature, rather than on prevalent theories, drawn from the principles of chemistry or mathematics. Febrile disorders attracted his especial notice, and in 1666 he communicated to the public the result of his observations, in a work entitled "*Methodus curandi Febres, propriis Observationibus superstructa*;" which was reprinted with additions, under the title of "*Observationes Medicæ circa Morborum acutorum Historiam et Curationem*," 1675. He first recommended a cooling regimen in the small-pox, a mode of treatment fully sanctioned by subsequent experience, as also has been his general practice in what are termed inflammatory fevers; but with regard to those of the typhous, or malignant kind, his practice deserves no peculiar commendation. Amongst his principal works are, "*Epistolæ Responsoriæ*," 1. *De Morbis Epidemicis a 1675 ad 1680*; 2. *De Luis Veneris Historia et Curatione*, 1680; "*De Podagra et Hydrops*," 1683, 8vo; and "*Processus Integri in Morbis fere omnibus Curandis*," published posthumously. The reputation of Sydenham has been by no means confined to his native country, for Haller denominates from him one of his periods in the history of medicine; and Boerhaave mentions him on several occasions with expressions of the highest respect.—*Aikin's Gen. Biog.*

SYKES (ARTHUR ASHLEY) a learned English divine, was born in London about 1684. He was educated at St Paul's school, and admitted of Corpus Christi college, Cambridge, in 1701. After graduating MA. he left college, and for some time acted as one of the assistants of St Paul's school. He subse-

quently was collated in succession to the vicarage of Godmersham in Kent, and to the rectories of Dry Drayton in Cambridgeshire, and Rayleigh in Essex, which last he retained to his death. He was also appointed, in the first place, evening, and afterwards morning preacher at King-street chapel, Golden-square, a chapel of ease to St James's, Westminster, of which his friend Dr Samuel Clarke was rector. In 1723 he was collated to a prebend in the cathedral of Salisbury, by bishop Hoadley, who also made him præcentor of the same cathedral. In 1725, upon the nomination of Dr Clarke, he was appointed assistant preacher of St James's church, Westminster, and finally obtained the deanery of St Burien in Cornwall, and a prebend in the cathedral of Winchester. He died November 15, 1756, in the seventy-third year of his age. Dr Sykes is principally distinguished as an able controversialist in favour of Whig opinions in the state, and what are termed Hoadleyan principles in the church. His tracts in defence of his views are numerous and able, and in particular he laboured hard to prove that a latitude of opinion in subscribing to the articles of the church of England was allowed and intended by the legislature. As this and the other points of dispute alluded to, have for some time past engaged very little attention, the works by which he is now chiefly known are entitled "An Essay on the Truth of the Christian Religion" in answer to Collins's Discourse on the Grounds and Reasons of the Christian Religion; and "The Principles and Connexion of Natural and Revealed Religion distinctly considered." Dr Sykes composed no fewer than sixty-three publications.—*Memoirs by Dr Dimsey.*

SYLBURGIUS (FREDERIC) a learned grammarian of the sixteenth century, born at Marburg, in Germany, in 1546, and during the earlier part of his life, master of a school at Licha. He afterwards retired to Marburg, and gave himself wholly up to the study and elucidation of ancient authors, of several of whose works he published valuable editions, particularly of those of Dion Cassius, Herodotus, Aristotle, Dionysius of Halicarnassus, &c. He also assisted in the compilation of the celebrated Greek Thesaurus of Henry Stephens. His own writings consist of some miscellaneous poems in Greek, and a valuable grammar and lexicon of that language. This last appeared in one large folio volume, two years previous to his death, which took place in 1596.—*Melchior Adam. Saxii Orig.*

SYLLA (LUCIUS CORNELIUS) a famous general and statesman in the last period of the Roman republic. He was descended from a branch of the illustrious family of the Cornelii, which had sunk into comparative indigence and obscurity. His youth was passed in dissipation, and having obtained wealth from the bequests of a courtesan and of his mother-in-law, he aspired to political distinction, and in 107 BC. he was chosen quæstor. He soon displayed evident proofs of his talents and ambition; and after having served with credit

as an officer under Marius, in Africa and the north of Italy, he was, BC. 96, sent into Cappadocia, to establish on the throne Ariobarzanes, who had been declared king of that country by the Roman senate. In the Social war, which began in Italy BC. 91, Sylla again distinguished himself; and in the year BC. 88 he was chosen consul. At this period began his contest with Marius, which occasioned the most dreadful misfortunes to their common country. The first object of dispute between these ambitious rivals was the appointment to the command in the war with Mithridates, king of Pontus. Marius, through the influence of the tribune Sulpitius, procured a decree of the people that Sylla should remain in Italy, and Marius lead the expedition against Mithridates; and two tribunes were sent to acquaint the army at Nola with this resolution. But the soldiers attached to Sylla treated the messengers with contempt and outrage, and demanded to be led to Rome, where their commander took vengeance on his enemies, and re-established his authority. Soon after the expiration of his consulate he set sail for the East; and having landed in Thessaly, and received the submission of several Grecian cities, he besieged and took Athens, and slaughtered multitudes of its inhabitants. He then proceeded to Asia, and after repeatedly defeating Mithridates, he concluded a very advantageous treaty with that powerful enemy of the Romans. While he had been absent from Italy the party of Marius had triumphed at Rome, and sacrificed to their vengeance the adherents of the absent general. He therefore returned with his victorious army, and landed at Brundisium, or according to some writers at Tarentum, 84 BC. The details of the proceedings of Sylla must be sought in the pages of history. It can only here be stated that the death of Marius had preceded the arrival of his opponent, who, though treated as a public enemy by the existing authorities, was in the end completely successful. Having entered Rome at the head of his troops, he began the horrid work of retaliation. He declared that all who expected a pardon for their late offences must gain it by destroying the enemies of the state; and he thus unsheathed the sword of the assassin, and encouraged murder as the means of acquiring distinction and power. Slaves were rewarded for killing their masters, and children were seen dragging their parents to execution. After the destruction at Rome of a multitude of persons, including fifteen men of consular rank, the two consuls, eighty senators, and sixteen hundred knights, and the desolation of several Italian cities, the wrath of Sylla was somewhat appeased; and having obliged the people to choose him dictator, he governed the Roman world two years under that title, and then voluntarily laid down his power, and retired to private life. Resuming his early habits of debauchery, and abandoning himself to sensual gratifications, he at length was attacked by a disgusting disease, which occasioned his death at the age of sixty, in the

year of Rome 676.—*Plutarch. Aikin's Gen. Biog.*

SYLVESTER II (pope) previously named Gerbert, was born of an obscure family in Auvergne, in the tenth century. At an early age he entered himself a monk in the monastery of St Gerard, in Aurillac. After laying a foundation for all the sciences cultivated in that ignorant age, he travelled into Spain to hear the Arabian doctors, and at length became so distinguished that he was appointed by Hugh Capet preceptor to his son Robert. Otho III, emperor, who had also been his pupil, conferred upon him the archbishopric of Ravenna; and on the death of Gregory V, in 999, procured his election to the papacy, on which event he took the name of Sylvester. He acted with great vigour in this capacity, and maintained the power of the church with a high hand. He was also a great promoter of learning, and a proficient in various branches of science himself. He spent much time and expended large sums in the collection of books from various parts of Europe; composed a number of works, particularly on arithmetic and geometry; and with his own hands made a clock, a globe, and an astrolabe. A great number of Letters on various subjects were written by this pope, of which 160 were printed at Paris in 1611; but the most complete collection has been given by Du Chesne. One of these, written in the first year of his pontificate, contains a project for a crusade. He died in 1003.—*Tiraboschi. Mosheim. Moreri.*

SYLVESTER (JOSHUA) a quaint and laborious poet, known among his contemporaries as "the silver-tongued Sylvester," flourished about the end of the reign of Elizabeth and the commencement of that of James, with both of whom he was a favourite. He was born about the year 1563; and although he does not appear to have had a university education, became familiarly acquainted with the Italian, French, Dutch, and Spanish tongues, together with a competent knowledge of the Latin. These languages he probably acquired in the course of his travels on commercial speculations, as tradition states him to have been a merchant in the earlier part of his life. His reputation as a poet is principally owing to his translation of the works of Du Bartas, which was very popular, as were also some others from the writings of De la Noue, Baron Teigny, and Pibrac. In original composition, according to Winstanley, he was much less successful, and in both capacities has long since been regarded as a singularly curious and fantastical writer. Henry prince of Wales, son to James I, placed him about his person as poet-pensioner; and off his death, which took place in 1618 at Middleburg in Holland, John Viccars, who much admired him, wrote a whimsical epitaph to his memory. Sylvester, among other things, imitated the example of his royal patron James in levelling a satire against tobacco, under the quaint title of "Tobacco battered and the Pipes shattered (about their ears that idly idolize so base and barbarous a weed, or at least-wise overlive so loathsome a

Biog. Dict. Vol. I. T.

vanitie), by a volley of holy shot thundered from Mount Helicon." This circumstance may perhaps in some measure account for the favour he enjoyed at court, which did not, however, preserve him from the evils of poverty, which is thought to have driven him abroad.—**MATTHEW SYLVESTER**, a non-conformist clergyman of the seventeenth century, educated at Cambridge, is known as the editor of "Baxter's History of his Life and Times." He suffered a similar fate with many of his brethren in being ejected from his living, Gunnerby in Lincolnshire, and retired to London, where he died in 1708, pastor of a dissenting congregation.—*Athen. Oxon. Censura Literaria*, vol. ii.

SYLVIUS. There were several learned and ingenious persons of this name; of these **JACQUES** (who, according to the fashion of the age in which he lived, thus Latinized his French patronymic Dubois) was one of the most skilful and celebrated physicians of the sixteenth century. He was a native of Amiens, born in 1478, and studied medicine at the college of Tournay in Paris, of which his elder brother, Francis Dubois, who had adopted the same mode of designating himself, was the principal. He soon rose to the first rank in his profession in point of science and ability; but being of a most penurious turn of mind, refused to take his university degrees in the faculty on account of the necessary fees. Continuing however both to practise and to lecture upon medicine, as well as on anatomy and botany, the wealth and reputation which he rapidly acquired drew on him the attacks of the regular practitioners, who, from his not having graduated, stigmatized him as an empiric, and endeavoured to prevent his practising. In this respect they so far succeeded as to induce him to retire for a while to Montpellier. While thus in comparative retirement, he occupied himself in writing a valuable treatise "On the Exhibition of Wine in Fevers." Subsequently he succeeded in making matters up with his old antagonists; and on the celebrated Vidius quitting Paris for Italy in 1548, the vacant professorship of physic in the royal college at Paris was offered to him. After a hesitation, real or affected, which however lasted nearly two years, he accepted this honourable situation in 1550, and filled it till his decease in 1555. The acknowledged abilities of Sylvius were much sullied by the avaricious disposition already alluded to, and by the rudeness of his manners. He was a warm defender of the opinions of Galen, except upon points connected with judicial astrology, which he held at its true value, but coincided with him in some other ideas perhaps scarcely less chimerical. Besides the tract before mentioned, he was the author of a French Grammar, as well as of a variety of professional works, which have been several times reprinted, under the title of "Opera Medica;" the best edition is that of Moreau, published at Cologne in 1630, in one volume folio.—His brother, **FRANCIS**, formerly spoken of, was one of the most elegant scholars of his

S

day, and did much towards reforming the barbarous Latin used in the schools. He published a treatise on rhetoric, called "Progymnasmata in Artem Oratorium," and died in 1530.—LAMBERT VANDEN BOSCH, a native of Dordrecht in Holland, also assumed the name of SYLVIVS. He was born in 1610, and distinguished himself both as a poet and an historian. In his former capacity he produced several dramatic, as well as miscellaneous pieces, while in the latter he is advantageously known by his "History of his own Times, from 1667 to 1687;" a "Theatre of Illustrious Men," 4to, 2 vols; and a "History of Sea Heroes," 4to.—FRANCIS DE LA BOE, or SYLVIVS, born in 1614 at Hanau in Veteravia, was also eminent as a chymist and medico-surgeon. He was the first who very ably demonstrated Harvey's doctrine of the circulation of the blood at Leyden, where he filled the medical chair. His death took place in November 1672. There are two editions of his works; the 4to, printed by Elzevir at Amsterdam in 1679, and that of Venice, folio, 1708.—*Moreri. Eloy Dict. Hist. de la Med.*

SYMES (MICHAEL) an English officer and traveller in the latter part of the eighteenth century. He entered while young into the army, and having served in the East Indies, he attained the rank of major. In 1795 sir John Shore, governor-general of the British establishments in that country, determined on sending an embassy to the court of the king of the Birmans, to settle some disputes which had arisen between the two governments. Mr Symes was chosen to conduct this mission, in the prosecution of which he departed from Calcutta February 21, 1795; the vessel in which he sailed touched at the Andaman isles, and after passing five days there, arrived on the 18th of March at the mouths of the Irouwaddy, and ascended that river to Rangoon. While waiting for permission to continue his voyage to the capital of the Birmans, Symes visited Pegu, formerly the capital of an independent kingdom. On the 26th of April he returned to Rangoon, and a few days after he received the expected permission to proceed to Amerapooora, the residence of the Birman monarch, situated on the Irouwaddy. He embarked on that river the 29th of May; and on the 18th of July he entered the capital, where he was well received, but was directed not to leave the place appointed for his residence, till he had obtained an audience of his Birmese majesty. That prince was then absent; but on his return, the fortunate day being fixed on by the court astrologer, Mr Symes and the other members of the embassy were conducted with great pomp to the palace, on the 30th of August. The emperor did not show himself on this occasion; and it was not till the 30th of September, at the second solemn audience, that he made his appearance. He was visible only for a short time, most splendidly attired, and seated in a magnificent recess, closed by folding-doors, which were opened for the momentary display. He spoke

not a word to the ambassador, who however had reason to be satisfied with his reception; and in spite of the intrigues of the Birmese ministers, he had the satisfaction to conclude an advantageous treaty of commerce. On the 29th of October he quitted Amerapooora, and returned to Calcutta, December 22d, having been absent ten months. The following year the government of Bengal sent out another embassy, at the head of which was captain Hiram Cox, who returned to Calcutta, unsuccessful, in November 1797. Major Symes was therefore sent a second time to Amerapooora, and he accomplished the object of his mission. He afterwards returned to England, and published "An Account of an Embassy to the Kingdom of Ava in 1795," London, 1800, 4to, which was translated into French and German. His public services were recompensed with the commission of lieutenant-colonel in the sixty-sixth regiment of the line; and being sent to Spain in 1808, the fatigues which he had experienced in the retreat of sir John Moore to Corunna, occasioned his death shortly after he had embarked for England. He died Jan. 22, 1809, and his corpse being brought home, was interred at Rochester.—*Biog. Univ.* SYMMACHUS (QUINTUS AURELIUS AVIANUS) a Roman senator of the fourth century, was the son of a prefect of Rome, who himself arrived at the consular dignity. He was warmly attached to the ancient religion, and headed a deputation from the senate, to request from the emperor Valentinian the restoration of priests and vestals, and of the altar of victory. His petition, which is extant, was answered by St Ambrose and the poet Prudentius, and he lost his cause. He was, however, raised by the emperor Theodosius to the consulate in 391, but was subsequently banished and treated with great rigour. Though highly celebrated for oratory, it was of the florid corrupted kind of his day; and from his ten books of epistles, which have been preserved, Gibbon asserts that little of value can be extracted. The best edition of them is that of Scioptius, 4to, 1658.—*Moreri. Gibbon.*

—SYMMONS, DD. (CHARLES) a native of Cardigan, which town his father had represented in three successive parliaments. He was born in 1749, and received the rudiments of a classical education under Dr Smith at Westminster school, whence he removed to the university of Glasgow, and subsequently to Clare-hall, Cambridge. Having graduated in 1776 as bachelor in divinity, he obtained two years afterwards the rectory of Narberth, and in 1794 that of Lampeter in Pembrokeshire, the latter through the interest of Mr Windham, with whom he had contracted an intimacy when in Scotland. This last piece of preferment he narrowly escaped losing, in consequence of a sermon preached by him at Cambridge, before the presentation was made out, the discourse containing some winnigish sentiments little congenial to those then in power; and the remembrance of which cost his friend much trouble to obliterate. The same cause operated to throw difficulties in

the way of his doctor's degree, and he therefore found it advisable to enter himself ad eundem at Jesus college Oxford, in which university he proceeded DD. in the March of the same year. Dr. Symmons was a warm admirer of literature, and a zealous supporter of the Literary Fund for the relief of indigent authors. His own writings consist of "Inez, a Dramatic Poem," 1797; a second entitled "Constantia," 1800; an octavo volume of miscellaneous poetry, partly of his own composition and partly that of his daughter, 1813; a Rhymed Translation of the *Æneid*, 1817; and a "Life of Milton," prefixed to an edition of that author's prose works. After his decease, which took place at Bath in the spring of 1826, his friend, Mr Whittingham, published a posthumous biographical sketch of Shakespeare of his writing. In private life Dr Symmons was distinguished by the amenity of his manners and the benevolence of his disposition.—*Ann. Biog.*

SYNCELLUS (GZOROS) a monk of the Greek empire, so named from his office about the person of the patriarch. He flourished about the close of the eighth century, and is known as the author of a valuable chronological work, which throws some light on the early history of the Egyptians. Of this there is an edition with a Latin version annexed, printed in folio in 1652.—*Moreri.*

SYNESIUS. There were two of this name. The one a philosopher of the Platonic school, of whom little is known except his work on natural philosophy and another on dreams. Of the former there is an edition extant, printed at Paris in quarto, 1612; the other is to be found annexed to the writings of Jamblicus.—The second and most celebrated was a native of Cyrene, who went for the purpose of completing his education to Alexandria, where he became a disciple of Hypatia, and was eventually converted to Christianity. His learning and blameless life caused him to be chosen bishop of Ptolemais, contrary to his own wishes, although in his tenets he was far from coinciding with the doctrines then generally approved. This Synesius flourished about the commencement of the fifth century, and is recorded to have visited Constantinople in the year 400, for the double purpose of presenting to Arcadius his treatise "De Regno," and soliciting his interposition in favour of his native land against the Goths. There are two editions of his writings, both edited by Dionysius Petavius at Paris in 1623 and 1633. *Cave. Dupin. Brucker.*

SYNGE (EDWARD) archbishop of Tuam in Ireland, a learned and able prelate, born in April 1659, at Inishonane in that country. He was the second son of the bishop of Cork, and it is recorded as a singular occurrence with respect to this family, that both his father, his uncle, himself, and two of his sons were all in succession elevated to the mitre. Having gone through a preliminary course of educa-

tion at the grammar-school in Cork, he removed to Christchurch, Oxford, and thence again to Trinity college, Dublin; after which he commenced an active and laborious ministry as vicar of Cork, of which he continued the incumbent above twenty years. Having afterwards obtained the living of St Werburgh, Dublin, and a stall in the cathedral, he took up his abode in that metropolis, till in 1714 his exertions in favour of the house of Brunswick were rewarded by his elevation to the see of Raphoe. Over this diocese he presided about two years, when he was translated to Tuam, and continued to fill that primacy till his death in 1741. He was the author of a variety of treatises on devotional subjects, written with great piety and ability, which occupy four 12mo. volumes.—*Biog. Brit.*

SYRUS (PUBLIUS) a famous Latin poet, who was a writer of mimes, or mimic verses. He was a native of Syria, and was carried to Rome as a slave; but becoming the property of a master named Domitius, he was made a freedman while very young. His talents procured him the esteem of Julius Cæsar; and he recited his verses at the public theatre, which were so much admired that they eclipsed the fame of the works of the mimic poet Laberius. He flourished about 44 BC. A collection of sentences or maxims, in iambic verse, ascribed to Publius Syrus, has been often published. One of the best editions is that of Havercamp, Leyden, 1708, 8vo.—*Dict. Hist.*

SZALKAI (ANTHONY von) one of the best Hungarian poets of modern times, who is regarded as the founder of the national dramatic literature. His "Pikko Hertzeg," is the first regular piece composed in the Hungarian language; and it is said to possess considerable merit. The author had previously distinguished himself by a *Travesty of the Æneid*, in Hungarian, 1792, 8vo, written on the model of that of Blumauer, but more licentious than the *Travesty of Scarron*. Szalkai, who for a time belonged to the household of the archduke palatine Alexander Leopold, died at Buda in August 1804.—*Biog. Univ.*

SZEGEDI (JOHN BAPTIST) a jesuit, who was of a noble family, and was born in 1699, in the county of Eisenstadt. After having been a professor of the sciences in different establishments of his order, he became successively rector, missionary, and almoner-general. He distinguished himself by his talents, his affability, and the purity of his morals; and he was intimately acquainted with the laws and history of Hungary. He died at Tirnau, Dec. 8, 1760. His works are "Tripartitum Juris Hungarici Tirocinium," 1734, 12mo; "Synopsis Titulorum Juris Hungarici," 1734, 8vo; "Decreta et Vitæ Regum Hungariæ qui Transylvaniam possiderunt," 1743, 8vo; and "Werbotasius illustratus," 1753, 8vo.—*Biog. Univ.*

TABARI (**ABU JA'FAR MOHAMMED IBN JORAI'IR**) a celebrated Arabian historian, born in 839 at Amol, the capital of Tabaristan. He distinguished himself by his acquaintance with the religious traditions, jurisprudence, and history of the Mahometans; and he wrote a great number of works, the principal of which are a Commentary on the Koran and a History or General Chronicle, from the Creation to the Year 302 of the Hegira. There is extant an abridgment and continuation of the Chronicle of Tabari, by Elmacinus; and the part which commences at the birth of Mahomet has been published in Arabic and Latin, but so incorrectly as to render the printing of the original work extremely desirable. Tabari died at Bagdad in the year of the Hegira 310, and his body was interred in the house he had inhabited.—*Biog. Univ.*

TABERNÆMONTANUS, or **JAMES THEODORE**, an early physician and botanist, was born at Berg Zabain, in Alsace. He took the degree of MD. in France, and became first physician to the elector palatine. He resided for some time at Worms, which he quitted for Heidelberg, where he died in 1590. This physician, who had great faith in the virtue of herbs, published in 1558 a German herbal, with figures, folio, of which a second volume appeared after his death in 1590, and a third in 1592. The figures are partly copied, and partly drawn from nature by himself; and he has added to each plant a long catalogue of its medical virtues. This work was once held in great esteem, and has been several times reprinted. He also published a treatise on baths and mineral waters.—*Halleri Bibl. Botan.*

TABOUROT (**STEPHEN**) a French author, generally known by the name of the *Sieur des Accords*, was born in 1549. He was king's proctor in the bailliage of Dijon, and obtained celebrity by some very eccentric productions. The principal of these is entitled "Les Bigarrures et Touches du Seigneur des Accords;" to which some editions add, "avec les Apophthèmes du *Sieur Gaulard*, et les Escraignes Dijonnoises;" and the best of all (that of Paris, 1614), "de nouveau augmentées de plusieurs Epitaphes, Dialogues, et ingénieuses Equivoques." It is in two volumes, 12mo, and contains a great many singular and oddly constructed verses. He died in 1590, aged forty-one.—*Nouv. Dict. Hist.*

TABRIZI (**ABU ZACHARIAH YAHYA IBN ALI al**) also known under the appellations of *Scheibani* and *Ebn Alkateb*, was a celebrated Arabian critic and grammarian of the eleventh century. He was a native of the city of Tauris or Tabriz, whence he derived his name; and he resided at Bagdad, where he died in 1109. He studied under the most celebrated doctors of his time; and having acquired a profound acquaintance with the Arabian language and literature, he instructed many disciples, and composed several works much esteemed by his countrymen. His principal writing are Commentaries on the "Hamasa;"

on the "Dievan," or Collection of the Poems of Motanabbi; on the "Sikt Alzend," or Poems of Abu'lola; on the Poems termed "Moallakat," &c. besides grammatical works, and two treatises intended to facilitate the intelligence of books, entitled "Gharib Allogat," and "Isa Almantik."—*Biog. Univ.*

TACITUS (**CAIUS CORNELIUS**) a highly distinguished Roman historian, was born about the year fifty-six of the Christian era; but the place of his birth is no where mentioned. He was the son of Cornelius Tacitus, a procurator, appointed to manage the imperial revenue, and govern a province in Belgic Gaul. Little is known of the manner in which he spent his early years; but it is certain that if he were the author of the "Dialogue concerning Oratory," usually printed with his works, that his first ambition was to distinguish himself at the bar. He must have early acquired a solid reputation, as the excellent Julius Agricola gave him his daughter in marriage when only in his twenty-first year. He received his first public honours from Vespasian, which were augmented by Titus and Domitian, the latter of whom raised him to the post of prætor. After serving that office he was absent from the capital four years, during which period he lost his father-in-law Agricola. On his return he found Domitian in the fiercest exercise of his tyranny, and rendering the city of Rome a scene of blood and horror. At length this tyrant fell the victim of a conspiracy, and Nerva succeeded, in whose reign, in the year 97, Tacitus succeeded the celebrated Verginius Rufus, who died during his consulship, as consul for the remainder of the year. Under Trajan he enjoyed great distinction, and lived on terms of strict friendship with the younger Pliny, in conjunction with whom he pleaded against Priscus, accused of oppression in his proconsulate of Africa. It was about this time that he composed his celebrated "History," which commences with the accession of Galba, and ends with the death of Domitian. Of this work, which, according to Vossius, contained thirty books, only the first four and part of the fifth remain, which carry the narrative but little beyond the accession of Vespasian. His "Annals" followed, so called because the narrative is distributed into years. They supply an account of Roman affairs from the death of Augustus to that of Nero; but of these have perished part of the fifth book, containing three years of Tiberius, the entire four years of Caligula, the first six of Claudius, and the last two of Nero. He intended, if his life and health continued, to review the reign of Augustus, in order to detect the arts by which the old constitution was finally overthrown; but this work, which would have been invaluable from such a writer, it does not appear that he lived to carry into execution. His other productions, which have reached modern times entire, are a "Life of Agricola," his father-in-law; a "Treatise on the Manners of the Germans;" and, as gene-

rally supposed, the "Dialogue concerning Orators," to which allusion has been already made. Nothing is known of the remaining circumstances of his life, or of the time of his death; but as he makes no allusion to Hadrian in any of his writings, it is supposed that he died during the reign of Trajan, leaving issue, as the emperor Tacitus professed to be one of his descendants. In historical reputation no name stands higher than that of Tacitus, or has been the object of more earnest discussion. It is partly his fault and partly his excellence to aim at saying a great deal in a small compass, and to give a thought the force of an apophthegm by concentration. This he has commonly done with such effect, that his writings are regarded as a great storehouse of political maxims, the energetic brevity of which impress them indelibly on the memory. On the other hand, in consequence of a style so singularly concise, abrupt, and elliptical, he is often obscure. He is also accused of some affectation of exalting common remarks into aphorisms, and of philosophizing when he should only narrate. No prose-writer, however, excels him in the force of description, and in the choice of circumstances of a nature to place a scene distinctly before the eyes of the reader. With respect to his moral merits as an historian, he has been charged with too great a disposition to attribute unfavourable motives to actions, and with a misanthropical bias in his views of human nature. Little more however is necessary to justify him than a due consideration of the persons and actions which he had to describe; and that he believed in the reality of virtue is evident from the animation with which he frequently describes it. On the whole he is indisputably the most profound and philosophical of the ancient historians, and his works will ever be esteemed among the most valuable remains of antiquity. Of the numerous editions of Tacitus, that of Brotier, Paris, 1771, 7 vols. 4to, is certainly the best. There have however been subsequently published the editions of Collinus, 1779—92, 4 vols. 8vo; Homer, 1790, 4 vols. 8vo; of Edinburgh, 4 vols. 4to; and of Oberlin, 1801, 2 vols. 8vo, &c. The whole of Tacitus has been translated into English, both by Gordon and Murphv.—*Tiraboschi. Preface of Brotier. Life by Murphv.*

TACITUS (M. CLAUDIUS) a virtuous and patriotic emperor of Rome, who boasted of his descent from the subject of the preceding article, was in his seventy-fifth year when hailed emperor by the senate, on the death of Aurelian, in 275. Having been a conspicuous member of that assembly, all his predilections were in its favour, and his first object as emperor was to restore to that body the rights and privileges, which would have rendered him little more than their servant, and the head of a limited monarchy. The senators were transported with joy at this event, and announced the concession in circulars to the principal cities of the empire. He made several regulations for the reform of public morals, and having previously distinguished himself as a lover of literature,

continued to cultivate it on the throne. He showed his regard to the memory and writings of his ancestor, by directing that ten copies of his works should annually be made, and deposited in the public libraries, by which means, had his reign been of sufficient length, posterity would probably have enjoyed the whole of those productions, the fragments of which are so valuable. An early visit to the army became necessary to fix him on the throne, and he accordingly proceeded to Thrace, where he punished the murderers of Aurelian, and repressed an incursion of the Alans. Dissensions however broke out among the soldiery, and either by direct violence, or by the vexation the malcontents occasioned, the aged emperor's life was brought to a close at Tyana, in Cappadocia, after a short reign of two hundred days.—*Crevier. Gibbon.*

TACQUET (ANDREW) an able mathematician, was born at Antwerp in 1611. In 1629 he entered into the order of jesuits, and taught the languages and the mathematics for several years. He was the author of various able works upon mathematical subjects, and according to Montucla he endeavoured to extend the boundaries of geometry in his book "*De Annularibus et Cylindricis*;" in which however he rather affects to give a rigorous demonstration of things which present little difficulty, than to exhibit new truths. Several of his treatises were collected after his death, in a folio volume, under the title of "*Andree Taqueti Antverpiensis Opera Mathematica*." The chief recommendation of this collection is its clearness and perspicuity.—*Montucla Histoire de Math.*

TAFFI (ANDREA) an ingenious artist, born at Florence in 1213. He claims notice chiefly as the person who introduced into Italy the art of designing in Mosaic, which he learned from some Greek artists employed at Venice. With the chief of these, an individual of the name of Apollonius, he associated himself, and they worked together at Florence with great success. The most famous work of Taffi is a dead Christ, in a chapel at Florence. He died in 1294.—*Nouv. Dict. Hist.*

TAGLIACCOZZI (GASPAR) an Italian surgeon, ludicrously immortalized by Butler in his *Hudibras*, under the Latin appellation of *Taliacotius*. He was born in 1546, at Bologna, at the university of which city he was educated under Cardan. In his twenty-fourth year he was admitted MD, and he subsequently obtained the professorship of surgery. He applied himself chiefly to curing wounds of the ears, excisions of the lips, and more especially of the nose. On the restoration of the nose, &c. by a surgical operation, he published a curious work, entitled "*De Curtorum Chirurgia per Incisionem, additis Cutis traductis, Instrumentorum omnium, atque Deligationum Iconibus et Tabulis, Lib. ii.*" Venice, 1597, folio, which has been frequently reprinted. Tagliacozzi is said to have practised the operation in question, which consisted in partially dissecting out a portion of skin and flesh from the upper part of the arm of the pa-

tient, applying it to the raw skin of the face, in the situation of the lost nose, and retaining it there by ligatures till the parts were properly united, when the piece cut out must have been entirely separated from the arm, which till then had been kept in contact with the face. A better contrived operation for the restoration of the nose has been performed in England, by Mr Carpus and Mr Travers, who have written on the subject. This method consists in dissecting a part of the integuments of the forehead from the skull, and bringing it down to the proper situation, where it is confined till adhesion takes place. A similar operation appears to have been long practised in India, where the punishment of cutting off the nose is sometimes inflicted by the Hindoo chiefs. Some writers have expressed doubts whether Tagliacozzi ever performed the operation which he describes; but his pupil, Feys, in a work "*De Præcipuis Artis Chirurgicæ Controversiis*," expressly testifies that he had witnessed many cures of lost noses performed by his master. Tagliacozzi, after having for many years occupied the anatomical chair at Bologna, died there November 7, 1599. His fellow-citizens erected, in the hall of medicine, a statue of him, holding in his hand a nose, with an inscription commemorating his skill.—*Aikin's Gen. Biog.* *Biog. Univ.*

TAISAND (PETER) a French lawyer, born at Dijon in 1644. His father, who was a counsellor, was related to the celebrated Bosquet; and the son, after studying under the jesuits, took his degrees at the university of Orleans. He distinguished himself as an advocate, but a weakness of the chest obliged him to relinquish his profession, and in 1680 he obtained the office of treasurer of France. His leisure was devoted to the composition of several works, particularly his "*Commentaire sur la Coutume du Duché de Bourgogne*," 1698, folio. He resigned his post after holding it twenty-six years, and died at Dijon in 1715. Besides the work mentioned, he was the author of "*Histoire du Droit Romain*," 1678, 12mo; and "*Les Vies des plus célèbres Jurisconsults de toutes les Nations*," published posthumously, Paris, 1721, 4to.—*Biog. Univ.*

TAISNIER (JOHN) a man of science, who was a native of Aeth in the Netherlands, and was born in 1509. He was at one period governor of the pages at the court of Charles V; but that employment not suiting his inclination, he went to Cologne, where he obtained the office of master of music in the Electoral chapel. He was the author of a work entitled "*Opus Mathematicum*," Colon. Agrip. 1562, folio, from which it appears that, like many of his learned contemporaries, he professed the visionary sciences of chiromancy and judicial astrology. He also wrote on the magnet, and he gave an account of a curious experiment which he witnessed of the descent of persons under water by means of a vessel like a diving-bell. Taisnier, who was a great traveller, died at a very advanced age, towards the end of

the sixteenth century.—*Moreri. Bayle. Dict. Hist.*

TALBOT (JOHN) first earl of Shrewsbury, a famous commander, was born in 1373. He was the second son of sir Richard Talbot, of Goodrich castle, in Herefordshire, and on the death of his elder brother he became heir to the family. He was called to parliament by Henry IV, by the title of lord Furnival, whose eldest daughter and co-heiress he had married. In 1414 he was appointed lord lieutenant of Ireland, in which post he continued seven years, and performed great services for the crown, by keeping the native Irish in subjection, and taking prisoner Donald Macmurrough, a dangerous insurgent. In 1420 he attended Henry V to France, and was present with him at his two sieges and triumphant entry into Paris. At the beginning of Henry the Sixth's reign, he was created a knight of the garter, and again entrusted with the government of Ireland. He then served in France, under the regent, the duke of Bedford, and by his exploits rendered his name more terrible to the enemy than that of any other English leader. Being raised to the rank of general, he commanded the troops which were sent to the province of Maine, and made himself master of Alençon. He afterwards joined the earl of Salisbury at the famous siege of Orleans, which failed through the intervention of the celebrated Joan of Arc. The French recovering their courage under the guidance of that heroine, defeated the English at the battle of Patay, in which Talbot was made prisoner. After a captivity of three years he was exchanged, on which he repaired to England to raise fresh troops, and recrossing the sea, he found the duke of Bedford at Paris. After a conference with that prince, he took several strong places in succession; and for his eminent services was raised to the dignity of marshal of France, and in 1442 created earl of Shrewsbury. The following year he was appointed one of the ambassadors to treat of peace with Charles VII, after which he was sent once more to Ireland, and the earldom of Wexford and Waterford, in that kingdom, was added to his honours. The English affairs in France continuing to decline, he was made lieutenant-general of Aquitaine, in which capacity he took Bordeaux and received the allegiance of several other towns. Receiving intelligence that the French were besieging Chastillon, he marched to its relief, and made an attack upon the enemy; but here his usual fortune deserted him; he was left dead, with one of his sons, on the field of battle; and the English being wholly routed, their expulsion from France soon followed. This great captain, whose merit was acknowledged equally by friends and foes, fell on the 20th July, 1453, at the age of eighty. His remains were interred at Whitchurch, where a splendid monument was erected to his memory.—*Collins's Peerage. Monstrelet.*

TALBOT (PETER) a catholic divine and writer on controversial theology, who was descended from the noble family of Talbot, and

TAL

was born in Ireland in 1620. He studied in Portugal among the jesuits, and after entering into their society, he was ordained to the priesthood at Rome, and became professor of divinity at Antwerp. He followed Charles II to England at the Restoration, and was appointed almoner to the queen. His zeal for the catholic faith having given offence, he removed to Ireland, where pope Clement IX nominated him archbishop of Dublin. After a temporary retreat to Paris, he returned to his diocese; and in 1678 was accused as an accomplice in the pretended popish plot, to which so many victims were sacrificed, and being confined in the castle of Dublin, he died there in 1680. Lists of his works may be found in the annexed authorities.—*Moreri. Bing. Univ.*

TALBOT (RICHARD) earl of Tyrconnel, was the younger brother of the preceding. He entered into the army, and displayed great bravery in the civil war in Ireland in the reign of Charles I. After the death of Cromwell, he went to England to represent to Charles II the complaints of the Irish catholics relative to the oppression they suffered; but his mission procured no redress. He was involved in the same accusation with his brother the archbishop; but after being imprisoned, he obtained his liberty on the triumph of the catholic party. James II appointed him to the government of Ireland, giving him the command of the army in that country, and at length making him viceroy. He displayed his zeal in the service of his misguided master, and vigorously opposed the prince of Orange; but while he was making preparations for an engagement with the forces of the new king, he was suddenly taken ill, and died three days after, August 24, 1691. He left an only daughter, who married her cousin, Richard Talbot, to whose family the empty title of Tyrconnel was continued by James II.—*Moreri.*

TALBOT (CHARLES) duke of Shrewsbury, the son of Francis, earl of Shrewsbury, who was killed in a duel with the seducer of his wife, the profligate duke of Buckingham, in 1667. The subject of this article held the office of lord chamberlain to James II, but disapproving the imprudent measures of that prince, he resigned; and on the arrival of the prince of Orange he became an active promoter of the Revolution. On the accession of the prince as William III, lord Shrewsbury was made principal secretary of state, and knight of the garter; and in 1694 he was created marquis of Alton and duke of Shrewsbury. He resigned his post of secretary in consequence of ill health; but in the reign of queen Anne he was sworn a member of the privy council. After having been viceroy of Ireland, he held the office of lord treasurer; and his death took place in 1717, at the age of fifty-seven. An account of the life and character of this nobleman was published in 1718, 8vo.—*Collins's Peerage.*

TALBOT (CHARLES) lord high chancellor of Great Britain, was the son of William Talbot, bishop of Durham, descended from a younger grandson of the first earl of Shrews-

TAL

bury, and was born in 1684. In 1701 he was admitted of Oriel college, Oxford, and in 1704 elected a fellow of All Souls, but in a few years voided his fellowship by marriage. On quitting the university, he was admitted a member of the society of Lincoln's Inn, and was very speedily called to the bar. In 1719 he was chosen to represent Tregony in Cornwall, and in 1726 made solicitor-general, and elected member for the city of Durham. In November, 1733, he was constituted lord high chancellor, and created a baron of Great Britain by the title of lord Talbot, baron of Hensol in the county of Glamorgan. He died, in the enjoyment of high character and reputation, after an illness of only a few days, on the 14th February, 1737. Few chancellors have been more lamented than lord Talbot, who in this high office, as well as in his capacity of senator and in private life, acquired universal esteem.—*Bing. Brit.*

TALBOT (CATHERINE) a very ingenious lady, was the only child of Edward Talbot, second son of the bishop, and brother to the subject of the last article. She was born five months after the decease of her father, who died early; on which account her mother accepted the invitation of Mr. Secker, afterwards archbishop of Canterbury, the friend of her late husband, and of his lady, who was her own, together with her daughter, to become a part of their family, and they never afterwards separated. Thus situated, Miss Talbot received an excellent education, which she much improved by her own subsequent application. On the death of the archbishop in 1768, who bequeathed 400*l.* to Mrs and Miss Talbot; they removed to a habitation of their own; and after a while, in consequence of the declining health of Miss Talbot, to the house of the marchioness De Grey at Richmond, where the latter died of a cancer, in her forty-ninth year. This amiable lady was the intimate friend of the celebrated Mrs Carter, with whom she kept up a literary correspondence of considerable interest. Her works are, "Reflections on the Seven Days of the Week;" "Essays on Various Subjects;" "Letters to a Friend on the Future State;" "Dialogues;" "Prose Pastorals;" "Imitations of Ossian;" "Allegories;" and "Poetry."—*Life by Montague Pennington.*

TALBOT (ROBERT) an English antiquary, born at Thorp, in Northamptonshire, about the commencement of the sixteenth century. He studied at Oxford, which he left in 1530 to enter into holy orders; and in 1541 he obtained a prebend in Wells cathedral. In 1547 he was made treasurer of Norwich cathedral, in which station he remained till his death in 1558. He paid great attention to the antiquities of his native country; and from his collections Leland, Bale, Camden, and others derived much assistance. He left his MSS. to the library of New college, Oxford. Talbot was the first English writer who illustrated the Itinerary of Antoninus, by a Commentary and Notes, which Hearne published at the end of the third volume of Leland's Itinerary

T A L

He left other works, remaining unprinted.—*Gough's Brit. Topog.*

TALIESIN, the most celebrated of the ancient British poets, and therefore termed Pen Beirdd, or the Chief of the Bards. He flourished between 520 and 570, and many of his compositions are extant, and have been printed in the Welsh Archæology. He was ranked with the two Merlins, under the appellation of the Three principal Christian Bards. Tradition represents him as an orphan exposed by the side of a river, where he was found by Elfin, the son of Gwyddno, by whom he was educated and patronised. He studied in the school of the famous Cadog at Llanveithin, in Glamorganshire, and in the mature part of his life he was the bard of Urien Rheged, a Welsh prince, as appears by many of his poems addressed to that chieftain.—*Owen's Cambrian Biography.*

TALLART (*CAMILLE D'HOSTUN*, duke de) marshal of France, was descended of an ancient family of the province of Dauphiny, and was born February 14, 1652. He entered very young into the army, and after serving under the great Condé in Holland, and under Turenne in Alsace, he was engaged in the brilliant campaigns of 1674 and 1675. He distinguished himself subsequently on various occasions, and in 1693 he was made a lieutenant-general. In 1697 he was sent ambassador to England to negotiate concerning the succession to the crown of Spain on the death of Charles II. His services on this occasion were rewarded with the knighthood of the royal orders and the government of the county of Foix. War breaking out, in 1702, Tallart was appointed to the command of the French troops on the Rhine, and soon after he was honoured with a marshal's staff. He subsequently defeated the Imperialists before Landau, and having taken that place after a short siege, he announced his success to Louis XIV, in the following terms: "I have taken more standards than your majesty has lost soldiers." In 1704 he was opposed to the great Marlborough; and being taken prisoner at the battle of Hochstedt, or Blenheim, he was conveyed to England, where he remained seven years. On his return to France in 1712 he was created a duke; and in 1726 he was appointed secretary of state. His death happened the 3d of March, 1728.—*Dict. Hist. Biog. Univ.*

TALLEMANT (*PAUL*) a French writer, who was an ecclesiastic and academician. He was born at Paris in 1652, and was the son of Gideon de Tallemant, who held the office of master of requests and provincial intendant. He assumed the ecclesiastical profession; and though the death of his father left him unprovided for in point of fortune, yet having some powerful friends, and possessing considerable talents and learning, he raised himself to eminence as a man of letters. He became a member of the French Academy, and secretary of the Academy of Inscriptions and Belles-Lettres. Through the patronage of the minister Colbert he obtained various

T A L

benefices and pensions; and his pen among others was employed to celebrate the victories of Louis XIV, particularly in the "Histoire de Louis XIV par les Médailles," for which he wrote the preface, said to be the best of his compositions. He was also the author of several funeral orations, and academical discourses; and of a piece consisting of prose and verse, intitled "Voyage de l'Île d'Amour," besides other works. He died at Paris, July 30, 1712.—**FRANCIS TALLEMANT**, cousin of the preceding, was also an ecclesiastic, and a member of the French Academy. He published a French Translation of Plutarch's Lives of Illustrious Men, which for a while superseded the earlier version of Amyot, and went through several impressions. His death took place in 1693, at the age of seventy-three.—*Dict. Hist. Biog. Univ.*

TALLEYRAND-PERIGORD (*ALEXANDRE ANGELIQUE de*) the son of the marquis de Talleyrand, and uncle of the celebrated statesman of the same name, now living, was born at Paris in 1736. Entering into the church he obtained various benefices, and became royal almoner, and grand vicar of Verdun, and before he was thirty he was appointed coadjutor of the archbishop of Rheims, whom he succeeded in 1777. He was nominated a member of the second assembly of the Notables, and afterwards a deputy of the States General, where he vainly endeavoured to defend the privileges of the clergy, and published various tracts on the subject. At length he retired to Aix-la-Chapelle, and subsequently resided at Weimar and Brunswick. Louis XVIII having invited him to Mittau, he accompanied that prince to England; and on the death of the cardinal de Montmorenci, in 1808, he succeeded him as grand almoner. Returning to France at the restoration he had at first great influence in ecclesiastical affairs, but his councils were afterwards neglected. In 1816 he resigned the archbishopric of Rheims, and the following year he was appointed to that of Paris, and was made a cardinal. The execution of the concordat of 1817 meeting with obstacles, he did not take possession of his see till 1819, and the remainder of his life was devoted to the regulation of the concerns of the diocese. He died October 20, 1821.—*Biog. Univ.*

TALLIEN (*JOHN LAMBERT*) a French republican statesman, born at Paris in 1769. He was the son of the maître-d'hôtel to the marquis de Bercy, to whom he was indebted for his education. Previously to the Revolution he had been clerk to an attorney, and also to a notary; and he commenced his political career as secretary to the deputy Broustaret. He then published a kind of daily journal, called "Ami du Citoyen," which was affixed to the walls of the metropolis. The Jacobins furnished the expenses of printing this paper, the object of which was to excite the indignation of the populace against Louis XVI and his ministers. Tallien, who neglected no means to bring himself into notice, also published a discourse delivered at the Jacobin

club, "Sur les Causes qui ont produit la Révolution;" and he soon became one of the most popular men of the revolutionary party. July 8, 1792, he made his appearance at the bar of the National Assembly, at the head of a deputation from the commune of Paris, to demand the restoration of Pétion, who had been suspended from his functions as mayor of the capital, in consequence of the riots of the 20th of June, in which he was supposed to have been implicated. Tallien was deeply concerned in the terrible commotions of the 10th of August, and he was secretary-general of the commune which had installed itself at the Hôtel de Ville, and which continued its sittings in spite of the Assembly, becoming the centre and origin of the intrigues and massacres of that disastrous period. Hence the appellation of Septemberizer was justly applied to him, though it must be admitted that his influence was occasionally employed to preserve the lives of individuals. Being nominated a deputy to the Convention, from the department of Seine and Oise, he often mounted the tribune, and was the constant advocate for violent measures. In the session of Dec. 15, 1792, he strongly urged the immediate trial of Louis XVI, objected to allowing him counsel, and added new charges to the accusation against him. He afterwards voted for his death, and against an appeal to the people; and on the day of execution, January 21, 1793, he was president of the Convention. He took part in most of the sanguinary proceedings which occurred during the ascendancy of Robespierre; and after defending Marat, assisting in the destruction of the Girondists, and becoming the advocate of the infamous Rossignol, he was sent on a mission to Bordeaux, where he showed himself the worthy associate of Carrier, Lebon, and Collot d'Herbois. After he had desolated and pillaged that wealthy city, he was checked in his sanguinary career by the influence of madame de Fontenai, whose family name was Cabarrus. She was a woman remarkable for her personal beauty, and having been imprisoned at Bordeaux, as she was going to join her family in Spain, she owed her life to compassion, or to a tenderer feeling on the part of Tallien. He took her with him to Paris, whither he went to defend himself before the Convention against the charge of moderatism, which his recent conduct had caused some of his more blood-thirsty colleagues to prefer against him. Madame de Fontenai was exposed to new persecutions, and in order to maintain his influence for her protection as well as his own, he thought it necessary still to appear the advocate of violence and proscription. At length, after the fall of Danton and his party, Tallien perceived that he should become one of the next victims of Robespierre, if he did not strike the first blow at the overgrown power of that tyrant of France. Accordingly, at the sitting of the convention of the 9th of Thermidor, 1794, he ascended the tribune, and after an animated picture of the atrocities which had taken place,

and which he positively ascribed to Robespierre, he suddenly turned to the bust of Brutus in the hall of the assembly, and invoking the genius of that patriot, he drew a dagger from his girdle, and swore that he would plunge it into the heart of Robespierre if the representatives of the people had not courage to order his immediate arrest. On the morrow Tallien had the satisfaction to announce to his colleagues that their enemies had perished on the scaffold. Being elected a member of the Committee of Public Safety, the jacobins replaced his name on their list. At this period he married his protégée, Madame de Fontenai. He took a part in all the proceedings of the Assembly, and used his power and influence only to promote the interests of justice and humanity. This was the most honourable period of his life; but the recrimination and opposition which he experienced prevented him from enjoying tranquillity. If his own statement were to be believed, an attempt was made to assassinate him; but this report was regarded as a wretched attempt to excite the interest of the public in his favour. In July 1795 he was sent with extensive powers to the army on the coasts of Brittany; but after the victory of the republicans at Quiberon he returned to Paris. He subsequently became a member of the Council of Five Hundred, under the constitution of the year 5; but his influence gradually declined, and he was at length reduced to such a state of political insignificance, that he thought proper to retire to private life. Domestic uneasiness induced him to wish to leave France, and he followed Buonaparte to Egypt, as one of the literati attached to the expedition. He became a member of the Egyptian Institute and editor of the "*Decade Egyptienne*," a journal printed at Cairo; besides being administrator of the national domains. After Buonaparte left Egypt, general Menou treated Tallien very harshly, and at last obliged him to return to France. The vessel in which he sailed was captured by the English, and he was taken to London, where he experienced some attention from the leaders of the whig party. The duchess of Devonshire sent Tallien her portrait, enriched with diamonds, when he kept the portrait but returned the diamonds. On revisiting his native country he discovered that he had lost his wife, as well as the favour of Buonaparte, who was then rising to sovereign power. He appears to have been reduced to distress, but at length he obtained, through Fouché and Talleyrand, the office of French consul at Alicante. He died at Paris November 16, 1820. Madame Tallien having been divorced from her husband (by whom she had a daughter named Thermidor) was married in 1805 to M. Joseph de Caraman, prince de Chimay.—*Biog. Nouv. des Contemp. Biog. Univ.*

TALLIS (THOMAS) one of the greatest musicians not of this country only but of Europe in the sixteenth century. He was born in the early part of the reign of Henry VIII, and it has been said that he filled the situation of organist to the chapel royal under the mon-

arch, as well as under his three immediate successors; the tradition is however improbable, as it is doubtful whether, in the reigns of Henry and Mary at least, laymen were ever admitted to perform upon the organ in consecrated buildings. It is certain however that he acted as such under Elizabeth, succeeding Blithman, and being himself succeeded by his own pupil Bird. In this capacity he first enriched with harmony the melody of the cathedral service originally adapted to English words by Marbeck. This sterling composition is still frequently used in our cathedrals, and his Litany especially is commonly performed at the metropolitan church of St Paul on the high festivals of Christmas, Easter, and Whitsunday. As a contrapuntist he yields perhaps to no one, and a most extraordinary proof of his abilities in this respect still subsists in a song composed in parts for forty voices; viz. eight basses, eight tenors, eight counter-tenors, eight mezzo-sopranos, and eight trebles, placed under each other, with one line for the organ, each of which has its share in the subjects of fugue and imitation introduced on every change of words, and terminating in twelve bars of universal chorus. Talia died in 1585, and was buried in the old church at Greenwich, where an epitaph to his memory was existing in Strype's time, and was renewed by dean Aldrich; but the church having been rebuilt in 1780, it is now to be found only in Boyce's collection.—*Burney's Hist. of Mus. Biog. Dict. of Mus.*

TALMA (FRANCIS JOSEPH) the Roscius of the French stage, on which he produced a revolution equal to that created by Garrick on the English. He was born at Paris about the year 1770, and is said to have given the first indication of his histrionic talent when only eight years old, in an old tragedy entitled "Tamerlane," performed by boys. Soon after his father, who had settled in London as a goldsmith, sent for him to England; and after a few years spent at a boarding-school in Lambeth artiled him to a surgeon. His fondness for theatrical amusements, having introduced him to sir John Gallini, who at that time superintended an amateur French company, which performed at the Hanover-square rooms; under his auspices he appeared in several comedies, especially as count Almaviva in Beaumarchais' comedy of the Barber of Seville, then at the height of its popularity. Kemble and Mrs Siddons were at this period in the zenith of their reputation, and the former had just succeeded in reforming the absurdities of theatrical costume, which had hitherto disgraced the drama. The performance of these two eminent professors decided Talma's vocation, as well as formed his taste; he returned to Paris, and through the interest of Molé, the actor, obtained an engagement. His debut upon the boards of the Théâtre Français was made in the part of Seide, in Voltaire's tragedy of "Mahomet;" but it created no particular sensation in the minds of the audience, which had yet to discover that a new light had risen upon their drama.

After performing a variety of insignificant characters, accident lifted him at once to the summit of his profession. Chenier's tragedy of Charles IX was accepted, and put in rehearsal, when Saintfal, the principal actor, returned his part with a sneering recommendation to the author to "give it to young Talma." Chenier took him at his word; Talma accepted the part with delight, and feeling that his future fame and fortune depended on that night's success, not only devoted all his energies to the study of it, but directed his attention in so especial a manner to give it effect by strict fidelity of costume, that the audience, equally surprised and delighted, continued to him, throughout the representation, the tumultuous approbation with which they greeted his first appearance. Thus the tragedy was completely triumphant and the fame of the actor established. His greatest triumph, however, was yet to follow. Ducis had translated the Othello of Shakespeare, but not daring to contend so far against French prejudices as to exhibit the murder of Desdemona on the stage, he had furnished a new catastrophe of a more fortunate description. Talma alone was bold enough to prefer the original termination, and, after considerable hesitation, resolved, with the consent of the author, to risk the attempt. His success astonished even himself, and most honourably rewarded his intrepidity. From this moment he became the paramount tragedian, and though occasionally annoyed by criticisms, the personality of some of which brought him on one occasion into personal contact with their author, M. Geoffroi, he continued at the summit of his profession till his death. He acquired a handsome fortune by his profession; and was not only generally esteemed by men of rank and talents for his powers of fascination in private society, but was also a favourite with the emperor Napoleon. In 1825 he published "Reflexions" on the art he professed, which display the extent and variety of study and research by which he had arrived at such extraordinary excellence. The death of Talma took place at Paris, October 19, 1826, after a distressing illness arising from an obliteration of a portion of the large intestines, as appeared from an examination of the body after his decease. He preserved all his intellectual faculties to the last, and his latest hours were employed in giving directions about his funeral, which he desired might take place at the cemetery of Père la Chaise, without any of the usual ceremonies of religion. The excommunication pronounced by the Catholic church against theatrical performers doubtless caused this conduct on the part of the dying actor; and several applications made by the archbishop of Paris to the nephew of Talma to be allowed an interview with him were unsuccessful. Madame Vanhove, his wife, from whom he had been separated, also applied to be permitted to see him; but Talma declined the interview, lest it might be thought that he complied from interested motives, she being possessed of a large independent property. A short time

T A L

before his death he embraced his theatrical friends, Jouy, Arnault, and Duvilliers, and expired, ejaculating the name of Voltaire. As soon as his death became known, public respect was shown to his memory by the closing of the doors of the Comédie Française. The funeral took place agreeably to his directions, the corpse being taken to the place of interment without interruption or ceremony. The procession consisted of a magnificent hearse, fifteen mourning coaches, Talma's own carriage, and several empty ones; a number of literary and theatrical characters followed on foot, and the whole was closed by a body of four or five thousand persons; a vast concourse of the citizens filling the cemetery and surrounding the tomb. Funeral orations or eulogies were delivered at the grave by Lafon, the colleague of the deceased, and by two tragic writers, Jouy and Arnault, on whose works Talma had by his talents conferred great scenic popularity.—*Biog. Nouv. des Contemp. Atlas Newspaper.*

TALMONT (A. PH. DE LA TRIMOILLE, prince de) second son of the duke de Trimoille, distinguished as a royalist officer in the war of La Vendée. His youth had been devoted to dissipation; and when the Revolution broke out he became a partizan of monarchy, and in 1792 he joined a confederation of royalists in the province of Poitou. He afterwards went to England and Germany, and returned to France in 1793, with the plan of an insurrection in the western provinces against the republican government. He was arrested and imprisoned at Angers, and narrowly escaped suffering death; but his brother, the abbé de la Trimoille, found means to procure his release, on which he went and joined the insurgents in La Vendée, by whom he was appointed general of the cavalry. His signalized himself for his courage at the attack of Nantes June 28, 1793, and on various other occasions, in the desperate service in which he engaged. After the great defeat of the royalists at Mans, December 14, he wandered in disguise in the environs of Laval and Fougères; and being recognized he was taken prisoner, and was soon after executed before the principal entrance of his own castle of Laval. Being interred in the vicinity, the spot was enclosed in 1822, and a monument erected in commemoration of this victim of national discord.—*Biog. Univ.*

TAMBRONI (JOSEPH) an Italian poet and historian, born at Bologna in 1773. He studied in the university there; and in 1794 he was elected palæographer, or inspector of the archives of his native city. When the French invaded Lombardy the first time, he went to Milan, and attached himself to Marescalchi, whom he accompanied to the congress of Rastadt and to Vienna, as secretary of the Cisalpine Legation. On the return of the Austrians to Italy, Tambroni found an asylum in the mountains of Savoy; but he returned after the battle of Marengo and the foundation of the Cisalpine republic. He was then attached to the Italian legation at Paris, under his friend count Marescalchi; and in 1809 he be-

T A M

came consul at Leghorn, and two years after at Rome. On the fall of the imperial government in 1814 he retired from public life, and engaged in conducting the "*Giornale Arcadico*." He belonged to several learned societies, and he was decorated with the order of the iron crown. Tambroni died at Rome January 10, 1824. Among his works are "*Compendio delle Storie di Polonia*," 2 vols. 8vo; "*Intorno alla Vita di Canova Commentario*," 8vo; besides many letters and poems.—*Biog. Nouv. des Contemp. Biog. Univ.*

TAMBRONI (CLOTILDA) sister of the preceding, a lady distinguished for her acquaintance with Greek literature. She was born in 1758, and from her early years she displayed an invincible attachment for study, in consequence of which her parents afforded her the means of instruction. She was admitted into the Arcadian academy at Rome, the Etruscan academy at Cortona, and the Clementine at Bologna; and in 1794 the professorship of the Greek language was bestowed on her, which she retained till 1798, when she was displaced because she refused to take the oath of hatred to royalty required by the laws of the Cispadane republic. She was afterwards restored by Buonaparte; but the Greek professorship being at length suppressed, she retired to the bosom of her family. Her death happened June 4, 1817. Her works consist chiefly of poems written in Greek, among which is an elegy in honour of Bodoni, the celebrated printer.—*Id.*

TAMMEAMEA or **TAMAHAMA**, king of the Sandwich isles, in the Pacific ocean, was one of those individuals who are destined to produce a great effect on the state of society around them. He belonged to the race of the native chiefs; and at the death of captain Cook, in 1780, he had arrived at manhood, but he had no concern in that event. Tirrioboo, the king of Owhyhee, the largest of the Sandwich islands, having offended his principal officers, he was put to death, and Tammeamea was chosen to succeed him. He soon showed extraordinary talents for his situation, and it was a part of his policy to encourage the settlement of European mariners and others in his dominions. When captain Vancouver visited Owhyhee Tammeamea put himself under the protection of that officer, as the representative of the king of Great Britain; and as the price of his submission, he was assisted in building a fine vessel, which afforded a model for the construction of several more. Tammeamea thus formed a fleet, with which he conquered the adjoining islands, and traded to China. He subsequently erected a fort on the island of Vahou, and he obtained from the Russians some artillery; while by encouraging the trading of his subjects with navigators, he added to his own wealth and importance as well as that of his people. This enterprising monarch died in March, 1819. Rhio Rhio, the son and successor of Tammeamea, having made a visit to this country together with his queen, in 1824, both their majesties died in London, after a few months' residence, in conse-

quence of a disease arising from change of climate and habits of life.—*Biog. Univ.*

TANDY (**JAMES NAPPER**) born in Ireland in 1757, was a merchant at Dublin, who being an enemy to the ascendancy of the English over his native country, attempted to bring about a revolution. In 1791 he published a plan of reform, and he was appointed secretary of a Catholic association, though he was himself a Protestant dissenter. He was nominated colonel of the volunteers of Dublin; and he rendered himself so obnoxious to the government that to avoid being arrested he took refuge in France. He was well received by the Executive Directory, who gave him a commission, as general of brigade in the expedition against Ireland, in August, 1798, under general Rey. On its failure he took refuge at Hamburg; but he was delivered up on the requisition of the English minister. Being taken to Ireland, he was tried for treason, found guilty and condemned to death. But the judgment was not executed, and being liberated after the peace of Amiens, he went to France, and died at Bordeaux, in August 1803.—*Biog. Univ.*

TANNER (**THOMAS**) bishop of St Asaph, a prelate distinguished for his learning, especially in the antiquities of his native country. He was the son of a country clergyman, incumbent of the living of Market Lavington in Wiltshire, where he was born in 1674. At Queen's college, Oxford, (where he remained till his abilities procured his election in 1697 to a fellowship in All Souls,) he was led by a congeniality of taste for antiquarian research, to form a close intimacy with Mr (afterwards bishop) Gibson. In 1701 Moore, bishop of Norwich, himself a great promoter of historical inquiry, gave him the rectory of Thorpe and the chancellorship of the diocese, whence he rose successively to a stall in Ely cathedral 1713, the archdeaconry of Norwich 1722, and a canonry of Christchurch 1724, till in 1732 he was was elevated to the episcopal bench. As an author, besides contributing considerably to the revived edition of Anthony à Wood's "Athene," he is advantageously known by a work compiled with great industry, under the title of "Bibliotheca Britannico-Hibernica," folio, 1748, containing alphabetical memoirs of the principal English, Scotch, and Irish writers, from the earliest periods to the commencement of the seventeenth century; and an elaborate though brief account of the religious houses of England and Wales, entitled "Notitia Monastica," which has gone through two editions, 8vo, 1695; folio, 1744; the latter containing additions and emendations by his brother. A third, considerably improved, was published in 1787 by Naasmith. Bishop Tanner died at Oxford, December 14, 1735, and lies buried there in Christchurch cathedral.—*Biog. Brit. Nicolson's Hist. Lit.*

TANNER (**BERNARD**) a native of Prague in Bohemia, distinguished as a traveller. He had already visited Italy and Poland, when in 1678 he was appointed interpreter to an em-

bassy which John Sobieski, king of Poland, sent to Moscow. He published a particular account of this, entitled "Legatio Polono-Lithuanica in Moscoviam, potent. Polonicæ Regis ac Reip. mandato et consensu anno 1678 feliciter suscepta, breviter sed accuratè quoad singula notabilia descripta à teste oculato B. L. F. Tannero," Nuremberg, 1689, 4to. The time of his death is uncertain.—*Biog. Univ.*

TANSILLO (**LUIGI**) an Italian poet, born about 1516, at Nola. He lived a great part of his time in the service of Don Pedro, of Toledo, viceroy of Naples. The period of his death is not precisely known, but he is said to have been judge of Gaieta in 1569; and being then in a very bad state of health, he is supposed to have died soon after. When he was in his twenty-fourth year, he composed a poem entitled "Il Vendemmiatore," in which he related with too free a pen the scurrilous and obscene jests which in some parts of the kingdom of Naples pass between the vintagers. This poem was first printed in 1534, and went through several other editions under the title of "Stanze Amoroze sopra gli Ate delle Donne." To Tansillo is also attributed another poem of the same licentious character, entitled "Stanze in Lode delle Menta." The disrepute into which the author fell in consequence of these productions, induced pope Paul V to place all his works in the Index Expurgatorius, or list of prohibited books. Deeply mortified by this circumstance, he addressed a penitential canzone to the pope, and pleaded that he had made reparation by composing a devout poem, "La Lagrime di San Pietro." This apology was admitted, and his name erased from the list. Besides the works already mentioned, he was author of "Il Cavallarezzo," Vicenza, 8vo, and of sonnets, songs, stanzas, and some comedies. Lastly so late as 1767 professor Ranza published two elegant poems by Tansillo, entitled "La Balia," and "Il Podere," the former of which has been elegantly translated into English by Mr Roscoe, under the title of "The Nurse." Of his miscellaneous poems the best edition is that of Venice 1738.—*Moreri. Tiraboschi*

TANUCCI (**BERNARDO**, marquis) an Italian statesman, was born in 1698, of indigent parents, at Stia, a village in Tuscany. He studied law at the university of Pisa, and was subsequently nominated to the professorship of jurisprudence in that seminary. When Don Carlos, prince of Spain, came into Italy to receive the inheritance of the house of Medici, Tanucci was introduced to him, and secured his favour by the able manner in which he supported the right of the sovereign to withdraw an assassin from the sanctuary of a church, against the reclamation of the court of Rome. Soon after, Don Carlos being seated on the throne of Naples, called Tanucci to his ministry, and gave him his entire confidence. So great was his favour, that when this prince quitted Naples in 1759, to inherit the throne of Spain, he placed Tanucci at the head of the regency formed to govern the two

T A R

Sicilies during the minority of his son Ferdinand. For the space of fifty years his power and the kindness of his sovereigns remained undiminished, and his ministry was in the highest degree beneficial. He restricted within the narrowest limits the jurisdiction of the nunciature, and without having recourse to the pontifical authority, united bishoprics, and suppressed seventy-eight monasteries in Sicily. He also did every thing in his power to effect the suppression of the annual homage to the holy see of a white palfrey, established by Charles of Anjou. Tanucci was at the same time an enlightened patron of the sciences; and it was he who caused the excavations to be made in *Herculaneum* and *Pompeii*. This able and upright statesman, justly accounted one of the greatest ministers of his time, retired from office at the age of eighty, and died four years afterwards in 1783.—*Nouv. Dict. Hist.*

TAPLIN (WILLIAM) an eminent veterinary surgeon, who died in London in January 1807. He was one of the first scientific cultivators of the veterinary art in England, and he contributed by his writings not a little to its improvement. His principal publications are, "The Gentleman's Stable Directory, or the Modern System of Farriery," 1790, 2 vols. 8vo; "Practical Observations upon Thorn Wounds, Punctured Tendons, and Ligamentary Lameness in Horses, with Instructions for their Treatment and Cure," 8vo; and "A Compendium of Experimental Farriery, originally suggested by Reason and confirmed by Practice," 1796, 8vo. He also published a tract on the Preservation of Game; and other pieces of no permanent importance. He is said to have been deranged in the latter part of his life, owing to domestic misfortunes.—*Biog. Univ.*

TARGIONI TOZETTI (GIOVANNI) an eminent Italian physician and naturalist, was born at Florence in 1712, in which city his father also practised medicine with distinction. He studied at Pisa, where he took the degree of MD., and on the death of Micheli succeeded him in the directorship of the botanical garden at Florence, and was also nominated professor of botany in the Florentine college. He repaid those honours by drawing up, in junction with Cocchi, a catalogue of the famous library which Magliabecchi bequeathed to the public, and was in consequence made librarian to the grand duke. In 1778 he published Micheli's catalogue of plants in the Florentine garden, to which he added an appendix, consisting of a description of many rare plants native and foreign. He also made several scientific excursions, of which he published the results in a work entitled "Relazioni d'alcune Viaggi fatte in diverse Parte della Toscana, per osservar le Produzioni Naturali et gli Antichi Monumenti d' esse," Firenze, 1751, 8vo. He likewise wrote several able medical treatises, including a dissertation on the vegetables which may be profitably substituted for bread. He died in 1783, aged seventy-one.—*Halleri Bibl. Botan.*

TARLETON (RICHARD) a dramatic per-

T A R

former and author of the age of Elizabeth, celebrated as a humourist, whose witticisms are often quoted in the earlier jest books. He was a native of Conover in Shropshire, and was originally attached to a company of comedians in the occasional employ of the earl of Leicester. Tradition states him to have enacted the character of judge in the old play of Henry V, now lost, and to have been admitted among "the queen's players" in 1583. The only composition ascribed to him, with the exception of the facetiæ already alluded to, is an interlude, entitled the "Seven Deadly Sins." He is said to have died in 1589.—*Biog. Dram.*

TARQUINIUS, surnamed *Priscus*, fifth king of Rome, was the son of a wealthy merchant of Corinth, who settled at Tarquinii in Etruria. He married a woman of high birth, named Tanquil, who perceiving that, notwithstanding her husband's great riches, he could obtain no rank in Etruria, urged him to repair to Rome. He accordingly procured himself to be admitted a Roman citizen, and changed his name from Lucumon Demaratus to Lucius Tarquinius. By his address he ingratiated himself both with the king Ancus Martius, and the people, and the former conferred on him the guardianship of his two sons. These he superseded on their father's death, and procured by bribes and solicitations the suffrages of the people for himself. His first step, when king, was to admit two hundred plebeians into the senate, after which he engaged in a war with the Latins, and having finally defeated a confederacy between them and the Sabines and Etrurians, obliged them to sue for peace on terms of dependence. For this success he was honoured with a triumph, and he employed the spoils of war in erecting the *Circus Maximus*, for the exhibition of the great, or Roman games. A confederacy of all the Etrurian tribes against the Romans followed, which after a war of nine years' duration, terminated in the Etrurians acknowledging him for their sovereign. The succeeding interval of repose was employed by Tarquin in improving the city of Rome, which he enclosed with walls of hewn stone; and constructed for the purposes of health and cleanliness, those celebrated sewers, which even at the summit of the Roman splendour were not viewed without admiration. A new war breaking out with the Sabines, being prevented by the superstitious attachment of the Romans to the arrangements of Romulus from increasing the number of his divisions of cavalry, he augmented the strength of each, and obliged the Sabines to purchase peace by the surrender of all their fortresses. Tarquin, who had vowed a temple to Jupiter, Juno, and Minerva, now laid its foundation in the Tarpeian rock, and thus founded the principal seat of the Roman religion. He had in the course of a long and prosperous reign reached his eightieth year, when the sons of Ancus, finding by the marriage of his daughter with Servius Tullius, that a design existed to perpetuate the sovereignty in his family, procured his assassination at the gate of his own

palace, whither he was inveigled by a pretended brawl. He was struck on the head with a hatchet, but the wound not proving mortal on the spot, his queen Tanaquil kept his death a secret until the succession was secured to her son-in-law. At the same time, the conspiracy of the sons of Ancus being detected, they went into voluntary banishment. Thus, BC. 570, perished the elder Tarquin, undoubtedly one of the most illustrious of the Roman kings, both in peace and war.—*Dionys. Halicar. Univ. Hist.*

TARQUINIUS, named Superbus, or the Proud, is supposed to have been grandson to Tarquinius Priscus. When grown to maturity, Servius Tullius married his two daughters to the brothers Aruns and Tarquin; the latter of whom was violent and ambitious, while his brother was mild and unassuming. On the other hand, the same character was reversed in their respective wives. The tragical deaths of Aruns and the wife of Tarquin, and a criminal union between the latter and his sister-in-law Tullia, followed, and, finally, the most unnatural murder of Servius, and the accession of Tarquin to the sovereignty, BC. 534. As he acquired the throne by a party, he acted as an arbitrary monarch, never communicating with the senate or the people, but supporting his usurpation by a band of foreign mercenaries. Among the victims of his suspicion and avarice was Marcus Junius, a wealthy patrician, whom he caused to be assassinated, as also one of his sons; the other, the celebrated Junius Brutus, escaping the same fate by counterfeiting idiocy. To avoid similar danger, many of the principal senators went into voluntary banishment, and the plebeians, who, in the first instance, were pleased with their humiliation, soon found the yoke press as hardly on themselves, all public assemblies, whether for business or pleasure, being prohibited. Conscious of the odium under which he laboured at Rome, Tarquin politically ingratiated himself with the allies, and laid the foundation of a confederacy and of an annual assembly, in which, as the Romans took the lead, essentially contributed to the extension of their dominion in Italy. He subsequently undertook war against such of the Volscians as had rejected his alliance, as also against the Sabines, and was victorious in both instances. Returning to Rome, he twice triumphed, and there employed the idle populace in finishing the great circus and sewers commenced by his grandfather. It was in the reign of this Tarquin that the Sibylline books were brought to Rome, where they were for many years resorted to for purposes of superstition or state policy. He had also the glory of completing the Capitoline temple. His next warlike enterprise was the siege of Ardea, the capital of the Rutuli. This circumstance was the remote cause of that brutal treatment of Lucretia, which led to the expulsion of himself and family, the particulars of which have been already related in the articles BRUTUS and LUCRETIA. Brutus skilfully employing the passion excited in the people by

the unhappy fate of Lucretia, procured a public decree for the banishment of Tarquin and his sons; and the army stationed before Ardea concurring in the resolution, the king, at the age of seventy-six, BC. 539, was obliged to abandon his capital and take refuge in Etruria. Various attempts were made by his party at Rome to procure his restoration, in which even the sons of Brutus engaged; but they were all rendered abortive. The Tarquins were even enabled to interest some of the neighbouring states in their favour, and a battle was fought, in which Aruns, one of the sons of Tarquin, and Brutus fell by mutual wounds. Por-senna, king of the Clusini, an Etrurian tribe, invested Rome in their behalf, but discovering treachery in their conduct, he timely renounced their cause. The Latins also took arms in their favour, and were backed by a dangerous conspiracy in Rome itself, but the genius of the new republic finally triumphed over all its enemies. Tarquin at length, having seen all his sons perish in the field, retired to Cumæ, where he died in the ninetieth year of his age and the fourteenth of his exile. He appears to have been a man of considerable energy and talent for command, but violent, cruel, and altogether unprincipled.—*Livy. Dionys. Halicar. Univ. Hist.*

TARIN (PIRANA) an eminent French physician of the last century, whose medico-surgical writings have procured him considerable celebrity among the faculty. The principal and most approved of these are his "Anatomical Dictionary," 4to; "Adversaria Anatomica," 4to; "Art of Dissecting," 12mo, 2 vols.; "Osteographia," 4to; "A Description of the Muscles," 4to; "On Ligaments," and "Observations on Medicine and Surgery," 12mo, 3 vols. He was a native of Courtenai, but the time of his birth is uncertain; his death took place in 1761.—*Biog. Univ.*

TARTAGLIA (NICHOLAS) whose name is also sometimes spelt Tartalea, an eminent mathematician of Brescia, who flourished about the middle of the sixteenth century. He was the author of a variety of useful works connected with his favourite science, especially of an Italian translation of the twelve books of Euclid, with notes, printed in 1543, folio; a treatise on "Numbers and Measures," folio, 1556; "Questi et Inventioni diversi," and a tract on the art of gunnery, entitled "Nova Scientia inventa." He lived to an advanced age, and died about the year 1557.—*Tiraboschi.*

TARTINI (GIUSEPPE) an admirable Italian musician and composer, a native of Pirano in the province of Istria, where he was born in 1692. His father, a rich citizen of Parenza, ennobled for his liberal benefactions to the church, gave him an expensive education, with the view of qualifying him to follow the law as his profession, and had him also instructed in all the lighter accomplishments of a gentleman, in which, especially in the use of the small sword, he made a great proficiency. Among them music was not forgotten, but it was not till his attachment to an unworthy ob-

ject, which terminating in a marriage, alienated from him the affections of his friends, that he thought of making it conducive to his support. The interest of an ecclesiastic connected with the family procured him a situation in the orchestra of his convent, where an accident discovering his retreat, matters were at length accommodated, and he was enabled to settle with his wife at Venice. Here the example of the celebrated Veracini excited in him the strongest emulation; and he is said to have retired to Ancona for the sole purpose of being able to practise on the violin in greater tranquillity than circumstances, and especially his wife's temper, allowed him to enjoy at Venice. While thus occupied, he discovered in 1714 the phenomenon of "the third sound," i. e. the resonance of a third note when the two upper notes of a chord are sounded; and after seven years' hard practice obtained, without solicitation, the distinguished situation of leader of the orchestra in the cathedral of St Anthony at Padua. In this capacity he continued to act till the day of his decease, with a constantly increasing reputation, and declining, from a remarkable species of devotion to his patron saint, many advantageous offers both from Paris and London. A singular story respecting one of his most celebrated compositions is told on the authority of M. de Lalande. One night in the year 1713 he dreamed that he had made a compact with the devil, and bound him to his service. In order to ascertain the musical abilities of his new associate he gave him his violin, and desired him, as the first proof of his obedience, to play him a solo, which, to his great surprise, Satan executed with such surpassing sweetness and in so masterly a manner, that awaking in the ecstasy which it produced, he sprang out of bed, and instantly seizing his instrument, endeavoured to recal the delicious but fleeting sounds. Although not attended with the desired success, his efforts were yet so far effectual as to produce the piece since generally admired, under the name of "The Devil's Sonata;" still the production was in his own estimation so inferior to that which he had heard in his sleep, as to cause him to declare, that could he have procured a subsistence in any other line of life, he should have broken his violin in despair, and renounced music for ever. Besides the musical compositions of Tartini, which are numerous, and among which two books, containing more than fifty sonatas, have been printed in England, he was the author of several treatises on the science, published at Padua, Venice, and Naples, about the years 1754 and 1767; besides some which, according to Fanzago, yet remain in manuscript. The death of this celebrated musician took place at Padua in 1770.—*Burney's Hist. of Mus. Biog. Dict. of Mus.*

TASMAN (ABEL JANSEN) a Dutch navigator and geographical discoverer in the 17th century. He was employed by the Dutch East India Company, under whose directions three vessels were fitted out at Batavia, and

the command of them given to captain Tasman, who set sail on his expedition of discovery on the 5th of September, 1642. The first fruits of this enterprise was the discovery of that part of New Holland called Van Diemen's Land, where the navigators landed November 24, and proceeded again on their voyage the 5th of December. On the 13th of the same month, Tasman saw the islands of New Zealand, where his vessels were attacked by the savage inhabitants, which circumstance prevented him from landing. After visiting several islands in the South Sea, some of which were previously unknown, he arrived at Batavia, June 15, 1643, having sailed round the southern hemisphere of the globe. The Dutch East India Company considered it a point of wise policy to prevent the publication of any account of this voyage; but a map or chart of the discoveries of Tasman was preserved at the Stadthouse at Amsterdam, and at length Dirk Rembrandts published an extract from the journal of this enterprising seaman, which has appeared in many geographical compilations.—*Barrow's Collection of Voyages and Discoveries*, vol. ii.

TASSIE (JAMES) a very ingenious modeller, was born of obscure parents in the neighbourhood of Glasgow, and began life in the humble condition of a country stonemason. On a visit to Glasgow, having obtained a sight of the collection of paintings made by the eminent printers the Foulises, for the purpose of establishing an academy, he was prompted to remove to that city, in order to obtain a knowledge of drawing at the infant academy, though still obliged to follow stone-cutting for a maintenance. Repairing to Dublin for employment, he became acquainted with Dr Quin, a physician, who was amusing his leisure with attempts to imitate precious stones with coloured pastes, and to take off impressions of the antique sculptured gems, an art practised in France and Italy with great secrecy. The doctor finding in Tassie the qualities of modesty, patience, and integrity, united with a fine natural taste, took him as an assistant; and their attempts being successful, when the discovery was completed generously enabled Tassie to proceed to London, and adopt as a profession, for his own benefit, the business of making these paste gems. He accordingly came to London in 1766, where he long struggled with difficulties, which by patience and perseverance he finally surmounted; and emerging from obscurity, acquired both money and reputation. At length his name became so much respected, that the first cabinets in Europe were open to his use. The first catalogue of his gems was published in 1775, 8vo; but such was his progress, that a new edition was subsequently published in 2 vols. 4to. Many of his pastes were sold on the continent for real gems; and several years before his death he executed a commission for the empress of Russia, consisting of fifteen hundred engravings, which he afterwards augmented to twenty thousand. He likewise practised modelling portraits in wax, which he

moulded and cast in paste. In private life he was universally esteemed for the modesty, benevolence, and simplicity of his character. He died in 1799.

TASSIN (RENE PROSPER) a French writer, who belonged to the congregation of St Maur. He was a native of Loulai, in the diocese of Coutances; and died in Paris, in 1777, aged eighty. Father Tassin deserves notice for his labours in illustrating the literary history of his order and other subjects connected with his profession. He published "Dissertation sur les Hymnographes," 8vo; "Notice des MSS. de l'Eglise de Rouen," 12mo; "Défense des Titres et des Droits de l'Abbaye de St Ouen, à Rouen," 4to; and "Histoire Littéraire de la Congrégation de St Maur," 4to.—*Biog. Univ.*

TASSO (BERNARDO) an eminent Italian poet of the sixteenth century, who may be said to have bequeathed his own poetic talents to his son Torquato, the celebrated author of the "Jerusalem Delivered." He was of a respectable family, and filled the situation of secretary to San Severino, prince of Salerno. On the determination of the Neapolitan viceroy to introduce the tribunal of the inquisition into the kingdom, the prince, accompanied by Tasso, set out for Vienna, and endeavoured by a personal appeal to the emperor Charles V to prevent so obnoxious a measure. He experienced, however, the fate which but too commonly awaits those who, relying on the justice of their cause and the integrity of their motives, do not sufficiently calculate on the overwhelming power to which they oppose themselves. His condemnation was pronounced, and he together with his secretary, who shared at once his disgrace and sentence, fled to Rome, in order to avoid the punishment denounced against them both. Besides the "Amadis," a poem written in one hundred cantos, and other miscellaneous metrical effusions of less note, Bernardo Tasso was the author of a variety of epistles still held in great esteem by his countrymen for the classical elegance of their diction. Of the poem above-mentioned the first edition appeared at Venice in 1560, where his letters also appeared in 1574. The latter days of his life were passed in the convent of St Onofrio at Rome, where he died in 1575.—*Tiraboschi.*

TASSO (TORQUATO) one of the most celebrated names in Italian poetry, was the son of the preceding Bernardo Tasso, and of Porcia Rossi. He was born at Sorrento, on the 11th of March, 1544, and from infancy exhibited such quickness of understanding, that at the age of five he was sent to the jesuits' school at Naples, and two years afterwards he recited verses and orations of his own composition. His education was interrupted by the misfortune which obliged his father to quit Naples; but it was in a great degree compensated by the care taken of him at Rome by a friend to the family. He was thence removed to Bergamo, where he was perfected in Greek and Latin, and at twelve years of age entered at the university of Padua. Here he pursued his studies with such success, that in his seven-

teenth year he was honoured with degrees in the four branches of civil and canon law, theology, and philosophy. His extraordinary abilities attracting the notice of the vice-legat of Bologna, he was invited to that city, where he gave many proofs of his abilities; but quit- ted it in disgust in consequence of an affront he received as the supposed author of some defamatory verses. He retired in the first instance to Castelvetro, and afterwards returned to Padua, where he distinguished himself as one of the most illustrious of the academicians named Eretri. At the age of eighteen he had published at Venice, in 1562, a poem of the romanesque class, entitled "Rinaldo," which he dedicated to the cardinal d'Este. The compliment was so well received, that the author was invited in 1566 to the court of Ferrara, and so splendidly entertained and provided for, that he had full leisure to carry on his noble design of the "Gerusalemme Liberata," of which he had conceived the plan so early, that he is said to have composed six cantos by the time he had reached the age of seventeen. In 1571 he accompanied cardinal d'Este into France, where he was honourably received by Charles IX and at his court. He returned to Italy the following year, when he caused his dramatic pastoral of "Aminta" to be represented, of which species of composition it is deemed one of the finest examples. In the mean time separate cantos of the Gerusalemme got into print, and in 1581 three editions were extant, the last of which may be regarded as that which first exhibited the poem in a genuine form. It has caused some surprise that Tasso did not anticipate these unauthorised publications by one under his own hand; but while all Italy was resounding with his fame, the poet himself was suffering under the severest of mental distresses. The story of the unhappy poet at this period of his life is involved in great obscurity, but there is reason to believe that a mental malady, often connected with keen sensibility and fervid genius, was the origin of his calamities. According to Tiraboschi, on the credit of the marquiss Manso, who derived the particulars from the poet himself, a courtier having betrayed some secrets respecting his amours, his resentment induced him to insult this person in the duke's presence-chamber. The consequence of this conduct was a fray, in which he had to defend himself with his sword, not only against his enemy, but his three brothers, which tumult produced the banishment of the brothers, and the confinement of Tasso himself to his apartment. This event is said to have taken place in his thirty-third year. Being apprehensive of worse treatment, he made his escape, and wandered on foot to Turin, where he was received with great honour. He then proceeded to Rome, and subsequently to Sorrento, where he spent some months with a married sister, and then returned to Ferrara, but had scarcely shown himself at court before he withdrew to Urbino. By the advice of the duke of Urbino, he however once more returned to Ferrara, when his

disorder of mind becoming manifest, he was shut up by order of the duke Alfonso, in a part of the monastery of St Anne, designed for lunatics. A traditionary story attributes this step to some extravagancy on the part of the poet, evincing an amatory attachment to the princess Leonora, the duke's sister, in whose praise he had certainly written some very warmly toned verses. However this might have been, the confinement only aggravated his malady, and all sorts of fantastical suspicions and apprehensions filled his disordered imagination. At the same time the faculties of his mind in other respects were in full vigour, as he proved by his writings in defence of his poem, against the virulent attacks of inimical criticism. At length his application to various quarters for aid, produced such high and influential solicitation for his release, that it was ultimately granted in 1586. The following year he was seized with a new fit of wandering, in which he took so little care to provide himself with money, that he was more than once obliged to request supplies in the way of alms. Such was the condition of the admired author of the "Jerusalem Delivered," the favourite of princes, and boast of Italy; so strongly may the highest gifts of intellect, and the most favourable circumstances of fortune be often counteracted. The latter years of his life he passed partly at Rome and partly at Naples, with the exception of some months, which in 1590 he spent at Florence. His last retreat was with cardinal Aldobrandino at Rome, who obtained for him a pension from pope Clement VIII, and had intended to procure him a solemn poetical canonisation in the capitol. The ceremony being however delayed in consequence of illness on the part of the cardinal, Tasso was himself seized with symptoms which announced approaching dissolution, and at his own desire being removed to the monastery of St Onofrio, with every demonstration of sincere piety he closed his life on the 25th of April 1595, at the age of fifty-one. In person this great poet was tall and well proportioned, with a countenance pale through sickness and study. His forehead was square and high, his head large, his eyes of a deep blue, full, and piercing, and his countenance altogether noble and expressive. His voice was clear and solemn, he spoke with deliberation, and in conversation displayed little of the fire which animates his poetry. The works of Tasso are so numerous, that it is astonishing how a man of his moderate length of life and unfortunate tendencies could compose so much. His works in prose consist of a great number of treatises, dialogues, and letters on moral, literary, and familiar topics, in which he displays much originality and profundity, but is occasionally too subtle and refined. Of his poetry the "Gerusalemme Liberata" undoubtedly takes the lead, and by universal consent is placed among the few epics which rank as first-rate productions in that noble department of poetry. His subject is singularly adapted for lofty narrative, and with little exception the characters are well

BIOC. DICTION.—VOL. III.

drawn and supported; the fictions strongly conceived; the style dignified, and the versification harmonious. It doubtless betrays several faults peculiar to the author's age and country, but upon the whole displays no small portion of taste and judgment as well as genius. Of the "Aminta" it is only necessary to report, that it has always delighted the lovers of Italian poetry, whether natives or foreigners; while his "Rime," or miscellaneous pieces, are regarded both in style and sentiment as among the finest compositions of their kind. His "Sette Giornate," or works of seven days, and other devotional pieces, also bear the marks of genius, although written in the late and calamitous period of his life. The abbé Serrasi enumerates no fewer than a hundred and thirty-two editions of Tasso, the best of which, in the opinion of Mr Black, is that of Venice, 12 vols. 4to. The "Jerusalem Delivered" has been translated into English by Fairfax and Hoole; and the "Aminta" by Mr Leigh Hunt.—*Life by Black. Tiraboschi.*

TASSONI (ALESSANDRO) a poet of Modena, equally admired for the elegance of his composition and the delicacy of his humour. He was born in 1565, and being left an orphan, was taken at an early age into the household of the cardinal Colonna, in quality of his eminence's secretary. He subsequently occupied a similar post in the service of the duke of Savoy, which again he quitted for that of his native prince. A war carried on between Modena and the Bolognese gave rise to his most celebrated poem, a mock heroic, entitled "Secchia Rapita," or "The Rape of the Bucket," which has gone through several editions, and is deemed by the Italians the most finished specimen in existence of that peculiar species of composition, not to mention its title to having furnished hints for the *Lutrin* of Boileau, and *The Rape of the Lock* of Pope. His other writings are "Observations on Petrarch," in which he lashed the eternal imitations of that poet, which ultimately produced his humorous piece entitled "La Tendaressa Riposta di Girolamo Nomisenti;" an Ecclesiastical History; and "Peusieri diversi." The will of Tassoni is also regarded as a genuine piece of humour. His death took place in 1635.—*Memoir by Walker.*

TATE (FRANCIS) an English lawyer and antiquary, was the son of Bartholomew Tate, of Delapre in Northamptonshire, where he was born in 1560. He received his academical education at Magdalen college, Oxford, and on leaving the university studied at the Middle Temple; and after admission to the bar acquired great reputation as a lawyer. He had a seat in parliament during the latter end of the reign of Elizabeth, and in the fifth year of James was made a Welsh judge. He acquired great reputation as a Saxon scholar and antiquary, and left various MSS. behind him on legal antiquities, the fate of which is unknown, but the following have been printed in Grose's "Collectanea Curiosa," "The Antiquity, Uses, and Privileges of Cities, Bo

roughs and Towns;" "The Antiquity, Use, and Ceremonies of Lawful Combats in England." Hearne's Curious Discourses also contain the following: "Of Knights made by Abbots;" "Questions about the Ancient Britons;" "Of the Antiquity of Arms in England;" "Of the Antiquity, Variety, and Ceremonies of Funerals in England;" "The Antiquity, Authority, and Succession of the High Steward of England."—*Athen. Oxon. Archaeologia*, vol. i.

TATE (NANUM) an English poet, who flourished about the close of the seventeenth and the commencement of the following century. His father, Dr Faithful Tate, resided in Dublin, where he was born about the year 1632; and after receiving a classical education at Trinity college in that metropolis, came to London, where he obtained the patronage of the earl of Dorset and the friendship of John Dryden. The countenance of his noble patron was the more useful to him on account of the narrowness of his circumstances, which exposed him to much mortification and inconvenience. The death of Shadwell at length made an opening for him, and the interest of his friends procured him the situation of poet laureate to William III. This post he held through that and the succeeding reign, and he even lived long enough to write the first birthday ode (his best composition of the kind) on George I; soon after which he died, at his apartments in the Mint, whither he had retired from his creditors, August 12, 1715. As a dramatic writer he is principally remembered by his alterations of some of Shakspeare's tragedies, of which his *Lear* alone kept possession of the stage till of late the old catastrophe, which he had rendered a happy one, has been restored. He was also the author of "*Brutus of Alba*," a tragedy acted in 1678; "*Duke and no Duke*," a farce, 1684; and some other dramatic pieces, exhibiting little genius and less invention, but it is by his metrical version of the Psalms of David, executed in conjunction with Dr Nicholas Brady, and commonly affixed to the liturgy of the church of England, that his name is now principally known. Several elegies and other occasional pieces also proceeded from his pen.—*Cibber's Lives*.

TATIAN, a Syrian rhetorician, converted to Christianity by Justin Martyr, whom he followed to Rome in the latter part of the second century. After the death of Justin the opinions of his proselyte took a tendency towards those of Marcion, with whom he was contemporary; but differing from that heresiarch in some material points, he became the head of a sect of followers of his own, who acquired the appellation of Encratites and Hydroparastate, from the abstinence which they enjoined from wine and animal food, and their substitution of water for the former in the administration of the Eucharist. There is yet extant an Address to the Greeks of his composition, of which an edition appeared in 1700 at Oxford, in one volume duodecimo.—*Care. Brucker*.

TATISCHIEF (VASSILI) the name of a Rus-

sian author of the last century, who spent thirty years of his life in collecting materials for a history of that vast empire, which he had partially succeeded in reducing into the shape of a chronicle, when his death in 1750 prevented him from the completion of his task. This however was carried into execution after his decease by Muller, who taking up the thread of the narrative at the reign of Theodore Ivanovitch, filled three duodecimo volumes with his continuation.—*Care's [Travels in Russia]*.

TATIUS (ACHILLES) a Christian bishop of the third century, born at Alexandria in Egypt. Prior to his becoming a proselyte from Paganism, he was the author of one of the earliest Greek romances now extant, entitled "*The Amours of Clitophon and Leucippe*," of which there is a translation by Cruceius. Part of a Commentary on the "*De Sphæra*" of Aratus, ascribed to him, has come down to posterity, and has been translated by Petavius. This prelate is occasionally mentioned both by Suidas and Photius.—TATTUS is also the name of an ancient king of the Sabines, who made peace with the Romans, and shared his kingdom with Romulus, but was assassinated six years afterwards at the instigation of his colleague.—*Vossius de Scient. Math. Biog. Univ.*

TAUBE (FREDERICK WILLIAM von) a German writer, was the son of Dr Taube, physician to queen Caroline, consort of George II, whom he accompanied to London, where the subject of this article was born in 1728. He was educated at the university of Gottingen, where he applied chiefly to the study of jurisprudence. On quitting the university he travelled into Africa and America; and on his return practised law at Gottingen, where perceiving but little prospect of advancement, he proceeded to Vienna, and became secretary to baron von Molke, privy counsellor to the emperor, and colonel of a regiment of foot. While in this situation the seven years' war took place, on which he volunteered into the army, which he subsequently quitted to become secretary to count von Seilern, imperial ambassador to the court of London. In 1766 he was recalled from London, and made secretary to the council of trade at Vienna. He was afterwards employed by the emperor in a mission to Slavonia and Transylvania, and on his return to Vienna was ennobled, and appointed a member of the government of Lower Austria. He died in 1778, aged fifty. His principal works are, "*De Differentiis Juris Civilis à Juris Naturæ*;" "*Thoughts on the present State of our Colonies in North America*," London, 1766; "*Historical and Political Sketch of the Present State of the English Manufactures*," 1774, 8vo; "*History of the English Trade, Manufactures, Colonies, and Navigation from the earliest Periods to 1776*," 8vo; "*Historical and Geographical Description of the Kingdom of Slavonia and Duchy of Syrmia*," parts I and II, 1777, part III, 1778; "*An Account of various New Discoveries made in the Years 1776 and 1777*

in Sclavonia, Syria, and the Neighbouring Districts," Leipsic, 1777, 4to. He also communicated to the Royal Society of London "A Short Account of a particular Kind of Torpedo found in the River Danube," published in the Philosophical Transactions for 1775.—*Rees's Cyclop.*

TAUBMAN (FREDERIC) a German author of humble origin, but considerable ability and deep erudition. He was a native of Wonsisch in Franconia, born 1565. After receiving an excellent education at Culmbach and Heilbrun he settled at Wittenberg in 1592, and obtaining the notice of the prince of Saxony, became through his interference professor of poetry and the belles lettres in that university. His principal writings, in which he displays much critical acumen, are two Commentaries on the works of Virgil and Plautus, the latter of which appeared in 1605; some miscellaneous poems, written in Latin; and a treatise on the genius and construction of that language. His death took place in 1613.—*Melchior Adam. Nicéron.*

TAUSEN (JOHN) one of the first promoters of the Reformation in Denmark, and on that account styled the Danish Luther. He was born in 1499 in the island of Fyen, where his parents were peasants. Having gone through his school education he embraced the monastic life, and entered a convent of the order of St John of Jerusalem. Being allowed a pension to travel, he proceeded to Cologne, Louvain, and Wittenberg, where he studied under Melancthon; and on his return to Denmark was made professor of theology at Copenhagen. In a short time, however, he was recalled to his convent, wherein after a while he threw away disguise, and declared himself a Lutheran. He endured some persecution on this account, but in 1526 was liberated from confinement, and made chaplain to the king. The people now flocked to hear him from all quarters; and he continued to maintain the reformed principles with zeal and courage, until at length he was raised to the episcopal chair of Ribe. He died in 1561. Besides an improved translation of the Psalms he wrote various theological treatises in defence of the Reformation.—*Munter's Hist. of the Reformation in Denmark.*

TAUVRI (DANIEL) a French physician and anatomist, born in 1669. He studied his profession under his father (who was a physician at Laval) after which he went to Paris, and then to the university of Angers, where he took the degree of MD. At the age of eighteen he published a treatise on "Rational Anatomy;" and settling at Paris, he became an associate of the Academy of Sciences. He principally distinguished himself by a controversy with M. Mery, on the circulation of blood in the fetus; on which occasion he published his treatise "On the Generation and Nourishment of the Fetus," 1700. Tauvri died soon after, in the beginning of 1701, leaving other works besides those just mentioned.—*Bing. Univ.*

TAVANNES (GASPARD DE SAULX de)

marshal of France, and one of the most eminent commanders of his day, was born in 1509 of an ancient family in Burgundy. He was introduced at an early age to Francis I, who made him his page, in which capacity he attended that monarch when captured at Pavia. He afterwards served in the wars of Piedmont, in which he distinguished himself by acts of the most romantic valour. In 1542 he reduced Rochelle, which had revolted on account of the gabelle, and in 1544 had a considerable share in the victory of Cerissoles. In 1552 he was made marshal-de-camp, and he acted with such courage and conduct against the imperialists, that he was honoured with the order of St Michael. He assisted in 1558 at the captures of Calais and Thionville; and during the civil wars of Francis II and Charles IX, reduced the insurgents of Dauphiny and Burgundy, on which occasion however he sullied his reputation by great cruelty, especially to the Protestants. He was afterwards chief of the council to the duke of Anjou, and had a great share in the victories of Jarnac and Montcontour. For his services he was recompensed in 1570 with the staff of marshal of France. Brantôme represents him as one of the principal advisers of the horrible massacre of St Bartholomew, and asserts that on that day he went through the streets of Paris, exclaiming to the people, "Let blood! let blood! physicians say that bleeding is as good in August as in May." He however opposed the design of including the king of Navarre in the massacre. In 1573, being directed by the king to repair to the siege of Rochelle, he was taken ill on the road, and died at his castle of Sully, being then in his sixty-second year.—His son WILLIAM, who also distinguished himself by his bravery in the wars of the League, composed "Memoirs" in his own name, and published others under that of his father, which were actually written by his brother, JOHN DE SAULX, marshal of France, who died in 1630.—JAMES DE SAULX, grandson to the first marshal, published "Memoirs on the Wars of the Fronde."—*Brantôme. Noun. Dict. Hist.*

TAVERNER (RICHARD) a polemic of the sixteenth century, who, though not in holy orders, obtained from Edward VI his royal licence to preach the reformed doctrines. He was a native of Brisley, Norfolk, born about the year 1505, and received his education both at Cambridge and Oxford, in which latter university he graduated as MA. in 1530, and subsequently entered at the Temple, with a view to following the law as a profession. Taverner held a Gresham professorship, and was one of those concerned in first printing an English translation of the Scriptures, commonly known as Matthew's Bible, which occasioned his temporary imprisonment by Henry. He survived however that monarch and his two immediate successors, and lived to witness the complete establishment of the Reformation in this country. His death took place in 1575.—There was also a contemporary of his, JOHN TAVERNER, like himself a member of

Cardinal college (now Christchurch), Oxford, who was an eminent musician, but is now more known as having, like his namesake, undergone considerable persecution on account of his religious tenets. Being accused in company with John Smith, Frith, and others, of holding heretical opinions, he was, together with his companions, thrown into a dungeon under the college, where the foul air actually suffocated one of them, while another only then escaped death to meet it in a more terrible form by fire in Smithfield. His skill in music is thought to have proved a stronger advocate for Taverner on this occasion than his innocence of the facts laid to his charge. —*Athen. Oxon. Biog. Brit.*

TAVERNIER (JEAN BAPTISTE) baron d'Aubonne, a title which he derived from an estate in the neighbourhood of Geneva, which his success in mercantile pursuits enabled him to purchase. He was the son of a Dutch merchant settled at Paris, and trading largely in charts and maps, the perusal of which is said to have first inspired his son with the strong propensity for travelling which he afterwards indulged. He was born in the French metropolis about the year 1605, and before he had reached his twenty-first year, had already visited a considerable portion of the European continent. He subsequently travelled through Turkey, Persia, and other Eastern countries, no fewer than six times by different routes, securing to himself considerable commercial advantages by trading as a diamond merchant, at the same time that he indulged his thirst for making himself acquainted with the manners and customs of remote nations. Of these his journeys he gave an account to the public, with the assistance of a literary friend, whose services from a defect in his own education were found necessary to reduce into shape and arrange the mass of his observations. In 1668, having realized a large fortune, and obtained a patent of nobility from the French king, he retired to his newly-purchased estate in the Genevese territories, with the view of passing the remainder of his life in tranquillity. The misconduct of a nephew whom he had sent to the Levant with a cargo, which had cost him upwards of 222,000 livres, by injuring his pecuniary resources, altered his determination, and induced him once more to set out for Russia for the purpose of recruiting his shattered finances. He succeeded in reaching Moscow, the ancient capital of that vast empire, but died there soon after his arrival in the summer of 1689. His travels, of which there is an English translation, have gone through several editions in the original French, the first of which appeared at Paris in three quarto volumes, 1676. They have since been printed in six volumes, 12mo.—*Moreri. Biog. Univ.*

TAYLOR (BROOK) a celebrated philosopher and mathematician, was born at Edmonston in Middlesex, August 28, 1685. He was the son of John Taylor, esq. of Bifrons house, Kent, who being fond of music, the subject of this article became an early proficient therein, as also very skilful with his pencil. He was

instructed in languages and the mathematics under a private tutor, and at the age of fifteen was entered a fellow commoner of St John's college, Cambridge. Here he applied with great assiduity to the mathematics, and in 1708 wrote his treatise "On the Centre of Oscillation." The following year he took his degree of B.L. and in 1712 was elected a fellow of the Royal Society. On this occasion he presented the society with the aforesaid treatise "On the Centre of Oscillation," and two more "On the Ascent of Water between two Glass Planes," and "On the Motion of a stretched String." In 1714 he was elected to the office of secretary to the society, and made doctor of laws at Cambridge. In 1715 he published his "Methodus Incrementorum," "An Account of an Experiment for Discovering the Laws of Magnetic Attraction;" and his celebrated treatise "On the Principles of Linear Perspective." In 1716 he paid a visit to Paris, and was received with great distinction, and on his return composed several more scientific treatises, which were read before the Royal Society. Intense application having impaired his health, he proceeded to Aix-la-Chapelle, and on his return appears to have turned his thoughts to studies of a religious nature. He did not however entirely neglect his previous pursuits, but improved his book on linear perspective, and wrote in defence of it against the attacks of John Bernoulli, who deemed it too abstruse. This fault has since been obviated in a work entitled "Dr Brook Taylor's Perspective made easy, by Joshua Kirby, Painter," a publication which long remained the manual of students and dilettanti. He died of a decline in his forty-first year, on the 29th of December, 1731. He left behind him several MSS. one of which, entitled "Contemplatio Philosophica," was printed in 1793, with the life of the author, by his grandson, sir William Young.—*Life as above.*

TAYLOR (JANE) an amiable and accomplished female writer, born September 23, 1783, in London, where her father, a highly respectable artist, then resided. While scarcely emerged from infancy, she was perceived to possess a vivid imagination, and gave evident indications of poetic talent, which her riper years did not fail to fulfil. Mr Taylor, a dissenter from the church of England, having accepted an invitation in 1792 from a congregation of his own persuasion at Colchester, to officiate as their pastor, carried his daughters thither with him, and continued to superintend their education, teaching them his own art as an engraver, with a view to their making it their profession. It was in the intervals between these pursuits that Miss Taylor began to commit the effusions of her genius to writing; and a visit to London in 1802 introducing her to the society of some young females of congenial disposition and talent, she, as well as her sister, was induced to join them in contributing to the "Minor's Pocket Book," a small publication, in which her first work, "The Beggar Boy," appeared in 1804. The

success of this little poem encouraged her to proceed, and from this period till 1813 she continued to publish occasionally miscellaneous pieces in verse, of which the principal are entitled "Original Poems for Infant Minds," in two volumes; "Rhymes for the Nursery," in one; and some verses in "The Associate Minstrels," a publication written in conjunction with the ladies already alluded to. In the winter of the last-mentioned year she commenced a prose composition of higher pretension, which appeared in 1815, under the name of "Display," and met with much success. Her last and principal work consists of "Essays in Rhyme on Morals and Manners," didactic poems written with much elegance and feeling. The latter part of her life was passed in occasional excursions from Ongar, in which place her family had resided since the year 1810. After some months of lingering debility, in which however the vigour of her mind appears to have subsisted to the last, this amiable and intellectual female expired of a pulmonary complaint, in the month of April 1823.—*Ann. Biog. Life by her Brother J. Taylor.*

TAYLOR (JEREMY) a very eminent divine and prelate of the Irish church, was born in the year 1613 at Cambridge, where his father exercised the calling of a barber. He was educated at Perse's free school in his native place, and entered in 1626 a sizar in Caius college, where he continued until he had graduated MA. Entering into orders he occasionally lectured for a friend at St Paul's cathedral, where he attracted the attention of archbishop Laud, who procured him a fellowship of All Souls college, Oxford, although his election was scarcely compatible with the statutes. He also nominated him one of his chaplains, and in 1640 obtained for him the rectory of Uppingham, on which he quitted his fellowship, and married. In 1642 he was created DD. at Oxford, at which time he was chaplain in ordinary to Charles I, whom he attended in some of his campaigns, and aided by several writings in defence of the church of England. After the parliament proved victorious, his living being sequestrated, he retired into Wales, where he was kindly received by the earl of Carbery, of Golden Grove, Carmarthenshire, under whose protection he was allowed to exercise his ministry, and keep a school for the maintenance of his family. It was in this obscure situation that he wrote those copious and fervent discourses, which, with respect to fertility of composition, eloquence of expression, and comprehensiveness of thought, have rendered him one of the first writers in the English language. He lost in this retreat three hopeful sons within a short period of time, which rendering a change of place necessary for the restoration of his tranquillity, he removed to London, and officiated, not without danger, to private congregations of royalists. At length he accepted an invitation from lord Conway to reside at his seat in Ireland, where he remained until the Restoration, when he came to England; and in

the promotion of January, 1660—1, was elevated to the Irish see of Down and Connor, with the administration of that of Dromore. He was also made a privy counsellor for Ireland, and chosen vice-chancellor of the university of Dublin. He conducted himself on his advancement with all the attention to his duties, public and private, which had ever distinguished him in humble situations. Piety, humility, and charity were his leading characteristics; and on his death, which took place at Lisburne, August 13, 1667, he left but very moderate fortunes to his three daughters. This eminent prelate possessed the advantages of a comely person and a melodious voice, which were farther set off by the most urbane manners and agreeable conversation. Bishop Taylor was a voluminous writer, his works having been printed in four and also in six volumes folio, a great part of which consists in sermons and devotional pieces. There are likewise several distinct treatises upon various subjects, one of the most remarkable of which is entitled "Theologia Eclectica, a Discourse of the Liberty of Prophesying (Preaching), showing the Unreasonableness of Persecution to other Men's Faith, and the Iniquity of persecuting different Opinions," 4to, 1647. This work, which was written while he was one of the vanquished party, pleads eloquently and strenuously for liberty of conscience, and treats the damnable clause of the Athanasian creed with a degree of freedom that put honest Anthony Wood to the trouble of inventing a theory to prove that he was not in earnest, and only intended to produce schism among the opponents of the church. It is unnecessary to dwell upon the absurdity of such a supposition in reference to a divine of the pure and earnest character of bishop Taylor. Of the other writings of this prelate, the most generally known and approved are his "Golden Grove, or Manual of daily Prayers;" his "Treatises on Holy Living and Dying;" and his "Doctor Dubitandum, or Rule of Conscience." Of these the two former are peculiarly admired for fervour of devotional feeling, beauty of imagery, and illustrative and copious impressiveness of eloquence. At the same time, like almost all men of genius and imagination, the author has sometimes hazarded passages which savour more of fancy than of judgment. The English prose of bishop Taylor is by many thought to surpass in strength and elegance that of all preceding writers.—*Biog. Brit. Gruinger. Life by Bonney.*

TAYLOR (JOHN) usually called the water poet, from his being a waterman, was born in the city of Gloucester, about 1580. He went to school in his native place, but appears to have learned no more than his accidence, when he was taken to London, and bound apprentice to a waterman. He was either impressed, or went voluntarily into the naval service, for he was at the taking of Cadix, under the earl of Essex, in 1596, when only sixteen years of age, and afterwards in some capacity or other visited Germany and Scotland. At home he

was many years collector for the lieutenant of the Tower of London, of his fees of the wines from all the ships which brought them up the Thames, but was at last discharged because he would not purchase the place for more than it was worth. He called himself the king's water poet, and the queen's waterman, and wore the badge of the royal arms. While a waterman he had a great aversion to coaches, and besides writing a satire against them, had the modesty to present a petition to king James, that all playhouses might be prohibited except that on Bankside, in order that the greater part of the inhabitants of London who wished to see plays, might be compelled to go by water. When the civil war broke out, he retired to Oxford, where he was much noticed by the Cavaliers, and encouraged in a common victualling house, which he kept there, as a reward for his pasquinades upon the Roundheads. After the garrison at Oxford had surrendered, he retired to Westminster, and kept a public-house; and constant in his loyalty after the death of the king, assumed for a sign the crown in mourning, which proving offensive, he substituted his own head. He died in 1654, aged seventy-four. His works are published under the title of "All the Works of John Taylor, the Water Poet, being Sixty and Three in Number, collected into One Volume by the Author, with sundry new Additions, corrected, revised, and newly imprinted," 1630, folio. These pieces are not destitute of natural humour, and of the jingling wit which prevailed so much during the reign of James I. He was countenanced by a few persons of rank, who enjoyed his oddities, but was the darling of the common people. This volume, from its early date, could not contain the "pasquils" which Anthony Wood believed did such loyal service at Oxford.—*Athen. Oxon. Cibber's Lives.*

TAYLOR (JOHN) an eminent dissenting divine, was born in 1694, at or near Lancaster, and educated at Whitehaven. In 1715 he was nominated by one of the Disney family, to the chapel of Kirkstead, in Lincolnshire, a cure exempt from episcopal jurisdiction, where he remained eighteen years, upon a very small salary, aided by a school. In 1735 he accepted the invitation of a presbyterian congregation at Norwich, which had hitherto been served by ministers of Calvinistic sentiments. The first edition of his "Scripture Doctrine of Original Sin" appeared in 1740; which attack upon a theory that had been long considered fundamental by nearly all classes of Christians, exposed him to much obloquy. In 1745 he published a paraphrase on the Epistle to the Romans, with a key to the apostolic writings, a production that has been honoured with very high approbation even from distinguished members of the church of England. He followed with the "Scripture Doctrine of Atone-ment," and various other smaller tracts, until in 1754 he published the first volume of his "Hebrew Concordance," the second of which appeared in 1757, being the labour of fourteen years. The degree of DD. was conferred

upon him soon after publishing this able work, and he soon after accepted the office of divinity tutor at the newly-founded academy of Warrington. Here however he found sources of disquiet, which affected his health and spirits to such a degree that they are supposed to have hastened his death, which took place suddenly during the night of March 5, 1761, at the age of sixty-six. Besides the works already mentioned, he was author of "A Sketch of Moral Philosophy," together with various theological tracts in advancement of the antitrinitarian and other opinions, which distinguished the rising sect of unitarians to which he belonged. *Harwood's Fun. Sermon. Memoir of his Life.*

TAYLOR, LLD. (JOHN) a distinguished scholar and critic, was the son of a barber of Shrewsbury. He received the rudiments of education at the grammar-school of his native town, and then was entered of St John's college, Cambridge, of which he became a fellow in 1730. In 1733 he was appointed librarian of the university, which office he soon after quitted for that of registrar. He published an edition of "Lysias" in 1739, and in 1742 graduated LLD. and became a member of Doctors Commons. Two years afterwards he was made chancellor of Lincoln; and in 1751 entering into orders, was presented to the living of Lawford in Essex, to which in 1757 was added a residentiaryship of St Paul's. Not deserting his legal studies, he published in 1755 "Elements of Civil Law," 4to, reprinted in 1769. He also held the offices of commissary of Lincoln and of Stowe, and was elected fellow of the Royal and Antiquarian Societies. He died in 1766, after having just completed an edition of Demosthenes, in 2 vols. 8vo. Besides the works already mentioned, he was author of "An Explanation of the Marmor Sandvicense;" an edition of "Two Orations of Demosthenes and Lycurgus," with notes and emendations; and of various pieces of poetry printed in the Gentleman's Magazine and Nichols's Select Collection of Poems.—*Nichols's Lit. Anec. Monthly Rev.*

TAYLOR (chevalier JOHN) an eminent English oculist of the eighteenth century. He was the son of a mathematician, who published some works on the branch of science which he cultivated. The son having finished his medical studies, according to his own account, under the first professor of the age, devoted himself particularly to the treatment of diseases of the eyes, and acquired great skill in the performance of various surgical operations for the relief of such complaints. His reputation procured him the appointment of oculist to the king; but not satisfied with the fame he had gained at home, he determined to make a professional journey on the continent. He left England in 1733, and stayed some time in Holland, after which he travelled through various parts of Europe for more than thirty years. He procured introductions to the courts of several princes, and obtained orders of knighthood from some of them, as well as more substantial remuneration of his profes-

sional services. Marchant, professor at the university of Tubingen, delivered a public panegyric on Taylor in 1750, and Haller and others have referred to him as a skilful operator; but he seems to have assumed an air of splendour and parade and an imposing self-sufficiency of behaviour which reduced him nearly to the level of a travelling empiric, and which sometimes exposed him to mortification and disgrace. He published "Anecdotes of the Life of the Chevalier Taylor," 4to, extracted from another work, "The History of his Travels," 3 vols. 8vo, in which he has given a list of his works, and a pompous detail of the honours bestowed on him by the great. He announced in 1767 his intention of settling at Paris; and he is supposed to have died soon after that time. A list of his works may also be found in the annexed authority.—*Biog. Univ.*

TAYLOR (SILAS) an able English antiquary, was the son of Sylvanus Taylor, a member of the high court of justice which tried king Charles I. He was born at Harley in Shropshire in 1624, and after receiving the elements of education at Shrewsbury and Westminster schools, he became a commoner of New Inn-hall, Oxford, in 1641. He had begun to distinguish himself at the university, when he was taken home and placed in the parliamentary army with the commission of captain. When the war was over his father made him sequestrator to the royalists in Herefordshire; but although he enriched himself considerably, he behaved with so much moderation, that on the Restoration he found friends who obtained for him the appointment of commissary of ammunition, &c. at Dunkirk, and subsequently that of king's storekeeper at Harwich. He died November 4, 1678. He left large materials for a history of Herefordshire and of Harwich; but the only work which he published was a "History of Gavelkind," London, 1663, 4to. In this work, a copy of which is in the library of Canterbury, with notes written therein by Somner, he carries the name and custom higher than the latter writer. It is very scarce.—*Athen. Oxon. Gough's Topog.*

TCHAMTCHIAN or CIAMCIAN (MICHAEL) an Armenian historian, born at Constantinople in 1738. Being brought up to the profession of a jeweller, he relinquished it for the study of literature; and at the age of twenty-three he became an ecclesiastic, and was admitted into the Armenian congregation of the Mickitarists at Venice. He made a rapid progress in Armenian literature, but being employed to instruct others he never could obtain leisure for studying Latin. Most of his works were published at Venice; but having had some disputes with the members of the religious society to which he belonged, he removed to Constantinople, and after residing there twenty-five years he died Nov. 30, 1823. His principal production is a "History of Armenia," 1784—86, 3 vols. 4to.—*Biog. Univ.*

TCHOU KONG, one of the sages and le-

giators of China, who flourished eleven centuries before the Christian era. He was equally distinguished as a statesman, a warrior, and a man of learning. Having assisted his elder brother, Won Wang, to dethrone the last emperor of the dynasty of Chang, and obtain the sovereign authority, his services were recompensed with the post of prime minister and the government of the country of King-feou. Won Wang dying, he appointed Tcheou guardian of his son and successor, Tching Wang, and regent of the empire. He carefully educated the young prince, and after crushing a rebellion, and performing various other services to the state, he resigned his employments, and died at an advanced age, 1106 B.C. Tcheou contributed greatly to polish the Chinese, and he is regarded as the most learned man of the age in which he lived. Father Gaubil reports that astronomical observations which he made are still preserved. The first use of the compass at sea is ascribed to him by the Chinese historians; but M. Azuni, in his "Dissertation sur l'Origine de la Boussole," Paris, 1809, 8vo, denies his title to this invention. He is celebrated as an orator, poet, and philosopher, and the ancient books of the Chinese contain several of his imputed productions.—*Amiot Mémoires sur les Chinois. Biog. Univ.*

TCHING TCHING KONG, a famous Chinese admiral or pirate in the seventeenth century, known to Europeans by the name of Koxinga. His father, Tching Tchi Long, was admiral in the reign of the last emperor of the dynasty of Ming; and being disappointed in an attempt to get his son adopted by the emperor as his successor, he quitted the court in 1646, at the time China was invaded by the Mantchou Tartars. He retired on board the fleet, and carried on hostilities against the Mantchous, after the emperor had killed himself, to avoid falling into their hands. Tching Tchi Long was at length treacherously taken prisoner by the invaders, and conducted to Peking. His son, the subject of this article, then assumed the command of the fleet, and swore implacable vengeance against the insidious Tartars, who had conquered the country. He attacked the coasts and besieged the city of Nankin; but being surprised in his camp by the foe, he was obliged hastily to re-embark. In a subsequent engagement with the Mantchous at sea, he took four thousand prisoners, whom he cruelly mutilated by cutting off their noses and ears, in 1658. On the death of the last descendant of the imperial family of Ming, in whose name he had carried on the war, he determined to form an establishment for himself on the island of Formosa. He laid siege to the fort of Zealandia, built by the Dutch; and having driven them from Formosa, and from the adjacent isles of Pong-hou, he took the title of king. He made a treaty with the English, and favoured their establishment in his territories, with a view to their aid against the Mantchous. He died in 1670, leaving his dominions to his son; but the Mantchou governor of the province of Fou-kien reconquered Formosa in 1687 with the

TEG

assistance of the Hollanders.—*Klaproth's New Annals of Voyages. Biog. Univ.*

TEBALDEO or **TIBALDEO** (**ANTONIO**) an Italian poet, who was a native of Ferrara. He adopted the military profession, which he relinquished for the study of literature. He then entered into the service of Francisco de Gonsaga, marquis of Mantua, whom he quitted to go to Rome, then the principal seat of arts and learning. He was an imitator of Petrarch, and was highly praised by Bembo and others of his contemporaries; and pope Leo X gave him five hundred ducats for a copy of verses. Tebaldeo was in the enjoyment of reputation and affluence at Rome when that city was sacked by the troops of the constable de Bourbon. The house of the poet was pillaged so that he was reduced to poverty; and having borrowed thirty florins of his friend Bembo, he died soon after in misery, November 4, 1538. His works are "Sonetti e Capitoli;" "Stanze Nuove;" "Capitoli non piu stampati;" and "Epigrammata." The poems of Tebaldeo, and especially some of his sonnets, display purity of feeling and delicacy of sentiment, heightened and adorned by that elegance of style and diction which so advantageously characterizes the golden age of literature in modern Italy.—*Biog. Univ.*

TEDESCHI (**NICHOLAS**) or **PANORMITANUS**, one of the most celebrated canonists of the fifteenth century. It is uncertain whether he was a native of Palermo or Catanea; but it was at the latter city that he assumed the habit of St Benedict, at the age of fourteen, when his superiors perceiving his abilities, sent him to study at Bologna. He applied himself particularly to the investigation of the canon law, and having taken the degree of doctor, he returned to Catanea, and opened a course of lectures on that subject. He was afterwards professor at Sienna, Parma, Bologna, and Florence, and every where acquired great reputation. Pope Martin V bestowed on him various ecclesiastical offices, and Eugenius IV raised him to the archbishopric of Palermo in 1434. He was sent by his sovereign, Alphonso V, to the council of Basil; and his services on that occasion procured him a cardinal's hat. He died of the plague in 1445. Besides a treatise "De Concilio Basiliensi," Tedeschi published several works on the canon law, reprinted collectively at Venice, 1617, 9 vols. folio.—*Biog. Univ.*

TEGEL (**ERIC**) a Swedish historiographer, whose father was the minister and favourite of king Eric XIV, and was beheaded by order of prince Charles, afterwards Charles IX, who took the son under his protection, and provided for his education. On his return from his travels in Germany, he was sent into Spain and Poland to conduct important negotiations; and after being employed in other political affairs, he was in the reign of Gustavus Adolphus appointed historiographer of the kingdom, and in 1617 he was made a privy counsellor. He died at Stockholm in 1636. His works are "Genealogies of the Kings of Sweden, Poland, and Denmark;" "History

TEK

of Gustavus I," 1622, folio; "History of Eric XIV."—*Rees's Cyclopedia. Biog. Univ.*

TEICHMEYER (**HERMAN FREDERIC**) an eminent physician, born at Minden in Germany, in 1685. After finishing his school education he studied medicine at Leipzig and Jena, and received the degree of MD. in 1707. Ten years after he became professor of experimental philosophy at Jena, where his fame attracted a great number of pupils, among whom was the celebrated Haller, who married the daughter of Teichmeyer. He lectured on anatomy, surgery, medical jurisprudence, chemistry, and botany, and maintained a high reputation as a public teacher. His death took place February 5, 1746. Besides a great number of dissertations he was the author of "Elementa Anthropologiae sive Theoria Corporis humani," 4to; "Institutiones Medicinæ legalis et forensis," 4to, both which have been repeatedly reprinted; and he produced several other useful elementary treatises.—*Biog. Univ.*

TEIFASCHY (**ABU'Z ARBAS AHMED al**) an Arabian of the thirteenth century, who was the author of a curious work relative to precious stones. He is supposed to have been born in Egypt, as he resided in that country, and appears to have exercised the profession of a jeweller at Cairo. He travelled a great deal, but whether in the prosecution of commerce or merely to satisfy his curiosity is uncertain. An Italian translation of the work of Teifaschy, with the Arabic text and notes, was published by M. A. Raimeri, Florence, 1818, 4to, under the title of "The Flower of Thoughts on Precious Stones." The author finished this treatise in 1265. According to Bochart he also wrote a book relative to "The Divers Kinds of Wood."—*Biog. Univ.*

TEISSIER (**ANTOINE**) a learned French advocate of the seventeenth century, a native of the city of Montpellier, born 1632. He was descended of Protestant parents, and was himself a member of the consistory court of the reformed church at Nismes, where he practised in his legal capacity. The revocation of the edict of Nantes forced him in common with innumerable others who held the same religious opinions to emigrate. He accordingly retired into the Prussian territories, and being introduced to the notice of the sovereign, was appointed historiographer to the court. He published "The Eloges of Learned Men," from the works of Thuanus, 12mo, 4 vols; "Catalogus Auctorum qui Librorum Catalogos, Indices, Bibliothecas, Virorum Litteratorum Elogia, Vitas, aut Orationes funebres, scriptis consignarunt," 4to, an excellent and useful compilation; "On the social Duties of Man," from Puffendorf; "The Lives of illustrious Princes;" "Instructions Moral and Political;" Biographical Memoirs of Theodore Beza, Spira, and Calvin, with the letters of the latter, &c. Teissier died at Berlin in 1715.—*Nouv. Dict. Hist.*

TEKELI (**EMERIC**, count de) was born in 1638, of an illustrious family in Hungary. His father, Stephen Tekeli, had been concerned in

TEL

the conspiracy of the counts Seurin and Frangepani, for which his castle was besieged by the imperialists. It was taken, and the old count soon after died; but the young Tekeli escaped and took refuge in Transylvania, where he obtained the patronage of prince Abaffi, and subsequently became his prime minister. Being sent to succour the malcontents of his native country, he was chosen their commander, and his arms were crowned with success in various actions. Having formed a connexion with the Ottoman Porte, he exchanged the Hungarian cap for the turban, which he received from the sultan, highly enriched with precious stones; but he sent it back again on assuming the crown of his native country. He still however continued his alliance with the Porte; but the losses sustained by the Turks at the siege of Vienna, and reverses sustained by himself, were followed by the submission of the greater part of the malcontents. Falling under the suspicion of the Turks he was put in irons, and sent to Adrianople, where he completely justified himself to the sultan, who made him prince of Transylvania on the death of Abaffi. He could not however maintain himself in this dignity against the imperial forces, and was afterwards made hospodar of Moldavia; but on the conclusion of the treaty of Carlowitz in 1699, he withdrew into Turkey, and died at Constantinople in 1703, in the profession of the faith of the church of Rome.—*Moreri, Mod. Univ. Hist.*

TELEMANN (GIO. PHILIP) one of the greatest and most voluminous musical composers who flourished in Germany during the former portion of the last century. He was born at Magdeburg in 1681, and he preceded Keiser as composer of operas for the city of Hamburg. In 1740 his overtures on the model of those of Lulli amounted to the number of six hundred. The list of his printed works, which appeared in Walther's Musical Lexicon in 1732, extended to twenty-nine; and fifteen more are specified in Gerber's Continuation of Walther; but double the number of those printed were long circulated in manuscript from the music-shops of Leipzig and Hamburg. His later compositions are said to be pleasing, graceful, and refined. Telemann, who lived to a great age, drew up a well-written account of his own life, in the earlier part of which he was the fellow-student and intimate acquaintance of Handel. He died in 1767, and immediately after his decease professor Ebeling, an excellent musical critic, published remarks on the professional merit of Telemann.—*Rees's Cyclop.*

TELESIO (ANTONIO) called also Thylesiæus or Thesius, was born at Cosenza in the kingdom of Naples in 1482. He travelled for the sake of improvement in classical learning through different parts of Italy, and in 1512 he was called to Milan to illustrate the Greek and Latin authors. He subsequently obtained a benefice at Rome, and a professorship in the Roman college. He there published Latin notes on the Odes of Horace; a collection of Latin Poems; and a treatise "De Corona."

TEL

After the sack of Rome by the troops of the constable de Bourbon, Telesio retired to Venice, where he gave public lectures, and printed a treatise "De Coloribus," and a tragedy entitled "Imber Aureus," on the story of Danaë. He died at Cosenza in 1533. His works were published at Naples in 1762, and again in 1808, 4to.—*Biog. Univ.*

TELESIO (BERNARDINO) nephew of the preceding, a modern philosopher, born at Cosenza in 1508 or 1509. He received his early education from his uncle, who kept a school at Milan, and accompanying the same relative to Rome, he was present at the sack of that city by the troops of the constable de Bourbon. Removing to Padua, he closely applied to the studies of philosophy and the mathematics, and then went again to Rome, where he obtained the friendship and patronage of pope Pius IV. He subsequently retired to Cosenza, where he married at an advanced age, and founded an academy which thence took the name of Cosentina. He was patronised by several persons of distinction, but was otherwise much disquieted by the calumnies raised against his school of philosophy, which, in addition to the grief produced by the assassination of one of his sons, are thought to have hastened his death in 1588. Telesio was a bold and vigorous opposer of the Aristotelian doctrines of physics, and employed mathematical principles in explaining the works of nature. These he first promulgated in a work printed at Rome in 1565, entitled "De Rerum Natura juxta propria Principia," 1563 and 1586. The essence of this system, which was also maintained by him in various other treatises, was the doctrine of the ancient sage Parmenides, that the first productive principles in nature are cold and heat, as well observed by lord Bacon, a mere transformation of properties into principles. He was however a lover of truth, and opened the way for greater improvements. After his death his writings, as containing innovations, were placed in the Index Expurgatorius of the inquisition, which did not prevent their republication at Venice in 1590.—*Brucher. Tirabouchi. Biog. Univ.*

TELL (WILLIAM) a celebrated person in the patriotic annals of Switzerland, was a native of Burgeln, in the canton of Uri, and was early distinguished by his skill in archery, as well as by his pre-eminence over his companions in activity and all those hardy exercises which are peculiarly characteristic of the inhabitants of a mountainous region. The tyrannic despotism of the emperor Albert sufficiently grievous in itself, was carried by Herman Gessler, whom he had appointed governor of Switzerland, to the most intolerable height. The most abject submissions were exacted from the peasantry, and the whole country ripe for a civil explosion, required only some daring hand to fire the train. The opportunity at length occurred. Gessler, who had been led to suspect the general feeling, with a degree of insolence as impolitic as wanton, placed his plumed cap upon a spear in the centre of the

market-place of Altorf, and in order to show his utter contempt of the people and their supposed design of emancipation, issued an order that every one in passing should, on pain of death, pay it the same tokens of submission which he exacted in his own person. Tell, disdainingly to comply, was seized and brought before him, and by a refinement in cruelty, according to the current story, after some ironical praises of his talents as an archer, was ordered to shoot an apple from the head of his son as the price of his own redemption from the punishment of his insubordination. Tell drawing two arrows from his quiver, placed one in his bosom, and with the other succeeded in hitting the proposed mark without injury to the boy; but having the boldness to avow his purpose of using the weapon he had reserved against the governor, had he failed in his previous attempt, the latter sentenced him to perpetual imprisonment, and carried him off in his own barge across the lake of Lucerne, to prevent the possibility of a rescue. One of those sudden storms so common in the country, arising during the passage, Tell, whose skill as a navigator was not inferior to his other qualifications, was of necessity released from his chains, and placed at the helm. Steering the vessel under a rock, still shown as the site of the exploit, one desperate leap from the deck placed him out of the reach of his captors. The death of Gesler, whom Tell soon after shot through the heart while riding near Kusanacht, formed the signal of a general rising, which terminated in the complete establishment of Swiss independence on the first of January 1308. Tell, who, notwithstanding his services to the cause, and the universal gratitude of his countrymen, continued to remain a private citizen, survived the liberation of his country forty-six years, and perished at length in an inundation which committed great ravages in the neighbourhood of Burgeln in 1354. A chapel in commemoration of his bold escape was built near the spot where it took place. This circumstance, together with the respect in which his supposed descendants were held so late as the commencement of the last century, goes far to obviate a suspicion which the similarity of the event of the apple and arrow to a story related by Saxo Grammaticus, (of which one Tocco, a Dane, is the hero,) has thrown upon the authenticity of the narrative.—*Müller's Hist. of Switzerland.*

TELLER (WILLIAM ABRAHAM) a German divine, born at Leipzic in 1734. Having been appointed in 1764 superintendent, professor of theology, and first pastor at Helmsstadt, he was, on account of his religious opinions, declared a heretic, and deprived of his offices in 1767. He went to Berlin, where he became member of the consistory, and first pastor of the church of St Peter. When the edict concerning religion was issued in 1787, Teller was suspended from his functions, but he was soon restored; and the prejudices against him being dissipated, he was admitted a member of the academy of Berlin, before which in 1802 he

read a discourse in honour of the minister Wölner, who had been his most determined persecutor. He died December 9, 1804. Even the enemies of this heterodox theologian admit that he was intimately acquainted with the Oriental languages and with history, especially that of the reformed church. His opinions relative to religion and the Scriptures were bold and singular, tending to introduce a system of philosophical Deism in the room of Christianity, by allegorizing and explaining away the supernatural portion of revelation. Among his works are "The Doctrine of the Christian Faith," 1764, 8vo, which first excited an outcry against him as a heretic; a "Dictionary of the New Testament," 8vo, 1772; "An Introduction to Religion in general and to Christianity in particular," 1792; "Sermons;" and a "Magazine for Preachers;" Jena, 1792—1801, 10 vols. 8vo.—*Biog. Univ.*

TELLEZ (BALTHASAR) a Portuguese historian, born at Lisbon in 1595. He became a jesuit, and after having for more than twenty years been a teacher in the principal seminaries of his order, he was appointed rector of the Irish seminary, and of the college of Don Antonio at Lisbon. He at length arrived at the dignity of provincial; but he resigned that office in his old age, and died at Lisbon in 1675. His historical works are a "Chronicle of the Affairs of the Society of Jesus, in Portugal," 1644—47, 2 vols. folio; and a "General History of Upper Ethiopia, and of the Establishments of the Jesuits in that Kingdom," 1660, folio.—*Biog. Univ.*

TELLEZ DE SYLVA (DOM MANUEL) marquis d'Alegrete, descended of a family distinguished by an hereditary taste for literature, was born at Lisbon in 1682. His father, one of the most learned men of his rank and country, was censor and afterwards director of the Royal Portuguese Academy of History. Dom Manuel cultivated with success Latin poetry, and on the foundation of the academy just mentioned, in 1720, he was elected the first perpetual secretary. He displayed indefatigable zeal in attending to the duties of this office, till his death in 1736. Besides a volume of Latin poems and epigrams, he was the author of "Historia da Academia real da Historia Portugueza," 1727, 4to; and he published a collection of the memoirs, &c. of the academy, 1721—27, 7 vols. folio.—*Id.*

TELLIER (MICHAEL le) chancellor of France, born in 1603, was the son of a counsellor in the court of aida. He passed through various posts, until, under the patronage of cardinal Mazarin, he became secretary of state under Louis XIII. He also obtained a principal share of the confidence of that minister and Anne of Austria during the subsequent regency. In 1651, when Mazarin was obliged to retire, Le Tellier supplied his place in the ministry, and on his return retained the office of secretary of state, until he resigned it to his son, the marquis de Louvois, in 1666. He however still held his place in the council, and in 1677 was raised to the station of chancellor, and keeper of the seals. He was severe

in his temper, and despotic in his principles, and urged all those violent measures against the Protestants, which terminated in the revocation of the edict of Nantz. In signing the edict for that iniquitous breach of faith, he exclaimed, *Nunc dimittis*, &c. and expired a few days afterwards, in his eighty-third year. Bossuet pronounced his funeral oration, and paints him as a great man. He was certainly a man of abilities, and probably a sincere bigot, a fact which does not exclude his possession of the dark and dangerous disposition that several authors have imputed to him, and which induced the count de Grammont to exclaim one day, on observing him come from a secret audience with the king, "I think I see a polecat stealing away from a henroost, and licking his snout stained with blood."—*Voltaire. Siècle de Louis XIV. Nouv. Dict. Hist.*

TELLIER (FRANÇOIS MICHAËL le) marquis de Louvois, son of the preceding, was born in 1641. His father artfully proposed him to Louis XIV, as a young man of sense, but rather slow, who might be aided by his majesty's instructions. This was taking Louis by his foible, which was that of affecting to govern every thing himself. Louvois made a rapid progress in his favour, and rose to great posts, the principal of which was that of war minister. He acquired and merited great praise for his abilities in this department, being the first who perfected the system of supplying armies by magazines disposed in convenient places. He also rendered officers attentive to their duty, and banished much of the luxurious indulgence which had previously reigned in the French service. Sensible how much his credit and the ascendancy which he had acquired over the king depended upon war, he was always solicitous to perpetuate and renew hostilities, and thereby with all his abilities acted very perniciously for France in the sequel. Neither in the practice of wars was he restrained by any sense of humanity; and the desolation of the Palatinate, which excited the indignation of all Europe, was his measure. His haughty and overbearing temper rendered him much more feared than beloved; and sometimes even led him to forget the respect due to the king himself. It is even asserted that owing to the disgust thus engendered, he had reached the end of his favour, and was on the point of being sent to the Bastille when he was carried off by a sudden death. July 16, 1691, immediately on returning from a council, in which Louis had treated him with extreme coldness. Suspicions were entertained of poison, but apparently without foundation. Louvois, although an unprincipled minister, was certainly an able man, and did his duty in recommending the king not to acknowledge his marriage with Madame de Maintenon, which conduct exciting the enmity of that influential personage, probably hastened the loss of that favour, which he was so solicitous to preserve.—*Voltaire Siècle de Louis XIV. Mem. de Ducloux.*

TELLIER (MICHAËL le) a distinguished

jesuit, was born in 1643, near Pere in Lower Normandy. He studied in the jesuits' college at Caen, and entered the society at the age of eighteen. In 1687 he published a *Defence of the Mission to China, Japan, and the Indies*, which was attacked by Arnauld in his "*Morale Pratique*," and delated to the holy office, which required alterations in the work. Many publications followed on both sides, the result of which was a great increase of reputation on the part of La Tellier, who was advanced to the posts of reviser, rector, and provincial of his order. At length, on the death of father La Chaise in 1709, he was presented by the jesuits with two others to fill the vacant place of confessor to the king, and was chosen, it is said, principally on account of the appearance of profound modesty and humility which he assumed in his deportment on that introduction. It was foreseen the use which he would make of his influence over an aged and bigotted monarch; and he is said to have himself exclaimed that he would make the Jansenists "drink to the lees of the cup of the society's indignation." His first act was the demolition of the famous house of the Port Royal, of which he left not one stone upon another. He then forced upon the magistracy and the nation the bull *unigenitus*; and such was the violence with which he proceeded, that the jesuits themselves exclaimed, "Father le Tellier drives too fast; he will overturn us." In reality he was the cause of much of the odium which soon after fell on the society, and paved the way for its abolition; nor was he esteemed even by his brethren, over whom he ruled with a rod of iron. On the death of Louis he was exiled, first to Amiens and afterwards to La Flèche, where he died in 1719, at the age of seventy-six. Le Tellier was a man of regular morals, and possibly more a real bigot than an ambitious hypocrite. He was well versed in literature, and wrote several works besides those already alluded to, which it is unnecessary to enumerate.—*Nouv. Dict. Hist. Destruction des Jesuites.*

TEMPELHOF (GEORGE FREDERIC) a German officer and writer on military tactics, born in 1737. After having studied at Frankfort-on-the-Oder and at Halle, he entered into a Prussian regiment of infantry as a corporal; and in that capacity he served in Bohemia in 1757. He afterwards entered into the artillery, and distinguished himself at the battles of Hochkirchen, Kunnersdorf, Torgau, &c. and at the sieges of Breslau, Olmutz, Dresden, and Schweidnitz. At the close of the second campaign he was made a lieutenant; and after the peace of 1763 he continued his studies at Berlin, and became acquainted with Euler, Lambert, Sulzer, Lagrange, and other men of science. He then published some mathematical works, and also "The Prussian Bombardier," 1781, 8vo, in which he reduced the doctrine of projectiles to scientific principles. He afterwards published "The Elements of Military Tactics," developing the manoeuvres and warlike operations of Frederic II.

He was appointed by the king to instruct the officers of infantry and cavalry, in the inspections of Berlin, and of the march of Brandenburg; in 1782 he was appointed major and commandant of a corps of artillery, and in 1784 he obtained letters of nobility. Frederic William II employed Tempelhof to instruct the princes, his two elder sons, in mathematics and the science of war; and he was soon after nominated a lieutenant-colonel and member of the Academy of Sciences. In 1790 he was promoted to a colonelcy; and in the beginning of the revolutionary war with France he had the command of all the Prussian artillery, and in 1795 he became chief of the third regiment of that corps. In 1802 he received the order of the red eagle from Frederic William III, who nominated him lieutenant-general and military tutor of the young princes, his brothers. He died at Berlin July 13, 1807. Tempelhof published some important works besides those mentioned above, of which the best known is his "History of the Seven Years' War in Germany, between the King of Prussia and the Empress Queen, &c." 1783, 6 vols. 4to, of which an English translation was executed by general Lloyd.—*Biog. Univ.*

TEMPESTA. There were two artists who are known by this designation; **ANTONIO**, a Florentine by birth, to whom it belonged of right as a patronymic, and one Peter Molyn, a native of Haerlem, who received it as a sobriquet from the circumstance of his pencil being principally employed in the delineation of tempests, shipwrecks, and similar subjects. The former was born about the year 1545, and studied the principles of his art under John Strada, whose style he imitated in his landscapes and hunting-pieces. He also produced some battle-pieces and other paintings, much admired for the spirit and delicacy with which they are executed, especially the animals which they contain. Many of these have been engraved, some of them by his own hand. His death took place in 1630.—The second, born of Protestant parents, quitted his native country for Italy, where he reconciled himself to the Romish church, and received the honour of knighthood; but was afterwards condemned to death for the murder of his own wife. This sentence he had interest enough to get commuted for one of perpetual imprisonment; and after remaining in prison nearly sixteen years, succeeded in making his escape from the place in which he was confined. His death took place about the commencement of the last century.—*D'Argenville Vies des Peint.*

TEMPLE (sir WILLIAM) provost of Trinity college, Dublin, and grandfather of the statesman of the same name. He was a younger son of the Temples of Leicestershire, and was educated at King's college, Cambridge, where and at Oxford he was admitted to the degree of master of arts. He afterwards became master of the school of Lincoln, and secretary successively to sir Philip Sidney, Elizabeth's ill-treated minister, Davison, and to the celebrated earl of Essex. In 1609, at the so-

licitation of Dr Usher, he accepted the provostship of Trinity college in Dublin, and was afterwards knighted and made a master in chancery. He died in 1626, aged seventy-two. He was the author of several scholastic treatises in Latin, and the father of sir JOHN TEMPLE, who was educated under him at Dublin, and who became master of the rolls and a privy counsellor in Ireland, during the reign of Charles II. Sir John wrote a "History of the Irish Rebellion of 1641," from his own observations, which work was published in 4to, 1646; in 8vo, 1746; and republished in 1812 by baron Maseres. The date of his death is not recorded.—*Athen. Oxon.*

TEMPLE (sir WILLIAM) a very eminent statesman, was the son of the aforesaid sir John Temple, by his lady, who was sister to the learned Dr Henry Hammond. He was born in London in 1628, and first sent to school at Penshurst in Kent, under the care of his uncle, Dr Hammond, and afterwards to the school of Bishop Stortford. At the age of seventeen he was entered of Emanuel college, Cambridge, under the tuition of the learned Cudworth, and in his twentieth year he commenced his travels, and passed six years in France, Holland, Flanders, and Germany. He returned in 1654, and married the daughter of sir Peter Osborne of Clicksand, Bedfordshire; and not choosing to accept any office under Cromwell, he occupied himself in the study of history and philosophy. On the Restoration he was chosen a member of the Irish convention, when he acted with great independence; and in 1661 he was returned with his father representative for the county of Carlow. The following year he was nominated one of the commissioners from the Irish parliament to the king, and removed to London. Declining all employment out of his chosen field of diplomacy, he was disregarded until the breaking out of the Dutch war, when he was employed in a secret mission to the bishop of Munster. This he executed so much to the satisfaction of the ministers, that in the following year he was appointed resident at Brussels, and received the patent of a baronetcy. A complete history of all the negotiations in which he was from this time concerned, would be that of the foreign politics of the reign of Charles II. One of the most distinguished of those services was his accomplishment, in conjunction with the equally able and patriotic De Witt, of the treaty between England, Holland, and Sweden, concluded in February 1668, with a view to oblige France to restore her conquests in the Netherlands. He also attended as ambassador extraordinary, and mediator, when peace was concluded, between France and Spain, at Aix-la-Chapelle, and subsequently residing at the Hague as ambassador, cultivated a close intimacy with De Witt, and became familiar with the prince of Orange, afterwards William III, then only in his eighteenth year. A change of politics at home led to the recall of Temple in 1669, who refusing to assist in the intended breach with

Holland, retired from public business to his house at Sheen, and employed himself in writing his "Observations on the United Provinces," and part of his "Miscellanies." When the unprincipled war against Holland terminated with the necessity of making peace, sir William Temple was again employed, and in 1674 was sent ambassador to the States General, in order to negotiate a general pacification. Previously to its termination in the treaty of Nimègue, in 1678, he was instrumental in promoting the important and highly popular marriage of the prince of Orange with Mary, eldest daughter of the duke of York, which union took place in 1677. In 1679 he was recalled from the Hague, and offered the post of secretary of state, which he declined. As a statesman he expressed himself decidedly averse to the exclusion of the duke of York, and the last act which he performed in parliament, where he sat as member for the university of Cambridge, was to carry from the council the king's answer to the Commons, containing his resolution never to consent to the exclusion of his brother. Disgusted however by Charles's dissolution of the parliament in 1681, without the advice of his council, he declined the offer of being again returned for the university, and retired from public life altogether. In the reign of James II he had so estranged himself from politics that he was one of the last to credit the landing of the prince of Orange. When the Revolution was concluded, however, he waited on the new monarch to introduce his son, and was again requested to accept the office of secretary of state, which he once more declined. His son was afterwards appointed secretary at war, but in the very week of taking office, in a fit of melancholy threw himself into the Thames, which only extorted from his father a maxim of the Stoic philosophy, "That a wise man might dispose of himself, and render life as short as he pleased." It was about this time that sir William took Swift to live with him, as already related; he was likewise occasionally visited by king William. He died at Moor park, Surrey, in January 1700, in his seventy-second year. Sir William Temple merits a high rank both as a statesman and a patriot. He well understood his country's interest, and steadily pursued it, without either ambition or avarice. He had some foibles of temper, and a share of vanity and conceit, but was substantially a worthy man in all the relations of life. As a writer he ranks among the most eminent and popular of his day. His "Observations upon the United Provinces," printed in 1672, are interesting and valuable, and his "Miscellanies" are lively and entertaining, if not profound. His memoirs are also important as regards the history of the times, an observation which may be also extended to the "Letters" published by Swift after his death. All his works, which have been published collectively in two volumes quarto, and four volumes octavo, display a great acquaintance both with men and books, conveyed in a style negligent and incorrect,

but agreeable, and much resembling that of easy and polite conversation.—*Ring. Brit. Life prefixed to edition of his Works, 1814.*

TEMPLEMAN (PIERRE) a physician of the last century, as eminent for his erudition and general knowledge as for his skill in the science he professed. He was a native of the town of Dorchester, in the county of Dorset, born in March 1711, and received the rudiments of a classical education at the Charterhouse, whence he removed to Trinity college, Cambridge, and then graduated in arts. Afterwards he proceeded to Leyden for the purpose of completing his medical studies, which he did under the celebrated Boerhaave, and having taken the degree of MD. returned to London in 1739, and commenced practice in that metropolis. A fondness however for literary pursuits, and the society of literary men, left him little leisure, and perhaps less inclination, to follow up his profession with the requisite perseverance; and having in 1753 obtained a situation in the British Museum, as keeper of the reading-room, he from that period devoted almost the whole of his time to pursuits more congenial to his disposition. Besides a translation of "Norden's Travels in Egypt," which he printed in one volume, folio, he was the author of "Remarks and Observations on Physic, Anatomy, &c. extracted from the Memoirs of the French Academy of Sciences," 2 vols.; "Cases and Consultations," &c.; with a few pieces of miscellaneous poetry. In 1760 he quitted the museum, on being chosen secretary to the Society of Arts, in which capacity he continued to act till his death in September 1769.—There was also a THOMAS TEMPLEMAN, a respectable mathematician, of Bury, in Suffolk, where he kept an arithmetical school, who printed a folio volume of tables, exhibiting the extent and comparative population of the different kingdoms of the world. His death took place about the year 1729.—*Nichols's Lit. Anec.*

TENCIN (PIERRE GUERIN de) an eminent ecclesiastic and statesman, who reached the summit of his career in the earlier part of the last century. He was born at Grenoble in 1678, and having received his education in the university of Paris, took the vows, and obtained early in life some considerable preferment in the church. On the election of Innocent XIII to the tiara, he was confirmed envoy from the court of Paris to that of the Vatican, and soon after was made archbishop of Embrun. His subsequent rise to the highest dignities in the church was rapid, but appears to have been rather the result of his genius for intrigue than of genuine merit or even commanding talent, since, after having become a member of the college of cardinals, with the rich archbishopric of Lyons, when he had at length reached the highest pinnacle of his ambition, by being appointed to succeed cardinal Fleury as minister of France, both his abilities and courage seem to have sunk under the difficulties of a post so arduous; and giving up a situation, to the duties and responsibilities of which he felt himself unequal, he

had the prudence to exchange the cares attendant on his short-lived power for the dignified retirement of his see. His death took place in 1758.—His sister, CLAUDINE ALEXANDRINE GUERIN DE TENCIN, who died in 1749, was originally destined like himself for a religious life, and took the veil in the convent of Montfleur. Her own dislike of a seclusion to which she had perhaps in the first instance reluctantly dedicated herself, aided by her brother's interest at Rome, procured her a dispensation from her vows, and she repaired to Paris, where she distinguished herself in the first circles by her gaiety and wit. The death of the counsellor La Fresnaye, who was said to have been murdered in her apartment, at length interrupted her career, and she underwent a short imprisonment, first in the Chatelet, and afterwards in the Bastille. She was the authoress of "Biographical Sketches of De Comminges, and Edward II," and two romances, "Les Malheurs de l'Amour," and the "Siege of Calais."—*Biog. Univ.*

TENIERS (DAVID) the name of two of the most celebrated artists of the Flemish school of painting, father and son, both natives of Antwerp, in which city the elder was born in 1582. Having been well grounded in the principles of the art under the famous Rubens, who much esteemed him, and always expressed the highest opinion of his genius, he went to Rome for the purpose of studying the great models of antiquity contained in that city, and became a scholar of Adam Elsheimer, of whose instruction and advice he continued to avail himself for a period of six years. On his return to his native country he occupied himself principally in the delineation of fairs, shops, rustic sports, and drinking parties, which he exhibited with such truth, humour, and originality, that he may be considered the founder of a style of painting which his son afterwards brought to perhaps the highest degree of perfection of which it is capable. His pictures are mostly of a small size. The elder Teniers died in 1649.—His son, born in 1610, imitated the style and expression of his father, whom he much excelled in the correctness as well as finish of his works. He confined himself principally to the same subjects of low humour in his original pieces; but from the wonderful exactness with which he was enabled to copy the productions of others, deceived even those who were esteemed among the best judges of the age, and acquired for himself the appellation of "The Ape of Painting." Leopold, archduke of Austria, made him one of the gentlemen of his bedchamber; William prince of Orange honoured him with his friendship, and the king of Spain built a gallery purposely for the reception of his paintings. The smaller figures of the younger Teniers are the most admired. His death took place in 1694.—There was another son, named ABRAHAM, also a good painter, especially excelling in his perfect knowledge of chiar-oscuro. — *D'Argenville Vies des Peint.*

TENISON (THOMAS) archbishop of Can-

terbury, a prelate of great piety and learning. He was a native of Cottenham in Cambridgeshire, born September 29, 1636. His father, who was rector of Topcroft, in the county of Norfolk, till ejected by the parliament for his adherence to royalty, placed him at the grammar-school of Norwich, whence he removed to Corpus Christi (Ben'et) college, Cambridge, and having graduated there, obtained a fellowship in 1662. His first inclination led him to the study of physic as a profession, but the church becoming open to him by the Restoration, he took orders, and became curate of the parish of St Andrew, Cambridge; in which capacity he distinguished himself so highly, especially by his exemplary conduct towards his sick parishioners when the plague raged there in 1665, that he was presented with a handsome piece of plate as a testimonial of their gratitude and affection. Soon after he was presented by lord Manchester to the living of Holywell, Huntingdonshire, and subsequently obtained in succession those of St Peter Mancroft, Norwich, 1674, and St Martin's in the Fields, London, 1680. Dr Tenison was a zealous polemic on the Protestant side, both previous to and after the Revolution, which circumstance, together with his tried integrity and ability, procured him rapid promotion under king William. One of the first acts of that monarch was to make him archdeacon of London, and in 1691 to raise him to the episcopal bench as bishop of Lincoln. On the death of Tillotson in 1694, he was advanced to the primacy; which high dignity he continued to hold with equal moderation, firmness, and ability, for a period of twenty years, till his death in December 1715. As an author he is known by his "Creed of Hobbes examined," an able and argumentative treatise; "Baconiana, or Remains of Sir F. Bacon," 8vo; "Sir Thomas Browne's Tracts;" and a variety of miscellaneous sermons. St Martin's parish is indebted to his munificence for a parochial school and library.—*Biog. Brit.*

TENNANT (SMITHSON) an able chemist, was born at Selby in Yorkshire, of which place his father was vicar in 1761. He received his early education at Scorton, near Tadcaster, and afterwards under Dr Croft at Beverley, where he attended more to the sciences than the classics. In 1781 he proceeded to Edinburgh to study physic, and the year following became a member of Christ's college, Cambridge, whence he removed to Emanuel college, where in 1786 he graduated B.M., and in 1796 took that of doctor in the same faculty. In 1812 he settled in London, and delivered lectures on mineralogy, and the following year was elected professor of chemistry at Cambridge. He had read but one course of lectures, when he visited France, where he was killed by a fall from his horse near Boulogne, which fractured his skull. This event took place February 22, 1815. He was a fellow of the Royal Society, to which body he communicated various papers on the decomposition of fixed air; the nature of the diamond; the action of nitre on

gold and platina; on the uses of lime in agriculture; on the composition of emery; a new method of obtaining potassium, &c. &c. He also contributed to the Transactions of the Geological Society the analysis of a volcanic substance containing boracic acid.—*Thomson's Annals of Philon.*

TENNENT (GILBERT) the son of an Irish presbyterian minister, who removed in 1718 to North America, and settled near Philadelphia, where he opened an academy for the education of students in divinity. The son assisted in the direction of this establishment, and after having studied medicine as well as theology, he was in 1726 ordained pastor of a congregation at New Brunswick. In 1743 he founded a presbyterian church at Philadelphia, and he subsequently travelled in the various Anglo-American provinces as a missionary. Notwithstanding his zeal and success in this undertaking, a party was formed against him, and he was accused of immorality. A hostile pamphlet was published, called the "Examiner;" to which he replied in another, entitled the "Examiner examined." This controversy occasioned the convocation of a synod in 1741, but no decision on the points in dispute took place. Tennent, with a view to conciliation, published a remarkable work, under the title of "The Peace of Jerusalem." He died in 1765.—His brother, WILLIAM TENNENT, minister of Freehold, in New Jersey, was a distinguished preacher among the Calvinists. He published a tract, giving an "Account of the Revival of Religion at Freehold and elsewhere." 8vo.—*Biog. Univ.*

TERENCE or PUBLIUS TERENTIUS, a celebrated Latin writer of comedies, is supposed to have been born in Carthage, about the year of Rome 566 (BC. 194). He was brought a slave to that capital in his youth, but falling into the hands of a generous master named Terentius Lucanus, the latter was so taken with the quickness of his parts, that he first gave him a good education, and then his liberty. He acquired the friendship and esteem of several Romans of rank, among whom were Scipio Africanus the younger, and his friend Lælius. He applied himself to the composition of comedies on the Greek model, and indeed, either in whole or in part, translated them from the Greek. The first piece which he is recorded to have brought on the stage, was the "Andria," represented BC. 166; and the whole of his six comedies which remain, were acted at Rome between the last-mentioned date and BC. 160. They were received with great applause, especially the "Eunuchus," for which, according to Donatus, he received 8000 sesterces (about 64*l.*), the largest sum which had ever been given for a comedy. It was a common opinion, confirmed by several ancient writers, that Scipio and Lælius assisted him in the composition of these pieces. Terence himself hints at this rumour as a charge made by detractors, but regards it as conferring honour rather than requiring contradiction. It is not likely however these statesmen and commanders, whatever their love for letters,

should possess talent of this description, not to mention that no writings are more strongly marked by their style and manner as the product of a single hand, than those of Terence. After he had given his six comedies to the Roman public, he departed for Greece, where he stayed about a year, in order, it is thought, to collect some of the plays of Menander. He fell sick, according to some, and died at sea on his voyage home, while others represent his death to have taken place at Stymphalis in Arcadia. Upon the merits of Terence much opposing opinion has existed, partly in consequence of his known obligation to the comic writers of Greece, and especially to Menander. Thus it is supposed that he has little claim to originality, either for the incident or sentiment of his pieces, which however still leave him the high praise of judicious selection, happy disposition, and purity and sweetness of language. Cicero also speaks of him as the translator of Menander, praises his Latin as expressing all the politeness and amenity of the original; and Cæsar calls him a lover of pure diction, while expressing his regret that he did not possess the *vis comica* of his original. Of the numerous editions of Terence, the most esteemed are the Elzevir, 1635; the Variorum, Amst. 1686; that of Westerhovius, 2 vols. 4to, 1726; that of Bentley, Cambridge, 4to, of the same year; the Edinburgh edition of 1758; and that of Zeunius, Leipsic, 1774, 2 vols. 8vo. Terence has been translated into English by the elder Colman, and into French by Madame Dacier.—*Vossii Poet. Lat. Crusii's Roman Poets. Saxii Onom.*

TERENTIANUS MAURUS, a Libyan author, born at Carthage, of whom a grammatical treatise is yet extant, written in Latin hexameters. It is entitled "De Litteris, Syllabis, Pedibus, et Metris," Milan, 1497. It is also to be found in the Genevese "Corpus Poetarum." Of his birth or condition but little is known.—*Moreri.*

TERPANDER, a Lesbian poet, who flourished towards the close of the seventh century before the Christian era. Like most of his brethren he united practical to theoretical harmony, and is said to have been the inventor of an additional string to the lyre. He first gained the prize for music at the Carian games, instituted by the Lacedæmonians; who however banished him for the innovation of the additional string, and declared his instrument forfeited.—*Vossius.*

TERRASSON, the name of several ingenious French writers, who flourished during the seventeenth and eighteenth centuries. Of these, JEAN, born at Lyons in 1670, the son of an advocate of that city, enjoyed the reputation of being one of the best practical philosophers as well as soundest scholars of his time. He was for some time a member of the Oratory, and eventually obtained in 1721 the Greek professorship in the Royal College of Paris. His dissertation on the Iliad, printed in 2 vols. 12mo, made him a prominent controversialist in the dispute carried on between Madame Dacier and De la Motte, respecti-

Homer. His other works are "Sethos," a moral and political romance; a French translation of the works of Diodorus Siculus, in seven duodecimo volumes; and a tract in favour of the Mississippi scheme. He was a member of the Académie des Sciences, and died in 1750.—ANDREW TERRASSON, brother to the above, was also an ecclesiastic belonging to the Oratory, and was celebrated for his eloquence in the pulpit. Four duodecimo volumes of his discourses were published after his decease, which took place at Paris in 1723.—GASPARD, another brother, was educated in the same seminary, but becoming a convert to the Jansenist party, not only lost the reputation he had previously acquired, but was thrown into confinement. After his liberation he settled at Paris, and died there in 1752, leaving also behind him four volumes of sermons.—MATTHEW TERRASSON, of the same family, was a native of Lyons, where he practised with much credit as an advocate. He was born in the autumn of 1669, and graduated at Paris, where he died September 30, 1734. Several professional tracts of his compilation were much esteemed, and are printed together in one quarto volume.—His son ANTOINE, born at Paris in November 1705, was brought up to the same profession as his father. His history of the Roman code, first printed in 1750, is an able work, and gained its author a considerable degree of reputation as well as advantages of a more solid nature. He obtained the situation of censor royal, with a law professorship in the Royal college, to which he united the lucrative appointment of counsellor to the French clergy. Besides the work already alluded to, he was the author of a variety of treatises on historical and critical, as well as on professional subjects. His death took place in the October of 1782.—*Biog. Univ. Nouv. Dict. Hist.*

TERRAY (JOSEPH MARIE) abbé, a French ecclesiastic and financier, was born in 1715 at Boan in Forez. He was educated at the college of Jully, after which he became a clerk in the parliament of Paris. He next entered into orders, but a defective utterance and forbidding exterior prevented him from making his way in the church, and he became chief of the council to the prince of Condé, then comptroller, afterwards minister of state, and finally director-general of the public buildings of France. He was a man of a firm decided temper, and of indefatigable application, who rendered his accounts models of financial order, precision, and perspicuity. He reformed many abuses, and introduced several economical reforms, which produced him numerous enemies, whose opposition he treated with contempt. He resigned his places in 1774, and died in 1778 at the age of sixty-three.—*Nouv. Dict. Hist.*

TERRY (EDWARD) an English voyager and traveller, born about 1590. Being appointed chaplain to a fleet which accompanied sir Thomas Roe, who was sent ambassador to the Great Mogul, Mr Terry sailed from Gravesend in February 1615, and on arriving

in India he was chosen to supply the place of the chaplain to the embassy, who had died in the voyage. He remained two years at the court of the Mogul emperor; and in 1617 he returned with sir T. Roe to England. He subsequently became rector of Greenford in Middlesex, where he passed the remainder of his life. Terry drew up an account of the observations he made during his residence abroad, which he presented in MS. to Charles I, then prince of Wales, in 1622. It was published under the title of "A Voyage to East India," London, 1655, 8vo, and was reprinted in 1777, 8vo.—*Biog. Univ.*

TERTRE. There were two French ecclesiastics of this name; JEAN BAPTISTE DU TERTRE, the first in point of time, was a native of Calais, born in 1610. He served originally in the army, but afterwards preferring a religious life, assumed the habit of St Dominic, and proceeded to the West Indies in quality of a missionary. On his return to France in 1658 he employed himself in writing a history of the French settlements in the Antilles, which is more remarkable for the accuracy of its statements than the elegance of its composition. This work, which occupies four quarto volumes, appeared partly in 1667, and was completed in 1671. The author survived its publication several years, dying at Paris in 1687.—RODOLPHUS, a Jesuit of the same name, was born in Alençon in 1667. The latter is known as the author of several metaphysical and devotional tracts, especially of a reply to the opinions broached by Malebranche.—*Biog. Univ. Nouv. Dict. Hist.*

TERTULLIAN (QUINTUS SEPTIMIUS FLACUS) considered the most early Latin father extant, was born at Carthage about the middle of the second century. His father was a centurion under the proconsul of Africa, and he was at first a Pagan, although when or where he embraced the Christian religion does not appear. He received a liberal education, and was well versed in Greek and Roman literature, and, as some assert, learned in the Roman law. He flourished chiefly under the reigns of the emperors Severus and Caracalla; and Jerome mentions a report that he lived to a very advanced age. He employed himself vigorously in the cause of Christianity; but towards the latter part of his life quitted the Catholic church to join the Montanists, out of which he formed a sect of his own, named Tertullianists. The ground of his separation, however, related rather to discipline than doctrine, being favourable to the greater austerities inculcated by Montanus and his two prophetesses. Of the personal history of Tertullian little more is known than that he did not separate from his wife on becoming a priest, if even he did not marry her after that event. Of his writings the most noted is his "Apologeticus, or Apology for the Christian Religion," addressed to the proconsul of Africa, which contains much information on the manners and conduct of the early Christians, and in a manly strain asserts the falsehood of the calumnies by which they were

assailed, and the injustice of persecuting them. Connected with this work are his two books, "Ad Nationes," in which, with his characteristic vehemence, he carries his attack into the quarters of his opponents. He also wrote largely against various heresies, and several distinct tracts "On Baptism," "On Idolatry," and on the conduct required from Christians under heathen domination. In one of these, "Upon Public Spectacles," he dissuades them from attending shows and festivals as partaking of idolatry; and he luxuriates in the anticipation of the transport with which he shall survey the torments of persecutors, philosophers, poets, and tragedians in another world. This father was a man of lively parts, but he displays little judgment in his reasoning, and while led by his temper to violence and exaggeration, he was at the same time weakly credulous and gloomily austere. His style is concise and figurative, but harsh, unpolished, and obscure. On the whole it has been doubted whether he did more good or harm to Christianity. His works have been frequently edited, both collectively and separately, particularly his "Apology." Of the entire works the editions of Rigaltius, Paris, 1641, and of Semler, Hal. Magd. 6 vols. 1770, are esteemed the best. The best edition of the "Apology" is that by Havercamp, Leyden, 1718, 8vo.—*Dupin. Cave. Mosheim.*

TESSE (RENE DE FROULAI, count de) marshal of France, was born about 1650. He served with distinction as aide-de-camp to marshal de Crequi in 1669. Having become a lieutenant-general in 1692, he raised the blockade of Pignerol in 1693; and he was commander-in-chief in Piedmont during the absence of Catinat. In 1703 he was made a marshal, and the next year he went to Spain, where he had some success, though he failed before Gibraltar and before Barcelona, where he was opposed by the earl of Peterborough. He was more fortunate in 1707, when he drove the Piedmontese out of Dauphiny. Disgusted with the world he entered into the religious society of the Camaldules in 1722; but he was obliged to quit his retreat to take the command of the French in Spain. On his return in 1725 he retired again to his solitude, and died the 10th of May, the same year. He was the author of three historical tracts; and general Grimoard published in 1806, "*Mémoires et Lettres du Maréchal de Tesse*," 2 vols. 8vo.—*Dict. Hist. Biog. Univ.*

TESSIN (NICODAMUS, count de) senator of Sweden and grand marshal of the court, principally known for his works of architecture, was born at Nikoping in 1654. His father, who was architect to Charles XI, received from that prince letters of nobility. The son, after studying the art of building at home, travelled for improvement, and stayed some time at Rome to observe the monuments of ancient and modern genius. Returning to Sweden, he was successively nominated chamberlain, baron, count, superintendent of buildings, grand-marshal, and senator. Among the numerous edifices erected from his designs

may be mentioned the king's palace at Stockholm, and the royal castle of Drottingholm. He died in 1718, leaving many Latin works, including a treatise, "*De Cometarum Natura*," 1700, folio.—*Biog. Univ.*

TESSIN (CHARLES GUSTAVUS, count de) son of the preceding, was one of those individuals to whose influence may be principally ascribed the modern revolutions of Sweden. He was born at Stockholm in 1695, and after being educated by his father, he travelled from 1714 to 1719 in Germany, France, and Italy. His talents were displayed in the political discussions which arose in Sweden after the death of Charles XII, when he declared for the party of the Hats, one of the two great factions which alternately governed or agitated the country. His influence caused the decided triumph of the party which he joined. After having assisted at the most secret deliberations of the states, and negotiated with many foreign courts, he was nominated president of the assembly of nobility in the diet of 1738. He presented and procured the adoption by the diet of a plan for a most essential change in the system of government. His favourite measure was the encouragement of manufactures, and the appropriation of a part of the public revenue to that purpose. He also cultivated the friendship of France, in preference to that of England or Russia; and from 1739 to 1742 he resided as ambassador at Paris, where he concluded a treaty of alliance and for a subsidy with the French government. Soon after his return he was made a senator, and was sent on a mission to Denmark; and in 1744 he went to Berlin to negotiate the marriage of Louisa Ulrica, sister of the prince royal of Sweden, when he received the decoration of the order of the Black Eagle, and many other marks of consideration for his services. From 1747 to 1752 count de Tessin had the direction of foreign affairs as president of the chancery; and at the same time he was appointed governor of the prince royal, afterwards Gustavus III. He addressed to his pupil a series of letters relative to morals, politics, and administration, which were published, and which have been translated into English, French, and other languages. The English version is entitled "*Letters to a Young Prince from his Governor*," London, 1755, 8vo. About 1760 the approach of party disputes in the diet induced count de Tessin to think of retiring from the public service, and in the following year he resigned all his employments. He then settled at his estate of Akeroe in Sudermania, where he died in 1770. He promoted the establishment of the Academy of Sciences at Stockholm; and besides his Letters, he wrote a number of discourses and essays. A description of a cabinet of natural history which he had formed, was published in 1753, under the title of "*Museum Tessinianum*," folio, with plates.—*Id.*

TESTI (FULVIO, count) an admired Italian poet, was born in 1593, at Ferrara, of parents in medium circumstances. He was carried when young to Modena, where he rose to the

highest offices in that court, and was honoured with various orders of knighthood. His life was however a perpetual alternation of prosperity and adversity, chiefly in consequence of his own ambition and inconsistency, which caused him to fall into disgrace with duke Francis I, who imprisoned him in the citadel of Modena, where he died in 1646. His poems are chiefly of the lyric class, and those which he published in his youth abound in the conceits and false taste of his age. When his judgment was matured, however, he composed in a purer style, and he exhibits a degree of vigour and poetical spirit which will bear comparison with the best poets of Italy. He wrote two tragedies, entitled "*Arinda*," and "*L'Isola d' Alcina*," the style of which is rather lyric than dramatic.—*Traboschi*.

TETENS (JOHN NICHOLAS) counsellor of state and of finance at Copenhagen, was born at Tetenshull, in the duchy of Sleswick, in 1737. After having been variously engaged as a public teacher, he went in 1776 to the university of Kiel, to give lectures on philosophy and mathematics. In 1789 he was called to Copenhagen, where he died Aug. 19, 1807, after having for nearly twenty years filled honourable posts in the departments of finance and administration. His works are "An Introduction to the Calculation of Annuities," Leipzig, 1785, 8vo; "A Voyage to the Coasts of the North Sea, to observe the Construction of Canals," 1788, 8vo; "A Philosophical Essay on Human Nature," 1777, 8vo; "The Origin of Language and Writing," Butzow, 1772, 8vo; and "Considerations on the reciprocal Rights of belligerent and neutral Powers at Sea," Copenhagen, 1805, 8vo. All these treatises are in German; and he likewise published a Latin translation of Kraft's Lectures on Mechanics, 1773, 4to.—*Biog. Univ.*

TETZEL, or TESTZEL (JOHN) a fanatical monk of the sixteenth century, whose bigotry and absurdities may be considered among the proximate causes of the Reformation. He was of German extraction, born at Piern upon the Elbe, and having taken the habit of St Dominic, received a commission from his diocesan, the archbishop of Mayence, to preach up the indulgences of Leo X. The excess of zeal which he displayed in the execution of this charge, and the extravagant power and virtue which he attributed to his commodities, declaring that they were sufficient to procure impunity for a sinner, though he had even violated the mother of God herself, first roused the indignation of Luther, and drew upon him those attacks which were at length transferred from the effect to the cause, and diverted from combating the absurdities themselves to exposing the corruption of the system by which they were originated and sanctioned. The eyes of the papal government were at length, when too late, opened to the mischief which their indiscreet instrument had occasioned, and he received so severe a rebuke from the legate, that his wounded pride could not bear up against what he considered so un-

grateful a return for his exertions, and he is said to have literally died in consequence of a broken heart in 1519.—*Moreri*.

TEXEIRA (JOSEPH) a Portuguese historian of the sixteenth century, born about the year 1543. He was a monk of the order of St Dominic, and head of a religious house belonging to that fraternity at Santarem. His principal works consist of a life of king Sebastian, with a particular account of the disastrous expedition of that prince into Africa, and an early history of Portugal. On the accession of Don Antonio to the throne, Texeira was one of those who went with him to Paris, in order to solicit assistance against Spain. His death took place in 1620.—*Moreri*.

TEXEIRA (PETER) a Portuguese historian and traveller, born about 1570. Nothing is known of his history till 1600, when, as appears from his own relation, he had resided some years in Persia, and particularly at the Portuguese settlement on the island of Ormuz. After having studied the Persian language, he went to India, and thence he determined to return to Europe by a route which would enable him to visit various parts of Asia, with which he was unacquainted. Having embarked at Malacca, he touched at Sumatra, the Sunda Isles, Borneo, and the Philippines, and crossing the Pacific ocean, arrived in December 1600 at Acapulco. He then travelled to Mexico, and sailing from the port of St John d'Ulos, he arrived at Lisbon in October 1601. He subsequently undertook a second voyage to Malacca, and on his return travelled by land from Bassora to Aleppo. Arriving in Europe he passed through Italy and France to the Netherlands; and at Antwerp he published "*Relaciones de Pedro Texeira del Origen, Descendencia, y Sucesion de los Reyes de Persia y de Hormuz, y de un Viage hecho por el mismo Autor dende la India Oriental, hasta Italia por tierra*," 1610, 8vo. This work is curious, as exhibiting much information previously unknown in Europe, relative to the history and geography of Asia.—*Biog. Univ.*

THABET BEN CORRAH, an Arabian mathematician, philosopher, and physician, who was of the sect of the Sabæans, and was born at Haran or Carrhe, in Mesopotamia, in 835. He is said to have been skilled in the Greek, Syriac, and Arabic languages, and to have composed in the latter one hundred and fifty works on dialectics, mathematics, astrology, and medicine, besides sixteen in Syriac, including a treatise on music, a chronicle of the kings of Syria, and a book on the religion of the Sabæans. Thabet resided at Bagdad, and was one of the astrologers of the caliph Motaded. Among his works are translations from Euclid, Galen, Aristotle, Ptolemy, Archimedes, and Apollonius Pergæus. He died A.D. 900.—SENAN, or SINAN BEN THABET, not less celebrated than his father, was first physician to the caliph Caher Billah. He turned Mahometan at the solicitation of the prince whom he served, and whose cruel disposition he dreaded. At length he fled to Khorasan, whence he returned after the de-

position of *Caher Billah*. He died in 942. He was learned both in astronomy and medicine, and composed works on both those sciences, much esteemed by the Orientals.—*THABET BEN SINAN*, his son, cultivated the same branches of learning with his father and grandfather, and was physician to the hospital at Bagdad. He wrote the history of his own time from AD. 902 to 970, in which year he died.—*Biog. Univ.*

THALEBI (*ABU MANSUR ABD' EL MELIK AL*) author of a great number of works on a variety of subjects, was born at Nischabur, in Persia, AD. 961, and died in 1038. Among his principal productions may be specified an Arabian Anthology, or Florilegium; a treatise on the intelligence of the Arabian language; a collection of the most elegant Arabian phrases; and a history of illustrious poets, entitled "The Pearl of the most meritorious Men of the Age," which is reckoned his chef-d'œuvre. Copies of this work exist in the royal libraries of Paris, and the Escorial, and in the Bodleian at Oxford.—*Biog. Univ.*

THALES the founder of the Ionic school of philosophy, was born at Miletus, in Asia Minor, about the year 580 BC. He rose to distinction among his fellow-citizens, and was early employed in public affairs. His ardour for improvement led him to travel in search of instruction, and after visiting Crete, he sailed to Egypt, where, according to some authorities, he acquired his knowledge of philosophy and mathematics from the priests of Memphis. Upon his return to Miletus he communicated the knowledge which he had acquired to many disciples, among the principal of whom were Anaximander, Anaximenes, and Pythagoras. In order to pursue his studies with the less interruption, he gave up the management of his estate to his nephew; and is otherwise the subject of several popular tales, founded on his close attention to philosophical speculations, and abstraction from common affairs. He reached the age of ninety, and died through mere infirmity, as he was attending the Olympic games. Laertius and several other writers regard Thales as the founder of the Greek philosophy, but as neither he nor his earliest successors in the Ionic school left any writings behind them, their tenets can only be conjectured from the obscure notices of the later Greek writers. He is represented as having held that water was the first principle of natural bodies, and according to Cicero he spoke of God as the mind which formed all things out of that primary element. Others deny that he represented God as the intelligent cause of the universe, and aver that the sayings ascribed to Thales are of dubious authority. According to him, the principle of motion, wherever it exists, is mind, the soul being considered as a moving power, perpetually in action. Respecting the material world, he held that night was created before day, that the stars are fiery bodies, and that the moon is an opaque one, illuminated by the sun. The earth he regarded as a spheroidal body, placed in the centre of the universe. In the mathe-

matics he is reported to have been the inventor of several fundamental propositions, adopted by Euclid. He was also a considerable improver of astronomy, and the first Greek who predicted a solar eclipse. He moreover taught the Greeks the division of the heavens into five zones, and fixed the revolution of the sun at 365 days. Thales was likewise one of the philosophers who united moral and political wisdom to the researches of science; and numerous aphorisms are attributed to him, in exemplification of his social penetration. On the whole he was doubtless one of the greatest men of early Greece, and well entitled, as was the case, to be regarded as the first of its seven sages.—*Diogenes Laert. Stanley. Brucker. Bayle.*

THALES, or *THALETAS*, an ancient Greek musician, who has been sometimes confounded with the celebrated philosopher of Miletus. He was a native of the isle of Crete, and was contemporary with Lycurgus, the Spartan legislator, by whom he was much esteemed. He introduced into Sparta, and also into Arcadia and Argos, several sorts of dances, including that denominated *gymnopedie*. Considerable improvements in the art he professed are attributed to Thaletas, and he is said to have composed lyric poems, which in conjunction with his music inspired those who heard them with sentiments of admiration and esteem for the social and manly virtues, producing effects hardly less surprising than those ascribed to the songs of Orpheus or Amphion.—*Biog. Univ. Rees's Cyclop.*

THEDEN (*JOHN CHRISTIAN ANTHONY*) an eminent Prussian surgeon, born in Mecklenberg in 1714. His youth was passed in poverty, and he raised himself to distinction by his own exertions. After having been attached to a regiment of cavalry, he in 1758 was appointed surgeon of a regiment of infantry, and at length first surgeon of the Prussian armies. He died in 1797. He invented various instruments for the improvement of surgical operations; and he published several works, including "New Observations and Experiments for the Advancement of Surgery," and "Instructions for Sub-surgeons in the Army."—*Biog. Univ.*

THELLUSON (*PRIER*) a native of Geneva, descended from an ancient family of French Protestants, who settled as a merchant in London, and acquired an immense fortune. He died at his seat at Plastow in Kent, July 21, 1797. The testamentary disposition which he made of his property was not a little extraordinary. To his widow and children (three sons and three daughters) he bequeathed about 100,000*l.* and the remainder, amounting to more than 600,000*l.* he left to trustees, to accumulate during the lives of his three sons and the lives of their sons; then the estates directed to be purchased with the produce of the accumulating fund, to be conveyed to the eldest male descendant of his three sons, with benefit of survivorship. This singular will being contested by the heirs at law, was finally established by a decision of

THE

the house of Lords, June 25, 1805. It however occasioned the passing of the Act of Parliament of the 39th and 40th of George III, cap. 98, restraining the power of devising property for the purpose of accumulation to twenty-one years after the death of the testator. In case there should be no such heir as the devisee described in the will, the accumulated property (which will probably amount to at least thirty-two millions) is to be added to the sinking-fund.—PETER ISAAC TRELLOSON, the eldest son of the subject of this article, was raised to the peerage by the Irish title of baron Rendlesham in 1806; and he died September 16, 1808, leaving several male children.—*Debreit's Peerage.*

THEMISTIUS, surnamed **EUPHRADES**, a rhetorician of Paphlagonia, who flourished during the greater part of the fourth and the beginning of the fifth centuries. Constantius, Julian, and Theodosius all vied in distinguishing with their favour a man who, though opposed to them in his religious opinions, was so little bigotted to Paganism, that he was on terms of intimacy with many of the leading Christians of his time, especially with Gregory Nazianzen. In the reign of the former prince he was admitted into the patrician order, and eventually rose to be prefect of Constantinople. Of his works more than thirty orations are yet extant, as well as his Commentaries on the Philosophy of Plato and Aristotle. He lived to an extreme old age, and died about the year 410.—*Fabricii Bibl. Græc.*

THEMISTOCLES, an illustrious Athenian warrior and statesman, whose father's name was Neocles. He is said to have indulged in dissipation in his youth, and to have been disinherited on that account. It does not however appear that he neglected the cultivation of his talents, since he seized every opportunity for obtaining popularity and military reputation. By this means he triumphed over his more virtuous rival, Aristides, whose banishment he procured; and at the period of the invasion of Greece by Xerxes, king of Persia, Themistocles was at the head of the Athenian republic, and in this station the fleet was entrusted to his direction. After the battle of Thermopylæ, when the Persian army was approaching, the people of Athens forsook their city and retired on board their navy; a measure which they adopted through the influence of Themistocles, who is reported to have bribed the priestess of Apollo at Delphos, in order, through the sanction of her oracular advice, to work on the minds of his superstitious countrymen. He then joined the confederate armament of the Grecian states; and to prevent the separation of the fleet, through the fears and jealousies of the different commanders, he privately sent to inform the Persian monarch that such a design was in agitation; and Xerxes, by the immediate advance of his navy to prevent their escape, obliged the Greeks to come to an engagement off Salamis, when they gained a most decisive and glorious victory, B.C. 480. Themistocles, to hasten the retreat of the Persians had re-

THE

course to another stratagem, sending information to Xerxes that the Greeks intended to destroy the bridge of boats which he had constructed for the conveyance of his troops across the Hellespont. His plan succeeded, and Xerxes hastily fled, and left his army to its fate. The signal services of Themistocles were at first warmly acknowledged by his countrymen, and the Greeks in general paid him the highest honours. Athens flourished under his administration, and he fortified the city with strong walls, rebuilt the Piræus, and augmented the navy. Yet the fickle Athenians at length treated with ingratitude the conqueror of Salamis, whom they banished from their territories, and obliged him to take refuge in the dominions of the ancient enemies of Greece, whom he had so nobly opposed. Artaxerxes, the son and successor of Xerxes, received the illustrious exile with kindness and attention, and provided him with a liberal revenue for his support. The precise time and manner of his death are uncertain. According to Plutarch, Themistocles put an end to his own life, to avoid serving against his native country, having, after some years' residence in Persia, received a command from the king to head an army destined for the invasion of Greece; but Thucydides says that he died of disease.—*Plutarch's Lives. Moreri.*

THEOBALD (Louis) a miscellaneous writer, principally known as one of the editors of Shakespeare, and as the original hero of Pope's Dunciad. He was born at Settingbourn in Kent, where his father was an attorney, to which profession he was himself brought up. He wrote various works, critical, poetical, and dramatic; but merits remembrance only as a commentator on Shakespeare, in which office he was the first who duly referred to the books and learning of that great dramatist's contemporaries. After publishing in 1726 a work entitled "Shakespeare Restored," he gave an edition of that author, which immediately followed the publication of that of Pope, from whom, although in correspondence with him, he concealed his design. Nothing more was necessary to embroil him with that irascible bard, and hence his place in the Dunciad. Although he did not deserve all the contempt cast upon him by Pope, and certainly rectified many errors in Shakespeare, he was a man of but small powers of mind. Besides twenty dramatic pieces written by himself, he produced on the stage in 1720 a tragedy, entitled the "Double Falsehood," which, upon evidence that was far from satisfactory, he attributed to Shakespeare; but in the opinion of Dr Farmer it belongs to Shirley. He died in 1744.—*Biog. Dram.*

THEOCRITUS, a Greek poet of Syracuse in Sicily, celebrated as a writer of bucolics or pastorals, whose numerous imitators, including Virgil, attest the unequivocal excellence of his productions. He did not however confine himself to one peculiar style of composition, as appears from his epigrams, still extant; and from the story of his having written

THE

satires or invectives against Hiero, the sovereign of Syracuse, who is said to have inflicted summary vengeance on the bard by ordering him to be strangled. According to other accounts, however, he fled from Sicily, and found an asylum at the court of Ptolemy Philadelphus at Alexandria; and he was not only a favourite with that prince, whose praises he sang, but was also held in high esteem among the literati of the Egyptian metropolis, and was one of the seven bards complimented by their contemporaries with the appellation of the Pleiades. Theocritus has by some critics been censured for the rustic simplicity of character and manners which his personages exhibit, as inconsistent with the recondite nature of the subjects of their dialogue; and with more obvious justice the gross obscenity of expression in which he too frequently indulges himself, has exposed him to severe reprobation. Besides his "Idylls or Pastorals," thirty in number, he wrote epigrams, and a ludicrous poem called "Syrinx." Among the best editions of the works of Theocritus are those of West, with the notes of Scaliger, Casaubon, and Heinsius, Oxford, 1699, 8vo; Reiske, Leipsic, 1765—66, 2 vols. 4to; Warton, Oxford, 1770, 2 vols. 4to; and Valckenæer, Leyden, 1781, 8vo; besides which his poems have been frequently printed with those of Bion and Moschus, and in various collections of the Poetæ Græci Minores.—*Moreri. Aikin's Gen. Biog. Elton's Specimens.*

THEODORA, empress of the East, the wife of Justinian, famous for her beauty, intrigues, ambition, and talents, and for the part she acted in the direction of affairs, both in church and state, in the reign of her husband. Her father was the keeper of the beasts for public spectacles at Constantinople, and she herself was a dancer at the theatre, and a courtesan notorious for her contempt of decency, before her elevation to the throne. Justinian saw her on the stage, and made her his mistress during the reign of his uncle Justin, whose consent he at length obtained for his marriage with Theodora; and a Roman law, which prohibited the marriage of the great officers of the empire with actresses, was repealed in her favour. She was crowned together with Justinian in 527; and the death of Justin shortly after left her in possession of sovereign authority, through the blind partiality and weakness of her imperial consort. She made use of the power she had attained to raise from obscurity her friends and favourites, and to avenge herself of her enemies. According to Procopius she continued to indulge herself in the most degrading sensuality after she became empress; and if the disgusting detail which he gives of her crimes is to be believed, seldom indeed has a brothel been disgraced by scenes of more infamous profligacy than those exhibited in the palace of Theodora. With all her faults, however, this woman displayed courage and presence of mind in circumstances of difficulty and danger; for in the alarming sedition at Constantinople in 532, her counsels animated the drooping spirits of

THE

Justinian, and induced him to forego his glorious design of fleeing before the rebels, who were subsequently reduced to subjection by Belisarius. Theodora died of a cancer in 548, much to the regret of her surviving husband.—*Gibbon. Biog. Univ.*

THEODORE OF CYRENE, a heathen philosopher, surnamed the Atheist, who lived in the latter part of the fourth century B.C. He excited the displeasure of numerous and powerful enemies by the singularity and boldness of his opinions; and being exiled from his native country, he went and resided at Athens, where he narrowly escaped the judgment of the court of Areopagus, but he was protected by Demetrius Phalereus. His irreligious tenets were disclosed in a treatise "Concerning the Gods," which was serviceable to Epicurus. Ptolemy, king of Egypt, sent Theodore on an embassy to Lysimachus, king of Thrace, and his conduct on that occasion displayed great courage and elevation of mind. He was the founder of the sect of Theodorians, one of the three subdivisions of the Cyreniac school of philosophy.—*Diogenes Laertius. Stanley's Hist. of Philo.*

THEODORE, an ecclesiastical historian of the sixth century, who was reader in the great church at Constantinople, and has therefore been styled Theodorus Lector. He compiled a work called the "Tripartite History," in two books, extracted from the writings of the ecclesiastical chroniclers, Socrates, Sozomen, and Theodoret, which is still in manuscript; and he continued the annals of the church from the reign of Theodosius the Younger to that of Justinian, in two more books, of which some fragments only are extant. These have been published by Henry Valesius, and by Reading in his edition of Theodoret.—*Aikin's Gen. Biog. Biog. Univ.*

THEODORE or THEODORUS PROSDROMUS, a Greek monk of Constantinople, known at present principally as the author of a romantic poem entitled "The Amours of Rhodanthe and Dosicles," published with a Latin translation by Gilbert Gaulmin, Paris, 1625, 8vo. The editor has added another work of Theodore, called "Amarantus, or the Amours of Old Age," which has been republished by M. Duthiel, in the eighth volume of the "Notice des Manuscrits du Roi." This monk was a very prolific writer, having produced "Galeomachia," a burlesque tragedy in imitation of the *Batrachomyomachia*, attributed to Homer; a dialogue entitled "Friendship banished from the World," and many other works. He lived in the twelfth century, and his poetry exhibits abundant proofs of the bad taste which prevailed at that period.—*Eodem.*

THEODORET, bishop of Cyrus, a town in Syria, an ecclesiastical historian, who was a native of Antioch and a disciple of the celebrated St John Chrysostom. He was raised to the see of Cyrus A.D. 420; and after having favoured the opinions of Nestorius, he wrote against that heresiarch. His zeal for the Catholic faith rendered him obnoxious to the Eu-

tychians, by whom he was deposed in the synod which they held at Ephesus; but he was restored to his diocese by the council of Chalcedon in 421. Nothing is known of his future history except that he was alive till after A.D. 460. He wrote, besides his "Ecclesiastical History," from the time of Constantine to that of Theodosius the Younger; Commentaries on the Scriptures; Epistles; Lives of famous Anchorites; Dialogues; Books on Heresy; and Discourses on Providence, and against the Pagans. His works have been edited by Sirmund and Garnier, Paris, 1642—1684, 5 vols. folio; and also published at Halle, 1769—74, 5 vols.—*Dupin. Moreri. Biog. Univ.*

THEODORIC, king of the Ostrogoths, surnamed the Great, descended of the royal Gothic race of the Amali, was born near Vienna in the year 458. His father, Theodemir, was one of the three brothers who jointly ruled the Ostrogoths settled in Pannonia, and he sent him when only eight years of age to Constantinople as a hostage, to secure the conditions of a treaty between the Goths and the emperor Leo. After residing two years with that emperor he was restored to his father, then sole monarch of the Ostrogoths, under whom he gave various indications of his warlike spirit and ability for command. On the death of Theodemir in 475, he succeeded to the crown, and commenced a course of proceeding and policy which, after menacing the safety of the Greek empire and Constantinople itself, terminated in an expedition against Odoacer, who had assumed the title of king of Italy. After several bloody engagements, the latter was finally induced to yield on condition that he and Theodoric should govern Italy with equal authority. The murder of Odoacer at a banquet rapidly followed this agreement; on which Theodoric caused himself to be proclaimed king of Italy, a title that the emperor Anastasius was reluctantly obliged to sanction. However indefensibly he acquired dominion, he governed with extraordinary vigour and ability. He attached his soldiers by assigning them a third part of the lands of Italy on the tenure of military service; while among his Italian subjects he encouraged industry and the arts of peace. He even improved the administration of justice; and so far from being one of the Goths who are accused of delighting in the destruction of public monuments, he issued edicts to protect them at Rome and elsewhere, and assigned revenues for the repair of the public edifices. Able in peace and victorious in war, he maintained the balance of the West until it was overthrown by the ambition of Clovis, who slew Alaric, the Visigoth king, the remains of whose family and property were saved by Theodoric, who also checked the victorious Franks in their farther career. Like his ancestors, he was an Arian, but was indifferent to controversy, and never violated the peace or privileges of the Catholic church. The particulars of the government of this memorable prince, who shed a short-lived lustre on

the Gothic name, are recorded in twelve books by his secretary, the senator Cassiodorus, a man of learning, who induced his illiterate master to become a patron of letters. Towards the close of his reign an intolerant edict of the Byzantine court against the Arians in its dominions, induced Theodoric, against his usual policy, to meditate a retaliation against the Catholics of Italy, which however was prevented from taking place by his death. It is to be lamented that an act of tyranny against two exemplary characters, Boethius (see his article) and Symmachus, his father-in-law, closed his career. These senators were both arbitrarily put to death, on the mere suspicion of an intrigue between a senatorial party and the imperial court. This cruel act had no sooner been perpetrated, than Theodoric was seized with remorse, and a fever ensued, which terminated his existence in three days, in August 526, being the seventy-second year of his age and thirty-fifth of his reign. The ordinary residence of this king was at Ravenna, above which city his daughter, Amalasuntha (left regent of Italy until the majority of one of her nephews) erected a splendid monument to his memory.—*Univ. Hist. Gibbon.*

THEODOSIUS, surnamed the Great, a Roman emperor, was the son of a distinguished general of the same name, who was executed for the alleged crime of treason at Carthage in 376. He was born about 346 at Canetra in Gallicia, or according to other accounts, at Italica near Seville. At a very early age he obtained separate command, but on the execution of his father he sought retirement, until selected by the emperor Gratian in 379 for his partner in the empire. To his care was submitted Thrace and the eastern provinces, which he delivered from an invasion of the Goths. This emperor distinguished himself by his zeal for orthodoxy and intolerance of Arianism, which he put down throughout the whole of his dominions. In the space of fifteen years he promulgated the same number of edicts against heretics; and the office of inquisitors of the faith was first instituted in his reign. He liberated the provinces from the barbarians with great prudence and diligence; and in the various warlike and other proceedings of his reign, showed himself an able and equitable monarch, except when under the influence of resentment or religious zeal. On the defeat and death of Maximus he became the sole head of the empire, although he administered the affairs of the west in the name of Valentinian, the son of Gratian, then a minor. He passed three years in Italy, during which period the Roman senate, which still chiefly adhered to the old religion, begged permission to restore the altar of victory, a request which he at first was inclined to grant, until prevented by St. Ambrose, who also induced him to pardon some zealots for having burnt a Jewish synagogue. In 390 a sedition took place in Thessalonica, the result of which has branded the name of Theodosius with great odium. The origin of the catastrophe was in itself very trivial, taking its rise

THE

simply in the imprisonment of a favourite charioteer of the circus. This provocation, added to some former disputes, so inflamed the populace, that they murdered their governor and several of his officers, and dragged their mangled bodies through the mire. The resentment of Theodosius was natural and merited, but the manner in which he displayed it was in the highest degree detestable and inhuman. An invitation was given in the emperor's name to the people of Thessalonica, to an exhibition at the circus, and when a great concourse of spectators had assembled, they were massacred by a body of barbarian soldiery, to the number, according to the lowest computation, of seven thousand, and to the highest of fifteen thousand. For this atrocious proceeding Ambrose, with great courage and propriety, refused him communion for eight months; and the docile, and it is to be hoped, repentant Theodosius, humbly submitted. About this time the pious emperor crowned his merits as a foe to Paganism, by demolishing the celebrated temple of Serapis, and all the other heathen temples of Egypt; and he also issued a final edict, prohibiting the ancient worship altogether. On the murder of Valentinian by Arbogastes, and the advancement of Eugenius in his place, the emperor carried on a war against the latter, which finally terminated in his defeat and death. Theodosius did not long survive this success, but after investing his sons, Arcadius and Honorius, with the eastern and western empire, he was carried off at Milan by a dropsical disorder, in January 395, in the fiftieth year of his age and sixteenth of his reign. He died possessed of a distinguished reputation, which was much confirmed by his services to orthodoxy and docility towards the priesthood, which has rendered him a subject of incessant ecclesiastical eulogy, both in ancient and modern times. He was doubtless a man of considerable abilities, and possessed many public and private virtues, which however will scarcely excuse the fierceness of his intolerance, or the barbarity of his anger and revenge.—*Univ. Hist. Gibbon.*

THEODOSIUS, a mathematician of Tripoli, who flourished, as it is supposed, in the first century. In the opinion of Suidas he is the same with Theodosius of Bithynia, mentioned by Strabo as excelling in the mathematics. He chiefly cultivated the part of geometry that relates to the sphere on which he wrote three books, containing fifty-nine propositions, all demonstrated in the pure geometrical manner of the ancients. In 1558 a Greek and Latin edition of this work was printed at Paris; but that at present most in use was published by Dr Barrow at Cambridge in 1675.—*Hutton's Math. Dict.*

THEODOTON, the third translator of the Old Testament into Greek, who lived in the reign of the emperor Commodus. He was a native of Sinope, in Pontus; and according to Epiphanius, he belonged to the heretical sect of the Marcionites. He afterwards left them to join the Ebionites, or Judaizing Christians, as we are informed by Eusebius and St Je-

THE

rome. He rather remodelled the Septuagint than produced a new Greek version of the Old Testament, his object being to accommodate the Jewish Scriptures to the Ebionite doctrines. Origen introduced this work into his "Hexapla," but little of it is now extant except the book of Daniel, which has been substituted for the Septuagint version of that prophet.—*Calmes's Dict. of the Bible. Biog. Univ.*

THEODULPH, bishop of Orleans in the age of Charlemagne, one of the principal restorers of learning in France, was a native of Cisalpine Gaul, and, as his name implies, of Gothic descent. Having distinguished himself by his erudition, he was invited to the court of Charlemagne about 781. That prince gave him the abbey of Fleury, and afterwards the bishopric of Orleans; and Theodulph restored in his diocese the ancient discipline of the church, and founded schools for the instruction of the people. He was sent into the Narbonnese provinces, together with the archbishop of Lyons, to regulate the administration of justice, when he signalized himself by the reformation of some glaring abuses. After the death of Charlemagne (to whose will he was a subscribing witness), he was in great favour with Louis le Debonnaire, who sent him to attend pope Stephen IV, when he visited France to crown the king at Rheims. Theodulph then received the Pallium with the title of archbishop. On the conspiracy of Bernard king of Italy against his uncle king Louis in 817, this prelate was accused of being an accomplice, and banished from court; and though he protested his innocence, he was deprived of his benefices, and exiled to Angers, where he died in 821. The works of Theodulph, which were published by father Simond, include "Capitularies," or instructions to the clergy of his diocese; an abridgment of ecclesiastical history; homilies; and Latin poems, among which is a hymn retained by the Catholic church in the service for Palm Sunday.—*Tiraboschi. Biog. Univ. Aikin's Gen. Biog.*

THEOGNIS, a Greek poet, was born in the fifty-ninth Olympiad, about 550 BC. He calls himself a Megarian in one of his verses, meaning most probably of Megara in Achaia. He wrote a series of moral precepts in verse, consisting of more than a thousand lines, which are without ornaments, and the precepts were probably verified, merely with a view to assist the memory. They have been often printed, both with and without Latin versions, and are to be found in all the collections of the minor Greek poets. One of the best separate editions, and a rare book, is that by Blackwell, 1706, 12mo.—*Fabricii Poet. Græc.*

THEON OF ALEXANDRIA, a celebrated Greek philosopher and mathematician, flourished in the fourth century, about the year 380, but the time and manner of his death are unknown. He became president of the famous Alexandrian school, and one of his pupils was his daughter, the celebrated and ill-fated Hypatia. Theon wrote notes and commentaries on some of the ancient mathematicians and

also composed a work entitled "Progynasmata," written with considerable judgment and elegance, in which he criticised on the writing of several illustrious authors and historians. This work was printed at Baale in 1541, but the best edition is that of Leyden, 1626.—*Hutton's Math. Dict.*

THEOPHANES (GEOORGE) a Constantinopolitan Greek, of a rich and noble family, who became a monk. He was present at the general council held in 787, where he was treated with singular respect, but was afterwards banished to Samothrace for his attention to the exiled primate Nicephorus. He died in 818. This monk published a chronicle in continuation of that of Syncellus, which he carried down to the reign of Michael Caroplatas. This work, which is valuable for its facts, while it otherwise displays the superstition and credulity of the author, was printed at Paris, with a Latin version in 1655.—*Vossii Hist. Græc. Moreri.*

THEOPHILE DE VIAUD, a French poet, was born about 1590, at Clerac, in the Agenois. He early resorted to the capital, where he rendered himself acceptable by his lively sallies and epigrams, but not without creating enemies. He was a Calvinist by education; but was very licentious both in his conduct and writings; and for some cause or other found it expedient in 1619 to withdraw to England. His friends having procured him leave to return, he professed himself a Catholic, a conversion which however had no effect upon the irregularity of his personal conduct. He was at length burnt in effigy, as the reported compiler of "Le Parnasse Satyrique," a collection by different authors, in which are several pieces offensive to decency and religion. He was subsequently arrested in Picardy, and being brought to Paris, was placed in the same dungeon which had been occupied by Ravallac, and was detained in prison two years. At length, after repeated petitions in protestation of his innocence, he was released by the parliament of Paris, which however sentenced him to banishment. He was afterwards protected by the duke of Montmorency, at whose hotel he died in 1626. Theophile was one of the first French authors who mingled prose and verse, the latter of which, although irregular, displays genius and imagination. His works consist of odes, elegies, sonnets, tragedies, a dramatic dialogue on the immortality of the soul, apologies for himself, and letters. A collection containing his poems and apologies was printed at Rome in 1627, 8vo. His "Letters" appeared separately in 1642.—*Moreri. Nouv. Dict. Hist.*

THEOPHILUS, an eminent bishop of Antioch, who was advanced to that see in the year 170. He was a vigorous opponent of heresy, and wrote several works, all of which are lost except three books addressed to Autolytus, a learned heathen, who had written to vindicate the ancient religion against the attacks of the Christians. They are filled with a variety of curious disquisitions concerning the opinions of poets and philosophers, and

are remarkable as affording the earliest example of the use of the word Trinity, which is applied by the author to the three persons of the Godhead, the third of whom he denominates "Wisdom." The "Books of Theophilus to Autolytus" were published in Latin by Gesner, Zurich, 1546, and are also inserted in the "Orthodoxographia," Basil, 1555.—*Dupin. Lardner.*

THEOPHRASTUS, a native of Eresus, in the island of Lesbos, who was the son of a fuller, and became famous as a naturalist and philosopher. He was born 371 B.C. and he studied at Athens, in the school of Plato, and afterwards under his rival Aristotle, of whom he was the favourite pupil and successor. His original name was Tyrtamus, which his master, in admiration of the brilliancy of his genius and the eloquence of his style and language, exchanged for that of Euphrastus, or the Fine Speaker, and afterwards for that of Theophrastus, or the Divine Orator, by which he is familiarly known. On the secession of Aristotle from Athens, after the judicial murder of Socrates, he became the head of the Peripatetic school of philosophy, where two thousand students are said to have attended his lectures. His fame extended to foreign countries, kings and princes solicited his friendship, and he was treated with particular attention by Cassander, the sovereign of Macedonia, and Ptolemy Lagus, the potent king of Egypt. Theophrastus composed a multitude of books, the titles of two hundred being specified by Diogenes Laertius. About twenty of these have escaped the ravages of time, among which are his Natural History of Stones; of Plants; of the Winds, &c.; and his "Characters," or Ethic Portraits, by far the most celebrated of all his productions, and the model of numerous imitators, including the moral satirist La Bruyere. He died about 288 B.C. and consequently, if the preceding date of his birth be correct, he must have survived to the age of a hundred and seven, though some state him to have been but eighty-five at the time of his decease. He is said to have expired lamenting the comparative brevity of human existence, complaining of the partiality of nature in granting longevity to the crow and to the stag, and withholding it from man. To his care we are indebted for the preservation of the writings of Aristotle, who, when dying, entrusted them to the keeping of his favourite disciple. The works of Theophrastus were published collectively by Dan. Heinsius, Leyden, 1613, folio; and among the numerous editions of his Characters may be noticed those of Needham, Cambridge, 1712, 8vo; of Fischer, Coburg, 1763, 8vo; and the recent English translation, with notes, and the Greek text, by Mr F. Howell.—*Diog. Laert. Vit. Philos. Moreri. Biog. Univ.*

THEOPOMPUS, an eminent Greek historian, who was a native of the island of Chios, and studied at Athens under the orator Isocrates. He distinguished himself by gaining a prize for a funeral discourse in honour of Mausolus, when his master was one of the

candidates. Only a few fragments of his writings are extant, a circumstance the more to be regretted, as he has been thought worthy of being compared with Herodotus and Thucydides; yet he is severely censured for his disposition to satire and illiberal reflection. He flourished 354 BC.—**THEOPOMPUS** was also the name of a comic poet, contemporary with Menander. He wrote twenty-four plays, all of which are lost.—*Lempriere's Bibl. Class. Moreri.*

THEOPHYLACT, surnamed **SIMOCATTA**, a Greek historian, flourished about the year 612. He wrote in eight books the history of the reign of the emperor Maurice, and is accounted by Casaubon one of the best of the later Greek historians. This work was printed at the Louvre in 1647. He also composed "Epistles, Moral, Rural, and Amatory," of which an edition was given by Aldus; and "Physical Problems," published at Leyden by Vulcanius, and afterwards by Schottus. Another work entitled "A History of the habitable World," by this writer, is cited by Eustathius.—*Vossii Hist. Græc.*

THEOPHYLACT, archbishop of Acris, in Bulgaria, in the eleventh century. He was a native of Constantinople, whose great reputation for theological attainment induced Maria, the empress of Michael Ducas, to urge him to accept the see of Acris, in a province then nearly barbarous. He zealously employed himself to diffuse Christianity in his diocese, and wrote several works which rank him among the principal ecclesiastical writers of the period. He was living in 1071, but the exact period of his death is unknown. His principal work is "Commentaries upon the four Gospels, the Acts of the Apostles, and the Epistles of St Paul." He also wrote "Commentaries on the four minor Prophets." Of these works several editions have been published in Greek and Latin, and in Latin alone. His "Epistles," in number seventy-five, will be found in the Bibliotheca Patrum. His Commentaries are well spoken of by Dupin and Lardner.—*Dupin. Lardner. Moreri.*

THERESA (St) a religious enthusiast, born at Avila in Spain, in 1515. At an early age the perusal of the Lives of the Saints inspired her with the romantic desire to become a holy martyr, and accompanied by her brother, she eloped from home, to seek death at the hands of the Mahometan Moors. Being brought back, she erected an hermitage in her father's garden, for retirement and devotion. After having been a boarder at a convent of Augustine nuns, she took the veil among the Carmelites at Avila, at the age of twenty-two. Her rapturous piety and religious zeal inspired general admiration, and being dissatisfied at the relaxation of discipline which she noticed in the order to which she belonged, she undertook to restore the original severity of the institute. After overcoming much opposition to her scheme, she was enabled to found the first convent of reformed Carmelite nuns at Avila in 1562, and a monastery of friars in 1568 at Dorvello, where

originated the order of Barefooted Carmelites, so denominated from their wearing sandals instead of shoes. Such was the success of her zealous exertions, that she lived to witness the foundation of thirty convents for her followers; and members of the order subsequently obtained settlements in most Catholic countries. Theresa died at Alba, in October 1582; and in 1621 she was canonized by pope Gregory XV. The character of this religious votary has ever been highly appreciated by the divines of the Catholic church, and among her warmest panegyrists may be mentioned cardinal Borromeo, Bossuet, Fleury, and the abbé Choisy. She was the author of several treatises, of which a list may be found in the first of the annexed authorities. The life of St Theresa, by herself, is in various respects a curious and interesting specimen of autobiography.—*Biog. Univ. Antonio Bibl. Hispan. Moreri. Aikin's Gen. Biog.*

THESPIA, the inventor of the tragic drama among the Greeks. He was a native of a town of Attica, called Icaria, and lived in the time of Solon. Previous to his exhibitions, sets of singers and dancers were accustomed to chaunt hymns, accompanied by dances in honour of Bacchus; and Thespia conceived the idea of relieving the monotony of these festive scenes, by introducing recitation at intervals between the songs of the chorus, and this was afterwards extended to dramatic dialogue. He was the author of several tragedies, the titles of some of which were "Alceste;" "The Combat of Pelias or Phorbas;" "The Priests;" "The Grecian Youths;" and "Pen-theus." Some dramatic fragments are extant which are ascribed to Thespia, but they appear to be spurious.—*Vossius de Poet. Græc. Aikin's Gen. Biog. Univ.*

THEVENOT (MELCHISEDEC) a distinguished traveller, who was born at Paris in 1621. He had scarcely finished his studies, when he determined to gratify the strong inclination which he felt to visit foreign countries. Having previously travelled in different parts of Europe, he was sent by the government to Genoa in 1645, and in 1652 to Rome, where, by order of the king, he assisted at the conclave in which Alexander VII was elected, in 1654. Returning to Paris, he devoted himself entirely to study, and to the promotion of the interests of literature, by collecting books and manuscripts, and by carrying on a correspondence with the learned in various parts of the world. The office of royal librarian, which he obtained in 1684, greatly facilitated his researches, and he contributed much to the improvement of the establishment under his care. His age and infirmities induced him to resign his office in 1692, and he died October 29, that year, at his house at Issy, near Paris. He published "Relations de divers Voyages curieux qui n'ont point été publiés," Paris, 1663—1672, 4 parts, in 2 vols. folio, including translations from several European, and some of the Oriental languages; "Recueil de Voyages," 1681, 8vo, comprising a description of an instrument for taking levels, and details of

natural history; and "*De l'Art de Nager*," 1695. 8vo. A catalogue of the library of Thevenot was published at Paris in 1694, 12mo.—*Moreri. Biog. Univ.*

THEVENOT (Jouin de) a traveller, born at Paris in 1633, was the nephew of the subject of the preceding article, with whom he has sometimes been improperly confounded. He received a good education at the college of Navarre, and the death of his father having put him in possession of a considerable fortune, curiosity prompted him to travel. In 1652 he commenced a journey through England, Holland, Germany, and Italy; after which he resolved to visit the East. In 1655 he embarked at Civita Vecchia, and after touching at Sicily and Malta, he went to Constantinople, thence to Naticia, and having visited Alexandria and other places in Egypt, he went in an English vessel to Tunis, and Carthage, then sailed to Leghorn, and after passing through Italy, he returned to France, whence he had been absent seven years. His passion for exploring foreign countries was not however satiated, and in October 1663 he again left Paris to commence a second Oriental tour. After visiting various parts of Syria and Persia, he went to the East Indies, and in his return through Persia, he died near Tauris, November 28, 1667. An account of his first expedition was published by himself, under the title of "*Voyage de Levant*," 1664, 4to; which was followed by "*Suite du même Voyage*," 4to; and "*Voyage contenant la Relation de l'Indostan*," 1684, 4to. The different narratives were collectively printed afterwards in 5 vols. 12mo, and they have been translated into English and other languages. This traveller is said to have introduced into France the use of coffee.—*Biog. Univ.*

THEW (ROBERT) an English historical engraver of eminence, born in Yorkshire in 1758. His father kept a small inn, and the son during the American war served as a common soldier in the Northumberland militia. He subsequently settled at Hull, and employed himself in engraving cards, shop-bills, &c. He soon however attempted works belonging to a higher style of art, and an engraving of the head of an old woman after Gerard Dow and other pieces which he executed, procured him so much notice, that through the recommendation of Charles James Fox, the duchess of Devonshire, and lady Duncannon, he was appointed historical engraver to the prince of Wales. He was then employed by alderman Boydell, for whom he engraved from a painting by Northcote, "*Edward V taking leave of his Brother the Duke of York*;" and he also executed nineteen large plates from the paintings of Reynolds, Shee, Westall, Smirke, Fuseli, Northcote, Peters, &c. for Boydell's Shakespeare. He died in July 1802, at Stevenage, in Hertfordshire.—*Gent. Mag.*

THIBAUT VI, count of Champagne and king of Navarre, noted among the early writers of French poetry, as well as for his personal concern in the affairs of Europe in the thirteenth century. He was the posthumous

son of the count of Champagne, by a daughter of Sancho, king of Navarre. After having been educated at the court of Philip Augustus, king of France, he was enabled, through the influence of that monarch, to maintain a successful contest for the succession to the counties of Champagne and Brie, to which his right was decided by the peers of the realm in 1221. On the death of his maternal uncle in 1234, he became king of Navarre; and in 1239 he embarked for the East, to engage in a crusade against the infidels. After an absence of two years he returned to his own dominions, and his death took place at Pampelona, July 10, 1253. Thibault was deeply engaged in the intrigues and civil dissensions which took place in France during the minority of St Louis, whose father Louis VIII he is said to have poisoned, and for whose mother, the beautiful Blanche of Castile, he is supposed to have entertained a criminal passion. These charges rest chiefly on the authority of the contemporary English historian Matthew Paris; and though they have been adopted by several modern writers, they appear to be undeserving of credit. The poetical talents of Thibault procured him the title of the "*Song-maker*;" and love being the theme of his muse, his verses have been considered as corroborative of his guilty attachment to queen Blanche; but this opinion is strongly controverted by M. Levesque de la Ravaliere, who published, with a glossary and dissertations, the songs of the king of Navarre, Paris, 1742, 2 vols. 12mo.—*Bayle. Moreri. Biog. Univ.*

THICKNESSE (PAUL) the son of a clergyman, born in 1780. He entered into the army when young, and went to Georgia with governor Oglethorpe, after which he served in the West Indies, and on his return to England he obtained a captain's commission. He then married a lady of French extraction, with whom he expected to have received an ample fortune; but his views were disappointed, and becoming a widower, he entered again into matrimony, becoming the husband of lady Elizabeth Touchet, heiress of the ancient barony of Audley. Her fortune enabled him to purchase the office of lieutenant governor of Landguard Fort; but the union, which took place in opposition to the wishes of his wife's family, involved him in disputes, and contributed by no means to his happiness in any of the domestic relations. About 1761 Mr Thicknesse lost his second consort by death; and on her only son succeeding to the title and estate of his mother's family, an unpleasant disagreement took place between him and his father, who thought proper to lay his grievances before the public in a pamphlet entitled "*Queries to Lord Audley*," 8vo. The year after he became a widower, he married the daughter of Mr Ford, a solicitor in London, who long survived him. [See the following article.] By this lady he had several children, and the difficulty of providing for his numerous offspring induced him to retire first to Wales, and afterwards to the continent. Having travelled through France, Italy, and

Spain, he returned home, and resided again in Wales, and subsequently at Bath. Shortly after the beginning of the revolutionary commotions in France, Mr Thicknesse again went abroad, intending to settle in Italy; but he died of apoplexy, while travelling in a carriage, near Boulogne, in 1792. His life was distinguished by much eccentricity of manners, conduct, and opinion, which was occasionally displayed in the numerous pieces which he committed to the press. Among them are "Man-midwifery analysed, and the Tendency of that Practice detected and exposed," 1765, 4to; "A Year's Journey through France and Part of Spain," 1777, 2 vols. 8vo; "The new prose Bath Guide," 1778, 8vo; "The Valetudinarian's Bath Guide, or the Means of obtaining long Life and Health," 1780, 8vo; "A Year's Journey through the Pays Bas and Austrian Netherlands," 1786, 8vo; "A Sketch of the Life of Thomas Gainsborough," 1788, 8vo; and "Mémoires and Anecdotes of Philip Thicknesse, late Lieutenant Governor of Landguard Fort, and unfortunately Father to George Touchet, Baron Audley," 1788, 2 vols. 8vo.—*Nichols's Lit. Anec.*

THICKNESSE (ANNE) an authoress of great beauty and accomplishments in her youth. Her maiden name was Ford; her father, who enjoyed the lucrative office of clerk of the arraigns, possessed a house near the Temple, in which she was born, February 22, 1737. Her talents and personal attractions having early introduced her into the world of fashion, she took advantage of that circumstance to give three concerts at the opera-house on her own account, having left her father's house abruptly, in consequence of his endeavouring to force her into a disagreeable marriage. By this bold step she realized fifteen hundred pounds, and acquiring the patronage of lady Betty Thicknesse, became domesticated in her family. On the death of this lady, the widower, governor Thicknesse, the subject of the last article, offered her his hand after a due interval, which she accepted, above three hundred persons being present at the wedding. During a union of thirty years she accompanied her husband on various journeys to different parts of the continent; and was with him at his death, which took place in his carriage, near Boulogne in 1792. The convulsions of the French Revolution had now commenced, and Mrs Thicknesse, in company with several other English ladies, was imprisoned, and narrowly escaped the guillotine, through the death of Robespierre, who had sent an order for their execution. On her liberation she returned to England, and ended a long and exemplary life at her house in the Edgeware-road, January 20, 1824. She was the personal friend of most of the wits of the last generation, speaking various modern languages with fluency and elegance. Her principal works are "Biographical Sketches of Literary Females of the French Nation," 3 vols. 12mo, 1778, and a novel entitled "The School of Fashion," 2 vols. 8vo, 1300.—*Ann. Biog.*

THIERRY or THEODORIC OF NIEM, an ecclesiastical writer of the fifteenth century. He was a native of Paderborn in Westphalia, and served Gregory XI, Urban VI, and several succeeding popes as under secretary. He also attended John XXIII to the council of Constance as writer of the apostolical letters; but after that pontiff's flight he drew up an account of his life and vices in a style of bitter but well merited invective. He died about 1417, leaving the following works: "A History of the Schism," Nuremberg, 1592; "The Privileges and Rights of the Emperors in the Investiture of Bishops;" "A History of John XXIII," Frankfort, 1620, and "A Journal of the Council of Constance." His style is harsh but energetic; and his writings, which describe chiefly what he himself witnessed, and draw a shocking picture of the court of Rome and the clergy of the period, are deemed accurate and faithful.—*Dupin. Moreri.*

THIERS (JOHN BAPTIST) a French ecclesiastic, very singular in his character and writings, was born in 1636 at Chartres, and educated at Paris, where he became a doctor of the Sorbonne. He was afterwards appointed to a benefice in the diocese of Chartres; but his caustic and litigious temper having involved him in a dispute with the archdeacon and chapter, he wrote a satire upon the former, which caused the issue of a decree for his arrest. He however escaped from the officers of justice, and took refuge at Mons, where he was well received by the bishop, who appointed him to the cure of Vitraie, in which situation he died the 28th of February 1703. His temper led him to delight in polemics, and he chose odd and uncommon subjects. Of his numerous writings the following are the most observable, "Traité des Superstitions que regardent les Sacramens," four volumes, 12mo; "Traité de l'Exposition du Saint Sacrement de l'Autel;" "L'Avocat des Pauvres, que fait voir les Obligations qu'ont les Bénéficiaires de faire un bon Usage des Biens de l'Eglise;" "De Festorum Dierum Immunitatione;" "Traité des Jeux Permis et Défenseurs;" "Histoire des Perruques, où l'on fait voir leur Origine, leur Usage, leur Forme, l'Abus, et l'Irregularité de celles des Ecclésiastiques," a most singular and entertaining disquisition, with several more, all of which are deemed very curious, and none more than a dissertation on an inscription over the great portal of the convent of the cordeliers at Rheims, which tract is extremely rare.—*Moreri. Nouv. Dict. Hist.*

THIRLBY (STYAN) a learned critic, was born at Leicester, where his father was a parish clergyman, about 1692. He was educated at the free school of his native place, whence he was removed to Jesus college, Cambridge, where he obtained a fellowship, and had several pupils, among whom was Dr Jortin. He was however a neglectful tutor, and otherwise of very irregular habits. Such was his caprice that he studied physic, divinity, and civil law successively, with a view to a profession; but although he took a doctor's

degree in the latter faculty, he never sought practice as a civilian. After losing many friends and some promising patronage by his uneven temper, imprudence, and irregularity, sir Edward Walpole obtained him a small sinecure in the custom-house, in possession of which he died in 1753, a martyr to intemperance, in his sixty-first year. In 1723 he gave the world his edition of Justin Martyr, folio, with notes and emendations, which is esteemed a very valuable performance. He also contributed some notes to Theobald's Edition of Shakspeare.—*Nichols's Lit. Anec.*

THISTLEWOOD (ARTHUR) memorable for his concern in the political commotions which disturbed this country after the restoration of regal government in France, was the son of a farmer in Lincolnshire, and was born in 1772. He obtained a lieutenant's commission in the supplementary militia in 1797, and soon after he married a young lady with a considerable fortune. He then resided at Bawtry in Yorkshire, but his wife dying in about eighteen months, he went to Lincoln, where he abandoned himself to dissipation, and having squandered his property at the gaming-table, he was obliged at length to take refuge in London. There he remained some time, making however occasional voyages to America and France, where he connected himself with the partizans of anarchy and revolution, and probably contracted that spirit of discontent which influenced his future conduct. After the peace of Amiens he returned to England, and improved his circumstances by a second marriage. But he had now become a gambler by profession; and having associated himself with other persons of desperate character, he engaged in schemes which drew on him the notice of government. When the riots in Spa-fields took place, he was arrested with Watson and others; and the proceedings against him on that occasion only served to irritate his passions and prompt him to such outrageous behaviour towards lord Sidmouth, then secretary of state, as occasioned his subsequent detention in prison for a considerable time. On his liberation he gave way to the suggestions of rage and despair, and became the principal agent in the memorable Cato-street conspiracy, the object of which was to murder several members of the administration at a cabinet-dinner, and excite an insurrection in the city of London. This absurd scheme was betrayed by a man employed as a spy by the ministry, and the insane projectors were arrested just as they were about to proceed to the execution of their purpose. Being tried and condemned as a traitor, Thistlewood with his coadjutors suffered the sentence of the law on the 1st of May 1820.

THOMAS (ANTHONY LEONARD) a distinguished French writer and member of the Academy, who was born near Clermont in Auvergne, in 1732. He was a professor at the college of Beauvais at Paris, and subsequently secretary to the duke of Orleans. Among a number of works which he published are Panegyrics, or biographical eulogies, remarkable

for the beauties of style and elegance of composition which they exhibit, and to these he is chiefly indebted for his literary reputation. His Eulogy on the Roman emperor, Marcus Aurelius, has been especially admired. Among the other productions of his pen are, "Réflexions historiques et littéraires sur le Poème de la Religion Naturelle de Voltaire;" "Eloge de Maréchal Saxe;" "Essai sur les Eloges;" "Essai sur le Caractère, les Mœurs, et l'Esprit des Femmes;" besides "La Pétitide," an epic poem, published posthumously, and other poetical compositions. He died in 1785, and his works have been subsequently published in 7 vols. 8vo.—*Biog. Univ. Dict. Hist.*

THOMAS (ELIZABETH) a female author, principally deserving of notice on account of her having been praised by Dryden and abused by Pope in his Dunciad. The former bard gave her the poetical appellation of Corinna; and she provoked the resentment of the latter, by publishing his letters to Mr H. Cromwell, which had come into her hands through her intimacy with that gentleman. She died in 1730, at the age of fifty-five; and a volume of her Poems and Letters was afterwards published, with a biographical memoir, written by herself, in a very romantic style.—*Cibber's Lives of the Poets.*

THOMAS (JOHN) a prelate respectable for his learning and liberality, who was the son of a clergyman, and was born at Carlisle in 1712. He studied at Queen's college, Oxford, and was afterwards a private tutor to the son of sir William Clayton. Having been ordained, he became rector of Blechingley in Surrey; and a marriage with the daughter of his patron opened the way to higher preferment in the church. In 1748 he was appointed one of the royal chaplains; and after holding various inferior benefices, he succeeded bishop Pearce in the deanery of Westminster, and the bishopric of Worcester. He died in 1793. His Sermons and Charges were published posthumously by his chaplain, the rev. G. Thomas, in 2 vols. 8vo, with a biographical memoir.—*Chalmers's Biog. Dict.*

THOMAS (JOSIAH) an English divine of the established church, who was educated at the university of Cambridge. Having taken the degree of MA. he was ordained, and became rector of Kingston Deverel in Wiltshire. He afterwards held the living of Street in Somersetshire, and at length obtained the archdeaconry of Bath, and was also minister of Christchurch in that city. Mr Thomas was the author of a very pleasing piece, entitled "A Poetical Epistle to a Curate;" and he published some tracts against the doctrines of those who style themselves the evangelical clergy; and distinguished himself as the opponent of his diocesan, Dr Ryder, who advocated those principles at a missionary meeting. He died in 1820, at the age of sixty.—*Bristol's Hist. of Bath Abbey.*

THOMAS (WILLIAM) an eminent prelate, born at Bristol, and educated at Oxford. After previous preferment he became precentor of St David's, and in 1665 dean of Worces-

ter, whence he was removed to the see of St David's, and he died bishop of Worcester in 1689. He published some sermons and tracts on divinity.—His grandson, WILLIAM THOMAS, who was educated at Westminster school and Trinity college, Cambridge, took orders in the church, and became rector of Exal, in Warwickshire. In 1723 he was presented to the living of St Nicholas, Worcester, where he continued till his death in 1738. He made collections for a history of Worcestershire, and he published "*Antiquitates Prioratus majoris Malverne*;" and "*A Survey of Worcester Cathedral*;" and was the editor of an improved republication of Dugdale's *Survey of Warwickshire*. His topographical papers fell into the hands of Dr Treadway Nash, and served as the foundation of his county history.—*Chalmers's Biog. Dict.*

THOMAS (WILLIAM) a native of Wales, who appears to have received his education at Oxford, and taken the degree of bachelor of canon law there in 1529. Being obliged to quit the kingdom in 1544, on account of some misfortune, he went to Italy, and two years after he resided at Bologna, and subsequently at Padua. In 1549 he had returned to England, as he was then appointed clerk of the council to king Edward VI, who, though he was a layman, bestowed on him a prebend in St Paul's cathedral, and a living in Wales. On the accession of queen Mary he lost his office and benefices, in consequence of which probably he engaged in a design to assassinate her majesty, or according to others he joined in the rebellion of sir Thomas Wyatt, and being arrested and imprisoned in the Tower, he made an attempt at suicide. He was however tried for treason at Guildhall on the 9th of May, 1554, and being convicted, he was hanged at Tyburn. Thomas was the author of "*The History of Italy*," London, 1549, 4to, reprinted in 1561; besides several other works of less importance, original and translated.—*Wood's Athenæ Oxon. Berkenhout's Biog. Lit.*

THOMASIIUS (JAMES) a learned critic, distinguished for his researches concerning the history of literature. He was born at Leipzig in 1622, and he became professor of rhetoric and rector of the Thoman school in that city, where he died in 1684. Among his works are "*De Fabulis Poetarum Dissertatio*;" "*De Theologia Scholastica*;" "*Erotemata Logica*;" "*Erotemata Metaphysica*;" "*De Vita Abelardi*;" "*De Plagio Litterario*," &c.—CHRISTIAN THOMASIIUS, son of the preceding, was also a man of learning, and a very multifarious and prolific writer. He was born at Leipzig in 1655, and received his education in the university of his native place. The authority of Aristotle still prevailed in Germany when he became a candidate for literary distinction, and he obtained the credit not only of successfully opposing the reveries of the schoolmen, but also of contributing greatly to the general diffusion of a spirit of philosophical inquiry throughout his native country. He was one of the first to combat the popular doc-

trines of witchcraft and demonology; and his scepticism on these subjects exposed him to no small degree of obloquy. After having graduated as L.L.D. at Leipzig, he obtained the professorship of the law of nature in that university; but the freedom with which he delivered his sentiments having given offence, he resigned his office, and removed to Halle, where he obtained the chair of jurisprudence. His death took place in 1728. The list of his very numerous publications includes "*Institutiones Jurisprudentiæ Divinæ*;" "*Historia Sapientiæ et Stultitiæ*," 3 vols. 8vo; "*Fundamenta Juris Naturæ et Gentium ex Sensu Communi deducta*;" "*Historia Juris Naturalis*;" and a journal entitled "*Free Thoughts, or Monthly Dialogues on Books*."—*Stollis Introd. in Hist. Lit. Dict. Hist. Biog. Univ.*

THOMASSIN (LOUIS) an eminent French ecclesiastical writer, was born in 1619, at Aix, in Provence, of a family distinguished in the church and the law. He was educated in the seminary of the Oratory, and entered into that congregation in his fourteenth year. He was subsequently made professor of theology at Saumur, whence he was called in 1654 to Paris, to teach in the school of St Magloire. Here he obtained great reputation, and in 1668 published his "*Mémoires sur la Grâce*," in which he endeavoured to reconcile the Greek fathers with St Augustine. In 1678 he published the first volume of the book by which he is most known, entitled "*De la Discipline Ecclésiastique*," which was completed in three volumes in 1681. This work was so much esteemed at Rome, that pope Innocent XI wished to draw him to the papal court, but Louis XIV refused his sanction. Another of his great works was "*Dogmata Theologica*," 3 vols. folio, 1680—9. He also published separate treatises "*On the Unity of the Church*," 3 vols. 4to; "*On the Divine Service*;" "*On Fasts and Festivals*;" "*On Truth and Falsehood*;" "*On Alms, Trade, and Usury*," &c. He was likewise the author of several philological tracts, and undertook a large work, entitled "*Glossaire Universelle Hébraïque*," folio. This work, which appeared in 1697, after his death, is spoken of by Huet as a very insufficient performance. The learning of Thomassin, although extensive, has not been deemed of the highest class. His private character was peculiarly modest, benevolent, and amiable. He died in 1695, in his seventy-fifth year.—*Nouv. Dict. Hist.*

THOMPSON (sir BENJAMIN) usually designated by his German title of COUNT RUMFORD, was born at a village of that name in New England (N.A.), in 1752. He acquired when young a knowledge of natural philosophy, for which he was indebted to a professor of that science in the American university of Cambridge. He then employed himself as a teacher, till he was raised to independence by an advantageous marriage, when he became a major in the militia of his native province; and when the war took place between Great Britain and her colonies, his local knowledge enabled him to render services of importance

to the English commanders. He came to this country, and as the reward of his services obtained a situation in the foreign office, under lord George Germaine. Towards the close of the war he was sent to New York, where he raised a regiment of dragoons, of which he was appointed colonel, and thus became entitled to half-pay. Returning to England in 1784, he received the honour of knighthood, and was for some time one of the under secretaries of state. Soon after he went to the continent, and through the recommendation of the prince of Deux Ponts, afterwards king of Bavaria, he entered into the service of the reigning elector palatine and duke of Bavaria, when he effected many important and useful reforms in both the civil and military departments of the state. Among these was a scheme for the suppression of mendicity, which he carried into execution at Munich and other parts of the Bavarian territories, providing labour for able-bodied paupers, and exciting a spirit of industry among the lower orders of the people in general. As the reward of his success in this and other undertakings, he was decorated by the sovereign of Bavaria with various orders of knighthood, made a lieutenant general, and created count Rumford. He left Bavaria in 1799, and returned to England, where he employed himself in making experiments on the nature and application of heat, and on other subjects of economical and philosophical research. He likewise suggested the plan, and assisted in the foundation of the Royal Institution, which led to other establishments of a similar description. In 1802 he removed to Paris, where he took up his residence, and his wife being dead, he married the widow of the celebrated Lavoisier; but the union proved unfortunate, and a separation ere long took place. Count Rumford then retired to a country-house at Auteuil, about four miles from Paris, and there he devoted his time to the embellishment of his domain and to the cultivation of chemistry and experimental philosophy. Though he disliked both the character and politics of the French, he preferred the climate of their country to every other; and he therefore procured permission from the king of Bavaria to continue in France, and retain the pension of 1200*l.* a year, granted him by that prince. He died in August 1814, leaving by his first wife a daughter, who resided at Boston, in America. Count Rumford was by no means a man of learning, his literary acquirements being confined to the English, French, and German languages; but he was familiar with the discoveries and improvements of modern science, and the industry and perseverance with which he pursued his inquiries, enabled him to make some considerable additions to our knowledge of chemistry and practical philosophy. Besides a great number of papers in various scientific journals, he published four volumes of "Essays, experimental, political, economical, and philosophical."—*Genl. Mag. Res's Cyclop.*

THOMPSON (EDWARD) a minor poet, was born at Hull in 1738, and went first to

sea in the merchant service. He afterwards removed into the navy, in which he obtained the rank of lieutenant, and by the interest of Garrick he was presented to the command of the *Hymna*. In 1785 he became captain of the *Grampus*, in which he proceeded to the coast of Africa, where he died the following year. He wrote some poems of a too free description, an entertainment called "Trinculo's Trip to the Jubilee;" "The Sailor's Letters," 2 vols.; and several sea songs, of more than usual merit. He also published editions of the works of Andrew Marvell, of the poet Oldham, and of Paul Whitehead.—*European Mag.*

THOMPSON (WILLIAM) a scholar and poet of merit, was born in the early part of the eighteenth century, and was the second son of the rev. Francis Thompson, rector of Brough in Westmoreland. At the usual age he was sent to Queen's college, Oxford, where he graduated A.M. in 1738. He afterwards became fellow of the same college, and succeeded to the livings of Westra and Hampton Poyle in Oxfordshire; after which he became dean of Raphoe in Ireland, where he died about 1766. He published an edition of bishop Hall's *Virgidemiarum* in 1753, and two volumes of poems, among which those entitled "The Nativity," "Sickness," and "The Hymn to May," have met with considerable approbation.—*Chalmers's Poets.*

THOMSON (ALEXANDER) a writer on miscellaneous literature, who died at Edinburgh in 1803, at the age of forty-one. He was the author of "Whist, a Poem in two Cantos," 1791, 8vo; "An Essay on Novels, a poetical Epistle, with six Sonnets from Werter," 1738, 4to; "The Paradise of Taste, a Poem," 1793, 4to; "The German Miscellany, consisting of Dramas, Dialogues, Tales, and Novels, translated from that Language," 1796, 8vo; "The East Indian, a Comedy, from the German of A. von Kotzebue," 1799, 8vo; "Pictures of Poetry, Historical, Biographical, and Critical," 1799, 8vo; "The British Parnassus at the Close of the Eighteenth Century, a Poem, in four Cantos," 1801, 4to; and "Sonnets, Odes, and Elegies," 8vo. He also published in the *Monthly Magazine*, 1810, "The Plan of a History of Scottish Poetry."—*Reuss. Biog. Univ.*

THOMSON (JAMES) a distinguished British poet, was born in 1740, at Ednam near Kelso in Scotland, being one of the nine children of the minister of that place. He was sent to the school of Jedburgh, where he early discovered a propensity to poetry, which drew the attention of the neighbouring gentry, who in consequence invited him to their houses. Being removed to the university of Edinburgh, his father soon after died, which induced him to attend to the wishes of his friends, and study for divinity. Quickly convinced that his inclinations lay another way, he soon gave up theological studies, and paid an exclusive attention to literature. After acting some time as a private tutor to lord Binning, he quitted the university and came to London, where he found out his college acquaintance, Mallet,

to whom he showed his "Winter," which was purchased by Millar for a very trifling consideration, and published in 1726 with a dedication to sir Spencer Compton. Its merits however were not discovered until it accidentally caught the eye of Mr Whately, a critic of acknowledged taste, who brought it into general notice; and besides a present of twenty guineas from his dedicatior, it led to the author's introduction to Pope and bishop Rundle, the latter of whom recommended him to the lord chancellor Talbot. In 1728 he published his "Summer," which he addressed to Bubb Doddington, and during the same year he gave the world his "Poem sacred to the Memory of Sir Isaac Newton," and his "Britannia." His "Spring" appeared in 1728, addressed to the countess of Hertford, and his "Autumn," rendering the Seasons complete, in 1730, when he published his poems collectively. He had previously brought on the stage his tragedy of "Sophonisba," the success of which was but moderate; and not long after, on the recommendation of Dr Rundle, he was selected as the travelling associate of the hon. Mr Talbot, with whom he visited most of the courts and countries on the continent. On his return he was rewarded with the post of secretary of briefs by the chancellor, which was nearly a sinecure. About this time he published his poem of "Liberty," with the cool reception of which he was much disappointed. Soon after the lord chancellor Talbot died, which vacated Thomson's office, who lost it either from pride or indolence, by omitting to request it of lord Hardwick, who succeeded to the seals, and who held it a while open for him, but claiming the attention of a request, finally gave it to another. Possibly neither party acted with much magnanimity on this occasion. An introduction to Frederick, prince of Wales, produced him a pension from that prince of 100*l.* per annum. In 1738 he produced a second tragedy, entitled "Agamemnon," which was represented at Drury-lane theatre, and was received very coolly, while a third, entitled "Edward and Eleanor," being deemed allusive to the prince and princess of Wales, the lord chamberlain would not allow to be performed at all. In 1740 he composed the masque of "Alfred," in conjunction with Mallet, but which of them wrote the song, since become national, of "Rule Britannia," has not been ascertained. In 1745 his most successful tragedy, entitled "Tancred and Sigismunda," was brought out at Drury-lane theatre, and warmly applauded. The following year produced his admirable "Castle of Indolence," his final and crowning performance. He had now, by the favour of Mr Lyttelton, obtained comparative independence, by the place of surveyor-general of the Leeward Islands, which, after paying his deputy, cleared him 300*l.* per annum. He died prematurely of a cold caught on the Thames, as he was returning one night by water from London to his residence in Kew-lane. A fever supervened, which terminated his existence in August 1748, in the forty-

eighth year of his age. He was buried at Richmond, and a monument was erected to him in Westminster-abbey in 1762, with the profits arising from an edition of his works published by Millar. He left behind a tragedy entitled "Coriolanus," which was acted for the benefit of the surviving branches of his family. It was on this occasion that Quin, at once a generous friend and companion to the deceased poet, spoke the prologue with so much feeling that was composed for the occasion by lord Lyttelton. Thomson was large and ungainly in person, and somewhat heavy in deportment, except among intimate friends, by whom he was singularly beloved for the kindness of his heart, and his freedom from the little malignant jealousies which so frequently debase the literary character. He was remarkably indolent and unhappily too much disposed to indulge in the grosser pleasures of sense, than from his writings would seem probable. The poetical merits of Thomson stand very conspicuously forward in his "Seasons," which for sensibility and beauty of natural description have scarcely been excelled. His diction, although occasionally cumbersome and laboured, is always energetic and expressive, and if its versification does not invariably denote a nice ear, it is seldom harsh or untunable. On the whole few poems have operated more forcibly on public taste, not only in England but throughout Europe. His other pieces in blank verse display a vivid imagination and a comprehensive understanding, but assume no marked or distinctive character like the "Seasons;" and his additional fame as a poet arises chiefly from his "Castle of Indolence," certainly the most spirited and beautiful of all the imitations of Spenser, both for moral, poetical, and descriptive power. This piece and his "Seasons" are poems which no time will render obsolete. Of his tragedies it is only necessary to remark, that they possess little dramatic interest, and merely appear respectable amidst the mediocre dramas of the French school, which prevailed at the time he composed them.—*Johnson's Lives of the Poets. Murdock's Life of Thomson.*

THOMSON (WILLIAM) a miscellaneous writer, born in 1746 at Burnside in Perthshire. He was educated at the university of St Andrews for the church, after which he became librarian to the earl of Kinnoul and minister of Monivard. Dissatisfied with his situation in Scotland, he repaired to London, where he kept an academy, and exercised his pen as an author by profession. His compilations were very numerous, and he was also the editor of several periodical publications, including "The Political Magazine;" "The Whitehall Evening Post;" and "The Annual Register." His original works are "The Man in the Moon;" "Memoirs of the War in Asia," 2 vols.; "Mammoth, or Human Nature Displayed," vols. &c. He obtained a doctor's degree from St Andrews, and died at Kensington in 1817.—*Ann. Biog.*

THORESBY (RALPH) an eminent antiquary, was born at Leeds in 1658. His

father, who traced his origin up to the reign of Canute, was a respectable merchant of the presbyterian religion, who being much addicted to antiquarian research, founded the collection entitled "*Museum Thoresbianum*." The subject of this article received his school education at Leeds, whence he was removed to London; and being designed for the mercantile profession, he was sent in his twentieth year to Rotterdam, to acquire the Dutch and French languages. On the death of his father in 1679 he succeeded him in business, and married and settled in his native place. Having imbibed a taste for antiquity from his parent, he pursued the study of it with so much ardour, that it became the principal employment of his life. He also formed connections with the most distinguished votaries of the same pursuits; and in 1697 was admitted a member of the Royal Society. Having long entertained the design of writing the history of his native town, he made large collections for the purpose, which he published in 1714, under the title of "*Ducatus Leodensis, or the Topography of Leedes and Parts adjacent*." In this volume he refers to an intended historical part, which was to give a view of the state of the northern districts of the kingdom in remote ages. A portion of this he left behind in MS, which is printed entire in the *Biographia Britannica*, under the article Thoresby. He also published "*Vicaria Leodensis, or the History of the Church of Leedes*," London, 1724. He died in 1725, of a paralytic affection, in the sixty-eighth year of his age. Besides his own writings, he lent his assistance to various works of the antiquarian and biographical class, among which are enumerated Gibson's edition of Camden; Calamy's *Memoirs of Divines*; Walker's *Sufferings of the Clergy*; and Collins's *Peerage of England*. — *Biog. Brit.*

THORIUS (RAPHAEL) a physician, who died of the plague in London, in 1629. He was a French Protestant, and was in favour at the court of James I. He is said to have been distinguished for his learning and for his excessive devotion to the pleasures of the table. His works are "*Hymnus Tabaci*," Lond. 1626, 12mo, republished at Utrecht, 1644 and 1651, and translated into English by P. Hausted; "*Elegia in Obitu Joannis Barclaii*," 4to; and a Letter "*De Causa Morbi et Mortis Isaaci Casauboni*." — *Diet. Hist.*

THORKELIN (GRIMM JOHNSON) professor in the university of Copenhagen, keeper of the royal archives of Denmark, member of the Icelandic Society, &c. a learned and ingenious investigator of northern antiquities. He lived in the latter part of the last century, and was a coadjutor in the literary labours of Suhm and Resenius. He published "*Diplomatum Arna-Magnæanum exhibens Monumenta Diplomática quæ colligit et Universitati Hafniensi Testamento reliquit Arnas Magnus, Historiam atque Jura Daniæ, Norvegiæ, &c. illustrantia*," 1786, 2 vols. 4to; and "*Eyrbyggja Saga, sive Eyrasorum Historia, quam mandante et impensas faciente P. F. Suhm,*

Versions, Lectionum Varietate, ac Indice Rerum auxit G. J. Thorkelin," 1787, 4to; and "*Fragments of English and Irish History, in the ninth and tenth Centuries, translated from the Icelandic, with Notes*," London, 1788, 4to. — *Biog. Univ.*

THORLAKSEN (GUDEBRAND) an Icelandic writer, born in the district of Holm in Iceland, in 1542. He studied at the university of Copenhagen, and then became rector of the school of Holm, and in 1570 bishop of the diocese. He established a printing-press, and contributed greatly to the diffusion of knowledge among his countrymen, being one of the most learned among the Icelandic prelates; but he is said to have exercised his authority in too arbitrary a manner, and thus involved himself in great difficulties. He died in 1629. Arngrim Jonas was coadjutor of this learned bishop, from whose press issued several works of his own composition, relating to theology and history. Thorlaksen also constructed a map of Iceland, which has been engraved and published. — *Aikin's Gen. Biog.*

THORNDIKE (HERBERT) a learned English divine of the seventeenth century, was educated at Trinity college, Cambridge, of which he became a fellow. In 1642 he was admitted to the rectory of Barley in Hertfordshire, and in 1643 was elected master of Sidnew college, of which office he was deprived by an oppressive piece of court intrigue. In the sequel he was also doomed to experience equal injustice from the opposing party, and who ejected him from his living of Barley, in which he was replaced at the Restoration, until he resigned it on being made a prebendary of Westminster. He died in 1672. The principal works of this divine, whose orthodoxy was somewhat suspected, are, "*A Discourse on Church Government*;" "*A Discourse of Religious Assemblies*;" "*Just Weights and Measures, or the present State of Religion weighed in the Balance*;" "*Origines Ecclesiæ*;" "*Epilogue to the Tragedy of the Church of England*," &c. He also assisted Walton in his *Polyglott*. — *Watkin's Sufferings of the Clergy. Kennett's Chron.*

THORNHILL (sir JAMES) an eminent English painter, descended from a good family in Dorsetshire, was born at Weymouth in 1676. He chose painting for his profession, and was enabled to pursue the study of that art by the assistance of his uncle, the celebrated physician, Sydenham. Although placed under a very indifferent master, he made a great progress, by the force of his natural taste and abilities, and then proceeded to Holland, Flanders, and France, where he examined all the good pictures, and himself purchased and brought over several to England. On his return he quickly acquired employment and reputation; and was much engaged in the decoration of palaces and public buildings. Among his principal works are the inside of the dome of St Paul's; the great hall at Greenwich hospital; an apartment at Hampton Court; the hall at Blenheim; the altar-piece of All Souls' chapel, Oxford; the chapel

at lord Orford's at Wimpole; and the saloon at More park, Hertfordshire. He was state painter to queen Anne, George I. and George II, by the latter of whom he was knighted. Although he lost much money by injudicious credit, he acquired sufficient property to repurchase a family estate, which the distresses of his father had obliged him to alienate. Attentive to the improvement of his art in England, he opened a school at his own house in Covent-garden, having failed in an application to lord Halifax for the foundation of a royal academy. He died at his seat of Thornhill in 1734, aged fifty-seven, leaving a son and a daughter, the latter of whom was married to Hogarth. The pencil of sir James Thornhill was firm and free, and his taste in design good, displaying great judgment in treating the allegorical compositions in which he was so much employed. His colouring was however defective, and his drawing often incorrect, defects attributable to the want of adequate instruction in the outset. Sir James Thornhill, in company with sir Christopher Wren, was most ungenerously deprived of his state appointment in the evening of life, in both instances to make room for persons of far inferior abilities.—*Walpole's Anecdotes. Pilkington.*

THORNTON (BONNELL) a miscellaneous writer of genuine humour, was the son of an apothecary in London, where he was born in 1724. After the usual course of education at Westminster school, he was in 1743 elected to Christchurch, Oxford. Here he became concerned in "The Student, or Oxford Monthly Miscellany," conducted by Smart. In 1750 he graduated M.A. and as his father wished him to study physic, in 1754 he added that of bachelor in the latter faculty. His bent however was not for severe studies, and he soon after united with the elder Colman in the establishment of the amusing periodical paper entitled "The Connoisseur." Assuming literature as a profession, he was also a profuse contributor to magazines, newspapers, and all the periodicals of the day, chiefly in the light and humorous way; and when the *St James's Chronicle* was projected, he not only assisted, but became a proprietor. His humour was not altogether confined to his pen, as he projected a ludicrous exhibition of sign paintings, which actually took place at his house; and as its object was to satirise temporary objects, events, and persons, it amused for a season. Of a kindred nature was the composition and performance at Ranelagh of a burlesque "Ode for St Cecilia's Day," professedly adapted to "Ancient British Music," meaning the salt-box, Jew's-harp, marrow-bones and cleavers, &c. &c. This farcical performance was often alluded to by Dr Johnson as exceedingly humorous. In 1766, in conjunction with Warner and Colman, he published two volumes of a translation of Plautus, afterwards completed in five. In 1767 he published "The Battle of the Wigs," in ridicule of the disputes between the fellows and licentiates of the College of Physicians; and this was followed by his "City Latin," in ridicule of the inscription on Blackfriars bridge. He died prematurely in his forty-seventh year, leaving a widow, a daughter, and two sons, one of whom is the well-known Dr Thornton the physician.—*British Essayists, Preface to vol. xxx.*

THORNTON (THOMAS) a noted sportsman and eccentric bon vivant, lieutenant-colonel of the West York militia, prince de Chambord and marquis de Pont in France, in which country he had purchased the estates to which those titles are attached. He was born in London, and educated at the Charter-house, whence he proceeded to the university of Glasgow. On inheriting his patrimonial estate of Thornville Royal, he distinguished himself by his attachment to field sports, and especially to falconry, which he revived on a most extended and magnificent scale. At the peace of Amiens he proceeded to France, where he afterwards settled, for the purpose of examining the state of sporting in that country, and gave the result of his observations to the world in a work (in which, as in some others, he is said to have been assisted by the rev. Mr Martyn) entitled "A Sporting Tour through France," 1806, 2 vols. 4to. Previously to the appearance of this work he had printed in 1804 "A Sporting Tour through the North of England and the Highlands of Scotland," 4to. He was also the author of a small work entitled "A Vindication of Colonel Thornton's Conduct in his Transactions with Mr Burton," 8vo, 1806. He died at Paris early in the summer of 1823.

—*Ann. Biog.*

THOROTON (ROBERT) an English physician of the seventeenth century, known as a writer on topography. Having obtained possession of a transcript of the account of Nottinghamshire from the Domesday Book, by sergeant Gilbert Boun, with some other materials, Dr Thoroton improved and augmented them, and following the plan of Burton's Leicestershire, he composed and published "The Antiquities of Nottinghamshire, extracted out of Records, Original Evidences, Leiger Books, other MSS. and authentic Authorities," London, 1677, folio. This work consists chiefly of a collection of epitaphs and a history of property, arranged according to the division of hundreds and towns; no notices occurring of our early national antiquities, whether British, Roman, or Saxon. An improved edition of the Antiquities of Nottinghamshire was published by J. Throsby, 3 vols. 4to, in 1797.

—*Gough's Brit. Topog.*

THORPE (JOHN) a physician and antiquary, was born at Penshurst in Kent in 1682. After practising in London he settled at Rochester, where he died in 1750. He was chosen a fellow of the Royal Society in 1705, to whose transactions he was a contributor; he also printed several ancient documents, in illustration of the history and antiquities of Rochester, and a volume of Scheuchzer's "Itinera Alpina."—His son, JOHN THORPE, was born in 1714, and educated at University college, Oxford, where he took a master's degree. He devoted the greatest part of his

life to the study of antiquities, the fruits of which appeared in 1769, in a volume entitled "Registrum Roffensi, or a Collection of Ancient Records necessary for illustrating the History of the Diocese and Cathedral of Rochester." In 1788 he also published "Cus-tomale Roffensi, from the Original in the Archives of the Church of Rochester." He died at Chippenham in 1792.—*Gent. Mag.*

THOU (JAMES AUGUSTUS de) in Latin Thuanus, an eminent magistrate and historian, was born at Paris in 1553, being the third son of Christopher de Thou, a highly respectable president of the parliament of Paris. At ten years of age he was placed in the college of Burgundy and designed for the church, but was afterwards sent to Orleans, for the study of the civil law, which he farther cultivated under Cujacius at Valence. In 1573 he travelled into Italy, and in 1576 his high character for prudence and ability induced the court to employ him to negotiate with marshal Montmorency for the purpose of preventing a civil war. On the death of his elder brother in 1579 he dedicated himself to the long robe, and in 1584 was made a master of requests; and in 1587, having resigned all his previous ecclesiastical engagements, he married. On the revolt of Paris, produced by the violence of the league, he adhered to Henry III; and after the assassination of the duke of Guise, was principally instrumental in reconciling that prince with the king of Navarre. On the death of Henry III he hastened from Venice to support the legal heir, Henry IV, who employed him in several important negotiations, and nominated him principal librarian to the king, on the death of Amyot. In 1594 he succeeded his uncle as president-à-mortier, and was afterwards one of the Catholic commissioners at the celebrated theological conference at Fontainebleau, between Du Perron and Du Plessis Mornai. In the regency of Mary de' Medici he was appointed one of the directors-general of finance and otherwise employed in nice and difficult matters, in which he rendered himself equally conspicuous by integrity and ability. These various occupations did not prevent him from an assiduous cultivation of literature; and being fond of composition in Latin verse, in 1584 he gave the world a descriptive poem on the subject of hawking, entitled "De Re Accipitraria." He afterwards published other pieces of Latin poetry, but his greatest literary labour was the composition in the same language of a voluminous history of his own times, of which the first part was made public in 1604. To the great discredit of Henry IV, this work was condemned, in submission to the influence of the Catholic leaders, where was nettled at the freedom with which the historian did justice to the Huguenots, and censured the popes, the clergy, and the house of Guise. The history when finished consisted of one hundred and thirty-eight books, comprising the events from 1545 to 1607; and as few writers have undertaken a work of this extent with better qualifications for the task, it was accomplished in

a manner which has unequivocally secured the approbation of unbiassed posterity. Accurately acquainted with the politics, revolutions, and geography of modern Europe, the narrative of De Thou is at once copious and exact, while his native candour and love of truth has ensured all the necessary freedom and impartiality. To this work he subjoined "Commentaries, or Memoirs of his own Life," composed in the same manly spirit. In 1601 he lost his first wife, by whom he had no children, and married a second, who brought him three sons and three daughters. The loss of this lady in 1616, together with the calamities which befel the country after the assassination of Henry IV, is thought to have hastened his own death, which took place in 1617, at the age of sixty-four. The most complete edition of the History of De Thou is that published in London in 1733 by Buckley, in 7 vols. folio.—*Memoirs by Himself. Moreri. Nouv. Dict. Hist.*

THOU (FRANCIS AUGUSTUS de) eldest son of the preceding, born in 1607, inherited the virtues and intelligence of his father, and was made master of requests and grand master of the royal library. Cardinal Richelieu having discovered that he kept up a correspondence with the duchess de Chevreuse, studiously kept him out of all confidential employment, which, unhappily for himself, threw him into the party of Cinquars. When that imprudent person therefore was detected in a secret correspondence with Spain, De Thou was apprehended on the charge of not revealing it; and notwithstanding an able and eloquent defence, was condemned, and sentenced to lose his head. Resolved upon a signal sacrifice to his power, the unrelenting minister resisted all entreaties in his favour, and his execution was irrevocably determined upon. Cinquars, who was the cause of his ruin, humbled himself before him drowned in tears; but De Thou raised and embraced him, saying, "There is now nothing to be thought of but how to die well." He was beheaded at Lyons in 1642, at the age of thirty-five, universally lamented.—*Id.*

THOUIN (ANDREW) professor of agriculture at the Royal Garden at Paris, was born in that city in 1747. His father was chief gardener to the king, and on his death Buffon and Bernard de Jussieu procured the office for the son, though he was then but seventeen years old. He devoted himself with great assiduity to the improvement of the establishment under his care, and to the advancement of botanical science. His merit procured him admission into the Parisian Society of Agriculture and into the Academy of Sciences. In 1790 he was elected a member of the council general of the department of Paris, where he was specially charged with the direction of affairs relating to agriculture. In November 1794 he was sent into Holland, and in 1796 into Italy, to collect whatever might be serviceable to the progress of cultivation in France. He became one of the earliest members of the French Institute, and in 1806 he

procured the establishment of a school of practical agriculture. He carried on a very extensive correspondence with botanists, both in France and in foreign countries; and besides his public lectures and tracts in the transactions of the societies to which he belonged, he published "Essai sur l'Exposition et de la Division méthodique de l'Economie Rurale, sur la Manière d'étudier cette Science par Principes, et sur les Moyens de l'étendre et de la perfectionner," 4to; "Monographie des Greffes," 1821, 4to, with lithographic plates; and other works. His death took place October 27, 1824.—*Biog. Nouv. des Contemp. Biog. Univ.*

THRELKELD (CALEB) a natural historian, was born May 31, 1676, at Kirkoswald, in Cumberland. He was educated at Glasgow, where he graduated M.A. in 1698. He soon after settled as a dissenting minister in a village near the place of his birth; but having made a considerable progress in the study of physic, he took a doctor's degree at Edinburgh in 1712, and proceeded with a wife and large family to Dublin, where his practice soon increased, and became respectable. He died of a violent fever in 1728. In 1727 he published his "Synopsis Stirpium Hibernicarum," 12mo, being a short treatise on the plants which grow in the neighbourhood of Dublin, with their Latin, English, and Irish names; and an appendix of observations made upon plants, by Dr Molyneux, physician to the state in Ireland. This book, which is written in a quaint style, is occasionally interspersed with curious observations, one of which states that "The Irish grammarians remark that all the letters of the Irish alphabet are names of trees."—*Pulteney's Bot.*

THROSBY (JOHN) a topographical writer, whose productions on the subject of his native county are numerous, was born in 1746, and was for many years parish-clerk of St Martin's, Leicester. He appears to have been a man of good natural parts, and he rendered himself conspicuous as a draughtsman and topographer. He seems however to have found much difficulty in maintaining a numerous family, and in the decline of life depended chiefly upon the benevolence of those who respected his industry and integrity. He died February 3, 1803. His publications are "Memoirs of the Town and County of Leicester," 1777, 6 vols. 12mo; "Select Views in Leicestershire," 1789, 4to; "The History and Antiquities of the ancient Town of Leicester," 1791, 8vo; "Letters on the Roman Cloaca at Leicester," 1793; "Thoughts on the Provincial Corps," 1795, 8vo. He also republished in 1797, "Thoroton's History of Nottinghamshire, with large Additions," 3 vols. 4to.—*Nichols's Lit. Anc.*

THUCYDIDES, a celebrated Grecian historian, born at Athens 469 B.C. He was the son of Olorus, said to have been descended from Miltiades, prince of the Thracian Chersonesus, and commander of the Greeks at the memorable battle of Marathon. Thucydides was distinguished in his youth for his eager

desire to excel in gymnastic sports and military exercises, and on arriving at a proper age he entered into the service of his country. Being appointed commander of a body of troops in the Peloponnesian war, he was ordered to relieve Amphipolis, besieged by the Lacedemonians; but the speedy approach of the hostile general Brasidas frustrated his operations, and returning home unsuccessful, he was driven into banishment. Thus removed from his military command, he devoted his involuntary leisure to study; and in the place of his exile he began to write the history of that intestine contest between the Grecian states, in the early part of which he had been employed, and which continued long after his retirement from the scene of actual warfare. He continued his narrative only to the twenty-first year of the war (thirteen years after his banishment); and the subsequent history of the contest, till the demolition of the walls of Athens by the Lacedemonians, has been related by Theopompus and Xenophon. Thucydides wrote in the Attic dialect, as being, by its purity, elegance, and energy, peculiarly adapted to the subject of his composition. He spared no pains to procure authentic materials for his purpose, and both the Athenians and their opponents furnished him with important communications, calculated to illustrate the transactions which he described. His history is divided into eight books, the last of which, left imperfect, is supposed to have been drawn up by his daughter. The son of Olorus and the historian of Halicarnassus have been frequently made the subjects of critical comparison. Herodotus has the advantage in the variety and extent of his information, and he excels in sweetness of style, grace, and elegance of expression; but Thucydides surpasses his predecessor in all the severer beauties of historical composition, and the fire and energy of his descriptions, the fidelity of his narrative, and the more immediate interest which it excites as the account of recent events, have secured for him the almost unrivalled admiration of succeeding ages. The ultimate fate of Thucydides is somewhat uncertain; but it is probable that he was recalled from his banishment, and died at Athens 391 B.C. Among the best editions of his history are those of Duker, Amsterd. 1731, folio; Glasgow, from the press of Foulis, 1759, 8 vols. 12mo; Bipont. 1788—9, 6 vols. 8vo; and Gottleber and Bauer, Leipsic, 1790—1804, 2 vols. 4to. There are English translations of Thucydides by the famous Hobbes, and by Dr W. Smith, dean of Chester.—*Moreri. Aikin's Gen. Biog. Vossius.*

THUNBERG (CHARLES PETER) a Swedish physician and traveller of the last century, was instructed by Linnæus. In 1770 he visited France, and afterwards went to Amsterdam, where he formed an intimacy with Burmann, professor of botany, on whose recommendation in 1775 he was engaged by the Dutch East India Company to proceed in a medical capacity to Japan. After continuing some time at the Cape of Good Hope, where

THU

he made some interesting botanical researches, he proceeded to Japan; and notwithstanding the jealousy of that government on account of his great reputation as a physician, he was allowed to explore the curiosities of that very singular country. Thence he proceeded to Ceylon, and on his return to Sweden, he succeeded Linnaeus in the professorship of botany at Upsal, where he died in 1799. He enriched the memoirs of the society of Upsal with many valuable communications, besides which he published "*Flora Japonica*," 1784, 8vo; and his interesting voyages, which have been translated into English in 4 vols. 8vo.—*Nouv. Dict. Hist.*

THURLOE (JOHN) secretary of state during the protectorate, was the son of the rev. Thomas Thurloe, rector of Abbot's Rodney, in Essex, where he was born in 1616. He was brought up to the law, and in 1644-5, through the interest of Oliver St John, appointed one of the secretaries to the parliamentary commissioners at the treaty of Uxbridge. After occupying some other offices, in 1650 he attended chief justice St John and Mr Strickland in their embassy to the States General, in the quality of secretary. In 1652 he became secretary to the council of state, and the following year was chosen by Cromwell for his own secretary, and also entrusted with the management of the post-office. In 1656 he was chosen to represent the Isle of Ely in parliament, and it was by his means that the plot of major-general Harrison and the other fifth monarchy men, for an insurrection in 1657, was detected, on which occasion he persuaded Cromwell and Whitelock to try the conspirators by the ordinary course of law in preference to a commission. On the death of Oliver he signed the order for proclaiming Richard Cromwell, and was chosen member for the university of Cambridge in the new parliament; retaining his post of secretary of state, both under the new protector and the parliament which deposed him. On the Restoration it appears that he offered his services to Charles II; but they were not only declined, but in a few weeks after he was arrested on a charge of high treason. He was however soon set at liberty, on which he retired to his seat in Oxfordshire, and only attended Lincoln's-inn in term time. Subsequently Charles II often invited him to take part in his administration, but disliking the mixture of men and principles, he declined in his turn, but was very serviceable to the chancellor Clarendon, by the instructions which he gave him of the state of foreign affairs during the protectorate. This minister, who appears to have been as amiable in private, as able in public life, died at Lincoln's-inn in February 1667-8, and was buried in its chapel. The state papers of Thurloe, which form a very valuable collection, and display his abilities both as a statesman and writer, were published by Dr Birch, in seven volumes, folio, 1742.—*Life by Birch. Biog. Brit. Granger.*

THURLOW (EDWARD) baron Thurlow, a distinguished statesman, who was lord high

THU

chancellor of Great Britain. He was the son of a clergymau, who was rector of Ashfield in Suffolk, where he was born in 1732. He was educated at Caius college, Cambridge; and after having been a student of the Middle Temple, he was in 1758 called to the bar. He rose to eminence through the display of his abilities in the famous Douglas cause; and he soon after obtained a silk gown. In 1770 he was appointed solicitor-general, in the room of Dunning (lord Ashburton), and the following year he succeeded sir W. de Grey (lord Walsingham) as attorney-general. He was now chosen MP. for the borough of Tamworth, and he became a warm and powerful supporter of the ministry in the house of Commons. He retired from office in 1783, but resumed it again on the dissolution of the coalition ministry; and he continued to hold the seals under the premiership of Mr Pitt till 1792. His death took place in September 1806; and he was succeeded in the peerage by his nephew, the son of his brother, the bishop of Durham. He was never married, but he left three illegitimate daughters, to two of whom he bequeathed large property; the other having offended him by an imprudent marriage, he left her only a small annuity.—*Bridges's Edit. of Collins's Peerage.*

THUROT (FRANCIS) a French naval officer, born at Nuits in Burgundy, in 1727. He was destined for the profession of surgery, and studied at the jesuits' college at Dijon; after which he devoted two years to the art of healing, and then he quitted the person with whom he was placed, and going to Dunkirk, embarked as a surgeon on board a privateer. The vessel was captured, but Thurot made his escape, and returning to Dunkirk, went to sea again as a common sailor. His skill and enterprising spirit procured him promotion, and he was appointed to the command of a privateer, when he took many prizes from the English, and displayed his courage in several bloody engagements. On peace taking place in 1748, he entered into the merchant service; but when war again broke out in 1755 he renewed his attacks on the commerce of the English with such success as a privateer officer, that he was invited to enter into the royal navy. He accepted the offer, and was patronized by marshal de Bellisle, who gave him the command of a division consisting of two frigates and two corvettes. He sailed from St Malo July 12, 1757; and after having signalized himself in several engagements, and taken many prizes, he returned to Dunkirk December 3, 1758. He appeared at court, where he was well received; and having recommended a descent on the British coasts, he was entrusted with the command of five frigates and a corvette, destined to convey a body of troops for that service. He sailed on this expedition October 15, 1759, and arriving at Carrickfergus-bay in Ireland, January 10 following, the troops were landed, and that place being invested, surrendered in a few days. Thurot however thought proper to re-embark the troops, and return to France. Two

of his vessels had parted company in a gale, when he was attacked by three English frigates under captain Elliott, and an engagement ensuing, Thurot was killed, January 20, 1760.—*Biog. Univ.*

THWAINES (EDWARD) an eminent Saxon scholar, was born in 1687, and educated at Queen's college, Oxford, where he graduated M.A. in 1697, and obtained a fellowship. In 1698 he became a preceptor in the Saxon tongue in the same college, and assisted Dr Hickes in the composition of his *Thesaurus*. He published "*Dionysii Orbis Descriptio*," Oxon. 8vo, 1697; "*Heptateuchus Liber Job et Evangelium Nicodemi*, Anglo-Saxonice; *Historiæ Judith Fragmentum*, Dano-Saxonice;" and an Anglo-Saxon Grammar. Mr Thwaites, who in Saxou learning was deemed second only to Dr Hickes, died in 1711, in his forty-fourth year, owing to an amputation rendered necessary by a white-swelling in his knee.—*Nichols's Lit. Anec.*

THYNNE (FRANCIS) an antiquary and herald of the sixteenth century, was the son of William Thynne, editor of Chaucer and steward of the household to Henry VIII. He was born at Stratton in Shropshire, and educated at Tunbridge school, whence he was removed to Magdalen college, Oxford. He afterwards became a member of Lincoln's-inn, and received the appointment of Lancaster herald. He died, according to some accounts, in 1611; but it is thought from the date of the patent of his successor, that it must have been in 1608. Hearne published a "*Discourse of the Dutye and Office of an Herald at Armes*," written by Thynne, who also composed "*Histories concerning Ambassadors*," published in 1631; and a "*History of Dover Castle and the Cinque Ports*," which with many other productions remain in MS. He intended to have published an edition of Chaucer, but resigned the task to Speght; on whose edition, in 1599, he drew up "*Animadversions and Corrections*," addressed to sir Thomas Egerton. This work remained in MS. until 1810, when it was published by Mr Todd, in his "*Illustrations of the Writings of Gower and Chaucer*."—*Athen. Oxon. Hearne's Discourse.*

THYSIUS (ANTONY) a celebrated Dutch philologist, was born about 1683 at Harderwyck. He studied at Leyden, where he ultimately became professor of poetry and eloquence and librarian to the university. Besides being an able commentator on ancient authors, he published several other productions, including "*Historia Navalis*," a history of the naval war between the Dutch and Spauiards, 1637, 4to; "*Compendium Historiæ Batavici*," 1645; "*Exercitationes Miscellanæ*," 1639, 12mo; and two tracts on the government and laws of Athens. He also published editions of *Paterculus*, 1663; of *Sallust*, 1665; of *Valerius Maximus*, 1670; of *Seneca's Tragedies*, 1651; of *Lactantius*, 1652; and of *Aulus Gellius*, 1661, all at Leyden.—*Saxii Onom.*

TIBALDI. See PELLEGRINO.

TIBERIUS CLAUDIUS NERO, a Roman emperor, was born B.C. 42. He was the

son of a father of the same name, of the ancient Claudian family, and of Livia Drusilla, the celebrated wife of Augustus. Rapidly raised to authority by the influence of his mother, he displayed no inconsiderable ability in an expedition against certain revolted Alpine tribes, in consequence of which he was raised to the consulate in his twenty-eighth year. On the death of Agrippa, the gravity and austerity of Tiberius having gained the emperor's confidence, he chose him to supply the place of that minister, obliging him at the same time to divorce Vipsania and wed his daughter Julia, whose flagitious conduct at length so disgusted him, that he retired in a private capacity to the isle of Rhodes. After experiencing much discountenance from Augustus, the deaths of the two Cæsars, Caius and Lucius, induced the emperor to take him again into favour and adopt him. During the remainder of the life of Augustus he behaved with great prudence and ability, concluding a war with the Germans in such a manner as to merit a triumph. After the defeat of Varus and his legions, he was also sent to check the progress of the victorious Germans, and acted in that war with equal spirit and prudence. On the death of Augustus he succeeded without opposition to the sovereignty of the empire, which, however, with his characteristic dissimulation, he affected to decline, until repeatedly solicited by that now servile body the Roman senate. The new reign was disquieted by dangerous mutinies in the armies posted in Pannonia and on the Rhine, which were however suppressed by the exertions of the two princes, Germanicus and Drusus. The conduct of Tiberius as a ruler has formed a complete riddle for the student of history, uniting with an extreme jealousy of his own power, the highest degree of affected respect for the privileges of the senate, and for the leading virtues of the ancient republican character. He also displayed great zeal for the due administration of justice, and was careful that even in the provinces the people should not be oppressed with imposts, a virtue which, according to Tacitus, he retained when he renounced every other. It is the province of history to record the events of this reign, so ably narrated by Tacitus, including the auspicious death of Germanicus, the detestable administration of Sejanus, the consequent poisoning of Drusus, with all the extraordinary mixture of tyranny with occasional wisdom and good sense, which distinguished the conduct of Tiberius, until his infamous and dissolute retirement to the isle of Capræ in the bay of Naples, never to return to Rome. On the death of Livia in the year 29, the only restraint upon his actions and those of the detestable Sejanus was removed, and the well-known destruction of the widow and family of Germanicus followed. At length the infamous favourite extending his views to the empire itself, Tiberius duly informed of his machinations, prepared to encounter him with his favourite weapon, dissimulation. Although fully resolved upon his destruction, he accumulated honours upon him, declared him

his partner in the consulate, and after long playing with his credulity, and that of the senate, who thought him in greater favour than ever, he artfully prepared for his arrest. Sejanus fell deservedly and unpitied; but many innocent persons shared in his destruction, by the suspicion and cruelty of Tiberius, which now exceeded all limits. The remainder of the detestable reign of this odious tyrant, is scarcely any thing more than a disgusting narrative of every form of servility on the one hand, and of despotic ferocity on the other. That he himself endured as much misery as he inflicted is evident, from the following commencement of one of his letters to the senate: "What I shall write to you, conscript fathers, or what I shall not write, or why I should write at all, may the gods and goddesses plague me more than I feel daily that they are doing, if I can tell." What mental torture! observes Tacitus, in reference to this passage, which could extort such a confession. In the midst however of all this tyranny he often exhibited gleams of strong sense, and of a judicious attention to the public welfare; a remark which holds good in every part of his anomalous reign. Having at length reached an advanced age, Caius, the son of Germanicus, his grandson by adoption, and Gemellus, the son of Drusus, his grandson by nature, became objects of interest. Caius however, who had reached the age of twenty-five, and who held the popular favour as a paternal inheritance, was at length declared his successor. Acting the hypocrite to the last, he disguised his increasing debility as much as he was able, even affecting to join in the sports and exercises of the soldiers of his guard. At length leaving his favourite island, the scene of the most disgusting debaucheries, he stopped at a country house near the promontory of Misenum, where on the 16th of March 37 he sunk into a lethargy, in which he appeared dead, and Caius was preparing with a numerous escort to take possession of the empire, when his sudden revival threw them all into consternation. At this critical instant Macro, the pretorian prefect, took the decisive step of causing him to be suffocated with pillows. Thus expired the emperor Tiberius, in the seventy-eighth year of his age and twenty-third of his reign, universally execrated; and so detestable is envenomed dissimulation and deep-rooted hypocrisy, he has left a more odious name behind him than many, who to equal cruelty united none of his better actions and more laudable qualities.—*Tacitus. Suetonius. Crevier.*

TIBULLUS (AULUS ALBIUS) a Roman knight, who lived in the reign of Augustus, celebrated as an elegiac poet. He lost his estate in consequence of having joined the party of Brutus in the last struggle for liberty which preceded the subversion of the republic; and he afterwards attached himself to Messala Corvinus, and went with that commander to the island of Corcyra. Returning to Italy he relinquished the pursuit of military glory for the cultivation of literature and voluptuous

indulgence, occupying a distinguished place in the group of men of letters who adorned the court of Augustus, and whose unrivalled compositions have amused and delighted mankind in every succeeding age. Tibullus first employed his pen to celebrate the virtues of his friend Messala; but love was his favourite theme, and the poetic taste and warmth of feeling which he displays in his alternate addresses to his mistresses Delia and Plautia, Nemesis and Neæra, are alike creditable to his talents, and discreditable to his personal character, as the reckless votary of pleasure in the luxurious capital of the world. Four books of "Elegies" are the only remaining pieces of his composition. They are uncommonly elegant and beautiful, entitling the writer to a station at the head of that class of bards to which he belonged. Tibullus was intimate with the literary men of his time. Ovid has consecrated to his memory a funeral elegy, and Horace has advantageously drawn his character in one of his epistles. His works have been often published together with those of Catullus and Propertius, as by Vulpinus, Patav. 1737, 4 vols. 4to; and Notii Var. et Grævii, Traject. 1680, 8vo. Separately, the Elegies of Tibullus have been edited by Heyne, Lips. 1776, 8vo; and 1817, 8vo, with the observations of Wunderlich. Dart and Granger are among the English translators of this poet, and the latter is by far the most successful. Tibullus died 19 BC. at the age of forty-three.—*Moreri. Elton's Spec. of Class. Poets.*

TICKELL (THOMAS) an ingenious writer both in prose and verse, and the intimate friend of Addison, was a native of Bridekirk, in the county of Cumberland, of which parish his father, the rev. Richard Tickell, was the incumbent, and where he was born in 1686. He received his education at Queen's college, Oxford, where he graduated and obtained a fellowship in his twenty-fifth year. While at the university, an elegant copy of verses, addressed by him to Addison, on his opera of Rosamond, introduced him to the acquaintance of that accomplished scholar, who induced him to lay aside his previous intention of taking orders, and on his own accession to office appointed him his under-secretary of state. This measure was warmly opposed by sir Richard Steele, who seems to have undervalued both his temper and abilities, and even to have insinuated suspicions of his fidelity, which the other warmly resented, and as far as Addison was concerned appears certainly not to have deserved. The latter at his death bequeathed to Tickell the publication of his works, a task which he performed with great ability, printing them in four volumes, quarto, and prefixing an elegiac poem to the memory of his patron, addressed to their mutual friend the earl of Warwick. In the summer of 1724, Mr Tickell obtained the situation of secretary to the lords justices of Ireland, and two years afterwards vacated his Oxford fellowship by contracting a marriage while resident at Dublin. As an author he may be considered to take a

prominent rank among the minor English poets; his versification especially, in its ease and harmony, being inferior perhaps to that of no one, with the exception of Dryden and Pope. About the period when the latter gave to the world his celebrated translation of the *Iliad*, Tickell avowedly entered the lists with him, and printed his own version of the first book in opposition to that of the other. In the execution of this rival production, if he falls far below his antagonist in spirit and harmony, he is considered to more than rival him in fidelity to his original. The production of this poem at the time occasioned an interruption to the good understanding between Pope and Addison, the former strongly suspecting, and not perhaps without reason, that Addison himself was a contributor to, if not the author of, the work. Tickell's other writings consist of "The Prospect of Peace," a poem, 1713; "The Royal Progress;" "Kensington Gardens;" "A Letter to Avignon;" "Imitation of the Prophecy of Nereus;" with several epistles, odes, and other miscellaneous pieces, to be found in the second volume of the *Minor Poets*. His death took place at Bath, April 23, 1740.—*Johnson's Lives*.

TICKELL (RICHARD) grandson of the preceding, was a native of Bath, where he became, by his marriage with Mary Linley, brother-in-law to Richard Brinsley Sheridan. For wit, repartee, and convivial qualities, it is said on the authority of those who knew him, that few could equal, nor did even the brilliant effusions of his facetious relative in this respect eclipse, his celebrity. As a writer, if less happy, he yet ranks very far above mediocrity, and a political effusion from his pen, entitled "Anticipation," which appeared in 1778, was of infinite service to the ministry of the day, by the poignancy of its humour and the keenness of its satire. "The Project," and "The Wreath of Fashion," two poems written about the same period, were also highly popular. The success of his first-mentioned work procured him the situation of a commissioner in the stamp-office, and his society was much courted by the leading characters of his time. But although the life of every company in which he mixed, his spirits were subject to an occasional reaction of the most distressing kind; and in one of the fits of despondency produced by this unhappy circumstance, he threw himself from the window of his bedroom in Hampton Court palace, and was killed upon the spot, on the 4th of November, 1793. "The Carnival," a comic opera, and a new version of Allan Ramsay's "Gentle Shepherd," were adapted by him for the stage.—*Bog. Dram.*

TIEDEMANN (DIRTHERIC) a modern German philosopher of considerable eminence, was born April 3, 1748, at Bremervorde, in the duchy of Bremen, of which place his father was a burgo-master. He was intended for the study of divinity, but he early gave up his views in that direction for an undivided pursuit of science and literature. In 1772 he published at Riga, his "Essay on the Origin

of Language," and in 1776 his "System of the Stoic Philosophy," which work was much admired by the celebrated Heyne, who procured him the professorships of the Greek and Latin languages in the Collegium Carolinum at Cassel. In 1786 he published his "Investigation of Man," 3 vols. 8vo, and in 1780 "The First Philosopher of Greece." In 1786 he was removed with the other teachers of the college, to Marburg, and appointed professor of philosophy, in which capacity he taught with high reputation, logic, metaphysics, empirical psychology, the law of nature, and the history of philosophy and of man. His latest performance was a translation of Denon's *Travels in Egypt*. He died May 24, 1803, in the fifty-fifth year of his age. The labours of Tiedemann are highly valued by Blumenbach and other modern physiologists. Besides the works already enumerated, he was also author of a work entitled "The Spirit of Speculative Philosophy."—*Nouv. Dict. Hist.*

TIELCKE (JOHN GOTTLIEB) a captain of engineers and artillery in the Saxon service, born at Tautenburg, in Thuringia, in 1731. He served at first as a private grenadier, and after having been employed in the principal actions of the Seven Years' war, he was sent as captain of the staff of the artillery to Freyberg, where he died November 6, 1787. This officer, who was self-instructed, was a keen observer of military occurrences, and he suffered nothing to escape his notice, from the slightest movement of an army to the most important battles. He published in German, "Instructions for the Officers of Engineers;" "The Qualities and Duties of a good Soldier;" "Prayers and Psalms for Soldiers;" and "Military Memoirs of the History of the War, from 1756 to 1763," with plans and charts, 5 vols.—*Biog. Univ.*

TIL (SOLOMON VAN) a learned and industrious divine, born at Wesop, a town near Amsterdam, in 1644. He studied at Utrecht, and afterwards at Leyden, and became a disciple of the Dutch theologian John Cocceius. He entered on the pastoral office on leaving the university, and in 1682 he was appointed minister at Medemblik, in North Holland, and shortly after at Dordrecht. In 1685 he refused the offer of the church of Amsterdam; but he accepted, in 1702, a theological professorship at Leyden; and after occupying that station with distinguished credit during ten years, he became subject to painful infirmities, which occasioned his death on the 31st of October, 1713. His principal works are "The Poetry and Music of the Ancients, and especially the Hebrews, illustrated by curious researches into Antiquity," 1692, 12mo, several times republished and translated into German; "The History of the Elevation and Fall of the first Man developed and defended, or a Commentary on the first eight Chapters of Genesis," 1698, 4to; "Phosphorus propheticus, seu Mosis et Habakuki Vaticinia novo ad istius Canticum et hujus Librum propheticum Commentario illustrata; accedit Dissertatio de Anno, Mense, et Die Nati

Christi," 1700, 4to; "Malachias illustratus; accedit Dissertatio de Situ Paradisi terrestri," 1701, 4to; "Theologiae utriusque Compendium, cum naturalis, tum revelatae," 1704, 4to; and "The Peace of Salem concluded in Charity, in Confidence, and in Truth," 1687, 4to. The praiseworthy object of this last publication was the promotion of a spirit of liberality and conciliation among different sects of Christians, and especially the Cocceians and Voetians, whose disputes divided into parties the Dutch Protestant clergy.—*Biog. Univ.*

TILLEMONT (LOUIS SEBASTIAN le NAIN de) an eminent historian, born at Paris, November 30, 1637. He was the son of John le Nain, who held the office of master of requests, and he received his education at the Port Royal. Having chosen the ecclesiastical profession, he assumed the name of Tillemont on entering into the order of priesthood. He devoted himself with great assiduity to study, and by his extraordinary industry and accuracy of research, he gained a high reputation as an historical writer. His death took place January 10, 1698. He was the author of "Mémoires pour servir à l'Histoire Ecclesiastique des six premiers Siècles," 16 vols. 4to; and "Histoire des Empereurs et des autres Princes qui ont régné durant les six premiers Siècles de l'Eglise," 5 vols. 4to, to which was added a sixth, published in 1738. The first volume of the Imperial History appeared in 1690, and the first volume of the Memoirs in 1693; and M. de Tillemont, previous to his death, published four volumes of each work, and the remainder were posthumous publications, exhibiting occasional defects, which show that they had not received the ultimate attentions of the learned author. He seems to have pursued his investigations more from an ardent love of literature than from the wish to acquire reputation as a man of learning; for he laboured on his works more than twenty years without giving way to the temptation to appear before the public. Gibbon praises highly the accuracy and industry of Tillemont.—*Dict. Hist. Biog. Univ.*

TILLET (MATTHEW) a French writer on agriculture, born at Bordeaux about 1720. He retained the title of director of the mint at Troyes in 1766, though no money had then been coined in that city for several years. The cultivation of land occupied much of his attention; and the care and skill with which he conducted his experimental researches on husbandry, render his observations peculiarly valuable. In 1738 he was admitted into the Academy of Sciences, and he assisted in the useful investigations of Duhamel du Monceau. He died in 1791. He published "Dissertation sur la Ductilité des Métaux, et les Moyens de l'augmenter," 1750, 4to; "Essai sur la Cause qui corrompt et noircit les Grains dans les Epis," 1755, 4to; "Précis des Expériences faites à Trianon, sur la Cause qui corrompt les Bleds," 1756, 8vo; "Histoire d'un Insecte qui dévore les Grains dans l'Angoumois," 1763, 12mo; "Essai sur le Rapport des Poids Etrangers avec le Marc de France,"

1766, 4to; "Expériences, sur le Poids du Pain au sortir du Four," 1781, 8vo; "Projet d'un Tarif propre à servir de Règle pour établir la Valeur du Pain, proportionnellement à celles du Bled et des Farines," 1784.—*Biog. Univ.*

TILLI (MICHAEL ANGELO) an Italian botanist, born at Castelforentino in 1655. He studied at the university of Pisa, and in 1677 settled at Florence, where he became acquainted with the celebrated naturalist Francis Redi, through whose recommendation he was appointed physician to the Tuscan galleas. He visited the Balearic isles, and afterwards went to Constantinople, to attend the son-in-law of the grand signior, who had requested the assistance of a skilful professor of medicine from Florence. He proceeded to the camp of the Turks at Belgrade, and witnessed the disastrous defeat of their army under the walls of Vienna. Returning home, he became director of the botanic garden at Pisa. The fame which he had obtained for medical skill in Turkey occasioned an application for his advice from the bey of Tunis; and after he had restored the bey to health, he obtained permission to make botanical researches among the ruins of Carthage. He subsequently devoted his time to the improvement of the garden which he superintended at Pisa, to the duties of his profession, and to the instruction of youth. He died at Pisa in 1740. As an author Tilli is known on account of his "Catalogus Plantarum Horti Pisani," 1723, folio, with plates.—*Fabroni Vite Italor. Biog. Univ.*

TILLOCH, LL.D. (ALEXANDER) the son of a respectable tobacconist of Glasgow, who filled one of the municipal magistracies in that city, where his son was born February 28, 1759. On leaving school he was intended by his father to follow his own business, and taken accordingly into his warehouse; but a strong bias towards mechanical and scientific pursuits soon diverted his attention from commercial pursuits. The art of stereotype printing, said to have been practised by Vander Mey and Mullen at Leyden, about the close of the sixteenth century, and even conjectured by some antiquaries to have been known among the ancient Romans, had, at all events, even if these assertions be correct, fallen into desuetude, and ranked among the *artes perditæ*. In 1736, it is true, a jeweller of Edinburgh, named Ged, had, though unacquainted with the tradition respecting Vander Mey, devised the art of printing from plates, and actually produced an edition of Sallust so printed; but so much was the art then undervalued, that it perished with him. It was reserved for Dr Tilloch to revive and bring it to the state of practical utility which it now exhibits, having himself again made the discovery without any previous acquaintance with Ged's attempts. In this new process Mr Foulis of Glasgow, a printer, joined him, and a patent in their names was taken out, both in England and Scotland. Circumstances however induced them to lay aside the business for a time, and it never was renewed by them

as a speculation. In 1787 Dr Tilloch came to London, and two years afterwards, in conjunction with others, purchased the "Star" evening paper, which he continued to edit till within four years of his death. In 1797 the public attention being then much directed to schemes for the prevention of forgery, he submitted to the Bank of England a plan respecting which he had been previously in communication with the French government, for producing a note beyond the reach of imitation; which however, like all similar proposals, was declined, and in 1820 Dr Tilloch petitioned parliament on the subject, which was then again brought before the house, but without any practical result. In June 1797 he projected and established the "Philosophical Magazine," sixty-five volumes of which are now before the public; and only fifteen days before his death he had obtained a patent for an improvement on the steam-engine. Amidst his other avocations he also found leisure to apply himself to theological studies with no common perseverance, the fruits of which appeared in a "Dissertation on the Apocalypse," published in 1823, besides a variety of detached essays, collected under the title "Biblicus." The last work which he was engaged to superintend, was the "Mechanica' Oracle," published in numbers at the Caxton press. In his religious opinions Dr Tilloch was a dissenter from the established church, and preached occasionally to a congregation who assembled in Goswell-street road. His death took place at his house in Barnsbury-street, Islington, January 26, 1825.—*Ann. Bing.*

TILLOTSON (JOHN) an eminent English prelate, was the son of Robert Tillotson, a clothier, at Sowerby, near Halifax, where he was born in 1630. His father, who was a strict Calvinist, carefully brought up his son in the same principles, and after bestowing upon him a proper preparatory education, sent him a pensioner to Clare-hall, Cambridge, of which he was elected a fellow in 1651, and took pupils. He exhibited at this time all the characteristics of his sect, and some time afterwards became tutor and chaplain in the family of Prideaux, attorney-general to the protector. It is not known when he entered into orders, but his first sermon which appeared in print is dated September 1661, at which time he was still among the presbyterians. When the act of uniformity passed in the following year, he however submitted to it without hesitation, and became rector of Cheshunt in Hertfordshire. Preaching frequently for his clerical friends in London, he became celebrated for his pulpit oratory, and in 1663 was presented to a rectory in Suffolk, which he resigned on being chosen preacher to the society of Lincoln's-inn. In 1664 he married Elizabeth French, daughter to Dr French, canon of Christchurch, and niece to Oliver Cromwell, whose sister Robina was her mother. In 1666 he took the degree of DD. and was made king's chaplain and presented to a prebend of Canterbury. When Charles II in 1672 issued a declaration for liberty of conscience, for the

purpose of favouring the Roman Catholics, he preached and counselled strongly against it, but was nevertheless advanced to the deanery of Canterbury, and soon after presented to a prebend in the church of St Paul. Popery was so much the object of his dread and aversion, that in a sermon preached before the king in 1680, he was betrayed into sentiments of intolerance, which exposed him to heavy censure, implying that no man, unless divinely commissioned, and who, like the apostles, can justify that commission by miracles, is entitled to draw men away from an established religion, even although false. Several animadversions were made upon this extraordinary doctrine, which assailed the authors of the Reformation itself; but Dr Tillotson made no open reply to them, although he privately acknowledged to his friends that he had hastily expressed himself in terms which could not be maintained. He warmly promoted the exclusion bill against the duke of York, and refused to sign the address of the London clergy to the king on his declaration that he would not consent to it. In 1682 he published a volume of sermons from the papers left in his care by Dr Williams, and in the following year edited the three folio volumes of Dr Barrow's Theological works, the MSS. of which had also been left to his superintendence. At the execution of lord William Russel he attended with Dr Burnet; and though afterwards decided friends to the Revolution, both these divines urged that nobleman to acknowledge the absolute unlawfulness of resistance. On the accomplishment of the latter great event, he was immediately taken into favour by king William, who had known him in his previous visit to London; and in 1689 he was appointed clerk of the closet to that sovereign, and subsequently permitted to exchange the deanery of Canterbury for that of St Paul's. On the refusal of archbishop Sancroft to take the oaths to the new government, he was appointed to exercise the archiepiscopal jurisdiction during the suspension of that prelate; and in 1691, after exhibiting the greatest reluctance, he was induced to accept the archbishopric itself. He had previously formed a second scheme for the comprehension of the presbyterians within the pale of the church, which had been rejected by convocation. He had also failed in another design for forming a new book of Homilies; and a sermon which he preached before the queen, against the absolute eternity of hell torments, still farther involved him with the advocates of rigid orthodoxy. When therefore he accepted the primacy, a large party, of course including all the nonjurors, assailed him with great animosity; and in particular he was reproached, and not unjustly, with the inconsistency of his own conduct with the doctrine he had advanced to lord William Russel. He prudently bore these attacks in silence, and even prevented some prosecutions for libel against him, directed by the crown. He was also vehemently charged with Socinianism, in answer to which he only republished four of his sermons "On the In-

carnation and Divinity of our Saviour." There appears to have been no other ground for that imputation, than that he defended Christianity on rational grounds, and corresponded with such men as Limborch, Locke, and Le Clerc; to which reason Dr Jortin adds, that he had made some concessions concerning the Socinians, which broke an ancient and fundamental rule of controversial theology, "allow not an adversary either to have common sense or common honesty." He gave the last answer to these and other strictures by doing every thing he could to advance the respectability of the church, and among other things he wished to correct the evils arising from non-residence. He was however counteracted in all his endeavours by the most perverse opposition, which rendered his high station a scene of much more disgust than gratification. He had indeed but little time to effect much of what he proposed, being seized with a paralytic stroke, the consequences of which carried him off after an illness of five days, on the 24th November, 1694, in his sixty-fifth year. So little had he been addicted to accumulation, that all he left his widow was the copyright of his sermons; but a pension was very properly settled on her by the crown. The temper and private character of Dr Tillotson are entitled to great encomium; he was open, sincere, benevolent, and forgiving; and although in some points too compliant, and fairly liable to the charge of inconsistency, his intentions always seem to have been pure and disinterested. As a writer he is principally remembered for his sermons, which have long maintained a place among the most popular of that class of compositions in the English language. He published as many during his life as, with his controversial work, entitled the "Rule of Faith," filled a folio volume; and after his death two more folio volumes were published from his MSS. by his chaplain Dr Barker. They obtained a high reputation both at home and abroad, and have passed through numerous editions. At one time they were regarded as a standard both of finished oratory and of the purity of the English language, but to this eulogy Mr Melmoth, in his "Fitzosborne's Letters," very justly objects. He however possesses great copiousness of thought and expression, and abounds in passages which strongly impress the mind. His sermons are doubtless much less read than formerly, but can scarcely fail of remaining a permanent part of the branch of English literature to which they belong.—*Lives by Birch. Biog. Brit.*

TILLY (count ALEXANDER de) born in 1754, of an ancient family in Normandy. He entered young into the army, and from its commencement he was an opponent of the Revolution. In 1790 and 1791 he published in the "Actes des Apôtres," and the "Feuille de Jour," some political essays, remarkable for energy of style and boldness of sentiment. In 1792 he exerted all his talents in defence of Louis XVI, to whom, on the 27th of July that year, he addressed a remarkable letter of

spirited advice, which he also published. After the commotions of the 10th of August, he emigrated from France, and taking refuge in England, and then at Berlin, he returned with the Bourbons to Paris in 1814. The return of Buonaparte from Elba obliged him to quit France a second time, and he remained in Belgium, and put an end to his life at Brussels, December 23, 1816. He was the author of "Œuvres mêlées," 1785, 8vo, Berlin, 1803, 8vo; "Lettre à M. Philippe d'Orléans," 1790, 8vo; "Six Romances, mises en Musique par Garat," 1792, 8vo; "De la Révolution Française en 1794," Lond. 1794, 8vo. This nobleman was the author of the well-known distich on Louis XVI:

"Il ne sut que mourir, aimer et pardonner;
S'il avait su punir, il aurait su régner."

Lieutenant general the count de TILLY, though a native of Normandy, was of a different family from the preceding. He entered into the army early in life, and becoming a partizan of the Revolution, he was made a colonel of cavalry in 1792, and Dumouriez appointed him his aide-de camp, and in March 1793 confided to him the command of Gertruydenberg, which he defended with great spirit, and obtained an honourable capitulation. He was subsequently general-in-chief of the army on the coasts of Cherbourg, when he gained some victories over the Vendéans. In 1794 he commanded a division of the army of the North, and then of that of the Sambre and Meuse; in 1796 he was governor of Brussels, when he returned to the army of the West. Under the imperial government he served in Austria, Prussia, Poland, and Spain, where he distinguished himself at the battle of Ocana. In 1814 the king nominated him grand officer of the legion of honour; but having accepted an appointment during the hundred days, he was not again employed after the second restoration of Louis XVIII. He died at Paris, Jan. 10, 1822.—*Biog. Univ. Biog. Nouv. des Contemp.*

TIMÆUS, a Pythagorean philosopher, who was a native of Locris in Greece, and has therefore been denominated the Locrian. He composed a treatise on the nature and the soul of the world, in the Doric dialect, which has been preserved by Proclus, and inserted in Stanley's History of Philosophy. Timæus in general adopted the doctrines of Pythagoras, though in his system of cosmogony he was rather the follower of Ocellus Lucanus. Plato, who has introduced this philosopher as an interlocutor in one of his dialogues, styles him "a most diligent inquirer into all the works of nature."—*Stanley. Brucker. Stollii Introd. in Hist. Litt.*

TIMÆUS, a Greek historian, born at Tauromenium in Sicily about 350 BC. Cicero styles him the most learned and eloquent of the Grecian historians, but Plutarch notices him in very different terms. He wrote many books, including a "General History of Sicily;" a "History of the Wars of Pyrrhus;" and a great number of pieces relating to rhetoric. His works are lost, but M. Goeller has collected and published fragments of them in

T I M

his treatise "De Situ et Origine Syracusarum," Leipsic, 1818, 8vo. Timæus was banished from Sicily by Agathocles, tyrant of Syracuse; and in his history, which he wrote at Athens, he has treated the character of his persecutor with great severity. He is said to have lived to the age of ninety-six.—*Adam's Classical Biography. Biog. Univ.*

TIMÆUS, the Sophist, a Greek grammarian, only known as the author of a Dictionary of Platonic Phrases (ἐκ τῶν τοῦ Πλάτωνος λέξεων) accompanied with short explications. He is supposed to have flourished in the third or fourth century of the Christian era; and his Lexicon, which was known to Photius and Suidas, was published from the only existing manuscript by David Ruhneken, with valuable notes, Leyden, 1754, 8vo; and in a second and improved edition, Leyden, 1789, 8vo.—*Biog. Univ.*

TIMAGENES, a Greek historian of Alexandria, who was brought to Rome by Gabinius, 54 B.C. and was sold as a slave to the son of Sylla. His talents were the means of procuring his liberty, and he became a favourite among the great. The emperor Augustus patronized him; but afterwards being disgusted at his impertinence, dismissed him from the court, and the irritated historian revenged the insult by burning the flattering memoirs which he had composed of the reign of his patron.—*Plutarch. Biog. Univ.*

TIMANTHES, a celebrated Greek painter of antiquity, contemporary with Alexander of Macedon. The place of his birth is variously stated to have been Sicyon and Cythrus, a small island in the Grecian Archipelago. His reputation now rests principally upon the tradition of an exquisite picture of his, representing the sacrifice of Iphigenia at Aulis. The other figures are all spoken of as having been delineated in the most masterly manner, but the artist, unable to embody his own conception of the feelings of the father, was compelled to throw a veil over the face of Agamemnon.—*Pliny's Nat. Hist.*

TIMOLEON, one of the illustrious characters of Greece. He was a native of Corinth, of noble parentage, and born about four centuries B.C. He early exhibited marks of intrepid courage and a rooted hatred of tyranny, which he carried to that extent, that unable to induce his brother Timophanes to resign his usurped authority, he stood by while he was assassinated, according to Plutarch; but Diodorus asserts that he killed him with his own hand. This deed, although justified by the code of morals, which places love of country at the head of all the social duties, caused him great distress of mind, which was increased by the direful imprecations of his mother, who would never again admit him into her presence. He lived several years in retirement, until the Syracusans sought the aid of the Corinthians against an invasion of the Carthaginians, when, without the least expectation on his own part, he was appointed to command the auxiliary forces. He accordingly set sail for Sicily, B.C. 344, with a fleet exceeding

T I M

ten sail, and by a happy mixture of valour and prudence succeeded not only in restoring Syracuse to liberty, but he brought the whole island of Sicily into a more prosperous and tranquil state than it had been in for many years. The Sicilians were so sensible of their obligations to Timoleon, that he was ever afterwards consulted in all their affairs, as the father of their country. He fixed his abode at Syracuse, whither he sent for his wife and children from Corinth, and lived as a private citizen, distinguished only by his influence and the respect paid to his virtues. He was so peculiarly prosperous in all his transactions after he left Corinth, that he ascribed all his successes to the goddess Fortune, an opinion which was much promoted by a very singular and extraordinary escape from a premeditated assassination. The only deduction from his prosperity was the loss of sight at an advanced period of life, but which misfortune was much alleviated by the continued kindness and respect of the Syracusans. He was at length carried off by a slight disease B.C. 335, and was honoured with a very magnificent public funeral, and a monument was afterwards erected to his memory, which being surrounded with porticoes and other public buildings, was made a place of exercise for youth, and named the Timoleon-teum.—*Plutarch Vit. Timolent. Univ. History.*
